

# **British Inquiry**

The Official Transcript of the British Inquiry into  
the sinking of the RMS Titanic  
May 2-July 3, 1912

## Introduction

The sinking of the passenger liner Titanic in 1912 is one of those historical events that always captured the imagination of researchers and the general public alike. Drama, pathos, cowardice, heroism and self-sacrifice -- all are vital parts of the story of the greatest tragedy to have taken place at sea up to that time.

But legends have sometimes become part of the Titanic saga, too, and many of these legends have arisen solely because the public has not had easy access to accurate, well-documented information about the tragedy. Books about the Titanic abound, but -- in a sense -- these books serve as "filters" of primary historical sources and put the reader one step "further away" from those people who actually \*experienced\* the Titanic disaster themselves. Although many Titanic survivors did testify about their experiences at the two government inquiries that were conducted after the disaster, the transcripts of these two inquiries were never commonly available to the general public and have become increasingly difficult for researchers to obtain as the years go by.

Until now.

A small and selfless group of serious Titanic researchers has recently gone to the incredible effort of transcribing the entire texts of the Senate and the British Titanic Inquiries -- each of which is over a thousand pages long -- and has graciously seen fit to post those transcripts on this website for the benefit of Titanic buffs everywhere. These researchers have reaped no financial reward for their self-imposed efforts and have undertaken this project solely in the interest of making hard-to-find historical information available to everyone who might wish to see it.

It gives me great pleasure to make the names of these researchers known to you:

Bob Bonnell - CAN  
Earl Chapman - CAN  
Mike Disabato - US  
Vera & John Gillespie - US  
Linda Greaves - US  
Jane Hilbert - US  
Robert Ottmers - US

Stuart Partridge - UK  
Marilyn Powell - US  
Susie Powell - US  
Parks Stephenson - US  
Bruce Trinqué - US  
Bill Wormstedt - US

The above-named men and women who so unselfishly transcribed thousands of pages of inquiry testimony deserve the sincere gratitude of Titanic researchers the world over. I hope you'll join me in honoring them for their efforts.

George Behe

Mount Clemens, Michigan.

## Wreck Commissioners' Court.

SCOTTISH HALL,  
BUCKINGHAM GATE,  
*Thursday, 2nd May, 1912.*

### PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

# LOSS OF THE S. S. "TITANIC."

[Transcribed from the Shorthand Notes of W. B. Gurney & Sons,  
26, Abingdon Street, Westminster, S. W.]

---

## FIRST DAY

---

The RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), THE RIGHT HON. SIR J. SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINALL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. F. LAING, K.C., MR. MAURICE HILL, K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.) appeared as Counsel on behalf of the White Star Line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor) appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland, and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. Admitted on application -- See Below.

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. Admitted on application -- See Below.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons) watched proceedings on behalf of the Allen Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son) watched proceedings for the Canadian Pacific Railway Company.

## Page 2

*The Attorney-General:* My Lord, before this Inquiry begins I desire on behalf of His Majesty's Government to express our deepest sympathy with all those who have to mourn the loss of relatives or friends amongst the passengers, the officers or the crew of this ill-fated vessel. My Lord, this terrible disaster in mid-ocean, both because in mere magnitude it exceeds any calamity in the history of the mercantile marine, and also because of many of its harrowing incidents, has in a profound and marked degree, touched the heart of the nation. Whilst not desiring in any way to anticipate the result of this Inquiry, I cannot refrain from paying a reverent tribute of warm admiration to those whose manful devotion to duty and heroic sacrifices for the safety of others, have maintained the best traditions of the sea. My Lord, before proceeding further, I know my learned friend, Sir Robert Finlay, would like to add something to what I have just stated. *Sir Robert Finlay:* My Lord, I desire to associate myself on behalf of my clients, the owners of the "Titanic," with the expressions which the Attorney-General has used on behalf of the Government. No words can express the sympathy which everyone must feel for those who have suffered by this

deplorable calamity. There is only one thing that gives some consolation, and to that the Attorney-General has alluded, that this disaster has given an opportunity for a display of discipline and of heroism which is worthy of all the best traditions of the marine of this country. I shall add no more, but the sympathy which we feel on this occasion with those who have suffered is really beyond expression in words.

*The President:* Mr. Attorney and Sir Robert Finlay: In speaking for myself and speaking I am sure for those who are associated with me in this Inquiry, and speaking, if I may do so, for the public at large, I beg to say that, in my opinion, your kind and sympathetic words will be well appreciated.

*The Attorney-General:* My Lord, with reference to the Inquiry which your Lordship is now about to commence, may I say that it is the earnest desire of the administration that a searching and thorough Inquiry should be made with the object of ascertaining as fully and as precisely as possible the circumstances surrounding the casualty, and also of deducing such lessons and arriving at such conclusions as may help hereafter to promote the safety of vessels and life at sea. My Lord, it is the wish of the President of the Board of Trade, and, my Lord, speaking on behalf of my learned friend and colleague, the Solicitor-General and myself as law officers of the Crown, I desire to add, in the public interest, that every possible source of information and all available evidence will be placed before your Lordship in this Inquiry. My Lord, any suggestion which you may think fit to make during the course of the case or after the evidence has been called on behalf of the Board of Trade will be accepted by us most willingly. In a word, may I say that throughout this Inquiry and acting entirely in the public interest the resources of the Government are unreservedly at your Lordship's disposal.

Now, my Lord, in regard to the Inquiry I should explain to you at the outset we shall be in some difficulty in calling Witnesses before you and particularly in presenting them in the order which we should have desired, because as your Lordship knows there is an Inquiry proceeding in the United States, and a large number of Witnesses who would otherwise be available have not yet come to this country. There is much material which we shall get later, and which will be presented to you. There are at the present moment a number of the crew who arrived in the "Lapland" who are available, and who are being detained by the Board of Trade. They should be called at the earliest moment, and I shall therefore place them before the Court as soon as we can get to evidence.

My Lord, there are, of course, also Witnesses who will be presented as to the construction and equipment of the vessel, and I think we can deal with those at an early moment, but the course which I propose, subject to anything that my learned friend has to say, and of course always subject to your Lordship's assent, is that today we should just decide upon the course of procedure, and that tomorrow I should open the case as well as I am able from the material which will be before me; that then we should proceed to hear this evidence of the crew, and then evidence on the construction and equipment of the vessel, and then continue *de die in diem* as far as we can, having regard to what, I am afraid, must be some little time which must elapse before we can put all the evidence we desire before you.

My Lord, there is another subject also into which we can inquire at an early moment. That would be the Board of Trade Rules and Regulations made under the Merchant Shipping Act for the preservation of life at sea, and indeed any regulations which are made under

the Merchant Shipping Act, which are relevant to this Inquiry; we can go into that, and shall go into that at an early stage.

I think, even now at this moment, we could deal with the questions which will be submitted by us to the Court. We submit those questions now, not as containing every question which it may be necessary to put; your Lordship has power, and there is power also in the Board of Trade, to supplement those questions at the end of the case which we are presenting to the Court; but they have been carefully considered, and I think it would be convenient if we just referred to them. I do not know whether it would be of any assistance (I will just do what your Lordship thinks fit) to refer to the sections of the Act of Parliament, and the Rules which have been made by the Lord Chancellor, in pursuance of the Act (they are very few) before I deal with the questions.

My Lord, under the Merchant Shipping Act of 1894 and dealing with Part VI., which relates to the special shipping inquiries and Courts, your Lordship will find first of all under Section 464 of the Statute 57 and 58 Victoria, Chapter 60, "a shipping casualty" is defined. It begins "a shipping casualty shall be deemed to occur"; the first four subsections refer to casualties on or near the coast of the United Kingdom, and we have nothing to do with those. Sub-sections 5 and 7, my Lord, you will consider. "When in any place any such loss" (that is the loss of a vessel), "abandonment, material damage or casualty as above mentioned occurs, and any Witness is found in the United Kingdom," and under sub-section 7, "When any British ship is lost, or is supposed to have been lost and any evidence is obtainable in the United Kingdom as to the circumstances under which she proceeded to sea, or was last heard of." Section 466 deals with a formal investigation. My Lord, you will observe from the statute that there are preliminary investigations and formal investigations, and of course this Inquiry would come under the formal investigation. Then, My Lord, under section 466, sub-section 1, "a person authorized as aforesaid to make a preliminary Inquiry shall in any case where it appears to him requisite or expedient that a formal investigation should be held, and in any case where the Board of Trade so directs, apply to a Court of Summary Jurisdiction to hold a formal investigation, and that Court shall thereupon hold the formal investigation." Then under sub-section 2 "A wreck commissioner appointed under this act shall at the request of the Board of Trade hold any formal investigation into a shipping casualty under this section" - that is the one to which we have to pay particular attention. Then under subsection 6, "The Court, after hearing the case shall make a report to the Board of Trade containing a full statement of the case and of the opinion of the Court thereon, accompanied by such report of or extracts from the evidence and such observations as the Court think fit." Then later sub-sections deal with the costs. "The Court may make such order as the Court think fit respecting the costs of the investigation or any part thereof." I think that is all that is material in the statute. Then, my Lord, there are a number of subsections and also of sections which deal with charges against officers and with their certificates. I do not know whether your Lordship

### **Page 3**

has yet seen the questions, but I may say that there is no charge made in those questions which would involve the cancelling or suspension of certificates of the officers. The officers who would be involved in any answers which your Lordship might make, as it

occurs to us at the moment, in reply to these questions are officers who have succumbed in this disaster, and whose certificates cannot be in question. My Lord, I think that is all, unless my learned friend thinks there is anything else he would like to call your attention to in the Statute that it is worthwhile to refer to. I do not know whether your Lordship has noticed - perhaps I had better just call attention to it as you have the section before you - sub-section 3 of section 466, which says that "the Court holding any such formal investigation shall hold the same with the assistance of one or more assessors of nautical, engineering, or other special skill or knowledge"; and then it says how they are to be appointed.

Now, my Lord, I propose to call your attention to the Rules; there are very few to which I need call your attention if your Lordship has them before you.

*The President:* Yes, I have them.

*The Attorney-General:* Rule 3 deals with the notice of investigation which has to be "served upon the owner, master and officers of the ship, as well as upon any person who, in their opinion, ought to be served with such notice." I will hand in the formal Notice of Investigation which has been served; it will not be necessary to prove the service of it; I have no doubt my learned friend will take that as evidence. "The notice shall contain a statement of the questions which, on the information then in possession of the Board of Trade, they intend to raise on the hearing of the investigation."

*The President:* Where is that?

*The Attorney-General:* That is in Rule 3 of the Statutory Rules and Orders of 1907. May I hand up a print - I think your Lordship will find that more convenient. Under the head of Rule 3, "When an investigation has been ordered the Board of Trade may cause a notice, to be called a Notice of Investigation, to be served upon the owner, master and officers of the ship, as well as upon any person who, in their opinion, ought to be served with such notice. The Notice shall contain a statement of the Questions which, on the information then in possession of the Board of Trade, they intend to raise on the hearing of the Investigation." "The Board of Trade may at any time before the hearing of the investigation by a subsequent notice amend, add to, or omit any of the questions specified in the Notice of Investigation." (4) The Board of Trade, the owner, the master, or any certified officer or other person upon whom a Notice of Investigation has been served shall be deemed to be parties to the proceedings. (5) Any other person may by leave of the Judge appear, and any person who appears under this Rule shall thereupon become a party to the proceedings." Then, my Lord, under paragraph 8, "Affidavits and Statutory Declarations may, by permission of the Judge and saving all just exceptions, be used as evidence at the hearing." Paragraph 10 is: "The proceedings on the Investigation shall commence with the production and examination of Witnesses by the Board of Trade." That deals with procedure which follows the ordinary course. Paragraph 11 is: "When the examination of the Witnesses produced by the Board of Trade has been concluded, the Board of Trade shall state in open Court the questions in reference to the casualty, and the conduct of the certified officers or other persons connected therewith upon the opinion of the Court is desired. In framing the questions for the opinion of the Court, the Board of Trade may make such modifications in, additions to, or omissions from, the questions in the Notice of Investigation, or subsequent notices referred to in Rule 3, as having regard to the evidence which has been given the Board of Trade may think fit." Then (12) "After the questions

for the opinion of the Court have been stated, the Court shall proceed to hear the parties to the Investigation upon and determine the questions so stated.” Then it deals with the procedure with which I will not trouble your Lordship, because it substantially follows what is the usual practice. After all the evidence has been heard, any of the parties who desire to do so may address the Court upon the evidence, and the Board of Trade may address the Court in reply upon the whole case. Then paragraph 17 is: “At the conclusion of the Investigation the Judge shall report to the

Board of Trade.” That is all there is in the Rules which affects this matter.

Then, my Lord, I will hand in the Order for the formal Investigation which contains what is called the Statement of the Case.

*(The Order was handed in, and is as follows):*

### **The Merchant Shipping Act, 1894.**

#### **ORDER FOR FORMAL INVESTIGATION.**

“Whereas, on or about the 14th day of April, 1912, the British Steamship ‘Titanic’, of Liverpool, Official Number 131,482, struck ice in or near latitude 41° 46’ N., longitude 50° 14’ W., North Atlantic Ocean, and on the following day foundered, and loss of life thereby ensued or occurred. And whereas a shipping casualty has occurred, and the Board of Trade have requested a Wreck Commissioner appointed under this Act to hold a Formal Investigation into the said shipping casualty, and he has consented to do so.

“Now the Board of Trade, in pursuance of the powers vested in them by Section 466 of the Merchant Shipping Act, 1894, do hereby direct that the Formal Investigation shall be held into the said shipping casualty in the Scottish Hall, Buckingham Gate, London, S. W.

“Annexed hereto is a Statement of the Case upon which the said Formal Investigation has been ordered.

“Dated this 30<sup>th</sup> day of April, 1912.

“Walter J. Howell.

“An Assistant Secretary to the Board of Trade.”

“The British Steamship ‘Titanic,’ of the port of Liverpool, Official Number 131,428.

#### **“STATEMENT OF CASE.**

“The following is a Statement of the Case on which a Formal Investigation is ordered:

“The above named ship left Queenstown for New York on or about the 11<sup>th</sup> day of April, 1912, with a crew of about 892 hands all told, and about 1,316 passengers. “On the night of Sunday the 14th day of April, 1912, the vessel struck ice in or near latitude 41° 46’ N., longitude 50° 14’ W., North Atlantic Ocean, and at about 2 a.m. on the following day foundered in about the same locality, and loss of life thereby ensued or occurred.

“Dated this 30<sup>th</sup> day of April, 1912.

“Walter J. Howell

“An Assistant Secretary to the Board of Trade.”

*The Attorney-General:* That is the Order for Formal Investigation. Your Lordship sees that is the Board of Trade Order. *The President:* Dated the 30th April.

*The Attorney-General:* Yes. It recites that “On or about the 14th April, 1912, the British Steamship ‘Titanic,’ of Liverpool, struck ice in or near latitude 41° 46’ N., longitude 50° 14’ W., North Atlantic Ocean, and on the following day foundered and loss of life thereby ensued or occurred. And whereas a shipping casualty has occurred “- (that is within the definition of the Statute to which I have called your Lordship’s attention) - “and the Board of Trade have requested a Wreck Commissioner appointed under this Act to hold a Formal Investigation into the said shipping casualty, and he has consented to do so. Now the Board of Trade, in pursuance of the powers vested in them by Section 466 of the Merchant Shipping Act, 1894, do hereby direct that the Formal Investigation shall be held into the said shipping casualty in the Scottish Hall, Buckingham Gate,

#### **Page 4**

London, S. W.” Then the next is the Statement of the Case, and the Statement of the Case is “The above-named ship left Queenstown for New York on or about the 11th day of April, 1912, with a crew of about 892 hands all told, and about 1,316 passengers. On the night of Sunday the 14th day of April, 1912, the vessel struck ice in or near latitude 41° 46’ N., longitude 50° 14’ W., North Atlantic Ocean, and at about 2 a m on the following day foundered in about the same locality, and loss of life thereby ensued or occurred.” That is the formal document containing the Order and Statement of the Case.

Then, my Lord, the only other matter I think to which I need refer is the Questions; and it might be convenient for me just to indicate what these Questions are: I think you will find it will facilitate the Inquiry. The Questions 1 to 8 inclusive relate to what happened before the casualty and before there is any question or suggestion of a warning that the “Titanic” was approaching ice. Questions 9 to 14 relate to the suggestion of warning given to the “Titanic,” and ask what was done with regard to look-out or other precautions before the casualty; that is to say, it is suggested by those Questions that those responsible for the navigation of the “Titanic” were warned that they were approaching ice; and then the Questions are put in order to ascertain what was done, and the Court may answer what it finds as a fact was done by those responsible for the “Titanic” after they received such warning, if they did receive it. Then, my Lord, Question 15 is a Question relating to the casualty itself. Questions 16 to 24 relate to the events after the casualty, as to what steps were taken either to save the vessel or to save life. Then there is a general Question, 25, which relates to the construction and equipment of the “Titanic” as a passenger steamer and emigrant ship for the Atlantic service; and Question 26, which relates to the Rules and Regulations under the Merchant Shipping Acts and the administration of those Acts and the Rules and Regulations, invites such recommendations or suggestions as the Court may

think fit to make with a view to promoting the safety of vessels and persons at sea. Now, my Lord, if you will look at the Questions to which I have just referred - *The President*: Have I a copy of them?

*The Attorney-General*: I thought your Lordship had a copy of them.

The Questions were handed in and are as follows -

### “S. S. ‘TITANIC.’”

1. When the “Titanic” left Queenstown on or about 11th April last: -
  - (a.) What was the total number of persons employed in any capacity on board her, and what were their respective ratings?
  - (b.) What was the total number of her passengers, distinguishing sexes and classes, and discriminating between adults and children?
2. Before leaving Queenstown on or about 11th April last did the “Titanic” comply with the requirements of the Merchant Shipping Acts, 1894-1906, and the Rules and Regulations made thereunder with regard to the safety and otherwise of passenger steamers and emigrant ships.
3. In the actual design and construction of the “Titanic” what special provisions were made for the safety of the vessel and the lives of those on board in the event of collisions and other casualties?
4. Was the “Titanic” sufficiently and efficiently officered and manned? Were the watches of the officers usual and proper? Was the Titanic supplied with proper charts?
5. What was the number of boats of any kind on board the “Titanic”? Were the arrangements for manning and launching the boats on board the “Titanic” in case of emergency proper and sufficient? Had a boat drill been held on board, and, if so, when? What was the carrying capacity of the respective boats?
6. What installations for receiving and transmitting messages by wireless telegraphy were on board the “Titanic”? How many operators were employed on working such installations? Were the installations in good and effective working order, and were the number of operators sufficient to enable messages to be received and transmitted continuously by day and night?
7. At or prior to the sailing of the “Titanic” what, if any, instructions as to navigation were given to the Master or known by him to apply to her voyage? Were such instructions, if any, safe, proper and adequate, having regard to the time of year and dangers likely to be encountered during the voyage?

8. What was in fact the track taken by the "Titanic" in crossing the Atlantic Ocean? Did she keep to the track usually followed by liners on voyages from the United Kingdom to New York in the month of April? Are such tracks safe tracks at that time of year? Had the Master any, and, if so, what discretion as regards the track to be taken?
9. After leaving Queenstown on or about the 11<sup>th</sup> April last, did information reach the "Titanic" by wireless messages or otherwise by signals, of the existence of ice in certain latitudes? If so, what were such messages or signals and when were they received, and in what position or positions was the ice reported to be, and was the ice reported in or near the track actually being followed by the "Titanic"? Was her course altered in consequence of receiving such information, and, if so, in what way? What replies to such messages or signals did the "Titanic" send and at what times?
10. If at the times referred to in the last preceding question or later the "Titanic" was warned of or had reason to suppose she would encounter ice, at what time might she have reasonably expected to encounter it? Was a good and proper look-out for ice kept on board? Were any, and, if so, what directions given to vary the speed - if so, were they carried out?
11. Were binoculars provided for and used by the look-out men? Is the use of them necessary or usual in such circumstances? Had the "Titanic" the means of throwing searchlights around her? If so, did she make use of them to discover ice? Should searchlights have been provided and used?
12. What other precautions were taken by the "Titanic" in anticipation of meeting ice? Were they such as are usually adopted by vessels being navigated in waters where ice may be expected to be encountered?
13. Was ice seen and reported by anybody on board the "Titanic" before the casualty occurred? If so, what measures were taken by the officer on watch to avoid it? Were they proper measures and were they promptly taken?
14. What was the speed of the "Titanic" shortly before and at the moment of the casualty? Was such speed excessive under the circumstances?
15. What was the nature of the casualty which happened to the "Titanic" at or about 11.45 p.m. on the 14<sup>th</sup> April last? In what latitude and longitude did the casualty occur?
16. What steps were taken immediately on the happening of the casualty? How long after the casualty was its seriousness realised by those in charge of the vessel? What steps were then taken? What endeavours were made to save the lives of those on board and to prevent the vessel from sinking?

17. Was proper discipline maintained on board after the casualty occurred?
18. What messages for assistance were sent by the "Titanic" after the casualty and at what times respectively? What messages were received by her in response and at what times respectively? By what vessels were the messages that were sent by the "Titanic" received, and from what vessels did she receive answers? What vessels other than the "Titanic" sent or received the messages at or shortly after the casualty in connection with such casualty? What were the vessels that sent or received such messages? Were any vessels prevented from going to the assistance of the "Titanic" or her boats owing to messages received from the "Titanic" or owing to any erroneous messages being sent or received? In regard to such

### Page 5

erroneous messages, from what vessels were they sent and by what vessels were they received and at what times respectively?

19. Was the apparatus for lowering the boats on the "Titanic" at the time of the casualty in good working order? Were the boats swung out, filled, lowered, or otherwise put into the water and got away under proper superintendence? Were the boats sent away in seaworthy condition and properly manned, equipped and provisioned? Did the boats, whether those under davits or otherwise, prove to be efficient and serviceable for the purpose of saving life?
20. What was the number of (a.) passengers, (b.) crew taken away in each boat on leaving the vessel? How was this number made up having regard to:
1. Sex.
  2. Class.
  3. Rating?
- How many were children and how many adults? Did each boat carry its full load and, if not, why not?
21. How many persons on board the "Titanic" at the time of the casualty were ultimately rescued, and by what means? How many lost their lives? Of those rescued how many have since died? What was the number of passengers, distinguishing between men and women and adults and children of the 1st, 2nd, and 3rd classes respectively who were saved? What was the number of the crew, discriminating their ratings and sex, that were saved? What is the proportion which each of these numbers bears to the corresponding total number on board immediately before the casualty? What reason is there for the disproportion, if any?
22. What happened to the vessel from the happening of the casualty until she foundered?
23. Where and at what time did the "Titanic" founder?

24. What was the cause of the loss of the “Titanic,” and of the loss of life which thereby ensued or occurred? Was the construction of the vessel and its arrangements such as to make it difficult for any class of passenger or any portion of the crew to take full advantage of any the existing provisions for safety?
25. When the “Titanic” left Queenstown on or about 11<sup>th</sup> April last was she properly constructed and adequately equipped as a passenger steamer and emigrant ship for the Atlantic service?
26. The Court is invited to report upon the Rules and Regulations made under the Merchant Shipping Acts, 1894 -1906, and the administration of those Acts, and of such Rules and Regulations, so far as the consideration thereof is material to this casualty, and to make any recommendations or suggestions that it may think fit, having regard to the circumstances of the casualty with a view to promoting the safety of vessels and persons at sea.

*The Attorney-General:* My Lord, may I say that the Assessors will all have copies of the Questions by this afternoon. They have, of course, had to be very hurriedly typewritten, and we have a very few copies; but I will just indicate what they are. My Lord, the first Question asks, “When the “Titanic” left Queenstown on or about 11<sup>th</sup> April last (a) what was the total member of persons employed in any capacity on board her, and what were their respective ratings? (b) What was the total number of her passengers, distinguishing sexes and classes and discriminating between adults and children?” The second Question is for the purpose of ascertaining whether the “Titanic” complied with the requirements of the Merchant Shipping Acts and the Rules and Regulations which apply to passenger steamers and emigrant ships. The third Question asks whether any special provision was made in the actual design and construction of the “Titanic” for the safety of the vessel and the lives of those on board in the event of collision or casualty.

The fourth is to ascertain how the “Titanic” was officered and manned. The fifth relates to the number of boats and asks “What was the number of the boats of any kind on board “Titanic”? Were the arrangements for manning and launching the boats on board the “Titanic” in case of emergency proper and sufficient? Had a boat drill been held on board, and, if so, when? What was the carrying capacity of the respective boats? The sixth Question relates to the installations for receiving and transmitting messages by wireless telegraphy on board the “Titanic,” and as to the number of operators employed on the installation, and in whether the installation was in good and effective order. The seventh Question is as to whether instructions as to navigation were given to the Master or known by him to apply to her voyage, and, if so, what those instructions were. The eighth Question relates to the track taken by the “Titanic” in crossing the Atlantic Ocean, and whether that was the track usually followed by liners, and whether that track is a fit track at that time of the year, and whether the Master had any, and, if so, what discretion as regards the track to be taken. That, your Lordship will see, deals with what I may call

the first Chapter of Questions, 1 to 8, that is, as to what happened before any suggestion of warning.

Then, my Lord, Question 9 asks whether, after leaving Queenstown, information reached the "Titanic" by wireless messages, or otherwise by signals, of the existence of ice in certain latitudes. Then, if such information did reach the "Titanic," it is asked what were the messages or signals, and when were they received; was her course altered in consequence of receiving such information; and, if so, in what way, and what replies did she send? Then Question 10 asks whether a good and proper look-out for ice was kept on board, and whether, after receiving any warning, directions were given to vary the speed, and, if so, were they carried out? Then, my Lord, Question 11 is directed to ascertaining whether binoculars were provided for and used by the look-out men, and whether the use of binoculars is necessary or useful in such circumstances; whether the "Titanic" had the means of throwing searchlights around her; whether, if she had, she made use of them to discover ice, and whether searchlights should have been provided and used on board the "Titanic"? Question 12 asks whether any other precautions were taken by the "Titanic" in anticipation of meeting ice; and the 13<sup>th</sup> Question is to ascertain whether anybody on board the "Titanic" saw and reported ice before the casualty occurred, and, if so, what measures were taken by the officer on watch to avoid it, and whether these were proper measures and promptly taken. The 14<sup>th</sup> Question asks what the speed of the "Titanic" was shortly before and at the moment of the casualty, and whether such speed was excessive under the circumstances. My Lord, that concludes the Questions before the casualty. Then the 15<sup>th</sup> Question is, "What was the nature of the casualty which happened to the 'Titanic' at or about 11.45 p.m. on the 14<sup>th</sup> April last? In what latitude and longitude did the casualty occur?"

Now, my Lord, come the questions relating to what happened after the casualty. Question 16 is, "What steps were taken immediately on the happening of the casualty? How long after the casualty was its seriousness realised by those in charge of the vessel? What steps were then taken? What endeavors were made to save the lives of those on board and to prevent the vessel from sinking? Question 17 is, "Was proper discipline maintained on board after the casualty occurred?" Then Question 18 asks what messages were sent by the "Titanic" after the casualty, and at what times and what answers were received. Then Question 19 is, "Was the apparatus for lowering the boats on the 'Titanic' at the time of the casualty in good working order? Were the boats swung out filled, lowered, or otherwise put into the water and got away under proper superintendence? Were the boats sent away in seaworthy condition and properly manned, equipped, and provisioned? Did the boats, whether those under davits or otherwise, prove to be efficient and serviceable for the purpose of saving life." Question 20 is to ascertain the number of passengers and crew taken away in each boat on leaving the vessel, and the question is asked: "How was this number made up, having regard to sex, class, and rating," and "how many were children and how many adults? Did each

## **Page 6**

boat carry it's full load, and, if not, why not?" Then Question 21 is to ascertain, "How many persons on board the 'Titanic' at the time of the casualty were ultimately rescued,

and by what means?" And your Lordship will see that it is asked, "What was the number of passengers, distinguishing between men and women and adults and children of the 1st, 2nd, and 3rd classes, respectively, who were saved? What was the number of the crew, discriminating their ratings and sex, that were saved? What is the proportion which each of these numbers bears to the corresponding total number on board immediately before the casualty? What reason is there for the disproportion, if any?" Then No. 22 is a general question: "What happened to the vessel from the happening of the casualty until she foundered?" And then question 23 is, "Where and at what time did the 'Titanic' founder?" Then Question 24 is, "What was the cause of the loss of the 'Titanic' and of the loss of life which thereby ensued or occurred?" No. 25 is the question to which I referred, as to the construction and adequate equipment as a passenger steamer and emigrant ship for the Atlantic service, and Question 26 is, "The Court is invited to report upon the Rules and Regulations made under the Merchant Shipping Acts, 1894 -1906, and the administration of those Acts, and of such Rules and Regulations so far as the consideration thereof is material to this calamity, and to make any recommendations or suggestions that it may think fit, having regard to the circumstances of the casualty with a view to promoting the safety of vessels and persons at sea."

My Lord, those are the questions which we submit to the Court at the present moment, and, as I have indicated and as your Lordship will see, by reference to the Rules, we are at liberty at the close of our case to supplement those questions or to modify them if we think fit.

My Lord, I do not think there is anything I can say further. I think that is all that is necessary to trouble your Lordship with today. It indicates what the course of procedure will be, and I have no doubt your Lordship will find it convenient to have the Questions at this early stage, so that you may see to what the evidence will be directed. My Lord, I should propose tomorrow to proceed and open the case on such material as we have at present, and then to call the evidence which is now available.

*The President:* Then, Sir Robert, if you have had time to consider the questions, or if not, after you have had time to consider them, perhaps you will let me know whether you think the questions ought to be supplemented.

*Sir Robert Finlay:* My Lord, I saw the questions this morning and at present nothing occurs to me; but of course it will be very carefully considered, and if any further questions occur to me as desirable, of course we will lay them before the Court. I understand the Attorney-General to suggest calling in the first place tomorrow some of the survivors who have reached this country.

*The Attorney-General:* Yes.

*Sir Robert Findlay:* There are some four or five of these persons who may be in a position to give evidence with regard to the nature of the damage to the vessel which caused the sinking. There are only four or five of them, and it occurs to us that it would be most desirable that these Witnesses should not leave, as they may be wanted at a later stage, when the evidence from America and the Witnesses who are now in America are available. My Clients will supply the Board of Trade with the names of these Witnesses, and I would suggest for the Attorney-General's consideration that their evidence should be delayed; that they should be kept and that their evidence should not be taken until we

are in a position to put before the Court other evidence with regard to what they can say which may be of importance.

*The Attorney-General:* I am not sure that I quite appreciate what my learned friend means by the last observation. When the Witnesses have been called, if it is desired to keep four of five of them here, as he says, in case any question arises with regard to Witnesses who may be called from America, of course they will be kept by us, so far as we have power to keep them, and I have no doubt they will remain here.

*The President:* I did not understand that to be quite the suggestion.

*The Attorney-General:* I thought it was from what was said at first, but from what my learned friend said just now, I gather the suggestion was that they should not be called till later.

*The President:* That they should be kept until some additional evidence, without which they cannot be well examined, comes from America. That is what I understand to be the suggestion.

*Sir Robert Finlay:* All I mean, my Lord, was this: I do not think it is desirable that the evidence of these Witnesses should be split up. It may form part of a whole body of evidence relating to an important part of the Inquiry. But I will put my learned friend, the Attorney-General, in possession of the names of the Witnesses.

*The Attorney-General:* If my learned friend will tell me who the Witnesses are and his reasons, I have no doubt we shall be able to agree to keep them.

*Sir Robert Finlay:* Then I understood my learned friend to say that after the evidence of the survivors was taken he would propose to go to the question of construction.

*The Attorney-General:* Yes.

*Sir Robert Finlay:* I quite agree with that, and I do not know that any considerable delay at all events will be necessary in dealing with the evidence on that part of the case.

*The Attorney-General:* No, I think that is a question at the most of two or three days, and I think we shall probably be ready to proceed with that at some time either on Tuesday or Wednesday of next week, assuming we have got rid of the other evidence, which I do not think will take long, because although there are many Witnesses, with a large number of them, as your Lordship knows, it is mere repetition.

*Sir Robert Finlay:* Then my learned friend mentioned another subject which must be discussed upon the Rules and Regulations that have been made with regard to these matters as to preventing collisions. Of course, any general discussion of Rules and Regulations might take place at any time. The only suggestion I wish to make is that the full consideration of the Rules and Regulations could take place with more advantage when the evidence with regard to the circumstances of this particular casualty is before the Court.

*The President:* Undoubtedly.

*Sir Robert Finlay:* And I doubt whether any great advantage would be derived from a general discussion of the Rules and Regulations at present without regard to the particular case, the circumstances of which have not been fully disclosed.

*The Attorney-General:* The only point is that we could have got on with the evidence that will be forthcoming with regard to the Rules and Regulations. Some evidence will have to be given as to what has taken place in regard to that matter; and if we cannot proceed because Witnesses are not here to put before the Court, it occurred to me that we

could usefully employ the time by calling Witnesses to prove these Rules - not to discuss them. We shall have to discuss them, of course, hereafter. *The President:* What do you mean by proving the Rules?

*The Attorney-General:* I think your Lordship will have to hear something about the Rules more than mere formal proof. I mean to say as to the history of the Rules - what has been done at various times.

*The President:* Do the Rules need to be proved?

*The Attorney-General:* I think probably some evidence will be useful. They will not need to be proved, but it is desirable that you should be told what has happened with regard to them. I attribute no importance to calling that evidence at any

## **Page 7**

particular time; the only thing is that I thought you would be anxious that no time should be lost that could be usefully occupied, and therefore that we should proceed as far as we could; but I quite agree with my learned friend that the discussion of them must necessarily be postponed until a later stage, when your Lordship has got the evidence before you. I did not mean to indicate that there should be a discussion; it was only a question of proving what has happened.

*The President:* What do you propose to do now, Mr. Attorney?

*The Attorney-General:* I did not propose to do anything further today. There is one matter which, I think, might be dealt with today - I am not sure that it can be satisfactorily disposed of or considered - but it may be that there are persons here today who desire to be represented, and who wish to make an application. I do not know whether your Lordship thinks it would be convenient that they should do that now, if they are here, or that it should be postponed and dealt with altogether tomorrow. We have not had notice of them at present, but whoever is here and wishes to give notice it might be desirable that he should do it. I said we had not had notice. I think we have had notice from one, but who it is I do not know.

*A notice was handed to the Attorney-General.*

*The Attorney-General:* This is apparently notice on behalf of the National Sailors' and Firemen's Union.

*Mr. Thomas Scanlan, M. P.:* I have to apply, my Lord, on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland, and the personal representatives of a number of their members who were members of the crew, and on behalf of a certain number of their members who are survivors, to be represented in the terms of Rule 5 of the Statutory Rules and Orders to which Sir Rufus Isaacs has referred. Rule 5 is in these terms: "Any other person may, by leave of the Judge, appear, and any person who appears under this Rule shall thereupon become a party to the proceedings." In the terms of that Rule, and on behalf of this Union, which represents 80,000 sailors and firemen, I respectfully make this application.

*Mr. W. M. R. Pringle, M.P.:* My Lord, I desire to apply to the Court for leave to appear on behalf of the Ship Constructors' and Shipwrights' Association. That Association represents a large body of men who are engaged, not only in the construction of ships,

but who are employed in the manning of ships, and they are consequently interested in this Inquiry from two points of view; first of all, from the point of view of the construction and equipment of ships, more especially in relation to life-saving, and, secondly, in relation to the manning of ships for the purposes of life-saving. It seems to me that, both of these considerations are relevant to certain of these questions which are being put to this Court by the Board of Trade, and which have been enumerated by the AttorneyGeneral.

*Mr. Thomas Lewis:* My Lord, I desire to make an application to represent the British Seafarers' Union.

*The President:* How does that differ from the other Union of Sailors and Firemen?

*Mr. Thomas Lewis:* It is a distinct organisation, my Lord

*The President:* It may be a distinct organisation, but what is the difference between the two?

*Mr. Thomas Lewis:* The same class of men are catered for in the organisation, but the British Seafarers' Union represents a large number of the crew. My friend represents a certain number and my organisation represents about 200 members of the crew, about 60 or 70 of whom are survivors. That is on the Sailors' and Firemen's section, and I ask on behalf of the British Seafarers' Union to be allowed to represent them.

*Mr. Clement Edwards, M.P.:* My Lord, I appear on behalf of the Dockers' Union, a number of whose members formed a part of the crew, some of whom were drowned and some of whom survived.

*Mr. L. S. Holmes:* My Lord, I appear on behalf of the Imperial Merchant Service Guild, which is a society of officers of the mercantile marine, numbering over 15,000. The second, third, fourth, and fifth officers, who are survivors, are members of that Guild, and the chief and first officer and sixth officer, who are dead, were also members of that Guild, and on their behalf I apply for leave to appear, to represent them at this Inquiry.

*Mr. Botterell:* My Lord, may I say that I appear here upon instructions on behalf of the Chamber of Shipping. They are anxious to give your Lordship and the Commission any assistance and information they can, and therefore I ask that I may be allowed to appear on their behalf in case any questions arise upon which you may require any assistance.

*The President:* Mr. Botterell, what is the object of the Association which you are representing?

*Mr. Botterell:* It is the Chamber of Shipping, my Lord.

*The President:* In this connection I mean?

*Mr. Botterell:* Directly, I do not suppose they have any interest in the Inquiry at all, but indirectly, the President of the Chamber thought, as they represent the shipping of the United Kingdom and take a great interest in the matter, it would be as well for them to place themselves at your Lordship's service in case you should require any assistance from them.

*The President:* Now, Mr. Attorney, subject to anything you may have to say, I propose to allow the National Sailors' and Firemen's Union to be represented; and I propose also to allow the Chamber of Shipping, as I think you called it, Mr. Botterell, to be represented. With regard to the others, if during the Inquiry it occurs to me that it is desirable that they should be represented, then I can take care that the bodies concerned should be communicated with; but I do not feel disposed at present to have more than the two I

have mentioned represented, and I will not do that until I have heard whether you have any objection to it, Mr. Attorney.

*The Attorney-General:* No, my Lord, I raise no objection.

*The President:* Do you see any objection to it, Sir Robert Finlay?

*Sir Robert Finlay:* I am quite content to leave it on the footing your Lordship has suggested.

*Mr. W. M. R. Pringle, M.P.:* My Lord, may I make a further submission to you? I think that the Ship Constructors' and Shipwrights' Association has a somewhat special interest

-

*The President:* You must not argue the question again. I thought you had said what you wanted to say.

*Mr. Thomas Lewis:* I am not quite clear, my Lord, with reference to your reply to the Attorney-General. Do I understand that your Lordship will allow the British Seafarers' Union to be represented here?

*The President:* No, not at present. I may later on.

*Mr. Thomas Lewis:* May I point out, my Lord, that the union I represent represents a large number of the crew.

*The President:* That may be; but at present my opinion is I shall have sufficient information and assistance if I allow the National Sailors' and Firemen's Union to be represented. If later on I want your assistance, I will take care to let you know. *Mr.*

*L. S. Holmes:* May I take it that your Lordship will allow the officers of the "Titanic" to be represented?

*The President:* I thought I had been very plain in what I said. I have allowed two of the associations to be represented, and I have mentioned

## **Page 8**

them. If I find that the others ought to be represented, as I go on with the Inquiry and hear the evidence, I will take care to let you know.

*Mr. W. H. Champness:* My Lord, I represent the widow of a deceased first-class passenger who was drowned.

*The President:* Do you appear on behalf of a particular widow?

*Mr. W. H. Champness:* Yes, a particular widow My Lord, I think nobody has applied at present to your Lordship on behalf of the representatives of the deceased passengers?

*The President:* I cannot consent to your application.

*The Attorney-General:* I understand what your Lordship has decided is that the National Sailors' and Firemen's Union and the Chamber of Shipping shall be allowed to appear, and that with regard to the other applications all you have done is to say that at present your Lordship is not allowing them to appear.

*The President:* That is exactly what I have decided.

*The Attorney-General:* I am desirous of putting this before your Lordship for your consideration at a later time when you may have some further application made to you in connection with this matter; that so far as I am concerned, I should not raise any opposition to anyone whose interests were involved in any way, during the course of this

Inquiry, being represented or at least applying to your Lordship to be represented. I only want to make that quite clear at the outset, because naturally the Board of Trade are anxious that everybody who has any interest in the matter should, when his interest is affected, have a right to put questions under the presidency of your Lordship. *The President:* I quite understand that. Now is there anything more to be done today? *Sir Robert Finlay:* My Lord, I hear from those sitting near me that there is great difficulty in hearing in this hall. This hall was not built for the purpose of holding Inquiries of this kind, and its acoustic properties are very bad indeed.

*The Attorney-General:* I quite agree.

*Sir Robert Finlay:* I think if we go on here it will most seriously hamper the progress of the Inquiry. May I suggest to your Lordship and to the Attorney-General, the desirability, if possible, of getting another hall. There is a large committee room at Westminster which may be available, and, I am perfectly certain that the efficiency of the Inquiry would be enormously increased by having another room better adapted for the purpose.

*The President:* I absolutely agree, and I am sure if the Attorney-General will put himself in communication with the Solicitor to the Board of Trade, arrangements can be made for the sittings to be held in a hall which will be more convenient, or a room which will be more convenient to all of us.

*The Attorney-General:* I will see what can be done, certainly. I entirely agree with my learned friend that it is most difficult to hear and most inconvenient; but we will see what can be done. Tomorrow, in any event, we meet here, I understand. *The President:* Yes. We must go on here until we find another room. *The Attorney-General:* What time does your Lordship propose to sit tomorrow morning?

*The President:* What time will be convenient?

*The Attorney-General:* I suggest that we sit at half-past ten if that will be convenient to your Lordship.

*The President:* Very well. We will sit at half-past ten. Then, at present, I will adjourn the Inquiry till half-past ten tomorrow morning.

*(Adjourned to tomorrow at half-past ten o'clock.)*

## **Wreck Commissioners' Court.**

SCOTTISH HALL,

BUCKINGHAM GATE,

*Friday, 3rd May, 1912.*

## **PROCEEDINGS**

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,

CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC."

### SECOND DAY.

The RIGHT HON. Sir RUFUS ISAACS, K.C., M.P. (Attorney General), THE RIGHT HON. Sir J. SIMON, K.C., M.P. (Solicitor-General), Mr. BUTLER ASPINALL, K.C., Mr. S. A. T. ROWLATT and Mr. RAYMOND ASQUITH (instructed by Sir R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. Sir ROBERT FINLAY, K.C., M.P., Mr. F. LAING, K.C., Mr. MAURICE HILL, K.C., and Mr. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.) appeared as Counsel on behalf of the White Star Line.

Mr. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor) appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland, and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted on application.)

Mr. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

Mr. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on Application.)

Mr. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

Mr. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons) watched proceedings on behalf of the Allan Line Steamship Company.

Mr. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son) watched proceedings for the Canadian Pacific Railway Company.

#### Page 10

*The Commissioner:* Is Mr. Scanlan here?

*Mr. Scanlan:* Yes, my Lord.

*The Commissioner:* Mr. Scanlan, can you tell me how many men there were on board this vessel who belonged to what is called the British Seafarers' Union?

*Mr. Scanlan:* That I cannot tell your Lordship. The Seafarers' Union is a distinct body from the Union I represent.

*The Commissioner:* I understand now (I did not know it yesterday) that it is an offshoot from your body. Can you tell me how many of your body were on the "Titanic"? *Mr.*

*Scanlan:* Well, my Lord, our information is not quite accurate as yet on that point, because the officials of the Union have only just got the Ship's Articles, from which they are compiling a list. They have paid away quite a number of claims to widows of the deceased - somewhere over 30, I understand.

*The Commissioner:* How many men do you suppose there were on board the "Titanic" belonging to your Union?

*Mr. Scanlan:* I understand the number is less than 100.

*The Commissioner:* Have you any idea how many men there were on board belonging to the new organisation, the offshoot - the British Seafarers' Union?

*Mr. Scanlan:* We cannot say, my Lord.

*The Commissioner:* Have you any idea of the number?

*Mr. Scanlan:* The gentleman who represented that body yesterday, my Lord, stated that it was 200.

*The Attorney-General:* Sixty or 70 out of 200, I understood him to say.

*The Commissioner:* Can you communicate with him?

*Mr. Thomas Lewis:* I am here, my Lord.

*The Commissioner:* Can you tell me how many men belonging to your Union were on board the steamer?

*Mr. Thomas Lewis:* There was a communication from the Chairman - I am not aware whether your Lordship has received it or not - to this effect -

*The Commissioner:* About the number is enough for me.

*Mr. Thomas Lewis:* The number is 228 on board the "Titanic," and the corrected figure of those saved, 77 out of the total number of 228 on board.

*The Commissioner:* How long has the Seafarers' Union been in existence? *Mr.*

*Thomas Lewis:* Since October 6th of last year.

*The Commissioner:* Then it has been in existence about six months?

*Mr. Thomas Lewis:* Six or seven months, my Lord.

*The Commissioner:* Is it more closely connected with Southampton than the other Union?

*Mr. Thomas Lewis:* It is all Southampton men, my Lord; it is at present a Southampton Union. It is called the British Seafarers' Union, but its headquarters are at Southampton, and the bulk of its members reside at Southampton, and it has a membership of about 4,000. Practically the whole of the seafarers of the "Titanic" are members of our Union.

*The Commissioner:* I personally had never heard of this Union, but I have heard for many years past of the Seamen and Firemen's Union I think, Mr. Attorney, in these circumstances it would be more satisfactory if the Seafarer's Union was also represented.

*The Attorney-General:* My Lord, I quite accept it.

*Mr. L. S. Holmes:* My Lord, might I renew my application as to the whole of the officers and the deceased officers who were members of the Union? The whole of the officers were members; they belonged to the Imperial Merchant Service Guild. *The*

*Commissioner:* I think they ought to be represented.

*Mr. W. H. Champness:* With your Lordship's permission I desire to renew my application to represent a deceased passenger. With great respect I submit that the interest of the passengers is the most vital interest that can be affected by this Inquiry, and that interest can only be represented by someone who appears on behalf of one or two of the deceased. There is no association of passengers, and I submit that that is an interest which should be before your Lordship. I do not desire unduly to prolong the Inquiry - possibly I may not call evidence - but I do desire to have an opportunity to ask questions of the Witnesses.

*The Commissioner:* I shall see about that later on. I do not accede to the application of a single person to be represented.

*Mr. W. M. R. Pringle:* May I be allowed to make an application on behalf of two members of the crew who were assigned to the ship in respect of the trades which I represent; one was a ship's carpenter and the other a joiner, and I am appearing on behalf of the relatives of both the deceased?

*The Commissioner:* There is no objection to your remaining here and listening, but I cannot at present allow you to interfere.

*Mr. W. M. R. Pringle:* May I be allowed to put questions with your Lordship's permission?

*The Commissioner:* Well, that depends upon the question and upon the circumstances of the case. Those circumstances have not arisen yet.

*The Attorney-General:* If your Lordship pleases, in the statement of the case which I shall now make to your Lordship, of course you will understand, as I indicated yesterday, that our information, that is to say, such information as I can act upon in opening the case to your Lordship, is founded at present upon very slight material. I do not feel justified in referring to press statements which have appeared, or reports in the papers of statements made elsewhere until, at any rate, I know that I shall be in a position to call as Witnesses before your Lordship those who made the statements; and therefore, although it would be an affectation to pretend, certainly as far as I am concerned, and I have no doubt also with regard to your Lordship and those who are assisting you, that you did not know a good deal more than may be stated this morning, you will understand why it is that I am confining myself to basing my statement upon evidence which I know at present I shall be able to put before you. And I think it will be sufficient for the purpose, because all your Lordship will require is a short statement of the material facts and some indication of the particular points upon which we desire to lay stress.

Now, my Lord, the "Titanic" was constructed under survey in the usual way by the Board of Trade for a passenger certificate, and to comply with the American emigration laws. She was a triple-screw steamer, a British steamship built by Harland and Wolff, Limited, at Belfast, for service in the White Star Line between Southampton and New York. She was a vessel of gigantic dimensions, and her length (I am reading from the register, copies of which will be handed up both to your Lordship and to those who are associated with you) from the fore part of the stem under the bowsprit to the aft side of the head of the stern post (that is the system of measurement) was 852 feet. I need not trouble about the decimal. Her main breadth, that is measured to the outside of the plating, was 92 feet. The depth of the vessel from the top of the deck at side amidships to

the bottom of the keel was 65 feet. There are other measurements, but I think I have given your Lordship the material ones. Now, my Lord, she had one turbine, and two sets of 4-cylinder triple expansion reciprocating engines, with a nominal horse-power of 6,906. The two reciprocating engines drove the wing propellers, and the turbine drove the centre. That I think is sufficient for the present purpose with regard to the engines. The horse-power was sufficient to give a speed of at least 21 knots. She was registered at Liverpool with a gross tonnage of 46,328 tons. Her registered tonnage was 21,831 tons. Your Lordship will see from the plan (and I only propose to state quite simply the points with reference to the plan) that she had five decks amidships

## Page 11

- it is rather important to bear in mind the number of decks fore and aft and amidships - seven decks in the No 1 hold, and six decks in the other holds. Apparently there was a lower Orlop deck in the No 1 hold, and that is what made the seven. She had a promenade deck. Your Lordship notices there is the boat deck which is the top deck, then there is a promenade deck, and a bridge deck. The promenade deck was about 500 feet long. My Lord, I will say something a little later about the bulkheads, but that is sufficient for the moment to indicate the size of the vessel, and she had a passenger certificate of the Board of Trade to carry 3,547 persons.

*The Commissioner:* When you say "persons" you mean passengers?

*The Attorney-General:* I did not mean passengers when I said "persons," and your Lordship will see why I am subdividing them. The 3,547 persons includes passengers and crew - 905 first-class passengers, 564 second-class passengers, 1,134 third-class, and the complement of crew 944. She carried, as your Lordship may see from the model which is before you, a number of boats on her boat deck. Altogether she carried 14 lifeboats and two boats which were not lifeboats but wooden cutters, which were used as emergency boats or were swung out in case of anybody falling overboard or in case of any sudden emergency in the lowering of a boat. That made her total 16, and besides that she had four Englehardt collapsible boats, and, counting the collapsible boats, that gave her 20, with a carrying capacity according to cubic feet of 1,167 persons.

*Mr. Laing:* I think it is 1,178.

*The Attorney-General:* There is a very slight difference between us I know. According to the constructor's view there was a capacity for 1,178, but it is not very material; according to our view it is 1,167. Then besides that, my Lord, there were 3,560 lifebelts or other similar approved articles and 48 life buoys. Her draught forward, on leaving Southampton, was 33 feet 8 inches and 34 feet 4 inches aft.

This was the first voyage of the "Titanic," and, as your Lordship sees from the model, and I think the statement which I am reading from here, she was, if not exactly built on the same lines and principle as the "Olympic," her sister ship, substantially so. She left Queenstown on the 11th April on this first voyage bound for New York. She carried a total number of passengers of 1,316, and a total number of crew of 892. I cannot say that those figures which I have just given, and which make a total of 2,208, are agreed figures. There is a slight variation upon which I do not think for the purpose of this

Inquiry we shall need to spend any time - I think my friend's figures make it 2,206, but we need not trouble about that. My Lord, before I proceed to describe the voyage I want to indicate sufficiently, for the purpose of your Lordship bearing it in mind, that this vessel had, I think I am right in saying, fifteen bulkheads.

*Mr. Laing:* Yes, that is right.

*The Attorney-General:* Fifteen watertight bulkheads with a number of watertight doors. My Lord, I have no doubt it will be necessary, during the course of the case, to go more fully into the design of these watertight doors and also for the purpose of ascertaining how many compartments there could be divided up with these doors closed. I understand, but I do not for a moment profess to say more than that it is what I understand at the present moment with regard to this vessel, that she was designed and constructed on the principle that she would remain afloat in the event of any two adjoining compartments being flooded. That I understand to be the scheme of the design of this vessel with regard to the bulkheads and the watertight doors. She was so built and strengthened that in the event of any two of the adjoining compartments being flooded, the vessel nevertheless would float, and assuming that two of the adjoining compartments were flooded that there would still be a free-board of some 2 feet 6 inches to 3 feet in the bulkhead. That is the design of construction; that is, to put it in another way, that the bulkhead would in the event of two of the compartments being flooded extend to 2 1/2 to 3 feet above the waterline - that she would then float and the top of her bulkhead would be 2 1/2 to 3 feet above the waterline. Therefore the result would be, according at any rate to the design of this vessel, supposing that she had come into collision either with another vessel, or even with an iceberg or any other obstacle, that so long as not more than two of her adjoining compartments were flooded she would float in perfect safety, particularly if you assume, as we do here, a calm sea. That is the position, and I understand that is the design upon which she was built. Your Lordship, of course, will hear a good deal more about this. We shall call those who were responsible for her construction. I am not quite sure for the moment, and therefore I will not go into it, how many watertight sliding doors there were. Obviously there must have been a considerable number, because there would have to be a passage in the ordinary course through the bulkheads; but it is a considerable number, and your Lordship will hear what the number was later. The watertight doors as I understand are closed some by gravity and some by gear, and we will have to go into that in greater detail later.

Now, my Lord, I come back to the commencement of her voyage from Queenstown on the 11th April. All went well. It was a quiet and successful voyage up to the casualty, which I am going to refer to directly. The weather was very fine all the way, the sea calm, and the wind west-south-west during the whole voyage. The temperature was rather cold, particularly on the 14th April, which is the date of the casualty, which took place, as your Lordship knows, between eleven o'clock and midnight of the 14th. So far as one is able to fix it (it is not possible, I think, to fix it with precision, at any rate with the material before me at present), it must have been about 11.40 that the casualty happened, at night. It was a starry night on the night of the 14th, the atmosphere was clear - some Witnesses say particularly clear. There was no moon, and the vessel, at any rate beyond all question up to the point of time to which the examination now before your Lordship relates, that is the casualty, was proceeding at the speed of 21 knots. So far as I am able to gather from

the evidence, that speed was never reduced, and she continued travelling at that speed during the whole of the 14th April, right up till the time of the collision with the iceberg, and, according to the evidence which we shall place before your Lordship, notwithstanding warnings that there were icebergs in the neighbourhood and that in the track in which she was proceeding she would meet them or would be likely to meet them. My Lord, at the present moment we are able to bring before the Court evidence of two vessels, one the "Caronia" and the other the "Baltic," which by means of wireless telegraphy informed the "Titanic" during that day that icebergs, growlers, and field ice were reported in the track along which the "Titanic" was proceeding. I think, my Lord, that the distinction, so far as I follow it, between a berg and a growler is that a growler is an iceberg, with but very little protruding above the water. Now, my Lord, in that connection I think it would be useful if your Lordship would just look at the North Atlantic Route Chart for the purpose of following the track which is marked for vessels between Queenstown and New York. I have marked the place on my chart, which I am going to hand up to your Lordship, where we say the collision occurred, but I just want my learned friend to see it.

*(The chart was handed up to his Lordship.)*

*The Attorney-General:* Now does your Lordship see the blue cross which I have made - it is on the left half of the chart?

*The Commissioner:* Yes.

*The Attorney-General:* According to our view, and according to the evidence, as far as we know it at present, when she struck ice she was in or near latitude 41° 46' North, and longitude 50° 15' West. The spot I have marked with a cross I have shown to my learned friend, Mr. Laing, and he agrees that

## **Page 12**

that correctly indicates the spot according to that latitude and longitude. Now, if your Lordship will look at that chart for a moment you will find New York on the extreme left, and if you follow the line indicated to the blue cross from the extreme left the course from the blue cross to New York is what she still had to do to complete the voyage. And if your Lordship will look a little way to the right you will see a curve, which follows right up to Ireland, and that is marked "Mail steamers outward, 15th January to 14th August." There are homeward tracks and outward tracks. There are tracks for the steamers outward, from the 15th August to the 14th January, and more southerly tracks for the mail steamers outward from the 15th January to the 14th August, and also for homeward voyages. The only point for the moment to which I desire to direct your Lordship's attention, as I think the Court will probably consider these tracks during the course of this investigation, is to indicate that there are these more southerly tracks for the vessels in this period from the 15th January to the 14th August - obviously and undoubtedly, I think, because it is thought necessary on account of ice to make a more southerly track during that period.

*The Commissioner:* Give me the tracks again. I have got the point marked by the blue cross.

*The Attorney*

*-General:* Now will your Lordship follow along a little way to the right from the blue cross, and there you have the beginning. You see there the point at which two tracks converge.

*The Commissioner:* From Queenstown.

*The Attorney-General:* Yes, one of them is from Queenstown, or from Ireland at any rate, and if you follow right along the higher of the two, you will find a few inches to the right, under the more northerly of these two tracks, the words "Mail Steamers outward, 15th January to 14th August."

*The Commissioner:* That is not the dotted line at all.

*The Attorney-General:* No my Lord, the dotted line is the homeward track; we have nothing to do with that. That is the indicated track for these mail steamers during this period of January to August, and along which, as I understand, the "Titanic" travelled. Your Lordship sees that when she gets to a certain point, the converging point of these two curves, she then proceeds in almost a straight line along the track to New York, past the cross which I have indicated. So that your Lordship will see, as far as I follow it, she was substantially travelling along the track which is marked for her for this time of year upon this chart. If your Lordship will look just a little above the spot with the blue cross you will see there, "Field ice between March and July," which is indicated upon the chart, and a little above that the great bank of Newfoundland. We may have to refer to the chart later, but for the moment I wanted your Lordship to appreciate that because of the evidence of the "Caronia."

*The Commissioner:* Where I see the words on the chart, "Icebergs, field ice," I suppose that means to the north of the line?

*The Attorney-General:* I understand so - that is, that the field of ice and icebergs have got so far south.

*The Commissioner:* This chart says, "Field ice between March and July." *The*

*Attorney-General:* Yes; that is to the northward of the striking point.

*The Commissioner:* But then further south there are these words, "Icebergs have been seen within this line." That means north of this line?

*The Attorney-General:* Yes, and there is another which your Lordship might note, as you have observed that, which follows immediately underneath it, "Icebergs have been seen within this line in April, May, and June."

*The Commissioner:* I saw that. That is a line to the southward again.

*The Attorney-General:* Yes, and it continues to the eastward of the indicated line of field ice. Now, I told your Lordship that these two vessels in any event, from the material now before us, gave this notice. My Lord, as it is, in our view, of importance to remember that notice was given and received by the "Titanic" during the day of the 14th that there were icebergs within this latitude and longitude, I call further attention to this, that in the case of the "Caronia" the notice was given in the morning. *The Commissioner:* The morning of the 14th.

*The Attorney-General:* The morning of Sunday, the 14th of April. At nine in the morning the message was sent to the "Titanic," and at 9.44 of that same morning the "Titanic"

*The Attorney*

acknowledged the message. I gave your Lordship the substance of the message, and it was that these bergs, growlers, and field ice were reported in 42° N., from 49° to 51° W. That was the message which the "Titanic" acknowledged.

*The Commissioner:* I think you have other copies of this chart.

*-General:* Yes, I will hand them up. I am sorry we did not have them before. Certainly, I quite agree that it is very important that the gentlemen who are with your Lordship should have them. I handed you up my own, my Lord.

*The Commissioner:* I should like something to be marked on my chart at all events to show these icebergs.

*The Attorney-General:* Certainly, my Lord.

*The Commissioner:* What I should like, Mr. Attorney is - perhaps Mr. Aspinall will do it for me - to have the points indicated on my chart which correspond with the information given by the "Caronia" as to the position of the ice. I do not know, Mr. Aspinall, whether you could mark it with a red pencil.

*The Attorney-General:* We could do that if your Lordship will hand the chart down to us.

*Mr. Aspinall:* I do not know, my Lord, if I might make this suggestion - that one of the Assessors, Captain Clarke, would do it with much greater accuracy than we could.

*The Commissioner:* Very well, I will ask Captain Clarke to do it for me.

*The Attorney-General:* If your Lordship will just pursue the line for about an inch to the right of the blue cross, that is the exact spot as I make it.

*The Commissioner:* It is no use my going along unless I have got it accurately in my mind.

*The Attorney-General:* I think that is right, my Lord.

*The Commissioner:* I daresay, but I want to see it on the chart, and I want to know also whereabouts the "Titanic" would be on her course at 9.44 in the morning of the 14th.

*The Attorney-General:* Yes, that, of course we do not know, we shall have to form an opinion from calculation.

*The Commissioner:* She was steaming 21 knots an hour you say, and you can put her back to 9.44 in the morning and ascertain where she was then, so that I may see what her relative positions were with the ice that was indicated. When you talk about 9.44 in the morning you are taking that time I suppose from the "Caronia"? *The Attorney-General:* Yes.

*The Commissioner:* Does that mean the "Caronia's" mean time, or what is it? *The*

*Attorney-General:* I am not quite sure what it means. It may mean, of course her time, I do not know. I rather gathered it was, but I will not be sure; but I know in the "Baltic," which is the other vessel, that is given as New York time. So that we shall have to ascertain that as we proceed, I do not know myself; I have made a note to ask the same question.

*The Commissioner:* I do not know if it is of very serious consequence.

*The Attorney-General:* No, I do not think it is, because, put it at what time you like, it is a considerable time before the casualty.

*The Commissioner:* Yes, it is more than twelve hours before the casualty.

*The Attorney*

*The Attorney-General:* Yes it would make a difference. The "Baltic" (I have given you the "Caronia" and I am dealing now with documents so that I can be precise) passed on reports of ice by wireless telegraphy to the "Titanic" from 49° 9' W., to 50° 20' W. *The Commissioner:* When did she pass on those reports?

**Page 13**

*-General:* They were passed on and acknowledged by the "Titanic" at 1 p.m. New York time on the same day.

*The Commissioner:* At 1 p.m.?

*The Attorney-General:* Yes, quite roughly, I think it would work out to about 3 p.m. by the "Titanic."

*The Commissioner:* About 3 p.m. by the "Titanic's" time?

*The Attorney-General:* Yes, that is it, and my Lord, while I am upon that, having given your Lordship 49° 9' W., longitude to 50° 20' W., I ought to have added "on the outward southern track." That was the message. That is the track to which I called your attention.

*The Commissioner:* I want to see if I have got the "Baltic's" figures right - 49° 9' N., 50° 20' W.?

*The Attorney-General:* Yes.

*The Commissioner:* I notice that the ice was between those points?

*The Attorney-General:* Yes on the outward southern track. Now if your Lordship would look just below the blue cross marked there, you will see the outward southern track is that line which you see immediately underneath.

*The Commissioner:* What are the figures again for the "Baltic"?

*The Attorney-General:* The only figures I have given you are longitude -

*The Commissioner:* For the "Baltic" I want them.

*The Attorney-General:* 49° 9' W to 50° 20' W longitude on the outward southern track.

*The Commissioner:* Where was the "Titanic" at the time that she received the "Caronia's" message, and where was she at the time that she received the "Baltic's" message?

*The Attorney-General:* All we can give your Lordship with reference to that is the distance that she must have travelled and for that you must have the times.

*The Commissioner:* Yes, you can form an idea, by the speed she was making, where she would be at the time that she received these two messages; and I want that.

*The Attorney-General:* Yes.

*The Commissioner:* Mr. Attorney, am I right in supposing that she ran right into the locality where the ice was after the warning that the ice was there?

*The Attorney-General:* Yes.

*The Commissioner:* That is what it comes to.

*The Attorney-General:* Yes, that is the point, and if you work it out with the chart, as we have been doing, it follows that she did that; because taking the point at which she struck the iceberg, and the indication to her by the "Baltic," you will observe that will work out

*The Attorney*

the position which I have just told your Lordship, immediately below the spot of the collision, actually on the southern track.

*The Commissioner:* Mr. Laing, do you agree about this?

*Mr. Laing:* No, my Lord, I cannot agree without seeing my figures of the exact spot. We are not quite certain of the exact spot, at the moment, of the collision.

*The Commissioner:* It is not a question of the exact spot. According to the indication made for me by my colleagues upon this chart, if, that is to say, the figures given to me by the Attorney-General are right, it looks as if she, having had warning, made for the ice.

*Mr. Laing:* Well, my Lord, we are not quite satisfied about the exact place of collision; we think there may be a substantial difference.

*The Commissioner:* Very well, if you say so, I will wait.

*Mr. Laing:* Yes, we think there may be, but at present we are not certain about it.

*The Commissioner:* Very well.

*The Attorney-General:* I quite appreciate what my learned friend says. I am sure my learned friend will agree with the way in which I put the blue cross. If the figures we have given are correct the spot indicated in the chart is correct, and if the figures we have given of the "Baltic" just now are correct what your Lordship said is also correct. My Lord, I cannot think that there can be any question between us as to the spot at which she struck the iceberg, because her own wireless messages to the "Baltic" asking for assistance were from 41° 46' N., and 50° 14' W., which is practically the spot. Her message was "Sinking; want immediate assistance." Of course, that is out of its order in the story, but I only wanted to tell your Lordship that to show there cannot be any question between us as to the spot at which we say she struck? *The Commissioner:* Now that you say comes to the blue spot?

*The Attorney-General:* Yes. I have now in my hands the "Caronia's" receipt of the message from the "Titanic" - what I gave just now was the "Baltic." This is the "Caronia": "Titanic requires immediate assistance. Been in collision with iceberg. Position: latitude 41° 46' N., longitude 50° 14' W."

*The Commissioner:* You told me 15.

*The Attorney-General:* Yes, I did - that is the spot that has been indicated at the same time. It is a difference of a mile; it is the same thing. Now, my Lord, according to the evidence which we shall call before you, after the receipt of these warnings, so far as we know, no reduction of the speed of 21 knots was made, and she traveled on during the afternoon, and when it became dark on this starry night, with no moon, she was going at a speed of 21 knots when she struck the iceberg. Of course that is a factor the importance of which your Lordship will appreciate, and which I desire to indicate at the earliest moment, so that any explanation that may be available should be given to your Lordship, and also, if there is any denial of the fact, that my friend may have notice that that is a point which I place before the Court as one of extreme importance as affecting this Inquiry.

Now, my Lord, the story of what happened immediately before the "Titanic" struck the iceberg is certainly somewhat difficult to give, and I do not propose to be in any way precise about it. I cannot be from the material we have at present, and your Lordship will have to hear the evidence upon it. What I have given now, and the evidence upon which I comment, is evidence which rests really upon documents, except as to speed, upon which we will call evidence which will, I think, place the matter beyond question as far as I understand what has taken place. Now, my Lord, there is also some further evidence. Undoubtedly during that day, Sunday, the 14th April, the temperature was extremely cold. It had been cold during the voyage; it became colder much on this 14th, and as they proceeded on their way till before the happening of the casualty the cold increased. My submission to the Court is that that would be an indication to those responsible for the navigation of the "Titanic."

*The Commissioner:* Are you talking of the temperature of the air or of the water? *The*

*Attorney-General:* I am talking of both, my Lord. The cold increased very considerably,

and was an indication to those who were responsible for the navigation and were accustomed to the voyages that they were in very close proximity to ice. That is my submission, that this increasing cold, and particularly of the water, was an indication to them of this proximity, more especially when taken in conjunction with the fact that the "Titanic" was then approaching the zone in respect of which she had received the warnings that there were growlers, icebergs, and fields of ice. My Lord, a little before she struck (I cannot give at present more indication than that) the man on the look-out in the crow's-nest sounded three bells. My Lord, the signal of three bells we understand to be something ahead. The practice apparently is to sound this signal and then to telephone from the crow's-nest, I imagine to the bridge, but I am going to leave the matter with that indication, because I am not able to speak precisely enough of what happened at that moment; we will wait till the evidence is a little more sifted. Then at that point Mr. Murdoch, who was the Chief Officer of the vessel and was in charge, was on the bridge. *The Commissioner:* Mr. Attorney, when you say the Chief Officer, I want to know whether you mean the First Officer?

#### **Page 14**

*The Attorney-General:* I was just asking about that, my Lord. I thought he was the Chief Officer, but I am told he was the First Officer. There has been some confusion about it, but I understand he was the First Officer.

My Lord, Captain Smith, who was the Captain of the "Titanic," was, at the actual time of striking, below, not on the bridge; he had gone down to his berth. He was a very experienced Captain in the employment of the White Star Line, and had, in fact, been in charge of the "Olympic" right up to the time of the "Titanic's" first voyage. He took charge of the "Titanic" because, as one would gather, the White Star Line had complete confidence in his skill and judgment. He had been many years in their employment and in charge of vessels belonging to the White Star Line; and I believe I am right in saying that, except for the occurrence between the "Hawke and the "Olympic," there had never been any collision in any vessel which he had commanded; and, as your Lordship knows, the matter of the "Olympic" and "Hawke" is now still *sub judice* in the Court of Appeal - litigation has resulted.

*The Commissioner:* What was the judgment?

*The Attorney-General:* The judgment was that owners were excused - were not liable, on account of compulsory pilotage, but that the "Hawke" was not to blame; the "Olympic" was. That is the judgment.

*Mr. Laing:* No fault was found with the Master.

*The Commissioner:* The "Olympic" was in charge of a pilot?

*The Attorney-General:* Yes, my Lord; not in charge of Captain Smith, but of a pilot. That matter is still the subject of litigation. That is how it stands at the present moment.

*The Commissioner:* Was there any blame imputed by the judgment to Captain Smith?

*The Attorney-General:* Not by the judgment, my Lord.

Now my Lord, after this report of the three bells signal, which was given by the lookout man, it is very difficult to know whether anything was done immediately before the

casualty. I confess that I am not able to make out, from the evidence that I have got at present, that anything at all was done, nor am I able to state to the Court how long an interval elapsed between the signal and the striking of the "Titanic" on the berg. We must leave it. I cannot attempt to say with any great precision what happened.

*The Commissioner:* Can you tell me, Mr. Attorney, how many of the men in charge would be apprised of these messages in the ordinary course of things?

*The Attorney-General:* Well, two officers, I think, would know. I cannot say more. Your Lordship sees, of course, that everybody no doubt is in this difficulty, that the persons chiefly concerned have succumbed in this disaster, and we have got to pick up, as best we can from those who survived, what happened; and, of course, from those who survived, as your Lordship will appreciate, we have not yet got statements.

*The Commissioner:* What I was asking was this - perhaps I ought to ask Mr. Laing - what in the ordinary course would be done with these messages? Would they be communicated to the officers of the ship, and, if so, to how many of them?

*Mr. Laing:* I am sorry I cannot answer, my Lord - certainly to the Captain.

*The Commissioner:* Of course, and I presume Murdoch would have received them. They would have been communicated to him.

*Mr. Laing:* I should imagine so, but at present I do not know.

*The Commissioner:* You do not know what the practice is?

*Mr. Laing:* I will try and find out, my Lord.

*The Attorney-General:* I have no doubt he would have received them, because, according to some of the evidence which we have even at present, it will be shown that the look-out man had special instructions to look out for ice; but, so far as I know on the evidence, nothing further was done by the "Titanic" after receipt of the warnings than to give this notice to the look-out man to keep a special eye open for ice.

*The Commissioner:* Is the look-out man alive?

*The Attorney-General:* We are going to call one, my Lord.

*The Commissioner:* Is this man you speak about, who rang the three bells, alive? *The Attorney-General:* I am not sure that he is, my Lord. We shall find out, of course, as we proceed, but he is not one of those who came home in the "Lapland." We have someone who heard it, but not the man who actually rang it.

Now, my Lord, the shock, so far as one knows from the evidence, taking it generally, does not appear to have been a severe one; that is, according to the accounts of the survivors. I am not saying there are not some who take a different view; but (I am only dealing with the evidence so far as I am able to at present), speaking generally, it does not appear to have been as severe perhaps as one would have imagined. However, your Lordship will hear all about that. Apparently, part of the starboard side of the vessel below the waterline was struck, and possibly also (although this is to a certain extent speculation or deduction from what happened afterwards) part of the bottom of the vessel was ripped up. Now, almost immediately after this had happened, water was observed to be pouring into the fore hatch.

My Lord, I see there is a reference in a newspaper report, and I am right in saying that the man who struck the three bells is alive, although we have not got a proof from him yet; he is in America.

Now, my Lord, from this moment again it is very difficult to ascertain what actually happened between the striking (which I place at 11.40 on the 14th April) and about two o'clock on the 15th in the morning when she sank. According to one of our Witnesses, who will be called before you, at a very early stage, the carpenter went to ascertain what water she was making, and he reported that she had made seven feet of water within a very few minutes; in the fore part - exactly in what part I cannot say -

*The Commissioner:* Is the carpenter alive?

*The Attorney-General:* No, my Lord, a number of Witnesses state that pieces of ice were observed immediately after she struck on the fore-well deck.

*The Commissioner:* Is anyone able to indicate with the pointer where the fore-well deck is?

*The Attorney-General:* Yes, my Lord. It is just abaft the foremast; it is easily seen. Now, my Lord, I am not sure that I have stated yet that almost immediately after she struck, Captain Smith came on the bridge - which is reconstituting, as best we can from the evidence, what happened - and I gather, from the orders that were given by him very shortly after he came on to the bridge, that he must have realised that the matter was serious; but, according to the information which we have got from the survivors, at any rate at present, there does not appear to have been any panic on board the vessel. Orders, generally speaking, were carried out in an orderly and a regular fashion. The men were told to go to their stations in their boats. I understand that each man had his station in the boat, and that there was a list, or there were lists in the boats, indicating the stations which the men were to take in the boats if the orders came, so that when an order came for men to go to their stations in the boats it was not necessary to tell him to what particular place he should go or what particular boat. The boats were numbered, and a man would know he had to go to boat No. 12 and take a certain place there. I cannot say from the evidence which will be called before your Lordship that the men seemed to know very well what their places in the boats were, notwithstanding these precautions which had been taken by the owners and the Captain, but still there appears to have been very little confusion. Orders were given for the boats to be lowered - to be got ready first; and also orders were given that the women and children were to come first; and orders were also given; the men were all called up - those who were not

## **Page 15**

on watch and had gone below were called up, as well as the passengers - and all were told to take lifebelts and put them on. Now I am not going at the present moment, particularly as it is not necessary, into further detail as to what happened at that time, because it is very difficult to say. I gather from the evidence (I mean now, of course, from the evidence which I know I can call before you) that the women and children were placed in the boats; that all the boats were lowered; that is the 16; the 14 lifeboats and the two wooden cutters; and that also the four collapsible boats were either were put into the sea or attempts were made to launch them. I am not sure what happened with regard to the four.

*The Commissioner:* There were sixteen wooden boats?

*The Attorney-General:* Yes, my Lord, and four collapsible boats. Of the 16, as your Lordship knows, 14 were lifeboats, but it seems clear from the evidence that the boats did not carry the full complement they were capable of carrying. With regard to the boats, undoubtedly although it may be that one or two carried as many as they possibly could, yet, speaking generally, they do not seem to have taken as many women and children or persons on board as could have been taken. There is some evidence undoubtedly that some wives refused to leave, declining to go without their husbands. There is also considerable evidence of husbands insisting upon their wives and children going in accordance with the orders that were given.

Now the boats were ordered to remain in the neighbourhood of the vessel, and did apparently for some time. Here, again, perhaps it is not remarkable, but it is impossible to get anything like a reliable estimate of time from those who survived, but there they were, in the boats, at distances, so far as I am able to judge, speaking generally, of 100 to 200 yards, in some cases more, from the "Titanic," standing by her, which they continued to do until just a little before, or at about, two o'clock in the morning, when undoubtedly she went down by the head. She began to go down by the head, and, according to some accounts, buckled, and then broke in two, and the fore part of the vessel went down into the water and the stern part stood right up for some time (that there is a great deal of evidence about), and eventually that disappeared too. According to some statements there was an explosion before she broke in two, several explosions some Witnesses say. According to others, she plunged head down into the water with her stern standing right up, and was in that position for some few minutes (it is impossible, of course, to gauge the time accurately), and then disappeared. Which is the correct version of those three statements, of course it is not possible to say, certainly at the present moment, but there is undoubtedly evidence that as she began to settle, apparently by the head, there came a moment at which there was a great rush aft, which seems to indicate it was quite clear that something was taking place in the fore part of the vessel, apart altogether from the sinking, which caused persons to rush to the afterpart of the vessel. That somewhat suggests that there had been some breaking of the vessel which caused them to make this rush; but it might be because it also became apparent that she was going down by the bow. Whatever the reason was, undoubtedly a large number of persons who were left on board the vessel rushed aft and remained there until the vessel went down.

*The Commissioner:* Is there any evidence as to the length of time between this rush aft and the final settlement of the afterpart of the ship?

*The Attorney-General:* No, my Lord, there is not. When I say no evidence, I mean nothing so far which is reliable.

*The Commissioner:* I suppose it would only be a question of a few minutes? *The*

*Attorney-General:* That is all, my Lord. According to one Witness, I think it was put at ten minutes; others say a few minutes, and no one knows better than your Lordship how unreliable estimates of time must be necessarily at moments such as those. My Lord, there ends the melancholy and lamentable story of the "Titanic." The boats were subsequently picked up by the "Carpathia," which, in conjunction, or which alike with a number of other steamers, received wireless messages from the "Titanic" for assistance, and informing everybody who could receive wireless messages that she was sinking, and

stating the position, latitude and longitude, which I gave to your Lordship a little while ago, in one of the messages sent to the "Caronia."

Now, my Lord, these wireless messages had been sent continually, not only to the vessels which I have indicated, but to a number of others, including, as I have just stated, the "Carpathia"; your Lordship will hear the account of those. I am not going to trouble you at the present moment by going into detail with regard to them.

My Lord, I think that one thing must emerge from this Inquiry, and that is that if it had not been for that marvel of science, wireless telegraphy, I doubt very much if anyone would have been picked up in these boats, or at least whether as many would have been saved as were actually saved. That is a matter your Lordship will consider when you hear all the evidence with regard to it.

Now, my Lord, I can give your Lordship figures which, I think, are of some importance. I am going to analyse the figures a little directly, because I do think that they are of considerable importance in the case, and that your Lordship should have them as far as we are able to give them. The total of passengers and crew on the vessel, if your Lordship will take them, were 2,206. The figures originally given were 2,208, but I will deal with them at 2,206. My Lord, there were 703 of the 2,206 saved, leaving 1,503 who succumbed in this disaster. Now, my Lord, of the 2,206 the percentage saved is 32, that is the 703 of the 2,206. I think it is useful to split up the 2,206 into men, women, and children. There were 1,662 men - I am dealing now with passengers and crew - carried in the vessel; there were 315 saved all told, which gives a percentage of 19. There were 439 women carried; 336 were saved.

*The Commissioner:* What percentage is that?

*The Attorney-General:* Giving a proportion of women saved of 77 percent. There were 105 children carried, of whom 52 were saved - 49 percent.

Now, my Lord, I propose to subdivide the figures again into passengers and crew, and the passengers into classes. There were altogether 322 first-class passengers, and if it would save your Lordship trouble we will have the table copied for the use of your Lordship and the Assessors, but the figures I am going to give you are not very many. I think your Lordship will find it useful to have them in this detached way. There were 322 first-class passengers; 173 men, 144 women, and five children. Of the 173 men, 58 were saved, giving a proportion of 34 percent. Of the 144 women carried 139 were saved, giving a proportion of 97 percent, of the women first-class passengers saved. Of the five children carried, five were saved, giving a proportion of 100 percent. In the second-class, there were 1,602 carried.

*The Commissioner:* What was the total number?

*The Attorney-General:* I beg your pardon, my Lord. I ought to have given that first, as I did in the other case; 277 were carried, 115 were saved, and the percentage was 42 percent.

*The Commissioner:* You are giving men, women, and children now?

*The Attorney-General:* Yes, the same as I did the others, my Lord.

*The Commissioner:* No, you did not give me the others.

*The Attorney-General:* I think so, my Lord. Yes, I began in the same way.

*The Commissioner:* Three hundred and twenty-two is the total?

*The Attorney-General:* Yes.

*The Commissioner:* Then you divided them into 173 men, 144 women, and five children; but although I can work it out, you did not tell me what was the total percentage of the first-class passengers saved.

**Page 16**

*The Attorney-General:* It was 34 percent.

*The Commissioner:* 34 percent of the men were saved.

*The Attorney-General:* Your Lordship means the percentage of the total.

*The Commissioner:* I thought you were going to give it in connection with the secondclass.

*The Attorney-General:* Certainly. It is 63 percent, 322 carried, 202 saved, 63 percent. Then of the second-class the percentage saved is 42 percent, 277 carried, 115 saved, 42 percent., 160 men were carried, 13 were saved, making a percentage of eight percent; 93 women were carried, 78 were saved, the percentage was 84; 24 children carried, 24 saved, percentage 100.

Now, my Lord, of third-class passengers there were 709 carried, 176 saved, making a percentage of saved 25 percent. Of these 454 were men, of whom 55 were saved, giving a percentage of 12; 179 women were carried, 98 were saved, giving a percentage of 55; 76 children carried, 23 saved, percentage, 30. Taking the passengers, therefore, without the crew, there were 1,308 carried, 493 saved giving a percentage of 38. Now, my Lord, dealing with those in the same way, subdividing them: Of the 787 men carried, 126 were saved, giving a percentage of 16 percent. Of the 416 women carried, 315 were saved, percentage 76; of the 105 children carried, 52 were saved, giving a percentage of 49. Now, my Lord, the only other figures are as to the crew, which are short. Eight hundred and ninety-eight were carried, 210 were saved, giving a percentage of 23. Of the 875 men carried 189 were saved, giving a percentage of 22. Of the 23 women carried, 21 were saved, with a proportion of 91 percent.

My Lord, the striking figures and figures which will no doubt engage the Court's attention during this Inquiry, are that 63 percent of the first-class passengers were saved, 42 percent of the second-class, and only 25 percent of the third-class.

*The Commissioner:* And 23 percent of the crew.

*The Attorney-General:* And 23 percent of the crew. My Lord, one striking figure to which I would direct your Lordship's attention also is this: that taking the figures I have given you of the first-class passengers, dealing with the women, and knowing as we do that some wives refused to go without their husbands, you will see that all except five were saved. If you assume that those five refused to leave their husbands the consequence is, that one must take it, that all the women in the first-class either were saved or had the opportunity of being saved and refused to avail themselves of it. One fact, my Lord, which does stand out in these series of figures which I have given to your Lordship is that of this very large number of men carried, of the passengers, only 126 were saved, giving the lowest percentage of any of the different classes to which I have referred. I mean taking the men of the first, second, and third-classes.

Now, my Lord, it may be necessary, and I daresay it will be later, during the course of the case, to analyse those figures even a little more closely; but I do not suppose that there will be any dispute with regard to them, and I thought it was important that your Lordship should have them at the outset.

Now my Lord, that really ends the story so far as I propose to trouble your Lordship and the Court with it in opening. The salient points which occurs to me at the moment (I am dealing with it only upon such material as we have at the moment), to which no doubt your Lordship's consideration will be directed - are first the speed of the vessel after the warning; secondly, that the number of boats was not sufficient for the number of persons carried; and thirdly, the construction of the watertight doors, and the effect of their action, will be another matter which will engage your attention during the course of the case. My Lord, dealing with the speed and the warning, there are the points which I have already sufficiently indicated, not only of the wireless telegrams, but of the temperature and also of the look-out. With regard to the boats, your Lordship will also hear what the rules and regulations are. I think I am right in saying this, that the "Titanic" carried sufficient boats to comply with the rules and regulations of the Board of Trade under the Merchant Shipping Acts, and no complaint is to be made against the "Titanic" that she in any way did not comply with those conditions. Whether they are sufficient, in view particularly of the experience which we have now had, and to what extent, and in what direction those rules and regulations should be amended is a matter which, as I indicated to your Lordship yesterday, will be for your Lordship's serious consideration.

*The Commissioner:* Have you, Mr. Attorney, obtained any figures as to the proportion of lifeboats carried by other lines?

*The Attorney-General:* We propose to do that, my Lord.

*The Commissioner:* By other lines I mean, of course, the German or French, or other lines. Do they carry a proportion of lifeboat accommodation in excess of that which was carried by the "Titanic."

*The Attorney-General:* We are inquiring into that matter, my Lord, and will produce evidence. I would rather not answer the question until I am in a position to state more definitely what the facts are. We are making the Inquiry which will give the answer to your Lordship's question. I am not, as I stated just now, in a position to answer it at present.

My Lord, the Board of Trade Rules are made under the Merchant Shipping Act, under Section 427. I need not trouble your Lordship with the Section. It is the one which gives power to make rules for providing life-saving appliances. In those rules there is a table which is at page 17 of the print if your Lordship happens to have it. If not I will hand it up in due time. It is sufficient if I state to your Lordship what the effect is. It is only one figure that you need to look at.

*The Commissioner:* I do not know whether I have it.

*The Attorney-General:* No, my Lord, you have not got it. It was proposed to deal with all these rules together, and, no doubt, that is the convenient form, but I thought your Lordship ought to have in the opening what undoubtedly is an important factor - what the Board of Trade Regulations are with regard to life-saving appliances. The only figure with which your Lordship need be troubled is this (it is at page 17): "The table referred to in the foregoing rules, showing the minimum number of boats to be placed under davits

and their minimum cubic contents. When the gross tonnage is 10,000 and upwards, the minimum number of boats to be used under davits, 16.” *The Commissioner*: What was the tonnage of the “Titanic”?

*The Attorney-General*: She had a registered tonnage of 21,831 and a gross tonnage of 46,328.

*The Commissioner*: It does not matter what size over 10,000 tons a vessel may happen to be, 16 boats is the minimum number?

*The Attorney-General*: Yes, my Lord, that is how it stands.

Now, my Lord, I propose at once to call the evidence of those who, as I indicated yesterday have returned in the “Lapland,” although they do not properly come perhaps in the order in which we might have wished to call them. *The Commissioner*: What about tomorrow, Mr. Attorney.

*The Attorney-General*: Well, my Lord, there is some difficulty. We cannot finish this class of Witness, I think, and in any event we have got to get material ready. I think it would be better if your Lordship would say you would resume on Tuesday; then we shall be prepared to go on daily.

*The Commissioner*: You mean not to sit tomorrow?

*The Attorney-General*: Yes.

*The Commissioner*: One of my colleagues is very anxious to know, because he has other matters to attend to.

*The Attorney-General*: As far as I am concerned, I am ready to do anything.

## **Page 17**

*The Commissioner*: Do you agree, Sir Robert, that we should not sit after this afternoon until Tuesday morning?

*Sir Robert Finlay*: I agree, my Lord.

*The Commissioner*: Very well, then, let it be so.

**ARCHIE JEWELL, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

1. Is your name Archie Jewell? - Yes.
2. And were you one of the look-outs on the “Titanic”? - Yes, quite right.
3. On the “Titanic” did all the able seamen take their turns at the look-out or had you a special set of look-outs? - Yes, six special look-outs.
4. You were one of the six? - Yes.
5. Now on the night of that Sunday, the 14th April, which was your look-out - which was your watch? - From 8 to 10.
6. And where were you - were you in the crow’s-nest or at the fore-castle-head, or where? - In the crow’s-nest on watch.
7. Was there a second look-out with you in the crow’s-nest? - Yes, there were two, one at a time.

8. There were two of you together in the crow's-nest? - Yes.
9. Who was the man who was with you? - Symons. He is back in New York.
10. And he was saved too, was he? - Yes.
11. Then those are the two in the crow's-nest. Then are there two on the bridge? - No.
12. Are there two forward? - No, not in clear weather; we take two hours each.
13. Let us just get it clear. There was you and there was Symons in the crow's-nest. Were there no other look-out men on duty? - No, not so long as the weather was clear.
14. Then on this night, during your watch from 8 to 10, was the weather clear? - Yes.
15. Was there any moon? - No, I never see no moon.
16. Was it starry? - Yes.
17. Now do you remember when you were on your watch, from 8 to 10, any message coming to you about ice? - Yes, about 9.30.
18. What was the message? - To keep a sharp look-out for all ice, big and small.
19. How did the message come to you? - On the telephone; we have a telephone in the crow's-nest.
20. That was telephoned up to the crow's-nest, and where was the telephone from? - From the bridge.
21. Then it would be the officer on the bridge who would telephone to you? - Yes.
22. Do you happen to know who it was - which officer it was? - I could not say. I think the second officer was on watch at the time.
23. Up to that time, up to the time you got that message, had you seen any ice? - No.
24. And after you got that message until you went off duty, did you keep a sharp lookout? - Yes, and passed the word along.
25. And did you see any ice? - No.
26. (*The Commissioner.*) What do you mean by "passed the word along" - to keep a sharp look-out for ice? - To the other look-out.
27. How far does the other look-out stand from you? - They relieve me from the nest.
28. (*The Solicitor-General.*) The two of you were together in the crow's-nest, and you would be relieved at 10 o'clock? - Yes, that is right.
29. And when you were relieved at 10 o'clock did you hand on this message? - Yes.
30. Who were the look-out men who relieved you at 10 o'clock? - Fleet and Lee.
31. I think Fleet has given evidence in New York? - Yes.
32. So he was saved? - Yes; all the look-out men were saved.
33. And Lee was saved as well? - Yes.
34. Do you know whether Lee has given evidence in New York? - I do not know. He has been kept back.
35. (*The Commissioner.*) What age are you? - Twenty-three.  
*The Solicitor-General:* There are six of them, my Lord, and we had better have the names of the other two.  
*The Commissioner:* Yes.
36. (*The Solicitor-General - To the Witness.*) Just give us the names of the remaining two look-out men? - Hogg and Evans.
37. And do they always work in the same pairs? - Yes, always.
38. You and Symons, Hogg and Evans, and Fleet and Lee? - Yes.

39. Then you had relieved at 8 o'clock, had you, Hogg and Evans? - Yes.
40. And you in your turn were relieved at 10 o'clock by Fleet and Lee? - Yes.
41. And up to the time you went off duty, you had not seen any ice at all? - Not any. 42. Just tell us, supposing that something is seen ahead and you want to send the warning, how is it done from the crow's-nest? - Strike the bell three times.
43. And is that a bell hanging in the crow's-nest? - Yes, a big bell.
44. Then you can telephone from the crow's-nest to the bridge? - Yes.
45. And do the look-out men use the telephone to the bridge from time to time? - Yes.
46. Now, supposing that during your watch, the 8 to 10 watch, there had been any ice and you had seen it, what would you have done; would you ring the bell and then telephone? - Yes, to tell them what it was.
47. However, nothing of that sort happened while you were on duty? - Nothing at all.
48. (*The Solicitor-General.*) My Lord, we have picked out this Witness because he begins the story, but of course he can also speak to a few matters after the casualty, and perhaps it is as well to take them now. (*To the Witness.*) When you went off duty at 10 o'clock and went below, did you go to bed - turn in? - Yes, I went to bed.
49. And what was the next thing you knew? - The boatswain came below and called all hands on deck. I heard the crash first; that woke me up.
50. You were woke up were you by the crash? - Yes.
51. What did you do then? - Ran on deck to see what it was.
52. What did you see? - I saw some ice on the well deck on the starboard side.
53. You mean the forewell deck, I expect? - Yes.
54. Did others turn out at the same time with you? - Yes.
55. And saw it too? - Yes.
56. What did you do then? - Went down and put on some clothes. We all went below. They did not think there was any harm.
57. Do you mean you turned in again? - No, we did not turn in.
58. Then you spoke about the boatswain coming. How long after was that? - Not long. I cannot say exactly the time. He came and called all hands on deck. I could not tell you exactly the time; it was not long.
59. Then, when the boatswain came and called all hands on deck, did you go on deck with the others? - Yes, all hands went on the deck.
60. Had you got a station? - Yes, at my own boat.
61. Which was your boat? - Number 7.
62. (*The Commissioner.*) Were the engines revolving at this time?
63. (*The Solicitor-General.*) I will ask him, my Lord. We have evidence to show that they were not; that they were stopped at once. (*To the Witness.*) Did you notice whether the engines had stopped? - The ship was stopped when I looked over the side.
64. Now I was just going to ask you about your boat station. Which was your boat? - Number 7.
65. How do they number them on the "Titanic"; how do the numbers run? - Well, all odd numbers on the starboard side; even numbers on the port.

66. And your boat was No. 7, you say? - Yes.
67. One on the starboard side? - Yes.
68. Then just take the odd numbers; do they run forward aft? - Yes.
69. The fourth boat on the starboard side. Now how did you know that that was your boat? - We had got a boat list right in front of our fore-castle.
70. Had you taken part in any boat drill before the accident? - We always have a drill leaving port.
71. Then did you take part in one? - Yes, always.
72. (*The Commissioner.*) Where was that? - At Southampton.
73. (*The Solicitor-General.*) And had No. 7 been your boat at that drill? - No; there were only two boats lowered away.
74. (*The Commissioner.*) Only two boats lowered for that drill? - Yes.
75. And is that the practice? - Yes, it is the practice.
76. What I mean is, you have travelled on these liners before, I suppose? - Yes.
77. Is it the practice when you have your boat drill to have it with two boats only? - That is all I have seen.
78. That has been your experience? - Yes.
79. (*The Solicitor-General.*) You say only two boats would be lowered at the drill. What I want to know is whether your boat drill included everybody going to their boat stations? - Yes, all hands are on the boat deck.
80. Just one thing more about that. There are two boats, are there not, that are kept swung out as emergency boats? - Yes.
81. And the rest of the wooden boats, the lifeboats would be swung in - kept in? - Well, they are not swung quite really in; they are just on the edge of the rails.
82. How do you know whether it was the emergency boats that were swung out that were used for the practice on which boat it was? - Oh, no, it was the lifeboats.
83. Two of the lifeboats? - Yes.
84. Now we can see which your boat is - because the model shows us the starboard side? - Yes, this is the one (*pointing to the model*) - there was one on the other side here and a fourth one on the starboard side.
85. That would be No. 7? - Yes.
86. Then there are No. 5 and No. 3, and No. 1 is just behind the emergency boat, is it not? - No, that is No. 1 (*pointing to the model*).
87. (*The Commissioner.*) The emergency boat is No. 1.  
*Sir Robert Finlay:* Yes.
88. (*The Solicitor-General.*) You say that when you were ordered up on deck and there was the muster, you went to No. 7? - Yes.
89. Just tell us what was done with boat No. 7? - We all cleared away the boats. The orders were for all hands to clear the boats, and we all went and cleared the boats. I helped to clear away No. 7, cleared away the falls, and got them all ready and the First Officer, Murdoch, told us to lower away the boats to the level of the rail.
90. That was Mr. Murdoch you say? - Yes, he was in charge of us.
91. And he gave the order to lower the boat to the level of the rail? - Yes.

92. And, of course, up to that time the boat would be empty? - Yes.
93. Then, when she was lowered down level with the rail, what were the orders then? - "Women and children in the boat."
94. Had any seamen been put into the boat? - Not then. We were all standing by that belonged to the boat.
95. (*The Commissioner.*) How many men man one of these boats? - There are two sailors told off for each boat, so many firemen, and so many stewards. I do not know how many firemen; I have never seen their list.
96. (*The Solicitor-General.*) Two seamen and a certain number of the firemen, and a certain number of the stewards? - Yes.
97. Did you count as one of the two seamen for this boat? - Yes.
98. Who was the other? - Weller.
99. You say Mr. Murdoch said "women and children first," and what was done? - Well, we put all the women in that was there, and children. Up to that time there was not many people; we could not get them up; they were rather afraid to go into the boat; they did not think there was anything wrong.
100. Were there men passengers there too? - Yes, we had some men passengers. 101. Did any of them get into your boat? - Yes. I do not know how many. There was three or four there. Three or four Frenchmen there - I do not know whether they got into the boat.
102. I only just want to know; did any men passengers get into No. 7? - Yes.
103. Three or four? - Yes.
104. Was there excitement? - No, Sir, none at all; very quiet.
105. And how many people got into No. 7 before she was lowered? - I could not say; it looked pretty full; there was not much room to work in her.
106. But you do not know the number? - No, I could not say the number at all. 107. You were one of the seamen told off for her. Did you get into her? - Yes, there were three seamen into that boat.
108. Where was the third? - I never see no fireman or no stewards up there at that time; it was about the first boat to be lowered.
109. Number seven was? - Yes.
110. And how is it done on a big liner like this: when you lower the boat from the rail down to the water, is it done from the boat or from the deck? - From the deck.
111. So that the people in the boat would not do the lowering away? - No, just keep the boat off the ship's side.
112. Did she get down to the water safely? - Yes.
113. Were there oars in the boat? - Yes.
114. A proper number? - Yes.
115. Was she provisioned? - I never saw any biscuits or nothing; I do not know whether there was any; I do not know that there was anybody looking for any.
116. Had she got any light? - No.
117. (*The Commissioner.*) Is a lifeboat usually provided with a light? - I think so, Sir; I do not know about every one.

118. And where is the light kept? - In the after-locker; the locker in the afterend of the boat.
119. Did anyone take it out and light it? - No; there was none there. We had a look to see if we could find a light, and there was none there.
120. Whose business was it to look after the light? - Well, I think the men in Southampton came on board ship to look after all that, to see that the boats were all looked after.
121. (*The Solicitor-General.*) Who was in charge of the boat? - Hogg.
122. That is the look-out man you spoke of, is it? - That is right.
123. There was Hogg and yourself and Weller? - Yes.
124. Were those the only three members of the crew in the boat? - That is all. 125. When you got down to the water, had you got any of these men passengers in them? - Yes.
126. They stayed in? - Yes.
127. You say you thought about four? - Well, I should say about that; I could not say the exact number.
128. Then the rest of them would be women and children? - Yes.
129. Were there any children? - We had one I think, that was all; the rest were women.
130. And you said, you did not know how many there were altogether, but I want to know was the boat full or not? - Well, she might have held a few more, Sir. 131. You say Mr. Murdoch was giving orders about lowering the boat; did he give orders to launch her down to the water? - To lower her right down to the water. 132. And what were the orders about - what was she to do? - He told us to stand by the gangway.
133. I do not quite know what you mean by that. What is the gangway you are referring to? - The doors that open in the ship's side. Just about here (*Pointing to model*) - the door is open continually.

## Page 19

134. Amidships? - Yes.
135. Where the gangway would be if she were in port, I suppose? - Yes, that is right.
136. (*The Commissioner.*) Just go to the model again and show me whereabouts on that model the waterline was, and where the gangway was, so that I may know where the boat was. - (*Pointing to the model.*) There is one door there, and there is the waterline right along here. There are several gangway doors in the side; there is one about there somewhere, and one about there.
- The Solicitor-General:* The actual line of the sea.
137. (*The Commissioner.*) You see the port holes, do not you? - Yes.
138. Now where was the waterline outside the vessel? - It was straight along here, I should say.
139. Now, where was this gangway you speak of? - There.
140. And you were told to remain in the water below that gangway? - Yes. 141. (*The Solicitor-General.*) Those were your orders. How far off from the ship did you keep? - We kept right alongside.

142. Was the sea smooth? - Yes, very smooth.
143. Just tell us what happened after that? - Well, we see all the other boats lowered away and pull away from the ship. Then we saw the ship settling away, and we had to pull away clear.
144. Let us just see if we can get clear about these other boats, if we can. Did you keep on the starboard side? - Yes.
145. You said, I think, that you thought your boat, No. 7, was one of the first to be lowered? - Yes.
146. Just think. Did you see any boat lowered into the water before you got into the water? - No.
147. You think you were the first to get into the water? - I know we were the first on our side.
148. I am talking of the starboard side; and you were the first to get into the water on the starboard side? - Yes.
149. So that there would be seven others, I think, on that starboard side? - Yes. 150. Did you see each of them launched? - No; I could not see afterwards very well from where I was.
151. Why not? - We were all messing about with the other boats being lowered, and looking out for our own boat. We were not taking any notice of the others.
152. But you saw some of the others lowered, at any rate? - I saw them all after they were launched.
153. You cannot tell us, I suppose, about the order of the others being lowered? - No, I can say nothing about that.
154. Can you give us any idea of about how long it was from the time when your boat got to the water before the other boats got to the water - the last of the others on the starboard side? - I could not say, they were not long; they were all down by the time we pulled away from the ship. We kept alongside and kept to our orders.
155. Then you told us you pulled away; you thought the ship was settling down? - Yes.
156. Can you give me any sort of idea how long it was from the time you pulled away to the time when the ship disappeared? - Well, about one and a half hours I expect. I had got no time; that is just a rough guess.
157. Did you see signs of the "Titanic" settling down when you left her side? - Well, very little. I did not notice anything in the boats alongside the ship.
158. And you pulled away from her side because you saw these other boats were pulling away? - Yes.
159. And how far off did you go? - We only just went a little way at first, just kept so that we could speak to them on board the ship in case we were wanted.
160. Did anybody speak to you from the deck? - No.
161. That would be some little distance off. Give me an idea how far off it would be? - About 20 yards or something like that, and we stopped there.
162. And when you were in that position, some 20 yards from the ship, so that you could be hailed from the deck, did you see any signs of her settling down then? - Yes, you could notice her going away by the head.
163. Was that gradual or sudden? - No, very slow.

164. This was when you were about 20 yards off? - Yes.
165. Were the other boats on the starboard side about the same distance off, or further off? - Further off.
166. Do you mean you think you were the nearest? - At that time.
167. Then when was it that you made a move again? - The forecastle-head was getting close down to the water then.
168. And what did you do then with your boat? - Pulled away clear.
169. Now can you give me any idea about how long that was before she disappeared? - I could not say that; not more than about half an hour I should say.
170. And how far from the ship did you pull away then? - Oh, a long way. We met with the Third Officer, and he moored his boat alongside of ours all night.
171. What is the Third Officer's name? - Mr. Pitman. 172. And you met Pitman in his boat? - Yes.
173. And he moored his boat alongside of yours? - Yes, alongside of ours all night.
174. Lashed together, I think? - Yes.
175. Just tell us shortly what you yourself saw then. What did you see that happened to the "Titanic" before she went down and as she went down? - We stopped there and watched her gradually sink away. We could see the people about on the deck before the lights went out. As she went away by the head so the lights went out, and we heard some explosions as she was going down. But all the lights went out and we could only see a black object in front of us.
176. Was it light enough to see if her stern was up in the air? - Yes. I saw the stern straight up in the air.
177. At that time were the lights still burning or had they gone out? - No. As the stern stood up in the air so all the lights went out.
178. Can you tell us at all how long you think the stern was like that? - Not more than a few moments.
179. And then when the stern sank did she sink slowly or all at once? - She went down pretty fast.
180. Now you say you heard some explosions? - Yes.
181. Did you hear more than one? - Yes; I heard two or three.
182. Were the explosions close together or at intervals? - Close after one another.
183. And how near was that to the disappearance - to the end? - Not long.
184. Was it before you saw the stern up in the air? - No, just as the stern went up in the air.
185. Were the lights burning when you heard the explosion? - Some on the afterend.
186. Did you hear any noise apart from the explosion? - Some people have spoken of the noise of the machinery? - I never heard nothing.
187. It is suggested that the heavy machinery fell. Now just come back to your boat for a minute. Did your boat pick up anybody out of the sea? - No, not one.
188. So that you landed the same number of people into the "Carpathia" as got into the boat at the rail level? - Well, we took two or three out of Mr. Pitman's boat. 189. That is the Third Officer? - Yes.

190. Because you had got more room than he had, I suppose? - Yes, to make it more even.
191. Did he remain in command of your boat the whole time till you got to the "Carpathia"? - Yes.
192. And how many of you were rowing? - Me and Hogg was doing most of the work; the rest were trying to pull. I was pulling from the time

**Page 20**

I went in the boat to the time we got alongside the "Carpathia."

193. What time did you get alongside the "Carpathia"? - It must have been somewhere about 7 or 8 in the morning or getting on that way.
194. (*The Commissioner.*) What time was it? - 7 or 8 in the morning.
195. (*The Solicitor-General.*) I will just ask you this: Had you seen any ice after the accident and before your boat was launched? - No.
- The Commissioner:* He saw a little, as I understand, on the deck.
196. (*The Solicitor-General.*) I meant really in the water. (*To the Witness.*) Did you see any icebergs when you were in your boat? - When it became daylight.
197. (*The Commissioner.*) What time did it become daylight? - That I could not say; there was nobody had any time.
198. Would it be about half-past five? - I should say it would be about that time.
199. When it became daylight you saw some icebergs, do you say? - Yes.
200. (*The Solicitor-General.*) Did you see many of them? - Yes, a lot, all around us. 201. Except for drifting, how far were you from where the boat sank? - We could not tell. We were drifting along with the wreckage. We could not tell where the boat went down; when it came daylight we had no idea; we had been drifting all night. 202. And had the wreckage been drifting with you alongside? - Yes, I expect so.

**Examined by Sir ROBERT FINLAY.**

203. You say that when you looked over the side the ship was stopped? - Yes.
204. Can you tell us when it was that you looked over the side? - Just after the accident, just after she struck; I rushed right up from below. I got out of my bed and went on deck. 205. Only one other question. Did you try to find any people to pick up? - Yes. There were only two to do any pulling; we could not get the boat about. 206. You did your best? - Yes; we done our very best.

*Mr. Scanlan:* With your Lordship's permission, I propose to ask some questions.

**Examined by Mr. SCANLAN.**

207. While you were on the look-out, were you given glasses? - No, we never had any glasses.

208. Had any glasses been supplied from the commencement of the voyage? - No.
209. When you have been on other liners, has it been usual to provide the look-out man with glasses? - Well, we had them in the "Oceanic." I was on the look-out once there.
210. Is the "Oceanic" the only other large liner you have been on? - Yes.
211. So far as you know it is the practice to supply glasses? - I can say nothing about that, because I could not say. 212. Did you ask for them? - Yes.
213. Whom did you ask? - My mate went and asked. I do not know who he asked - I did not ask.
214. (*Chairman.*) You did not ask? - No, I did not ask.
215. (*Mr. Scanlan.*) You did not ask yourself? - No.
216. Do you derive much help from the glasses when you are on the look-out? - Yes, they are very useful.
217. I think you said there was no look-out man forward? [No answer.]
218. (*The Commissioner.*) Will you tell me this: How often have you used glasses? - Well, we had them on the "Oceanic"; we used them there all the time.
219. How often have you used them in your life? - Well, I have used several glasses, not on the look-out.
220. But I am talking of on the look-out. How often in your life have you used glasses on the look-out? - Only on the "Oceanic."
221. How often did you use them there? - Oh! very often.
222. Did you see anyone else using them? - Yes, my mate. 223. How many had you? - Only one pair.
224. And where were they kept? - In a little bag on a little box in the crow's-nest.
225. Was there a box or bag on the "Titanic" for these glasses? - There was a box there.
226. But nothing in it? - No, nothing in it.
227. (*Mr. Scanlan.*) Did you look in the box on the occasion of your first watch to find out if there were glasses there? - Yes.
228. So that you are quite certain that from the commencement of the voyage you were not supplied with glasses? - Yes, we never had any glasses.
229. Tell me this: Is it usual on liners to have a look-out man stationed forward of the crow's-nest? - Well, it is not all big liners that have lookout men.
230. (*The Commissioner.*) How many liners have you been on? - Only the "Titanic" and the "Oceanic."
231. Have you ever been working on any other liners? - No, only sailing ships.
232. Then your knowledge is confined to these two vessels? - That is right.
233. How many voyages have you made on the "Oceanic"? - Seven or eight. 234. And half a one on this? - Yes.
235. (*Mr. Scanlan.*) Was the "Titanic" provided with a flashlight? - What do you mean?
236. Was there any electric light - any searchlight? - I never saw any. I could not say that.
237. (*The Commissioner.*) Was there one on the "Oceanic"? - I never saw any. I do not think so.
238. (*Mr. Scanlan.*) At the time you were taken on board the "Carpathia," was your boat full? - Well, nearly full.
239. Could you even then have accommodated a few more? - Very few.

240. You stated in answer to the Solicitor-General, that when your watch was finished, your watch finishing, I think at 10, you passed on to the two men who succeeded you the information you had got? - Yes, that was my orders from the bridge.
241. That ice was ahead? - Yes.
- The Solicitor-General:* His orders were to keep a sharp look out for ice.
242. (*Mr. Scanlan.*) You had a warning about ice? - Yes, and I passed the word along.
243. Is it usual for a man on the look-out - is it part of his duty to pass the word along in these circumstances? - Yes.
244. Now, did the two watchmen whom you and your mate replace, give you any word? - No, they had had no message then.
245. So that the first message of ice was not communicated until half-past time? - No, it could not have been.
246. Now, with regard to the boat drill, did you personally take part in it at Southampton? - Yes.
247. What boat did you go to when the order was given for boat drill? - Well, there was only two got ready, and so many told off for each.
248. Were you assisting in lowering one of the two lifeboats that were actually let down into the water at Southampton? - Yes, the two forward ones.
249. How many assisted at each boat? - Nine sailors and a quartermaster and an officer.
250. How many? - About eleven, I think.
251. Eleven seamen? - Yes, something like that; a quartermaster, an officer, and seven or eight seamen.

## **Page 21**

252. Did any firemen assist in the lowering of the boats at the trial? - At Southampton?
253. Yes. - No.
254. Did any stewards assist at the lowering of the boats? - No, only sailors. 255. You have told us that in the list which was set up in the fore-castle you were assigned to this boat, No. 7. Who were the others set down for this boat? - Weller. I know Weller was there; who else I could not say.
256. At this boat which you assisted in lowering in Southampton, you say eleven seamen were engaged in the lowering? - Not in the lowering; two men would lower away the boat.
257. How were the eleven engaged? - They were the crew of the boat.
258. What was the crew of the boat's work? - To pull and practice - pulling round the harbour and back.
259. How many were engaged in pulling her round the harbour? - I suppose there were six or seven pulling.
260. And were these six or seven able seamen? - Yes.
261. What I want to make clear is, amongst the six or seven you had not any firemen? - No.
262. Or stewards? - No, all able seamen.

263. Now, so far as the firemen and stewards were concerned, did they at Southampton or anywhere else get any practice or any training either in lowering boats or rowing them? - I never saw them.
264. (*The Commissioner.*) You saw none? - No.
265. (*Mr. Scanlan.*) Can you tell the Court how many firemen were expected to assist you as part of the crew of No. 7? - No, I could not say; I never saw their list. Their list is down in a different place from mine.
266. Is the list which is exhibited in your cabin merely a list of the deckhands? - Of the deckhands.
267. And on that list is it the case that there was no other name except yours and Weller's? - I think there was a quartermaster; I am not sure. We only go and look for our own name when we are on a job like that.
268. Then a third man came on? - Yes. 269. Hogg? - Yes. 270. Are you quite sure that Hogg's name was not on this list? - I am not sure. 271. So that you do not know whether No. 7 was Hogg's boat or whether he belonged to some other? - I could not say that.
272. Is it not a usual thing when there is boat practice to call to the boat deck all the men who are expected in an emergency to go with that boat? - Yes. Once on the trip. Once going out and once coming home - twice on the trip.
273. Had this been done on this trip? - No; it is generally done on the Sunday, but it was not done on that day. There was a strong wind.
274. (*The Commissioner.*) This was the first Sunday you were out? - Yes. 275. Had it been done on that day? - No. It was blowing hard that day; there was a strong wind that day; that was the reason why it was not done.
276. (*The Commissioner.*) A strong wind on what day? - On the Sunday.
277. What Sunday? - On the day of the accident; a strong breeze blowing all that day.
278. I thought the sea was quite smooth? - So it was when the accident happened.
279. Then the wind had gone down? - Yes, it had gone down as the sun set.
280. (*Mr. Scanlan.*) What time did the wind abate on the Sunday? - It went down as the sun began to go away.
281. And you say that that was the reason you had no boat practice. Who told you so? - Well, that is the only thing we knew.

**(After a short Adjournment.)**

*Mr. Quilliam:* Will your Lordship allow me to make an application on behalf of the National Union of Stewards. They had over 200 members on board the "Titanic," and they have over 15,000 stewards, members of their union, in the British Isles, and they are greatly concerned that they should be represented here, as there are many points which they wish to bring out which concern the stewards on these boats?

*The Commissioner:* Very well. Be moderate in the questions which you ask. 282.

(*Mr. Scanlan.*) I have a few more questions, my Lord. (*To the Witness.*) I understand there were three of you seamen in the lifeboat No. 7? - Yes, Sir.

283. Besides you three was there any fireman? - No.

284. Had you any assistance in the manning of that boat besides the three of you? - There were two gentlemen there who helped as well as they could.

285. They were passengers who by chance knew something about handling a boat, and they gave you assistance? - They did not know much about it, Sir.

286. To handle a lifeboat in a rough sea, in an ordinary sea, how many men would you require? - We would want six at the least, Sir.

287. Six trained men? - Oh, yes, we would want six men who understand the boat.

288. And you had only three? - That is all, Sir.

*The Commissioner:* It was similar on this occasion.

*Mr. Scanlan:* Yes, Sir, it was similar on this occasion.

289. (*The Commissioner.*) I suppose when you did get on board this lifeboat, in point of fact the men you had with you were able to manage it? - There were only three.

290. Was it swamped? - No, Sir, it was not swamped.

291. (*Mr. Scanlan.*) I think you said you were tired out when you were picked up? - I was myself.

292. (*The Commissioner.*) What do you say? - He asked me if I was tired when I was picked up, and I said I was.

293. You were on the boat for something like eight hours, were you not? - About seven hours.

294. Had you anything to eat? - No.

295. Had you anything to drink? - No, I had nothing, Sir.

296. (*Mr. Scanlan.*) When you speak of six men being required do you mean seamen, or would that allow for some of the men being stokers? - It does not matter who it is, so long as they understand how to handle a boat.

297. Now to your knowledge, had any of the men in the ship's complement knowledge of manning boats except the seamen, the A.B.'s, and the deckhands?

*The Commissioner:* But, Mr. Scanlan, you must be a little reasonable. Did he know all the other men? He cannot answer that question.

298. (*Mr. Scanlan.*) Very well, my Lord. (*To the Witness.*) Did you know in point of fact of your own knowledge how many seamen were on board? - No.

*The Commissioner:* It is no use asking him that question, because if he said he did I should not believe him.

299. (*Mr. Scanlan.*) Were the collapsible boats tested at all? - I could not tell you that, Sir.

300. You did not see it? - No.

301. From what part of the ship did the passengers come who were on your boat? - I would have a hard job to say; they were on deck when I got there.

302. Did you have instructions not to allow men on board? - Yes.

303. (*The Commissioner.*) Men as distinguished from women?

*Mr. Scanlan:* Yes, male passengers.

*The Witness:* Yes.

304. Had the lifeboat a compass? - No, Sir, not on board.

305. Should a lifeboat have a compass? - I do not think it is much use in an open sea like that. A compass is no good to anyone, it is all right if you see the land and know where you are.

*The Commissioner:* Would you ask him the question, do lifeboats carry compasses as a rule?

**Page 22**

306. (*Mr. Scanlan.*) Yes, my Lord. (*To the Witness.*) Do lifeboats as a rule carry compasses? - There is one on board for every boat.

307. Where is it kept on board? - I do not know where it is kept on the big ship - on the "Titanic."

308. Whose duty is it to put on board the lifeboats all that is required in the way of provisions and appliances? - That is done in port; I could not say. 309. Is it done in port before the commencement of the voyage? - Yes. *The Commissioner:* Do they put water on board before the commencement of the voyage?

310. (*Mr. Scanlan.*) Do they put water in the boat? - Yes, there is water in every boat.

311. (*The Commissioner.*) And how often is it changed; ever? - I could not say.

312. But have you known it ever changed? - I have never seen it.

313. And what food do they put on board? - A box of biscuits.

314. Is the box of biscuits kept on board the lifeboats while they are swung on the deck as we see them in this model? Has every lifeboat a box of biscuits? - I think so, Sir.

315. Or is a box of biscuits put on board when the lifeboat is being lowered into the water? - I do not know; I have never seen any on board; I could not say.

316. Have you ever seen any on board any lifeboat? - No, Sir.

317. (*Mr. Scanlan.*) There were not any of these things in yours - neither water nor biscuits? - Yes, there was water; but as to biscuits, I cannot say. I do not think anyone looked.

318. (*Mr. Lewis.*) There is one question I should like to ask first with regard to the speed. Could you say what speed you were going at? - No. *The Commissioner:* He does not know anything of that kind.

319. (*Mr. Lewis.*) I am merely asking the Witness whether he noticed any appreciable difference in the speed on the Sunday, the day of the accident, and on the Saturday; could you say? - I could not say anything about that.

320. You did not see any difference? - No.

321. With regard to glasses, did you make any personal application to anyone? - My mate did, Sir.

*The Commissioner:* He says his mate told him that he did.

*The Witness:* Yes.

322. (*Mr. Lewis.*) Which one? - Symons.

323. Could you tell how long the boat you were in took to prepare and lower? - Half an hour at the most, I should think.

324. Half an hour at the most? - Yes, we were all in a hurry; I could hardly judge the time.

325. Have you a knowledge of the ship itself, of the different parts; the first-class, the second-class, and the third-class quarters? - No, I could not say much about that, because I was not over the ship much.

326. You could not express an opinion whether it was difficult for the third-class passengers to reach the deck where the boat was? - There were some, so I heard.

327. You could not say how difficult it would be to reach it? - No.

*Mr. Searle:* I do not know if any of us are allowed to put any questions. *The Commissioner:* What do you mean by "any of us"? I do not know whom you represent.

*Mr. Searle:* I understood we had to get permission from you. *The*

*Commissioner:* Who are you?

*Mr. Searle:* I represent persons who are some of the deceased passengers' relatives, relatives of waiters and different persons.

*The Commissioner:* What is it you want to ask? *Mr.*

*Searle:* One or two questions.

*The Commissioner:* Will you tell me what it is?

*Mr. Searle:* I should have liked to have asked him how he got to know that the ship had absolutely stopped.

*The Witness:* That is a very foolish thing to ask. Any man looking over the side could tell whether the ship was going ahead or stopped.

*The Commissioner:* Who is it you represent? I do not know.

*Mr. Searle:* I can give you their names.

*The Commissioner:* But who are they?

*Mr. Searle:* Those who have lost relatives, Sir, fathers and husbands.

*The Commissioner:* Have you made any application previously?

*Mr. Searle:* Not to you, my Lord. I have only come this morning. I have only just come in.

*The Commissioner:* I cannot listen to people who have only just come in. I must have some sort of limit to these questions. Will you tell me what it is you want to ask the man?

*Mr. Searle:* I wanted to ask him how long it was after he came up from below that the ship struck. (*To the Witness.*) You said when you came up from below the ship had stopped?

*The Commissioner:* The engines had stopped.

*Mr. Searle:* That is another thing. He said the ship had stopped.

*The Witness:* The ship had stopped.

*Mr. Quilliam:* May I ask a question, my Lord.

*The Commissioner:* What do you want to ask?

*Mr. Quilliam:* Had they any practice with regard to the collapsible boats?

*The Commissioner:* Oh, yes, that is right enough; you may ask him that.

328. (*Mr. Quilliam.*) Did you have any practice with regard to the collapsible boat or boats before the "Titanic" sailed? - Not the collapsible boats.

329. Have you ever had any practice on any liner with regard to collapsible boats? - No.

*The Commissioner:* He has only been on two, you know.

330. (*Mr. Quillium.*) Now with regard to the food on the lifeboats - during the boats drills did the stewards bring the biscuits to the boat? - I never saw it done.

**Re-examined by the ATTORNEY-GENERAL.**

331. When you were in the boats did you see any steamer? - Not before the "Carpathia."

*The Commissioner:* Is there any other question that you want to ask, Sir Robert?

*Sir Robert Finlay:* No, my Lord.

*The Commissioner:* Thank you, Jewell; and if you will allow me to say so, I think you have given your evidence very well indeed.

*The Witness:* Thank you, Sir.

*(The Witness withdrew.)*

*(Joseph Scarrott was called, but did not appear.)*

*The Commissioner:* Mr. Attorney, have you any information from any of these Witnesses as to how long after the fore-castle-head went under, the stern went up in the air?

*The Attorney-General:* We have certain information, my Lord, but it is an estimate of time.

*The Commissioner:* You mean it is an estimate made by untrained men?

*The Attorney-General:* Yes, it is a question of minutes.

*The Commissioner:* Well, minutes or seconds.

*The Attorney-General:* To express it in minutes is very difficult.

*The Commissioner:* A man of the kind we had in the box just now talks sometimes about minutes when he means moments.

**Page 23**

*The Attorney-General:* That is why I hesitated to answer, my Lord.

*The Commissioner:* Where is Mr. Scarrott?

*The Attorney-General:* He has been called, and he has not answered.

*The Commissioner:* Is there nobody who looks after these Witnesses?

*The Attorney-General:* Yes, and he was warned he would be called, but he does not seem to have come back.

*The Commissioner:* There should be somebody whose business it is to keep these men in hand, otherwise they stray about.

**JOSEPH SCARROTT, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

332. Were you serving as A. B. on the "Titanic" on the occasion of this accident? - Yes.
333. Was it your watch from 8 to 12 on the Sunday night? - Yes.
334. What were your duties during that watch? - To stand by for a call in case I was wanted for anything whatever.
335. Shortly before the ship struck the iceberg did you hear the bell strike in the crow'snest? - Yes.
336. What did you hear? - Three bells.
337. Do you know what time that was? - Not to be exact I do not, but it was round about half-past eleven.
338. Shortly after that did you feel anything? - Yes.
339. What did you feel? - Well, I did not feel any direct impact, but it seemed as if the ship shook in the same manner as if the engines had been suddenly reversed to full speed astern, just the same sort of vibration, enough to wake anybody up if they were asleep.
340. Did you feel anything besides that? - No.
341. Did you feel the ship strike anything? - No, not directly.
342. "Not directly," you say? - Not as if she hit anything straight on - just a trembling of the ship.
343. How soon did you feel this vibration after you heard the three strikes on the gong? - As I did not take much notice of the three strikes on the gong, I could hardly recollect the time; but I should think it was - well, we will say about five or eight minutes; it seemed to me about that time.
344. Where were you at the time? - Just about the fore-castle-head.
345. Did you remain there? - No.
346. Where did you go? - I rushed down to tell my mate that was in the bath room just at the bottom of the ladder. He asked me to give him a call if anything was doing.
347. What did you do after that? - Rushed on deck with the remainder of those that were in the fore-castle. The shock caused everybody to turn out, and we came on deck to see what was the cause of the vibration.
348. Did the boatswain give any orders to the hands? - Yes.
349. What was his order? - "All hands on deck; turn out the boats and take the covers off and place the covers amidships."
350. When you got on deck did you see anything; did you see any ice or iceberg? - Oh, yes, when we first came up.
351. Tell me what you saw. - When we came up, that was before the boatswain's call, we saw a large quantity of ice on the starboard side on the forewell deck, and I went and looked over the rail there and I saw an iceberg that I took it we had struck. It would be abaft the beam then - abaft the starboard beam.
352. Was it close to? - No, it seemed the ship was acting on her helm and we had swung clear of the iceberg.
353. But how far away from your beam was the iceberg, a ship's length or two ships' length? - Not a ship's length.
354. You speak of this ship as if answering her helm - as if answering under which helm? - Under the starboard helm - under the port helm.

355. Get it right? - Under port helm. Her stern was slewing off the iceberg. Her starboard quarter was going off the icebergs, and the starboard bow was going as if to make a circle round it.

*The Commissioner:* You must be a little more particular about this, and make me understand it.

*Mr. Butler Aspinall:* I think what he means is that she was acting - correct me if I am wrong.

*The Witness:* Yes.

356. She was acting as if under port helm, her head going to starboard? - That is correct.

*The Commissioner:* The ship's head was going to starboard?

357. (*Mr. Butler Aspinall.*) Yes. (*To the Witness.*) Had your ship headway on at the time - or not do you think? - I cannot say.

358. You do not know? - No.

*The Commissioner:* You can tell me this, my colleagues will know this, no doubt. After a collision of this character what is the order generally given to the engines? Is it an order to stop or an order to reverse?

*Mr. Butler Aspinall:* It is difficult for me to say, my Lord; it depends so much upon the circumstances of each case.

*The Commissioner:* Then you cannot give a simple answer.

*Mr. Butler Aspinall:* No, my Lord, I am afraid I cannot. I do not know how they might be wishing to maneuver her.

*The Commissioner:* With a ship going 21 knots, how soon after an order to stop will the way on the ship stop?

*Mr. Butler Aspinall:* I should think, if the engines are only stopped and not reversed, a laden ship will carry her way for a very considerable distance.

*The Commissioner:* Can you tell me what you mean by a very considerable distance?

*Mr. Butler Aspinall:* I do not think I could give your Lordship any answer to that which would be of value.

*The Commissioner:* Very well. And, of course, if the engines are ordered to be reversed, then the way upon her is stopped in a much shorter time?

*Mr. Butler Aspinall:* That is so, and if the ship has run into something that, of course, is also a factor to be taken into consideration. *The Commissioner:* That arrests her course?

359. (*Mr. Butler Aspinall.*) Yes. (*To the Witness.*) You have told us that somewhere on your starboard beam, within a ship's length of you, was the iceberg. How high was the iceberg as compared with your vessel? - I should say about as high as the boat deck; it appeared to be that from the position of it.

360. (*The Commissioner.*) How high from the water would that be - 90 feet? - I cannot say.

*The Attorney-General:* I think about 60 feet.

361. (*Mr. Butler Aspinall.*) What was the shape of this iceberg? - Well, it struck me at the time that it resembled the Rock of Gibraltar looking at it from Europa Point. It looked very much the same shape as that, only much smaller.

362. (*The Commissioner.*) Like a lion couchant? - As you approach Gibraltar - it seemed that shape. The highest point would be on my right, as it appeared to me. 363. (*Mr. Butler Aspinall.*) You received the words, "Uncover and turn out the boats"? - Yes.
364. Now which was your boat? - No. 14.
365. On which side was she? - The port side.
366. And was she well aft on the port side? - In the after-section.
367. Did you go to that boat? - No.
368. Did you go to any other boat? - I went to 14 boat finally, but not at first.
369. Not at first? - No, not at the first order.
370. Which boat did you go to first? - The first boat on the port side - not the emergency boat. The first boat was the first boat to uncover. You understand we started on the port side and got those boats uncovered and cleared and turned

## Page 24

them out, falls all ready for lowering, and then worked with the starboard boats. At the time we were working at the starboard boat - I think I was at boat 13 - the chief officer came along and asked me whether it was my right boat. I said, "No, we are all assisting here." He said, "All right, go to your own boat," and then I went to No. 14 boat. 371. Then how comes it that you did not go to your own boat in the first instance? - Acting on the boatswain's orders.

372. (*The Commissioner.*) Which boat did you go to first - what number? - I think it is four, the first boat abaft the emergency boat on the port side.  
*Sir Robert Finlay:* It would be No. 4.
373. (*Mr. Butler Aspinall.*) How many boats did you assist in getting out and down to the water before you went to your own boat? - I think I assisted in getting four out ready for lowering, but not down to the water. I was at my own station then. By the time the order was passed for women and children first, by Mr. Wilde, I assisted to get them all out ready for lowering. I personally helped at four boats.
374. Was there any difficulty or not in getting them out? - There was in one or two cases, but the difficulty was not great. It merely wanted a kick of the foot just to clear the chock.
375. That is a small difficulty, if it is a difficulty at all. It has always got to be done? - Yes, you have to watch for that. That is common. That is a thing which is likely to happen at any time.
376. Apart from the difficulty, if it can be called a difficulty, the boats were got out readily and easily? - Yes.
377. (*The Commissioner.*) What is the number of your boat? - Fourteen.
378. (*Mr. Butler Aspinall.*) Then, later, having assisted at the other boats, you got to your own boat? - Yes.
379. Does that boat belong to any particular officer? - Whether it does or not I do not know.
380. That you do not know? - No.

381. Who was taking charge of that boat when you got there - was there anybody? -  
When I got there I put myself in charge as the only sailorman there. I was afterwards relieved by the Fifth Officer, Mr. Lowe.

382. Later? - Yes.

383. Yes, we will come to that. Now having got to boat 14, which was your boat, what was done about that? - Directly I got to my boat I jumped in, saw the plug in, and saw my dropping ladder was ready to be worked at a moment's notice; and then Mr. Wilde, the Chief Officer, came along and said, "All right; take the women and children," and we started taking the women and children. There would be 20 women got into the boat, I should say, when some men tried to rush the boats, foreigners they were, because they could not understand the order which I gave them, and I had to use a bit of persuasion.

The only thing I could use was the boat's tiller.

384. (*The Commissioner.*) When you say that foreigners tried to rush the boat, were they passengers? - By their dress I should say yes, my Lord.

385. (*Mr. Butler Aspinall.*) Did the Fifth Officer assist you in this persuasion? - He was not there then.

386. Did you get these men out of your boat, or prevent them getting in? - Yes, I prevented five getting in. One man jumped in twice and I had to throw him out the third time.

387. Did you succeed in getting all the women and children that were about into your boat? - Yes, when Mr. Lowe came and took charge he asked me how many were in the boat; I told him as far as I could count there were 54 women and four children, one of those children being a baby in arms. It was a very small baby which came under my notice more than anything, because of the way the mother was looking after it, being a very small child.

388. (*The Commissioner.*) How many women did you say? - Fifty-four.

389. And four children? - Yes.

390. (*Mr. Butler Aspinall.*) Were there any other passengers in that boat? - Not passengers; no, Sir.

391. Who else was in that boat? - Myself, two firemen, and three or four stewards. I will not be certain as regards the exact number of stewards, but there were not more than four.

392. Two firemen and three or four stewards? - Yes; not more than four.

393. Was Mr. Lowe, the Fifth Officer, also in the boat? - We were practically full up. I was taking the women in when Mr. Lowe came. There was another officer with him on the boat deck, but I do not know which one that was, and he said to this other officer: "All right, you go in that boat and I will go in this." That would mean No. 16 boat; she was abaft us, the next boat. Mr. Lowe came in our boat. I told him that I had had a bit of trouble through the rushing business, and he said, "All right." He pulled out his revolver and he fired two shots between the ship and the boat's side, and issued a warning to the remainder of the men that were about there. He told them that if there was any more rushing he would use it. When he fired the two shots he fired them into the water. He asked me, "How many got into the boat?" I told him as near as I could count that that was the number, and he said to me, "Do

- you think the boat will stand it?" I said, "Yes, she is hanging all right." "All right," he said, "Lower away 14." 394. Was she then lowered to the water? - Yes.
395. And having been lowered to the water, was she disengaged? - No, she hung up. The forward fall lowered all right, sufficiently far enough that the forepart of the boat was afloat and the forward fall slack. Her after-fall then would be about ten feet - we had about ten feet to go on the after-fall. Our boat was at an angle of pretty well 45 degrees. I called Mr. Lowe's attention to it. He said, "Why don't they lower away aft?" I know the man that was lowering the after-fall, it was McGough. I looked overhead naturally enough, seeing the boat did not come down, and the fall was twisted. It resembled more a cable hawser than a fall, and would not render at all. I called Mr. Lowe's attention to the fact. He said, "What do you think is best to be done?" I said, "I can case it. I will cut one part of the fall, and it will come easy. I have not the least doubt but what she will come away with her releasing gear." He said, "Do not you think the distance rather too much?" I said "No; she might start a plug, but I will look out for that." We dropped her by the releasing gear, and when she was clear I jumped to the plug to see if the impact of the water had started it, but it remained fast. After that we got clear of the ship.
396. Now you are clear of the ship? - Yes.
397. Now, having got clear of the ship, what was done with that boat? Where did it go to? - We just rowed clear of the ship. I suppose Mr. Lowe used his discretion to get clear of the suction which was likely to take place, and we saw four other boats then. Sixteen was the nearest boat. She had just got clear a little previous to us. 398. On which side of the ship? - The port side.
399. On which side of the "Titanic," I mean? - On the port side. 400. How many were rowing? - Four.
401. Do you know who they were - were they seamen? - I can only account for two as regards their rating. I was pulling the after-oar on the port side of the boat, and on my left was a fireman; but as regards the other two that were further forward on the boat, I cannot say what they were as regards their rating.
402. (*The Commissioner.*) I thought you said they were stewards. - I do not know whether those stewards were rowing. There were more than four men in the boat. 403. Am I right in supposing that in your boat, No. 14, there were yourself, two firemen, three or four stewards, and Lowe? - There is a correction there, my Lord. There was one man in that boat that we had been under the impression - when I say "we," I mean the watch of sailors - that he was a sailorman. That man was not a sailor at all,

## Page 25

- though acting in the capacity of sailor. That was another man that was in the boat.
404. What was he? - A window-cleaner; he was supposed to be in the ship as a window-cleaner.
405. (*Mr. Butler Aspinall.*) Who was steering your boat? - Mr. Lowe, the fifth officer.
406. How far off from the "Titanic" was your boat rowed? - I should judge about 150 yards.

407. Then did she lie there? - She lay there with the remainder of the other boats - with the four other boats that we saw when we got clear of the ship.
408. Did you see four other boats there? - Yes.
409. Did you speak them? - Yes.
410. And was anything done with the other boats? - Mr. Lowe asked them who was in charge of the boats, what officers were there, and we got a reply from each boat individually to say they had no officer in the boat. He said: "All right consider the whole of you are under my orders; remain with me," and when the ship sank, when there was nothing left of her above the water, he waited, I suppose, about a couple of minutes, not more, and ordered all our boats to row where we last saw the ship to see if we could pick up anybody.
411. You have gone on a little too fast. You spoke four other boats? - Yes.
412. And you remained there? - Yes.
413. Now what was happening as far as you could see, on the "Titanic" while you were lying off; was she sinking by the head, or what? - She was sinking by the head.
414. You could see that? - Yes.
415. Was she sinking at first fast or slow? - Very slow it appeared to be.
416. As time went on did she sink faster? - As the water seemed to get above the bridge she increased her rate of going down. 417. Going down head first? - Head first.
418. (*The Commissioner.*) As the water got above the bridge did you say? - As the water got above the bridge she started to go down faster.
- The Commissioner:* I should have thought that when the water got to the bridge the boat would go to the bottom at once.
- Mr. Butler Aspinall:* I should have thought so too.
- The Witness:* She was right up on end then.
419. (*The Commissioner.*) Do you say the water got to the bridge? - Yes, I am judging from what I saw. When the port bow light disappeared she seemed to go faster. That light is seen about level with the bridge, the port bow light.
420. Is it level with the bridge? Is not the bridge above it? - The bridge would be above it, yes.
421. Put your finger on the bridge on that model. (*The Witness pointed it out.*) Do you want me to understand that the fore part of the ship was so deep in the water that the bridge was touching the water? - All this part (*pointing on the model*) was in the water; you could just see the port bow light. Of course, that would be the other side. This would be the starboard light, here.
- The Attorney-General:* He said she was standing end-on.
422. (*The Commissioner.*) What do you mean by that? - This part of the ship was right up in the air. You could see her propeller right clear, and you could see underneath the keel; you could see part of her keel.
423. And at the stern she was so much up that you could see the propeller? - Yes.
- The Attorney-General:* And part of the keel.
424. (*Mr. Butler Aspinall.*) You saw the port light disappear? - Yes.
425. And then after that the ship went? - Yes, she seemed to go with a rush then. 426. (*The Commissioner.*) How soon after you saw the bridge level with the water did the

ship disappear? - Well, I cannot say as regards the time, but when it got there the ship went with a rush, and you could hear the breaking up of things in the ship, and then followed four explosions. To the best of my recollection that is the number of the explosions.

427. (*Mr. Butler Aspinall.*) As soon as the ship went down, what was done with your boat? Did she remain where she was for a little time, or did she row in to where the ship had sunk? - She rowed in in company with the four other boats, under the orders of Mr.

Lowe, to see if we could pick up anybody from the wreckage.

428. The whole five of you rowed in? - The whole five of us.

429. Was there much wreckage? - No, not so much as you would expect from a big ship like that.

430. Did you see many people in the water? - Later on, but not then. We did not see many then when we got right over the top of the ship. There did not appear to be many people in the water at all.

431. Did you hear cries? - Yes.

432. Much? - Yes, rather a great deal.

433. Now did you succeed in rescuing anybody? - Not our boat individually, but the other boats in our charge did get somebody, but how many I cannot say.

434. (*The Commissioner.*) You mean people who had dropped from the vessel into the water? - I take it that is where they came from.

435. (*Mr. Butler Aspinall.*) Your boat got none of them? - We got none of them. The boats that got them were the boats away to our right; they would be to leeward, where the wreckage would drift.

436. Did you see anything of a raft or rafts in the water? - Later on in the morning we saw one.

437. That was not till later on? - No.

438. You succeeded in rescuing no passengers? - No.

439. Now, after seeing there was no chance of rescuing passengers, what did you do; did you remain there or did you sail away in any direction, or row, or what? - Mr. Lowe ordered four of the boats to tie together by the painters. He told the men that were in charge of them, the seamen there, what the object was. He said, "If you are tied together and keep all together, if there is any passing steamer they will see a large object like that on the water quicker than they would a small one." During the time that was going on - we intended to make fast ourselves, of course, with the four - we heard cries coming from another direction. Mr. Lowe decided to transfer the passengers that we had, so many in each boat, and then make up the full crew; it did not matter whether it was sailors or anything, and make up the full crew and go in the direction of those cries and see if we could save anybody else. The boats were made fast and the passengers were transferred, and we went away and went among the wreckage. When we got to where the cries were we were amongst hundreds, I should say, of dead bodies floating in lifebelts.

440. Was it dark then? - Yes.

441. Still dark? - Yes, and the wreckage and bodies seemed to be all hanging in one cluster. When we got up to it we got one man, and we got him in the stern of the

boat - a passenger it was, and he died shortly after we got him into the boat. One of the stewards that was in the boat tried means to restore life to the man; he loosed him and worked his limbs about and rubbed him; but it was of no avail at all, because the man never recovered after we got him into the boat. We got two others then as we pushed our way towards the wreckage, and as we got towards the centre we saw one man there. I have since found out he was a storekeeper; he was on top of a staircase; it seemed to be a large piece of wreckage anyhow which had come from some part of the ship. It was wood anyhow. It looked like a staircase. He was kneeling there as if he was praying, and at the same time he was calling for help. When we saw him we were about from here to that wall away from him, and the boats, the wreckage were that thick - and I am sorry to say there were more bodies than there was wreckage - it took us a good half-hour to get that distance to that man to get through the bodies. We could not row the boat; we had to push them out of the way and force our boat up to this man. But we did not get close enough to get him right off - only just within the reach of an oar. We put out an oar on the fore-part of the boat, and he got hold of it, and he managed to hold on, and we got him into the boat.

## Page 26

Those three survived. There was one dead in our boat, and that was the passenger, the first one we picked up.

442. You got four on board, one of whom died - is that it? - Yes, that is correct.

443. And three were saved? - Yes.

444. What did you do after that? - We made sail and sailed back to take our other boats in tow that could not manage themselves at all. We made sail then, but just as we were getting clear of the wreckage we sighted the "Carpathia's" lights.

445. Then what did you do; did you go back to the four other boats? - Yes, we went back to the four other boats. On our way back we saw one of our patent rafts. 446. (*The Commissioner.*) What is a patent raft? - I can give the details of the construction of it. These are air boxes with a seat construction on them, and on the top of them there is a sort of canvas bulwark. It is not a Berthon boat at all; it is not collapsible. It is constructed, and there is a canvas bulwark to it. This one we saw was awash. There seemed to be about 18 or 20 people on it. I particularly took notice of two women that were there, and we made straight for them first and got them off and got them into our boat.

447. How many? - I will not be exact to the number, but I think there would be about 20, because we were under sail at the time. My attention was directed to the sail while the officer manoeuvred the boat alongside this raft.

448. How many on the raft were women? - I only noticed two.

*The Commissioner:* But what is this patent raft? Is it a thing which is carried on board the boat?

*Mr. Butler Aspinall:* Yes, my Lord.

*The Commissioner:* Is it a thing which is constructed by the passengers or by the crew?

*Mr. Butler Aspinall:* I think it is part of the equipment of the ship.

*The Commissioner:* I have not heard of it.

*Mr. Butler Aspinall:* I think they are so constructed; they are put all about the deck, are not they?

*The Witness:* Yes. I will show you on this model. There is one at the end of this boat and there is one on the other side on the boat opposite to this one.

*The Commissioner:* Are these things which are carried in accordance with the Regulations of the Board of Trade? I never heard of them.

*Mr. Butler Aspinall:* I have heard of them before, my Lord.

*The Commissioner:* Do you know anything about them, Mr. Attorney?

449. (*The Attorney-General.*) Yes. It is a frame, and you can make round it by the arrangements there are there a bulwark of canvas. That is as I understand it. (*To the Witness.*) Is that right? - That is correct, Sir, but there are air boxes there that form the seats of that raft. Those are tanks.

*The Commissioner:* Those are air boxes which help to float the thing.

450. (*The Attorney-General.*) I presume so, my Lord. (*To the Witness.*) Do you know what an Englehardt collapsible boat is? - No; the only collapsible boat I have had any dealings with is the Berthon boat and I understand that thoroughly.

451. I am not sure what he is dealing with in regard to collapsible boats. Do you know how many there were? - No, I do not know how many there were.

*The Commissioner:* Is he talking about collapsible boats?

*The Attorney-General:* He may be.

*The Witness:* No, not collapsible boats.

*The Commissioner:* Is there anyone here, Sir Robert, connected with the White Star Line who can give us any information about these rafts, because I know nothing about them?

*Sir Robert Finlay:* Yes, my Lord. Captain Steele, the Marine Superintendent, will.

*The Commissioner:* Will you tell me, Captain Steele, what these things are?

*Captain Steele:* They are similar to an ordinary boat; just like the bottom of an ordinary boat, only there are air spaces in them, and they have canvas bulwarks.

*The Commissioner:* They are things which have to be rigged up I suppose when they are needed?

*Captain Steele:* They have; the bulwarks have to be raised, yes.

*The Commissioner:* How many of those are carried on board the boat?

*Captain Steele:* Four.

*The Commissioner:* Two on each side?

*Captain Steele:* Two on each side.

*The Attorney-General:* Will your Lordship ask him whether they are things we have been calling the Englehardt collapsible boats?

*Captain Steele:* Yes, they are.

*The Commissioner:* Are they the collapsible boats?

*Captain Steele:* Yes, they are, the Englehardt collapsible boat.

*The Commissioner:* They are the collapsible boats that you spoke of, Mr. Attorney.

*The Attorney-General:* Yes, I spoke of four Englehardt collapsible boats.

*The Commissioner:* Now I understand. They are not something additional to what you mentioned in your opening?

*The Attorney-General:* No.

*The Commissioner:* Now, Mr. Aspinall, please go on.

452. (*Mr. Butler Aspinall.*) Did you leave any dead bodies on this collapsible boat, what you call a raft? - Yes, two.

453. Were they men or women? - Men.

454. Having got these persons off this structure, what did you do then? - We took another collapsible boat, as you term what I mentioned just now, one of a similar kind, not a Berthon boat, a similar kind, to the one I said was awash - we took her in tow; she had passengers on board.

455. Do you know how many? - No, I do not.

456. You took her in tow and towed her in what direction? - Towed her to the "Carpathia."

457. The "Carpathia" was in sight then? - Yes.

458. Did you then go to the "Carpathia"? - Yes. 459. And get alongside of her? - Yes.

460. Was it dark - or light by the time you got alongside of the "Carpathia"? - Daylight.

*The Commissioner:* I understood it was 8 o'clock in the morning when they got to the "Carpathia."

*The Attorney-General:* Between 7 and 8, my Lord.

461. (*Mr. Butler Aspinall - To the Witness.*) And then, did you all go on board the "Carpathia"? - Yes.

462. When daylight came that morning, was there much ice about? - Yes, an enormous quantity of ice about.

463. Were there bergs about - icebergs? - Yes.

464. Many? - Yes. I did not count them, but I saw half a dozen that I took notice of. 465. How long do you think it was from the time the "Titanic" struck the iceberg until she sank? - Roughly, about two hours and a half.

466. How long was it from the time she struck the iceberg until you got your boat into the water? - It was about one o'clock when we got our boat into the water.

467. (*The Commissioner.*) And would that be about an hour and a half? - It would be about an hour and a half.

468. Or an hour and a quarter? - I judge that she struck about twenty minutes to twelve, and it was about one when we got our boats into the water.

469. It was about an hour and twenty minutes before you got your boat into the water? - Yes.

470. (*Mr. Butler Aspinall.*) What were you doing during that hour and twenty minutes or hour and a half? How were you occupied? - Getting other boats ready for lowering - not the whole of the time.

471. What were you doing during the rest of the time? - Well, there was an interval between when Mr. Wilde sent me to my boat. I was there a fairly decent while, time enough for me to give a good look round to see my boat was ready for lowering before we had orders to take the passengers in. I would not say how long, but I had ample time to look round the boat and see she was all in perfect order.

472. And was your boat in good order? - Yes.

473. Had she got her oars? - Yes.

**Page 27**

474. And her plug or plugs? - Yes.

475. Did you notice anything else; what else had she got in her? - Well, I could not go right into details. There was one thing we found was not in her after going away, and that was the boat's lamp; but as regards there being biscuits in the tanks we did not require to use them, so we did not sound the tanks to see if there were biscuits there, but there was an ample supply of water there, because we drank some of it, so we know.

476. Was it good water? - Good fresh water.

477. Was there a place for this lamp in the boat? - The usual place for a lamp to be in a boat when she is fully equipped is to be hung underneath one of the thwarts.

478. Did you look there? - Yes.

479. And it was not there? - It was not there. I looked under all the thwarts.

480. (*The Commissioner.*) Whose business is it to see that these lamps are in the boats? - Any ship that I have been in in my experience it has been the boatswain's duty to see that all the boats are equipped.

481. It is the boatswain's duty to see the lamps are there? - Yes.

482. (*Mr. Butler Aspinall.*) How long do you think it was after the ship struck the iceberg until you got the women and children into your boat? - Well, I should say, taking the time we got into the water, it would be half-past 12 we started getting the women into the boat - near about that time I should say.

483. As far as you could see, apart from the rush made by these few men, was there any panic? - No panic whatever.

484. Were the people behaving well, as far as you could see? - Exceptionally well.

485. The crew and the passengers? - Yes.

486. I think you said you had ample time to make an inspection of your boat? - Yes.

487. Before the women and children were put in? - Yes.

488. You remember telling us that after you came on deck there was a general order, "Women and children first." Do you remember that? - I remember that order. 489. Can you tell me what interval of time there was between that order being given and the women and children getting into your boat? - About three minutes previous. It seemed no sooner the order came along my side of the deck from Mr. Wilde - I heard him personally give that order - we had just started to get people into the lifeboat. We heard that before he got abreast of our boat; we heard it further along the deck, and I continued getting the women in, and when Mr. Wilde came along he gave the order again and assisted me to get the women into the boat.

490. With regard to the women, I want you to tell me this; from your knowledge of the ship what were the means of summoning the women, say in the third-class compartments to the place where the boats were to take the people off? - I know of no special means of summoning them there.

491. You do not know? - No.

492. I suppose that really is not in your department? - No.

493. That is more in the stewards' department? - Yes. 494. The stewards will tell us about that? - Yes.

495. I suppose the boats are in a place where the first-class passengers are allowed to go as soon as they are swung out and lowered a bit? - And second-class.

496. So that first and second-class passengers in that sense would have a better chance of getting to the boats, would they not? - Yes, on account of their being allowed on that deck.

497. You told me of the efforts that were made to save life after your boat had cast off, how you picked up people from what you called the raft. Did any people from the water try to get into your boat, and were told there was not room for them? - No, not at all.

498. Did anything of that sort come under your notice, either in your boat or in any of the other boats which were about you? - No, that is not to my knowledge; I speak for my own boat.

You are quite right; I only want your own knowledge.

*Sir Robert Finlay:* I have nothing to ask at present, my Lord, but if any question should be put by any other of the gentlemen who are attending, your Lordship will allow me to cross-examine.

*The Commissioner:* You can ask him in the way of re-examination.

*Sir Robert Finlay:* I think in future it might be more convenient if I was allowed to make our cross-examination after the others.

*The Commissioner:* Very well.

### **Examined by Mr. SCANLAN.**

[no question 499]

500. You said that the first and second-class passengers had a better chance of getting to the boat deck than the third-class passengers. Is it not the case that from the time the collision happened until you were ready to take in passengers there was ample time for the women and children in the steerage to have been brought on to the boat deck? - Yes, there was ample time.

501. With regard to the lamp, is it not the usual practice to supply the lifeboats with lamps before leaving the port of departure from which the voyage starts? - In the boat's equipment when it has gone into Southampton, when boats are overhauled, with regard to the full equipment, the lamp counts part of the boat's equipment; it is always put in the boat.

502. Is it not the practice to overhaul the boats and examine their contents before the ship is cleared? - I have always seen that done in the Union and Castle Line, where most of my time has been, but on the Wednesday we left in the "Titanic" I did not see anything in the boats overhauled at all.

503. (*The Commissioner.*) Were you there? - I was there and went away in one of the boats that was under exercise under the Board of Trade's Surveyor.

504. Which of these boats, what number was it that you were present at? - On the test on the sailing day?
505. Yes? - No. 13 boat I was in.
506. That is not on your side of the ship but on the other? - Yes, on the other side.
507. And what did you see? - I do not quite understand the question.
508. You saw a boat overhauled, I understand? - No, I did not.
509. Then what did you see? - The boat turned out; we were told to put our lifebelts on, so many men, there were both watches there, an officer there, junior officers, and two chief officers.
510. Did you see, for instance, that there was no lamp there? - I did not notice anything in the boat then in particular.
511. Then you do not know whether there was a lamp or there was not? - In my own boat I do as regards the day the accident happened.
512. What boat are you talking about now? - I am talking about 13 boat that I went away in practice.
513. Thirteen boat was not your boat? - No, but it was the boat I was in for survey on the day of sailing.
514. That was at Southampton, was it not? - Yes.
515. Now, was there a lamp in that boat? - That I cannot say.
516. You do not know? - No.
517. Did you look? - No.
518. I suppose you did not look? - No.
519. Then you cannot say whether there was a lamp there or not? - No.
520. (*Mr. Scanlan.*) In the overhauling of the boat No. 13, and in the practice of boat drill was there any inspection made by you or anybody else to see whether the boat was fitted with a lamp and

## Page 28

compass and the other proper equipment? - There was no inspection made.

*The Commissioner:* Now, Mr. Scanlan, will you tell me what "the other proper equipment" means, so that I may understand what you are asking?

*Mr. Scanlan:* I am reading from the rules made by the Board of Trade on page 15. No. 5 says: "Equipments for collapsible or other boats, and for life-rafts. In order to be properly equipped each boat shall be provided as follows: (A.) With the full singlebanked complement of oars, and two spare oars."

*The Commissioner:* Now stop a moment. Did you see whether the boat that you were on, No. 14, was equipped with a proper complement of oars? - With a proper complement of oars, yes.

*The Commissioner:* Now what is the next?

*Mr. Scanlan:* "(b) With two plugs for each plug-hole, attached with lanyards or chains, and one set and a half of thole pins or crutches, attached to the boat by sound lanyards."

*The Commissioner:* Did you look for those?

*The Witness:* My position in the boat -

521. Now, will you answer the question? Did you look for those? - Not for the plug, but for the crutches.

522. You looked for some; did you find them? - Yes.

523. And the others you did not look for? - No.

524. I suppose it was not your business to look to these things? - Not as regards the plug.

*Mr. Scanlan:* "With a sea anchor, a bailer, a rudder, and a tiller, or yoke and yoke lines."

525. (*The Commissioner.*) Did you look for those things? - No.

Then you cannot tell us whether they were there or not? - No.

*The Attorney-General:* There was a tiller, my Lord; he said he used it.

*The Witness:* Not in that boat, Sir.

*The Commissioner:* This man was not there for the purpose of seeing whether the boat was properly furnished or not.

*Mr. Scanlan:* "A painter of sufficient length and a boat-hook."

526. (*The Commissioner.*) Did you look for the painter and the boat-hook? - Yes. 527.

Were they there? - Yes.

*Mr. Scanlan:* "The rudder and bailer to be attached to the boat by sufficiently long lanyards."

528. (*The Commissioner.*) Did you measure the lanyards? - No.

*Mr. Scanlan:* "A vessel to be kept filled with fresh water shall be provided for each boat."

*The Commissioner:* That was there; it was there after the collision.

*Mr. Scanlan:* In those rules the next Section (6) is headed "Additional equipments for boats of Section (A.) and Section (B)."

*The Commissioner:* What does that mean - "(A.) and (B.)?"

*Mr. Scanlan:* I understand (A.) are lifeboats. It gives Section (A.) in the general rules, "Section (A.). A boat of this Section shall be a lifeboat of whale boat form properly constructed of wood or metal, having for every 10 feet of her cubic capacity as in Rule 2 at least one cubic foot of strong and serviceable enclosed airtight compartments so constructed that water cannot find its way into them. In the case of metal boats an addition will have to be made to the cubic contents of the airtight compartments so as to give them a buoyancy equal to wooden boats."

*The Commissioner:* This man will know nothing about that unless he was a skilled naval architect.

*Mr. Scanlan:* This was an ordinary lifeboat. Section 6 provides that the boat should have two hatchets or tomahawks - that is the language of the Board of Trade Rules - "one to be kept in each end of the boat, and to be attached to the boat by a lanyard." 529. (*The Commissioner.*) Did you see the hatchet or tomahawk? - No, my Lord. 530. Do you mean to say they were not there or that you did not look for them? - I did not look for them.

*Mr. Scanlan:* "With a mast or masts and good sail and proper gear for each."

531. (*The Commissioner.*) Was that there as far as you know? - Yes. *The*

*Commissioner:* What is the next?

*Mr. Scanlan:* "With a line becketted round the outside of the boat, and securely made fast."

532. (*The Commissioner.*) Had it that? - Yes. *Mr. Scanlan:* "With an efficient compass."

533. (*The Commissioner.*) Did you look for a compass? - No.

534. You did not look for one? - No.

535. Then you did not know whether it was there or not? - No.

536. (*Mr. Scanlan.*) Had 14 a compass when you got into it after the accident? - No.

537. It had no compass? - No.

538. (*The Commissioner.*) Whose business is it to see the compass is there? Is it the boatswain's place? - I am being questioned as regards two boats now.

539. You are being asked particularly about No. 14. Do you know when you were being exercised? - That was 13.

540. In No. 13 you did not look for a compass? - No.

541. And therefore you do not know whether it was there or not? - No.

542. But when you got into 14, which was after the collision, there was no compass? - I looked for one and I found there was not one there.

543. You found there was not one there? - Yes.

544. Now, I am going to ask you whose business is it to see that the compass was on the lifeboat. Is it everybody's business or nobody's business? - Yes, it is somebody's business.

545. And who is the somebody? - The Chief Officer.

546. The Chief Officer? - Yes, on any ships I have been in the Chief Officer has seen that the boats were properly equipped, but the boatswain has seen the boats equipped and reported to the Chief Officer. That is the rule.

547. It is the boatswain's business in the first place? - I would rather not say whose business it is, not as regards the state of affairs.

*Sir Robert Finlay:* I think your Lordship will observe in Rule 6, not more than four boats in anyone ship are required to have this outfit mentioned in the rule to which Mr. Scanlan is referring.

*The Commissioner:* Is that so, Mr. Scanlan?

*Mr. Scanlan:* It is so my Lord, but I think for the purposes of this investigation as the boats are being taken one by one, it is desirable to see whether the individual boats had this equipment. But I wish to read to your Lordship -

*The Commissioner:* Am I to understand that according to the Board of Trade Regulations only four boats out of the whole complement of boats are required to have a compass?

*Mr. Scanlan:* That is so, my Lord.

*The Commissioner:* You see he only saw two boats, one at Southampton and one he got afloat in after the accident. In the one boat he did not look for the compass, in the other he found there was not one.

*Mr. Scanlan:* What I suggest, my Lord, is this. If we find on examining the people who were responsible for each particular boat that each particular boat was deficient, then it will be found, I submit, that this regulation was not complied with. May I read to your Lordship this sentence from the General Rules: "All boats shall be constructed and properly equipped as provided by these rules, and two boats and other life-saving appliances are to be kept ready for use to the satisfaction of the Board of Trade." *The*

*Commissioner:* Yes, but the Board of Trade, you know, cannot be afloat on the ship every day that the ship is at sea. They can only see that the things are right before the ship leaves port.

*Mr. Scanlan:* That is my submission, my Lord, that a survey before the boat leaves port should disclose whether or not the requirements of these sections have been complied with.

*The Commissioner:* I am pointing that out to you. This man made no survey. It is not his duty to make a survey.

548. (*Mr. Scanlan.*) I pass from that generally to this. This particular boat to which you were

## Page 29

attached had neither a compass nor a lamp? - That is boat 14.

*The Commissioner:* Now you are talking of No. 14.

549. (*Mr. Scanlan.*) Yes, my Lord (*To the Witness.*) I want to ask you this as a practical seaman: Do you consider it very important that a lifeboat laden as this one was, with the full complement of passengers, should be provided on a dark night with a lamp? - Yes. *The Commissioner:* Well, now you know that is not a question to ask this Witness; that is a question for me. You may ask me the question at the proper time. I shall probably not answer it.

550. (*Mr. Scanlan.*) I shall observe your Lordship's ruling. (*To the Witness.*) Now I want to ask you about the numbers of the crew who were attached to this lifeboat. I understand it is the practice to have posted up in the cabin or in the forecabin a list of the crew for the manning of each particular lifeboat. Is that so? - Yes.

551. Was there a list for No. 14? - Yes.

552. Besides your own name what other names were there on this list? - I am not certain; I do not know.

553. Do you know how many names were on it? - No.

554. As part of the boat drill which took place at Southampton were the different officers and the members of the crew whose names were put down for the different boats expected to go to their stations at the falls? - Not in their own particular boat, no.

555. Not in their own particular boat? - No.

556. So that so far as the "Titanic" were concerned there was no practice of bringing the boatmen and crew of the lifeboats to their respective boats before the voyage commenced? - No one went to their own particular boats until the voyage had commenced.

557. (*The Commissioner.*) Was there any difference in regard to those boats? - No.

558. So that for the purpose of practice it did not matter which boat you went to? - No.

559. (*Mr. Scanlan.*) You rowed back, I understand, to see if you could rescue anyone in the water. How many of the crew did you take to row this No. 14 back? - Eight and the officer in charge would be nine.

560. Will you tell his Lordship how many of the crew are necessary for the proper manning of a lifeboat of that size? - Eight and a man at the tiller.

561. Suppose, instead of it being a calm night you had a storm, would eight men be necessary to safely navigate such a boat as that? - Yes.
562. And when you started, I think there were only two of you capable seamen? - No, only one.
563. Only one?
564. (*The Commissioner.*) Who was that? - That was myself, your Lordship. 565. (*Mr. Scanlan.*) I do not doubt your capacity, but I understand Mr. Lowe was with you? - Yes, Mr. Lowe was there.
566. When the boat was lowered into the water? - Yes.
567. Besides you and Mr. Lowe, was there any other practical man, I mean to work the oars or assist in the navigation of the boat? - There was no other practical seaman in the boat.
568. You do not think that sufficient? - No.

**Examined by Mr. QUILLIAM.**

569. I want to ask you about the two icebergs. Can you tell his Lordship how far you were able after the collision to see that iceberg distinctly - when you got into the small boat I suppose you were from time to time some distance off the iceberg?  
*The Commissioner:* I do not know that he was, you know; for aught I know he was close upon it.
570. (*Mr. Quilliam.*) Were you close upon it? - I did not see the iceberg after we were away in the boat, not till daylight.
571. At any time you could not see the iceberg when you were away in the boat? - Well, we really did not look for it.
572. It was only in the morning time you noticed the iceberg. With regard to rafts, did you see any of them lowered into the water? - No.
573. Were you the last boat to leave? - No.
574. How many rafts did you see at daylight? - Two.
575. Did you see any rafts floating about without passengers or crew on them? - No, none at all.
576. There was no practice before the "Titanic" left the port - no practice as to lowering the lifeboats or manipulating them? - Yes, there was practice.  
*The Commissioner:* You must not put questions of that kind, which are directly contrary to the evidence. The evidence is that there was practice at Southampton.  
*Mr. Quilliam:* Very well, my Lord.  
*The Commissioner:* Whether it was sufficient or not is a different matter.
577. (*Mr. Quilliam.*) You saw practice, but you are not in a position to say whether there was any lowering of the lifeboats or not, or whether they came adrift after the boat went down? - Do you mean on the night of the accident or at Southampton? 578. On the night of the accident? - On the night of the accident I saw three boats lowered.
579. Three of the rafts? - No, not rafts, boats, ordinary lifeboats.
580. You saw no rafts lowered at all? - No.

581. (*The Commissioner.*) He never saw any rafts until he saw the two in the water, I understand? - That is correct, my Lord.
582. (*Mr. Scanlan.*) Were the falls of all the boats long enough? - Yes.
- Mr. Holmes:* May I ask a question?
- The Commissioner:* Who are you?
583. (*Mr. Holmes.*) I made an application, my Lord, on behalf of the officers. (*To the Witness.*) You told me two shots were fired by Mr. Lowe into the water? - Yes.
584. No shots were fired at anyone? - No.
585. And did you hear any other shots fired at all? - Yes.
586. Where? - After we came back from the wreckage where we had taken one of those rafts in tow, Mr. Lowe emptied his pistol into the water; as regards the number of rounds left in it I cannot say, but I think he emptied five rounds out of it. 587. But all shots were fired into the water? - Yes.
588. (*Mr. Lewis.*) I represent the British Seafarers' Union. I understand you helped to lower the boats? - To turn them out, not to lower them - to turn them out ready for lowering.
589. How many men would have been there? - Three.
590. Then you proceeded to another boat? - Yes.
591. You did not take the three men who were assisting you on to the next boat, and so on? - We divided ourselves as we came on the boat deck; we each went so many to a boat, irrespective of any number whatever, and as we got the boats out so we passed on to another one.
592. When you reached the next boat, was anyone there? - Yes, there was somebody there. In some cases there was one man there working, and in some cases there were two, and perhaps three.
593. Then you assisted? - Yes.
594. As you came to each boat there were not sufficient men there -
- The Commissioner:* Do not ask questions by making statements; ask the question. 595. (*Mr. Lewis.*) Were there enough men there when you came to the boat to prepare and lower the boats successfully? - No.
596. You mentioned in regard to one of the boats that the falls were rather short; is that so? - Not the falls short; the falls being new, I take it, it twisted and so prevented it from rendering, from overhauling properly, as we call it.
597. Am I correct in saying that McGough was in the boat? - No.
598. He assisted you? - Yes, he lowered that fall.
599. He did not go into the boat? - No.
600. You gave in your evidence that the third-class passengers would have very little chance of

**Page 30**

going by your boats because they did not have access to the embarkation deck? - I will not say that, because every barrier is down in a case like that.

*The Commissioner:* You do not listen to him. Every barrier was down, he says, and therefore every one could get on to this deck.

*The Witness:* Yes, the decks were quite open.

601. (*Mr. Lewis.*) Have you sailed in the "Olympic"? - No.
602. Do you know the character of the "Titanic" fairly well; did you know its form? - No, I do not know anything about the structure of the vessel.
603. Could you say whether it was difficult for the third-class passengers to obtain access to the deck which you were referring to just now? - Yes, it is difficult.
604. (*The Commissioner.*) In what sense? - There is only one ladder. May I point to the model?
605. There is only one ladder to approach that deck for the third-class passengers? - There is a ladder here goes on to this deck and you have to go inside this part here and up another ladder, but there are other ladders here on the afterpart of this deck-house, but they are only rungs on the side of a house, hardly ladders. They are straight up and down, and anybody outside seafaring men would find it a difficult job.
606. He would find it a clumsy job to do? - Yes.
607. Point me out where you were during this time - during the lowering of the boats? - This was the last boat I worked on, No. 13. That was the last one I worked on. My boat was on the other side of the ship.
608. You were on the port side? - Yes; I went to my own boat afterwards.
609. You were on the port side about where you have put your finger? - Yes. 610. Did you see any third-class passengers coming up? - I saw none coming up, but I saw some there.
611. You were close to this ladder that you talk about? - No.
612. Show me how far away the ladder was from where you were standing. - The ladder is here and I am right away on the other side. 613. Is there not a ladder on each side of the ship? - No.
614. Do you mean to say there is only the ladder on the starboard side of the ship? - No, there is one each side of the well deck.
615. Of course there is; there is one on the starboard side and one on the port side? - Yes.
616. And could you see the ladder on the port side? - No.
617. Then you do not know how many people were coming up that ladder? - No. 618. (*Mr. Lewis.*) At the time you placed the women and children on board, were the decks at all crowded near your boat? - There were people round about my boat, but I could not say what space there was beyond the cluster of people I saw there.
619. How many years have you been at sea? - Eighteen years.
620. You have had a fair experience. How many seamen were on your boat? - On boat 14?
621. No, on the "Titanic" itself? - I do not know the number.
622. Would it be round about 42 or 43? - Yes, it would be round about that.
623. How many men did you say it required to prepare and lower a lifeboat? - At least four.
624. So that it would require more skilled men? - They would want to be skilled men.
625. I understood you to say you formerly worked for the Union Castle Company? - Yes.

626. And you had systematic boat drill? - Yes.

627. Have you been on any other boat of the White Star Line except the "Titanic"? - Yes, the "Teutonic."

*Mr. Lewis:* I take it I am in order to ask what is the general practice on the White Star boats. I want to ask whether Mr. Scarrott has had experience of other White Star Line boats.

*The Commissioner:* He has told you he has been on the "Teutonic."

628. (*Mr. Lewis.*) Did any boat drills take place while you were on the "Teutonic"? - Yes.

629. Regularly? - One drill during the voyage.

630. (*The Commissioner.*) How long was the voyage? - Three weeks then.

631. Where was it from and to? - From Southampton to New York and back. 632. Did the "Teutonic" take three weeks to get to New York? - It was on a different service from what we are on now.

633. I never heard of a White Star liner taking three weeks to get from Southampton to New York. I should think a sailing ship could do it. When is the time you are talking about? - Our contract lasted for that time that we belonged to that ship. Our agreement was, when we belonged to that ship, for a voyage of three weeks, occupied from Southampton to New York and return.

634. (*Mr. Lewis.*) You mean there and back do you? - Yes.

635. You said the collapsible boat or raft was waterlogged? - No, not waterlogged; it was awash.

636. Was it serviceable; was it of any use? - No.

*The Commissioner:* What are you talking about now?

*Mr. Lewis:* I am talking about the collapsible boat termed a raft and asking the Witness whether it was in his opinion at all serviceable. I asked him if it was waterlogged, and he tells me he thinks it was not serviceable.

637. (*The Commissioner.*) I understood him to say that he did not think it was waterlogged. (*To the Witness.*) Was it waterlogged? - It was full of water; its compartments were full of water.

638. You think it was waterlogged? - Yes.

639. What happened to it? - It was unserviceable.

640. When was this? - When we went to take the survivors off of it.

641. At all events it was serviceable enough to keep afloat? - Yes.

642. And to preserve the people on it? - Yes.

643. And then you took the people off it? - Yes.

644. (*Mr. Lewis.*) Was that the only raft or collapsible boat that you saw? - No, that was not the only one, but that was the only one I saw in that condition.

645. You saw others in the water? - Yes.

646. (*The Commissioner.*) How many? - One other.

647. (*Mr. Lewis.*) Were there passengers in that? - Yes.

**Re-examined by the ATTORNEY-GENERAL.**

648. You have told us you saw another raft, what we have called an Englehardt collapsible boat. Was that one waterlogged? - No.

649. So that she was doing her service properly? - Yes, she was full of passengers; we had her in tow at the time.
650. One question, I want to ask you about the Sunday when the vessel sank; when she came into collision with the iceberg did you notice at all any difference in the temperature; did it get any colder or warmer on that day? - Colder. It was very cold after sundown.
651. Colder than it had been yet on the voyage? - Yes.

*(The Witness withdrew.)*

*The Commissioner:* I do not propose to go any further, but I want to ask whether you think it would be of service if I and my colleagues were to go down to Southampton to see the "Olympic"?

*The Attorney-General:* I think it would.

*The Commissioner:* If so we will make arrangements to be there at some time that fits in with the trains on Monday.

### **Page 31**

*The Attorney-General:* If your Lordship pleases.

*Sir Robert Finlay:* Everything will be ready on Monday.

*The Commissioner:* Very well, then, we will arrange amongst ourselves, and let you know by what train we propose to go. We had, perhaps, better do it now. We can get a railway guide.

*The Attorney-General:* As a result of today's experience, particularly having regard to inquiries which have been made, we think it would be quite well to stop where we are. There is a considerable improvement today both by the sounding-board and bringing us closer.

*The Commissioner:* I am very glad to hear that because I understand the arrangements have all been made, and it would be very difficult to undo them. *The Attorney-General:* Yes, I think it is very much better to stay.

*The Commissioner:* Well, I hear you very well. I do not know whether you hear me, but I hear you.

*Sir Robert Finlay:* Yes, it is really very much better.

*The Attorney-General:* We have a number of Witnesses here, and I think it is an obvious disadvantage to have a lot of these men here when they may not be wanted on a particular day. What it is proposed to do, therefore, is to have as many Witnesses here on Tuesday as can usefully be examined during that day, and leave the rest out.

*The Commissioner:* That is a matter that I must leave entirely to you. I am told there is a train at 10.15 on Monday morning for Southampton, whether it is true or not I do not know, but I have it on fairly reliable authority. If it is I propose we should go down by that train.

*Mr. Laing:* There is a train about 10, my Lord.

*The Commissioner:* Very well then, we will leave it in that way. We will be at Waterloo to take that train about 10, and we shall expect somebody at Southampton to look after us and to insure that we see what we want to see.

***(Adjourned to Tuesday next, at 10.30 o'clock.)***

## PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC."

### THIRD DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., appeared on behalf of the Dockers' Union. (Admitted on application.)

## Page 34

*Mr. Roche:* I have an application to make to your Lordship on behalf of the Marine Engineers' Association. It is an application to take a limited part in this Inquiry, but there are certain things which affect the members of that society very deeply. It is an association, the largest, I think, and the most recognised association, of marine engineers in England, with 10,000 seagoing members, marine engineers. The magnitude of the society is shown by the fact that some half or a large proportion of the engineers of this unfortunate vessel were members of this society.

*The Commissioner:* That seems reasonable.

*The Attorney-General:* I see from the ratings there were 25 engineers on board. I think they ought to be represented.

*Mr. Harbinson:* May I make an application to your Lordship? I have been instructed on behalf of a section of third-class passengers, Irish passengers, 180 of whom left Queenstown on the "Titanic," and of whom I am informed only 20 were saved. I have been asked to apply to your Lordship, with the authority of the learned Attorney-General, for permission to take part in this Inquiry. I quite appreciate and understand that it will be undesirable that there should be any duplication or anything in the nature of overlapping in the evidence given or in the questions asked. That, my Lord, would be undesirable. With your Lordship's permission, perhaps, on behalf of this important section, I might supplement some of the others and add something to the information to be submitted to this Inquiry.

*The Commissioner:* Will you put down in writing the names and addresses of those whom you represent and hand it in to my secretary, and I will then consider your application?

*Mr. Harbinson:* That shall be done.

*Mr. Clement Edwards, M. P.:* May I make an application on behalf of the Dock, Wharf, and Riverside Workers' Union? There is an application before your Lordship stating the names of persons on whose behalf I seek to appear. I do not know whether your Lordship has it in mind.

*The Commissioner:* I have not seen such a paper, but you must give me the names and addresses of the persons who desire to be represented and state what the reasons are. If I grant all these applications, this Inquiry will get into a state of inextricable confusion, but I will try to give permission to everybody that I think ought to be heard, separately.

*Mr. Edwards:* I have here a copy of the written application.

*The Commissioner:* Well, then you must hand it in to my secretary, and I will look at it.

*Dr. Jackson Wolfe:* I appear for the relatives of a number of third-class passengers, Irish emigrants, who joined at Queenstown. I think there is some misapprehension as to the number of passengers.

*The Commissioner:* Is this an application on behalf of another section of third-class passengers?

*Dr. Wolfe:* Yes, my Lord, and I am in a position to hand in the names and addresses.

*The Commissioner:* Is it suggested I should allow the third-class passengers to be divided into groups, and each group to be separately represented?

*Dr. Wolfe:* If your Lordship would allow me to suggest, I am sure I could work in harmony with my friend.

*The Commissioner:* Then you must consult him, and when you have arrived at some sort of agreement, let me know.

*Dr. Wolfe:* I can hand in the names and addresses.

*The Commissioner:* You can hand it in together with the list which that gentleman is going to hand in.

*Mr. Harbinson:* I wish to say, my Lord, that Mr. Farrell, who instructed me to make the previous application to your Lordship on behalf of the third-class passengers, represents almost the whole of the number, and tomorrow morning he can have authority practically from the whole.

*The Commissioner:* Then what does that gentleman mean by telling me he represents a number?

*Dr. Wolfe:* The number I represent is 21. The total number of Irish passengers who joined at Queenstown is 113. Of those, 69 were drowned, and of those 69 who were drowned, the relatives of 21 have instructed the solicitor who has instructed me.

*The Commissioner:* You must put it all down so that I can understand it, but at present I am not at all disposed to let any one class split itself up into a number of groups and each group to be represented. I should not know really how to conduct this Inquiry if I did. (*To Mr. Roche.*) It has been suggested that I had not given you leave to appear; I certainly intended to do so.

*Mr. Roche:* And I so endorsed my brief, my Lord.

*The Commissioner:* Is there anyone else?

*The Attorney-General:* No, not that I am aware of.

**GEORGE WILLIAM BEAUCHAMP, Sworn.**

**Examined by MR. RAYMOND ASQUITH.**

652. Is your name George William Beauchamp? - Yes.

653. And were you a fireman on the "Titanic"? - Yes.

654. Were you on duty on Sunday, the 14th, when the ship struck? - Yes.

655. Where were you? - Eight to twelve watch.

656. Were you down below in the stokehold? - Yes.

657. Which stokehold was it? - No. 10.

658. Can you see the plan from where you are? - The second one from the forward end.

659. The second one from the bow? - Yes.

660. Can you say what pressure of steam was being carried at that time? - I could not say.

660a. (*The Commissioner.*) Do you know anything about the pressure of steam? - We were carrying it where we had orders. What the orders were I could not say for certain.

661. I do not want you to tell me anything you do not know yourself; I do not want you to guess. I want you only to tell us what you know yourself? - Sometimes they carry 210 and sometimes 200. I think we were carrying thereabout 210 then.

*The Attorney-General:* We will get it from somebody else who knows it better.

*The Commissioner:* I do not think he knows anything about it, and I should not expect him to.

661a. (*Mr. Raymond Asquith - To the Witness.*) Did you notice the shock when the ship struck? - Yes, Sir, I noticed the shock.

662. Was it a severe shock? - Just like thunder, the roar of thunder. 663.

And immediately after the shock was any order given? - Yes.

664. What order? - To stand by, to stop. - The telegraph went "Stop."

664a. (*The Commissioner.*) You got that order from the bridge, "Stop"? - Yes. 664b.

(*Mr. Raymond Asquith.*) And were the engines stopped at once or not? - The telegraph rung off "Stop," so I suppose they were.

665. Did the engineer in your section give you any order? - Yes; the engineer and the leading stoker shouted together - they said, "Shut the dampers."

666. Did you shut the dampers? - Yes, immediately; "shut everything up."

667. Was anything done to the watertight doors after that time? - Yes, immediately the telegraph rang "off" and the order was given to shut up everything the watertight doors dropped.

668. The watertight doors dropped? - Yes.

## Page 35

668a. (*The Commissioner.*) How soon do you suppose after the order to "Stop" came from the bridge did the watertight doors close? - In less than five minutes. 668b. (*Mr. Raymond Asquith.*) Can you say which watertight doors they were - in which bulkhead they were? - The watertight doors shut. There was only one in the section where I was. They all shut all through.

668c. (*The Commissioner.*) Did not all the bulkheads close at one time? - Yes. *The Commissioner:* If the order came from the bridge to close the watertight bulkheads, would not they all simultaneously be closed?

*Mr. Butler Aspinall:* I believe if they were all in working order they would. 668d.

(*The Commissioner.*) I assume they would all close; they would not close some only.

(*To the Witness.*) At all events, all you know is that those which were in your compartment were closed? - Yes, Sir.

668e. (*Mr. Raymond Asquith.*) After the watertight doors were closed, was any order given to you with regard to the fires? - Yes, I could not say when - it was a few minutes afterwards; the order was given to draw fires.

669. A few minutes after what? - After the order was given to shut up, an order was given to draw fires. I could not say how many minutes, but the order was given to draw fires.
670. And did you obey that order? - Yes.
671. Did you see any water? - Water was coming in on the plates when we were drawing the fires.
672. What do you mean by "the plates"? - The plates of the stokehold where you stand.
- 672a. (*The Commissioner.*) You mean where the stokers were standing? - Yes.
673. What happened then? - The water was just coming above the plates then. 673a. (*Mr. Raymond Asquith.*) You mean it was coming through the floor? - Yes, coming through the bunker door and over the plates.
674. Through the bunker door? - Yes, coming through the bunker like.
675. When you had drawn the fires what did you do next? - Waited till everything was shut down and an order was given. Someone shouted "that will do," when everything was safe, when everything was shut down.
676. What did you do? - When the order was given someone shouted "that will do," and so I went to the escape ladder.
677. Is that the ladder by which you get out of your stokehold when the watertight doors are closed? - Yes, the escape ladder.
678. Can you say how long it took to draw the fires? - I could not say how long it took, just the usual time; I could not say for certain.
679. What is the usual time - you have often done it, I suppose? - Yes, I have done it a good many times. Of course, it all depends what you have got in the fires as a rule.
680. Can you say whether it took a few minutes or half an hour? - It took about a quarter of an hour, I suppose.
681. Did you notice any more water coming through during that quarter of an hour? - When the order was given and everything was shut up, someone shouted "that will do," and I went to the ladder then, the escape ladder.
682. But I asked you did you notice any more water coming through as time went on; did it come through in greater quantities? - I was going up the ladder.
683. Your answer is you do not know - is that what you mean? - I do not know. 684. When you went up the ladder where did you go to? - I walked aft in the alleyway, right aft.
685. Which deck? - Where the stokehold doors were; I do not know what deck it was.
686. Did you go up to the boat deck? - Yes, I went right along aft up the companionway up to the boat deck.
687. Did you know what your boat station was? - No.
- 687a. (*The Commissioner.*) Why not? - The list was put that morning, they said, but I did not see it.
688. Does that mean to say you could have seen it but did not look? - I heard someone say it was put up, but did not look.
689. Therefore you did not know which was your boat? - No, Sir.
690. And that was because you had not looked to see? - Yes, I did not look to see. That is right, Sir.

690a. (*Mr. Raymond Asquith.*) You say you heard a list had been put up that day? - Yes, that morning.

691. Had you looked to see if there was a list before that day? - There was no list before that day.

691a. (*The Commissioner.*) Had you looked, was the question. You did not look for this one. Had you looked to see whether there was a list? - Yes, Sir.

692. When did you look to see if there was a list? - You generally see anything put up like that.

693. When did you look to see if there was a list? - When I was going about in the daytime.

694. But when - how many days before? - I was in the room, and I did not see any notice up.

695. Answer the question. You say you looked for this list some time before, and that you did not see it. When was it you looked for it? - The second day out.

696. Did you tell anyone the list was not there? - No, I did not say anything about it. 697. Why did not you tell someone that the list was not there, if it was not there? - I never took any more notice of it.

698. Then you say you looked and found it was not there and you said nothing. Is that right? - Yes, that is right.

699. And then on the morning of the day on which the collision took place you know there was a list there hanging up? - I never saw it.

700. You did not look? - No.

700a. (*Mr. Raymond Asquith.*) And not knowing where to go to, what your boat was, what did you do? Where did you go? - I went aft on to the boat deck, and across to the starboard side, and stood on the deck of the ship by the boat and one foot on the boat and one foot on the lifeboat, like that, and helped the ladies and children in that were there, and the order was given by the officer then, "Lower away the boat, that will do." 701. Which boat was it? - No. 13.

702. No. 13 on the starboard side? - Yes.

703. Who was looking after that? Was there an officer there looking after it? - On the deck giving orders, yes.

*The Commissioner:* This is the starboard side (*pointing to the plan.*) Tell me where No. 13 boat was.

*The Attorney-General:* Is not the model better for him, my Lord?

*The Commissioner:* That is also the starboard side?

*The Attorney-General:* Yes.

*The Commissioner:* Now show me No. 13. (*The Witness indicated the position on the model.*)

703a. (*Mr. Raymond Asquith.*) Was there an officer looking after the loading of that boat? - Yes.

704. Who was he, do you know? - No, I could not say who he was.

705. Did he give you any order? - He said, "That will do in that boat. Who can pull oars?" I said, "I can." He said, "Get into that boat. Lower away. That will do." 706.

How long were you there before the order to lower away was given? - I could not say how long it was.

707. Did you help many people to get into the boat? - Yes. The order was given, "That will do; that is enough for that boat," and I stepped into the boat and went away with it.

708. I want you to say, if you can, how the people were chosen that got into the boat? - Women and children first.

709. Were there a lot of people standing about

## Page 36

the boat or not? - There was. Some ladies would not come in the boat.

709a. (*The Commissioner.*) Did you say some lady or some ladies? - Some ladies. I heard one say it.

710. Some ladies refused to come in? - Yes.

710a. (*Mr. Raymond Asquith.*) How many refused? - Well, I heard them saying - two or three of them saying, "No, I will not go; I will not go away in the boat."

711. Did they give any reason for refusing? - They did not give any reason, Sir. 712.

However, you did put a good number of ladies into the boat? - Yes, all that would come.

713. Did you put any men in as well? - No, Sir.

714. Any passengers, I mean - any male passengers? - No, I never put any in.

714a. (*The Commissioner.*) Did any get in? - Yes, I suppose some of them.

714b. (*Mr. Raymond Asquith.*) Do you know how many, if any, got in? - I could not tell you the amount of male passengers there were in the boat.

714c. (*The Commissioner.*) The question is how many men got into the boat - men passengers? - I could not tell you the number.

715. Well, did some get in? - Yes.

716. Can you give us about how many? - I could not tell you the number that got there.

717. Was it 20? - I do not know. I never saw 20 get in. I stood like I could not see everything, helping the ladies and children in.

718. Then I suppose you took an oar after the boat went into the water, did you not? - Yes.

719. Well, you would see then how many men there were in the boat and how many women? - No. I was keeping the boat off the ship's side with an oar.

720. How long were you in that boat before you were picked up? - It was 10 minutes to 10 when I was picked up by the "Carpathia."

721. The next morning? - Yes.

722. Very well then, you were in the boat a very long time. Cannot you remember how many men there were in it and how many women passengers? - No, I could not say how many men there were in there. The boat was full, 70 - about 60 or 70 I should think all told.

722a. (*Mr. Raymond Asquith.*) Before the boat was lowered, while people were still getting in, were there a lot of men passengers as well as women passengers on the deck? - Yes, there were a lot on the deck all round there.

723. Did they try to get in or was it orderly? - Quite orderly. Everyone obeyed orders. Everything was quite calm.
724. Could you tell whether the people that you saw standing round that boat were third-class passengers or first-class passengers? - No, Sir.
725. You did not know which they were? - No.
726. Who was in charge of that boat after it had been lowered? - The leading stoker and a sailor in the sheet ends of it. They were both in charge. I could not tell you which took charge of her.
727. Do you know their names? - Only Barrett. I think he took the tiller. He was giving orders. Barrett, the leading stoker.
728. How many of the crew were in this boat? - I could not say how many of the crew altogether that was in this boat.
729. There was you, and a sailor, and Barrett, the stoker? - Yes.
730. Did you have any difficulty in lowering and launching the boat? - Yes, we had a difficulty, because we were under the engine room discharge.
731. Did water come into your boat? - No. Everything lowered easily right till she got to the bottom, to the discharge, then we had a difficulty in keeping it away from the ship's side, to prevent the water coming in.
732. Did you succeed in keeping her away from the side and getting off? - Yes.
733. Did you have any difficulty in getting the boat free from the falls? - Yes. The boat was crowded. We could not get to the lever to get the blocks out.
- 733a. (*The Commissioner.*) That was because the people were in your way? - Yes, because the boat was crowded.
734. You had to push through? - You could not get through to where the lever was.
- 734a. (*Mr. Raymond Asquith.*) What did you do? - Barrett cut one end of the falls and a sailor cut the other.
735. What did you do when you got free of the falls; did you row away or did you stand by the ship? - We pulled a little way away and then laid on the oars.
736. Can you say about how far you pulled away? - Well, I could not judge the distance; it was not very far away.
737. Do you mean 100 yards or do you mean half a mile? - It was not half a mile.
738. Could you see from where you were what was going on on the deck of the vessel? - Yes, we could see what was going on.
739. How long did you remain there? - We pulled on our oars again then and pulled further away because of the suction of the ship.
740. What I asked you was how long did you remain in your original position? - What, stopped pulling the oars?
741. No. You told me you first of all rowed a short way away from the ship. How long did you stay in that position? - I could not say how long it was.
742. How long was it between the time when you launched your boat and the time when the ship sank? Can you say that? - Well, I should say about half an hour.
743. Within half an hour she sank? - Yes.

743a. (*The Commissioner.*) I want to ask a question about that. How long were you upon No. 13 boat getting her into the water? How long did it take you to get her into the water? - I could not say the time, but not very long.

744. What do you mean by not very long? - Everything worked all right and very easily till we got to the engine room discharge.

745. Yes, and then you had to push the boat away with your oar from the ship's side? - Yes.

746. But how long were you altogether in getting that boat launched, getting the passengers in, getting in yourselves, letting her down, cutting the falls, and getting her into the sea? - I could not say.

747. Can you give me no idea? - Well, as quickly as possible. Every man did the best he could.

748. I have no doubt of that, but how long did it take? - I could not say the time.

749. Did it take an hour? - No, not an hour, certainly not.

750. Did it take 20 minutes? - No, Sir.

751. You did it in less than 20 minutes? - Yes, I should think so.

752. How long was it after the shock, after you felt the shock in the engine room, that you began to let down the boat? - I could not say.

753. To loosen the boat on the deck, you know? - I could not say.

754. We have heard something. You were a quarter of an hour drawing the fires and you were some time down in the stokehold after you got the order to stop. You were down there, as I understand, about half an hour after the order to stop came? - No, not so long as that.

755. Say 20 minutes, and then it took you 20 minutes to lower the boat? - It took us about that or less than that.

756. That would be about three quarters of an hour; and do you tell me the ship sank in half an hour after your boat got free? - From the time of the impact when the ship struck, someone in our boat had a watch; it was just about 2 hours and 10 minutes.

757. So I thought - a great deal longer than that. It was over 2 hours between the impact and the foundering? - About 2 hours and 10 minutes. Someone in the boat had a watch because it was between 20 and 25 to 12 when she struck, and it was just after 2 the gentleman said that she went down, or just about 2, somewhere handy 2 o'clock.

## **Page 37**

757a. (*Mr. Raymond Asquith.*) When she sank were you near enough to see what happened; did you see how she sank? - Yes, she went down bows first; I could see the stern and then the stern went.

758. Did you hear any explosion? - I could hear a roaring just like thunder.

758a. (*The Commissioner.*) Yes, but I wish you would apply your mind to the question. You were asked, did you hear any explosions? - Yes.

759. Are you sure? - Yes.

759a. (*Mr. Raymond Asquith.*) How many did you hear? - You could hear the roaring as the ship went down as the explosion occurred.

760. Did you see anyone in the water after the ship went down? - No; you could hear the cries after the ship sank.

761. Did you go back to the place where the cries came from or not? - No; no order was given.

762. You did not go back? - No.

762a. (*The Commissioner.*) I did not understand him to say he heard cries. (*To the Witness.*) Did you hear cries after the ship went down? - Yes, Sir.

763. Was that from the people in the sea? - Well, I could not say; I daresay it was, I suppose it was.

763a. (*Mr. Raymond Asquith.*) You did not go back? - No.

764. Had you any room for more people in your boat or not? - No. Had we had any more room we should have gone back, but we could not go back owing as we were full up.

765. Do you know whether there was any compass in your boat? - No, Sir; there was not.

766. Did you look for one? - There was no compass, not in the boat I know. 767. Did you look for a compass? - Some of them did, I think.

767a. (*The Commissioner.*) Did you? - No, I never. When I got on the "Carpathia" I looked.

767b. (*Mr. Raymond Asquith.*) Was there any lantern or lamp on the boat? - No, Sir.

768. Did you look for that? - Yes.

769. Did you know where to look for it? Where did you look? - We looked everywhere; everyone tried and looked the best they could, and there was no light in the boat, none whatever.

770. Were there any provisions? - No, Sir.

771. Any water? - No, Sir.

772. Did you look for those? - Yes, Sir.

772a. (*The Commissioner.*) Can you tell me whose business it would be to put the water and the biscuits on the boat? - I could not say.

772b. (*Mr. Raymond Asquith.*) You have said already that it was about 10 minutes to 10 when you were picked up by the "Carpathia." Is that right? - Yes, it was 10 minutes to 10 by the clock when I looked.

773. By what clock was it 10 minutes to 10? - By the clock in the saloon of the "Carpathia."

774. Were you rowing all through that night? - Yes.

775. How many other men were rowing? - There was a steward there.

776. And did Barrett, the stoker, row? - He was taking charge of the boat aft. 776a. (*The Commissioner.*) Where were you rowing to; were you simply keeping the boat steady? - Well, we kept pulling till we saw a light, and we would row a little way and then stop, lay on our oars until we saw a light.

776b. (*Mr. Raymond Asquith.*) Who else were rowing in the boat besides you and the steward? - I could not say who else. The steward and I were on the oar I was on.

777. Can you say how many oars were being used? - Six.

778. Were they all men who were rowing of some sort, or did some women row? - They were all men, so far as I know.

778a. (*The Commissioner.*) How many oars were there? - We only had three oars each side.

779. That is six oars? - Yes.

780. Were six men handling those six oars? - There was me and the steward on the oar I was on.

781. You and a steward on one oar? - Yes.

781a. (*Mr. Raymond Asquith.*) You said there was a sailor on the boat as well, an ordinary seaman. Was he rowing? - I do not know; I could not say.

782. Do you know whether there was a man called Major, a fireman, in the boat? - Yes.

783. Was he rowing? - I believe he was, yes.

784. And a man called Foley, a steward? - I do not know the steward's name.

785. Had you ever had any boat drill while you were on the "Titanic"? - No. 786. Or seen anybody else having boat drill? - No.

787. Where did you join the ship? - Southampton.

788. You saw no boat drill and had none yourself? - No.

789. When you were picked up by the "Carpathia" were you among the first of the boats or the last of the boats to be picked up or in what order were you picked up? - There were several there before us. I could not say how many for certain.

790. Do you know how many were picked up altogether by the "Carpathia"; how many boats, not how many people? - Thirteen.

791. Were those all lifeboats or do you include some collapsible boats? - They were all lifeboats.

792. Had you a lifebelt on during all this night? - No.

793. How was that? - I was on watch and of course I came up and I never had time to go and get a lifebelt, the ship was too flooded.

794. (*The Commissioner.*) Had any of the passengers lifebelts on in this boat? - Yes.

795. How many of them? - I could not say how many for certain; all those round me had lifebelts on.

796. (*Mr. Raymond Asquith.*) Had you a lifebelt of your own if you had been able to go and fetch it? - Yes; I believe there is one in our quarters for every man.

797. (*The Commissioner.*) Did you ever look at it? - No.

*The Commissioner:* Are you going to ask any questions, Sir Robert?

*Sir Robert Finlay:* I may have some, but I think it would be convenient if I waited.

*The Commissioner:* Do you want to come next, Mr. Scanlan?

*Mr. Scanlan:* I am not particular about the order, my Lord; but I should like to ask a question or two.

*The Commissioner:* Well, I want to get the thing in order if I can.

### **Examined by MR. SCANLAN.**

798. How long have you been going to sea, Beauchamp? - Ten years.

799. Have you been employed as a stoker on many liners? - Yes.

800. Is it the usual practice on liners to give the stokers boat stations? - Yes. 801. Do you, as a rule, get your boat station before the ship leaves the port of departure? - On some ships you do, Sir, and on some ships you do not.
802. Is it the usual practice on liners to have boat drill? - Yes.
803. How often is the boat drill held? - Some companies every Saturday.
804. Once a week? - Once a week. Not round the coast as a rule.
805. I am speaking now about liners; is it not the case that on liners you have boat practice or boat drill before the ship leaves for a voyage? - Yes.
806. And then do you have a boat drill or practice in the course of the outward voyage? - Yes, once a week.
807. When you were taking on the passengers

**Page 38**

- on the boat deck, was there any officer of the ship bringing the passengers up to the boat deck? - There was one on the deck giving orders.
808. Do you know if any officer went down to the steerage quarters to let the steerage passengers know the lifeboats were ready? - No, Sir; I do not know. 809. Can you tell me how many of you were rowing? [No Answer.] *The Commissioner:* Will you ask him what he was rowing for.
810. (*Mr. Scanlan.*) Yes, my Lord (*To the Witness.*) I think you said, Beauchamp, that you saw a light? - Yes.
811. And that you were rowing for that light? - Yes.
812. (*The Commissioner.*) Now, what was that light? - We did not know what it was then. We thought it was a boat.
813. How long did you see that light? - We could not see at all till we got handy to it, and then we could see it was a ship.
814. What sort of a ship was it? - Well, it was the "Carpathia's" lights.
815. When did you first see the "Carpathia's" light? - I could not say what time it was.
816. How long before the "Carpathia" picked you up? - A long time.
817. What do you mean by a long time - three hours? - I could not say the time; I have no idea of it.
818. What I want to know is this: What were you doing rowing in the boat before you saw the light? Where were you rowing to? - We rowed and then had a blow, and then rowed on again when we saw the light, Sir. We rested on our oars.
819. Were not you resting on your oars most of the time? - I do not know what you would row for? - Well, we rowed to the light when we saw one.
820. When you saw one, I can understand, but before you saw the light you were resting on your oars, were you not? - Yes.
821. (*Mr. Scanlan.*) Did you first of all row away from the sinking ship? - Yes. *The Commissioner:* Yes, he has told us that.
822. (*Mr. Scanlan.*) And then you commenced rowing to the light you saw. Can you tell me how many men were rowing with you in that boat? - There were two on the oar I

was on; there were only six oars. I do not know how many men there were on each oar.

823. Were there six oars being in use at the time? - Yes.

824. Actually in use? - Yes.

825. If you had a light in the boat at the time the boat was lowered from the ship's side, could you have seen better to disengage the boat from the falls? If you had had a lantern or any light in the boat, could you have seen better how to disengage the boat from the falls? - No. That was all right; everything went all right.

*The Commissioner:* This light is quite a small thing, and it would not, in my opinion, be of any assistance for that purpose.

*Mr. Scanlan:* What I thought was that it might light them through the lifeboat itself.

*The Commissioner:* Oh, no, it would not do anything of the kind.

826. (*Mr. Scanlan - To the Witness.*) Is it usual on liners for each fireman to get a badge something like this, letting him know his boat station (*exhibiting badge.*)? - In some companies it is.

827. And some companies do not do it? - No.

*The Attorney-General:* Let me look at it. (*The Badge was handed to the learned Counsel.*)

828. (*The Commissioner.*) What companies have you had it at? Have you ever had a badge like that? - Yes.

829. What company? - The Union Castle Company.

830. Have you had a badge from any other company? - No, Sir.

831. How many companies have you served under? - Under the Union Castle Company, the Royal Mail, the White Star.

832. Any others? - No, Sir.

833. No other liners? - No, Sir.

834. (*Mr. Scanlan.*) You have told his Lordship that a stoker was in charge of this lifeboat? - Yes.

835. Have you ever heard of a stoker being in charge of a lifeboat in the arrangements of any company you have travelled with before? - No.

*The Commissioner:* I do not quite know what you are driving at, Mr. Scanlan. Nothing went wrong in this boat, and it seems to have been launched in a very reasonable time.

*Mr. Scanlan:* What I am trying to get at, my Lord, is that in ordinary circumstances the proper thing is to have an experienced sailor in charge of a lifeboat, and not a stoker.

*The Commissioner:* I daresay, but these were not ordinary circumstances; they had to do their best.

836. (*Mr. Scanlan - To the Witness.*) When a list of a lifeboat's crew is put up in a ship, in what part of the ship is it placed? - In the forward end where the crew's quarters are. 837. If this had been in its place would you have necessarily seen it in going to your quarters? - I never looked.

*The Commissioner:* That is not a pertinent question. Ask him if he would necessarily have read it.

838. (*Mr. Scanlan.*) You only heard of the list having been put up after the wreck took place? - No; I heard that morning.

*The Commissioner: (To Mr. Holmes.) Whom do you represent?*

*Mr. Holmes: The officers.*

**Examined by MR. HOLMES.**

839. Have you any recollection of the name of the officer who was in charge of the deck at the time? - No, I do not know.

840. He did not sail in your boat? - No; there was no officer there.

841. Can you say how many boats he was in charge of on the deck? - No.

842. Was he superintending people getting into more than your boat? - I never got up there in time to see that, only this boat.

843. And what order was given to you when your boat was lowered? - When we lowered there were enough in it.

844. You are satisfied there were enough people? - Yes, it was crowded.

*The Commissioner: He has told us it was full; so full they could not get any more on board.*

845. (*Mr. Holmes.*) What order was given when you got into the water? - There was no order given. We could not get to the lever owing to so many people.

846. Were you told to stand by or to row away? - There was no order given.

847. No order was given at all? - No.

848. (*The Commissioner.*) But you knew what to do; you knew you had to get away from the side of the ship? - Yes, we had to get away from the side.

849. (*Mr. Holmes.*) Were you alone the whole time in your boat till you got to the "Carpathia," or were you one of the four boats that were tied up together under the charge of Mr. Lowe? - No; our boat was alone.

**Examined by MR. LEWIS.**

850. How long have you been employed by the White Star Company? - I have come out of the Union Castle Company into the White Star Company.

**Page 39**

851. Have you ever served on any other ship? - Yes.

852. Have you ever had a boat station given to you on any other ships of the White Star Company? - Yes.

853. Have you taken part in boat drill? - I have always had boat drill in New York.

854. On the Sunday? - Yes, on the Sunday morning.

855. (*The Commissioner.*) Is that the practice of the White Star Line? - I believe so.

856. Then is it the practice to have a boat drill before you start from Southampton? - Your names are called out; the fire stations and boat stations are given when you go on the ship. Your name is called out and you are generally told.

857. Told what? - Where to go. As you go along there; your name is called out; there are many of you there and you do not take much notice like.

858. You say that it was usual to have boat drill on Sunday at New York? - Yes. 859. Sunday comes after Saturday. I suppose in those circumstances you would not have a boat drill on Saturday. You would not have one on Saturday and one on Sunday? - No.
860. Therefore, on this line the lifeboat drill is on Sunday, is it? - Yes.
861. Is it usual to have a boat drill before the vessel leaves Southampton? - Yes.
862. Had you one on this occasion? - I cannot remember now.
863. I thought you told me a little time ago that you had not had one. Which am I to understand, either that you had not one or that you cannot remember? - I do not remember now, Sir; I cannot say.
864. (*Mr. Lewis.*) Were you on joining the ship told the number of your boat? Were you informed at any time of it? - I could not say.
865. Now, with regard to this list, have you ever noticed the boat list posted anywhere when leaving Southampton? - I have never looked - not the day of leaving Southampton.
866. Have you ever noticed it? - I never looked, not to see for certain the first day away.
867. You cannot say? - No.
868. Did you meet any other boat after you left the ship? - So many boats were all round; we could see the other boats round.
869. Do you remember any one in particular and anyone on the boat hailing it? - Someone hailed leading stoker Barrett on our boat, but I could not say who it was.
870. What boat was it? - I do not know the number.
871. Did you observe the boat? - Yes, we were close to it. They sung out, "Barrett, have you got any more room in that boat?" and he said, "No, full up."
872. Did you observe how high it was out of the water? - No, I did not take much notice of that.

**Examined by SIR ROBERT FINLAY.**

873. How long was it before the ship sailed that you joined at Southampton? - I joined her some time between 8 and 9 o'clock in the morning. 874. And when did she sail? - Twelve.
875. You do not remember any boat drill? - No.
876. Whether there had been one before you joined or not you do not know? - I do not remember.

**Re-examined by the ATTORNEY-GENERAL.**

877. I want you to help us if you can on this one point. You were in this boat for some hours after you left the "Titanic"? - Yes.
878. And you have told us, at any rate, that they were mostly women and children in the boat? - Yes.
879. I want you to try if you can to give us some idea of how many men there were in the boat? - I could not say the number of men.

880. You could not give us any idea? - No.

881. You have told us who were there, seamen and firemen like yourself? - What I know.

882. Yes, quite right. There were some men passengers there? - Yes, I think there were some.

883. But cannot you give us some idea whether there was a dozen, or six, or anything like that? - No, Sir, I do not know. I have no idea of the number at all.

884. (*The Commissioner.*) Were there more women than men in the boat? - Yes, there were more women and children in the boat.

885. (*The Attorney-General.*) Have you any idea how many there were in the boat altogether? - They were full up - someone said between 60 and 70 - I know it was crowded. I did not count the number.

*Sir Robert Finlay:* Perhaps your Lordship will allow the Witness to point out on the plan where he was.

*The Commissioner:* Yes.

*The Attorney-General:* He did so.

*Sir Robert Finlay:* It was not pointed out on the plan.

886. (*The Commissioner - To the Witness.*) Do you understand that plan? - Yes.

887. Could you point out to us what stokehold you were in? - Yes.

887a. (*Sir Robert Finlay.*) Take that pointer and go over and point it out.  
(*The Witness indicated the position on the plan.*)

888. (*The Commissioner.*) That is No. 10, is it? - Yes; No. 6 boiler, No. 10 stokehold.

889. (*Sir Robert Finlay.*) Was the stokehold fore or aft of the boiler? - Aft.

890. (*The Commissioner.*) I thought you said you were in the second stokehold from the bow? - Yes, Sir.

891. Now show me there which is the first stokehold from the bow.  
(*The Witness indicated the position.*)

892. I thought that was the stokehold you pointed to as the one in which you were? - No, that is the first one. This is the second one.

*The Attorney-General:* And that is the one he pointed to, my Lord.

**ROBERT HICHENS, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

893. Are you a quartermaster? - Yes.

894. And did you sail on the "Titanic"? - Yes.

895. Do you remember the Sunday, the day of the collision with an iceberg? - Yes. 896. During that day can you tell us whether it was particularly cold or not? - Yes, intense cold towards evening; in the day it was not very cold.

897. It got colder towards evening? - Yes.

898. I do not know whether you took the temperature of the water or whether you only speak of what it felt like about in the air? - I took the temperature of the water.

899. As well? - Yes.

900. (*The Commissioner.*) Was that part of your business? - Yes, my Lord.

901. (*The Attorney-General.*) When did you take it last before the collision? - A quarter to 10 - between a quarter and ten minutes to 10.
902. Did you take it at all before a quarter to 10 on that evening? - No.
903. Then you took it about a quarter to 10,

**Page 40**

and what was it? - I entered the reading in the logbook, but I can hardly remember at present.

904. Did you notice whether it was particularly cold? - Yes, intense cold.
905. Do you mean that is what you found from taking the temperature of the water? - Yes.
906. Can you tell us when it first began to get colder on that day? - As far as I remember I went on watch at eight o'clock; it was bitter cold then. 907. Colder than when you had been on watch before? - Yes.
908. When did you go off watch before? - At six o'clock, the first dog-watch.
909. You were in the first dog-watch, and you went off at six? - Yes. 910. And then you came on after the second dog-watch? - Yes.
911. When you came on watch at eight o'clock did you act as stand-by on the bridge? - Yes.
912. Who was at the wheel? - Quartermaster Oliver.
913. You remained there on the bridge? - When I was not running a message. 914. Did you get any instructions from the second officer to give to the carpenter? - Yes.
915. About when in point of time? - Just immediately after I got on the bridge; I could not tell you to a few minutes.
916. It would be a little after eight o'clock? - Yes.
917. What were the instructions you were to give to the carpenter? - To take his compliments down and tell him to look after his fresh water; it was going to freeze; the thermometer was very low.
918. He was to look after the fresh water; it was going to freeze; the thermometer was very low? - Yes.
919. Is that the fresh water in the tanks? - Yes.
920. Is that the carpenter's business? - Yes, it is the carpenter's duty.
921. When you had done that did you come back to the bridge? - Yes.
922. Did you see the carpenter? - Yes.
923. Did you tell him? - I came back and reported to Mr. Lightoller, the second officer in charge of the bridge.
924. (*The Commissioner.*) And he was the man who sent you to the carpenter? - Yes.
925. (*The Attorney-General.*) Soon after you returned to the bridge, did you hear a conversation between the second officer and another officer about the look-out? - Yes. 926. The second officer and what officer was it? - The sixth officer, Mr. Moody.

927. Tell us what you heard? - I heard Mr. Lightoller speak to Mr. Moody and tell him to speak through the telephone to the crow's-nest to keep a sharp look-out for small ice and growlers until daylight and pass the word along to the look-out man.  
*The Commissioner:* Send a message to the crow's-nest to do what - to keep a sharp look-out for ice?
928. (*The Attorney-General.*) Small ice and growlers, I think he said (*To the Witness.*)  
That is right, is it not? - Yes.
929. Until daylight and pass the word along to the look-out man? - Yes.
930. That would be sending the message to the man in the crow's-nest and telling him to pass it along to the man who would relieve him? - Yes.
931. Who was in charge of the bridge at that time? - The Second Officer, Mr. Lightoller.
932. Who were the other officers with him at this time? - The Sixth Officer, Mr. Moody, and Mr. Boxhall, the Fourth Officer.
933. Mr. Lightoller, the Second Officer, Mr. Boxhall, the Fourth Officer, and Mr. Moody, the Sixth Officer? - Yes.
934. Were they all on the bridge at this time? - Yes. 935. Did you relieve Quartermaster Oliver? - I did.
936. At what time? - Ten o'clock.
937. What was the course given to you? - N. 71° W.
938. Do you know what was the course which was given to Quartermaster Oliver? - That was the same course.
939. Was there a course-board in the wheelhouse? - Yes.
940. Was there anything on the course-board to indicate the course you were to steer? - Yes, N. 71°.
941. That was on the course-board? - That was on the course-board, the steering compass.
942. Was she a good steering ship? - Fairly well, yes.
943. Up to the time of the collision did she vary from her course at all? - Not that I am aware of, not more than a degree on either side.
944. Were there two clocks in the wheelhouse? - Yes.
945. Do you remember the vessel striking? - Yes.
946. Did you notice the time when she struck? - Yes.
947. What was it? - Twenty minutes to twelve.
948. Had you had any instructions before she struck? Had you been told to do anything with your helm before she struck? - Just as she struck I had the order "Hard-a-starboard" when she struck.
949. Just as she struck, is that what you said? - Not immediately as she struck; the ship was swinging. We had the order, "Hard-a-starboard," and she just swung about two points when she struck.
950. You got the order, "Hard-a-starboard"? - Yes.
951. Had you time to get the helm hard a starboard before she struck? - No, she was crashing then.

952. Did you begin to get the helm over? - Yes, the helm was barely over when she struck. The ship had swung about two points.
953. She had swung two points? - Yes.
954. (*The Commissioner.*) Do let me understand; had she swung two points before the crash came? - Yes, my Lord.
955. (*The Attorney-General.*) I am not quite sure that I understand what you had done to the helm before this. You had got an order, "Hard-a-starboard"? - "Hard-a-starboard," yes.
956. You proceeded at once to put the wheel hard-a-starboard? - Immediately, yes. 957. Before the vessel struck had you had time to get the wheel right over? - The wheel was over then, hard over.
958. (*The Commissioner.*) Before she struck? - Oh yes, hard over before she struck. *The Attorney-General:* I rather understood him to say the opposite before. I do not think he understood.
- The Commissioner:* Let me see if I understand it. Someone gave an order, "Hard-astarboard"?
- The Attorney-General:* Yes.
- The Commissioner:* This was before she struck?
- The Attorney-General:* Yes.
- The Commissioner:* He put the wheel hard over?
- The Attorney-General:* Yes; and got it hard over.
- The Commissioner:* And got it hard over. The ship moved two points?
- The Attorney-General:* That is right.
- The Commissioner:* She did not move any more, because, as I understand, the crash came?
959. (*The Attorney-General.*) Exactly; that is the story. (*To the Witness.*) Who gave the order "hard a starboard"? - Mr. Murdoch, the First Officer.
960. When had he come on the bridge? - He relieved Mr. Lightoller on the bridge at ten o'clock.
961. Did the Fourth and Sixth Officers, Mr. Boxhall and Mr. Moody, remain? - Mr. Moody was standing behind me when the order was given.
962. And was Mr. Boxhall on the bridge? - From what I am given to understand, Mr. Boxhall was approaching the bridge.
963. Was Captain Smith on the bridge? - No, Sir.
964. Do you know where he was? - Yes, Sir; in his room.
965. So far as you know was there any change in the speed at which the vessel was travelling before she struck? - I took the log which was part of my duty at half a minute to ten, as near as I can tell, and the vessel was going 45 knots by the Cherub log every two hours.

**Page 41**

966. Forty-five knots? - Forty-five was registering on the log.

967. (*The Commissioner.*) Was the speed altered before the collision? - Well, the crash came immediately.
968. I know it did. Had the speed been altered before? - No, I could not say, my Lord, because I could not see the officer on the bridge. I am in the wheelhouse. I cannot see anything only my compass.
969. (*The Attorney-General.*) I think we can get at it in this way. What was the first notice to you that there was something ahead? - Three gongs from the crow's-nest, Sir.
970. That you would hear in the wheelhouse, would you? - Certainly.
971. And you knew what that meant? - Certainly, Sir. 972. That meant something ahead? - Yes.
973. How long was that before the order came "Hard-a-starboard"? - Well, as near as I can tell you, about half a minute.
974. In order that we may understand, if there was a telephone message from the crow's-nest to the bridge, would you hear it? Would you know anything about it? - Certainly so, Sir.
975. Would you indicate on the model where you were, where the wheelhouse is? - Yes. (*The Witness indicated the position on the model.*)
- 975a. (*The Commissioner.*) And the crow's-nest is just on the mast in front, is it not? - Just above the eyes of the fore-rigging.
976. (*The Attorney-General.*) Put your finger on it? - Yes. (*The Witness did so.*) 977. I think that is the indication of it; is it not? - Yes.
978. Then there is the telephone. What was the telephone message? Did you hear any? - I did not hear the message, but I heard the reply.
979. What was the reply? - "Thank you." 980. Who gave it? - Mr. Moody.
981. Then it means this, that Mr. Moody, the Sixth Officer, got a telephone message after the three bells had been struck? - Immediately after.
982. You did not hear what was said to Mr. Moody, but you heard him acknowledge the message, and say "Thank you"? - Yes. I heard Mr. Moody repeat, "Iceberg right ahead."
983. To whom did he repeat that? - To Mr. Murdoch, the First Officer.
984. "Iceberg right ahead"; is that what he said? - Yes.
985. Repeating what he had heard from the telephone message? - Yes.
986. And then what happened? - I heard Mr. Murdoch rush to the telegraph and give the order, "Hard-a-starboard."
987. When you say he rushed to the telegraph, is that the telegraph to the engine room you are speaking of? - Yes.
988. The order, "Hard a starboard," was to you? - Yes.
- The Commissioner:* What order did he give to the engine room?
989. (*The Attorney-General.*) I do not think he knows. (*To the Witness.*) Do you know what order it was that was telegraphed down to the engine room? - No.

990. I think your Lordship will hear that it was, "Stop: full speed astern." Now just for a minute give me your attention on the point of speed. You have told us according to the log that the speed was 45 knots in two hours? - Yes.
991. Up to the time of hearing the three bells struck, was there any change of the speed at which the vessel was proceeding? - No, none whatever.
992. And the order, if any, that was given with regard to the speed would be the order by telegraph to the engine room, which you have told us you do not know? - I do not quite understand you.
993. You have told us what happened; first of all, the signal of the three bells, then the telephone message, then it was repeated to the First Officer, "Iceberg right ahead"; then the First Officer went to the telegraph to give an order to the engine room and gave you the order, "Hard-a-starboard"? - Yes.
994. At any rate up to his going to the telegraph as I follow you, there was no change of speed? - No, Sir.
995. What that order was you do not know? - No, Sir.
996. Then "Hard a starboard," and you immediately put up your helm? - Hard a starboard.
997. Right over? - Yes.
998. What is it, 35 degrees? - Forty degrees.
999. Then you got the helm right over? - Right over, Sir.
1000. Then she comes round two points and then strikes. Is that right? - The vessel veered off two points; she went to the southward of west.
1001. And then struck? - Yes.
1002. Were there blinds in the wheelhouse? - Yes.
1003. They were all closed? - Always closed just after sunset.
1004. And no lights were in the wheelhouse at all except the compass light? - And the small light.
1005. And the small light on the course board? - Yes.
- The Commissioner:* Have you a green board here with some small wooden models?
- The Attorney-General:* No.
- The Commissioner:* You know what I want? *The*
- Attorney-General:* Yes.
- The Commissioner:* The report from the crow's-nest was "Iceberg ahead."
1006. (*The Attorney-General.*) "Iceberg right ahead." (*To the Witness.*) The helm was put hard-a-starboard? - Yes.
1007. And the ship moved two points? - Yes.
1008. Assuming the iceberg was right ahead, I should like to see what difference the two points would make, and what part of the ship would then be presented to the iceberg?
- Yes.
- The Attorney-General:* We can do it, of course. I quite appreciate what your Lordship means.
- The Commissioner:* Mr. Laing could do it for me in a minute.
1009. (*The Attorney-General.*) It is a mere question of taking the indication of course.

(*To the Witness.*) Did any one of the officers see you carry out the order? - Yes. 1010. Who? - Mr. Moody, and also the Quartermaster on my left. He was told to take the time of the collision.

1011. Let us get the fact of what happened. Was Mr. Moody there when you put the helm hard-a-starboard? - That was his place, to see the duty carried out.

1012. Was it his duty to report it? - Yes; he reported the helm hard-a-starboard.

1013. To whom? - To Mr. Murdoch, the First Officer.

1014. Then you had put the helm hard-a-starboard and Mr. Moody had reported it hard-a-starboard to Mr. Murdoch? - Yes.

*The Attorney-General:* That is the only fact your Lordship had not got in the story. *The Commissioner:* I do not see the significance of it.

1015. (*The Attorney-General.*) It is only because you cannot fix the time except by seeing exactly what happened. That is the point of it. The estimate of time is of very little value, but if you can get what happened you can form an estimate. So that he had reported, and then it was after that that she strikes, is that right? - She struck almost at the same time.

1016. Almost as he reported it? - Yes.

1017. How long did you remain at the wheel? - Until 23 minutes past 12.

1018. And who relieved you? - Quartermaster Perkis.

1019. After she struck, did you notice at all what happened? - No.

1020. Did you notice whether the ship had stopped? - Oh, yes, the ship had stopped.

1021. Can you tell us how long it was after the collision that you noticed that the ship had stopped? - Immediately.

1022. While you were remaining at the wheel until 2.23 [12:23, see 1017], could you see what was going on on board the vessel? - I could not see anything.

## Page 42

1023. You remained at your post? - Yes.

1024. I suppose you heard something of what was going on? - I heard a few words of command, that was all.

1025. Tell us what you heard in the way of command? - Just about a minute, I suppose, after the collision, the Captain rushed out of his room and asked Mr. Murdoch what was that, and he said, "An iceberg, Sir," and he said, "Close the watertight door."

*The Commissioner:* Wait a minute. A minute after the collision, Captain Smith -

1026. (*The Attorney-General.*) Came out of his room on to the bridge do you mean? - Yes, Sir; he passed through the wheelhouse on to the bridge.

1027. He rushed out of his room through the wheelhouse on to the bridge? - Yes.

1028. And asked Murdoch, "What is that?" - Yes.

1029. And Murdoch said, "An iceberg." Is that right? - Yes.

1030. Mr. Murdoch said "An iceberg," and then? - The Captain immediately gave him orders to close the watertight doors. He said, "They are already closed." He immediately then sent for the carpenter to sound the ship.

*The Commissioner:* The Captain gave orders to close the watertight doors?

1031. (*The Attorney-General.*) Yes. Mr. Murdoch said, "They are already closed." Do you know where they were closed from? - Yes, the fore-part of the bridge.
1032. Could you see them being closed? - I could not see anything but my compass.
1033. Where you were you would not be able to see it? - No.
1034. (*The Commissioner.*) Do you know what these doors are? - Yes, my Lord. 1035. Would that order from the bridge refer to all the watertight doors, or only to those that close automatically? - Only those that close automatically, my Lord.
- The Attorney-General:* That is what I understood, my Lord. I think all the lower ones closed. I think that is how it stands; but, of course, your Lordship will hear it.
- The Commissioner:* Some of them are worked by hand.
- Sir Robert Finlay:* There are 12 lower doors which close when the button is pressed.
1036. (*The Attorney-General.*) Let us follow it. Mr. Murdoch said, "They are already closed"? - Yes.
1037. And then what happened? - He then gave orders to send for the ship's carpenter to sound the ship.
1038. That is what Captain Smith did? - Yes.
1039. Do you know whether the ship's carpenter was sent for? - I do not know; I only heard the order given.
1040. Did you hear any other order? - No other order after that. That was the last order I heard with the exception of the boats.
1041. What was that you heard about the boats? - I heard the Captain say "Get all the boats out and serve out the belts." That was after 12.
1042. I am rather anxious to get the time if I can? - I could not barely tell you the time.
1043. That is enough - as near as you can; it was after 12? - Yes, the Captain then looked at the commutator and he found that the ship was carrying a list to starboard.
1044. And were those all the orders you heard until you were relieved from the wheel? - Yes.
1045. When the vessel struck, did you feel any shock? - Yes. I felt the ship tremble, and I felt rather a grinding nature along the ship's bottom.
1046. While you were in the wheelhouse you had the compass in front of you? - Yes.
1047. Could you see ahead at all through the wheelhouse? - I could not see anything.
1048. You would not be able to see the iceberg even if it had been quite clear. Is that what you mean? - No, I could not see it, on no account whatever could I see it. 1049. You said that the Captain rushed out of his room through the wheelhouse to the bridge? - Yes.
1050. Where was his room? I do not know if you can point it out on the model. Was it on the starboard or port side? - The starboard side.
1051. That model is the starboard side. Where was the Captain's room? - About here. (*Pointing on the plan.*)
1052. Was it quite close to the wheelhouse? - Yes, quite close to the wheelhouse. 1053. We have a plan which will show it. I do not know whether your Lordship has the plan, but we need not stop to consider it very carefully now. It is quite close. (*To the Witness.*) Then, when you were relieved by Quartermaster Perkis, what did you

- do? Did you get an order first of all? - Yes, orders to carry on, helping to get a collapsible boat uncovered - getting the cover off a collapsible boat.
1054. Carry on and get the cover off the collapsible boat? - On the port side.
1055. Who gave you that order? - I think it was the Chief Officer, Mr. Wilde, or Mr. Lightoller, I am not sure which.
1056. Had you any station on the boats? - Yes.
1057. What boat were you stationed to? - I think it was one of the emergency boats.
1058. Do not you know which? - No; we never had any boat drill while we were there.
1059. There are only two emergency boats, one on the starboard and one on the port side? - Yes.
1060. But you were stationed to an emergency boat. You do not know whether it was port or starboard. Is that it? - There were two Quartermasters with their names specially picked out for those two boats, but I was not told off to anyone of them. I never went to either one of them for any drill.
1061. That is not quite what I want to know whether you went to drill. I will ask you about that directly. What I want to know is whether you had any station to which you were to go? - Not that I am aware of, no.
- The Commissioner:* I am getting a little in confusion. I have written down, "I was stationed to one of the emergency boats." *The Attorney-General:* He did say so, my Lord.
1062. (*The Commissioner.*) Am I to understand you were not stationed to any boat? - I had no proper station. I had no station to go to on paper that I was notified where to go on a station.
1063. What did you mean by saying just now, "I was stationed to one of the emergency boats"? - One of the Quartermasters was at the wheel at that particular time and it would be my duty to go there and fill his vacancy during his absence at the wheel.
1064. (*The Attorney-General.*) It would be the duty of the two Quartermasters to go to the two emergency boats. Is that right? - Yes.
1065. What he means is that if the Quartermaster was on duty, and somebody had to go to the emergency boat it would be his duty to act as one of those Quartermasters. Is that right? - Yes.
1066. But to which of the two boats, whether it was port or starboard there were no orders? - No orders.
1067. Did you see the lists of the stations for the boats on board? - No.
1068. If I understand you correctly, your name would not be on the list, would it? - Not that I am aware of.
1069. You would not have any cause to look at the list for yourself? - I have never seen any list put up anywhere. The usual thing is to have the fire and boat stations marked on a sheet of paper and put up for everyone to see, but I did not see it.
1070. (*The Commissioner.*) I should like to have this clear. Would your name be on such list? - Certainly, my Lord, in boat stations.
- 1070a. I rather understood you to suggest that it would not.
1071. (*The Attorney-General.*) I did. I understood from him that it would not, because it would depend whether he was on duty or not. (*To the Witness.*) I understood you to

say that you would not expect to find your name on the list of stations. Is that right? - No, Sir.

I did not mean that at all.

1072. Tell us what you mean about it. - In every ship that I have been in we always have had every Quartermaster, or whatever he may be, seaman, fireman, steward, always have their boat stations,

### **Page 43**

and they would have a proper muster every Saturday or whenever it may be - it lies at the Captain's discretion whenever he liked to give us a drill, and everybody is mustered in front of their boats, but I never saw it like that on the "Titanic."

1073. That means you never saw a muster? - No. 1074. Where did you join the "Titanic"? - Southampton.

1075. How long before the vessel sailed? - Four days.

1076. Do you remember the day of the week that you went on board of her? - I think the first day when we dressed ship.

1077. What day was that, do you remember? - I think it was Good Friday, holiday time.

1078. Then from that time until the collision occurred had you any boat drill at all? - I did not see any; they might have had when it was my duty off. We Quartermasters were keeping gangways in harbour.

1079. You, personally, had not had any; is that right? - That is quite right.

1080. Whether the others had or not you do not know? - That is right.

1081. They might have had without your knowing it? - That is right.

1082. Now will you come back to the order that you got to remove the cover of one of the boats? - Yes.

1083. It was the cover of one of the collapsible boats on the port side? - Yes.

1084. Did you do that? - I did, Sir.

1085. Did you finish that job? - Yes.

1086. Did you clear her, taking away all the coverings? - I was ordered away to one of the next lifeboats before I had time to ship the rudder, and so on.

1087. You had the cover off? - I had the cover off and got the boat's grips off. 1088. And then you were ordered to another boat? - Yes.

1089. Who ordered you to another boat? - Mr. Lightoller.

1090. And to what boat? - No. 6 boat.

1091. Is that a lifeboat on the port side? - Yes.

1092. It would be the third on the port side from forward, would it not? - I do not know whether it was the second or third boat. It was one of the two.

1093. We have been told it was the third. When you got to No. 6 lifeboat was that all ready? - Yes. She was swung out then.

1094. Did you take passengers on board? - Yes.

1095. When you got to her were there any passengers on board? - No.

1096. She had only been swung out ready? - That is all.

1097. And then what happened - who was giving orders then? - Mr. Lightoller was in charge of the port side.
1098. Did you hear any order given? - Yes, I heard the captain say, "Women and children first," and the officer repeated the words from the captain.
1099. "Women and children first"? - Yes.
1100. (*The Commissioner.*) Where was the captain? - Just standing by the collapsible boat by the officers' quarters between the officers' quarters and the collapsible boat. 1101. Will you just show us where that is on the model? - Yes, here, in the centre; the officers' quarters were here, and the collapsible boat under the emergency boat (*pointing on the model.*)
1102. Are you speaking of the port side? - Yes.
1103. You have indicated to us the corresponding point on the model on the starboard side? - Yes.
1104. Was No. 6 boat that you went to a boat which was on the deck where the firstclass cabins were? - Yes.
1105. The first-class promenade? - Yes.
1106. How many people did you take on board? - Forty-two all told.
1107. First of all, will you tell me, how many crew there were besides yourself? - One seaman, Sir.
1108. And how many passengers? - Forty passengers.
1109. How many men passengers? - One man and one boy.
1110. And the rest were ladies? - Yes.
1111. Could you tell at all whether they were first, second, or third-class passengers? - Nearly all first and second-class, I think, Sir.
1112. Do you know the name of the one man passenger? - Yes, Sir.
1113. What is it? - Major Pewan. [*Peuchan.*]
1114. P-e-w-a-n - is that it? - Yes, I think it was spelt something like that.
1115. Very well, that is near enough. Was there room for any more in that lifeboat? - The boat seemed pretty full, Sir, but from what I am given to understand she could carry five or six more. She seemed pretty well full up with the ladies with their lifebelts on, scattered about the boat.
1116. Were all the lifeboats the same size? - I am not quite certain, Sir; I do not think they were. Some were smaller than others.
- The Commissioner:* How is that?
- The Attorney-General:* According to what we make out, they are all the same size except, of course, the two emergency boats. I asked him about the lifeboats. We make out that they are all the same as I understand it. The fourteen boats would all be the same.
- The Commissioner:* All of them are marked on the plan as 30 feet?
- The Attorney-General:* Yes, that is so.
- The Commissioner:* They would all have the same beam?
- Sir Robert Finlay:* I am told they are all the same size except the emergency boat. 1117. (*The Attorney-General.*) That is just what I stated. (*To the Witness.*) The lifeboats, I suppose, were bigger than the two emergency boats? - Oh, yes, Sir.
- The Commissioner:* Beauchamp said that on board his boat there were 60 or 70 persons.

*The Attorney-General:* He did.

*The Commissioner:* And I understand this Witness says there were 42 in his boat. *The Attorney-General:* Yes, we will get that from some other Witness. We can only get as far as that from this one. According to Scarrott's evidence there were about 60 in his boat all told. In this one we have only got 42. *The Commissioner:* Then I took a wrong note of it.

1117a. (*The Attorney-General.*) I think your Lordship will find that that is right - just about 60. (*To the Witness.*) According to what we have heard these lifeboats were all about the same size. If you only had 42 on board all told, there was room for something like 20 more. Did you notice that at all? - Well, I do not think she would have held 20 more, Sir. That was nothing to do with me. That was the officer's orders.

1118. Who gave orders for her to be pushed off? - The Second Officer, Mr. Lightoller, ordered the boat to be lowered away.

1119. Where was he when he gave that order? - Right abreast of the boat, Sir.

1120. On deck? - Yes, on the promenade deck.

1121. Then she was lowered away? - Yes.

1122. You were in her? - Yes, Sir.

1123. Who was in charge of the boat? - I was.

1124. Were there any other passengers on the deck so far as you could see when you got the order to lower away - when the order was given to lower away? - Yes, there were some passengers there.

1125. Women? - I think there were one or two women, Sir, besides gentlemen as well. They felt half inclined - they did not care about getting into the boat.

1126. Who felt half inclined? - Why, the passengers, Sir.

1127. They did not like getting into the boat? - They did not like to get into the small boat - no.

1128. Who is "they" that you are speaking of? - Why, the passengers that were standing there on the deck that I heard talking.

1129. Do you know how you came to have the one man passenger and a boy in the boat? - I do not know how the man passenger got in the boat at all, Sir - nor the boy.

1130. You do not know how they got in? - No, Sir.

## **Page 44**

1131. You did not see them get in? - No, Sir.

1132. Did you see they were in when the boat was lowered? - Just after we got away from the ship I did.

1133. But not till then? - No.

1134. As I understand it, when you saw the boat lowered you thought there were only ladies in the boat and yourself and another seaman. Is that right? - Yes, Sir.

1135. Who was the other seaman? - Seaman Fleet.

1136. That is one of the look-out men that we have heard about? - Yes.

1137. When did you count the number of ladies on board? - I counted them as near as I could when we got down to the "Carpathia," just before we got aboard the "Carpathia." 1138. Not till then? - No.

1139. (*The Commissioner.*) That was hours afterwards? - Yes, Sir.

1140. (*The Attorney-General.*) You may as well tell us - when did you get to the "Carpathia"? - As near as I can tell you about 7 o'clock. We were the last boat to get alongside.

[*The Attorney-General*] That does not tell me anything, but I will take the statement for the moment.

*The Commissioner:* It does not fit in with the other evidence.

1141. (*The Attorney-General.*) It depends on clocks, and so on. There is some difficulty in arriving at the time. (*To the Witness.*) When the order was given to lower away, did you hear any question asked as to whether there were any others ready to go on the boat?

Did you hear any such question as that? - I do not remember, Sir.

1142. (*The Commissioner.*) I think you will remember if you think about it? - No, I do not remember, my Lord.

1143. Do you know what you were asked? - Yes, my Lord.

1144. What were you asked? - If there was any more passengers asked to get on board before the boat was lowered away.

1145. Do you mean to tell me that you do not remember whether the people waiting on deck were asked to get into your boat. You know there was room in it; there was room in your boat. Was no one asked of those people who were standing about on deck if they were going into the boat? - Oh, yes, my Lord. The officer asked for them to get into the boat then - women and children first.

1146. And then what did they say - those that remained behind? - They were talking between themselves; they would rather stay aboard of the ship.

1147. (*The Attorney-General.*) Now let us go back for a moment. You told us he asked to go on board - the women and children first. That was the first order to passengers to get into the boat? - Yes.

1148. Then, as I understand you, a number did get into the boat? - Yes.

1149. Then your boat was not full? - The Second Officer would not allow any more in my boat.

1150. Did you hear the Second Officer give any order? - I heard the Second Officer say; "Lower the boat away," yes, Sir.

1151. You said just now that he would not allow any more people to get into your boat. Did you see anybody wanting to get into your boat who was stopped? - No, Sir.

1152. But there were people there then, I suppose? - Plenty of men there.

1153. Did he stop them? - He did not.

1154. I do not understand what you mean by saying he would not allow any more to get into the boat. How do you know that? - Because the boat was lowered away. There was enough people in the boat.

1155. Did he say that? - I think so, as much as I can remember.

1156. What do you remember he said? - I think he said, "Lower away."

1157. Did you hear anything said at all about, "There is enough people in the boat"? - I do not hardly remember, Sir.

1158. What! You can hardly remember? You said just now you thought "there was enough people in the boat" - I do not care about the particular words. Did you hear anything like that said? - I do not remember, Sir - only "Lower away the boat." That is all I remember.
1159. Then, when the boat was lowered, did you have any order as to what you were to do? - Yes, Sir.
1160. Who gave it to you? - Mr. Lightoller, the Second Officer.
1161. What was the order? - To pull for that light - to steer for that light. 1162. What light? - There was a light about two points on the port bow, about five miles away, I should judge.
1163. You are speaking now of the time that the order was given to lower the boat? - I am speaking now of the time when the boat was going to be lowered away. 1164. Then you got the order from Mr. Lightoller, the Second Officer, to steer for a vessel which was two points on the port bow, or, rather, I said for a vessel, you said for a light; it is the same thing? - Yes.
1165. To steer for a light which was on the port bow? - That is right, Sir.  
*The Commissioner:* A light two points off.
1166. (*The Attorney-General.*) Yes, on the port bow, and he also said about five miles distance. That is right, is it not? - Yes, Sir.
1167. When you had first seen that light two points on the port bow? - While we were in the boat, Sir, taking the passengers on board. That was the order then, to steer for that light.
1168. (*The Commissioner.*) Do listen to the question. When had you first seen that light? - During the time that I was standing in the lifeboat taking the passengers into the lifeboat, my Lord.
1169. (*The Attorney-General.*) When you looked and saw this light, could you tell what it was at all? - No. We surmised it to be a steamboat.
1170. As I understand, you saw that light for the first time when you were standing in the boat before the order was given to lower away? - Yes, Sir.
1171. Then, when you got down to the water you started rowing away, I suppose, did you? - Yes, Sir.
1172. Who rowed? - When we got half way down the boat she was hanging at an angle, and I stopped them from above from lowering by shouting to the Second Officer to steady forward and lower away a bit astern, and I told him I had only one seaman in the boat.
1173. And then - tell us what happened. - This major here was in the boat. When I looked around I saw the major.
1174. Was that while the boat was being lowered? - When the boat was down in the water, just before we let go of the falls.
1175. How came you to see him? - He was standing up there, standing up in the bows of her.
1176. The bows of the boat? - Yes.
1177. Was there any difficulty in freeing her from the falls? - No, Sir.
1178. Then, when you got free of the falls you started rowing? - Yes, Sir.

1179. What I was asking you was who rowed - how many of you rowed? - The sailor and the major and two or three of the ladies put out oars.
1180. What did you do? - Steered for the light, Sir.
1181. How far did you go? - About a mile, I suppose.
1182. A mile from the ship in the direction of the light, two points on the port bow. Is that right? - Yes, Sir.
1183. Could you tell at all whether the light was moving or whether it was still? - The light was moving, gradually disappearing. We did not seem to get no nearer to it.
1184. As I understand you, it seemed to get further away from you? - Yes, Sir.

## Page 45

1185. Could you tell us how many boats had got away before you? - I think there were two on the port side, but how many on the starboard side I could not tell you.
1186. On the port side you think there were two before you? - Yes, Sir.
1187. Did any of the other boats travel in the same direction that you took? - Yes, Sir, four or five of us there altogether.
1188. When you say "altogether" you mean close to each other - you do not mean lashed together? - No, close together, going away to this light.
1189. When you stopped rowing were there any of these boats near you? - One right alongside of us, Sir.
1190. Do you know who was in charge of that? - Yes, the Master-at-Arms, Mr. Bailey.
1191. What sort of a night was it? - It seemed a clear night, a starlight night. 1192. And calm, as we have been told - very calm? - It was calm, Sir, till about three o'clock in the morning, when it came on choppy, a little breeze sprung up. 1193. Nothing to speak of, was it? - No, Sir; but quite enough for a small boat.
1194. When you were rowing away did you see the "Titanic" still? - Yes, I saw the lights of the "Titanic."
1195. You saw the lights of the "Titanic"; did you see any signals sent up by her? - Yes, and before I left, Sir.
1196. What? - Rockets.
1197. Before you left and after you left? - Yes, Sir.
1198. Can you tell us what colour rockets? - I did not take no particular notice of the colour, Sir. Some were green, some were red, and some were blue - all kinds of colours - and some white, Sir. I think, if I remember rightly, they were blue.
- The Commissioner:* Have these colours a different significance?
- The Attorney-General:* My Lord, that is what I am trying to ascertain. There is a special reason for wanting to know it. Has your Lordship got the "Regulations for Preventing Collisions at Sea"? Is that what you are looking at?
- The Commissioner:* Yes, the last page.
- The Attorney-General:* I am much obliged. That is what I was looking at myself. *The Commissioner:* "At night."
1199. (*The Attorney-General.*) Yes. That is Article 31, dealing with distress signals: "When a vessel is in distress and requires assistance from other vessels or from the

shore, the following shall be the signals to be used or displayed by her, either together or separately"; and then, as your Lordship pointed out, "At night" No. 3 is "Rockets or shells, throwing stars of any colour or description, fired one at a time, at short intervals." That is it. (*To the Witness.*) Will you tell me how long it was before you left the vessel that you saw rockets sent up? - I could not give you no estimate of time, because by the time I come from the wheel I was there working about the boat.

1200. It would be after you came from the wheel, because you could not see till then? - Yes, Sir. I could not give you no time for that.

1201. Had it been going on any time before you left the vessel? - No, not very long, Sir, I should not think it would be. It could not have been, in fact, because I was working there not more than a quarter of an hour or 20 minutes, I suppose, before I was sent away in the boat.

1202. When you came first of all to remove the cover of the collapsible boat, did you see any then? - No, not at that time, I didn't.

1203. It was only when you went to No. 6 lifeboat; is that right? - Yes. 1204. You saw it then? - Yes.

1205. Do you remember how many boats got on board the "Carpathia"? - No, Sir, I do not.

*The Commissioner:* Are you leaving this point now?

1206. (*The Attorney-General.*) No; I was trying to get his mind to a particular question I wanted to put to him. (*To the Witness.*) You say you saw the rockets being fired as you were rowing? - Yes.

1207. Did that continue during all the time? - It continued for about half an hour, I suppose, after we left the ship, as near as I can tell you. I never had no time in the boat; I am only guessing the time.

1208. That is your best estimate? - Yes, Sir.

1209. Did you see the "Titanic" go down? - No, Sir.

1210. Did you see her lights? - The last time I looked I saw her lights.

1211. Was your back to her then? - Yes. I was steering away from her then.

1212. You were steering? - Yes.

1213. The last time you looked you saw the lights, and then you did not see them any more? - No, Sir.

1214. When you had got about a mile's distance away, did you see the "Titanic" then? - Yes, Sir; I saw the lights.

1215. Were you facing her then? - No, Sir, going away from the ship all the time.

1216. I thought you stopped when you got about a mile's distance? - It was about that time when we did not see the lights - when me and Bailey made our boats fast side by side. 1217. And you did not see the lights of the "Titanic" any more, is that what you mean? - Yes, Sir. I did not see the lights of the "Titanic" again after that.

1218. Let me see if I understand the story. You rowed away from the "Titanic," and when you looked round you saw the lights there. As you were being rowed away from the "Titanic" you saw her lights? - Yes.

1219. When you got about a mile's distance you stopped; and then when you looked you did not see the lights any more; is that right? - That is quite right, Sir.
1220. That is all you can tell us about what happened? - Yes.
1221. Is that right? - That is all, Sir.
1222. Did you hear any explosion? - Well, no, Sir.
1223. What does that mean, "Well no"? - Well, not that I could say that I heard any explosion.
1224. But you heard something - is that it? What is in your mind about it? - I do not think I heard any explosion.
- The Attorney-General:* Do you mean you have heard other people talking of it; is that what you mean?
- The Commissioner:* That is what he means.
1225. (*The Attorney-General.*) Is that what you mean? - No, I do not.
1226. (*The Commissioner.*) Do you mean to say you have not heard it said that there were explosions before the boat went down? - Yes, my Lord. I have heard those questions repeated and talked about, but I never heard them myself.
1227. (*The Attorney-General.*) Now, we understand what you mean. Did you look in your boat for a light? - I had a light served out to me before I left the ship.
1228. Who served it? - A lamp-trimmer, Sir.
1229. Do you remember his name? - No, I do not know his name - a stranger.
1230. And you took it on board with you? - Yes, Sir.
1231. Did you hear an order given to the lamp-trimmer to bring a light, or did he give you the light without your hearing an order? - I never heard any orders. I see him coming along with the lights, and he had orders to give me one of them.
1232. Orders from whom? - From Mr. Lightoller, the officer.
1233. Did he have any other lanterns with him? - Yes, Sir, several.
1234. Of the same kind that you had? - Yes, Sir.
1235. And he served you out one as he passed? - Yes, Sir.
1236. And then went along as far as you could see to the other boats: Is that right? - Yes, Sir.
1237. How many oars had you on board? - I do not know; there was not much time for counting the oars; I did not think much about the oars.
1238. But you had time afterwards? - I did not count them, Sir; I do not know. 1239. How many did you see used? - Four.

## Page 46

1240. Four altogether? - But then there was more in the boat than that.
1241. Very well, I understand. Were there any biscuits on board? - Not that I am aware of, Sir.
1242. Did you look for them? - No, Sir.
1243. Then you cannot say? - No.
1244. Was there water on board? - Yes, Sir, there was a breaker of water. 1245. A breaker with water in it? - Yes, Sir.

*The Commissioner:* What is a “breaker,” - a can?

1246. (*The Attorney-General.*) I understand it is a cask that shape (*showing*). (*To the Witness.*) It is a breaker into which you put the water? - A breaker with a bung-hole to it, just like the top of this water-bottle. There was no compass, Sir, and no biscuits. 1247.

(*The Commissioner.*) I thought you said you did not look for the biscuits? - I understood the other two men to say there was no biscuits, my Lord.

1248. (*The Attorney-General.*) So far as you are concerned you did not look, and so far as you know there were none - that is as I understand it? - Yes.

1249. Did you tell anybody to look? - No, Sir.

1250. You were in charge? - No, Sir, not at that time.

1251. But at any time before you got on to the “Carpathia”? - I heard them say that there was no biscuits when we got to the “Carpathia.”

1252. When you got to the “Carpathia”? - When we got to the “Carpathia.” When we were aboard the “Carpathia.”

1253. Did you look yourself then? - No, I did not look myself then.

1254. You said something about the compass; did you look for a compass? - Yes, Sir.

1255. Was there one? - No, Sir.

1256. Had you a mast and sail on board? - That was taken out of the boat before the boat was launched.

1257. By whom? - By the men that were working about in the boat.

1258. You mean the men uncovering the boat? - The men that were helping to get it out. When the boat was being lowered down out of the rails the passengers took them and laid them on the deck.

1259. When you started, did you start from the ship’s side without any mast or sail? - Yes, Sir.

1260. But there had been a mast and sail in the boat which had been removed before she was launched, is that it? - Yes, Sir.

1261. Does that mean that in the confusion the mast and sail were not taken - is that what you mean, or were any orders given? - No, Sir. They were passed out of the boat to make room, I think.

1262. At any rate, they were passed out of the boat and not passed back into the boat? - Yes.

1263. But you did not hear any special order given about it? - No, Sir.

1264. Now about the boats on the “Carpathia”; were the boats taken on board the “Carpathia”? - Some were. Mine was not. Mine was cut adrift.

1265. Some were taken on board. They were all taken to the “Carpathia,” and then the boat was set adrift - was that it? - Yes.

1266. (*The Commissioner.*) Do you know how many lifeboats were taken on the “Carpathia”? - I think about 13, my Lord.

1267. Then there were not many cut adrift? - I think there was about two cut adrift, my Lord.

1268. (*The Attorney-General.*) Do you know anything about the use of glasses for the look-out? Have you acted as look-out at all? - Well, I have been on the look-out, Sir, in mail boats, but not in the White Star Line.

1269. In what mail boats have you been on the look-out? - Troopships chiefly, Sir, and different kinds of vessels.
1270. Have you been on any liners? - Yes, Sir.
1271. For what companies? - The Union-Castle and the British India.
1272. When you were on those vessels were glasses used by the look-out? - I do not know, Sir. I was never on the look-out on those ships. I was quartermaster always.
1273. You cannot tell me. You do not know whether there were or not? - No, Sir.
1274. And you do not know whether there were on the White Star Line or not? - No. *The Commissioner*: I want to know if this man can tell me whether the rockets which were sent up would be visible to this supposed ship which was five miles away.
1275. (*The Attorney-General*.) You told us, you know, that rockets were sent up to a ship that was, according to your view, two points on the port bow about five miles away? - Yes.
1276. Would the rockets that were sent up from the "Titanic" be seen by a vessel five miles away? - Quite easily, Sir.
1277. Did you see any answer - any answering signal? What I want to know is this: Did you see any rockets from any other vessel? - No, Sir.

**Examined by MR. SCANLAN.**

1278. I think you have told his Lordship that the night was calm? - Yes.
1279. Was the whole of the Sunday a calm day? - As far as I can remember there was a little breeze in the afternoon.
1280. A moderately calm day, it was? - Yes.
1281. Considering that the night was calm, would it have been possible if the "Titanic" had been provided with sufficient lifeboats to have taken safely away from her after the collision every passenger and every member of the crew? - Well, I think so, Sir.
1282. You have told us that you had only one sailor, in addition to yourself, in this lifeboat? - That is all, Sir.
1283. How many sailors do you consider would be necessary in order properly to man and navigate this lifeboat? - At least four besides the man that is steering the boat - five.
1284. Would that number have been sufficient even though the sea had been stormy? - No, Sir. In stormy weather you require more men. It is all according to the weather.
1285. (*The Commissioner*.) Will you tell me this: Would the lifeboats, in your opinion, have been of any use at all if there had been a rough sea? - I am sure they would not, my Lord.
1286. They would not? - No.
1287. (*Mr. Scanlan*.) Would the utility of the lifeboats depend to some extent on the proximity to you of any rescuing ship? - I beg pardon; I did not quite follow you; Sir.
- The Commissioner*: That is not a question which it is necessary to ask.
- Mr. Scanlan*: Even in a rough sea is it not possible with good seamanship to keep a lifeboat afloat?

*The Commissioner:* Will you ask him first whether it is possible or easy to get it afloat to begin with.

1288. (*Mr. Scanlan.*) In a rough sea, when you have some wind, is it possible - is it easy (of course it is more difficult) to launch a lifeboat? - Well, yes, it is very difficult in lowering and launching a lifeboat in strong weather or strong winds - heavy sea.

*Mr. Scanlan:* Is it possible even in a heavy sea for qualified seamen, able-bodied seamen, to launch, man, and navigate a lifeboat?

1289. (*The Commissioner.*) Had you ever had to do it? - Well, not in big ships, I have not, Sir.

1290. What was the fall from the boat deck to the water? - About 65 ft., my Lord. 1291.

(*Mr. Scanlan.*) You say that your boat had a light. I think you stated that you came close beside four of the other lifeboats? - Yes, Sir.

1292. Was there a light in any of those? - The one that we tied up to - Mr. Bailey's - had no light because we were talking to him. He came alongside of us.

1293. Were you sufficiently near the other two or three boats to observe whether or not they had lights? - Oh, yes. We kept on showing our lights. The boats that had lights kept on showing their lights. Everybody did not have a light.

#### **Page 47**

1294. While you were in the deck-house engaged at the wheel, did you learn from any of the officers whether warning had been communicated to the "Titanic" of the presence of icebergs? - The only thing I knew about ice at all was the order I received for the carpenter from the second officer.

1295. Was anything said to you about the reporting of icebergs? - No, Sir.

1296. Is it usual on board liners in circumstances of danger to double the watches - the look-out? - That is always so, Sir.

1297. Had the watch been doubled or augmented - increased in any way - on this occasion? - Not that I am aware of. They do not double the watches on the bridge, where there are three officers on the bridge, two junior officers taking eight-bell watches, and the senior officer taking command of the bridge.

1298. (*The Commissioner.*) Do they double that watch? - No, Sir.

1299. (*Mr. Scanlan.*) What watches do they double? - In ships where they are not manned with so many officers, and when they are nearing the shore in foggy weather they might double the watches.

1300. Is it usual in circumstances of danger to station a watchman at the bows - a lookout man? - I cannot say. He cannot see so well as the man can see in the crow's-nest.

1301. I am asking you, is it usual or not? - In some ships, Sir, they do station a man there.

1302. (*The Commissioner.*) As well as in the crow's-nest? - I have not seen that, my Lord - not a man stationed forward and stationed in the crow's-nest, too.

1303. (*Mr. Scanlan.*) If a watchman was stationed at the bow he would be considerably nearer the water than the man in the crow's-nest? - Yes, that is so, Sir.

1304. Would not a watchman stationed there with glasses have a better opportunity of detecting an iceberg ahead than a man in the crow's-nest? - I do not think he would have so good a chance myself, Sir.

1305. On this occasion there was not a watchman or a look-out man on the bows? - Not that I am aware of, Sir.

*The Commissioner:* Are your instructions, Mr. Scanlan, that it is the practice on large liners to put a man in the bow to watch?

*Mr. Scanlan:* Yes, my Lord.

*The Commissioner:* From whom do you get such instructions?

*Mr. Scanlan:* The instructions I get are from the Seaman's and Fireman's Union, my Lord, and from officials of that Union.

1306. (*The Commissioner.*) Have you ever seen a man in the bow, when there are men in the crow's-nest? - Never, my Lord.

1307. Did you ever hear of such a thing? - Never, my Lord.

1308. (*Mr. Scanlan.*) Besides you there were six other quartermasters? - Five others besides me.

1309. Six quartermasters in all. Is it usual when the order for drilling is given and the order for crews of the lifeboats, to station a quartermaster to a particular boat? - Yes. In the case of an emergency and a boat being launched the quartermaster not at the wheel would be the likely man to be sent with the boat with the officer in charge.

1310. I want to ask you a question about boat drill. When you have boat drill on the ships you have been sailing on, is it the practice for the seamen and the firemen and the stewards to muster on deck and take their stations in the places that they have to go to if an accident happened? - Always, Sir.

1311. And is it your evidence that on this occasion this was not done? - Not that I remember, Sir. It might have been done, but not to my knowledge.

1312. Had there been any training given to the seamen to your knowledge in the launching and manning of the "Englehardt" collapsible boats? - Not that I am aware of. 1313. Are they as easy to launch as the ordinary lifeboat? - No, they are a little more difficult, Sir, because those boats are swung in. You have to get the boats out, Sir.

### **Examined by Mr. HOLMES.**

1314. You were given the order to hard-a-starboard? - Yes.

1315. Was that the only order you had as to the helm? - Yes.

*Mr. Holmes:* Because, if your Lordship will remember, the evidence of the Witness Scarrott on Friday was quite the contrary, when he came up on deck.

*The Commissioner:* What did he say?

*Mr. Holmes:* He said that the ship appeared to be under a port helm, and appeared to be going around the iceberg towards the starboard side.

*The Commissioner:* Did he say so?

*The Attorney-General:* Yes, I think so.

1316. (*Mr. Holmes.*) It is Question 354. (*To the Witness.*) She never was under a port helm? - She did not come on the port helm, Sir - on the starboard helm.
1317. You said that after you left the "Titanic" the boats that had lights were showing them to each other? - Yes.
1318. Can you say how many boats you saw lights in? - No; I did not count them.
1319. Were there two, or three, or four? - Five or six of us.
1320. Five or six other boats had lights as well as yourself? - Yes.

**Examined by Mr. LEWIS.**

1321. Had you ever crossed the Atlantic before? - This was my first time in the North Atlantic, Sir.
1322. So that you had no idea as to the course, whether it was the usual course or not? - No.
1323. With regard to the captain giving an order to the carpenter, did the carpenter return? - I do not know, Sir.
1324. Have you had any experience as a quartermaster? How many able men would be required to successfully man a lifeboat the size of the one you were in? - For drill purposes they take 10 to 12 men.
1325. I mean under circumstances like these that you have been explaining? - They take about 4, Sir, besides somebody in charge to steer the boat.
1326. You think it would require at least 4 men and someone in charge to look after her properly? - Yes, Sir.
1327. Can you tell me whether any steps were taken to prevent passengers approaching the boat? - Steps were taken as regards the male passengers. They had to stand back and let the women and children get in the boats first. That was the order, Sir.
1328. What method was adopted to see to that? - All the officers had revolvers, as far as I am aware of, Sir.
1329. Did you observe any ropes drawn across the deck in any way? - Not that I am aware of. I never went to the aft side of the bridge, scarcely, from the boat I was stationed in.
1330. These revolvers - were they used at all? - I heard several reports, Sir, but, as regards anything else, I do not know.
1331. You simply heard? - I heard the reports of the revolvers - yes, Sir.
1332. You would not have seen the whole of

**Page 48**

- the deck? - No, I assisted in one boat, and my own boat that I was in.
1333. You would not have seen the whole of the deck? - No.
1334. When you left the ship, what position was she in? Was she well down? - Yes, the ship was well down by the head - well down by the bow, Sir.
1335. Had you any knowledge at all as to wireless messages having been sent? - No.
1336. No knowledge whatever? - No, Sir.

**Further examined by the ATTORNEY-GENERAL.**

1337. There are two or three questions that I should like to ask this Witness before my friend, Sir Robert Finlay, or Mr. Laing examines him. I am now going to deal with some questions which I see were put to him in America, because we shall have to call another Witness later on, and as this Witness may not be here then, he should be asked them now. You were examined before the Commission in America - you remember that? - Yes.

1338. Did you say that you started for the light which you expected to be that of a fishing schooner? - I said that, Sir. Yes, I did say that.

1339. You told us here it was a steamer; I see that this is what you said there? - We expected it to be a steamer from the ship, but when I got into the boat and could not get nearer to it, and being calm weather, and then we expected it to be a fishing boat, a cod banger, as we call it.

*The Commissioner:* You led us to suppose that you thought at the time it was a steamer?

1340. (*The Attorney-General.*) I must point out to you that you said she was disappearing gradually as you were getting towards her? - So she was.

1341. Did you borrow a fireman from one of the other boats to help you to row? - Yes, that was in the morning part, to row back to the "Carpathia."

1342. Did you say this? "We borrowed a fireman from one of the other boats to help us to row, but we got no nearer the light"? - No, I do not remember saying that. I remember when I got this fireman out of Mr. Bailey's boat. It was to pull back to the ship. In fact I know we pulled back to the ship immediately I got him aboard, because all the other boats were going ahead of us showing us their lights.

1343. Were you at the tiller through the night? - I was, all the night.

1344. It was very cold? - Bitter cold.

1345. Did you hear cries of distress? - Faintly; yes, Sir.

1346. For several minutes? - I could not say several minutes, for a minute or two. 1347. Did you answer to the question: "Did you hear cries of distress"? Answer, "Yes, for several minutes"? - I think I said for two or three minutes. I do not think I said for several minutes.

1348. "Some men in the boat said they were the cries of people in the other boats signalling. I suppose they said that so as not to alarm the women." You said that? - Yes.

1349. Did you go in the direction of these cries of distress? - We had no compass in the boat and I did not know what direction to take. If I had a compass to know what course I could take from the ship, I should know what course to take, but I did not know what course to go upon.

*The Commissioner:* I do not understand you. "I did not know where these cries came from."

1350. (*The Attorney-General.*) You heard cries of distress, you have told us? - Yes.

1351. Where did they come from? - I suppose from the "Titanic" when the "Titanic" had sunk.

1352. Could not you tell in what direction they were coming? - No, not hardly, Sir.
1353. Not hardly? - No, I could not tell what direction they were coming.
1354. (*The Commissioner.*) Was this after the "Titanic" had gone down? - After the lights had gone. I did not know whether the "Titanic" was gone down, but the lights had gone away from the ship.
1355. (*The Attorney-General.*) As I understand, what you told us before was that you saw the "Titanic," that she had her lights burning, you stopped about a mile's distance, and when you got to about a mile's distance you did not see the lights any more? - That is right, Sir.
1356. That is what you tell us? - Yes.
1357. What I want you to tell us is this: how long after that was it, or when was it, that you heard the cries of distress? - I had no time in the boat. I could not tell you hardly what time.
1358. Had you stopped before you heard the cries of distress? - Yes. We were made fast then to the other boat. Me and Bailey was made fast together.
1359. Mr. Bailey's boat? - Yes.
1360. If I understand you correctly, you did not make any attempt to reach the cries of distress, did you? - It was a matter of impossibility; I could not do it.
1361. I want to understand why it was a matter of impossibility? - I only had one sailor in the boat, and I did not know where we were. I had no compass. I judge I was about a mile away the last time I saw the lights.
1362. (*The Commissioner.*) You had your ears. Could not you hear where these cries came from? - Your Lordship, in the meantime, the boats were yelling one to another as well as showing their lights to try and let each other know whereabouts they were. 1363. I do not understand how a compass would help you to get to the cries? - That is the only thing that would help me, your Lordship.
- The Commissioner:* I should have thought your ears would help you better?

**Examined by MR. COTTER.**

1364. On the day of muster in Southampton, what officer called the names out? - Mr. Murdoch, I think, Sir.
1365. After you had answered your name did he give you any instructions with regard to the boat, fire, or bulkhead door drill? - Not that I am aware of.
1366. He never gave you any? In other ships you have been in you said you have seen the general boat muster? - Yes.
1367. There was none on the "Titanic"? - No.
1368. Now I will take you to the time that she struck and you came out of the wheelhouse. You stated that she took a list to starboard? - Yes.
1369. When you got on deck had she come to a level keel, or had she still a list to starboard? - She still had a list to starboard when I was out on the deck.
1370. Had you any trouble in getting the people into the boat - the women? - Well, not a great deal of trouble, Sir; some seemed to come and some was half-inclined - they

seemed rather to prefer to stay, to the best of my knowledge. *The Attorney-General:* May we know who this gentleman represents?

1371. (*Mr. Cotter.*) I represent the National Union of Stewards. (*To the Witness.*) When you got on deck you said the boats were slung. How far from a large ship's side is a boat when it is slung from the davits? - About two feet - that is, when the ship is level, when she has no list.
1372. Did any of the women object to step over that gap of two feet, with a drop of 60 feet? - You understand, Sir, that our boat was listed in against the ship's side because the vessel had a list to starboard, and I was on the port side of the ship.
1373. But no women endeavoured to step on board the boat? - Some had to be helped into the boat.

## Page 49

*The Commissioner:* And some would not go at all?

1374. (*Mr. Cotter.*) Yes; but I am going to try and point out that some women will object, when boats are slung out, to go on board. (*To the Witness.*) In your opinion, if you had shipped the women with the boats slung, would it not have been better, and you would have got more women and children in? - I do not know that.
1375. I was just asking you for your opinion. When you were being lowered had you any difficulty in getting the boat away from the ship's side? - Yes, we had to put our hands out several times. 1376. To push it away? - Yes.
1377. That is, through the length of the drop from the upper deck? - Yes, and the list as well.

## Examined by MR. LAING.

1378. With regard to the "Cherub" log, where was it put out? - I think it was put out shortly after we left Queenstown.
1379. Is it taken every watch? - It is taken every two hours by the quartermaster when he got on the poop at the time.
1380. What was the reading when you took it? - The reading for the last day had been 45 miles.
1381. That is the calculation. What was the reading on the log? - I do not know the exact reading on the log, Sir.
1382. It would show the distance run from Queenstown, I suppose? - Yes.
1383. And in order to get what you said it was, 45 miles in two hours, you must make a calculation? - No. We took it, you see. We used to take it, we Quartermasters, by the speed the ship was travelling. We used to talk about it ourselves in our cabin.
1384. I want to know what reading you got from this log at 10 o'clock? - I could not tell you.
1385. Unless you knew what it was at eight o'clock you could not make the calculation? - We could only make the calculation by the run for the day. She had been going by the log.

*(The Witness withdrew.)*

*(After a short adjournment.)*

**WILLIAM LUCAS, Sworn.**

*The Commissioner:* I have since the adjournment received a letter from Mr. Champness, a solicitor, a gentleman who applied to me to appear for one passenger, and I declined to allow him to do so. He now tells me that he is instructed by five altogether, one first-class passenger, one-third-class passenger, another third-class, another thirdclass, and fourth a third-class, and he wants to appear for those five. He also says he is instructed by seven gentlemen who are constantly in the habit of making Atlantic voyages as passengers, and that they desire to be represented. In addition now I have a number of deceased Irish passengers; I daresay there are forty or fifty of them. Now, it appears to me quite impossible to allow gentlemen who are in the habit of crossing the Atlantic to be represented at all. I do not know where I should get to if I began that. I might as well admit the man in the street who takes an interest in this Inquiry to be represented. But I suggest that the representatives of passengers should consult together and agree upon some committee of passengers first, second, and third, and then if they can do that I shall be glad to have that Committee represented, so that the interests of the passengers may be in somebody's hands.

*The Attorney-General:* I suggest that you might not see fit to object to representatives of each of the classes appearing. There may be some difference in the point of view taken.

*The Commissioner:* I should have thought they could all have been entrusted in the hands of one man who would look after the interests of all three classes, but if you think we shall not get into difficulties by these innumerable people being present I shall not raise any objection. I have a strong objection myself to these numerous applications. One of the strangest is this last, in which gentlemen who occasionally or frequently make voyages across the Atlantic should be represented.

*The Attorney-General:* If your Lordship could see your way to allow a representative of each of the classes to be present I think it would satisfy the demand.

*The Commissioner:* I do not think so, but if it will, so much the better. Then let the representatives of the first-class, the second-class, and the third-class - there is not a fourth class I hope - each form a Committee, and then they may be represented.

*The Attorney-General:* If your Lordship pleases.

**Examined by Mr. ROWLATT.**

1386. Is your name William Lucas? - Yes.

1387. Were you A. B. on the "Titanic"? - Yes. 1388. When did you join her? - Southampton.

1389. What day? - The day of the sailing.

1390. What time of the day did you join her? - I caught her at ten minutes to twelve when all the gangways were up.
1391. When did she sail? - The same day.
1392. Yes, but how long after that; what time? - Well, just after twelve. 1393. You joined the very last thing? - Yes.
1394. And where were you employed on the voyage? - With the watch.
1395. On the deck? - Yes.
1396. What was your watch on the Sunday that she hit the iceberg? What was your watch that afternoon? - We had the first watch. That would have been our watch below.
1397. When did you go off in the evening? - We had the first from four to six, and then our next watch was from eight to twelve.
1398. Therefore it was your watch when the accident happened? - Yes.
1399. Where were you when the collision did occur? - I had just left the mess room.
1400. Where is that on the ship? - Just above the fore-castle.
1401. Will you show it us on the model? - Yes, it will be under here (*pointing to the model*).
1402. Down in the well? - That is right.
1403. Where the mast comes up - forward of the mast? - It would be about there (*pointing on the model*).
1404. Port or starboard side? - The port side.
1405. What was the weather? - We could not wish for better weather.
1406. Was it cold? - Well, it was.
1407. When did it begin to get cold? - I noticed it Saturday morning.
1408. Did it get colder and colder after that? - Colder and colder, yes.
1409. I suppose you did not think to look at any thermometers or anything of that sort yourself? - No, I only put on an extra jersey.
1410. You were your own thermometer? - Yes.
1411. I see. Did you hear of any ice? - Well, I knew it was knocking about.
1412. Did you hear it talked of or anything of the sort on board? - Only among my own sailor fellows, that is all.
1413. Discussing the question whether there might be ice? - Yes. 1414. Was that because it was so cold that you did that? - Yes.

## **Page 50**

1415. Did you not hear any orders about ice from officers? - No, not at all.
1416. You say you had just come out of the mess room when the collision occurred? - Yes.
1417. What did you hear, how did it sound like to you? - It very nearly sent me off my feet.
1418. A hard shock? - Yes.
1419. Was there a loud sound? - Well, I did not take that particular notice. I went to the fore-well deck and there I saw ice on the deck. 1420. Did you see the iceberg? - No, I did not.

1421. You would be down a little way you would not be able to see over the side? - No, we would have passed it.
1422. Where did you see the ice on the deck? - On the fore-well on the starboard side.
1423. Show me on the model how far forward does the well come? - This is the forewell deck I am touching now (*pointing to the model*).
1424. How far forward does the well come before the deck begins? - This is the forewell; it would be about here; that is where we sleep. There is about six yards difference.
1425. Where was the ice just abaft the mast? - About here, in the centre of the fore-well (*pointing on the model*).
1426. How much ice was there on the deck there? - I suppose, about a couple of tons.
1427. What colour was it? - It was a darkish white.
1428. What happened then, as far as you know? Whom did you see who came? - The first orders I got was up under the bridge; that would be the boatswain's mate, followed by the boatswain, "All hands up about the boats."
1429. How long was that after the collision do you suppose? - I suppose, about a quarter of an hour.
1430. What had you been doing in the meantime? - I had been playing nap - playing cards.
1431. Were you playing at nap again after the collision? - No.
1432. What were you doing between the time of the collision and the time you had the order about the boats? - Playing nap.
1433. After the collision? - No, not after the collision; before the collision.
1434. When the collision happened you stopped playing nap? - I stopped before the collision, because I was broke.
1435. Then after the collision what did you do? - I went down below to put on my extra jersey.
1436. Did you put on a lifebelt? - No, not at all.
1437. Had you a lifebelt? - I had one, but I would not put it on.
1438. At that time did you think there was any danger? - Not at all.
1439. You say you came on deck and you heard the order, "All hands up to the boats"? - Yes.
1440. Did you obey that order? - I did.
1441. And did you go up on to the boat deck? - Yes.
1442. Where did you go? - The first boat I had anything to do with was No. 2, but that boat was already swung out.
1443. What was your boat? - My boat was No. 1.
1444. Did you know that? - I knew that, yes.
1445. How had you found out? - By the lists that is always put up in all the boats I have been in; in nearly all the White Star boats.
1446. Where was the list put up? - Just above the fore-castle.
1447. And you saw it there? - Yes; I saw it.
1448. When did you see it? - I saw it the day after we left Queenstown.
1449. Did you say you had found it in all the White Star boats? - In all that I have been in and I have been in four of them.
1450. You saw it the day after you left Queenstown? - Yes.

1451. Do you know when it was put up first? - Well, they very nearly always put them up so that you can muster on a Sunday.
1452. Can you remember when it was put up on the "Titanic" this time? - Well, I should say on Saturday night.
1453. You saw it when you left Queenstown? - Yes.
1454. (*The Commissioner.*) You left Southampton on Good Friday, I understand? - Yes.  
*The Commissioner:* Is not that right?  
*The Attorney-General:* I am not sure that it is. I think they joined on the Good Friday.  
*Mr. Rowlatt:* When did you leave Southampton? - It was the next week, was it not?
1455. (*Sir Robert Finlay.*) It was on the Wednesday following.  
*The Witness:* It was on the Wednesday, I think.
1456. (*Mr. Rowlatt.*) You say your boat was No. 1? - Yes, that was my emergency boat. While I was at sea I got told off to two boats.
1457. When you got upon the deck did you go to No. 1? - No, not at that time, I did not.
1458. Where did you go? - I went to the assistance of all the boats there to be swung out from the deck.
1459. This one had not to be swung out? - No, it was already swung out.
1460. That is it, slung outboard already (*pointing on the model*)? - Yes.
1461. Then you went to the next one, No. 2? - The opposite side, the port side. 1462. Who was in charge of that boat at that time; was any officer there? - The only officers I saw there were Mr. Moody and Mr. Lightoller.
1463. Did they give you any orders? - Yes.
1464. What did they say? - They said "get out the boats," we all got out those boats - before the boats were lowered, before they were swung out.
1465. They had to be uncovered I suppose? - Yes.
1466. And then got out outside the rails? - We took the covers off and slung them inboard.
1467. Did you stay at No. 2 boat? - No.
1468. Where did you go? - To number 4 and number 6, and then I went right aft.
1469. What boats did you go to right aft? - The lifeboat - I mean on the boat deck.
1470. Do you know what number? - Well, No. 16, No. 14.
1471. Right aft on the other side, on the port side? - On the boat deck there, right aft.
1472. That was before anybody got into the boats was it? - That is right.
1473. Do I understand you to say that all the boats were outside before anybody got in? - Before anybody was lowered.
1474. Where did you see the first people get into the boats? - The afterpart of the ship where I first started lowering boats.
1475. What boat was that? - That was number 16, 12.
1476. How many people got into that? - They were not fully manned by a long way.
1477. Not full? - No not full.
1478. Was any order given about filling up? - Yes, but there was not anybody there handy - No women. I was singing out for women myself.
1479. Had you received the order that women were to be put in the boats? - Yes.
1480. Whom did you receive that from? - Mr. Moody, the sixth officer.

1481. Was he there or was he by the falls? - He was near me when I was lowering.
1482. And you called out for women and there were no more? - That is right, Sir.
1483. That was right at the afterend was it? - Yes, the afterend of all.
1484. Do you know where the access from the third-class accommodation comes up? - Well, I never knew my way up myself and I was a sailor on the ship.
1485. I daresay you had never been that way before? - No. I do not think those people had time to go there without directions from somebody; I hardly knew my way there myself.
1486. When you say the way, what do you mean - the way where to? - The boat deck.
1487. You had come up this forward end, had you not? - Yes, the fore end.
1488. I see there is third-class accommodation at both ends of the vessel? - Yes. 1489. Were there third-class passengers here forward? - Yes, they were.

## Page 51

1490. Do you know if there were aft too; perhaps you do not know? - Well, I think the general rule is women aft and the men forward.
1491. As far as the third-class passengers forward were concerned they would come up the same way that you went to the boat? - The same way as I went.
1492. How did you get up? What sort of access is there? - You come up about three flights of ladders to get to the promenade deck.
1493. And then from the promenade deck? - And then I have to go up another two flights to get to the boat deck.
1494. Where are they in the ship? - About here. There is a ladder leads up here, and then you go back again and go up the ladder here (*pointing on the model*).
1495. What sort of ladder? - A wooden ladder.
1496. A gangway ladder? - Yes.
1497. Not a ladder that you can go up hand over hand? - No.
1498. (*The Commissioner.*) Steps? - Yes.
1499. (*Mr. Rowlatt.*) Did you know what the passengers were on the boat deck - firstclass, second-class, or third-class? - The majority first-class.
1500. Along where you were? - Yes.
1501. How many boats did you see filled. How many boats did you take notice of as they were being filled? - About nine.
1502. Could you see whether they were all filled to the full capacity? - They were not all filled.
1503. Why was that? - Because there were no women knocking about.
1504. Was there good order? - Yes, excellent order.
1505. And were the boats that you saw all lowered successfully to the water? - I lowered the majority of the boats on the port side. I never lowered a boat in the water at all; I lowered them about three feet from the water.
1506. But they all got into the water all right? - Yes. Those boats are all fitted with a patent dropping gear. You pull a little lever, and the boats drop without lowering them into the water.

1507. Were you told to help to lower the boats? - I was warned off by Mr. Moody, and to stand by.
1508. How many boats did you help to lower? - About eight.
1509. One after the other? - Yes.
1510. With regard to each of them was there very orderly embarkation of women? - Yes.
1511. Then finally did you go in a boat? - Well, I got in a boat and I got ordered out by Mr. Lightoller. That was the last boat that left.
1512. Then you were ordered out of the boat? - Yes.
1513. Could you see whether the boats were properly equipped with oars and things? - The two boats that I got into afterwards were properly manned with oars.
1514. You said 16 was the last boat, did you not? - No; 16 was the last boat like, the after boat on the port side.
1515. What was the last boat you got in? - The collapsible boat, the port side, inside the emergency boat.
1516. Is that the one you got into? - I got into her and got ordered out.
1517. Who ordered you out? - Mr. Lightoller.
1518. What did you do then? - I went over to the starboard side to see if there was any more boats there. There were no more boats there so I came back and the boat was riding off the deck then. The water was up under the bridge then. The ladies sung out there was no sailor in the boat and no plugs, so I was a sailor and I jumped into the boat. 1519. It was a boat that was on the deck, just explain that? - Just here (*pointing to the model*).
1520. What boat was that? - A surf boat; they call them collapsible boats.
1521. She was lying on the deck? - Yes.
1522. The sides collapse, do not they? - No, they are three parts clinker boats and about three parts of the gunwale is canvas.
1523. Had the gunwale been pulled up? - Yes.
1524. And made fast? - Yes.
1525. Who had done that? - I assisted in doing that.
1526. Who else? - There were eight more sailors there besides myself just at the time.
1527. At that time you say the water was right up to the place where you were? - The ship was at that angle then (*indicating*).
1528. (*The Commissioner.*) And the water up to the bridge? - Yes; the water under the bridge.
1529. (*Mr. Rowlatt.*) How long was that after the collision? - I should think about an hour and a quarter.
1530. Was it long after all the other boats had gone away? - I should say about a quarter of an hour.
- Mr. Rowlatt: Here is an illustration of these collapsible boats, if you care to look at it, my Lord. It is a very shallow boat. (*the same was handed to the Commissioner.*) *The Commissioner:* I have seen them.
1531. (*Mr. Rowlatt - To the Witness.*) You were telling us about this collapsible boat; you assisted to get her out? - Yes.
1532. Now what did you do with her? - I pulled her to the davits.

1533. Did you hook her on the falls? - The same falls used for the emergency boat picked up that boat.
1534. Did you get the falls up again? - Yes, but the water was about 1 1/2 feet then when she was strung up to the davits.
1535. What falls do you say? - The same falls as the emergency boat used.
1536. They had been hauled up again? - Yes.
1537. Did you lower her and get her to the water by these falls? - No, they only required lowering. They were already in the water.
1538. Who got into her? - About forty women.
1539. And what men? - Well, I found three men in the boat afterwards, but I never saw them in the boat when she went away.
1540. Did you go away in that boat? - I went away in that boat.
1541. Who were the other men? Were they seamen? - One-quartermaster and two foreigners in the boat.
1542. (*The Commissioner.*) What do you mean by foreigners - passengers? - Yes.
1543. (*Mr. Rowlatt.*) Two foreign passengers? - Yes.
1544. Do you know what class they were? - Well, I should think they were third-class.
1545. Then did you push off from the side? - No.
1546. I mean to row away? - The water was there.
1547. Did you row away? - Yes.
1548. You practically floated off the ship? - Yes.
1549. How far off did you go? - Well it was about 100 yards before the first explosion went. It was a very loud report.
1550. You heard an explosion? - Yes.
1551. Then did you row further off again? - Yes.
1552. How many oars had you? - About eight.
1553. Plenty? - Yes.
1554. How many people had you rowing? - Well, I had to ask a couple of women to get hold of an oar.
1555. How many oars had you out altogether? - About four.
1556. Who was in charge of the boat - who was steering? - There was no rudder there.
1557. No rudder at all? - No, I was in charge of the boat.
1558. Did anybody steer with anything? - No. I kept on changing my oar from port to starboard to keep her away as best I could.
1559. You were doing that? - Yes.
1560. You were in command of the boat? - Yes.
1561. Did you see the "Titanic" sink? - Yes.
1562. How far off were you when she sank? - I suppose about 150 yards. 1563. Then it was not very long after you left her that she did sink? - No.
1564. Had you been rowing all the time? - I was not rowing long before she went down.

1565. (*The Commissioner.*) When you floated in this collapsible boat into the sea were you on the port or the starboard side? - The port side.
1566. (*Mr. Rowlatt.*) Did you see any light? - Well, I did see a light, a faint sidelight of another ship.
1567. Where away? In what direction? - On my port hand it was then.
1568. You saw a light? - Yes.
- The Commissioner:* A faint sidelight as I understand.
1569. (*Mr. Rowlatt.*) Where was it? - Off my port hand as I was in the boat.
1570. Do you mean it was a port light? - Was it a red or a green light? - A red light - a sidelight.
1571. Now in what direction from you was it? That is what I wanted to ask - taking the bow of the "Titanic"? - Taking it from here it would be the starboard side.
1572. Broad on the starboard side? - Yes, from her quarter.
1573. What, astern? - No, as she is left now it would be in that direction.
1574. Right out here? - Yes.
1575. Aft the beam? - Just the same as she is lying now, on her quarter.
1576. That is where you saw the light? - Yes.
- The Commissioner:* Is that where the other man said?
- Mr. Rowlatt:* No, he said two points on the port bow. That would be in that direction (*indicating*), assuming they are speaking of the time when the ship was in the same place.
- The Commissioner:* It is possible the "Titanic" had turned, you mean?
1577. (*Mr. Rowlatt.*) We cannot tell how she was moving. Did you notice whether the "Titanic" moved at all after the collision? - No, I do not think she did.
1578. She lay pointing in the same direction? - Yes.
1579. Did you take any notice of that? You would not notice unless you noticed the stars, I suppose; you would not see, would you? - No.
1580. Did you see any other light beside the red light? - Yes, the steaming light.
1581. You did? - Yes, I saw the sidelights and the steaming light.
1582. You said the sidelight was faint? - Yes, certainly.
1583. Was the other light faint or clear? - You can only see one side.
1584. I know that, but I mean the masthead light? - Yes, clear.
1585. Could you judge at all how far off it was? - It was about eight or nine miles; it was right on the horizon.
1586. Are you speaking of it being on the horizon when you were in the boat? - Yes.
1587. And of course before you left the "Titanic" you were down on the water as you have told us? - Yes.
1588. I want to go back for a moment to get one thing clear. You told us you got into a boat and were ordered out of it? - Yes.
1589. Which boat was that? - That was the collapsible boat.
1590. Is that the same one you went away in? - That is the same one I went away in.
1591. I see - port side? - Yes.
1592. You came back to her afterwards? - I came back to her afterwards.
1593. When the "Titanic" went down did you see wreckage about? - Chairs and spare cupboards like.

1594. And people in the water? - No, I never saw anybody in the water.
1595. Did you go back in your boat? - I transferred all the women from my boat to No. 8 boat because I was frightened of my boat capsizing and going down.
1596. Whose boat was No. 8 boat? - Poingdestre was in charge.
1597. You got all your women out of your boat into No. 8? - Yes.
1598. Then what did you do with your boat? - Poingdestre asked me if I would go in the boat and get hold of an oar and I said yes, and then I went over to the upturned boat where we had picked up 36 from the wreckage.
1599. What upturned boat was this? - This was one of the boats that had got off from the deck where I was assisting before I went away in this collapsible boat.
1600. Was it a collapsible boat? - It was a collapsible boat.
1601. It was upturned? - It was upturned.
1602. Were there people clinging to it? - Yes, 36 on the top of it.
1603. There were two collapsibles on the "Titanic," were there not? - There are four.
1604. These are the two that got off? - Yes.
1605. Now with regard to these 36 people on this upturned boat, what happened to them? - I put them in the boat that I was in.
1606. You took them off? - Yes.
1607. With your collapsible? - No, with this No. 8 boat.
1608. What happened to your collapsible? - I let that go with the three men in it. 1609. Where did they go? - Well, they hung on to the remainder and were knocking round - tied themselves together afterwards.
1610. I just want to get it quite clear. You went with this collapsible boat alongside No. 8? - Transferred the women into No. 8 because I was frightened the boat was going down.
1611. I daresay you were rather crowded, were you? - Yes, we were; the gunwales were under water.
1612. You got them out? - Yes.
1613. You went in No. 8 yourself? - Yes.
1614. Now, was anybody left in the collapsible? - Yes, three men - a quartermaster and two men.
1615. What did they do? - They stopped there till they were picked up.
1616. By the "Carpathia"? - Yes.
1617. Did they go to see if they could save any people out of the water? - Yes, but they could not arrive there because our boat had two or three sailors in it and we got in there before them.
1618. They went, and you went back towards the scene of the wreck? - Yes.
1619. Now, you picked up 36 people off an upturned boat? - Yes.
1620. Did you pick up anyone else in No. 8? - No.
1621. Were there any other people to be picked up? - Well, there were people to be picked up, but they were dead before we got there.
1622. I suppose it took you some time to get there, did it? - Well, say about a quarter of an hour.
1623. How many men had you rowing in No. 8? - Four.

*The Commissioner:* Will you ask him what his boat load was?

1624. (*Mr. Rowlatt.*) I was going to ask him that. (*To the Witness.*) When you got into No. 8 how many people were in altogether, after you got the 36 people out of the collapsible? - Well, I should say near about 80.

1625. Would she hold all that? - Well, we were frightened of her ourselves. Mr. Lightoller gave orders, "Keep quiet, men, before you get into the boat now." 1626. I want to get it clear. I do not quite understand why you left the collapsible so very empty and filled this boat so very full? - Because we were frightened of her. We had no plug in it.

1627. You had no plug? - We did not know whether there was a plug in it or not. We could not find it.

1628. Was it full of water? - There was water under our feet. The women were frightened of her.

1629. Surely if there had been no plug there, there would have been a great deal of water with 40 people in her? - These boats have a false bottom and plug hole about that depth. Me and Mr. Lightoller were looking round for that plug a good ten minutes before any passenger got into it and could not find it. 1630. Is it plugged from the top? - I should say so.

### **Page 53**

1631. Do not you know how this boat ought to be plugged? - Well, not these boats. They are the first boats I have seen of that build.

1632. (*The Commissioner.*) For aught you know the plug may have been in position? - Yes, my Lord.

1633. (*Mr. Rowlatt.*) Did you see No. 8 go away from the ship? - I lowered No. 8 myself.

1634. How many people were there then in her? - I should say near about forty.

1635. How many men as far as you can recollect? - Three.

1636. How long before you went did she go? - About half an hour.

1637. Then she did not go very far away? - No.

1638. She had only three men to row and a heavy load? - Yes.

*The Commissioner:* A heavy load! She had 40, and afterwards took 40 more apparently.

1639. (*Mr. Rowlatt.*) Yes. The other 36 makes up the other 40? - Yes. But when we got to the other boat I transferred some of those people off the upturned boat into another boat; I think it was No. 10.

1640. I have not got it yet, I think. When No. 8 went away she had 40 people in her, you think? - Yes.

1641. How many people went in your collapsible? - Forty; loaded right up.

1642. And they went into No. 8, did they not? - Yes.

1643. And that made 80? - Yes.

1644. Where did the 36 men off the collapsible go? - We took them aboard our boat and then we transferred some of them to another boat that came up alongside us; No. 10, I think.

1645. At one time you had more than 80 on No. 8? - Yes, at the time we were crossing.

1646. You did not see any living people in the water? - No.
1647. Did you hear any cries? - I did.
1648. Did you see No. 12 boat at all, or only No. 8, or was it No. 12? - Well, I started all those boats on the port side right till I got forward.
1649. The one you transferred your people to, was that No. 8 or No. 12? - They were the last people to go on board the "Carpathia," and to be picked up.
1650. Were they No. 8 or No. 12? - I think one was No. 8. I think the other was No. 10 or 12. I would not be sure; I know the coxswain of her.
1651. What is his name? - Foley.
1652. Was he a steward? - No, a sailor.
1653. He is not a third-class steward? - No.
1654. Was he saved? - Yes.
1655. Now, did you have any boat drill? - Yes.
1656. Where was that? - Southampton.
1657. You told me you came on board just before she sailed? - Yes, but we always had this boat drill with the Board of Trade muster - just after we have our muster, that is just after 9.
1658. Earlier in the day? - Yes.
1659. You mean you had your boat drill and then went ashore again? - Yes; it is a regular thing for sailors to go ashore and have a final drink.
1660. Did you actually take part in the boat drill or did you only muster? - I went up to the boats to lower them, but I went ashore.
1661. How do you mean? - I went up about the boat, and as soon as I saw a chance I went ashore.
1662. You did not take part yourself in the actual drill? - No.
1663. Where was the drill held, on the boat deck? - Yes.
1664. How near to the drill did you get? - I got on the boat deck to get the boats out, and then I went ashore.
1665. You did not bear a hand in anything? - No.
1666. Did you get to your right boat? - It is any boat you get in. They lower the boats and you go away in those boats, you sail back and get hoisted in board.
1667. You do not muster at your particular boats? - No.
1668. You had a particular boat? - Yes, you always muster at that when you are at sea.
1669. Did you have any boat drill at sea? - Not in this ship.
1670. You knew where your boat was? - Yes.
1671. How many seamen were there in No. 8 when you got there? - Two.
1672. How many seamen, in your judgment, does it want to man one of these boats? - A lifeboat wants at least 12 hands in it.
1673. And how many passengers would she then hold safely? - I should think she would take 40 comfortably.
1674. Then how many oars would she row with 12 men according to your reckoning? - Twelve oars.
1675. And a coxswain beside? - Yes.

1676. (*The Commissioner.*) Do I understand, in your opinion, a lifeboat to accommodate 40 people ought to have in it 12 men with each an oar? - Yes, my Lord. 1677. (*Mr. Rowlatt.*) Did you have one man to each oar or two men to an oar? - One man to an oar in a lifeboat.
1678. Do they have sails? - Yes.
1679. And when you say 12 men - ? - That includes the four to sail the boat.
1680. Would they be enough in bad weather? - That is the crew.
1681. When you say 12 - ? - I am talking of rough weather.
1682. A crew to face everything? - Yes.
1683. Did you find it difficult to row these lifeboats with only two oars? - Well, we just kept her going that is all.
1684. And the collapsible, how many men do you think would be wanted for the collapsible? - About five hands.
1685. Four to row and one to steer? - Yes.
1686. Is the collapsible intended to have a rudder? - Yes.
1687. Did you never see a rudder belonging to a collapsible? - I never saw one there.
1688. Had she the proper number of oars? - Yes.
1689. And rowlocks or crutches? - Yes.
1690. Did you never see the rudder? - No.
1691. What happened to the collapsible ultimately? - I do not know.
1692. Was she cut adrift, or was she taken on board the "Carpathia"? - None of the collapsible boats were taken on board of her. They were cast adrift.
1693. Therefore you never had an opportunity of seeing? - No.
1694. Can you form any judgment as to whether she had a plug or not? - If there had not been a false bottom I might have been able to find it out, but they carry a false bottom about 2 feet from the keel.
1695. As far as you were able to see you could not see whether there was a plug or not? - To speak the truth, I do not think there was a plug in the boat.
1696. Would she have floated as well as she did without a plug? Would not the water have spurted up from the hole? - We could not see that because there was a false bottom - that was what I was frightened of.
1697. You mean a false bottom, not watertight? - Yes.
1698. Not one hole coming through the two bottoms? - The boat is like that, and the false bottom is laid like a bit of a platform. (*describing.*)
1699. You did not know what was going on under the platform? - No.
1700. I see; that is what it was. Would not you have expected the water to have come over the platform more than it did if there had been no plug at all in the boat? - I should have done, yes.
1701. What is your conclusion about whether there was a plug or not? - The passengers wanted to get out of the boat, and I got them out of it.
1702. Was there a lamp in the boat? - No.
1703. And no provisions nor water? - Not in this boat.
1704. (*The Commissioner.*) A compass? - No.

1705. (*Mr. Rowlatt.*) Was there going to be any other boat drill as far as you heard? - No, I do not think there was, they would have mustered

**Page 54**

that Sunday. It is a regular thing in these boats to muster on Sunday for boat drill and fire stations.

1706. You had had a Sunday? - Yes, this was a Sunday.

1707. Did you muster? - No.

1708. (*The Commissioner.*) Why was that? - I do not know, my Lord.

**Cross-examined by Mr. SCANLAN.**

1709. In the boat drill you had at Southampton is it the case that only able seamen and deckhands took part in it? - That is all.

1710. No firemen, no stokers, no engineers or stewards were called to take part in it? - No.

1711. Had you been given any training in the launching of a collapsible boat? - That is my work. I do not want any training.

1712. I know you are a capable man. Had you on board the "Titanic" been instructed in the launching of any of those collapsible boats? - No.

1713. In the state of your knowledge while you were on the "Titanic" did you know whether to expect plugs or not in the collapsible? - No.

1714. If there had been plugs in this collapsible boat attached with lanyards or chains, could you have found them easily? - Certainly.

1715. Can you tell my Lord that there was not a plug attached by a lanyard or a chain in this collapsible boat? - I should say now that there was no plug attached to the boat; I never saw one.

1716. Was there a sea anchor in this collapsible? - No.

1717. Was there a baler? - Yes, there was a baler.

1718. A rudder or tiller? - No rudder or tiller.

*The Commissioner:* Is a rudder used in those boats?

*Mr. Scanlan:* I am reading, my Lord, from the general rules under the Merchant Shipping Act, and if your Lordship will refer to page 15 of the rules you will see: "Equipments for collapsible or other boats and for the rafts. In order to be properly equipped each boat shall be provided as follows: - (A.) With the full single banked complement of oars and two spare oars. (b) With two plugs for each plug hole, attached with lanyards or chains and one set and a half of thole pins or crutches, attached to the boat by sound lanyards. (c) With a sea anchor, a baler, a rudder and a tiller, or yoke and yoke lines, a painter of sufficient length and a boat hook. The rudder and baler to be attached to the boat by sufficiently long lanyards and kept ready for use." *The*

*Commissioner:* What is the date of those rules?

*Mr. Scanlan:* 1894 my Lord, it is here.

*The Attorney-General:* February, 1902.

*Mr. Scanlan:* Yes, 1902. I think there was a rule made in 1910.

*The Attorney-General:* Quite right, and there is another in 1909.

*Mr. Scanlan:* And the rules were reprinted in 1911.

*The Commissioner:* Are they the same in 1911 as they were in 1902?

*Mr. Scanlan:* Yes, my Lord, with the exception of the one added rule.

*The Attorney-General:* I do not think that affects this.

1719. (*The Commissioner - To the Witness.*) Is it possible to steer these collapsible boats without a rudder? - Yes, by putting an oar over the stern.

1720. Is not there a provision made in the stern of collapsible boats for an oar which is to act as a rudder? - No, my Lord.

1721. Well, there is according to my notion. Are you sure? - I have never seen a place, my Lord.

1722. I mean a place for a rowlock? - No, I never saw one, my Lord.

1723. Did you ever look? - Well, I did look when I was in this collapsible boat. *Mr. Scanlan:* I think that point that your Lordship is referring to is met in one of the rules which I did not finish. "In boats where there may be a difficulty in fitting a rudder a steering oar may be provided instead."

*The Commissioner:* According to the picture which I have here of one of these collapsible boats, there is no rudder, but there is the provision of a row-lock and so provision for steering with an oar.

1724. (*Mr. Scanlan.*) Yes, my Lord. (*To the Witness.*) Were there four collapsible boats on board? - One either side of the emergency boats and one each side of the funnel.

1725. Of the four, how many were actually launched? - I can answer for two.

1726. Do you know whether the others were launched or not? - I cannot say.

1727. You have told us that you saw eight lifeboats being launched? - Yes.

1728. And sent off with a complement of passengers? - Yes.

Were all these incompletely filled with passengers?

*The Commissioner:* Not his own I should say.

1729. (*Mr. Scanlan.*) Before his own. (*To the Witness.*) Yours was the last to leave? - Yes.

1730. But of the eight which you saw leaving is it true that they were incompletely filled? - Some had more passengers in than others.

1731. How many more do you think could have been accommodated in these? - In some of them they could have taken another 15 or 20.

1732. (*The Commissioner.*) Now, what I want to know is this; why were they not filled up? - There were not any females on the deck to put in the boats.

1733. Or if they were they would not go? - Some would go in and some would not; they wanted to stay behind with their husbands.

1734. (*Mr. Scanlan.*) From the time of the order which you received to assist in uncovering and launching the lifeboats until they were being sent off from the side, was there sufficient interval to enable the female passengers in the steerage to be got up to the boat deck? - They would if they had anybody there to direct them to the boat deck.

1735. Was there any person, so far as you were aware, directing the steerage passengers, either those who were stationed forward or aft, to the boat decks? - I do not think so.

1736. You do not think there was anybody? - No.

1737. (*The Commissioner.*) But you were not there to see, I should think? - No, my Lord; but there were hardly any third-class passengers up there.

1738. (*Mr. Scanlan.*) You say that you heard shouts, "Any more passengers?" "Any more women?" - Yes; I shouted myself.

1739. Could those shouts by any possibility have been heard by the passengers in the third-class quarters? - No, not at all.

1740. Of the eight boats which you saw launched how many were properly manned with seamen? - [No Answer.]

*The Commissioner:* Do you mean with twelve seamen? - I do not know what you mean by "properly manned." Is your definition of "properly manned" twelve seamen? *Mr.*

*Scanlan:* It is not, my Lord.

*The Commissioner:* What is your definition?

*Mr. Scanlan:* I should hesitate, my Lord, at this stage of the Inquiry, on my instructions to give a definition as to what is a sufficient number of seamen to man a lifeboat.

*The Commissioner:* This Witness said twelve.

*Mr. Scanlan:* My instructions have never gone to that extent, my Lord - *The*

*Commissioner:* I am not astonished to hear that.

1741. (*Mr. Scanlan.*) As to the efficiency of a crew for manning a lifeboat. (*To the Witness.*) How many seamen could, in your opinion, man one of

## **Page 55**

those lifeboats in fine weather and under favourable conditions which you had on the night of this unfortunate accident? - If they were to keep in the boat for any length of time it would want at least six.

1742. In those eight boats which were launched while you were looking on, can you tell my Lord how many seamen were in each on an average? - To my knowledge there was either one or two in each.

1743. Was that insufficient in your opinion? - That is the regulation, two sailors to each boat.

*The Commissioner:* I really do not understand it. He says the regulations are two in each boat. He says there ought to be twelve in some circumstances, and apparently six in other circumstances. What am I to understand? Are we getting this Witness's skilled opinion on the point?

1744. (*Mr. Scanlan.*) I think his opinion might be of some value. (*To the Witness.*)

When you speak of twelve men being required do you mean stokers as well as seamen? - I am a Service man and I did nine years in the Navy, and for a lifeboat it was always considered fourteen men is a lifeboat's crew.

1745. (*The Commissioner.*) How many persons will that boat manned with 14 men carry in addition to the 14 men? - That boat would carry at least 50 besides the crew.

1746. Besides the fourteen? - Yes.
1747. (*Mr. Scanlan.*) When you speak of Mercantile Marine boats - I am not talking of Service boats now - you referred to a crew of twelve? - Yes.
1748. Does that include firemen and engineers and stewards as well as seamen? - Yes.
1749. You also stated a moment ago that you are supposed to have two seamen to each lifeboat? - Yes.
1750. Is that an ordinary regulation - two qualified seamen? - Yes, that is a regulation laid down by this Company - two sailors to each boat.
1751. Were there two sailors to each of the boats which you saw launched before you left the "Titanic"? - There were two sailors in several of them, one in some, and a fireman took their place.
1752. Do the firemen and stokers in other ships? - No.
- Mr. Holmes:* I have no questions.

**Examined by Mr. LEWIS.**

With regard to this boat drill at Southampton, are many men allowed to run away as you did on that Saturday?

*The Commissioner:* What is that question?

1753. (*Mr. Lewis.*) I am asking about the boat drill on Saturday at Southampton, where, I think, Mr. Lucas departed to have a drink. (*To the Witness.*) Was any notice taken of your going away? - No.
1754. What time is generally spent upon these boat drills as a rule? - I should say about an hour from the time they are lowered to the time they are hoisted.
1755. Who takes part - only sailors? - Only sailors.
1756. The whole of the sailors? - Yes.
1757. And how many boats? - Two.
1758. Is the Board of Trade Inspector generally present? - Yes.
1759. And does he make a thorough examination of the boats? - Yes. 1760. Does he see that they are properly equipped? - Yes.
1761. Now with regard to the "Titanic," I understand you went from your quarters? - Yes.
1762. How long did it take you to get from your quarters to the boat deck? - I should say about five minutes. 1763. No more? - No.
1764. (*The Commissioner.*) Where are your quarters. I thought they were here? - Yes; in the fore-well deck.
1765. You had got up to the boat deck? - Yes.
1766. Does it take you five minutes to get up? - At times it took me longer than that. I never knew my way; it was a new ship.
1767. In ordinary circumstances, or what I conceive to be ordinary circumstances, do you mean to tell me it takes five minutes to get from your quarters in the fore part of the ship up to the boat deck? Just think about it? - It took me close on that. I never knew my way properly upon the boat deck.

1768. Do you mean to say that you were groping about in places that you knew nothing about? - Yes.
1769. Had you never been up before? - Yes, I had been on the boat deck every watch.
1770. And had not you then learnt your way? - Yes, I had learnt my way.
1771. Then having learnt your way how long did it take you to go your way to get to the boat deck? Five minutes seems a very long time. I should have said half-a-minute?  
- It is rather long, my Lord.
- The Commissioner:* I came up those stairs in the "Olympic" yesterday. It is quite true I was shown the way but five minutes seems an extraordinary length of time.
- Mr. Lewis:* Would you say the boat is very complicated?
1772. (*The Commissioner.*) Was it difficult for you to find your way from your quarters up to the boat deck? - No.
1773. (*Mr. Lewis.*) Was it easy to get from the men's quarters to the deck? Would it be more difficult on the "Titanic" than one of the Union-Castle boats? - Yes.
1774. You say it would be more difficult? - In the "Titanic," yes.
1775. How long did it take you? I understand you say you assisted to get eight lifeboats out? - Yes.
1776. How long did it take you from the time you commenced till the time you finished with the last boat? How long were you engaged on the work? - I should say about an hour.
1777. You said that you were launching that boat. I understood you to say there were eight sailors there? - That is right.
1778. You were rather short-handed in launching the eight boats? - Yes.
1779. And there were not sufficient seamen sent out with the boats? - No.
1780. What had those eight men been doing? - Lowering all the boats.
1781. But they were left behind? - Yes, left behind along with me - got orders to stand by the boats and lower, and do nothing else.
1782. As two sailors at each boat went out they left the number behind to look after the other boats? - Yes.
1783. It would not require the eight sailors to do the last two or three boats, would it? - It required every man that was there. I got ordered out of the boat I was in, the last collapsible boat, to get one off from the funnel.
1784. Were there any women or children left behind when you left on this collapsible boat? - Yes, I left two myself.
1785. Where were they? - They were lying alongside of me and I said to them: "Wait a minute, there's another boat going to be put down from the funnel for you." 1786. That was because you could not take them? - I could not take them. 1787. Were they young people or old? - Two young girls.

1788. How long have you been in the employ of the White Star Line? - About eighteen months or two years.
1789. Have you been in any other lines that have first-class passenger ships? - No.
1790. When you got to the boat decks, you found these collapsible boats lashed down? - Yes, they were secured down.
1791. How were they secured? - I could not tell you.
1792. Have you any idea how you got them away? - The collapsible boats?
1793. Yes? - The same falls from the emergency boat picked the collapsible boats off the deck.
1794. Who cut them away? Did you chop them away with anything, or did you unfasten them? - Firemen and sailors.
1795. How many firemen were there? - I should say about 40.
1796. Forty firemen and how many sailors? - Three while I was there.
1797. I thought you said eight? - This is getting the collapsible boat off the deck. Eight sailors were there when I was alongside the funnel - by the boat by the funnel.
1798. You had had no drill or any practice in getting these collapsible boats away in case of emergency? - No. 1799. None at all? - No.

**Examined by SIR ROBERT FINLAY.**

1800. You said you saw a sidelight and a masthead light? - Yes.
1801. Was I right in thinking that you said you judged them to be eight or nine miles apart? - Yes.
1802. Could you see a sidelight eight or nine miles distant? - A night like that I could.
1803. Eight or nine miles distant? - I think so.
1804. You saw nothing more of the vessel to which those lights belonged? - No; the light went further away every time we looked at it.
1805. (*The Commissioner.*) I am not quite clear about it. Did you see this masthead light and this sidelight before you got into the boat? - No.
1806. Before you were on the surface of the water? - No, I never saw it.
1807. And you saw one of them nine miles away when you were down in the boat? - Yes.
1808. (*Sir Robert Finlay.*) At the time of the collision did you hear any noise? - No, only the collision we had with the berg.
1809. That is what I mean. If it made any noise can you describe what it was like? - Like a ship running up on gravel, a crushing noise.
1810. Grating on gravel? - Yes.
1811. In regard to all these lifeboats that you saw lowered, did you notice whether there was water? - There was breakers of water.
1812. Yes? - The boat I was in had breakers of water.
1813. You mean the collapsible? - Yes, and No. 8 boat.
1814. (*The Commissioner.*) Both had? - The collapsible boats are not fitted with any breakers, not the one I was in; but No. 8 had water in it.
1815. (*Sir Robert Finlay.*) Did you notice with regard to any of the other boats? - No.
1816. Did you notice whether there were biscuits in any of them? - I asked the

coxswain of No. 8 whether he had any biscuits in the boat, and he said "Yes, he had and water too."

1817. Did many of the women passengers refuse to leave the ship? - Me and Mr. Lightoller helped one elderly lady into the collapsible boat, and we had to get her out again because she refused. She would not go without her husband. There were several cases like that while I was lowering my boats on the port side.
1818. Several cases like that came under your own notice? - Yes.
1819. You know that a great many third-class women passengers were saved? - Yes.
1820. You were not there to hear how they were told what was happening? - No. 1821. Somebody must have told them? - Yes.

### **Re-examined by the ATTORNEY-GENERAL.**

1822. You have spoken to us of what happened before you left Southampton. With reference to the boats, was it No. 3 and 7 lifeboats which were swung out, do you remember? - I could not answer for that.
1823. Were there two boats on the starboard side? - Yes.
1824. Were the deckhands duly mustered? - Yes.
1825. And then were a number of men told off to swing out and lower the boats into the water? - Yes.
1826. Do you remember at all how many men? - No. That is all the men, all sailors - it does not matter what you are - all go to those two boats.
1827. All the sailors who would otherwise have to man the other boats? - Yes.
1828. The sailors? - Yes.
1829. A number of them with an officer formed the crew of each boat? - Yes.
1830. Then were the boats swung out at the same time? - Yes, they went away together.
1831. Is that a matter which takes about 3 1/2 minutes, or something like that? - It would be about that.
1832. Were the crews exercised by the officers in the water? - Yes.
1833. Did you see an Emigration Officer of the Board of Trade there at the time this was done? - Yes, there was an officer there.
1834. We are talking of it as a boat drill; it is as well to get it correct, my Lord; it is not boat drill?

*The Commissioner:* So I gathered.

*The Attorney-General:* It is a muster.

*The Commissioner:* They do not go through any evolutions.

*The Attorney-General:* No.

*The Commissioner:* They simply go up and stand opposite two boats, not more.

*The Attorney-General:* Yes. Then, of course, they swing out the boats and they go into the water and they are exercised. This is in order to satisfy the Emigration Officer of the Board of Trade. That is the point. It is not boat drill at all; it is a muster. Your Lordship asked a question also about the rules. I find that the last rule is the 14th June, 1911, and that makes some additions and amendments to rules in reference to deck lifeboats. If your Lordship has not got it we will see you get it. We will go into that more fully hereafter.

*(The Witness withdrew.)*

**Page 57**

**FREDERICK BARRETT, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

1834. Is your name Frederick Barrett? - Yes.
1835. Are you a fireman, a leading hand? - A leading stoker.
1836. Does a stoker and a fireman mean the same thing? - No.
1837. What is the difference? - One is a little higher than the other.
1838. I beg your pardon, are you a leading stoker? - Yes.
1839. Is there a leading stoker to each stoke-hold? - There is a leading stoker to each section.
1840. And how many sections are there? - Six, one is a single section. There are five leading stokers on each watch.
1841. You say there are six sections? - Yes, one is a single section.
1842. Which was the number of your section? - No. 6.
1843. Does that correspond to No. 6 boiler room? - Yes.
1844. We had a fireman here this morning, Beauchamp his name was, he told us it was No. 10 section? - That is No. 10 stokehold. There are two stokeholds to each section. 1845. That is one of the two stokeholds in No. 6 section? - No. 10 and 11 stokeholds is No. 6 section.
1846. Yes, that works it out. I suppose it runs like that all through. One and two corresponds to No. 1 boiler? - Yes, No. 10 and 11 is No. 6 section and 8 and 9 is No. 5 section.
1847. Is this section of yours, No. 6 section, the foremost section of the ship? - Yes, right forward.
1848. It is under the fore funnel, of course? - It is the forward boiler.
1849. It will be under the fore funnel? - It is just close under the fore funnel.
1850. Were you on duty at the time this accident happened? - Yes.
1851. How many firemen or stokers are there in a watch working with you in No. 6? - There are eight firemen in No. 6 section and four coal trimmers. That is what they call the men who wheel the coal.
1852. And yourself as well? - Yes, and an engineer.
1853. Who was the engineer who was on duty? - Mr. Shepherd.
1854. Now can you tell me where you were or what you were doing just at the time the collision happened? - I was talking to the second engineer.
1855. What is his name? - Mr. Hescott. [Hesketh]
1856. Can you tell us where you were? - I was in No. 10 stokehold.
1857. I think it is important to fix the place. Does this stokehold extend across the ship from the starboard side to the port side? - Yes.

1858. Can you tell me which side you were in the stokehold? - The starboard side.

1859. You were talking to Mr. Hescott [Hesketh]? - Yes.

1860. Now just tell us what happened that you noticed? - There is like a clock rigged up in the stokehold and a red light goes up when the ship is supposed to stop; a white light for full speed, and, I think it is a blue light for slow. This red light came up. I am the man in charge of the watch, and I called out, "Shut all dampers." 1861. You saw this red light? - Yes.

1862. You knew that was an order to stop the engines? - It says "stop" - a red piece of glass and an electric light inside.

1863. Shutting the dampers, I suppose, would be? - To shut the wind off the fires.

1864. To shut the draught off the fires. And you gave an order, "Shut the dampers"? - Yes.

1865. Was that order obeyed? - Yes.

1866. What was the next thing that happened? - The crash came before we had them all shut.

1867. They were shutting them when the crash came? - Yes.

1868. Where was the crash - what was it you felt or heard or saw? - Water came pouring in two feet above the stokehold plate; the ship's side was torn from the third stokehold to the foreword end.

1869. We will get this slowly, because it is important. Just let us have that again. You said something about the water coming in? - Yes.

1870. Did it come in on you? - Yes.

1871. Did it come into this No. 6 section No. 10 stokehold? - Yes.

1872. Then you said something about the side of the ship being torn? - Yes.

*The Commissioner:* Before you leave that will you tell me where the water came from?

1873. (*The Solicitor-General.*) It is the same thing as I was upon, my Lord. (*To the Witness.*) Where did the water come from? - Well, out of the sea, I expect. 1874. (*The Solicitor-General.*) I think your last question and mine meant the same thing, my Lord. (*To the Witness.*) I wanted to know where it came from - underneath or from the side or from the port side or from the starboard side? - The starboard side. 1875. Can you tell us at all compared with where you were standing whether it came from above or below? - About two feet from where I was standing.

*The Commissioner:* That is what I want to know - exactly where the water came from. He says from the starboard side.

1876. (*The Solicitor-General.*) We will get it by degrees, my Lord. (*To the Witness.*) About two feet from above where your feet were? - Yes.

1877. On the starboard side? - Yes.

1878. What is it you stand on in the stokehold? - We call them plates. It is like a floor.

1879. Iron plates, I suppose? - Yes.

1880. I expect you can find your way about a plan. Do you think you could point on this section here with a pointer what would be the level you were standing on? - Yes.

*The Solicitor-General:* I think it would be well if he did that, my Lord.

*The Commissioner:* Yes. (*To the Witness.*) Just do so. Perhaps we could understand it better if he did it on the upper plan.

*The Solicitor-General:* I will get it from the lower one first and then turn to the other.  
(*The Witness pointed out on the plan.*)

1881. (*The Solicitor-General.*) Is the place you are pointing out now No. 6 section and No. 10 stoke-hold? - Yes.

(*The Witness further pointed out on the plan.*)

1882. And is the place you are pointing out now the floor level where you would be standing? - No, that is about *here*. (*Pointing on the plan.*)

1883. Lord Mersey thinks you might also be able to point it out on the section above. You see there is the water level outside the ship where she would be? - The plates were supposed to be six feet above the tank tops. That is what it is reckoned to be.  
1884. The floor you are standing on is supposed to be six feet above the top of the tanks? - Yes.

1885. What tanks are those? - I could not tell you.

1886. The tank top is marked there, is it not? - Yes. (*The Witness pointed out the position on the top plan.*) There would be about six feet over these tank tops.

1887. (*The Commissioner.*) Those were the plates you were standing on? - Yes.

1888. Did the water come up through those plates? - No, from 2 feet over those plates.

1889. Did the water come through the side of the ship? - Yes.

1890. Before you go away can you point out to me whereabouts in the skin of the ship the water came from. Look at the top plan? - I cannot judge by the top plan. I can judge better by this one.

1891. Very well? - The ship was torn right through here (*indicating on the plan*). I consulted Mr. Shepherd and Mr. Hescott [Hesketh] about the hole being in this bunker, and that was the farthest aft the ship was torn. This is a watertight compartment, and the ship was torn from there to there. That is in the next section.

1892. (*The Solicitor-General.*) What do you call that section? - No. 5.

1893. (*The Commissioner.*) Just show me on that plan the watertight bulkhead that is nearest the

## **Page 58**

bow? - I have no duty at the forward end; I only know where I am working.

*The Commissioner:* Point out to me, Sir John, will you?

*The Solicitor-General:* As I understand the collision bulkhead is here (*pointing*) and then there is one here, a third one here, and a fourth one here.

*The Commissioner:* And the water came in on the afterside of the bulkhead that you are pointing to?

1894. (*The Solicitor-General.*) We have still one more to go. There is a fifth one here. I understand the Witness to say that he found water was coming in aft of that bulkhead, the fifth, and therefore the skin of the ship was certainly injured at that point? - Yes.

*The Commissioner:* How many watertight compartments are there forward of that point? Are there four or five?

*The Solicitor-General:* Your Lordship sees that forward of that point there are five bulkheads, and a compartment would be formed I presume by any two of them.

*Sir Robert Finlay:* There are six altogether, my Lord, I think.

*The Commissioner:* I want to see how far aft the rent or whatever it was caused by the iceberg extended.

*The Solicitor-General:* May I ask the Witness a question about it?

*The Commissioner:* Certainly.

1895. (*The Solicitor-General - To the Witness.*) You pointed out that you found that this rent was abaft of this bulkhead here and therefore that the water was coming into No. 5 section? - Yes.

1896. Can you tell me whether the rent went further aft than that? - It did not.

1897. So it got as far as that and no further? - Yes.

1898. That is one end your Lordship sees. (*To the Witness.*) Now as far as you are concerned, can you tell me whether the rent ran right through No. 10 section? - I did not stop to look; I jumped from that section when she struck. 1899. You jumped from No. 6 section back to No. 5. - Yes.

1900. And you cannot tell me of your own knowledge whether there was damage done more forward than aft? - I cannot.

*The Commissioner:* He knows nothing about the damage, I suppose, except in the place in which he was.

1901. (*The Solicitor-General.*) That is it, my Lord. Now, if I may keep him here for a moment, there are two or three things I want to ask him. (*To the Witness.*) The water came into No. 6 section, where you were at work? - Yes.

1902. Just after you had given the order to close the dampers, and while they were being closed; is that right? - Yes.

1903. Did it come in fast? - Yes.

1904. Did it come in fast enough to begin to flood the place? - Yes.

1905. Then what was it that you did? - Me and Mr. Hescott [Hesketh] jumped into this section, and the watertight compartment closed up.

1906. You and Mr. Hescott [Hesketh] both jumped into the next section? - Yes.

1907. There were stokers working there still; firemen in No. 6? - Yes.

1908. What happened to them? - There was one of them saved.

1909. One of them was saved? - Yes.

1910. Did he get through the watertight compartment with you? - I could not tell you where he got to.

1911. What was his name? - Beauchamp, I think it was.

1912. He is the man who has given evidence here this morning, because he said he was in No. 10. As far as you know were any others of your gang saved? - I could not tell you. 1913. Now point out in this bulkhead whereabouts in the section of it does this watertight door come that you jumped through? - This connects in the amidship part of the ship. There is a pass connecting this bulkhead. It is further aft than that, it is about here in the centre of the ship (*pointing on the plan*).

1914. It is in a passage, is it? - Yes.

*The Commissioner:* Is that a door that works automatically, or is it a door that has to be shut?

1915. (*The Solicitor-General.*) I think we shall find out, my Lord. (*To the Witness.*) Can you tell me whether that is one of the watertight doors that is worked from the bridge? - It is.

1916. At the time the accident happened it was open. You and Mr. Hescott [Hesketh] got through it just in time and it shut down behind you? - Yes.

1917. Then when you got into the next section, No. 5, did you find water there? - I went through this bunker here - it is a coal bunker - and then the water was rushing in.

1918. You say you went through the coal bunker, which is immediately abaft of the watertight door which you had passed through? - Yes.

1919. And did you find water coming in in that bunker? - Yes, pouring in the bunker.

1920. Was it coming in rapidly? - Yes.

1921. Could you tell us from what level it was coming in? The same as the other? - Two feet above the plates.

1922. Still the same? - Yes.

1923. And then did you get into the stokehold, here? - We were in the stokehold.

1924. And water was coming into the stokehold? - No, only into the bunker.

1925. And that is as far aft as the rent seemed to go? - Yes.

1926. Then what did you do when you got into No. 5? - Mr. Hescott [Hesketh] shouted out "all hands stand by your stations." That is for the men to stand by the fires. My station was in the next boiler room, and Mr. Shepherd and I went up an escape and down to the boiler room, but we could not get in. There were 8 feet of water in it.

1927. (*The Solicitor-General.*) I do not know whether your Lordship caught that. I will ask it again. It is more satisfactory than my telling you. (*To the Witness.*) I was asking you, and I will get you to repeat it slowly and clearly, what happened when you got through this doorway and into No. 5? You told me that Mr. Hescott [Hesketh] gave an order? - Yes.

1928. What was the order he gave? - "Every man to his station." 1929. Your station was No. 6? - Yes.

1930. The one you had just come from? - Yes.

1931. Then what did you do? - Me and Mr. Shepherd, that is the engineer who is in my section, go up the escape of No. 5 and down No. 6 escape.

1932. You tried to go back into the place you had come from? - Yes, we did go back, but we could not go in there because there were about eight feet of water when we got there.

1933. You could not get back to No. 6 through the doorway because it was shut? - Yes.

1934. So you had to go up one escape and down another? - Yes.

1935. When you came into No. 6 what water did you find in it then? - Eight feet above the plates.

1936. That is a rise of six feet since you left it? - Yes.

1937. (*The Commissioner.*) How long? - It was not a quarter of an hour, just on ten minutes.

1938. (*The Solicitor-General.*) You told us you got as quickly as you could into No. 5?

- Yes.

1939. And when this order was given did you obey it as quickly as you could? - Yes, we obeyed it as quickly as we could.

1940. Now just think. Was there much length of time after you got into No. 5 and before Mr. Hescott [Hesketh] gave that order? - I should say about ten minutes.

1941. You had been in the bunker? - Yes.

1942. (*The Commissioner.*) Why did you go into the bunker? - I never went into the bunker, my Lord. The bunker was empty, my Lord, and you can stand on the stokehold plates and look into the bunker from the stokehold. You can see into the bunker from where you are working.

1943. (*The Solicitor-General.*) Your Lordship appreciates that it is up to there that he says the rent came. (*To the Witness.*) When you returned or tried to return to No. 6 coming down that emergency

## Page 59

ladder did you see anything of your mates in No. 6? - No.

1944. (*The Commissioner.*) What had become of them? - I cannot tell you, my Lord.

1945. Have you seen any of them since? - Only one.

1946. (*The Solicitor-General.*) That is Beauchamp, my Lord. (*To the Witness.*) Suppose you were in one of these sections and you went to get out of it at ordinary times. I want to know how many ways out there are? You have said you can get through the watertight doorway when it is open, and there is this emergency ladder. Is there any third way? - I could not tell you. I was only four days on the ship myself.

1947. As far as you know is there any third way? - No, not to my knowledge.

*The Commissioner:* I do not think there are any other ways.

1948. (*The Solicitor-General.*) I do not think so, my Lord. (*To the Witness.*) The bunker you went into was empty? - Yes.

1949. There was no coal in it? - No.

1950. Was there any water in that? - The water was pouring into it when I noticed it.

1951. That brings us as far as you are finding eight feet of water in your own section? - Yes.

1952. When you found there were eight feet of water there, what did you do then? - We came back to No. 5.

1953. Again using these emergency ladders? - Yes.

1954. That really means, does it not, passing over the top of the bulkhead? - Yes; you come out into the alleyway where the passengers would be.

1955. (*The Commissioner.*) The alleyway that goes right fore and aft of the ship? - Yes.

1956. (*The Solicitor-General.*) Did Mr. Shepherd come back with you to No. 5? -

Yes. 1957. And when you got back to No. 5, you and Mr. Shepherd, who else did you find there? - Mr. Harvey and Mr. Wilson.

1958. What is their rating? - I could not tell you; they are engineers, second assistant engineers.

1959. Anyhow, they are engineers? - Yes.

1960. Mr. Harvey, one of the engineers, and Mr. Wilson? - Yes.

1961. And what were they doing? - Attending to the pumps.

1962. Are there pumps in each section? - As far as I understand, there are.

1963. At any rate there were pumps in No. 5? - Yes.

1964. And when you got back to No. 5, how much water was there in No. 5? - None.

1965. Let us understand it. You said that the bunker in No. 5 had got some water coming into it? - Yes; but the hole was not so big in that section as it was in No. 6 section. By the time the water had got there she had stopped.

1966. So that the water was not coming into No. 5 fast enough to flood it? - No.

1967. Were the pumps working in No. 5? - I could not tell you.

1968. Did you get down to the plate level in No. 5? - Yes.

1969. And the water was not above that? - No.

1970. Now tell us what happened after that. We have come back to No. 5, and you say they were attending to the pumps there. What was the next thing that happened? - They rang through from the engine room to send all the stokers up and me to remain there.

1971. They rang through from the engine room. The engine room is further aft, of course? - Yes, right aft.

1972. It is under the after funnel? - They have a telephone in every section.

1973. The engine room is between the third and fourth funnels? They telephoned from the engine room to No. 5 section did they? - Yes.

1974. And what did you say the message was? - Send all the stokers up.

1975. Up where? On deck? - Yes, up on deck.

1976. I think you told me you were told to remain? - Yes.

1977. Who gave you that order? - Mr. Harvey.

1978. That was one of the engineers that was in No. 5? - Yes.

1979. Do you know what he wanted you to remain for? - In case he wanted anything, I could go and fetch it, because you have to travel up ladders. You cannot go through the watertight doors.

1980. That is what I wanted to know. Was the watertight door in the bulkhead behind you, the one at the afterend of No. 5 shut? - Yes.

1981. Does that shut automatically too? - I believe it shuts the same as the remainder.

1982. Then you were given an order by Mr. Harvey to remain there, and I suppose you did. What did the other hands there do? - I sent them up.

1983. They all went up? - Yes.

1984. Then you and Mr. Harvey were left alone in No. 5? - And Mr. Wilson and Mr. Shepherd.

1985. The three engineers and you. Was it still clear of water? - Yes.

1986. So the bulkhead in front of No. 5 was holding the water back? - Yes.

1987. Now what happened after that? - The lights went out.

1988. The lights went out in No. 5? - Yes.

1989. And when the lights went out what did you do? - Mr. Harvey sent me up for some lamps.

1990. Did you go? - I went to the top of the escape and sent two firemen. They fetched 12 to 15 back.

1991. I should like to understand about the escape. This is the escape ladder, of course?  
- Yes.
1992. Is it an iron ladder, and you climb up hand over hand? - No, it is an iron ladder on a slant. It slants over the boiler.
1993. Where does it come out? - Into the main alleyway.
1994. And then that runs fore and aft, and you can go forward by it? - Yes.
1995. You sent two firemen for lamps? - Yes.
1996. Is the lamp room in the forecandle? - You have to go down into the engine room for them.
1997. They had to go aft? - Yes, aft to the engine room.
1998. Did they get lamps? - Yes.
1999. And bring them back to you? - Yes.
2000. Did you take them down to Number 5? - Yes.
2001. (*The Commissioner.*) The electric lights were still burning in the alleyway? - They went out for ten minutes. They must have been changing over to the other engine. As soon as I got the lamps they came on again.
2002. That is in the alleyway? - In the stokehold.
2003. (*The Solicitor-General.*) I am not sure you have answered my Lord's question. You went up as far as the alleyway, and the alleyway is lighted by electric light? - Yes.
2004. Was the light burning or was it out there too? - It was burning there.
2005. It was only in No. 5 it had gone out as far as you know? - Yes.
2006. Then the lamps are got and you take them down to No. 5, and how soon did the electric light come back? - It just came back as we got the lamps.
2007. When you got back to number 5 was it still clear of water, or not? - Still clear of water.
2008. What was the condition of the boilers at this time? - I looked at the water. There was no water in the boilers.
2009. You looked at the water gauge? - Yes.
2010. And there was no water in the boilers? - No.
2011. Then it had been let out, had it? - With the ship blowing off it had blown it out.
2012. Then after you had looked at the boilers and found they had no water in them what was the next order you got from Mr. Harvey? - To fetch some men down to keep the fires pulled.
2013. Would that be in all the sections? - No; only in No. 5 section.
2014. How many men were wanted for that? - I got between 15 and 20 down. There were 30 furnaces to pull.

**Page 60**

2015. How many furnaces are there in each section? - There are 30 in some sections, and there are 24 in some.
2016. But in No. 5 there are 30? - Yes.
2017. And you got some 15 men to help about it? - Yes.
2018. And did they draw the fires? - Yes.

2019. How long do you think it would take them to draw the fires? - It would take them 20 minutes.
2020. And after they had drawn the fires what happened to them? - I sent them up again.
2021. They went up again? - Yes.
2022. Did you stay below? - Yes.
2023. With Mr. Harvey? - Yes.
2024. Then what was the next order? - He asked me to lift the manhole plate off.
2025. Where was the manhole plate? - On the starboard side of No. 5 section. 2026. When the plate was in position what was it - closed? - It is something you lift up to get at the valves. I do not know what valves it is. It is just like a hole in this table. You lift it off to get to the valves to turn on the pumps or something.
2027. Is it in the floor? - Yes.
2028. And did you do that for him? - Yes.
2029. That would leave a hole in the floor? - Yes.
2030. And what happened then? - Mr. Shepherd was walking across in a hurry to do something and then fell down the hole and broke his leg.
2031. He did not notice the manhole plate had been lifted? - No.
2032. He broke his leg? - Yes.
2033. What did you do with him? - We lifted him up and carried him into the pump room, me and Mr. Harvey.
2034. Is that the pump room in No. 5? - Yes.
2035. At this time, in this No. 5, was it easy to see? - No, all the water which had been thrown on the furnaces when they were pulled out was making the stokehold thick with steam.
2036. And then you attended to Mr. Shepherd as best you could. Did you stay there after that? - Just about a quarter of an hour after that.
2037. And during that quarter of an hour did No. 5 keep free from water? - Yes.
2038. Then tell us what happened at the end of a quarter of an hour? - A rush of water came through the pass - the forward end.
2039. You say the forward end of the pass. What is the pass? - It is a space between the boilers where we walk through.
2040. There are boilers on either side of it? - Yes.
2041. From which direction did this water come? - From the forward end.
2042. And this pass that you walk through, is that at the same level as the plates? - Yes.
2043. The same level as where you were standing? - Yes.
2044. Supposing that the bulkhead which is the fore-end of No. 5 had given way, would water come through it and through this pass? - Yes.
2045. Do you know yourself where it was the water came from, whether it had got through the bulkhead or not? - I did not stop to look.
- The Solicitor-General:* There is a plan here my friend Mr. Rowlatt has found, which is really a very great help in following this. May I bring it up to your Lordship. It is a plan which is numbered No. 3. At the bottom of this plan one gets the tank top level, and here No. E is the transfer section of the watertight bulkhead. W.T.D. is the watertight door to

which the Witness said he had got. Immediately behind it is the bank of boilers, and here is the pass between two of the boilers.

*The Commissioner:* Let the Witness come round here. (*The Witness explained the plan to the Commissioner.*)

*The Commissioner:* Sir John, can you tell me what the height of the bulkhead is at this part?

*The Solicitor-General:* It can be scaled, my Lord, of course. I have no doubt one of Mr. Laing's advisers can say.

*The Commissioner:* It could not come over the top of the bulkhead, I suppose? 2046. (*The Solicitor-General.*) I was going to ask him. He could tell from his feet, of course, whether the ship had shown any tendency to tip, because that gives one some guide. (*To the Witness.*) Can you tell us, up to this time, was the ship lying on an even keel? - No, she was sloping down by the head.

2047. You felt that she was down by the head? - Yes.

2048. Had you noticed that already? - Yes.

2049. And had it been getting worse? - Yes.

2050. Had you ever remarked on it to Mr. Shepherd, or any of them? - No, we never passed any remarks, the engineers never had time to pass any remarks; they were working all the time.

2051. Can you tell me where you were when you first noticed it? Did you notice it in No. 5?

You were in No. 5 after the first all the time. Had you noticed it before the lamps went out? - No.

2052. Had you noticed it before the electric light returned? - No.

2053. Then you said there was a quarter of an hour, about, before this rush of water? - After the fires were drawn.

2054. Had you noticed it while the fires were being drawn? - Yes.

2055. That is when you noticed it? - Yes.

2056. And you say it got worse. Now can you give me any idea whether the water came from over the top of the bulkhead or through it? - I do not see how it could come over the top.

2057. You do not think it did come over the top? - No.

2058. Now, when it came through this pass between the boilers, did it come with a rush? - Yes.

*The Commissioner:* I suppose he means by that as if something had given way.

2059. (*The Solicitor-General.*) Do you hear my Lord's question? He is asking whether, when you said that, you got the impression that something had given way? - That was my idea.

2060. (*The Commissioner.*) Something that had been holding the water back gave way? - That is my idea, my Lord.

2061. (*The Solicitor-General.*) So it came with a rush? How fast did it fall? - I never stopped to look. I went up the ladder. Mr. Harvey told me to go up.

2062. (*The Commissioner.*) Could it have been a bunker bulkhead that gave way, do you think? - I have no idea on that, but that is the bunker that was holding the water back.
2063. It was the bunker that was holding the water back? - Yes.  
*The Solicitor-General:* It is entirely my fault, but I have not followed the meaning of that.
2064. (*The Commissioner.*) It was suggested to me that it was a bunker bulkhead that gave way, and that the water rushed from the bunker. (*To the Witness.*) Do you think that is possible? - It would be possible, because there are watertight compartments inside the bunker. There is a watertight compartment going through the centre of the bunker.
2065. Was the bunker door shut? - I dropped the bunker door.
2066. (*The Solicitor-General.*) I think there are the elements of a little confusion over this. The bulkhead runs across the ship from the starboard side to the port side, does it not? - Yes.
2067. Is there a coal bunker on either side of the bulkhead on the starboard side? - There is a watertight compartment running right through the centre of the bunker.
2068. There is the watertight bulkhead? - Yes.
2069. (*The Commissioner.*) But the bunker is partly on one side of the watertight bulkhead and partly on the other? - Yes.
2070. And the watertight bulkhead goes through the middle of the bunker? - Yes. 2071. And then across the ship? - Yes.

**Page 61**

2072. (*The Solicitor-General.*) If you imagine this box is the bunker and that is the starboard skin of the ship, the watertight bulkhead runs through it like *that* does it not, down the middle? - Yes.
2073. And you were on the after-side of this No. 5? - I was in No. 6 when we shipped it; I was on the after-side of the bulkhead later.
2074. You cannot tell what part of the watertight bulkhead it was which gave way? - No.
2075. But it was your impression that something gave way and the water came in with a rush? - Yes.  
*The Solicitor-General:* I see by this plan that the bulkhead, if you trace the line of it across the ship, runs down in a line between the two compartments of the coal bunkers, then it takes a right angle turn up to the watertight door, then it zigzags back again and then it goes through the corresponding bunker on the other side.  
*The Commissioner:* I do not quite understand that.  
(*The Solicitor-General explains the plan to his Lordship.*)

**(*The Witness withdrew.*)**

**(*Adjourned to tomorrow at 10.30 o'clock.*)**

# Wreck Commissioners' Court.

SCOTTISH HALL,  
BUCKINGHAM GATE,

*Wednesday, 8th May, 1912.*

## PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC."

### FOURTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., appeared on behalf of the Dockers' Union. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third-class passengers. (Admitted on application.)

## Page 64

*Mr. Harbinson:* May it please your Lordship, I desire this morning to renew the application I made to your Lordship yesterday morning on behalf of a section of the crew of the "Titanic," with this modification. My application today, my Lord, is to be appointed by you to represent the third-class passengers, the whole class. We have been in consultation with some of the other gentlemen who have been in communication with the relatives of the deceased, and my solicitor represents the survivors of a great number of Irish passengers, and especially he has personal and direct authority to appear on behalf of two survivors, of two persons, whose evidence, according to the view that has been put before us, is of a very important character. It involves serious issues as between the crew of the "Titanic" and the survivors; and considering the importance of those on whose behalf I ask your Lordship to allow me to appear, considering the number of those whom my solicitors represent, and considering the importance of the class for whom I desire to appear, I ask your Lordship to nominate me on behalf of the third-class passengers. Mr. Farrell, M.P., is the gentleman who raised this question in the House.

*The Commissioner:* Is Mr. Farrell the gentleman who is instructing you?

*Mr. Harbinson:* Yes, my Lord, and his brother is Mr. Farrell, the Member of Parliament who raised this question in the House of Commons. Mr. Farrell, the Member of Parliament, is here.

*The Commissioner:* Is the Mr. Farrell who is instructing you a solicitor?

*Mr. Harbinson:* Yes, my Lord.

*The Commissioner:* Is he a brother of the Mr. Farrell who is in the House of Commons?

*Mr. Harbinson:* That is so, my Lord.

*The Commissioner:* Now, who are the two people that you want to have represented here?

*Mr. Harbinson:* The name is Thomas McCormick, who alleges in his statement - *The*

*Commissioner:* Never mind what he alleges. What is the other name?

*Mr. Harbinson:* The other name is Bernard McCoy. *The*

*Commissioner:* And where are they living?

*Mr. Harbinson:* At the present moment in America.

*The Commissioner:* Are they coming over here?

*Mr. Harbinson:* Subject to what your Lordship may say, it was my wish, were I allowed to appear, to apply to your Lordship to have their evidence taken on commission.

*The Commissioner:* I think I am very unlikely to do that. They are in America?

*Mr. Harbinson:* That is so, my Lord.

*The Commissioner:* When did you get instructions to represent them?

*Mr. Harbinson:* I, my Lord, was instructed two days ago, but probably Mr. Farrell can tell you.

*Mr. J. P. Farrell, M. P.:* I was a colleague of your Lordship in the House of Commons.

*The Commissioner:* I daresay. When did you get these instructions?

*Mr. J. P. Farrell:* About three weeks ago from the relatives and the friends in my constituency.

*The Commissioner:* I am asking about those two gentlemen in America. From whom did you receive instructions?

*Mr. J. P. Farrell:* From their parents in County Longford, which I represent in the House of Commons.

*The Commissioner:* Very well, that is all right. And you have their letters?

*Mr. J. P. Farrell:* Yes.

*The Commissioner:* Now what are the issues which have been mentioned as being issues between those two gentlemen and the crew?

*Mr. J. P. Farrell:* They are of the very gravest kind. Thomas McCormack alleges that when swimming in the sea he endeavoured to board two boats and was struck on the head and the hands and shoved back into the sea, and endeavoured to be drowned. That is one charge.

*The Commissioner:* That gentleman who did it may be guilty of manslaughter for aught I know.

*Mr. J. P. Farrell:* McCormack was not drowned, my Lord.

*The Commissioner:* Very well, then he may be guilty of an attempt to commit manslaughter, but I cannot try that.

*Mr. J. P. Farrell:* Is it not a question for investigation by this Court?

*The Commissioner:* I do not think so.

*Mr. J. P. Farrell:* There is another charge we have about a man named McCoy. *The*

*Commissioner:* That I do not think comes within my jurisdiction at all. If any crime has been committed by some individual in connection with this unfortunate matter that has to be tried by somebody else.

*Mr. J. P. Farrell:* But, my Lord, we also appear for others. We have gone to a great deal of expense.

*The Commissioner:* Now you know, Mr. Farrell, if you will confine yourself to what I think is possibly a legitimate position on your part, there will be no difficulty about it.

*Mr. J. P. Farrell:* I will accept any suggestion with great pleasure.

*The Commissioner:* You want to represent, as I understand, not the representatives of two but the representatives of a great number of the passengers on board this vessel.

*Mr. J. P. Farrell:* Quite so, my Lord.

*The Commissioner:* Third-class passengers?

*Mr. J. P. Farrell:* Quite so, my Lord.

*The Commissioner:* I can quite conceive that there may be circumstances in connection with this catastrophe which affected third-class passengers and perhaps did not affect the first-class and the second-class, and if you or your brother, the solicitor, will take up that position and bring before me any matters that particularly affect the third-class passengers I shall be very glad to be assisted by the evidence that he is able to put before me.

*Mr. J. P. Farrell:* I am obliged to your Lordship.

*The Commissioner:* But do not turn me into a criminal judge to try charges of attempted manslaughter.

*Mr. J. P. Farrell:* Very well, my Lord, I will request my brother to get in communication with the others.

*The Commissioner:* Very well, let that be done as far as Mr. Farrell, your brother, is concerned.

*Mr. J. P. Farrell:* Will your Lordship allow Mr. Harbinson to appear in the meantime, because witnesses may be passing through the box - *The Commissioner:* Is not your brother here at present?

*Mr. J. P. Farrell:* Not at present.

*Mr. Champness:* I desire again to mention an application I made last week - *The Commissioner:* Will you allow me to finish one thing before I begin another. This gentleman, Mr. Harbinson, can represent what I call your clients, Mr. Farrell.

*Mr. J. P. Farrell:* I thank your Lordship.

*The Commissioner:* Until Mr. Farrell arrives, and then if Mr. Farrell chooses to take it out of the hands of this competent gentleman, he can do so.

*Mr. Harbinson:* I have been instructed directly by Mr. Farrell to appear and also by another London solicitor -

*The Commissioner:* Do not introduce somebody else.

*Mr. J. P. Farrell:* In the meantime you will allow Mr. Harbinson to appear.

*The Commissioner:* I will.

*Mr. Harbinson:* May I appear on behalf of the third-class passengers?

*The Commissioner:* I hope you do; but I will tell you this: I am not going to allow you to appear on behalf of some of them and somebody else for another group and another person on behalf of another group. I must have only one representative of the third-class passengers.

*Mr. J. P. Farrell:* I am satisfied.

*The Commissioner:* I quite understand you are satisfied.

*Mr. Harbinson:* I am prepared, subject to other gentleman's approval, to do this. If he,

## **Page 65**

as well as others, who are interested in the third-class passengers, will call my attention to any evidence or give me any information at their disposal, to make the best use of it I can according to my judgment.

*The Commissioner:* That seems very reasonable, but I cannot be any party to that arrangement.

*Mr. Braddock:* There were 113 Irish passengers on the “Titanic”; of that numbers, 69 were drowned, and the solicitor who instructs me represents 21 of those passengers.

*The Commissioner:* Very well, then, put your interests into Mr. Harbinson’s hands, and let him look after them.

*Mr. J. P. Farrell:* I am glad to see there is something in having been fellow Members of the House of Commons.

*The Commissioner:* That is an insidious compliment.

*Mr. Champness:* I was afraid there might have been some misunderstanding with regard to those my friend wants to represent. I am appearing on behalf of Irish, Scotch, and English passengers, third-class passengers, although few in number, I understand now your Lordship has granted leave to Mr. Harbinson to represent all the third-class passengers. Is that right?

*The Commissioner:* Yes.

*Mr. Champness:* That being so, I ask you to give me leave to represent the first-class passengers’ interests.

*The Commissioner:* The Home Rule Bill is not law yet. I am going to allow them to be all represented together.

*The Attorney-General:* With regard to the sittings, I have spoken to my friend, Sir Robert, about it, and I hope your Lordship will think it reasonable, that we should at the close of the proceedings on Friday, adjourn till Tuesday. There is a great deal of preparation to be made in connection with it, to put it in as short a fashion as possible before your Lordship. It really makes it shorter to give me a little time to consider. We are all anxious to go to the “Olympic” to see what your Lordship has already seen with the assessors. I am sure it is a considerable assistance in understanding the case, and we shall take advantage of that period to make that visit.

*The Commissioner:* Very well. Then I shall rise on Friday and not sit again till Tuesday morning.

*The Attorney-General:* If your Lordship pleases.

*The Commissioner:* Now, is Sir John Simon here?

*The Attorney-General:* Yes, my Lord.

*The Commissioner:* Now, Sir John, will you be kind enough yourself to state what you understand to be the effect of the present Witness’ evidence up to this point?

*The Solicitor-General:* Yes, my Lord.

*The Commissioner:* I am very sorry to have to ask you to do it, but my mind is in a state of confusion, and I want to clear it up; and I think some of the assessors want an explanation of the matter.

*The Solicitor-General:* I think I have a view of what he said.

*The Commissioner:* If you state it to us now we shall be able to follow on with the remainder of his evidence.

*The Solicitor-General:* My Lord, if I may say so, I think it would greatly help if your Lordship and the Assessors would look for a moment at what Mr. Wilding has just done for me on that model. He has tipped the model so that we can see more of the bottom than we otherwise should, and he has put on that model two pieces of white paper, a long piece which is perpendicular and then a short white piece a little further along. The long

piece represents the line of the watertight bulkhead between No. 5 and No. 6. That white line on the outside of the ship starts at the top where the watertight bulkhead begins, and it goes down to the bottom to the place where the watertight bulkhead would join the inner skin of the ship. Your Lordship asked that length, and that length is 40 feet.

*The Commissioner:* The bulkhead is 40 feet perpendicular.

*The Solicitor-General:* That is it, my Lord. Then the other piece of paper which is rather more forward is the point on the outside of the ship corresponding to the place where, according to this Witness's evidence the water came in at the moment of the collision.

*The Commissioner:* Now can you tell me what space that hold opened into. *The*

*Solicitor-General:* Yes, my Lord, I can. As I understand, his evidence is to this effect. Immediately in front of that watertight bulkhead which is there indicated is Section No. 6, which is the foremost boiler room of the ship. Immediately behind that perpendicular bulkhead is Section No. 5. The man's evidence begins by his being in No. 6, which is his proper place, and he says he was at work there in No. 6 together with, I think, eight firemen and four trimmers, and the first thing that he testifies to is the appearance of a red disc in No. 6 which, as he knew, indicated that a message had been sent to the engine room to stop. The engine rooms, of course, are further on. That is the first thing he says. Then he says as soon as he sees this red disc appear in his stokehold, which means that the engines had been told to stop, he orders his gang to push in the dampers so as to reduce the draught on the fires. He says that they were in the act of putting those dampers in when the collision occurred, and that he felt it. He says that the moment it occurred, or immediately afterwards, water came into No. 6, where he was standing.

*The Commissioner:* That is where the small piece of white paper is.

*The Solicitor-General:* Yes. And this is what I venture to think is the important point. He says that as far as he could judge the water came in at something like 2 feet above the plate level where he was standing. The plate level, Mr. Wilding tells me, there would be something like 18 inches or 2 feet above the top of the tanks; and by that means one is able to tell, Mr. Wilding says, how far that is below the level of the water outside approximately. Mr. Wilding tells me that he estimates that the waterline outside, the level of the sea outside, would be 25 or 26 feet above the stokehold plates. Therefore, if the water came in some 2 feet above the stokehold plates it came in at a point some 23 or 24 feet below the level of the sea.

*The Commissioner:* The level of the sea would be how many feet below the top of the watertight bulkhead?

*The Solicitor-General:* Perhaps Mr. Wilding will just tell us. My Lord asks, Mr. Wilding, assuming your figures, how much below the top of the bulkhead the level of the sea would be?

*The Commissioner:* The waterline?

*Mr. Wilding:* About 13 or 14 feet. It is the difference between 23 or 24 feet and 40 feet.

*The Commissioner:* The ship had to sink 13 or 14 feet before the water could get over the bulkhead.

*The Solicitor-General:* It had to sink that amount at this point.

*The Commissioner:* But the moment it sank that amount at that point, then supposing the bulkhead was quite firm and strong, the water would come over into the next compartment?

*The Solicitor-General:* That is so - 13 or 14 feet from the top would bring you to the level of the sea; another 25 or 26 feet would bring you to the plates.

*The Commissioner:* That makes the 40 feet.

*The Solicitor-General:* That makes the 40 feet. Then, the Witness goes on to say that upon this water rushing in from the side, as he describes it, he and Mr. Shepherd, who is the second assistant engineer, ran back through the watertight door which was then open, that is to say through the bulkhead into No. 5, and that they had just passed through that open door when the door shut behind them automatically.

*The Commissioner:* From the bridge.

*The Solicitor-General:* From the bridge; and that brought him and Mr. Shepherd into No. 5.

*The Commissioner:* Yes.

*The Solicitor-General:* Your Lordship may remember we had an earlier Witness, Beauchamp, yesterday, who was a fireman, and who spoke as to

## **Page 66**

the order to close the dampers; he said that the water had come in and he said that he escaped by the emergency ladder.

*The Commissioner:* Yes.

*The Solicitor-General:* Then, my Lord, this Witness goes on to say that as soon as he got into No. 5 with Mr. Shepherd and the watertight door shut behind him, he looked to see whether water was coming into No. 5, and his evidence is that a certain amount of water was coming in immediately behind this bulkhead in the empty coal bunker.

*The Commissioner:* Yes, through the skin of the ship.

*The Solicitor-General:* I understand through the skin of the ship, but I propose to ask him this morning a question to be sure, because your Lordship will remember the plan shows that immediately behind the bulkhead is a coal bunker on the starboard side and another on the port side, the passage-way being between the two.

*The Commissioner:* But the watertight bulkhead, as I understand, goes through the middle of the bunker.

*The Solicitor-General:* There are two bunkers, one on each side, one bunker to serve No. 5, and one bunker to serve No. 6. Of course, there are more bunkers than one.

*The Commissioner:* Oh, yes; but that particular bunker is divided by the bulkhead.

*The Solicitor-General:* Yes. He says that particular bunker, that is to say, the bunker immediately behind this bulkhead on the starboard side was empty. The coal had been used; and that he could see into it; and in that way he noticed some water coming in. I propose this morning to ask him another question about that, because I am not clear as to how it came to be stopped. Then he went on to say that in addition to Mr. Shepherd and himself he found also in No. 5 two others of the engineer's staff; he found Mr. Harvey and Mr. Wilson. He says they were busying themselves about the pumps. He says that

orders were given that the other stokers and firemen should go up; he was kept behind, as he says, in case he should be wanted. He says that almost immediately afterwards the lights went out, and that it was his business then to go up by the emergency ladder to the alleyway where he sent a man to the engine room for some lights.

*The Commissioner:* To get a lamp.

*The Solicitor-General:* Yes. He says that when this lamp or these lamps came back he took them down to No 5, and almost at the same time the electric light came back. I think the next thing he says is that orders were given to him to get some firemen back in order to draw the fires in No. 5, and that he did get 15 or 20 men to come back, and that they drew the fires; and he says that that took about a quarter of an hour. He says that they had just done this, they had just drawn the fires, when they were ordered up again; that he was then in No. 5 with the engineers; that there was a short wait, and that during that time he was asked to lift a manhole plate from the floor in No. 5. He says that No. 5 was full of steam owing to the fact of the fires having been drawn, water had been thrown on them, and that in the confusion Mr. Shepherd fell into this hole and broke his leg. He says he lifted Mr. Shepherd up and put him in what he calls the pump room which is in the same level, in No. 5, one of the little rooms, and that just as he put him there, suddenly there was a rush of water into No. 5 through what he describes as the pass.

*The Commissioner:* Between the two boilers?

*The Solicitor-General:* Yes, my Lord, the pass being the space between the two boilers - a little space, and, as I follow, on the same line as this emergency door, which had already closed. He says it came in very suddenly, and he had to escape, and did escape.

*The Commissioner:* It came from the direction of No. 6?

*The Solicitor-General:* Yes, my Lord. Your Lordship will remember you asked him just at the close yesterday whether his impression was that the thing had come with a rush, as though something had given way, and he said that was his impression. I think the only other material evidence up to date is that I asked him whether he had noticed that the ship was tipping, was going down by the head, and he said he had noticed it; and I asked him when it was he first noticed it, and he said that he had first noticed it when the fires were being drawn, and that it got worse. To the best of my recollection, that is the whole.

*The Commissioner:* I wanted to ask you a question. Can you account for the lights going out and coming on again?

*The Solicitor-General:* My Lord, his suggestion was that they were changing over from one dynamo to the other.

*The Commissioner:* There is a sort of reserved dynamo on board, which may be put into operation and which will keep all the lights in what you may call the public part of the vessel alight. It will not keep the lights in the cabins and such like places alight; and it may have been that when the main dynamo stopped, the whole ship was in darkness for a short time. Then when they got the supplementary dynamo to work, the lights would come in the passages and in the engine rooms and in places of that kind.

*The Solicitor-General:* I did ask him, if your Lordship remembers, whether, when he went up to get the light, he found the lights were also out in the alleyway, and he said, "No; the lights were burning in the alleyway."

*The Commissioner:* I do not understand it.

*The Solicitor-General:* It seems to have been a local failure.

**FREDERICK BARRETT, Recalled.**

**Further examined by the SOLICITOR-GENERAL.**

*The Attorney-General:* Your Lordship has No. 3 plan.

*The Commissioner:* Yes.

2076. (*The Solicitor-General - To the Witness.*) Before we go on there are just two things you told us about yesterday that we want a little more information about. First of all, about the lights. You told us yesterday that the electric lights went out in No. 5? - Yes.

2077. And so you were sent to get some lamps? - Yes.

2078. And that you went up the ladder to the alleyway, and then sent along to the engine room? - Yes.

2079. When you got to the alleyway, were the electric lights burning there or had they gone out? - They were burning there.

2080. As far as you know had the electric lights gone out elsewhere in the ship except in No. 5? - That I cannot tell.

2081. You do not know? - No.

2082. Did the electric lights continue to burn in the alleyway until those lamps were brought and you went down again? - When I went down with the lamps the lights were burning in the fireroom again.

2083. The fireroom is the stokehold? - Yes.

2084. How long should you suppose the lights were out in that stokehold? - I could not estimate. After I went up and got the lamps and came back again they were lit.

2085. That would not take very long? - No; you have to run along the alleyway and down the engine room to the stores and come back again, and down the escape ladder. 2086. And of course they would have to find the lamps when they got to the stores? - I could not tell you; I did not go down to the stores.

2087. Now the other thing is this. You told me yesterday that when you got into No. 5 and the

**Page 67**

watertight door closed behind you, you found that there was some water coming into No. 5? - No. 5 coal bunker.

2088. Yes, the coal bunker. Is that the coal bunker immediately behind the watertight bulkhead? - Yes.

2089. Is it the coal bunkers on the starboard side? - On the starboard side.

2090. So that as you came through the watertight door from No. 6 into No. 5 it would be immediately on your left hand? - Immediately on the left hand.

2091. Was it empty? - Yes.

2092. And was the door of it open? - Yes.

2093. So that you could look in? - Yes.

2094. Just tell us, when you did look in, what was it you saw? - I saw water pouring in through the ship's side.

2095. In this bunker? - In this bunker.

2096. In the ship's side in the bunker. At what level was it coming in, as far as you could see? - The coal bunker is about 2 feet below the plates; it was coming about 4 feet higher than the coal bunker - the bottom of the coal bunker is 2 feet below the plates.

*The Solicitor-General:* Your Lordship sees that.

*The Commissioner:* I understand.

2097. (*The Solicitor-General - To the Witness.*) So that if it was 4 feet below the bottom of the coal bunker it would be the same level as if it was 2 feet above the plates? - Yes. 2098. And that is the same level as you found it was coming in in No. 5? - In No. 6 and No. 5 about the same level.

2099. Was it coming in the opening in No. 5 as fast as it had been coming into No. 6? - No, Sir.

2100. What is the width of the side of the ship in that coal bunker? The side of the ship is one of the sides of the coal bunkers there. How many feet is it, should you say? What is the width? - From the watertight bulkhead to the other?

2101. Yes. From the watertight bulkhead to the other wall of the bulkhead? - The forward end of the watertight compartment would be about four feet wide, but the afterside was wider.

2102. I am told it would be nine feet wide? - I could not estimate; I am no judge of measurement.

*The Solicitor-General:* My Lord, that is the depth of the coal bunker immediately behind the watertight bulkhead, measured along the skin of the ship, fore and aft, nine feet. Your Lordship sees what I mean?

*The Commissioner:* Yes.

2103. (*The Solicitor-General.*) Then you got this wall, nine feet or thereabouts. I want you to tell us, was the water coming through all parts of that or through some part of it only? - Which wall do you mean?

2104. The water is coming through the skin of the ship into the bunker? - Yes. 2105. And the bunker is about nine feet along the side of the ship. Now, I want to know, was the water coming in at this level right across the bunker or only in part of it? - Water was coming in about two feet abaft the watertight bulkhead.

2106. Do you mean that it was coming in from the watertight bulkhead and for two feet back? - No; only from the ship's side. The watertight bulkhead was not damaged. 2107. Was it coming in at one point, or was it coming in for two feet? - I could not estimate exactly how large the hole was.

*The Commissioner:* I do not think this Witness can answer your questions. I should place very little reliance upon his evidence, because I do not believe that in these circumstances such particular notice would be taken.

*The Solicitor-General:* No, my Lord.

*The Commissioner:* And I think you are trying to tax his memory too much.

*The Solicitor-General:* If your Lordship pleases.

*The Commissioner:* Ordinary people, or even extraordinary people, would not have all these details in their head. I do not think so. It seems to me sufficient that the water was coming in in the forward part of the coal bunker - that is to say, in the part forward of the bulkhead - and was also coming in in the afterpart of the coal bunker and at about the same height - more coming in, it is true, in No. 6 than in No. 5.

*The Solicitor-General:* If your Lordship pleases.

*The Commissioner:* But evidently coming in from the same wound. I think that is enough.

*The Solicitor-General:* The only thing I was concerned about was to see whether one could not ascertain whether this wound ran the whole length of the coal bunker, or whether it only ran back a little way from the watertight bulkhead, and I gather he says it was about 2 feet back; but of course, he cannot say more than that.

*The Commissioner:* Very well.

2108. (*The Solicitor-General - To the Witness.*) That being so, I will only ask you this further question about this part of the case. What was done, if anything was done, about the water that was coming into that coal bunker? - The engineers put pumps on as far as I understand; but, of course, I am only a stoker; I do not know what engineers' work is.

2109. But you were there, and you will help us. They succeeded in getting the water down by pumps? - As far as I was concerned, the plates never got covered while I was there.

2110. (*The Commissioner.*) I want to ask you about that. How were the pumps worked? - I could not tell you, my Lord.

2111. Cannot some one tell me. The engines had been stopped? - There was steam. They opened the pump by the steam valve in the pump room.

*The Solicitor-General:* The only engines that would be stopped would be the engines that actuated the propeller. There is plenty of other machinery in the ship.

*The Commissioner:* Then these pumps work notwithstanding that the fires are drawn and the main engine stopped?

*The Solicitor-General:* I do not suppose all the fires were drawn, my Lord.

*The Commissioner:* I thought all the fires were drawn?

*The Witness:* Only one section, my Lord.

*The Solicitor-General:* I think, if your Lordship would like to know, Mr. Wilding would be able to tell your Lordship.

*The Commissioner:* No, it is my fault; I understand it now.

2112. (*The Solicitor-General.*) I think that is all I can ask him about that part, my Lord.

(*To the Witness.*) Now then, Barrett, when all that was over, you told us you came up out of No. 5 when the rush came in? - Yes.

2113. Where did you go to? - Up the escape into the main alleyway.

2114. And where did you go to after that? - I walked aft.

2115. Did you go up on the deck? - On the saloon deck I went.

2116. Then above the saloon deck there is a shelter deck, the bridge deck, the promenade deck, and the boat deck? - I call the saloon deck the one under the boat deck.

2117. You got up to the boat deck? - The one underneath the boat deck.

2118. That is called the promenade deck, I think. Were there people there? - I did not see any. I saw some of the stewards, and there were some third-class passengers - men and women. No. 13 boat was pretty well filled when I got there.
2119. No. 13 boat is a boat on the starboard side? - Yes.
2120. It is last but one on the starboard side? - It is last but one on the starboard side.
2121. (*The Solicitor-General.*) That is the boat that Beauchamp, the fireman, spoke about yesterday, my Lord. (*To the Witness.*) When you got there was that boat on the level of the boat deck, or was it lower? - Lowered to the deck I was on.
2122. And was that deck immediately below the boat deck? - Yes.
2123. We can see that in the model. It is the last boat but one on the side we are looking at, is it not? - Yes.

## Page 68

2124. And you say it was lowered by that time as far as the next deck? - Yes. 2125. Now you said you found stewards there and you mentioned third-class passengers? - Yes.
2126. Men? - Yes.
2127. Women? - Women were coming up.
2128. Women were coming up. Did you see them coming up? - Yes.
2129. Would that be coming up from the steerage? - Coming round from aft to forward.
2130. And moving forward? - They had to go forward to get to the boats. 2131. When you say you saw them coming up, what was it they were doing? Where were they coming? - They were going towards the two boats; there were only the two boats left.
2132. There is a stairway, or a gangway, or something, I suppose, is there? - I cannot say.
2133. You did not actually see them mounting a stairway or a gangway? - No.
2134. When you did there were only two boats left. I know No.13 was one; what was the other one? - No. 15.
2135. That is the last boat on the starboard side? - Yes.
2136. And those other boats on the starboard that were not left, were they in the water? - Which boats?
2137. The others on the starboard side? - I never saw any.
2138. You did not see them? - No.
2139. They had gone? - Yes.
2140. And by this time what was the position of the ship in the water? - Her fore-castlehead was not under.
2141. Can you tell us a little more closely about it? Did you notice? - I noticed when I got away in the lifeboat it was not under.
2142. Even when you got away in the lifeboat it was not under? - Even then it was not under.
2143. Now, why did you go to No. 13? I suppose it was the only one? - I took a walk along the deck. I made my way aft because it was no use going forward. 2144.

- Had you got a particular boat to which you ought to have gone? - I never bothered looking.
2145. (*The Commissioner.*) With reference to that do the men ever bother to look at these lists that are hung up? - Some do, my Lord, and some do not.
2146. What do the bulk of them do? The bulk of them do not, I suppose? - No, my Lord.
2147. Am I right? - That is right, my Lord.
2148. (*The Solicitor-General.*) Are you able to tell us the time when you got to No. 13? - No. As a rule a stoker never carries a watch when he is at work.
2149. I got an impression that you could for some reason? - No.
2150. Now when you got to No. 13 just tell us what you found about that boat - whether she was filled or empty, and all that? - She was just on getting filled.
2151. What sort of people were they in her? - Five-sixths were women.
- The Commissioner:* This is No. 13?
2152. (*The Solicitor-General.*) Yes, my Lord, the same boat that Beauchamp spoke of. (*To the Witness.*) Do you know the fireman Beauchamp? - Yes.
2153. He is in your section, I think? - Yes.
2154. No. 6. Was he already in the boat? - I never took that much notice. I did not notice him in the boat till morning; it was too dark.
2155. Was there any officer in this boat? - No.
2156. After you got up to her did any more people get in? - Yes, there were about three more got in after I got in, and the order was given from the boat deck, "Let no more in that boat; the falls will break."
2157. That order was given from the deck above, I suppose? - From the deck above.
2158. Are you able to tell us who gave you that order? - I could not exactly tell you.
2159. But you heard the order given? - Yes.
2160. When that order was given, "Let no more in that boat," was the boat lowered? - Only just where the people were getting in; it was lowered to the deck below the boat deck.
2161. What happened to it after that? - It was lowered away.
2162. (*The Commissioner.*) Which deck did you get into the boat from? - From the deck below the boat deck.
2163. Was it lowered partly full and stopped again at your deck? - I could not tell you, my Lord, because the majority were in when I got up.
2164. You mean to say you do not know from what deck the people got into the boat? - I could not tell you.
2165. But you got in from the deck below the boat deck? - Yes.
2166. (*The Solicitor-General.*) And as I understand, two or three other people got in after you? - Yes.
2167. And then this order was given? - Yes.
2168. I think Beauchamp told us (he was in the boat) that as it was being lowered down the side the main discharge from the engine room threatened to swamp the boat? - Yes.
2169. It was somewhere opposite the rear funnel, was it not? - Yes.

2170. Then there was one other boat on the starboard side still, No.15; what was happening to that at this time? - It was getting lowered about 30 seconds after us. It was coming on top of us.
2171. It was coming on top of you. Just tell us about that shortly? - Yes. When we found the discharge was coming out we stopped lowering and all the hose was tied up in the boat. I had a knife and I cut the hose adrift and shoved two oars over the forward end to shove the lifeboat off the ship's side. We got into the water and there was a bit of a current and it drifted us under No. 15 boat, and I sung out "Let go the after fall." Nobody seemed to realise what I was doing. I walked across the women to cut the fall, and the other fall touched my shoulder.
2172. Supposing the ship was going down by the head and No. 15 boat was being lowered, after No. 13 boat was in the water No. 15 boat would tend to get on the top of No. 13? - Yes.
2173. Then whatever the cause, you say No. 15 was coming on top of you? - Yes.
2174. Did you get clear? - We just got clear.
2175. Then what happened to No. 13, the boat you were in? - We got the oars out. I did not see anybody that was going to take charge of the boat. The rudder was lying in the stern at the bottom, and I shipped the rudder and took charge of the boat till after the "Titanic" sank.
2176. And then did you take charge of her after the "Titanic" sank? - No. I gave the tiller to somebody else because I was too cold; I could not feel my limbs. I had only thin gear on, coming out of the fire room. Some woman put a cloak over me, and I do not know what happened then.
2177. Now can you tell us how many people were in your boat - how many men and how many women and how many of the crew? - I could not tell you exactly.
2178. Tell us as near as you can? - I could give a rough idea - 70 all told.
2179. Can you tell us how many of the crew there were? - I could not; the crew mostly consisted of stewards.
2180. There was yourself and there was Beauchamp the fireman? - Yes. I think there was another fireman, but I am not sure; I cannot say for certain.
2181. There may have been another fireman; that would make a leading stoker and two firemen. Were there some stewards? - Yes.
2182. Do you know how many or about how many? - No idea.
2183. You must have some idea? - Judging by the majority, because they were sitting six on a thwart, two inside of each oar, and the man pulling made a third one. He could not pull; he was only just dipping the oar into the water.
2184. Because they were sitting six on a thwart? - Yes. 2185. You say five-sixths were women? - Yes.
2186. Were there any children? - There were

**Page 69**

two - I am not sure whether there were two or one.

2187. You have told us you saw some third-class passengers coming up to where these boats were, as far as you know. Had you got some of those third-class passengers in your boat? - All the women were getting up in the boat at the last of it, and the women were there till there was no more. The men stood all in one line when I was getting up there. I saw them standing in one line, as if at attention waiting for an order to get into the boat, against the back of the house.
2188. Was there good order on deck? - Yes.
2189. Did you see who was keeping them back, if anybody was? - I did not.
2190. Was there any officer there? - No.
2191. They were keeping good order without him? - Yes.
2192. You say you had got about 70 people in your boat. Did you pick up anybody out of the sea or not? - No.
2193. Had you any room to? - No.
2194. There are two or three questions we ask everybody about these boats; I will put them to you. As far as you know, was there any compass in this boat No. 13? - I did not look.
2195. At any rate, no compass was used as far as you know? - The only thing I looked for was a light.
2196. Was there any light in the boat? - No.
2197. Was there any water? - I did not look.
2198. Biscuits? - I did not look.
2199. I gather, Barrett, really, that you felt the cold so much that you do not remember very much? - No, I remember the ship went down.
2200. You remember the ship going down? - Yes; then I must have fallen asleep.
2201. You said one of the women put a cloak over you? - Yes.
2202. We know that the fires were lit in No. 5, and I suppose in No. 6, your section. Were all the fires lit in the ship? - No.
2203. Do you know how many sections were lit? - The first two days when she left Southampton there were nine boilers out. The next two days there were eight out.
2204. When you say they were out, do you mean they were not lit? - They were not lit.
2205. And on the day of the accident were there eight boilers not in use? - I could not exactly say about how many were not in use. There were either eight or five; I can say sure for five.
2206. Would you know at all anything about the number of revolutions they were making or the pace they were going? - Seventy-five was my order.
2207. Seventy-five were your orders? - Yes.
2208. I do not quite understand what you mean by saying it is your orders? - The second engineer gives orders to me of the revolutions he wants, and I pass the word to all my other men.
2209. Then do you hear in the stoke-room if you are not making the revolutions? - They ring through on the telephone.
2210. And the order was 75 revolutions, was it? - Yes.
2211. Were you making 75? - I could not tell you that because it is a long way to walk. I never used the passage to the engine room.

2212. You never heard a complaint? - No, I heard no complaints.
2213. Can you tell us, is 75 revolutions what you had been doing during that day, or ordered to? - I got the order the day before. 2214. You got the order the day before? - Yes.
2215. On the Saturday; and how many revolutions had you been doing before that? - Just the same, I think.
2216. Then, so far as you know, the order for the number of revolutions was the same up to the accident? - Yes.
2217. Then as far as you know there was no reduction in speed? - There were two main boilers lit up on the Sunday morning, but I could not tell you whether they were connected with the others or not.
2218. You mean two main boilers which had not been lit up before? - Yes, they were lit up.
2219. That is extra? - Yes.
2220. On the Sunday morning? - Yes.
2221. That is why you told me that there had been 8 boilers out and afterwards you thought there were only 5 or 6 out; is that it? - Yes.
- The Commissioner:* What he said was 5 boilers, certainly, and perhaps 8.
2222. (*The Solicitor-General.*) Yes, my Lord, I am much obliged. (*To the Witness.*) That is what you said, Barrett - you said 5 boilers were out, certainly, and perhaps 8? - Yes, and perhaps 8.
2223. Now, just explain why you say that? - When you light a boiler up it will take 12 hours before you can connect it with the others to get steam on as a rule in a merchant ship as far as my experience goes.
2224. These three, the difference between the 5 and the 8, were they lit up? - Those three were lit up on the Sunday morning.
- The Commissioner:* Was it 3 or 2? I wrote down 2 main boilers were lit up on the Sunday morning, and you said 2.
- The Solicitor-General:* It would not be in his section.
2225. (*The Commissioner.*) Which was it, 2 or 3? - I could not exactly say.
- The Commissioner:* Then we will say 2 or 3.
2226. (*The Solicitor-General.*) Do you know in which section they were? - In the after section - the next one to the after section. That would be No. 2 section.
2227. In No. 2? - Yes.
2228. Of course that would not be your section? - No.
2229. So I suppose you can only have heard this? - My other leading hand is in charge of that section and he tells me this when he comes by.
2230. What is his name? - Ferris.
2231. (*The Solicitor-General.*) He says, my Lord, the other leading hand, a man named Ferris, who would be in charge of No. 2, told him this when he came by. (*To the Witness.*) Was Ferris saved, or not? - He was drowned.
2232. (*The Commissioner.*) Now I want to know this. Can you tell me when those two or three main boilers were lit on the Sunday morning - about what time? - As near as I could say, 8 o'clock in the morning.

2233. Then they may have been connected that same night? - Yes.

**Examined by Mr. SCANLAN.**

2234. In No. 13 lifeboat was there any seaman? - I could not tell you.

2235. How long have you been going to sea? - I have been going to sea over 10 years in the fire-room, but I was on the deck previous to that.

2236. Have you experience of a number of liners? - Yes, I have been in quite a quantity of liners.

2237. Is it usual for an officer to draw the attention of stokers to the stations given to them? - It is usual for the list to get put up.

2238. Can you tell his Lordship whether a list was put up on the "Titanic"? - I never look for that as a rule.

2239. Is it usual on liners to call all hands, including stokers, to muster for boat drill? - About twice a trip - once going to New York and once coming back.

2240. Are firemen called too on these occasions? - Yes.

2241. And there was no such practice or no such muster on this voyage? - No.

**Page 70**

**Examined by Mr. ROCHE.**

2242. I want you to answer two or three questions. You saw in your section Shepherd, the engineer No. 6? - Yes.

2243. And the last you saw of him was he had broken his leg and was taken to the pump room? - Yes.

2244. You have told us you saw Second Engineer Hesketh in No. 6? - That was the man who jumped through the watertight door, not Mr. Shepherd.

2245. And you left him in No. 5 also? - I left him in No. 5 also.

2246. And you saw there also two other engineers, Wilson and Harvey? - Yes.

2247. Did you see any other engineers at all? - No.

2248. Did you see any engineers at all on deck? - No; when I went up I saw one of the builders' men.

2249. That is all you can tell me about the engineers. Now I want to ask you one question about the hole in this bunker that you have described to my Lord. I do not suppose you can tell us how big it was, but I expect you can tell us whether the water was coming through in a rush, or was trickling through? - I explained it was not coming through as much as in the other section.

2250. But did it look as if it were a hole, and as if a hole had been made by something outside puncturing the bunker, or did it look as if a rivet had been started by the shock? - That would be a question for an engineer.

2251. You can tell us, I think, by the amount of the flow. Was it pouring through? If you cannot tell us, you cannot? - I cannot explain.

2252. You cannot say how much water was coming through at all? - No.
2253. (*The Commissioner.*) I do not understand this. Was a teacupful of water coming through? - No.
2254. What was it? - A continual pour of water.
2255. Now, describe the pour of water. It was not like Niagara Falls, I suppose, but try and tell me what it was like? - Just the very same as an ordinary fire hose would come in.

**Examined by Mr. HARBINSON.**

2256. I understood you to say when you came up on to the deck there were a number of third-class passengers coming out? - Coming around the house.
2257. You did not see whether or not any third-class passengers were coming from the fore part of the ship? - No; I never made an attempt to go forward.
2258. Your impression is that all the passengers in the neighbourhood of boats 13 and 15 were third-class passengers? - Yes; I believe the majority in No. 13 boat were thirdclass passengers.
2259. All the other boats except 13 and 14 had been launched? - On the starboard side.
2260. Did many passengers remain? - I could not say.
2261. Were there many passengers about on the boat deck that you picked up? - I was not on the boat deck.
2262. On the deck below? - Not many.
2263. Not many? - No.
2264. All the women were put into the boat? - Yes.
2265. Into boat 13? - As many as were there. Boat No. 13 was never lowered until all the women were taken off the deck.
2266. Was boat 15 lowered at this time? - It was lowered to the saloon deck.
2267. How many seamen were in charge of it? - I cannot tell you.
2268. Was it full? - I cannot tell you.
2269. You could not see it? - No.
2270. Were there any boats on the port side at this time? - I cannot say.
2271. Were passengers continuing to go from the deck above? - I cannot say that. They were just coming round as I got into the lifeboat.
2272. Many? - No; one's and two's.
2273. Were they men or women? - The women who came around were put in No. 13 boat.
2274. After No. 13 boat had been launched could you see what took place? - No.
2275. Were there any officers or seamen about at this time? - I cannot say. 2276. You do not remember? - No.

**Examined by MR. LEWIS.**

2277. How long have you been in the White Star Line employment? - I was sailing out with the Company at Liverpool.

2278. You draw distinction between a boat drill and boat stations? - They do not lower a boat at sea; they only go and muster before the boats.
2279. Have you ever been stationed at your boat at a definite place? - Yes.
2280. Is it the general practice for the men to examine the boat list? - It is. When the list gets put up you might see your name and what boat you are at.
2281. With regard to this boat you left in, I understand you to say about 70 were in the boat? - Yes.
2282. Would you consider that boat safe? - No.
2283. How far from the water was the gunwale? - I should say, as a rough idea, about half a foot.
2284. I take it if it had been at all choppy it would have been extremely dangerous? - Yes.
2285. (*The Commissioner.*) If it had been bad weather would it have been worthwhile to get into the boats at all? - No.
2286. (*Mr. Lewis.*) Did you see any other boat? - There was one boat; I hailed one boat.
2287. Why? - Because I thought there was hardly anybody in it.
2288. How could you tell that? - The boat was pretty high out of the water.
2289. Did you get any reply? - They said they were full up.
2290. What height was it out of the water? - Between 3 and 4 feet.
- The Commissioner:* Such a question and such an answer produce no effect upon my mind. This man was not busy measuring the amount the other boats were out of the water. He was nearly unconscious.
- Mr. Lewis:* I am anxious to know whether this witness hailed another boat, and I am entitled to ask him why he hailed the boat and whether, in his opinion, the boat he hailed was full or not.
- The Commissioner:* He has answered that question. Then you asked him how many inches the gunwale of the boat was above the water. I tell you that in my opinion, if he told me, if he answered it, it would produce no effect upon my mind.
- Mr. Lewis:* I am satisfied with the answer, my Lord.
- The Commissioner:* I do not believe he was measuring such things or thinking about such things.
2291. (*Mr. Lewis - To the Witness.*) Do you know the number of the boat? - I inquired on board the "Carpathia"; I believe it was No. 1.
2292. Now, with regard to the bunker, you have said this bunker referred to just now was empty - the coal bunker? - Yes.
2293. Were there any other coal bunkers empty forward? - No.
2294. Was this the only one empty? - Yes.
2295. Had it been emptied in the usual way? - No.
2296. Why was it emptied? - My orders were to get it out as soon as possible.

**Page 71**

2297. When did you receive those orders? - Not very long after the ship left Southampton.

2298. Was there anything wrong? - Yes.
2299. What was wrong? - The bunker was a-fire.
2300. Shortly after you left Southampton -  
*The Commissioner:* Now how is this relevant to this Inquiry.
2301. Shortly after you left Southampton - I'll put another question or two, and you will see why I think it is relevant. (*To the Witness.*) How long did it take them to work the coal out? - Saturday.
2302. The whole Saturday. What condition was the watertight bulkhead in? - It was the idea to get the bunker out. The chief engineer, Mr. Bell, gave me orders: "Builder's men wanted to inspect that bulkhead."
2303. The bulkhead forms the side of the bunker.
2304. What was the condition of the bulkhead running through the bunker? - It was damaged from the bottom.
2305. Badly damaged? - The bottom of the watertight compartment was dinged aft and the other part was dinged forward.
2306. (*The Commissioner.*) What do you attribute that to? - The fire.
2307. Do you mean to say the firing of the coal would dinge the bulkhead? - Yes. 2308. (*Mr. Lewis.*) This is the bulkhead between sections 5 and 6? - Yes.

**Examined by MR. COTTER.**

2309. You said that when she struck the water was two feet above the plate coming in? - Yes. Would not it be better for you to ask a steward? I am a stoker.  
*The Commissioner:* You must answer the questions.
2310. (*Mr. Cotter - To the Witness.*) You rushed through the emergency door into the next compartment, No. 5? - Yes.
2311. Now what I want to know is the dimensions of the bunker, how far it extended to amidships - fore and aft 9 feet. Now what was the extension the other way? - I cannot exactly tell you.  
*The Attorney-General:* I will give you the exact dimensions later.
2312. (*Mr. Cotter.*) When you looked into the bunker you saw holes through the ship's side? - Yes.
2313. Now seeing that hole was also in No. 6, naturally you would expect it would rip the bulkhead. As a rule when you go from one compartment to another and that door closes automatically, you could open it again? - Yes.
2314. By turning a handle? - Yes.
2315. When you went back again the height of the water was how much? - We never held any door up.
2316. You went up a ladder? - No. About 8 feet of water. As soon as the order was given for men to their stations me and Mr. Shepherd went up the emergency ladder of No. 5 and down No. 6.
2317. There was 8 feet of water there? - Yes.
2318. You had been away how long? - I could not exactly say the time.
2319. Can you give us any idea? - Well, 10 minutes.

2320. So that in 20 minutes it would be 16 feet? - That I cannot say. The upper 8 feet of the ship is bigger than the bottom 8 feet of the ship.

*The Commissioner:* I do not think you ought to ask a question of that kind.

*Mr. Cotter:* I want to know how long it took for the water to get higher than the top of the escape ladder.

*The Commissioner:* That sounds to me like a riddle. It is no use asking him questions of that sort.

2321. (*Mr. Cotter - To the Witness.*) You say there was a rush of water when you were in No. 5? - Yes.

2322. Have you any idea where the water came from? - No.

2323. No idea at all. Now I am going to ask you a question about the boats. When you were on the promenade deck, the deck under the boat deck, how far from the ship's side was No.13 boat? - I could not say; I could not tell you that.

2324. You say the ship had a list to starboard. I wanted to know how far the boat would be away from the ship's side? - I cannot say.

2325. You say you put some passengers into her. Had you any difficulty in getting the women in? - I never put passengers into her.

2326. Can you tell me who put them in? - I do not know.

*Mr. Pringle:* There are two questions which I would like to put to the Witness. First of all, if he saw anything done to stop the hole in No. 5 bunker, and secondly, whether he saw if it was the watertight door or part of the bulkhead which gave way when the water rushed in to No. 5 section.

*The Commissioner:* Put them yourself.

2327. (*Mr. Pringle - To the Witness.*) Did you see anything done to stop the hole which you saw in No. 5 bunker? - I did not.

2328. Did you see whether it was the watertight door or part of the bulkhead which had given way? - No.

2329. You did not see? - No.

2330. (*The Commissioner.*) You told us there was some fire in that bunker? - Yes.

2331. Soon after you left port? - Yes.

2332. Is it a very uncommon thing for fire to get into a coal bunker in that way? - It is not an uncommon thing.

2333. It happens sometimes? - Yes.

2334. I suppose the proper order is to have that actual bunker emptied as soon as possible? - Yes.

2335. And, therefore, that was all right? - Yes.

2336. Did the fact that there was fire in that bunker in any way conduce to the collision as far as you know? Had it anything to do with it? - I could not say that.

2337. Do you think it had? Do you think that the fire had anything to do with this disaster? - That would be hard to say, my Lord.

*The Commissioner:* Very well; perhaps I am asking you a riddle.

**Examined by MR. LAING.**

2338. Did you work out that bunker yourself? - I was in charge. There were between 8 and 10 men doing it.
2339. Was it fire or only heat? - It was fire.
2340. Did you play upon it? - The hose was going all the time.
2341. And did they get it out by the Saturday? - Yes.
2342. Cleared all out? - Yes.
2343. I want to ask you about this bunker, just a question or two. When you saw the water coming into the bunker in No. 5 section, did you shut the bunker door? - Yes.
2344. The bunker door is not a watertight door? - No.
2345. And did you tell the engineer that you had seen water coming in? - I reported to Mr. Shepherd and he reported to Mr. Hesketh.
2346. And as far as you know you are not able to say whether they were pumping it or not? - No.
2347. All you know is you shut the door and left it? - Yes.
2348. When this rush of water came from the pass, you went up and got in the alleyway? - Yes.
2349. You have told us that was about ten minutes past one, I think? - That is as near as I can recollect.
2350. Was there water on the alleyway? - Just a little.

**Page 72**

2351. I do not know whether you know - do you know where that must have come from? - No. In my idea, the cause of that water being in the alleyway was some of the lower deck ports being open, and the water reached them and came through the ports. 2352. But to be on the alleyway the water must have been above the level of the watertight bulkhead? - The water was coming down the alleyway from forward. 2353. If there was water on the alleyway it must have been above the watertight bulkhead? - I cannot say; I do not know how high the watertight bulkhead is.

*The Commissioner:* Is that so?

2354. (*Mr. Laing.*) I think so, my Lord; I think that must be so. (*To the Witness.*) This rush of water which you have described coming from the pass; was it like a fire hose? - No, it was a greater rush than a fire hose.
2355. Can you give us any idea of the volume of water that came in when you were in No. 6? - The pass was filled up.
2356. When you were in No. 6? - No, No. 5.
2357. No, when you were in No. 6; the first rush of water - was that heavy? - Pretty heavy.
2358. With regard to the revolutions, did you keep the same revolutions all Sunday, so far as you know? - Yes.
2359. Up to the time of this disaster? - Yes.

**Re-examined by the ATTORNEY-GENERAL.**

2360. There is only one matter I want to ask you about. You saw the ship go down - the "Titanic"? - Yes.

2361. Had you heard the band playing? - I had not heard the band; my friends told me they heard it; some of my mates said they heard it. I did not hear it.

*(The Witness withdrew.)*

**REGINALD ROBINSON LEE, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

*The Attorney-General:* This is the Witness about whom you asked when my friend the Solicitor-General was examining the look-out man who had been relieved at 10 o'clock. Your Lordship asked whether he was alive.

*The Commissioner:* I do not know whether there is any significance at all in this evidence of explosions before the sinking of the ship. I do not know what it points to, and I do not know whether it is important or relevant, but you did not ask the last Witness about it.

2362. *(The Attorney-General.)* I did not think he could tell us anything about it; that is why we did not ask. Your Lordship will appreciate that in regard to a number of the questions we are putting, when all the facts are ascertained they may or may not be relevant, but we thought it right that all the facts should be ascertained, so that then your Lordship can select such as you think relevant and material after hearing it all. *(To the Witness.)* Are you an able seaman? - Yes.

2363. And were you on the "Titanic" when she sailed in April on her first voyage? - Yes.

2364. You were the look-out man? - Yes.

2365. You have had about 15 or 16 years at sea altogether? - Yes.

2366. Just tell us, in your experience, speaking generally, have you had experience in mail steamers? - Yes.

2367. Are glasses usually supplied to the lookout man in mail steamers? - Not that I know.

2368. Have you acted as look-out man in other ships before the "Titanic"? - Yes. 2369. On mail steamers? - Yes.

2370. Have you ever had glasses for use as look-out man? - Yes, but I do not know whether they were private or supplied by the company.

2371. You have had them, but you do not know whether they were private or not? - No.

2372. Have you found them of use? - They are better than the ordinary eye-sight. 2373. Are they of use at night at all? - Certainly, night glasses.

2374. I think I caught what you said just now, "night glasses"? - Yes.

2375. There are different glasses used at night from those used in the day; is that right? - Well, they are called that by the trade, I believe.

2376. Glasses to be used at night? - Yes.

2377. Do you know whether they are supplied in any other vessels of the White Star Line? - I cannot say they are for certainty, but my mate in the crow's-nest, who was for four years in the "Oceanic" as look-out man, told me they had them there.
2378. Who is your mate in the crow's-nest? - Fleet.
2379. (*The Commissioner.*) Fleet told you they were in the "Oceanic"? - They used them there.
2380. (*The Attorney-General.*) Were there any on the "Titanic"? - No, not for our use anyway.
2381. Was there any place in the crow's-nest for glasses? - Yes.
2382. On the "Titanic"? - Yes, there was - a small box.
2383. There was a box in the crow's-nest? - Yes.
2384. If I understand you aright, there was a box there for glasses, but no glasses in the box? - I could not tell you if they were for glasses, but there was a box there that would hold glasses.
2385. Did you look for glasses at all in the crow's-nest? - We asked for them. 2386. On the "Titanic"? - Yes. I did not personally ask for them, but one of the other fellows did, and they said there were none for us.
2387. Who was the one of the other fellows who asked for them, do you know? - Simmons [Symons] or Jewell; I cannot be sure which one it was.
2388. I think we know Simmons [Symons] was Jewell's mate on the look-out? - Yes.
2389. Fleet was yours? - Yes.
2390. And I think Hogg and Evans were the other two? - Yes.
2391. Did you come on the look-out at 10 o'clock? - Yes.
2392. On Sunday night the 14th April? - Yes.
2393. How long did you remain on the look-out? - What was your duty? - 4 to 6 and 10 to 12.
2394. I suppose that would mean that you and Fleet came on at 10 o'clock? - Yes. 2395. And relieved Simmons [Symons] and Jewell? - Yes.
2396. Did one of you take the starboard side and one the port side of the crow's-nest on the look-out? - I generally took the starboard side and Fleet took the port side. 2397. You were on the starboard side. Do you know whether there was any other lookout than you two? - I could not say. We do not know what orders are given from the bridge.
2398. Then when you relieved Jewell and Simmons [Symons] did they pass any word to you? - Yes, they told us to keep a careful look-out for ice and growlers in particular.
2399. They told you to keep a careful look out for ice and growlers? - Yes; by the officer of the watch before 10 o'clock, Mr. Lightoller.
2400. I think I heard you say you remember that very well? - Yes, I think I do. 2401. What sort of a night was it? - A clear, starry night overhead, but at the time of the accident there was a haze right ahead.

### **Page 73**

2402. At the time of the accident a haze right ahead? - A haze right ahead - in fact it was extending more or less round the horizon. There was no moon.

2403. And no wind? - And no wind whatever, barring what the ship made herself.
2404. Quite a calm sea? - Quite a calm sea.
2405. Was it cold? - Very, freezing.
2406. Colder than you had had it yet on the voyage? - I would not say that - but it was the coldest we had had that voyage, yes.
2407. It was colder that night than ever you had had it that voyage in the "Titanic"? - Yes, on that trip.
2408. Did you notice this haze which you said extended on the horizon when you first came on the look-out, or did it come later? - It was not so distinct then - not to be noticed. You did not really notice it then - not on going on watch, but we had all our work cut out to pierce through it just after we started. My mate happened to pass the remark to me. He said, "Well; if we can see through that we will be lucky." That was when we began to notice there was a haze on the water. There was nothing in sight.
2409. You had been told, of course, to keep a careful look-out for ice, and you were trying to pierce the haze as much as you could? - Yes, to see as much as we could.
2410. At the time you came on watch, up to the moment just before the collision, can you tell us whether there was any difference in the speed at which the vessel was travelling compared with the rest of the voyage. What I mean is, was she going the same speed? - She seemed to be going at the same rate all the way.
2411. Do you know who was in charge on the bridge? - Yes; Mr. Murdoch.
2412. The first officer? - Yes, that was his watch.
2413. There would be other officers on the bridge with him? - Yes.
2414. Do you know who they were? - I think Mr. Moody was there, but I could not say for certain, because when you are up in the nest you do not know.
2415. You would not be able to tell who the officers were? - No, unless you happened to see them.
2416. Did you receive any orders from the bridge at all during this watch? - No. The orders were turned over by the people we relieved.
2417. Those are the orders that you told us of, that you got from Simmons [Symons] and Jewell? - Yes.
2418. May I take it those were the only orders you received during the time you were on watch? - Yes.
2419. Before half-past eleven on that watch - that is, seven bells - had you reported anything at all, do you remember? - There was nothing to be reported.
2420. Then what was the first thing you did report? - The first thing that was reported was after seven bells struck; it was some minutes, it might have been nine or ten minutes afterwards. Three bells were struck by Fleet, warning "Right ahead," and immediately he rung the telephone up to the bridge, "Iceberg right ahead." The reply came back from the bridge, "Thank you."

*The Commissioner:* This would be about 11.40.

*The Attorney-General:* That is right, my Lord; ten minutes after seven bells.

2421. (*The Commissioner.*) Seven bells struck, and ten minutes after, about 10 minutes, Fleet struck three bells? - Yes.

2422. And telephoned? - And telephoned to the bridge, "Iceberg right ahead." 2423. And you got an answer, "Thank you"? - "Thank you" was the answer from the bridge.
2424. (*The Attorney-General.*) I want you to tell the story from this point. You were watching the iceberg? - Yes.
2425. Did you notice what the ship did? - As soon as the reply came back "Thank you," the helm must have been put either hard-a-starboard or very close to it, because she veered to port, and it seemed almost as if she might clear it, but I suppose there was ice under water.
2426. (*The Commissioner.*) She veered to port. Her helm must have been put hard-a-starboard? - Yes.
2427. (*The Attorney-General.*) He then said it looked as if she was going to clear it. (*To the Witness.*) It looked as if she was going to clear it, and then did you feel a blow? - As she struck on the starboard bow there was a certain amount of ice that came on board the ship. That was the forewell deck. It seemed as if she struck just before the foremast.
2428. (*The Commissioner.*) Did you say anything about the ship striking part of the iceberg under the water? - The formation of the berg is, there is more under water than there is above.
2429. I daresay. What I want to know is, did you say anything just now about the ship striking the iceberg under the water? - I did not hear it.
2430. (*The Attorney-General.*) He did, my Lord; he said it "Felt as if," and I was trying to get to it. He said it just after he said "I thought she was going to clear it." I think we will get it from him in this way. (*To the Witness.*) You saw the iceberg as the vessel veered to port, did you? - I saw it before that.
2431. Yes, you had seen it before, but that had been reported? - Yes.
2432. Then you said you saw her head veer to port? - Yes.
2433. Where did you get the iceberg - on what side of you? - On the starboard hand as she was veering to port.
2434. You had the iceberg on your starboard side? - Yes.
2435. You were on the starboard side of the crow's-nest, you told us? - Just at that time I happened to be right in front of the nest, because as the nest is semi-circular the telephone is in the corner of the nest on the starboard side. My mate was telephoning from there, and I was standing in the front of the nest watching the boat.
2436. Do you mean you were standing just about amidships? - Just about amidships in front of the nest.
2437. You were watching the berg. You had got the berg on the starboard side as the vessel's head veered to port? - Yes.
2438. And you watched it? - I watched it.
2439. Now could you give us any idea of what height there was of ice out of the water? I only want to have some idea of it? - It was higher than the forecastle; but I could not say what height was clear of the water.
2440. (*The Commissioner.*) How high does the forecastle stand out of the water?  
*The Attorney-General:* I think it is about 60 feet.  
*The Commissioner:* I do not think it is as much as 60 feet.

*The Attorney-General:* I think she drew about 34 feet.

The Commissioner: I was not thinking about her draught, but how high the forecastle would stand from the water.

2441. (*The Attorney-General.*) I said 60 ft.; I am told it is about 55 feet. (*To the Witness.*)

Can you give us any idea of the breadth? What did it look like? It was something which was above the forecastle? - It was a dark mass that came through that haze and there was no white appearing until it was just close alongside the ship, and that was just a fringe at the top.

2442. It was a dark mass that appeared, you say? - Through this haze, and as she moved away from it, there was just a white fringe along the top. That was the only white about it, until she passed by, and then you could see she was white; one side of it seemed to be black, and the other side seemed to be white. When I had a look at it going astern it appeared to be white.

2443. At that time the ship would be throwing some light upon it; there were lights on your own ship? - It might have been that.

2444. Can you give us an idea to the best of your ability how far off she was when you passed her to starboard? - She hit us.

#### **Page 74**

2445. How far was the vessel from the iceberg? - What did you say?

2446. You have told us your vessel veered to port and then you got the iceberg on your starboard side? - Yes, that is where she hit.

2447. Quite right; that is where she hit, but can you tell us how far the iceberg was from you, this mass that you saw? - It might have been half a mile or more; it might have been less; I could not give you the distance in that peculiar light. 2448. You are speaking of when it was you first saw it? - Yes.

2449. I understand that; you think it might have been half a mile or rather less, and of course you cannot give any better indication than that. I am much obliged to you for that, but it is not quite what I wanted you to tell us. You have told us that she veered to port and then she struck on the starboard side. But when you were looking at her, could you see whether this darkness which you have told us of was any distance from the ship or was it quite close up against the side of the ship? - Close up against the side of the ship on the starboard bow.

2450. Did you see at all how much ice there was that fell on the forewell deck? - I knew there was some there, because I saw it when I went on to the boat deck.

2451. You did not pay particular attention? - No, I had something else to think about.

2452. Give us, to the best of your ability, where it was according to you the vessel struck. I want to get some idea from you? - Just before the foremast. It must have been there because when I went down from the crow's-nest the water was coming into - I do not know whether you call it No. 1 or No. 2 - it was level with here (*pointing on the model.*) that is about where it was.

2453. That would be just before the foremast. I am going to ask a little more precisely about that? - The water was coming in down below - I do not know whether it is No. 1 or No. 2.
2454. No. 1 or No. 2 what? - Hold - water coming in there down in the firemen's quarters. I was not relieved till 12 o'clock.
- The Commissioner:* I am not following this.
2455. (*The Attorney-General.*) Neither am I, my Lord; I did not even hear it. Do you mind telling us again what you said then? I could not hear you. Try to speak up? - I did not leave there until 12 o'clock. When I went down at 12 o'clock water was coming into that compartment. That was just outside the seamen's quarters, down below.
2456. I think that does help us. Did you know the seamen's mess? - Yes, that is what I am talking about.
2457. That is what I want. Then I know where it is. It was just about there that the water was coming in? - Just outside there. The door is on a level, and the water was coming in down below. The ship was making water down there. You could see it from underneath the tarpaulin; you could look down below and watch the water coming in.
2458. Is No. 1 hatch just opposite the seamen's mess amidships? - Yes.
- The Attorney-General:* Your Lordship has that plan, and you will see at once where it is.
- The Witness:* This was at 12 o'clock though.
2459. That is what you saw at 12 o'clock? - When I came down from aloft, yes. 2460. Did you see the water coming in? - Yes, I could hear it, and then I looked down to see what it was, and it was water pouring in from the ship's side or the bottom, anyway.
2461. Which side? - The starboard side apparently.
2462. Where did you see the water coming in? - It was coming on the deck down there.
2463. What do you mean by that? - Down in the firemen's quarters.
2464. On the starboard side of the firemen's quarters; is that right? - Well, it is amidships there; their quarters are down below there. Perhaps it is the deck below that. 2465. I do not know whether you understand it. You know where the seamen's mess is? - Yes.
2466. That is on the port side is it not? - That is on the port side.
2467. Is the firemen's mess on the starboard side? - Oh, I mean down below, on the deck below there. If you look you will see; there are firemen's quarters down there.
2468. The quarters are below that? - Yes.
2469. That gives us the side, at any rate? - I think it is about two decks below that where those other quarters are.
2470. Yes, you are quite right. I think we can follow it from the plan: First of all, there is a deck where there are the seamen's messes and the firemen's messes? - That is under the forecastle.
2471. Then below, and again below that, that is in the next deck and the deck under that, there are quarters for the firemen? - Yes.

2472. For the firemen and the greasers and some of the other men. Is that what you mean? - That is where water was coming in then, because the men brought their bags up from there who were going on the 12 to 4 watch, because the watch was coming in there.

2473. Wait a minute. You say the men were bringing up their bags from the one deck? - They could not stay down there with the water coming in.

2474. We understand that, but from what deck was it that they were bringing their bags up? Perhaps we can get at it if you will tell us where they brought the bags to? - I cannot tell you the name of the deck, but from their quarters.

2475. Where did they bring their bags to? - They put them on the forecastle on top of the hatch there, and then they were no good to them; they had to leave them behind.

2476. That was because of the water coming into their quarters where they slept? - That is so.

2477. And is that where you saw the water? - I saw the water coming through - well, I saw water down there.

2478. In their quarters? - I saw it down there as I looked through the top of the hatch. I saw water coming in.

*The Attorney-General:* I think it must be No. 1 hatch, my Lord; it might be No. 2.

*Sir Robert Finlay:* I think it must be No. 1.

2479. (*The Attorney-General - To the Witness.*) Was that the most forward hatch? - Yes, I think it was No. 1; it is just outside the seamen's mess.

2480. Yes, that is No. 1. You were looking down that, and looking down there you saw the water? - Yes, the water coming in. That was at 12 o'clock when I went down below.

2481. Could you hear it? - Yes; hear it plainly.

2482. Was it rushing in or simply pouring in? - It was not coming in so fast, but you did not know where it was coming from. It was coming from somewhere else further over to the starboard side; it must have been, but I did not know where it was coming from.

2483. All you could see was that water was coming in from somewhere on the starboard side? - Yes.

2484. And it was getting into the firemen's quarters. That is right, is it not? - Yes.

2485. And getting into their quarters so much that the firemen were driven up, and were carrying up their baggage on to the forecastle deck? - They came up on deck there, and some of them were standing by; they did not know whether they would have to go below or not.

2486. (*The Commissioner.*) Do you know anything about the lettering of these decks? - Well, there is a boat deck.

2487. Do you know anything about the lettering of them? They are lettered C, D, E, F, and G. Do you know anything about that? - Those are different compartments, I think. There is the boat deck, A deck, B deck, C deck, but I think the other letterings come in for different quarters for the passengers' benefit.

2488. (*The Attorney-General.*) After you saw that at 12 o'clock what did you do? - I went on the boat deck.

- 2488a. Did you get any orders to go on the boat deck? - No, but I heard the boatswain call the other watch.
2489. Did you hear what orders he gave? - Yes, he told everybody to get the boats ready for turning out.
2490. He told everybody? - That was the watch below; they were turned out, and we all went on deck.
2491. That really meant all hands on deck to help uncover the boats? - To get the boats ready for lowering.
2492. Not only those that were on deck and on duty, but those below off duty? - Yes, the watch that had just gone below.
2493. That would be at 12 o'clock; they had just gone below? - Yes.
2494. Did you notice any list of the vessel at all by the time you came down at 12 o'clock from the crow's-nest? - Not enough to take notice of; I did not notice any.
2495. Did you go to work to help prepare the boats for lowering? - Yes.
2496. To which side did you go, to starboard or port? - The starboard side.
2497. Had you a station? - No. 11 boat.
2498. That would be the third from the last, would it not? - Yes, that is right. 2499. Did you know that that was your boat? - Yes, it was put up on the printed order on the ship, outside our quarters.
2500. That is a list? - Yes.
2501. As I understand from that there was a printed list outside your quarters? - Yes.
2502. Then your names would be filled in? - Our names would be filled in.
2503. To what boats you were to go? - Yes.
2504. You had looked at yours? - Yes.
2505. Was that list up when you first left? - It was up the day after we left Southampton.
2506. So that it would be up the day you left Queenstown, at any rate? - Yes, certainly.
- The Commissioner:* How long does it take from Southampton to Queenstown, 20 hours?
- The Attorney-General:* Something like that, because she left, I think, on the 10th from Southampton, and she left Queenstown on the 11th. That is as far as I understand the dates.
2507. (*The Commissioner.*) I was told she went to Cherbourg first. (*To the Witness.*) Did you go to Cherbourg first? - Yes.
2508. (*The Attorney-General.*) She went to Cherbourg, and, as I understand, it is about 13 or 14 hours from there to Queenstown, is that right? - Yes.
2509. And we know she left Queenstown on the 11th. When you went to your boat were there people waiting to be passed into the boat? - The first thing that I did, and that most of us did that were there, was that we cleared the falls away from the boats on the starboard side, and then we lowered the boats from forward to aft; and when I came to No. 11 I was told that the boat was full, and that I was to get on with the next boat. So I went into No. 13, and left in No. 13 after we had got a full load.
2510. So that you were in the same boat eventually when the boat left as Barrett? - Yes.

2511. And Beauchamp - do you know Beauchamp? - No, I cannot say that I do. 2512. He was a fireman. If you do not know him, never mind. We have seen him, and we know him. But you know Barrett? - Yes.
2513. And you were with him? - Yes, I saw him just now.
2514. I think I understand what you have said about what happened before you left, but just let us get it quite clearly. Were your orders to uncover all the boats along that side? - I had no orders whatever.
2515. Why did you go then to help uncover all the boats on the starboard side? - I went there because it was my duty.
2516. You knew that you had to do it? - I knew it was my duty, and that is why I went there. I did not have any orders myself.
2517. But why did you go to uncover the boats on that side? - Because I knew what had happened.
2518. You knew there had been serious damage done to the vessel? - Certainly. 2519. I suppose you knew the order that had been given by the bos'un, or somebody, that all hands were to go on deck? - I heard the bos'un say that as he went on deck, and I went up then just after the other fellows.
2520. You did not wait for anything more; you knew what your duty was - to go and help uncover the boats. That is right, is it not? - Certainly.
2521. And then you helped uncover all the boats? - I helped to uncover all the boats on the starboard side.
2522. Uncover them and get the falls ready? - Yes.
2523. Get them ready for lowering? - Yes. They were lowered on to A deck; that is where the passengers were put in, and from there they were lowered into the water.
2524. Your Lordship, we need not go in detail through this story again; we have had it already. Then you got to No. 13 boat. No. 11 boat ought to have been your boat; that was your station? - Yes.
2525. Why did not you get into that? - Because she was full up, and I went on to the next one.
2526. Did you get any order about that? - No, but I did not want to make a jump for it, and I went on to the next boat because there was scarcely anybody in that boat. 2527. You mean there was scarcely anybody in No. 13 boat? - Yes. Mr. ----, I cannot tell you what his name is - a tall officer, about 6 feet in height, fresh complexion - I forget his name; I could not remember his name - he was there attending to passing the passengers into the boats.
2528. Was it Mr. Wilde, the chief officer? - No, He is about the sixth officer, or the fifth officer.
2529. At any rate, he was a very tall man, according to you? - Yes, tall and spare. I think he was drowned.
2530. Then what did you do? - We put some women and children into the boat, and then there were some passengers got in, and I was ordered by him to get in the boat and we lowered away; and then No. 15 very nearly came on top of us.
2531. That is No. 13 you are speaking of? - Yes.
2532. And No. 15 very nearly came on top of you? - Yes.

2533. I do not think it will be useful to go all through that again; we have heard what happened from Barrett, and I shall leave that. Then what did you do when you got into the boat? Were there any seamen on board? - Three of us; three able seamen.
2534. Besides yourself? - There were three able seamen in the boat.
2535. In No. 13? - Yes, three able seamen.
2536. Who were they? Do you know who the other two were? - Hopkins was the name of one, but I do not know the name of the other fellow.
2537. But you knew he was an able seaman? - Yes.
2538. That is the important point; it made three? - Yes.
2539. Do you know how many men there were in the boat altogether? - Hopkins told me when I asked him the next day if he happened to know how many people there were in the boat that there were 64.
2540. Hopkins told you there were 64? - Yes. He said, "I counted them as nearly as possible 64."
2541. When you got into the boat and your boat got away from the side, did you see the vessel settling down? - She was going down; she was settling down by the bows, but the bows was not underneath the water when we left. What I mean to say when I say the bows - the deck was not underneath the water; the foc'sle deck was not under the water. 2542. (*The Commissioner.*) You mean the foc'sle deck? - Yes, the foc'sle deck was not under the water when we left the ship.

## Page 76

2543. (*The Attorney-General.*) Was it pretty low down? - About half way down I should say.
2544. What do you mean when you say "about half way down"? - I do not know; it is rather hard to say what the number of feet is. I do not know how many feet there are from the waterline up.
2545. I want to understand what you mean. Do you mean she had got a good deal down? - Yes; she was a good deal down.
2546. But not up to her foc'sle deck? - Not up to her foc'sle deck.
2547. I want to know what you mean by saying she was about half-way down. Do you mean about half-way down from the height of the decks to the water? - From the waterline to the foc'sle deck.
2548. Was she settling down quickly; could you see? - Not so very quickly. 2549. Can you give us any idea of the time? I want you to help us as far as you can, although I know it is very difficult for you. Had you any idea of what time it was when you left in the boat - how long it was after you had come down from the crow's-nest? - I could not say how long it was after. There were no clocks to look at, and I did not ask anybody the time until we got away in the boat. There was a lady there had a watch, and after the ship went down she told me that her watch said half-past two. That is all I know about the time. That was after the ship went down. But as regards other time, I am afraid I could not tell you.

2550. We will get the best help we can from you as to what was done. You pulled away from the "Titanic." Did you keep near to the other boats? - Yes. 2551. A number of other boats? - Yes; we kept in touch with each other.
2552. And did you keep in touch with the other boats until you were picked up by the "Carpathia"? - Yes, in the morning.
2553. Did you lay off for some time in the boats. I mean, lay off the "Titanic"? - We were about a quarter to half a mile away from the ship, laying off until she disappeared.
2554. So that you could see what was happening? - Yes.
2555. Then did you see her settling by the head? - She went down by the head.
2556. Did you see the lights on the ship? - You mean the electric lights?
2557. Yes? - Oh, yes.
2558. Were the lights burning on the ship until - ? - They burnt practically until she disappeared.
2559. That is what I wanted to know? - I suppose until the dynamos were put out of order.
2560. Did you see her stern? - No. I cannot say that I did from where I was in the boat. I was standing in the bottom of the boat, and I did not actually see the last part of her go. I saw her just before that, but when people said, "She's gone; that's the last of her," I did not actually see it. I cannot say.
2561. Did you see her stern in the air at all during any of the time? - Well, I did not see her just before her final disappearance. I did not see that, I cannot say that I did.
2562. Did you hear any explosions? - After she had gone down, yes.
2563. After she had gone down? - As she went down, you might say, you heard underwater explosions, like a gun-cotton explosion under water at a distance off. I suppose it was the boilers.
2564. When the steamer struck, was there any light of any other vessel to be seen? - No.
2565. And after leaving the steamer, did you see the lights of any other steamer before the "Carpathia"? - There was a ship apparently ahead of the "Titanic," as she was then, but, that ship was supposed to have disappeared. Anyway, we did not see her in the morning.
2566. But did you see her lights after you left the steamer? - We saw a light, yes, but we did not know what it was. It might have been one of our own boats that was showing a light. I could not say that it was a steamer.
2567. You saw a light? - I saw a light, apparently it was on the port bow of the "Titanic" as she was, it seemed to me. That was the one that we were going to pull for, but she disappeared.
2568. The light disappeared? - The light disappeared. Whether it was a fishing vessel or a steamer, or what she was, I do not know.
2569. (*The Commissioner.*) Or one of your own boats, I thought you said? - It might have been one of our own boats at a shorter distance. You could not tell; it was a dark night.
2570. (*The Attorney-General.*) I gather from what you said that it would only be a white light that you would see? - A white light was all that I saw.

2571. It might have been a masthead light? - It might have been a masthead light in the distance. I could not say for certain.
2572. And I understand you to say it might even have been the light of one of your own boats? - It might have been the light of one of our own boats.
2573. Did you see that light before the "Titanic" sank? - No.
2574. Does that mean that you only saw that light after the "Titanic" sank? - After I was in the boat, after leaving the ship.
2575. Those are two different things, you see. You got into the boat, and left the "Titanic" some time before she sank? - Yes.
2576. Before she sank had you seen that light? - No. It was only after being in the boat and away from the ship that we saw that light.
2577. (*The Commissioner.*) Yes, but did you see that light before the "Titanic" went down? - Yes, Sir, certainly.
2578. Then I have got it down wrong; you saw it. How long after you had got into No. 13 boat was it that you saw the light. Do not guess? If you do not remember tell me you do not remember. - I could not say how long it was.
2579. That is quite a proper answer. But are you sure that you saw this light, whatever it was, before the "Titanic" plunged to the bottom? - Yes, Sir. 2580. You did? - Yes, from the boat. I cannot say how long it was.
2581. You cannot say how long; all you can say is that you saw it before the "Titanic" went down? - Yes, before the ship disappeared.
2582. (*The Attorney-General.*) Did you see any rockets sent up from the "Titanic"? - Yes, Sir.
2583. Before you left the vessel? - Before and after.
2584. Were they coloured rockets, or only white ones? - No, coloured rockets.
2585. Did you see any reply? - No, none whatever.
2586. Now, will you tell us, so far as you can, about the passengers in your boat. Had you third-class passengers in your boat? - Second and third. A few second, principally third.
2587. Did they behave well? - Very well indeed.
2588. They were mostly women? - They were most women.
2589. Some children? - Four children.
2590. Was it very cold? - Very cold indeed.
2591. But you had no difficulty on board? - None whatever.
2592. Everybody bore it without complaint? - Yes, Sir.
2593. Before you left with your boat, did you see any other third-class passengers, women or children, waiting to go into the boats? - There were no women left there when our boat was lowered into the water, not as far as I could see.
2594. You can only tell us what you remember. You saw the other boat lowered, that is, the boat astern of you, No. 15? - I did not notice what they had there. We had our work cut out to get away with the crowd that we had in our own boat.
2595. You were carrying a very large number, you mean, for the boat? - Yes, and we were right under that exhaust there (*pointing*), and if the boiling water had got on

to the people in the boat they would have made a start on the starboard side and capsized.

**Page 77**

**Examined by MR. SCANLAN.**

2596. When you are at sea in a fog is it a usual practice to station a watchman at the bows in addition to the lookout in the crow's-nest? - The captain of the ship has to be responsible for that kind of thing.

2597. Just tell me whether in your experience it is usual to do that? - If the captain of the ship thinks it is necessary.

2598. Have you seen it done? - I have.

2599. Have you seen it done frequently? - Frequently.

2600. Is not a haze a kind of a fog? - It is a kind of a fog, but you could not describe it as a fog.

2601. How long were you on your last watch before you observed the haze? - I think I answered that question before. Didn't you hear me answer that question before?

*Mr. Scanlan:* I did not.

*The Commissioner:* You must not whisper your answers. Speak up so that we can hear you.

2602. (*Mr. Scanlan.*) How long had you been in the crow's-nest on your last watch? - It was not so hazy to begin with as it was when the accident occurred. *Mr. Scanlan:* When you found the haze thickening - *The Commissioner:* Did he ever find it thick? *Mr. Scanlan:* I said "thickening," my Lord.

2603. (*The Commissioner.*) I thought you said "thick." (*To the Witness.*) Were you in a fog when this accident happened? - No.

2604. (*Mr. Scanlan.*) Did you communicate with the bridge, that you found it hazy? - No.

*Mr. Scanlan:* I think you mentioned that you said to your mate, or your mate said to you, that you would be very lucky if you could see through the haze. *The Commissioner:* "If we can get through this."

2605. (*Mr. Scanlan.*) Were you not then of opinion that the pressure of that haze made the passage dangerous? - I am not the officer of the watch.

*Mr. Scanlan:* I am not accusing you of that.

*The Commissioner:* These questions are proceeding upon the assumption that that observation was made.

*Mr. Scanlan:* That this observation was made to him, my Lord.

*The Commissioner:* Yes.

*Mr. Scanlan:* Was that observation made to you?

*The Commissioner:* He says it was.

2606. (*Mr. Scanlan.*) When this observation was made to you did you not think it a proper thing to communicate with the officer on the bridge? - Certainly not. The officer of the watch would ask you what you meant by it. He would ask you whether you were interfering with his duty or not.

2607. When you are going through a haze at night, is it usual to slow up - slacken speed?  
- That has nothing to do with me. I am not on the bridge. I am a look-out man, as I said before.

2608. You have often been in a fog, I daresay, in Atlantic passages? - I am in a fog now.

2609. You have been at sea for a number of years. Have you been sailing through an ice-field? - Yes.

2610. When your ship is sailing through an ice-field, is it usual to go slow - to slacken speed? - Certainly.

2611. Is it not also usual when you are in a fog or in a haze to slacken speed? - Certainly.

2612. And speed on this occasion was not slackened? - I could not tell you. 2613. You could not tell? - No.

2614. What is the height of the crow's-nest above the foc'sle deck? - I do not know. I suppose it is a matter of between 40 and 50 feet above the foc'sle deck.

2615. (*The Commissioner.*) It is a little higher than the bridge, is it not? - Some distance higher, my Lord.

*Mr. Scanlan:* About 40 feet.

*The Commissioner:* He said that the crow's-nest is about 40 feet higher than the bridge.

*The Attorney-General:* I do not think he meant that, my Lord; I think he meant the foc'sle deck.

*The Witness:* Yes, I meant the foc'sle deck

*The Attorney-General:* Forty feet higher than the foc'sle deck.

2616. (*The Commissioner.*) That is a very different thing. How much higher than the bridge is it? - I suppose 20 feet something.

*The Attorney-General:* Your Lordship can see it there on the model.

*The Commissioner:* Yes, and I have seen the thing itself on the "Olympic."

2617. (*Mr. Scanlan.*) Would it have been easier to have observed the iceberg from the bow than from the crow's-nest? - I cannot answer you that.

2618. When you have been on other ships have you ever been at watch on the bows? - Yes.

2619. (*The Commissioner.*) Was there a crow's-nest on that ship? - Yes.

2620. And was there somebody in the crow's-nest as well? - Yes.

2621. And somebody on the bridge as well? - That was off the banks of Newfoundland.

2622. Was there somebody on the bridge as well? - Two quartermasters were there, and the officer of the watch.

2623. What ship was this? - The "Minnehaha."

2624. What line does she belong to? - The Atlantic Transport. 2625. Is she a mail boat? - No, Sir.

2626. (*Mr. Scanlan.*) As you have been stationed both in the crow's-nest and in other ships on the bows, I want you to give us your opinion as to whether it would be easier to see the iceberg if you were stationed at the bows than in the crow's-nest?

*The Commissioner:* He has given you an answer to that which I believe to be quite true, that he does not know.

2627. (*Mr. Scanlan.*) You were assisting in the launching of all the boats from the starboard side? - I did not say all the boats.

2628. A number of them? - Some of them.

2629. How many of them? - I do not know how many - about three or four. 2630. Were any of these three or four boats that you assisted in launching provided with lights, lamps? - I did not look for them.

**Examined by MR. HARBINSON.**

2631. I believe you went from Southampton to Cherbourg? - Yes.

2632. Did you take many passengers on at Cherbourg? - That I could not say.

2633. You do not know? - No.

2634. Then you went from Cherbourg to Queenstown? - Yes.

2635. Did you ship many passengers at Queenstown? - A good number, but I cannot say how many.

2636. But a good number? - Yes.

2637. Mainly, I suppose, third-class passengers? - Yes, third-class passengers. 2638.

(*Mr. Harbinson.*) Do I rightly understand that third-class passengers were carried both fore and aft in the "Titanic"?

*The Commissioner:* You do; you need not wait for an answer to that.

*Mr. Harbinson:* Thank your Lordship.

*The Witness:* Yes, fore and aft.

2639. You say you asked for glasses. Who did you ask? - I did not ask.

2640. Did you know that anybody asked for glasses? - Yes, I think Simmons [Symons] asked.

2641. Who did he ask? - He was supposed to ask one of the officers on the bridge, but I do not know whether he asked. I am only just saying what I was told.

2642. (*The Commissioner.*) Simmons [Symons] told you that he asked, did he? - So I understand, that he asked the question on the bridge. 2643. Did Simmons [Symons] tell you that he asked the

**Page 78**

question on the bridge? - I think I am right in saying that he did.

2644. Are you sure about it? - I will not swear that he did. I know that we all spoke about it, my Lord, and when they asked.

2645. When who asked? - When one of them asked about the glasses they were told there were none for us.

2646. Who was the one that asked? - I think it was Simmons [Symons].

2647. What makes you think so? - Because I can remember the conversation about it. We all spoke about it together.

2648. Who was there at this conversation? - Fleet, Hogg, Evans, Simmons [Symons], and myself were all there.

2649. And were you all talking about binoculars? - They were asking why they could not have them, because they had been in use from Belfast to Southampton, and they wanted to know what had become of the glasses that we had used in that time.

2650. Then the binoculars, according to this conversation, had been in the crow's-nest coming from Belfast to Southampton? - Yes.
2651. And therefore when she left Harland and Wolff's, if this conversation ever took place and it was accurate, the binoculars were there, and they had vanished at Southampton? - I was not there at the time, my Lord.
2652. But, as I understand, the conversation was to the effect that they had been in the ship when she left Belfast? - Yes.
2653. And the matter being discussed at this conversation was where they had gone? - Yes.
2654. And where had they gone? - I do not know.
2655. Did the conversation lead to any conclusion on that point? - We did not have any to use.
2656. I know that, so you say; but did you in your conversation arrive at any conclusion as to what had become of them? - We simply went without them, my Lord, that is all. 2657. (*Mr. Harbinson.*) You considered it was a serious matter not to have them? - If you have got good eyesight it is not necessary to have them perhaps.
- The Commissioner:* That is your statement, you know.
2658. (*Mr. Harbinson.*) You were told to look out for ice and "growlers"? - Quite so.
2659. Had you been told there was ice about? - Yes.
2660. Did you know, as a matter of fact - had it been communicated to you - that a warning had been given from the "Baltic" as to ice being about? - No. The orders were passed over from the man that we relieved.
2661. Jewell and the others? - Jewell and Simmons [Symons]. 2662. You knew that ice was about? - You could smell it.
- The Commissioner:* "Smell it"?
- Mr. Harbinson:* That is his reply.
2663. (*The Commissioner.*) This is the first time I have heard that. Does he mean that he felt the cold? (*To the Witness.*) Is that what you mean by "smell"? - There was a sudden change in the temperature, my Lord.
- The Commissioner:* Then I understand.
2664. (*Mr. Harbinson.*) But so far as you knew the boat was going at the same speed? - Yes.
2665. Was the haze visible from the bridge, this haze that you saw? - It should have been.
2666. Despite the fact that this haze was about, you saw no slackening of speed? - No.
2667. And no alteration of the course? - No.
2668. I think you said that off the banks of Newfoundland on previous occasions there has been an additional man in the bows - an additional look-out? - Yes.
2669. How many times in your experience? - In the Navy they have extra look-outs on each side of the foc'sle, and may be aloft as well.
2670. But you yourself have seen it on boats you have been previously employed on? - Yes.
2671. Immediately after the collision, did you come down from the crow's-nest? - No, I waited till our relief's came up at 12 o'clock.

*The Commissioner:* You are taking him all over the same story again. He told you that he came down from the crow's-nest at 12 o'clock, the end of his watch.

2672. (*Mr. Harbinson.*) Immediately you came down from the crow's-nest, did you see any of the passengers come from the forepart of the boat? - No, because underneath the foc'sle you would not see anybody there, only the sailor folk or some of the firemen.

2673. Were there many passengers about the front of the boat when you came down? - No.

2674. Did you see any stewards about? - Yes, there may have been one or two, but I did not see many.

2675. Did you see anybody giving any instructions or warnings to the passengers in that part of the boat? - I saw the bos'un and he sent the watch up on deck to clear the boats.

2676. But you did not hear any instructions given as to warnings to be given to the passengers? - No, I could not hear them there.

2677. You made your way immediately down to boat No. 13? - No, up from the foc'sle to the boat deck here (*showing.*) right along the starboard side.

2678. To boat No. 13? - No, 11, down the side to No. 11 and No. 13 (*showing.*)

2679. Were there any passengers about the place about the position of boat No. 13? - We had no women or children there, but there were a few men that went over to the other side, or got into the next boat.

2680. Was it before or after the lowering of your boat that you saw the rockets first go up? - They were sending them up before the boat was lowered into the water. *The Commissioner:* You have told us that already, you know.

### **Examined by MR. LEWIS.**

2681. How long have you been an A. B.? - [No Answer.]

2682. (*The Commissioner.*) How long have you been a sailor? How old are you now? - Forty-one.

2683. When did you first go to sea? - In 1887.

2684. That is twenty-five years ago, so that you went to sea when you were about 16? - Yes, 16.

2685. When did you become an A. B.? - Last year.

*The Commissioner:* It is a long time you know. He says he became an A. B. last year.

2686. (*Mr. Lewis.*) I do not press that point, Sir. How many times have you acted as look-out man? - [No Answer.]

2687. (*The Commissioner.*) Have you counted the number of times that you have acted as a look-out man? - I could not swear I have. I was a look-out man on the way to China in the "Cordelia," but I was not paid for it. I was 14 years in the Naval Service. I was in the "Minnehaha," and I was in the "Olympic," and I was in the "Titanic." 2688. (*Mr. Lewis.*) Is your sight good? - I hope so.

2689. Never anything the matter with your sight at all? - No.

2690. Is there an examination of the eyes before you are appointed look-out man at Southampton, or elsewhere? - Yes.

2691. Who by? - You go through the Board of Trade office.

2692. At Southampton? - Yes.
2693. What doctor examined you? - I do not know his name.
2694. A doctor did examine you at Southampton; did he particularly examine your eyes; did he test your sight? - Yes.
2695. Do you swear that he tested your sight at Southampton at the Board of Trade Dock there; do you swear that? - No.
2696. Let us be quite clear. You were examined by the Board of Trade doctor at the Southampton - is that so? - I am not going to answer that.
2697. (*The Commissioner.*) What did you say? Were you examined at Southampton by a doctor? - Yes, Sir, but not for eyesight though. He only just asked me - not a test to get a certificate for so

**Page 79**

- that I can prove it. There is a doctor's examination when you fall in.
2698. Were you asked about your eyesight? - Not specially.
2699. Were you asked in any way about it? - I cannot say that I was.
2700. (*Mr. Lewis.*) Can you tell us what form the examination took then. Were you examined separately; were all the men examined separately? What sort of examination did the doctor make? - I suppose he pleased himself. A medical man generally does, does not he?
2701. What sort of examination did he make of you? What did he say to you? - You might ask me something easier because I cannot remember what the man said.
2702. You say you were examined by the doctor - this is very important. I want you to answer the question. What form did the examination take; how long did it take? - We were falling in on the lounge deck and the doctor came and examined us all. I do not know that he particularly asked me anything.
2703. Just a casual examination? - It was a casual kind of examination.
2704. He did not ask you anything at all about your eyes? - No.
2705. No special examination. Has there been any examination by anyone since, by a ship's doctor or anyone else, with respect to your eyes? - No.
2706. (*The Commissioner.*) Is your eyesight good? - I think so, my Lord. 2707. Do you believe that it is good? - I do.

**Examined by MR. COTTER.**

2708. You said that the berg, when you first saw it, was half a mile away? - I did not. I said I could not say whether it was half a mile or a little more or a little less. It was impossible to say.
2709. (*The Commissioner.*) I thought you said it was about half a mile away? - About half a mile.
- The Attorney-General:* He did say that he really could not say, but that that was it as it appeared to him.

2710. (*Mr. Cotter.*) If you had had a pair of night binoculars that night, and you were using them, I suggest to you that you would have seen that berg earlier? - Quite feasible.  
2711. And then there would have been a chance of telling the officer on the bridge that it was ahead before you did.  
2712. (*The Commissioner.*) Can you tell me the difference between day binoculars and night binoculars? - No, my Lord, except that they are made in the trade for night use and day use.

**Examined by SIR ROBERT FINLAY.**

2713. Just a few questions. The practice varies a good deal, does not it, about supplying binoculars to the look-out men? - Well, Sir, I do not know. They are supposed to be. It may be that some companies would supply them and some companies would not supply them.  
2714. You know, I daresay, there is some difference of opinion as to whether it is desirable that the men who have to look out all round should have glasses? - Yes. 2715. That is, I believe, because it leads them to fix their attention on the spot to which they are directing the glasses? - Yes.  
2716. There is a difference of opinion about that. Now about this light that you saw after you were in the boat. You saw it before the "Titanic" went down, as I understand you? - Yes.  
2717. Were there more lights than one? - It seemed like a masthead light, or, as I said, it might be one of our own boats with a small light.  
2718. How far off did you think it was? - It might have been a matter of six miles; it might have been five miles.  
2719. Five or six miles? - It might have been that, five or six miles.  
2720. How long did you see it? - I could not say. I never know that I noticed it, because it was pointed out to me, and all the passengers were saying that they thought there would be a ship coming along. But really I could not tell whether it was a ship or whether it might have been one of our own boats that had gone away from the other side of the ship and pulled ahead.  
2721. You thought it might be a masthead light of a ship five or six miles away? - Yes, five or six miles away, of another ship; but as for being certain about it - I could not be certain.  
2722. The haze could not have been very bad if you thought it was a masthead light, five or six miles off? - This is afterwards, Sir. This is in the morning - when I say in the morning, it is about what time?  
2723. The "Titanic" sank about 2 o'clock? - Two something. *The Commissioner:* Half-past two.  
2724. (*Sir Robert Finlay.*) Before the "Titanic" sank? - This is after she had passed the berg, Sir. As she got clear of the berg the weather was clearer.  
2725. Had the whole haze gone by that time? Had the whole of the haze disappeared by that time? - It seemed to be clearer about that time.

2726. (*The Commissioner.*) About what time? - I suppose about 2.30, my Lord. 2727. Then did this haze come on some time before 12 o'clock, and then lift just about the time the "Titanic" was sinking. Are you sure this haze existed at all? - Yes, Sir, quite positive.
2728. (*Sir Robert Finlay.*) Was it ever very bad? - It was so bad that you could not see the iceberg, Sir.
- The Commissioner:* It was so bad that you could not see it.
2729. (*Sir Robert Finlay.*) It had lifted. When did it lift? - It cleared.
2730. When? - It was towards daylight. That is the only thing I can say.
2731. (*The Commissioner.*) But it was not daylight till about five o'clock? - No. 2732. I understand that when you saw this light the rockets were going up from the "Titanic"? - So they were.
2733. You saw the light before the "Titanic" went down, and when the "Titanic" was sending up rockets, and there was no answer from the light? - Not as far as we could see.
2734. (*Sir Robert Finlay.*) There is just one other matter that perhaps you can tell me about. When you saw the water coming in you looked down No. 1 hatch? - Yes. 2735. Could you see down to where on a lower deck the hatch was battened over and tarpaulined - battened down? - Yes.
2736. You saw down to that? - Yes.
2737. Below that would be the cargo? - Yes.
2738. You know that, do not you? - Yes.
2739. The various decks down to that would be decks with quarters for the firemen and so on? - Yes.
2740. You saw this hatchway? - I am not sure about this deck business. You could hear the water rushing in, but where it was coming from I could not tell you.
2741. What I want to know is did you see the water rising on the deck where the hatch was? - Yes.
2742. That is what you mean? - Yes, but I cannot tell you whether it was two decks or even below that.
2743. I will not trouble you about the number? - The water was making its way into the ship.
2744. I quite follow. All I wanted to get clear was that you saw down to this hatchway? - You could hear the water running in there.

**Page 80**

2745. You saw the hatchway where it was tarpaulined over and battened down? - Yes.
2746. The water was rising there? - The water was washing round it as it came on to the deck.
2747. Did you see where the water was coming from - did you see any hole or anything like that? - No, I could not see that from up top; you could not see that.
2748. From all you saw, the water may have been rising from below? - Rising from below for all I know.

**Further examined by the ATTORNEY-GENERAL.**

2749. If I understand you aright, I suppose you were examined by the doctor when everybody else was examined - when you were all told to fall in? - Yes.
2750. And not specially because you were the look-out man, or anything of that kind? - No.
2751. That is in accordance with the regulations. There is one question I would like to put to you, because I am not sure that we have got your answer clearly upon it. When you were in the crow's-nest did you first of all feel the impact, the blow of the vessel on the iceberg? Did you feel it? - The ship seemed to heel slightly over to port as she struck the berg.
2752. You felt her strike, did you? - Oh, indeed, Sir.
2753. Then she heeled a little over to port? - Very slightly over to port, as she struck along the starboard side.
2754. Could you tell at all whether she had struck above or below the waterline? Can you say that? - It was hard to say that - we would not know.
- The Commissioner:* What is supposed to have caused the ice to fall on the deck? Was it some part of the ship, the "Titanic," striking the berg above the waterline, or was it something that fell from the iceberg without the iceberg being struck.
- The Attorney-General:* I should have thought myself that it followed that the vessel must have struck the iceberg, and brought the ice on to the deck.
- The Commissioner:* So I should have thought, but I was wondering what part of the "Titanic" would strike the iceberg.
2755. (*The Attorney-General.*) I do not think there is any such suggestion. (*To the Witness.*) You have told us that you saw some ice fall on to the fore-well deck? - It must have been overhanging from the berg as she struck, otherwise it could not have come there, because there were no yards on the mast or anything of that sort. It must have been. 2756. It must have been either the head or the side? - It caused it to fall inboard. This is where it landed, just on that fore-well deck. (*Showing on the model.*) 2757. You did not notice that, did you. Did you notice whether there was any overhanging part? - No, I cannot say what was overhanging; I cannot say the size. 2758. Did you notice where it fell on the fore-well deck. Was it amidships or on the starboard side or port side? - It was on this side here, the starboard side. (*showing.*) 2759. I think there is one other thing you may still be able to tell us. When she struck, did the blow continue? Did she seem to be ripping along? - There was a rending of metal. 2760. Did you notice that? - Yes. You could hear that from where we were.
2761. You could hear a rending of metal? - Yes, you could hear a rending of metal right away. It seemed to be running right along the starboard side.
- The Attorney-General:* That is what I wanted to understand from you.

*(The Witness withdrew.)*

*(After a short adjournment.)*

**JOHN POINGDESTRE, Sworn.**

**Examined by MR. ASPINALL.**

2762. Were you serving as an A. B. on the "Titanic," at the time of this accident? - Yes.
2763. When did you join her; what day? - At seven o'clock on the Wednesday morning.
2764. Have you been on other liners? - Yes.
2765. What? - Some other White Star liners.
2766. Give me their names. - The "Oceanic" and the "Teutonic." 2767. Have you been in any other liners? - Yes.
2768. Give me their names. - Nearly all the Royal Mail liners leaving Southampton.
2769. Any other liners? - No, Sir.
2770. How many years' experience have you had on liners? - I have had three years' experience on liners.
2771. You joined on the Wednesday, I think you said? - Yes.
2772. And then the ship proceeded to sea? - Yes.
2773. Did you know what your boat was? - Yes.
2774. Which was your boat? - No. 12.
2775. How did you know No. 12 was your boat? - Because I made it my acquaintance to find out which boat I was in.
2776. How did you make it your acquaintance to know which boat you were in? - On the top of the foc'sle ladder leading down to our mess-room the list was put up acquainting each man of which boat he was in.
2777. You looked at it, and there you saw No. 12 boat for you? - Yes.
2778. Now I want to take you to the night of the accident. Was it your watch from eight to twelve? - Yes.
2779. What were your duties that night? - Standing by.
2780. What sort of weather was it? - Grand weather.
2781. What do you say? - Fine weather. 2782. Was it cold? - Rather cold.
2783. You call it "rather cold"? - Yes, rather cold. 2784. You had come on duty at eight? - Yes.
2785. Did the coldness continue, or did it get worse? - It got worse.
2786. And at the time of the accident how would you describe the weather, was it cold or very cold? - Terribly cold.
2787. And did you appreciate that it was getting colder and colder as you got along? - Yes, Sir.
2788. That is with regard to the temperature. With regard to the clearness of the atmosphere, how would you describe it? - Well, on the evening that the accident occurred it seemed to be fine weather.
2789. By "fine weather" - do you mean a good clear night for seeing lights? - Yes. 2790. At the time of the accident was it fine weather then? - Yes, Sir.

2791. Weather in which, according to you, you could see ships' lights at full range, do you mean? - Yes.
2792. Did you feel the shock from the ship striking the iceberg? - Yes.
2793. Where were you? - Underneath the fore-castle, outside the mess room, on the port side.
2794. On the port side, do you say? - Yes.
2795. Can you tell me this; at the time you felt the shock do you think your engines were working astern or working ahead? - I felt the vibration, but I could not say whether the engine was going ahead or astern.
2796. But it was a big vibration, was it? - Yes.
2797. A sort of vibration that would tell a sailor

### Page 81

that probably the engines were going astern? - Yes.

*Mr. Aspinall:* During this watch of yours from eight to 12, did you notice at what sort of speed your ship was travelling? Would you say she was travelling at her full speed? *The*

*Commissioner:* I do not understand you. You say the vibration was such as to indicate that the engines were going astern. The engines were stopped, were they not? *The*

*Attorney-General:* According to our view.

*Mr. Aspinall:* "Stopped." I think the order came, "Full speed astern," according to the earlier evidence.

*The Commissioner:* Were the engines ever reversed? They were stopped, I know.

*Mr. Aspinall:* I think, my Lord, there has been evidence that they were reversed.

*The Commissioner:* Very well.

2798. (*Mr. Butler Aspinall.*) Or we have it coming. (*To the Witness.*) At any rate, your view is that there was that vibration going on in the ship which one feels when the engines are put astern? - That is quite so, Sir.

2799. Having felt the shock, what did you do? - Came out on the fore-well deck.

2800. When you got out on the fore-well deck, did you see anything? - Yes.

2801. What did you see? - I knew we had struck an iceberg.

2802. Why did you know you had struck an iceberg? - I saw the ice on the deck.

2803. Did you see the iceberg itself? - No, Sir.

2804. Did you remain there, or go elsewhere? - I picked a piece of ice up and went underneath the foc'sle with it outside the mess room. 2805. You went back to your mess room? - Yes.

2806. Were you alarmed then, or not? - No.

2807. You thought nothing of it? - No.

2808. Having gone back to your mess room, did you remain there, or did you leave the mess-room? - I remained outside the mess-room for a few minutes.

2809. And then? - I saw the carpenter.

2810. Before you saw the carpenter, while you were remaining outside the mess-room, what was your ship doing? Did you notice? - I think the ship was stopped, Sir.

2811. Now I will just go back for one minute. With regard to the coldness of the night. Did you hear any orders which came from the Officer of the Watch to anybody? -

- Yes. 2812. What orders were those? - I saw Quartermaster Hichens about half-past nine, and he had orders to go and tell the carpenter to look after the fresh water as it might freeze. 2813. This was something that was told you, was it? - Yes, by the man himself that went and put the question to the carpenter.
2814. Hichens had orders. Did Hichens tell you who gave those orders? - Yes.
2815. Who? - Mr. Lightoller.
2816. And who is he? - The Officer of the Watch from 8 to 10.
- The Commissioner:* I have got that evidence somewhere already.
- The Attorney-General:* Hichens himself said it.
2817. (*Mr. Butler Aspinall.*) Now, to go back to where we were before; you were just telling me that you saw the carpenter? - Yes.
2818. Did anything pass between you and the carpenter? - Yes.
2819. Will you tell me what was said by the carpenter to you? - The carpenter told me, and said the ship was making water; "Get up to your boats."
2820. Did he give you any more definite information than that? - No.
2821. He did not tell you how much? - He said about 7 feet, Sir.
2822. Did he tell you whether he had been sounding himself? - He had been sounding the wells down in the firemen's compartment. 2823. He had done that? - Yes.
2824. He told you 7 feet of water was the result? - Yes.
2825. Now when the carpenter gave you that information how long do you think that was after the ship had struck the iceberg? - I think about 10 minutes.
2826. What did you do after the carpenter had told you that? - Stayed where I was.
2827. For about how long? - A matter of a couple of minutes.
2828. And at the end of a couple of minutes what did you do? - The boatswain piped.
2829. What did the boatswain pipe? - "All hands up and get the lifeboats ready." 2830. Now after the first pipe what did you do? - Went up on to the boat deck. 2831. Now having got on to the boat deck what did you do? - I went to the first boat I came to and cleared her away.
2832. On which side of the boat deck were you? - On the port side.
2833. And which boat did you go to? - I went to no particular boat; I cleared all away.
2834. How many boats did you help to clear away? - About 10.
2835. All on the port side? - No; I went from the port side over to the starboard side.
2836. Was there good order whilst those boats were being cleared away? - Yes, because there were only the sailors up there to do it.
2837. You were up the whole time on the boat deck? - Yes.
2838. Then the boats would be lowered down to the deck below for the passengers to get in? - No, not necessarily.
2839. Where were the boats lowered to? - Some boats were lowered to the promenade deck and some were lowered in line with the fish plate that is on the boat deck.
2840. Now, having assisted in getting these boats lowered away, what did you next do? - I went down the fore-castle.
2841. Back again to the fore-castle? - Yes.
2842. Now, why did you go back to the fore-castle? - To put my boots on.

2843. When you got back to the forecandle did you find any water coming in? - Yes.
2844. How long do you think it was after the ship had struck that you went back to the forecandle to put your boots on? - About three-quarters of an hour.
2845. Now I want you to tell me about the water. Where was the water that you saw when you went back to the forecandle? - Coming in through a bulkhead that had broken outside our forecandle, a wooden bulkhead from the third-class.
2846. Was it coming from abaft this bulkhead, or forward of it? - It was coming in from the starboard side.
2847. On the starboard side? - Yes, in line with our forecandle, where we slept. 2848. Was it coming from a place abaft where you slept? - No, forward of where we slept.
2849. From a place which was forward of where you slept? - Yes.
2850. About how far aft of the stem of the vessel did you sleep? Perhaps you do not know? - Well, I reckon 50 to 60 feet.
2851. Were you sleeping in a place which was forward of No. 1 hatch or aft of No. 1 hatch? - Aft of No. 1 hatch.
2852. Was this water coming in fast? - Yes, it was pouring in.
2853. Could you hear it as well as see it? - I was in it; I had to come through it up to my waist in water to get out.
2854. And it was pouring in? - Yes.
2855. (*The Commissioner.*) How did you get your boots? - While I was in the forecandle, getting my boots, this bulkhead broke as I was coming out - the wooden compartment leading from the third-class.
2856. (*Mr. Butler Aspinall.*) Was this a watertight bulkhead which broke? - No, a wooden one.
2857. The ordinary wooden bulkhead? - Yes, separating our forecandle from the thirdclass cabins.
2858. On which deck were you at the time you saw this bulkhead go? - I was in our forecandle.
2859. On which deck would that be? - I could not say; we call it the lower deck.

## Page 82

2860. One of the lower decks? - Yes.
2861. Do you know where the seamen's wash place is? - It is right opposite.
2862. Is it the same deck? - Yes, right opposite the washroom door.
2863. (*Mr. Butler Aspinall.*) That is deck E, my Lord. (*To the Witness.*) Is your place aft of the seamen's wash place? - Yes.
2864. I see there is a space on the place for "seamen"? - Yes, just abaft the bath room.
2865. On the port side? - Yes.
2866. Now the bulkhead that carried away, is that a bulkhead which is aft of that? - No.
2867. Forward? - Directly opposite our bathroom door.
- The Commissioner:* Is this wooden bulkhead worked on any plan?
- The Attorney-General:* That is what we are trying to find, my Lord.
- Mr. Butler Aspinall:* Has your Lordship got deck E? Deck E, 44 seamen on the port side?

2868. (*The Commissioner.*) Was it a fore and aft bulkhead that gave way? - Yes, a fore and aft bulkhead.

2869. (*Mr. Butler Aspinall.*) Did the water come from the starboard side? - Yes.

2870. Now, did you remain below? - No, a matter of half a minute.

2871. You cleared out? - Yes, as fast as I could.

*The Attorney-General:* Has your Lordship got it now where it is on the plan?

(*The Attorney-General pointed out the position on the plan to his Lordship.*) 2872.

(*Mr. Butler Aspinall.*) It is difficult to measure time on these occasions, but how long do you think it was after the ship struck the iceberg that this fore and aft bulkhead carried away? - About half an hour.

*The Commissioner:* He first said he went to this place to get his boots three-quarters of an hour after the collision, and that when he got his boots and was coming out then the wooden bulkhead gave way. That must have been, if anything, longer than three-quarters of an hour.

*Mr. Butler Aspinall:* It is very difficult, my Lord.

*The Witness:* Well, about three-quarters of an hour, my Lord.

*The Commissioner:* It is near enough.

2873. (*Mr. Butler Aspinall.*) You cleared out, you say? - Yes.

2874. Where did you go to then? - I was going up on to the boat deck to go towards my own boat, and I heard the Captain pass the remark, "Start putting the women and children in the boats," and then I went to my boat, No. 12.

2875. Now, on your way from your quarters up to the boat deck would you go near where the third-class passengers could get out from their quarters up to the deck? - Yes, they were already out.

2876. How do you know that? - I passed them on the fore-well deck on the port side.

*The Commissioner:* Which were those?

2877. (*Mr. Butler Aspinall.*) Those were third-class passengers, my Lord; he says he knows the third-class passengers were out because he passed them on his way. (*To the Witness.*) I want you to explain that.

2878. (*The Commissioner.*) Now you are talking about the third-class passengers in the fore part of the vessel? - Yes. 2879. By the fore-castle? - Yes.

2880. (*Mr. Butler Aspinall.*) How do you know they were out? - You say you passed them; what do you mean by that? - Well, I saw them with my own eyes, with their own baggage on the deck.

2881. Did you see them coming up? - They were already there. 2882. Was there a large number of them there? - Yes.

2883. And when you say "there" what do you mean precisely by that? - On the port side of the well deck, outside, from under the fore-castle.

2884. As you passed, I suppose it was a short time? - Well, it was directly I came out of the fore-castle.

2885. You saw them gathered there? - Yes.

*The Commissioner:* I want to know where they were gathered?

*Mr. Butler Aspinall:* I think he could point out to your Lordship.

2886. (*The Commissioner.*) Were they gathered on the well deck or did he see them on the boat deck? - Gathered on the well deck, my Lord, port side.
2887. (*Mr. Butler Aspinall.*) It is difficult to tell numbers on a dark night? - There may have been 50 or there may have been 100, I could not say.
2888. Were they not only gathered, but were they remaining there? - Yes.
2889. Stopping there? - Yes.
2890. Were there men, women, and children? - No.
2891. What were they? - They were men, foreigners.
2892. You saw no women? - None whatever.
2893. It may be the women are berthed aft of the ship? - Yes, aft, away from the men altogether.
2894. Now, was there anybody connected with the ship, stewards or sailors, or anybody else, giving any information to these people? - Yes.
2895. Who was giving information? - The third-class stewards were with them, some of them.
2896. They were with them? - With the passengers.
2897. Were they telling them anything? - They were conversing with them.
2898. What do you mean by that? - Why, speaking to them.
2899. Did you hear anything they said to them? - No.
2900. Were there any orders being given - you know what I mean - orders in a loud voice? - I never heard any.
2901. They were gathered together? - Yes, in a bunch.
2902. And talking? - Yes.
2903. Then you passed along? - I went up the ladder then to go to the boat deck. 2904. And when you had gone up to the boat deck did you leave behind you these people on the well deck? - Yes.
2905. Now having got up what did you do? - I went along to No. 12 boat.
2906. That's your station boat? - Yes.
2907. When you got to your station boat in what condition was it? Where was it? - Hung to the davits.
2908. Was it swung out? - Yes.
2909. (*The Commissioner.*) What number was your boat? - No. 12.
2910. (*Mr. Butler Aspinall.*) That is on the port side? - Yes.
2911. The last boat but two? - Yes.
2912. Now having got to your boat, was it in a line with the boat deck or had it been lowered? - It was lowered, but in line with the boat deck.
2913. In a line with the boat deck? - Yes.
2914. Was there anybody there looking after it? - Yes.
2915. Who? - Mr. Lightoller.
2916. Is he an officer? - Second Officer.
2917. Was there anybody else with him? - No, only myself.
2918. Only you two? - Yes.
2919. Were there any passengers up there? - Yes.
2920. Were they males or females, or both? - Both.

2921. Children? - Yes.
2922. Many of them at that boat? - There were hundreds gathered round waiting to get into the three boats.
2923. When you speak of three boats, which boats do you mean? - Nos. 12, 14, and 16.
2924. Were you able to distinguish between these people whether they were first, second, or third-class passengers? - No.
2925. Now what happened with regard to your boat, No. 12? - We filled her up with women and children - me and Mr. Lightoller, the Second Officer.
2926. How many women and children? - About 40.
2927. This was a lifeboat, was it not? - Yes.
2928. How many would it hold? - The full carrying capacity of the big lifeboats is 65.

**Page 83**

2929. Now having, to use your own phrase, filled it up with about 40, what was done with that boat? - It was left there.
2930. Left on a level with the boat deck? - Yes, with the boat deck.
2931. How long was it left there? - I went away, and helped fill another boat after that
2932. Which boat did you go to help with? - No. 14.
2933. That is a boat immediately abaft No. 12? - Yes.
2934. How long were you away with No. 14? - A matter of about ten minutes.
2935. Was there any officer looking after No. 14? - Yes.
2936. Who? - Mr. Wilde, the Chief Officer.
2937. Anybody besides him? - No.
2938. So you helped the First Officer? - Yes, the Chief Officer.
2939. Were people put into that boat? - The boat was filled with women and children also.
2940. About how many? - About 40.
2941. And was that boat left, as you call it? - No, the boat was lowered.
2942. That boat was lowered into the water, and who went away in that boat? - I could not say.
2943. Did the officer go away? - No.
2944. What did you do next? - I went to my own boat.
2945. No. 12? - Yes.
2946. When you got back to No. 12, was there any officer there? - Yes.
2947. Who? - Mr. Lightoller.
2948. Any seamen, firemen, or anybody else? - Yes, there were some sailors there.
2949. Do you know their names? - Yes.
2950. What were their names? - There was Lucas, who lowered the boat, and another man who lowered the other end I did not know, but another man I asked to come in the boat by the name of Clinch.
2951. Did he come in the boat? - He came in the boat at my own request.
2952. That is an officer and three seamen? - No, they were gone.
2953. Two of them helped to lower? - And two of us were in the boat.

2954. You and the third one were in the boat? - Yes.
2955. So that the boat, when it was lowered to the water, contained two sailors, you and Clinch? - Yes.
2956. When the boat was lowered to the water how many people were in her when you last left her? - About 42.
2957. You are precise; did you count the number? - No. I never had any time to do that.
2958. Do you know how it comes that there were not more than 42 put into this boat? - Yes.
2959. Why? - Well the reason is that the falls would not carry any more.
2960. You mean somebody was frightened of the falls? - Yes, the second officer, Mr. Lightoller.
2961. Now having lowered her down to the water did Mr. Lightoller give you any orders as to what to do with the boat? - He gave me orders before the boat was lowered what to do.
2962. What orders did he give you? - To lay off and stand by close to the ship.
2963. Were there any left on the boat deck as the boat was being lowered? - No women.
2964. Men? - Yes.
2965. How did the passengers behave - well? - Well, they did not where I was. 2966. (*The Commissioner.*) What were they doing? - They were trying to rush No. 12 and No. 14 boats.
2967. Men, you mean? - Yes.
2968. (*Mr. Butler Aspinall.*) Did you have to keep them back? - Yes, to the best of my ability.
2969. Who did that? - Myself and Mr. Lightoller and the other two sailors who were standing by to lower. They could not lower the boat as it should have been lowered because of the passengers. Men were on the boat falls; they could not get them clear. 2970. Could you tell the Court who those were who were trying to rush the boat? - Passengers.
2971. What sort of passengers? - Second and third.
2972. (*The Commissioner.*) Men passengers? - Yes, my Lord.
2973. (*Mr. Butler Aspinall.*) No. 12, I see according to the plan, is somewhere in the neighbourhood of the second-class promenade, is it not? - Yes.
2974. At any rate, the boat only contained women and children? - Yes, and two hands.
2975. Now having got her down to the water, did you obey Mr. Lightoller's orders? - Yes.
2976. Did you go and stand off? - Yes.
2977. After you had got her into the water, did you speak any other boat? - Yes.
2978. What were they? - Three lifeboats and a collapsible boat.
2979. And did you get any men to help you in looking after your boat from any of those other boats? - Yes, from the collapsible boat.
2980. What did you get from the collapsible boat? - A sailor and two firemen.
2981. How came it that the collapsible boat could spare a sailor? - I could not say. 2982. Was the collapsible boat full? - The collapsible boat was full, but it had more men than what I had.

2983. You only had how many? - Two.
2984. So they lent you these hands? - Three.
2985. We have heard this before. Did you make your boat fast to some three other lifeboats? - No.
2986. What did you do? - Had the boats made fast to me.
2987. Do you know if there was a man called Lucas in the collapsible boat? - Yes, Lucas was the sailor I took from the collapsible boat.
- The Attorney-General:* That would show, my Lord, that when Lucas said No. 8, he really must have meant No. 12.
2988. (*Mr. Butler Aspinall.*) Whilst your boat was in the water did you see the "Titanic" sink? - Yes.
2989. How long do you think it was after she struck the iceberg that she sank? - About two and a half hours when she was last seen.
2990. After she sank did you see any people struggling in the water? - No.
2991. How far away from the "Titanic" were you? - About 150 yards.
2992. After she sank did your boat pull in towards the place where she sank? - Yes.
2993. For what purpose? - To pick up anybody who was there.
2994. Was there anybody there? - I never saw anybody.
2995. Did you see any corpses? - No.
2996. You saw nothing? - I saw some by daylight.
2997. Did you hear any cries? - Yes.
2998. Did not the cries guide you so as to enable you to go to them? - Certainly.
2999. Did you go in that direction? - I pulled in the direction the cries came from.
3000. Did not you find anybody there? - No.
3001. Did you see nobody? - Nobody whatever.
3002. Are you sure? - Yes.
3003. When you pulled in that direction, did the passengers on board your boat approve of your doing so? - Yes.
3004. And you went and searched and found nobody? - Yes.
3005. You are sure of that? - Yes.
3006. Because you had a good deal of room in your boat? - Well, it did not look much room to my idea.
3007. According to your numbers your boat had 42? - Yes.
3008. And you and Clinch? - Yes, 40; and Clinch and me is 42.
- The Commissioner:* And it is constructed to carry 65.
3009. (*Mr. Butler Aspinall.*) Yes. (*To the Witness.*) You say you did go and look and found nobody? - Yes.
3010. I am directing your attention to the point of time after the "Titanic" went down and you pulled in the direction of the cries; was that before

**Page 84**

- you had got them in from the collapsible boat? - Yes.
3011. It was? - Yes.

3012. So that at that time there was a great deal of spare room in your boat. You think not you say? - No.
3013. We know what the capacity of the boat is. How long did you remain looking, do you suggest, for the people? - About a quarter of an hour.
3014. And you saw nothing? - Nothing at all.
3015. Did you see wreckage? - Only about a couple of hundred deck chairs.
3016. But you saw no bodies? - No bodies whatever.
3017. During that quarter of an hour, while you were looking, how long did the cries continue? - All the time that we were looking we heard the cries.
3018. And yet you found nothing? - We found nothing at all.
3019. These cries were going on for the whole of the time you were searching? - Yes.
3020. What was the nearest do you think that you got to any of these cries? - I reckoned about 100 yards.
3021. And then did they cease? - Yes.
3022. Can you account for that? - I can account for not going to the position where I ought to have been.
3023. Well, will you tell us? - There were not enough sailors in my boat, only me and my mate, and we could not get there.
3024. (*The Commissioner.*) Get where? - To where the halloes were coming from - the cries.
3025. I thought you could not find that?
3026. (*Mr. Butler Aspinall.*) What is the name of the other man who was in the boat with you? - Clinch.
3027. Do you know whether he is in this country? - He is not; he is coming home.
3028. He is coming home? - Yes.
3029. At the end of this quarter of an hour what did you do then? - I hailed for other boats.
3030. Hailed for them? - Yes.
3031. What do you mean by that? - Called to see if there were any in the vicinity of where I was.
3032. Had you a light in your boat? - No.
3033. Did you look for one? - Yes.
3034. Is there a place for a light? - Well, there is not a place made in the boats for a light, but it is a case of having a lamp tied up in the after-thwarts.
3035. Did you look there? - Yes. I knew where to go and find it.
3036. Were there sufficient oars in the boat? - Yes.
3037. Was there any water in the boat? - Yes.
3038. Were there any provisions? - Yes.
3039. At the end of this quarter of an hour you hailed the other boats; did you get any answer to your hail? - Yes.
3040. What answer did you get? - I heard somebody call out, and they came up to us - another lifeboat.
3041. Were they showing you a light from that other boat? - No.
3042. Do you know the number of that lifeboat? - No.

3043. Do you know who was in charge of it? - No.

3044. Was it an officer or a seaman? - A seaman.

3045. Do you know the name of the man in charge? - I think it was Foley, a storekeeper.

3046. Did anything pass between you and that boat with regard to changing passengers? - No.

3047. (*The Commissioner.*) What did you hail it for? - To tie up, to keep together.

3048. (*Mr. Butler Aspinall.*) Did you tie up and keep together? - Yes.

3049. What happened next? - We saw another boat in charge of Officer Lowe.

3050. Did that boat come to you, or did you go to it? - He came to me.

3051. When he came to you, what happened? - He discharged some of his passengers into my boat and some into the other boat that was tied up astern of me.

3052. How many passengers did he put into your boat? - About a dozen.

3053. Did he remain with you then, or go away? - A few minutes.

3054. And at the end of the few minutes what did he do? - He took the men crew, what he had already had, and went and searched.

3055. He went off to search. Now were the cries still going on? - No.

3056. Did you tell him anything which led him to go and search? - No.

3057. Did he tell you anything? - He told me he was going to search and to stop where I was.

3058. What were the people that were put into your boat? Were they women, or men and women? - Women; I would not take any men.

3059. You would not take the men? - No.

3060. Now, Mr. Lowe went away? - Mr. Lowe went away.

3061. What happened next? - We met another lifeboat.

3062. (*The Commissioner.*) This is a third, is it? - Yes.

3063. (*Mr. Butler Aspinall.*) Do you know the number? - I believe it was 14.

3064. When you say you believe it was 14, what is your reason for believing it? - Well, I am not certain.

3065. It is a guess? - Well, I do not know.

3066. Do you know who was in charge of that boat? - No.

3067. Do you know the name of anybody who was in that boat? - No.

3068. Was an officer in the boat? - No.

3069. Do you know a man named Scarrott? - Yes.

3070. Was he in that boat? - I could not say; I do not know.

3071. Did you have any conversation with them? - No.

3072. Did they make fast? - To the boat behind me.

3073. Was that boat full, as far as you could see? - As far as I could see it was full.

3074. Did you take anybody from that boat? - No.

3075. What happened next? - We were all together.

3076-7. You three? - We saw the lights of the "Carpathia" coming up. We had never seen the light before; I never. I saw an imaginary light which kept showing for about ten minutes.

3078. (*The Commissioner.*) How do you see an imaginary light? - Well, what we thought was a light. There is such a thing at sea as seeing imaginary lights.

3079. Oh, is there? - Yes.
3080. (*Mr. Butler Aspinall.*) When did you see this imaginary light? I do not mean was it twelve or half-past, but was it while you were on the "Titanic" or after you had left the "Titanic"? - When I had left the "Titanic."
3081. (*The Commissioner.*) I do not understand it. Did you imagine that you saw a light? - Yes.
3082. Or did you see a light that you imagined, which? - Well, one way or the other.
3083. (*Mr. Butler Aspinall.*) Where was it that you saw what you call this imaginary light? - Off my port bow.
3084. Is that the port bow of your lifeboat? - Yes.
3085. (*The Commissioner.*) Have you ever seen imaginary lights at sea before? - Yes.
3086. Are they frequent things? - Yes, I have been on the look-out on ships on the fore-castle-head, and reported a light, and it has been an imaginary light; as soon as you see it it has gone again.
3087. (*Mr. Butler Aspinall.*) How high above the horizon or above the sea do you think this imaginary light was? Was it low down, or rather high up? - It seemed low.
3088. Low down, near the horizon? - Yes.
3089. What distance did you judge it to be? - A matter of four or five miles.
3090. (*The Commissioner.*) And what do you think it was? - I could not say.

## Page 85

3091. (*Mr. Butler Aspinall.*) What colour was it? - White.
3092. Might it have been a star, do you think? - Well, it might have been.
3093. You saw no sidelight, did you? - No.
3094. No red or green light? - None whatever.
3095. Was there any general talk in your boat about this imaginary light? - Well, I spoke to the women about this light and said, "We are all right, we shall be picked up in a minute; there is a ship coming."
3096. Did you hear any explosions? - A slight one.
3097. From the "Titanic" when she sank? - A slight one. 3098. One? - One.
3099. Did you see any rockets sent up from the "Titanic"? - Yes; there were rockets sent up before I left the ship.
3100. And after? - Yes.
3101. I have asked you about any general talk on your boat about the light. Was there any conversation between you and the other boats about this light? - No.
3102. There were three of you all tied together? - Yes.
3103. Nothing was said about this light? - Nothing.
3104. (*The Commissioner.*) I thought you said to the women in your boat that you could see the light? - Yes, so I did, my Lord.
3105. And told them they would be picked up in a few minutes? - Yes, my Lord.
- The Commissioner:* What is it you are asking him about Mr. Aspinall?

3106. (*Mr. Butler Aspinall.*) I was asking him when the three boats were tied together whether there was any talk between boat and boat about the light, and he says no. (*To the Witness.*) You said you saw the "Titanic" sink? - Yes.

3107. How far away were you when she sank? - About 150 yards.

3108. Now will you describe to us what you saw happen when she sank? - Well, I thought when I looked that the ship broke at the foremost funnel.

3109. What led you to that conclusion? - Because I had seen that part disappear.

3110. If she sank by the head you would see that part disappear, would you not? - Yes.

3111. What was there about the disappearance that led you to think she broke? -

Because she was short; the afterpart righted itself after the foremost part had

disappeared. 3112. (*The Commissioner.*) Do you mean to say that the fore part of the vessel went down to the bottom, and that then the remainder came on an even keel? - Yes.

3113. (*Mr. Butler Aspinall.*) Before the ship sank just tell me this, what was the position of the vessel? I have a pen in my hand? - Well, the water was up to the officers' house.

3114. Assume, for a moment, that is the officers' house. Now could you see under the keel of the ship abaft the officers' house? - Yes, the propeller and everything was quite clear.

3115. Underneath? - Yes.

3116. Then the water comes up to the officers' house. Was it then that the forward part disappeared? - Yes.

3117. And then what happened to the afterpart? - It uprighted itself, as if nothing had happened.

3118. You mean it came back like that, so to speak? - Yes, straight on the water again.

3119. Did it float on the water for any appreciable time? - Not above a couple of minutes.

*The Commissioner:* Has there been evidence of breaking before?

*The Attorney-General:* Not of righting itself and again floating - not that part. *The*

*Commissioner:* She was already down by the head a great deal, and then at the last she took a sudden plunge, her afterpart went up, so to speak, in the air, and then she went down.

*The Attorney-General:* There is evidence of her breaking.

*The Commissioner:* There is evidence of noise. Will you tell me what is the evidence of breaking? You mean to say evidence that we have not had yet?

*The Attorney-General:* No; evidence I think that your Lordship has had.

*The Commissioner:* Well, will you tell me who it is that speaks to it?

*The Attorney-General:* I think Jewell did.

*The Commissioner:* Do you know which Witness it was?

*The Attorney-General:* That is what we are trying to find, my Lord.

*Mr. Butler Aspinall:* It is not in my recollection that it has been proved.

*The Attorney-General:* Well, we will see.

*The Commissioner:* Nor is it in the recollection of any of my colleagues. It may be that you have read it.

3120. (*Mr. Butler Aspinall.*) I think so, my Lord. In some of these documents there is a statement about it. (*To the Witness.*) With regard to the number of people that you took from the other boat into yours, did you count them, or is it a guess about the number? - I counted them.
3121. And you counted them as being twelve? - Yes.
3122. I tell you why I am asking you these questions, because another Witness, by the name of Lucas, has been called, and he told us of this transfer of passengers, and he spoke of 36 being put into your boat? - I can explain that to you.
3123. Will you explain it? - Because the 36 men, that Lucas said he had transferred from one boat to another, he is meaning the boat picked up by Mr. Lightoller, the upturned boat, the collapsible boat. That was at dawn on the Monday morning. That is where Lucas made the mistake - from one boat to another.
3124. You think that is how the confusion may have arisen. You say you counted 12 into your boat? - 12 women from Mr. Lowe's boat. This was about three o'clock in the morning.

**Examined by MR. SCANLAN.**

3125. How many men do you think would be required to man one of these lifeboats? - Five.
3126. Five sailors? - Five sailors, four and a coxswain.
3127. Would that number be sufficient to enable you to row even in stormy weather? - Yes.
- The Commissioner:* Another man said 12, did he not? *Mr. Scanlan:* He said 12, my Lord.
- The Witness:* 12 is a full boat's crew, my Lord.
3128. If you had every oar in use you would require 12? - You would require 13. 3129. When you speak of a crew of 13 do you mean a number of stokers and stewards as well as seamen? - As well as seamen. 3130. How came it that your boat, No. 12, left the "Titanic" with only two seamen? Were there any others on the deck at the time? - No, only the two men that were lowering the boat.
3131. Now you stated that Mr. Lightoller warned you that the falls might give way? - Yes.
3132. If you took on any more passengers? - Yes.
3133. Were not the falls for this boat No. 12 similar in every way to the falls of the other boats? - Quite so, bar No. 1 and No. 2.
3134. What was the difference between the falls of No. 12 and the falls of Nos. 1 and 2? - No. 1 and No. 2 are small boats; No. 12 is a large lifeboat.
3135. On all the large lifeboats like No. 12 were the falls similar? - Exactly the same.
3136. Do not you know that a number of the other boats were lowered with a full complement of passengers, 65? - That I could not say.
3137. You do not know that. Where did you expect to find a lantern? - Tied up in the after thwarts.
3138. Is that the place where in ordinary practice the lantern is kept? - Yes.

3139. At what stage of the voyage is it put there? - Before the commencement of the voyage.
3140. Did you make a careful search for the lantern? - Yes.
3141. Did you search for it before lowering the boat? - No.
3142. Did you find in this boat, No. 12, a compass? - No.
3143. Can you tell my Lord if there was a compass in the boat? - There was not a compass in the boat.
3144. Had the boat a sea anchor? - Yes.
3145. I understand your previous experience extends to Royal Mail liners, and that you have been sailing on them for about three years? - Yes.
3146. Was it usual on all those to have a muster of the crew for boat drill? - Yes. 3147. Does that take place every week? - Every Saturday afternoon.
3148. Had there been such a muster on the "Titanic"? - There had not been a muster, but there had been boat drill.
3149. Is that the boat drill which took place at Southampton? - Yes.
3150. Which consisted merely of lowering two boats? - And going away and coming back; a Board of Trade muster.
3151. It did not provide for bringing the stokers on deck and showing them their stations? - No.
3152. I understand that you have been a look-out man at times? - No.
3153. Well, you have done look-out duty, I think you said? - I have. 3154. On the fore-castle-head? - Yes.
3155. On what kind of ships? - On the Royal Mail boats, and also on the "Oceanic" and the "Teutonic."
3156. And those are ships which have crow's-nests as well? - Yes.
3157. On those boats has it been the practice to have as well as the look-out man in the crow's-nest, a look-out man at the fore-castle-head? - Yes, and the White Star Liners always do have one.
3158. From your experience is the fore-castle-head a good place from which to keep a look-out? - Well, it is.
3159. (*The Commissioner.*) Is it better than the crow's-nest? - No, my Lord.
3160. (*Mr. Scanlan.*) Would it be better for icebergs than the crow's-nest? - No.
3161. Were you provided with binocular glasses on those other liners? - Well, you are.
3162. (*The Commissioner.*) Do you use them? - Yes, my Lord.
3163. Is your sight bad? - No.
3164. (*Mr. Scanlan.*) Are binocular glasses given to the look-out men in the crow's-nest, and also to the look-out man at the fore-castle-head? - Yes.
3165. You have had them yourself? - Yes, and used them.
3166. Did you find it of advantage to have them? - It is in the day, but I cannot say anything about at night.
3167. Did you see collapsible boats being got off? - No.

3168. In the lowering of the other boats when you were assisting on deck, were you in a position to see whether they had lanterns? - Not in the boats.
3169. When you were clearing them? - No, we only cut the covers off and threw them on one side.
3170. When you hailed the other boats in the course of the night before being rescued by the "Carpathia," did you observe whether or not they had lanterns? - Nobody had a light; only Mr. Lowe had a flash electric light belonging to himself, I believe.
3171. Is it your evidence that all the boats you came across from leaving the "Titanic" until you were rescued were unprovided with lanterns? - Yes, quite right.
3172. Did this make it specially dangerous for you in navigating your boats at night? - Not necessarily.
3173. (*The Commissioner.*) No harm occurred as far I know from there being no lanterns on board? - No, my Lord, none whatever.

**Examined by MR. HARBINSON.**

3174. Do you know how many third-class passengers were in the fore part of this "Titanic"? - No.
3175. You say you saw a great number about when you were going down on the well deck? - When I was coming up from the well deck.
3176. That would be about three quarters of an hour after the collision? - Yes. 3177. With regard to this bulkhead that you have spoken of, which broke, it separated your compartment from the third-class compartment; it ran between them? - Yes.
3178. Did the breaking of that bulkhead involve the flooding of the third-class compartment? - The third-class compartment was flooded.
3179. Before the bulkhead broke at all? - Yes.
3180. Did you see people come up? - Yes.
3181. Were they up at the time? - They were up when I came up from the fore-castle.
3182. Had you heard previous to that any instructions given by the officers to the passengers in the third-class compartment? - No. 3183. You heard none given? - No, none whatever.
3184. (*The Commissioner.*) Were you anywhere where you could hear any orders? - No. I was up clearing away the boats; if an order was given that is where I was. *The Commissioner:* It is no use asking that because he was not in a place where he could hear.
- Mr. Harbinson:* He did not hear.
- The Commissioner:* Of course, he did not if he was not in a place where he could. 3185. (*Mr. Harbinson.*) About how many men were left on the well deck when you put off in the boat? - I could not exactly say.
3186. Was there a big crowd? - There was a crowd.
3187. Mainly third-class passengers? - All third-class passengers.
3188. And in this boat that was lowered there were only two seamen? - In my boat.

3189. You pulled away, I understand, about 150 yards from the "Titanic"? - Yes. 3190. I gather you to say that if there had been more seamen in your boat you could have gone to the assistance of the cries? - I could.
3191. It was because of insufficient manning that you were unable to rescue? - Quite so.

**Examined by MR. HOLMES.**

3192. The number of 40 that you have given us of passengers that got into your boat was only a rough estimate on your part. You did not count them? - That is correct.
3193. Do you know whether Mr. Lowe counted them? - No.
3194. Did the boat appear to you to be sufficiently full when it was lowered? - Yes, because people with lifebelts on take up room for two.
3195. You told us that the boat was being rushed by some of the third-class passengers? - Yes.
3196. Had that anything to do with the anxiety to get the boat lowered and out of the way? - Yes, it was a great inconvenience.
3197. It was advisable to get it away at once? - Yes.

**Page 87**

**Examined by MR. LEWIS.**

3198. I understand you assisted in lowering a number of boats before you went to your own? - Yes.
3199. How long did it take you before you reached your own boat? - About 45 or 50 minutes.
3200. When you came to your own boat were there any other sailors there? - Yes, three.
3201. They assisted to lower the boat? - Yes, and went in the boat.
3202. Were you ordered out of your boat? - Yes, I was ordered out of it.
3203. You subsequently returned? - I was ordered out of the boat by Mr. Lightoller.
3204. Did you go? - Yes.
3205. Did you subsequently return? - I said to Mr. Lightoller, "There is no seaman in that boat." He said "all right, go back again."
3206. Because there was no seamen in the boat you were allowed to go back? - Yes.
3207. With regard to third-class passengers, from your general knowledge, would they be allowed under ordinary circumstances upon the boat deck? - No.
3208. They would be kept back if they made any attempt? - No doubt they would. 3209. Who would they be kept by - the Master-at-arms? - The Master-at-arms and the stewards.
3210. I suppose the Master-at-arms was on duty upon this evening? - Yes. 3211. And as far as you know the rules would be in operation then as on ordinary occasions? - Yes.
3212. (*The Commissioner.*) Do not you know that all barriers were down? - All barriers were not down.

3213. We have been told all barriers were down. Were any barriers down? - I never saw any.

3214. If they were not how did the third-class passengers get to the boat deck? - Up the ladder leading from the after-well deck.

3215. And how then? - Up through the second-class companion way.

3216. Would there be no barriers there, keeping them from getting through the secondclass? - The doors were locked at the time; the second cabin doors, where they had entrance to go on to the boat deck, were locked.

3217. Those had been unlocked, had they? - I could not say.

3218. How do you account for the third-class passengers being there? - That is the only way up, my Lord, from the afterpart of the ship.

3219. They had been able to find their way there somehow? [No Answer.] 3220. (*Mr. Lewis.*) How many third-class passengers did you observe, grouped together? I think you said you saw passengers grouped? - On the fore-well deck - about a hundred.

3221. Under ordinary circumstances would it be difficult for third-class passengers to get from one portion of the vessel to the other? - Yes. 3222. I suppose more difficult when there is a crowd? - Sure.

3223. When you took the men off the up-turned boat. I think you took a number of men into your lifeboat? - Quite right.

3224. About how many had you in the boat then? - About 90.

3225. Was it dangerous? - The starboard gunwale was getting under water every time anybody moved.

3226. If there had been a slight breeze it would have been dangerous? - There would have been no chance whatever.

3227. I understand you have served in other companies besides the White Star? - Yes.

3228. The Union Castle? - No.

3229. The Royal Mail? - Yes.

3230. Do I understand that in that company they have a larger number of hands in proportion to their tonnage than the White Star? - Yes.

3231. (*The Commissioner.*) Have you studied the subject? - Yes.

3232. Then you can tell me the tonnage of one of the Royal Mail boats and the number of lifeboats on her? - There is one Royal Mail boat that I was in about 3,000 odd tons.

3233. Can you tell me the tonnage of a Royal Mail boat and the number of boats on board that vessel, and the name of the vessel? - I can tell the name of the vessel but I could not tell you the tonnage.

3234. Then how do you know that the proportion is greater? - Because the "Titanic" was four times her size.

3235. I want you to answer not too readily but after thinking. I want to have accurate evidence if I can get it. You told me there is a larger proportion of lifeboats according to the tonnage, on the Royal Mail boats than there was upon the "Titanic"? - Yes. 3236. Now can you give me the tonnage of a Royal Mail boat and the number of boats upon that Royal Mail boat, and her name? - I do not know exactly the tonnage, but it is 3,000 odd.

3237. What is the name of the boat? - The "Arragon."

3238. Over 3,000 tons? - I have the tonnage in my pocket.

3239. The "Arragon" over 3,000 tons?  
*The Attorney-General:* He says he has it in his pocket.

3240. (*The Commissioner.*) Very well, let me see it. (*To the Witness.*) What is the proportion of lifeboat accommodation? - Sixteen.

3241. And how many is each boat intended to carry? - Fifty to sixty.

3242. Now let me see it. (*The document was handed to the Commissioner.*) The tonnage on this paper is 5,397? - Yes, my Lord, it would be. That is from the Board of Trade.

3243. You said "over 3,000."  
*Sir Robert Finlay:* "Three thousand odd" was his expression.

3244. (*The Commissioner.*) On this paper it is 5,000 odd - 5397. Where does the lifeboat accommodation appear on this paper? - The lifeboats do not appear upon that, but I know from experience.  
*The Attorney-General:* I think he was on her. I do not know whether he served on her; I think he did.

3245. (*The Commissioner - To the Witness.*) Did you serve on her? - Yes, my Lord.

3246. (*Mr. Lewis.*) The tonnage is something over 5,000 tons I understand? - Yes.

3247. What is roughly the tonnage of the "Titanic"? - Forty-six thousand odd, I believe.

3248. How many boats were on the "Titanic"? - Sixteen, and four rafts. 3249. And how many on the boat you speak about? - Sixteen.

3250. Would they be the same size, or smaller? - Near about the same size.  
*The Commissioner:* It is really no use whatever. If this evidence is to be of value it must be accurate. "Near about" conveys nothing to my mind.  
*Mr. Lewis:* You have the evidence that this boat was over 5,000 tons.  
*The Commissioner:* Yes, he began by saying 3,000.  
*Mr. Lewis:* Yes, but he had the figures in his pocket, my Lord.  
*The Commissioner:* It makes a good deal of difference if he was thinking of 3,000 tons, when he said the proportion of lifeboats was in excess. He may have been right, but it makes a great deal of difference if the 3,000 is altered to 5,000.  
*Mr. Lewis:* And also if the lifeboats are smaller. It is common knowledge that the accommodation provided by that particular company is much better than that provided by the White Star Company.  
*The Commissioner:* That may be important, but if it is to be important to me it must be accurate.  
*Mr. Lewis:* Well, as near as possible, my Lord, but sailors as a rule are not particularly accurate.  
*Sir Robert Finlay:* There cannot be the slightest difficulty in getting authentic information.  
*The Commissioner:* The Royal Mail office will give you the information. *The Attorney-General:* We will take care that that evidence shall be brought before your Lordship. I quite appreciate it must be accurate.

**Page 88**

*The Commissioner:* He does not remember whether it was 3,000 or 5,000. It is no good.

3251. (*Mr. Lewis - To the Witness.*) If you will tell us the number of boats carried on the Royal Mail boat I am content. Can you tell us? - 16.

3252. Can you tell us the number of men carried by the Royal Mail Company on the boat I referred to? - 50.

3253. How many A. B.'s? - Two to a boat.

**Examined by MR. COTTER.**

3254. How long have you been in the employ of the White Star Line? - About six months.

3255. When did you join the "Titanic"? - When she left Southampton. I joined the "Titanic" in Southampton.

3256. What do you mean by when she left Southampton? - I joined the "Titanic" in Southampton.

3257. How many days before she sailed? - On Good Friday.

3258. That is about five days before she sailed? - Yes.

3259. (*The Commissioner.*) She sailed on the Wednesday, did she not?

3260. (*Mr. Cotter.*) Yes, my Lord. (*To the Witness.*) You understood your way about? - Yes, slightly.

3261. When did you first go upon the boat deck? - Upon the Friday.

3262. Were you one of the men who took part in the boat drill? - Yes.

3263. Have you ever taken part in first-class ships in boat drill? - Yes.

3264. Will you tell the Court what really constitutes a boat's crew at boat drill? - Firemen, trimmers, stewards, and sailors.

3265. Can you tell us the numbers and the places in the boats? - On an average ten to a boat, two sailors, four firemen and perhaps four stewards. 3266. I put it to you that the boats' seats are all numbered No. 1, No. 2, No. 3 and No. 4? - That is quite right - to No. 6.

3267. Had you got any seat on any boat on the "Titanic"? - No.

3268. You simply got the number of a boat. Did you muster? - Yes.

3269. Who gave you the number of the boat? - I was told to get into the boat by Mr. Lightoller.

3270. Who gave you the number of the boat the day your name was called out at Southampton? - We never had a boat muster at Southampton - only the Board of Trade muster.

3271. When you answered your name, the day you joined the ship - ? - Who mustered us?

3272. Yes? - The chief officer.

3273. Did he give you the number of a boat when he called your name out? - No.

3274. How did you get the boat? - By looking at the boats' crew list which was posted up in the forecabin. 3275. Now, you said that the boats on board the "Titanic" numbered 16 and four rafts? - Yes.

3276. Did you mean rafts or Englehardt boats? - I term the collapsible boats rafts.

3277. But there is a collapsible boat and there is an Englehardt boat and there are rafts? - These boats the "Titanic" had had a wooden bottom with a canvas top.

3278. They are Englehardt's. Was there any collapsible boat there? - No.

3279. Were there any rafts? - No.

3280. Simply sixteen boats and four Englehardt's? - Yes.

3281. When you saw those third-class passengers and the stewards amongst them, were they making any effort at all to get to the boat deck? - None.

3282. Is there any way to the boat deck forward? - Yes.

3283. How? - From the forecabin, up two ladders.

3284. Where are they situated? - On the foremost port side of the ship.

3285. Where are the ladders? Will you show them to us? - There is one on the port side coming here along the well deck and going up on the promenade deck here - (*pointing on the model.*) On the starboard side there is no ladder, but on the next deck, on the lower promenade, as we call it, there is a ladder here, and also another one going on this deck.

3286. There is only one ladder going to the next deck? - Yes, on the port side.

3287. That is for the third-class passengers who want to get up, or the crew? - Yes.

3288. Are there any indication marks for finding the way up to the boat deck? - No.

3289. When you got to the boat deck you said you assisted to put out the boats. Were the boats in the chocks or were they slung? - They were already on the falls, but they were resting on half a chock - on the inboard chock.

3290. Had you any difficulty in getting the chocks from under the boats when you wanted to string them up? - No.

3291. How were the falls fastened to the davits holding the boats? - On to a clutch in the deck, a staghorn in the deck.

3292. Whereabouts were the ends of the falls? Were they situated near the boat or near the house? - The coils? Do you mean when the falls are in the boat?

3293. When you put them out where did you sling them? - On the deck - coiled them down on the amidship part of the deck.

3294. When the people came up they were standing on the falls? - They were. 3295. The result was they interfered with the falls in the middle of the deck and you had a difficulty in getting the people out of the way? - Yes.

3296. You stated somebody attempted to rush the boats? - Yes.

3297. Were they English people? - Foreigners.

3298. Were they members of the crew? - No, I never saw any members of the crew.

3299. She had no foreigners in the crew? - No, not that I know of.

3300. You do not know? - No.

3301. When the boats were hung out you were on the starboard side? - I was on the port side.

3302. The ship had a list? - Yes.

3303. Had you any difficulty in getting the women into the boat? - No.  
3304. Did any women refuse to go in? - Yes.  
3305. Why? - Because they would not leave their husbands.  
3306. Did any refuse to go into the boat because they were afraid to step over the gap to the boat-side? - No.

**Examined by MR. LAING.**

3307. When Mr. Lightoller told you about the falls not being strong enough was that when the boat was being rushed? - Yes; the boat was already full.  
3308. (*The Commissioner.*) No. How many were in the boat? - There were 40 in the boat, but the falls would not take any more.  
*The Commissioner:* Well, that is what Mr. Lightoller said. Apparently the falls had taken more in the other boats.  
3309. (*Mr. Laing.*) When Mr. Lightoller said that was the boat being rushed or were they trying to rush the boat? - They were trying to rush the boat.  
3310. Afterwards he told you to lower away? - Well, he did not tell me, he told the other two men.  
3311. (*The Commissioner.*) They were men passengers to rush the boat? - Yes.  
3312. Not the crew? - No.  
3313. Not women? - No, my Lord.  
3314. But men? - Yes.  
3315. Trying to rush into the boat? - Yes.  
3316. And was it then and in order to prevent them rushing into the boat that Mr. Lightoller said that the falls would not stand it? - No.  
3317. What was it then? - When the boat had sufficient in he said that.  
3318. There were not sufficient? - That is nothing to do with me, my Lord. I do not know if there is sufficient or not. I have to obey orders.

**Page 89**

3319. Yes, but I thought you told me the capacity of these boats was 65? - So it is, my Lord.  
3320. Then did not you know that the boat was not full? - No, my Lord.  
3321. You knew the capacity was 60 to 65. Did you know there were only 40 in it? - No, not at the time, my Lord.  
3322. (*Mr. Laing.*) Mr. Lightoller was there, at all events? - Yes.  
3323. And he was the officer who said this about the falls, you say? - Yes.  
3324. The boat looked full to you as far as you could see? - Yes, it did.  
3325. Did you mean to say that the Master-at-arms was keeping the passengers back? - I did not see him, I said it was his duty to do so - to keep people off the next deck.  
3326. Do you mean under ordinary circumstances? - Yes.  
3327. During the voyage? - Yes.

3328. But you did not mean to say - at least, I hope not - that the Master-at-arms was keeping these passengers back at this critical time? - I never saw him. If he was, no doubt he was the same as myself and he did not think any harm was coming.
3329. Now, with regard to the lights on the boats you saw none at all after the boats were all in the water? - No.
3330. Do not you think you may be mistaken? - I saw a light, I saw another accident boat burning a blue or a green light.
3331. I mean ordinary boat lights? - No, I did not.
3332. (*The Commissioner.*) The ordinary boats' light is white? - Yes.
3333. (*Mr. Laing.*) Did you see the lamp trimmer carrying about a lot of lighted lamps on the boat deck? - No.
3334. And serving them out to the boats? - I never saw the lamp trimmer whatever.
3335. Now, when you say that in the White Star Line they have a man forward in the fore-castle-head as a look-out as well as in the crow's-nest, do you mean in dense fogs? - No, in any hazy weather whatever.
3336. In foggy weather? - Yes.
3337. Then they have a man forward on the lookout? - Yes, they generally put two extra men on the look-out.
3338. That is when they are blowing the whistle for a fog, is it? - Yes.
3339. (*The Commissioner.*) There was no fog on this night, was there? - No, my Lord.

*(The Witness withdrew.)*

**JAMES JOHNSON, Sworn.**

**(Research has shown that Johnson's name is consistently misspelled here, as close analysis of the sign-on sheets shows it to be "Johnstone". We have retained the original spelling in this document.)**

**Examined by MR. ROWLATT.**

3340. James Johnson, is that your name? - Yes. 3341. You live, I think, in Liverpool? - Yes.
3342. Were you on the "Titanic" as saloon steward? - In the saloon, not the saloon steward.
3343. Which saloon was it? - The first saloon. I was night watchman; I had charge of the night watch. There were five of us went on every night.
3344. I want to get the part of the ship first - which was it? - The first saloon. 3345. Where is that situated in the ship? - By the exit doors from A, B, and C down to E deck to the engine room; the saloon is in front of that, through the pantry.
3346. Do you understand that plan; can you see it? - Yes, I have an idea. 3347. Can you see where the engine room is? - Yes, it was in front of that. It ran through that blue mark, I should think. The first big blue one.
3348. Can you see the funnels? - Yes.

3349. Do you know where your saloon was with reference to the funnels? Do you know where the engineers' room was? - Yes.
3350. There it is? - I say the first large blue mark would be the entrance door.
3351. "Third-class galley and stewards," I see there? - Yes, the working stairs. 3352. Were you further along here (pointing)? - Yes.
3353. The first-class dining saloon? - Yes.
3354. Was it your job to go on every night? - Yes.
3355. Did you go on the night of the accident? - I went on at 11 o'clock.
3356. You simply had to go into the saloon and wait? - Well, no. Everyone gets a watch and at 12 o'clock when the bedroom stewards turn over we take their watch. There is a bedroom steward and a night watchman on each deck, and all the third-class and all the second-class reported to me each night when they came on watch.
3357. Now what you had to do was simply to stay in that saloon as I understand? - No, I took E - what they call the saloon - the reception room and the pantry, on.
3358. Where were you when the accident happened? - About the amidships saloon, I should think. We were all talking a few chairs up. It would be about the third or fourth table up.
3359. In that big saloon? - Yes.
3360. Did you feel the shock? - I did not feel much because we thought she had lost her wheel or something, and somebody passed the remark, "Another Belfast trip."
3361. Another what? - To go back to Belfast it meant.
3362. Do you belong to Belfast? - I belong to Scotland.
3363. Did you do anything in consequence of feeling a shock? - I had a look round first and then I asked a man when he came up for some hot water, "Do you mind going down to the engine room and have a look." He went down and came back and said, "I think it is a bit hot" - that is a racing phrase. He meant it was a bit serious.
3364. Do you know who that was? - I have found out afterwards, but I did not know then. I only knew our own division. I never knew anyone but those in our own stewards' department.
3365. He was a greaser, was he not? - I think he was.
3366. You do not know his name? - I think he might have been a man they called White. I have found out, but I do not know whether it is right or not.
3367. Did you do anything after that? - Yes; I went down and walked along the saloon and saw Mr. Andrews come down and go down to the engine room, and then I saw the Captain directly following him, and then I followed Mr. Andrews after he came up from the engine room.
3368. Now tell me who is Mr. Andrews? - Well, one of the best known among our division, because he did anything for us we asked him.
3369. But who is he? - He is one of the builders.
3370. He is the representative of the builders? - Yes.
3371. And he and the Captain came through? - No, he came three or four minutes before the Captain.
3372. Through the saloon you were in? - He had to come down through the stairs to get down to the engine room to get on to E deck; he had to go down through those

stairs. 3373. And then he gets into the alleyway and got to the engine room? - Just turn to the left and he is in it.

3374. Did he go in that direction? - I do not know. I know he went down.

3375. Did the Captain go down after him? - Directly after.

3376. Did you stay where you were? - No; I put four oranges into my pocket. I might have done it after, but I think I did it then.

## Page 90

3377. Did you follow the captain or stay where you were? - No; I waited a minute and followed Mr. Andrews.

3378. What happened next? - Mr. Andrews went through the saloon after this man came and told me it was a bit thick. I followed Mr. Andrews and went down to E deck to see if Duscheck was there. He was down there on watch in that deck. I went down to E deck and saw Mr. Andrews go down by the baggage room or mail room. One door goes down and the other does not.

3379. It is lower down still? - Yes.

3380. Is that the same part of the ship? Are you still speaking of the same part of the ship? - It is a little bit farther forward, past the reception room.

3381. Is that it? (pointing on the plan) - Give it another 50 yards.

3382. Was it as far as the squash racket? - Opposite the squash racket.

3383. That is a good way forward, is it not? - Yes.

3384. The baggage room is there, is it? - Well, they were handling mails or something; when I looked there was water there then.

3385. In the baggage room? - Yes, it is on F deck, underneath E.

3386. The squash racket is on two decks, is it not? - I do not think so.

3387. Does not that go up through two decks? - No.

3388. Surely it is higher? - You are asking me a question and I am answering you. I say it is on F deck. You have to go down from E to it. 3389. It is on F deck, and is it not on G deck too? - No.

3390. Now where is the first-class baggage? It is on G deck - the baggage room? - No, I do not think so. I never went further than that, and I think it was in that.

3391. Will you understand this if I show you the plan.

3392. (*Sir Robert Finlay.*) It is on G deck.

*The Witness:* Well, it is a little bit further down. The baggage room was not on G deck.

3393. (*Mr. Rowlatt.*) Is it not? - The mail room is on E, F.

3394. The baggage room and mail room are on this deck. Come and look at the plan and then we shall not quarrel. We had better understand it once for all. (*The Witness examined the plan with the learned Counsel.*) *The Commissioner:* Which deck is it?

*Mr. Rowlatt:* G.

*The Commissioner:* Very well.

3395. (*Mr. Rowlatt.*) You looked into the baggage room? - No, I looked down the stairs.

3396. You saw into it, and saw there was water there? - Yes.

3397. How long should you say after the shock was it that you saw water in the baggage room? - I went down to call the second steward, Mr. Dodd. I took plenty of time and it must have been a good twenty-five minutes after I met Mr. Wheat coming up, and he said "What is it?" I said "I think it is a bit serious." 3398. Who said that? - I said I thought it was a bit serious.
3399. Whom to? - To Mr. Wheat, the assistant second steward. He is living now, I think he was the only one I met there at the time.
3400. Had you seen Mr. Andrews in the reception room? - I saw him speaking to some ladies, and they were all in a bunch and he said he thought it would be all right. He said,  
"Be easy, it will be all right." I asked him, and he said; "All right."
3401. Were those first-class passengers? - Yes, all first-class passengers just at the corner of the reception room, down the companion stairs.
3402. After you found there was water in the baggage room, what did you do next? - After I had called Mr. Wheat I went away down and changed my clothes in the glory hole, and put this suit of clothes on.
3403. Which is the glory hole? - No. 3 glory hole on E deck.
3404. Where is that? - It is situated half between the two exit doors. There is one from the first-class companion on to the working alleyway, and then there is one for the boys to go down to the engine room.
3405. On E deck? - On to E deck. There is an exit right from the saloon companion to the working deck.
3406. You went down there? - Yes.
3407. And whom did you find there? - All the boys were in bed when I went down there.
3408. Who are the "boys"? - All the stewards. They are called "boys."
3409. After you had gone there, did you go up again? - I went up again, and I walked up through the companion, and I saw Mr. Latimer, the Chief Steward. You could not make any mistake about him, he was too big. There was Mr. McElroy and the purser standing by the officers, and two or three officers on C deck.
3410. Had you a lifebelt then? - I had no lifebelt then. I went down for it after.
3411. You had gone down and fetched your clothes, but you did not bring your lifebelt? - I went down for that after, again.
3412. You had a lifebelt? - Yes.
3413. In your bunk - in your quarters? - Yes, everybody had a lifebelt.
3414. You saw all these people you have mentioned? - Yes.
3415. What happened next? - I went out on the top. I thought I might have made a mistake in the boat station list, and I went to look at it again. I said "I will have a sky again."
3416. You went to look at the list? - Yes.
3417. Had you seen it before? - Yes, I had seen it on Thursday afternoon. 3418. Where was your list? - In the pantry on the port side, right opposite the chief steward's office.

3419. Had that been there from the beginning? - It was there from Thursday afternoon.
3420. Do you mean you saw it put up? - I did see it because I went and looked for my name, and I knew where my boat was.
3421. You went and looked at it again? - Yes, I went to make sure I had not made a mistake.
3422. Had you heard any order to go to the boats? - Nothing at all then. I did it on a principle of my own, being Scotch, I suppose.
3423. Then did you see what your boat was? - I went and had a look at it.
3424. What was it? - One of the small boats - the emergency boat No. 2.
3425. That is on the port side? - Yes, abaft the bridge.
3426. Was it slung? - It was slung out outside the rails. It was all right when I saw it.
3427. Do I understand you went up there then? - Yes, I had a look round, and I spoke to one man. I should know him if I saw him again. I looked in the boat to see if the plug and everything was right. I came out again and stood by for a bit, and the second steward said to me, "Hold this." It was his lifebelt and his dustcoat. I never saw him after that. I suppose he went West.
3428. When you got up to the boat this first time were there many people up there? - There were not many people wanted to go in at all, because they all wanted to travel. They seemed to travel in heaps.
3429. Were there plenty of people on the boat deck? - Yes, plenty, but they would not go into our boat.
3430. Were the crew mustering there at the boats? - I think Mr. Wilde asked, "What boat do you belong to" I said, "No. 2." I am sure he had the list because he said, "That is right." He said, "Can you pull" I said, "Certainly." He said, "Stand by the falls." 3431. Did you stand there by the falls? - I stood a little bit longer.
3432. You said you went to get your lifebelt. When did you do that? - I went for my overcoat down below again. The Chief Steward told me to

## **Page 91**

get upon deck, and go to my boat again. By that time the water was coming to the foot of the companion -

3433. One moment; was it after that that Mr. Wilde spoke to you? - Yes, after that I went down for my coat.
3434. And you came up again? - Yes.
3435. Did you go to your boat again? - Certainly.
3436. Was there anybody in it? - No, there was nobody in it - not a soul.
3437. What was happening at your boat? - There were about eight or ten firemen, and I asked if they belonged to it, and some of them seemed to hesitate - they did not know.
3438. Were there women there? - There might have been about four or five.
3439. Did they go in? - No. We did not lower for a good ten minutes after that. 3440. Was any officer there? - An officer got into the boat afterwards. This man handed

- me a lamp out of the boat. I saw a lamp standing on the deck. It was ready-lit. I said, "It will be all right for us," so I stowed it in there.
3441. Had you seen whether the plug was in the boat? - Yes.
3442. And had it oars? - Yes, four oars.
3443. Had it any provisions? - I saw a loaf lying on the deck and a box of biscuits lying on the deck, but nobody seemed to care whether he put it in or not.
3444. When you came up again I think you said nobody was in the boat? - No. 3445. Could you explain how the boat came to be filled with people? - I got to the forward fall. I had asked one of the firemen (I do not know whether fireman or trimmer)
- "Have you a knife? There is no knife in the boat." I had looked at the fall because anybody lowering the fall with a jerk might shove it off the blocks. I thought I must have a knife if nobody else had one. I asked the man and he handed me a razor. He told me his name was McCuliffe. He said "Remember me at Southampton and give it me back."
3446. You took it? - Yes.
3447. And you stood by the fall? - Yes.
3448. Was anybody else in the boat then? - There was no one else then. Then the women and children got into it.
3449. Who put them in? - The chief officer.
3450. Were they women and children? - Yes; they could walk right into it because there were either gratings or something, you had only to step half-a-foot on to the ledge and into the boat.
3451. That was on the boat deck? - Yes.
3452. How long did that boat stay in that position on the boat deck? - She must have stayed a good quarter of an hour.
3453. Were there any other people standing by waiting to go in? - No, I saw 30 or 40 ladies going down the deck again. - No 2 boat is *here*, *here* is the companion right down *there* - right down to A deck.
3454. (*The Commissioner.*) Going back to their berths do you mean? - No, I do not think they were; they did not seem to realise that there was anything wrong.
3455. (*Mr. Rowlatt.*) So far as you saw they were going off the boat deck? - Yes.
3456. Down to the deck below? - Yes.
3457. And how much further you could not, of course, tell? - No.
3458. Was there any call for women and children at that boat? - All the women and children that were there could have got in. We could have put more in; in fact, we had not a full complement.
3459. Can you tell us at all what classes were represented? - I could not.
3460. When all the women that wanted to go in were in was the boat lowered? - No, it was put down perhaps 3 or 4 feet. They were told to go down to A deck to see if anybody else wanted to come in. There was nobody came down to A deck. It stopped opposite A deck.
3461. It looks from here as if there was a window there? - There is A deck (*pointing on the model.*)

3462. If it is lowered to A deck it looks as if it is outside a window? - There was no window, it was a free passage.
3463. Did anybody get in at A deck? - No, there was nobody to get in.
3464. Then what happened? - We got lowered, and then we cut her adrift. The razor came in handy.
3465. You did use it? - Yes, we had to because nobody else had a knife. The ropes were a little bit jerky, but they came down properly.
3466. When you got to the bottom you cut adrift with the razor? - They slipped all right enough. It was in other boats the same. All companies have been the same I have been in. They would fall off with a little bit of a jerk.
3467. You got free? - Yes.
3468. How many people were there in your boat? - I think 23 to 25.
3469. Is she as big a boat as the others? - Certainly not.
3470. Was she full, in your judgment? - She would not be full, but she would have been full in a heavy sea. She was not full according to how we were.
3471. Was anybody that wanted to get on that boat kept back? - Not at all, certainly not.
3472. Were there any seamen in that boat? - There was one. He said he was a seaman. We saw a light and we pulled for that light. I do not know whether he was a seaman or not.
3473. Was there an officer in the boat? - Yes.
3474. Who was he? - I do not know his name; I should know him if I saw him.
3475. The fourth officer, was it not? - I think it would be him.
3476. And somebody who said he was a seaman? - Yes.
3477. Was there any other man beside yourself? - There was a foreigner, and I think the other one was a cook or something. He told me afterwards he was a cook.
3478. And any passenger men? - No, that was all the men.
3479. All the rest were women and children? - Yes.
- The Attorney-General:* The cubic capacity of an emergency boat is 40 persons, my Lord.
3480. (*Mr. Rowlatt.*) Mr. Boxhall is the 4th Officer, is he not? - I did not know them by their names.
3481. You said something about seeing a light? - Yes.
3482. Did you see that light from the deck of the "Titanic"? - I should think we saw it for about twenty minutes on the port bow.
3483. How broad from the port bow? - I should think from where I was standing we pulled a mile and a half or two miles after it.
3484. Was it nearly right ahead? - No, something like an angle.
3485. A right angle? - A left angle from the port bow rather.
3486. Now face the same way as the ship in that model? - Yes, it was there about and the boat was there, and it was lying like *that*. (*demonstrating.*) I should consider it would be about eight or ten miles off.
3487. But that is not the angle you know. A little clear of the bow on the left hand side as you looked towards the bow? - A little more aft.
3488. One of the Witnesses said two points? - I do not know a point unless it is in billiards.

3489. Did you row for that light? - Certainly.
3490. How many oars did the boat row? - We had four? - I think there were two rowing and the other two dipping. I think two could row and the other two were dipping.
3491. They were simply dipping their oars? - Well, they were doing their best.
3492. Which were you doing, rowing or dipping? - I think I was rowing.
3493. Was somebody steering? - Sometimes there was a girl steering and sometimes an officer steering. He was telling her what to do and he was helping the foreigner at the other oar to pull. He was pulling a stroke oar.

**Page 92**

3494. Did the officer direct you to steer to the light? - We took a star and got this star underneath us and kept it in front of us, and tried not to get away from it. 3495. Did you see the light all the time? - No, we lost it, it disappeared.
3496. How long do you think you were rowing towards the light? - By the time we came back again and pulled round the stern of the "Titanic" we must have pulled a mile and a half, I should think a good half-hour.
3497. You came back to the "Titanic"? - Yes, round the stern of the "Titanic." 3498. How far off from the stern did you come round? - I should think about 800 yards.
3499. How long was that before she sank? Did you see her sink? - Yes.
3500. How long before you saw her sink did you get back to her? - We went back and rowed round, and the officer said to the ladies, "Do you think we should go back or not?" 3501. How long before she sank did you get back to the region of the "Titanic" after you had been looking for the light? - I suppose a good half-hour before she sank. 3502. Then you had not gone very far towards the light? - A mile and a half. I am certain we pulled that.
3503. Did this light seem to get fainter or did it disappear suddenly? - When we got away it disappeared altogether.
3504. What coloured light was it? - I think it was red. I think there were two lights, in fact, a red and a white light.
3505. (*The Commissioner.*) Are you sure? - I can discern any sort of colour, racing, a mile and a quarter off, and I think I could see a red light.
3506. Are you sure? - I am certain.
3507. What are you certain about? - I am certain there was a light. The Captain told the officer to pull for that light.
3508. Are you sure there were two lights? - I am certain there were two lights. The Captain told the officer to pull for that light and come back again.

*(The Witness withdrew.)*

*(Adjourned to tomorrow at 10.30 o'clock.)*

## PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC."

### FIFTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third-class passengers. (Admitted on application.)

## **Page 94**

*The Attorney-General:* With reference to the Witnesses who have been called, I do not propose to keep them unless your Lordship thinks it desirable. If there is any special Witness whom my friend wishes kept, of course we shall have to make arrangements to keep him, but it is very inconvenient and expensive to keep a lot of Witnesses who have already given their testimony, and I should have thought it was very much better to let them go.

*Sir Robert Finlay:* So far as I am concerned there are no Witnesses that have yet been called that I should desire to be kept.

*The Commissioner:* Then I think the better plan will be to assume that no one desires a Witness to be kept unless he asks for it.

*Sir Robert Finlay:* Yes, my Lord. If any occasion arises in the future, I will notify the Attorney-General.

### **JAMES JOHNSON, Recalled.**

#### **Further examined by Mr. ROWLATT.**

3509. Now, Mr. Johnson, you told us you rowed away and came back again. Did you see the "Titanic" sink? - I saw her go down.

3510. How far off were you from her then in your boat? - It might have been threequarters of a mile, or it might have been a little bit less.

3511. Did you row back at all towards the wreck? - Well, the boatswain told us to keep a star and keep looking at this star and not to lose it, and keep within the vicinity of it.

3512. Keep within the vicinity of what? - Of the star, underneath it rather.

3513. Did you go back towards the wreck at all? - Well, we might have pulled a little bit back. When we were all quiet he said, "Listen," and what we heard was the swish of the water against another iceberg.

3514. What I want to get at is this. You saw the ship go down? - Certainly.

3515. You knew in what direction that was? - Yes.

3516. Now did you try to row back in that direction with your boat? - No; we stood off.

3517. Three-quarters of a mile away? - Very near it, I think.
3518. At that time was your boat full? - No; I told you yesterday it was not full. 3519. Was there any suggestion by anybody that you should go back in the boat? - Yes; the officer asked a question as to going back, but at that time we were just close to an iceberg, and the ladies said, "No," I think; they thought it was dangerous.
3520. Did anything more pass in the boat - a conversation about going back, that you heard? - I was not listening. I was told by the officer to listen, and I heard the swish of the water, and when we looked there was an iceberg right in front of us.
3521. You saw it? - Certainly; we were close to it.
3522. Did you hear any cries of people in distress? - Oh, yes, too many.
3523. You did? - Certainly.
3524. Did you recognise from your boat in which direction those cries came? - From the left-hand side where we were; we had pulled round astern and were on the left-hand side.
3525. Was anything said in the boat about the cries? - Certainly, there were lots of remarks by the ladies. They said they were sorry and everything.
3526. But with reference to going back? - The only thing I heard was he asked them; should we go back, and I heard the ladies distinctly say no.
3527. (*The Commissioner.*) I do not understand what you mean by your left-hand side? - The "Titanic" - after we pulled round astern, we had left the port side and we came to the starboard side of her. After we went after the light we came right round astern to the left-hand side. You might say we were still on the port - my left hand was still on the port side of our boat. I mean the "Titanic," you know.
3528. Then the cries that you heard? - You heard them every now and again. 3529. They came from the direction - ? - Of the left hand.
3530. Of the "Titanic"? - Yes.
3531. (*Mr. Rowlatt.*) At this time how many oars were being used on your boat? - Well, I know two were pulling strong - two of us.
3532. And two, you told us yesterday, were pulling easy? - Yes.
- 3532a. There were two good oars on your boat? - Yes.
3533. How did your boat travel through the water? - Easy, Sir.
3534. I think you said yesterday that you think you had rowed a mile and a half away and back again? - Certainly.
3535. I may take it the boat could have gone back towards the wreck, if it had been decided to do so? - Yes, we had the only lights.
3536. What did you say? - We had a light in the boat; all the rest of the boats followed us; we had flashlights in our boat.
3537. You had flashlights? - Yes, Roman candles.
3538. What did you do then, did you lie on your oars or row, or do what after it was all over, you know? - We did not row, we kept round the vicinity of the boat; we never rowed after we came round astern; we lay still and the officer told us to keep our eye on this star.
3539. (*The Commissioner.*) I have taken that down - "We tried to keep stationary"? - That is right, Sir.

3540. (*Mr. Rowlatt.*) Were there other boats near you? - We did not see one; we heard a whistle, but I do not know where the boat was.
3541. In time I suppose it got light, did it? - No. I think we were the first boat in the "Carpathia."
3542. Were you picked up before it was light? - No, it was just dawn. We thought we saw an illumination of a boat coming; it was the Northern Lights.
3543. You did see the "Carpathia" ultimately? - Yes.
3544. It was still dark then, was it? - When we saw it, it was a little bit dark. 3545. (*The Commissioner.*) It was at dawn that the "Carpathia" picked you up? - At dawn, yes.
3546. (*Mr. Rowlatt.*) Did you signal to her with your candles, or was it too light? - I think all the boats followed us, because the officer must have burned about eight or nine.
3547. Did you signal to the "Carpathia" with your candles, or how did you attract attention? - With a lamp. The officer put his hat in front of the lamp, and held it up (*demonstrating*).
3548. The next morning did you see any icebergs or ice? - Yes, there were fields of it.
3549. (*The Commissioner.*) Was the "Carpathia" in the ice-field? - It could not have been 200 yards off some of the ice.
3550. Then they were off the edge of the ice? - Yes.

**Examined by Mr. SCANLAN.**

3551. When you sighted the "Carpathia" was she going slow? - I could not tell you that.
3552. Do you know if there was a compass on this lifeboat you were on? - I know there was a lamp, and we had roman candles.
3553. But you do not know whether there was a compass? - I never looked.
3554. Were the lady passengers frightened? - They were quite satisfied, and they lay still.

**Page 95**

3555. At the time your boat was lowered, had the "Titanic" begun to sink? - Yes. 3556. Had she sunk much? - Yes, she was right down by the bridge when we lowered our boat.
3557. Did you realise when you got into the boat that the condition of the "Titanic" was very dangerous? - No, I do not think we thought about that.
3558. You yourself, I mean? - I did not; I did not think so, in my own private opinion. I do not think any of us thought that.
3559. You had had an interview with Mr. Andrews? - I had no interview; I only saw him.
3560. Did he not tell you, as the result of his inspection? - No, Mr. Andrews did not speak to me. I said I sent a man down that was getting hot water, not Mr. Andrews. I followed Mr. Andrews, he never spoke to me.
3561. I think you said you were present when he said something re-assuring to a few ladies? - Well, I thought so at the time too.
3562. And you then had a word with him? - He told me to see that the ladies were quiet, or something to that effect, at the foot of the companion.

3563. But he did not tell you anything? - He did not.

3564. Is it your evidence that instead of the fourth officer, who was in charge of your boat, deciding for himself as to whether it was possible for him to go and rescue the people from whom he heard shrieks, he consulted the lady passengers on the boat? - He asked the lady passengers.

3565. There would have been no difficulty at that time in your rowing round to the place from which you heard the shrieks? - Question?

3566. What was the difficulty, if there was any? - She is not a big one, she is a dinghy.

3567. You had only 23 people, and you have told my Lord that the boat's capacity was 40 people? - I did not say so; I did not know the capacity.

*The Commissioner:* I took it down. I may have been wrong, or possibly someone else told me. "The boat is constructed for 40." I may have taken it from the Attorney-General.

*Mr. Scanlan:* Yes, the cubic capacity is 40 persons.

*The Attorney-General:* What did your Lordship say you took from me?

*The Commissioner:* I have down in my note in this Witness' evidence that the boat was constructed to carry 40.

*The Attorney-General:* That is right.

*The Commissioner:* He says he did not say so.

*The Attorney-General:* That is quite right; I said so.

*The Commissioner:* And he did not know it, and I was saying I possibly took the information from you.

*The Attorney-General:* Your Lordship did.

3568. (*Mr. Scanlan.*) It is so down in the official note. (*To the Witness.*) Do you know yourself how many additional people you could have accommodated in your boat? - I have no idea - they might have crammed in.

3569. For the benefit of the Court, give us the best of your belief? - I think if they had got five or six more in it would have been quite enough to pull, and if it had been heavy weather I do not suppose there would be anybody here to tell the tale.

3570. In the weather conditions which you had, I take it to be your view that you could at all events have accommodated five or six more? - Certainly.

3571. In that calm sea, when you heard the shrieks of people struggling in the water, how far were you from them? - Half a mile to three quarters, I should think. 3572. I thought when you rowed back, after rowing for a mile and a half, you came quite close to the "Titanic"? - We came round astern.

3573. Was it not just in the immediate vicinity of the "Titanic" that people were struggling in the water? - We did not see anybody struggling where we were. 3574.

Were the crew of your boat rowing quite easily? - Two of us were rowing very easy.

3575. I noted you said when you rowed this mile and a half each way you did it remarkably quickly? - Well, I think we could do it again.

3576. Is it fair to assume that if the officer had given instructions on his own account, on his own responsibility, instead of consulting frightened passengers? - They were not frightened.

3577. You might have got back in a short time to the people struggling in the water? - I do not think they were frightened.

3578. But they advised him not to go to the rescue of those people? - I think that was their answer. And he acted on their advice, instead of on his own responsibility.

*The Commissioner:* I understand, Mr. Scanlan, that they were in fear of some iceberg.

3579. (*Mr. Scanlan.*) What distance from you was the iceberg that you were in fear of? - I think as to the one we saw we could hear the water swish up against it. We could not have been very far from it. We could not have been far because everyone distinctly heard it.

*The Commissioner:* I wish you would put your questions to him quite plainly and distinctly, if you will. Was he of opinion that there was any cowardice on the part of the man who accepted the suggestion of the ladies, because that is, as I understand, what you are suggesting.

3580. (*Mr. Scanlan.*) If I may say so with deference, my Lord, do not wish to suggest cowardice. What I do feel inclined to suggest is that there was a great lack of discretion on the part of the officer in charge of a boat which could be rowed easily, in not rowing to the rescue of those people. I would not like to say it was cowardice, my Lord. (*To the Witness.*) Can you explain why it was, with an unfilled boat, the fourth officer failed to go to the rescue of the drowning people? - I have answered the question. 3581. It was because the ladies protested? - Yes. I have answered that question. 3582. If you had had charge of the boat, would you have gone back? - I do not suppose I would have done any more than he did. He acted as an Englishman.

#### **Examined by Mr. HARBINSON.**

3583. Just one question. Have you any notion as to which class the majority of passengers in your boat belonged? - I think they belonged mostly to the third or second. I could not recognise them when I saw them in the first-class, and I should have known them if there were any prominent people.

3584. Most of them were in the boat when you came along? - No.

3585. You put them in? - No. Mr. Ismay tried to walk round and get a lot of women to come to our boat. He took them across to the starboard side then - our boat was standing -

I stood by my boat a good ten minutes or a quarter of an hour.

3586. At that time did the women display a disinclination to enter the boat? - Yes. 3587. Do you know as a matter of fact if reassuring statements had been made to them that everything was all right? - I could not tell you. I could not tell you all those people.

3588. Did you say as a matter of fact yesterday that you heard Mr. Andrews say to some ladies he thought it would be all right? - I think he did not know the full strength of it.

3589. You mean he did not know how dangerous it was? - Certainly not; he could not have known.

3590. (*The Commissioner.*) I understand you to say that when you got into the boat you did not think the condition of the "Titanic" was dangerous? - Oh, yes, I did; I thought so then, when I got into the boat.

3591. Then I have not got it down right? - I thought so then.

3592. Is this right: "When we lowered our boat I did not think the condition of the 'Titanic' dangerous"? - I thought it was sure to stand up, but my opinion was very little.
3593. Is that right - is that what you said? - Yes, very likely.
3594. (*Mr. Harbinson.*) At the time you lowered your boat the water had risen almost to the wheel, had it? - I do not know where the wheel was; I was not looking at it; I was not near the bridge.
3595. You did hear Mr. Andrews make these reassuring comments to the ladies? - When I heard him it was just a quarter of an hour after she struck, not much more. 3596. What I want to ask you is this: Would the disinclination on the part of the ladies to get into the boats as a matter of fact be traceable to those reassuring statements which had been made to them by members of the crew? - No, I do not think so.

**Examined by Mr. COTTER.**

3597. How long have you been going to sea? - A few years, 25 to 30 very near.
3598. How long have you been in the employ of the White Star Line? - Over 18 years.
3599. Have you ever taken part in a boat drill? - Everybody in the White Star knows their boats. Every Sunday you have to have a boat drill, but I have never taken a boat drill for lowering a boat.
3600. Never in your life? - I have not done it in one company; I have not done it in any. They generally ask for sailors to do that and to try the boats.
3601. Have you been in any other company where there has been boat drill? - The Pacific Company.
3602. There you took part in lowering the boats? - Yes.
3603. Did you learn how to handle a boat through that? - Yes.
3604. Have you ever taken part in bulkhead door drill? - Yes.
3605. Were there any hand-closing bulkhead doors? - No; they were all bridge-closed.
3606. Were there any hand-closing bulkhead doors? - No.
3607. Are you sure? - Certainly. I can only tell you the working deck and the position I was working in.
3608. Was there any bulkhead door drill? - I could not tell you. The ship had only sailed for the one week, and on Saturday they close all the doors. They try them at 12 o'clock; they are closed and opened again.
3609. Did not you take part in that bulkhead door drill? - No.
3610. When the boat struck you said you were on night watch? - Yes.
3611. Your duty would be round the first-class saloon to receive the reports from the bedroom stewards and the stewards of the second and third-class? - That is right.
3612. Where did you go when you found there was water going into the baggage-room? - As I told you, I went down and changed my clothes.

3613. You did not go to the second steward or the chief steward? - I went down. I met Mr. Wheat, the assistant second steward, and I told him I thought it was serious, and I was going away into the glory hole. I called all our boys.
3614. What did you say to them? - I told them I thought it was a bit serious.
3615. Did they come up? - Some of them did and some did not till Mr. Dodd came, and he chased everyone out of every glory hole.
3616. Were you there when he came? - Yes. I had changed and had everything ready.
3617. What order did he give the men? - Everyone to get their life preservers and go to their boats.
3618. Did he give instructions to get the women out of the third and second-class and the first? - The bedroom stewards were all told to go to every room and put life preservers on the passengers and get them out of their cabins.
3619. Did the men carry out those orders as far as you could see? - As far as I could see.
3620. Now I want to ask you a very vital question. How many men were in the steward department of the "Titanic"? - I think something like 470 altogether - there must have been.
3621. Were they all Englishmen? - I do not know whether the restaurant were included in it or not.
3622. There is a restaurant there? - Yes.
3623. What is that staff constituted of? - Mostly Italians and French. I do not know. I never mix with them, so I cannot tell you; but there were none of them Englishmen as a rule.
3624. How many Italians and Frenchmen would there be in the crew? - Do you mean my average?
3625. Yes? - Well, I should say 50 to 60.
3626. Can you tell us whose jurisdiction they were under outside the captain - the chief steward or somebody else? - Mr. Gatti. 3627. Who was Mr. Gatti? - A nice little man.
3628. What was Mr. Gatti's position on board the "Titanic"? - He was like chief steward in his own department. 3629. Do you know if any of Mr. Gatti's men took part in any drill at all; had they a boat station? - I do not know.
3630. Did you see any of those men after, shall I say, the alarm had been given? - Well, I saw them all bunched together, but everyone was bunched together at first; but after that I only saw one, and he saved himself.
3631. I want to ask you your opinion - supposing there had been what we will call a proper boat muster of all hands on the "Titanic" to the boat stations when that collision took place, do you think, if that had taken place, and they had mustered on the boat deck it would have been possible from the time the ship struck, before the boats were lowered, to have got every woman and child out of the third, second and first-class? - Well, my opinion is, suppose everyone went to their boat stations - you had all your boat stations, and perhaps eight or ten stewards, five or six firemen, two or three sailors - I do not think there would have been more ladies in the boats.

3632. You missed my point. When you go to a boat station to muster, you go there to receive orders? - Yes.
3633. A bugle goes - is that so? - Yes.
3634. Did any bugle go that night? - No.
3635. If a bugle had gone, the men would have gone to their boat stations, I take it? - Some of them would have gone, and some would not, because they never thought about looking to their boat stations.
3636. Not the stewards department? - Some of them did not.
3637. I am asking for your opinion. Supposing they had done so, was not there time then to turn the spare men out of the boat, and say, "Go down and show the women, second and third-class, and also the first-class, up here"? - If you had got them up - but you could not drive the women.
3638. How do you know that? - Because I tried it.
3639. Where did you try? - For our boat.
3640. I mean down in the third-class, in the rooms; that is what we want to get at - if the stewards had been told to go down and bring them up? - They were told, but they did not think she would go down, and they were laughing when the passengers were carrying their baggage about.
3641. Your contention is that they were told, and that the women would not come up on deck? - I am certain of it.
3642. How are you certain of it. It is a very serious answer you are giving now? - Well, I am certain by our boys, because some of our boys would have been saved if they had come to the boat stations.
3643. You have had conversations since? - I have never spoken to the boys. 3644. How do you know? - Because I know all the old ones were lost.

## **Page 97**

3645. That is not the point. You make a statement that a man was there and that the women would not come up, and then you said, "Some of our boys have been saved"? - I did not say they were saved; I said all the best of the boys went down.
3646. How do you know the women and children would not come up? - Well, I could tell by the bedroom stewards. I saw them driving, and I saw Mr. Ismay try to drive a few, and he had a pair of slippers on and his dust coat, and he was trying to get the women, and they would not go in for him into our boat.
3647. That was on the boat deck. I am talking about down below - the third-class quarters? - I was not down there, and I could not tell you.
- The Commissioner:* This Witness was not down below in the third-class quarters. *Mr. Cotter:* He states there was a steward sent down there, and he also states that the women would not come up.
- The Commissioner:* I suppose he only says that because he only saw some women come up. Some certainly did come up and got into his boat.

3648. (*Mr. Cotter.*) You are not sure what was going on down below? - No. 3649. You say the second steward, Mr. Dodd, came back with a dust coat over his head? - Yes, he had his dust coat in his hand and gave me his lifebelt, and did not come back for it.

3650. Did he give any orders? - No, he gave orders in the glory hole; he had no business to give orders on the deck.

3651. Are you sure he had no right to give orders to the steward department on deck? - Certainly not; it is under the officers, that.

3652. Now when you got into the boat did you find any biscuits and water there? - No. I trampled over a loaf of bread, a big pan loaf; there were biscuits carried up, but nobody seemed to care to put them in.

3653. Who carried the biscuits up? - Williams had one box - Billy Williams - and there might have been four or five boxes carried up through the companion way. They were shoving each other on.

3654. There were some stewards bringing the stores up? - Yes, they were bringing the stores up.

3655. Had you any difficulty in launching your boat? - Nothing at all earthly - easy.

3656. There was no attempt to rush the boat by the men? - No; it would have been rushed at first; but when they saw it was not going down, they went away from our boat. 3657. Did you see any stewards putting lifebelts on the passengers? - I did not, because I was not amongst them.

3658. How many women do you think were on deck just as your boat was lowered? - When it was lowered there was not a woman near our boat, because we could not get any more to go in.

3659. Were there any there? - They were walking up and down. As I told you I saw Mr. Ismay trying to get them into our boat, and he took them to the starboard side; he went to the starboard side with them.

3660. Was your boat the first away? - No, I should think it would be about fifth on the port side - fourth or fifth on the port side when it went away.

3661. Yours was one of the emergency boats? - Yes.

3662. It would be the first boat on the other side? - Yes.

3663. Number 2? - Yes.

3664. Did you see any of the foreign waiters on the deck? - I saw them in a bunch before I went to my boat.

3665. You did not see any on the deck? - No.

3666. You never saw them after you saw them in that bunch? - No.

3667. You do not know whether they assisted with the passengers in any way? - I do not know.

3668. Did you go to Belfast on the "Titanic"? - Yes.

3669. So you would have a thorough knowledge of the way round her? - Well, I was every night round her and every day. I went round every part of her, or I think I did - but you could not go round her.

3670. Can you tell us where the glory holes are situated in the "Titanic"? - All amidships.

3671. On which side, port or starboard? - Port side.

3672. On the port side? - Yes.

3673. Can you show on that chart? - Underneath the saloon as near as possible. They would hold about 28. Some of them hold about 28, some 40, and some 60 or 70.

3674. Would they have any difficulty at all in getting up the companions, and round the ship? - Certainly not.

3675. No difficulty at all? - Certainly not.

3676. Was there a lifebelt for every steward in the glory hole? - Yes.

**Examined by Mr. HOLMES.**

3677. Did you hear any order given by the captain as to the sending away of your boat? - I think it was the captain told us to make for that light and come back again.

3678. Did you hear him tell the fourth officer to go away? - Yes, and come back. 3679. Is it not the fact that you did in fact try to pick up some passengers who were in the water? After you had left the "Titanic" did not you make any attempt? - I did not see any people in the water; we heard them, but did not see them. *The Commissioner:* I understand he heard cries, but saw no one.

*Mr. Holmes:* I am basing my question on the report of the evidence given by the fourth officer in America.

*The Commissioner:* I do not know what that is.

**Examined by Mr. EDWARDS.**

3680. Do you remember the names of the members of the crew who were in your boat? - I do not know any of them.

*The Commissioner:* Whom do you represent?

*Mr. Edwards:* The Dockers' Union.

*The Commissioner:* How is the Dockers' Union interested in the matter? Were any of your members on board?

*Mr. Edwards:* Yes, my Lord. I am sorry this should be raised again. I made an application. You told me to put the thing in writing.

*The Commissioner:* I know that, but I want you to tell me exactly how they are interested?

*Mr. Edwards:* Quite a large number of the deckhands on board the "Titanic" were members of the Dockers' Union.

*The Commissioner:* I see; I understand. Are they members of any other Union?

*Mr. Edwards:* No, my Lord.

*The Commissioner:* Very well, that is quite enough.

3681. (*Mr. Edwards - To the Witness.*) You said that you saw a list of men allotted to each boat? - Certainly.

3682. Was that a printed list? - Written out. It is a printed bill, but your name is put for each boat.

3683. Are the names written in? - Yes.

3684. Would those names be written before you left Southampton? - I saw my name on the Thursday night.

3685. That I understand, but would they in fact be written out before you left Southampton or not? - No, they would be written out after we got away, I should think.

They have always been in every ship I have been in.

3686. So that there would be no copy on shore of this list? - I do not think so.

**Page 98**

**Examined by Mr. LAING.**

3687. Did you hear the fourth officer give his evidence in America? - No.

3688. Is it true, so far as you know, after you were in the water you attempted to rescue three more persons for whom there was room, but without success? - I did not see them. 3689. Do you remember anything of that sort? - No.

**Re-examined by the ATTORNEY-GENERAL.**

3690. Now just explain to us a little more. What do you mean by the glory hole? - It is where we all live.

3691. The stewards? - Yes; it is called "glory hole" in all ships.

3692. Is it next to the galley? - No, it is on E deck, the working alleyway. There are two exits, one from the saloon companion and the other up through the pantry.

3693. It is on the port side, I understand? - Yes.

3694. The glory holes are on the port side of the alleyway? - Yes, the outside. 3695. The alleyway goes up - that is, the port alleyway? - The port alleyway is the working alleyway.

3696. And you are on the port side of that? - Yes, on the off side.

3697. Against the side of the ship? - Yes. 3698. Against the port side? - Yes.

3699. I think I see where it is; it is on "E," if I understand? - Yes.

3700. (*The Attorney-General.*) Your Lordship sees no doubt where it is. (*To the Witness.*) You told us about Mr. Ismay in answer to one of my learned friends? Was Mr. Ismay still on the "Titanic" when your boat left? - Yes, he was doing as much as any other Englishman could do.

3701. Standing on the deck? - He was not; he was trying to entice women to go to the boats.

3702. As I understand he had tried that on the port side where you were? - He took them across. There is about that height where my boat was, and he took them round there to the other side abaft the second funnel, I think.

3703. Why did he take them the other side? - Because they would not come into ours, and he tried to get them to the other side to go into another boat.

3704. You told us something about a bulkhead drill? - I did not tell you that. 3705. I thought you answered a question? - I answered a question. I know nothing about bulkhead drill.

3706. Did you see a bulkhead drill? - In our position we would not know anything at all; it might happen dozens of times and we would not see it.

3707. So far as you are concerned you know nothing about that? - I know nothing at all about it.

*(The Witness withdrew.)*

**THOMAS PATRICK DILLON, Sworn.**

**Examined by Mr. RAYMOND ASQUITH.**

3708. You were a trimmer on the "Titanic," were you not? - Yes.

3709. I suppose your duties as a trimmer would be in the engine room? - Yes.

3710. Were you on duty in the engine room on the night of the accident? - Yes.

3711. Is there more than one engine room? - I do not know.

3712. I see on the plan immediately after the last boiler there is a compartment marked "Reciprocating engine." Is that where you were? - That is where I understand I was - in the engine room. I have never been down below before; it was my first trip down below.

3713. Would you be in a coal bunker, or where? - In the engine room where the main engines are.

3714. What were you doing there? What were your duties there? - I belonged to the upper section, but the upper section of boilers was not lit up, and they sent us to the engine room to assist in cleaning the gear.

3715. Did you feel the shock when the ship struck? - Slightly.

3716. And shortly before that had the telegraph rung? - Yes.

3717. Can you say at all how long before she struck that was? - Two seconds.

3718. What was the order given by the telegraph? - I could not tell you.

3719. You just heard it ring. Then a few seconds after that you felt a slight shock? - Yes.

3720. Was anything done to the engines? Did they stop or did they go on? - They stopped.

3721. Was that immediately after you felt the shock or some little time after? - About a minute and a half.

3722. Did they continue stopped or did they go on again after that? - They went slow astern.

3723. How long were they stopped for before they began to go slow astern? - About half a minute.

3724. For how long did they go slow astern? - About two minutes.

3725. Two or three did you say? - Two minutes.

3726. And then did they stop again? - Yes.

3727. And did they go on again after that? - They went ahead again.

3728. For how long? - For about two minutes.

3729. Then did they stop the boat after that? - Yes.
3730. Who else was in the engine room? Were there a number of engineers there? - Yes.
3731. Can you remember who they were? - I did not know their names.
3732. What did they do when the ship struck? - They rushed to their stations, the pumps and valves, I understand.
3733. They set the pumps in motion? - I could not tell you.
3734. Was anything done about the watertight compartments? - Yes.
3735. Were they closed? - In the meantime.
3736. How soon after the ship struck was that done? - Three minutes.
3737. Did you receive any orders from the engineer? - Yes.
3738. What order? - The next order we got was to get out of the engine room and into the stokehold and open the doors.
3739. Open what doors? - The watertight doors or watertight compartments.
3740. Was that possible; could you do it? - We assisted to do it.
3741. As I understand it the watertight doors had been closed from the bridge? - Yes.
3742. Could you open them from below? - One leading from the engine room to the stokehold was lifted up high enough by hand to let us get underneath. 3743. You could open them by hand? - Yes, by a pump.

**Page 99**

3744. (*The Commissioner.*) By a pump; what is the meaning of that? - The pump wheel.
3745. (*Mr. Raymond Asquith.*) Did you open the watertight doors? - Yes, I assisted to open them as far as we could forward.
3746. And did you go into the stokehold? - Yes.
3747. Do you know which stokehold that would be? - The after-stokehold.
3748. The one immediately forward of the engine room? - Yes.
3749. Were the boilers lit in the stokehold? - No.
3750. None of them? - No.
3751. Did you go on to the next stokehold? - Yes.
3752. Where the boilers were lit? - Yes.
3753. What did you do there? - Opened the doors - assisted to open the other doors. 3754. Did you do anything to the fires? - No.
3755. Was an order given you with regard to the fires shortly after that? - Yes.
3756. What order? - "Keep steam up."
3757. How long was steam kept up? Can you say? - I could not tell you how long it was kept up, but that was the order - "Keep steam up."
3758. Subsequently to that was an order given to draw the fires? - Yes.
3759. Did you assist in carrying out that order? - No.
3760. Drawing the fires? - No.
3761. Do you know what fires it had reference to? What fires were to be drawn? - No.
3762. You do not know in which stokehold the fires were to be drawn? - I know the order was passed along to the stokehold to draw fires as much as possible.
3763. You were at this time in No. 2 stokehold, were not you? - Yes.

3764. Were the fires drawn in that? - I do not know.

3765. Was that the only stokehold you were in? - No.

3766. What other stokehold were you in? - As far as No. 6.

3767. That is in all of them. In which ones did you see the fires drawn? - I did not take notice.

3768. You have told us that you, first of all, went into No. 1 stokehold, where the fires were not lit? - Yes.

3769. And you then went on into No. 2, where they were lit? - Yes.

3770. I suppose you lifted up the watertight doors? - We lifted up the watertight doors and opened them again.

3771. Did you go on from No. 2 to No. 3? - Yes.

*The Commissioner:* Mr. Asquith, it is not clear whether you are talking of stokeholds or boiler rooms.

*Mr. Raymond Asquith:* I ought to have spoken of boiler sections, I think. I understand there are several stokeholds in each boiler section. What I meant was from one boiler section to another.

*The Commissioner:* Will you put your question quite plainly to the Witness, because I am told he may misunderstand.

3772. (*Mr. Raymond Asquith.*) Yes, my Lord. (*To the Witness.*) You told us you first went from the engine room into another compartment, into one of the boiler sections. Is that right? - Yes.

3773. No. 1 boiler section? - Yes.

*The Commissioner:* Now, in order that I may understand, will you take the long pointer, and point out to me and to the Witness where it is.

3774. (*Mr. Raymond Asquith.*) Yes, my Lord. (*To the Witness.*) Can you see this plan?

3775. (*The Commissioner.*) You can see the plan, cannot you? - Yes, my Lord.

3776. (*Mr. Raymond Asquith.*) That is the engine room? - Yes.

3777. You went through a watertight compartment there into that place which is called boiler room No. 1 - is that right? - Yes.

3778. And there were no fires lit there? - No.

3779. Then you went through another watertight door into another boiler room? - Yes.

3780. Were the fires lit there? - Yes.

3781. Did you go on from that into the third boiler room? - Yes.

3782. Were fires lit there? - Yes.

3783. Through another watertight door? - Yes.

3784. Did you go on from that to the fourth boiler room? - Yes.

3785. Through another watertight door? - Yes.

3786. And then through another watertight door into boiler room No. 5? - No.

3787. You did not? - No.

3788. You stopped short at that point? - Yes.

3789. (*The Commissioner.*) Then you opened three watertight doors in the watertight bulkheads.

*The Attorney-General:* Four, that is the evidence; from the engine room first. 3790.  
(*The Commissioner.*) Oh, from the engine room first. Then you opened four, did you? - Yes, my Lord.

3791. And when you came to the afterside of the fifth section, you stopped? - Yes, my Lord.

3792. (*Mr. Raymond Asquith.*) Did you leave the doors open or not as you went through? - Left them open.

3793. (*The Commissioner.*) They were not closed again? - No, my Lord.

3794. (*Mr. Raymond Asquith.*) Having gone into No. 4 boiler room, did you go back through the open watertight doors, or what did you do then? - I did nothing then; I just knocked about.

3795. You afterwards went on deck? - Yes.

3796. How did you go up? Did you go back through the way you had come? - Yes, through the engine room.

3797. And when you went back those watertight doors were still open, were they? - Yes.

3798. (*The Commissioner.*) Were you ordered to open those doors? - Yes.

3799. By whom? - By the chief engineer.

3800. And what did you open them for? - To allow the engineers to get forward to their duties, the valves and the pumps.

3801. Then am I to understand that the order had come from the bridge to close all the watertight doors, and that they were closed, and that afterwards the chief engineer ordered you to open the doors? - Yes, my Lord.

*The Attorney-General:* What he said was that they were closed automatically from the bridge.

*The Commissioner:* Yes, he said they were ordered to be closed from the bridge; they were in fact closed from the bridge. *The Attorney-General:* Yes, my Lord.

*The Commissioner:* And although they were closed from the bridge you, under the orders of the chief engineer, opened them? - Yes, my Lord.

3803. Sufficiently to allow you to get under the door? - Yes, my Lord.

*Mr. Laing:* They have to be released from the bridge; they have to telephone to the bridge and get the catch or clutch on the bridge released so as to allow them to be opened.

3804. (*The Commissioner.*) That is so, is it? You could only open them with the concurrence of the people on the bridge? - We opened them by hand.

3805. It is suggested to me - I do not know how it is - that you cannot open them by hand unless some catch or something of the kind is operated on the bridge to allow you to do so.

*The Attorney-General:* That would be done by the chief engineer; he would telephone up, I expect.

*The Commissioner:* The chief engineer would probably telephone up and get the man on the bridge to work the apparatus so that these doors could be opened.

3806. (*Mr. Raymond Asquith.*) You have told us that you came back through those watertight compartments again to the engine room. Did you remain in the engine room some little time? - No.

3807. What did you do then? - We got the order, "All hands on deck; put your lifepreservers on."
3808. Was there a clock in the engine room? - Yes.
3809. Did you notice what time it was you got that order? - I noticed the clock, but I did not take any particular notice what time it was. The clock was put back about 20 minutes, I think.
3810. Can you give us any idea of how long it was after the ship had struck that you got the order to go on deck? - Yes.

## Page 100

3811. About how long was it? - An hour and 40 minutes.
3812. That would make it about 1 o'clock? - No. 3813. After that - a quarter-past one? - Yes.
3814. Did you go up on to the boat deck? - No.
3815. Where did you go? - I kept on the well deck.
3816. Did you see any water before you went up in any of the boiler rooms or the engine room? - Yes, there was water coming in forward.
3817. The furthest point forward you reached was No. 4 boiler section? - Yes.
3818. Was it coming in there? - Yes.
3819. Where was it coming in? - Coming from underneath.
3820. From underneath the floor? - Yes.
3821. And from what part of the floor, the forward part or the afterpart? - The forward part.
3822. Did it come in large quantities or only in small quantities? - Small quantities.
3823. Was there any depth of water standing on the floor? - No.
3824. Do you mean the floor was just damp? - That is all.
3825. And it seemed to be coming through the floor? - Yes.
3826. Did you see any coming through the side of the ship at all? - I never noticed.
3827. Was there any water anywhere else in any of the other sections? - No. 3828. Then you got this order about a quarter-past one and you went up on deck; you say the well deck. Did you see any passengers on the well deck? - Yes.
3829. Men or women, or both? - Men and about two women; they just put them into the last boat; the last boat was getting lowered. 3830. You actually saw the last boat go off? - No.
3831. What do you mean when you say you saw the women put into the last boat that was lowered? - I did not lower it. I was on the starboard side of the well deck when I came up, and I saw two women there. They were singing out, "Any more women?" and there were two more, and we chased them up on to the boat deck. The last boat to leave was on the port side.
3832. (*The Commissioner.*) Are you talking of the aft well deck? - Yes, my Lord. 3833. (*Mr. Raymond Asquith.*) When you say the last boat, do you mean the aftermost boat or the last boat to leave from the ship? - The last boat to leave from the ship.
3834. Do you know the number of that boat? - No.

3835. Can you point it out on the model there? - No.

3836. It was a boat on the port side? - Yes, because I could see they were chasing the women on to the port side. We stopped where we were. It was no use us going there. 3837. You could see after that boat left there were no other boats left on the ship? - Yes.

3838. Can you point out what was the situation on the ship of the boat that you saw leave, the last boat? - No.

3839. (*The Commissioner.*) It was on the port side, I understand. The boat that you saw leave, the last boat, was on the port side? - They sung out it was the last boat.

3840. Whichever it was, was it on the port side of the "Titanic"? - Yes, my Lord. 3841. And was it in the forward part or aft? - I do not know, my Lord.

3842. Were you on the after-well deck when you saw it? - Yes, my Lord. I heard an order - the last boat was leaving the ship. "Any more women there?" and we chased them up the ladder.

3843. After that boat left did you see a number of passengers standing about still? - Yes.

3844. Any women? - No.

3845. I did not quite hear the answer you gave just now. You said something about chasing women up the ladder? - There were two women on the well deck when we got up from below, and we heard the order - the last boat was leaving the ship. "Are there any more women there?" and we chased them up the ladder.

3846. Up to the boat deck? - Yes, I suppose they went up there.

3847. And those were the women you saw there on the well deck? - Two women.

3848. Did you afterwards go up yourself on to the boat deck? - No.

3849. You remained where you were until the ship sank? - No.

3850. Well, what did you do? - I went on to the poop.

3851. Was she getting low in the water then? - Yes.

3852. Were there many others on the poop besides yourself? - Yes.

3853. Any passengers? - Yes.

3854. Any women? - No.

3855. How long did you wait on the poop? Until the ship actually sank? - Yes.

3856. How did you get off the ship? - I left her in the water.

3857. (*The Commissioner.*) Am I to understand that you were actually on board the "Titanic" when she went down? - Yes, my Lord.

3858. (*Mr. Raymond Asquith.*) Before the ship actually went down did you see her make any movements? - Yes, she took one final plunge and righted herself again.

3859. She gave a plunge and righted herself again? - Yes.

3860. Did you notice anything about the funnel? - Not then.

3861. Did you afterwards notice something about the funnel? - Yes.

3862. What? - When she went down.

3863. Was that after you had left the ship? - Before I left the ship.

3864. What did you notice? - Well, the funnel seemed to cant up towards me.

3865. It seemed to fall aft? - Yes; it seemed to fall up this way.

3866. Was that the aftermost funnel? - Yes.

3867. Did you get the idea that the ship was breaking in two? - No.

3868. Did the funnel seem to fall towards you? - Yes.
3869. (*The Commissioner.*) That is the after funnel? - Yes, my Lord.
3870. (*Mr. Raymond Asquith.*) Then you say the ship plunged and righted herself again; and was it then that you dived into the water? - I did not dive into the water. 3871. How did you get off the ship into the water? - I went down with the ship, and shoved myself away from her into the water.
3872. Were you sucked down at all? - About two fathoms.
3873. And did you then come up again to the surface? - I seemed to get lifted up to the surface.
3874. You got lifted up to the surface? - Yes.
3875. Were you picked up by one of the boats? - Yes.
3876. Do you know which one? - Afterwards I found out; it was No. 4 boat. 3877. Did you have to swim far? Were you swimming long in the water before you were picked up? - I suppose about twenty minutes.
3878. Did you see any of the other passengers in the water - any other people in the water of any sort? - Yes.
3879. Many? - About a thousand.
3880. Were there any others near the boat when you were picked up? - I do not know.
3881. (*The Commissioner.*) Did you say "I saw about one thousand people in the water"? - From my estimation, my Lord.
3882. (*Mr. Raymond Asquith.*) When you came up again, after you were sucked down - you told us you were sucked down and came up again - was the ship still floating then? - No.
3883. She had sunk when you came up again? - Well, I saw what I thought would be the afterpart of her coming up and going down again, final. 3884. Then she had not sunk? - She came up and went down again.

## **Page 101**

3885. You saw what you thought was the afterpart coming up again? - I thought it was the ship coming up again. She came up and went down again - finish.
3886. You were picked up by boat No. 4? - I found out it was No. 4 afterwards.
3887. Did you see any women in the water? - No.
3888. Was there anyone round about boat No. 4 in the water when you were picked up? - I do not know.
3889. I suppose you were probably very exhausted by that time? - Yes.
3890. When you got into the boat, I think you became unconscious? - Yes.

### **Examined by Mr. SCANLAN.**

3891. Did you ascertain how many people were in No. 4 boat? - No.
3892. At any time before you were rescued by the "Carpathia"? - No.
3893. Did you know before you left the ship - before she sank - whether all of what you call the life-rafts, the Englehardt collapsible boats had been used? - I do not know.

3894. With regard to those watertight doors, is it the case that when you pass, say, from the engine room into No. 1 boiler room, you can open the door from the engine room, but you cannot shut it from the boiler room? - I do not know.

*Mr. Scanlan:* You do not understand me.

**Examined by Mr. HARBINSON.**

3895. I think this was your first trip on this boat? - Yes.

3896. So you did not know very much about it? - No.

3897. When you came aft, after going through boiler rooms 2, 3 and 4, you stopped at 4?  
- Yes, I stopped at 4; I think it was No. 4.

3898. That was to allow all the others to go through - the other engineers to come back?  
- All the engineers were working in the stokehold.

3899. That is why you opened the doors? - Yes.

3900. Were they all through when you came back; had they come aft? - In my estimation I suppose they did.

3901. But were you the last to come aft? - No.

3902. There were others behind you? - They came in a bunch.

3903. Do you know why the doors were left open; why no attempt was made to close them? - No.

3904. You do not know? - No.

3905. Had you a lifebelt? - Yes.

3906. Had you it on? - Not then I did not.

3907. You say when you came up to the well deck there were a great number of people there, men? - Yes.

3908. Had they all lifebelts? - In my estimation they had.

3909. Most of them? - Yes.

3910. What class of passengers did these seem to be? - Steerage passengers.

3911. All steerage passengers? - Yes.

3912. But there were no boats for them? - No; the last one was being lowered.

**Examined by Mr. EDWARDS.**

3913. From the time that the ship struck until you came back from No. 4 boiler section, what time elapsed? - About an hour and forty minutes.

3914. At that time some water was coming through in No. 4 boiler section? - Yes.

3915. As you came back was there any water at all coming in at No. 3, or No. 2, or No. 1? - No.

3916. From the time that you left the engine room until you started back from No. 4 boiler section what time elapsed? - From the time I left the engine room till the time I came back from No. 4 section what time elapsed.

3917. Yes? - An hour and ten minutes.

3918. Did you report to anybody in the engine room that you had seen water coming through in No. 4 boiler section? - No.

3919. Did anyone report, to your knowledge? - No, all the engineers were working there.  
3920. (*The Commissioner.*) Do you mean by that that they all knew it? - Yes. 3921. (*Mr. Clement Edwards.*) Did you hear any orders given, before you left, to reclose the watertight doors? - No.

**Examined by Mr. LEWIS.**

3922. I believe you have had experience as a sailor as well as a trimmer? - Yes. 3923. Did you have a boat number given to you or a boat place in precisely the same way as you would as a sailor? - No.  
3924. How long were you waiting on the poop, waiting for the boat to go down? - About 50 minutes.  
3925. From your position could you see the passengers? - Yes.  
3926. You could see the passengers? - Yes.  
3927. Was there any commotion all this time on the part of the passengers? - No.  
3928. They were simply waiting? - Yes.  
3929. Expecting the boat to go down? - Yes.  
3930. No disorder whatever? - No.  
3931. When you were taken into the boat what condition were you in? Were you picked up unconscious? - Unconscious.  
3932. When you came to what did you find? - I was not properly right when I came to.  
3933. Whom did you find with you in the boat? - Lyons lying on top of me, a seaman, and a passenger lying on top of me dead.  
3934. Do you know the seaman? - One was Lyons.  
3935. Were you in the hospital some time after you were taken on board the "Carpathia"? - Yes.  
3936. Do you remember the fire in the bunker? - I remember working in a bunker.  
3937. Do you remember the fire in a bunker? - Yes. 3938. Did you help to clear out the coal? - Yes.  
3939. You were ordered to do so, I presume? - Yes.  
3940. Would you call it a serious fire? - I do not know.  
3941. Did it take some time to put out? - Yes.  
3942. Did you see the sides of the bunker after the coal was taken out? - No. 3943. You did not see whether it was painted afterwards? - No.

**Examined by Mr. LAING.**

3944. How many boilers are there in No. 1 section? - Five.  
3945. And none of the boilers in No. 1 section was alight at all? - No.  
3946. Did you see the engine room telegraph? - No.  
3947. How are you able to tell us what orders came down? - By the telegraph ringing.  
3948. But the ring would not tell you, would it? - It would tell me that the telegraph rang.  
3949. Yes it would, but it would not tell you what order came down at all? - No.

**Re-examined by the ATTORNEY-GENERAL.**

3950. In No. 1 boiler room are the five boilers single ended boilers? - Yes.

3951. In No. 2 they are double ended? - I do not know.

*The Attorney-General:* If your Lordship will look at the plan, your Lordship will see it quite clearly and what he did. You will see the watertight doors marked which he went through. Plan No. 3 is the one that contains the decks from the saloon deck, through the various decks E., F., G., down to the tank top. If you look at the lowest of them "Tank top" you see there "Reciprocating Engine," then you see five engine boilers in No. 1 boiler room; and then if you notice there you will see a watertight door, very small, between the two coal sections. Then you pass through that into No. 2 boiler room. There you have the five double-ended boilers, and then again through that through a watertight door into No. 3 boiler room, where there are again five double-ended boilers; again through a watertight door into No. 4 boiler room for the five double-ended boilers, and that is where he stops.

*The Commissioner:* He saw water coming up through the floor plates of that No. 4.

3952. (*The Attorney-General.*) Yes. Your Lordship will remember it is in the next compartment No. 5 that Barrett and this man were. (*To the Witness.*) You went through Nos. 2, 3 and 4 boiler rooms? - Yes.

3953. You have told us, I think, in No. 1 boiler room - that is with the single-ended boilers - the fires were not alight? - Yes.

3954. Were they alight in the others, Nos. 2, 3 and 4? - Yes.

3955. So far as you know all the fires were alight except the five single-ended boilers in No. 1 boiler room? - Yes.

3956. Could you alone raise one of these watertight doors? - No.

3957. Could you do it by yourself? - I do not know.

3958. How many of you went through the watertight doors from boiler room to boiler room? - There were seven of us working in the engine room.

3959. But how many of you went? First of all you went from the engine room to No. 1 boiler room? - Yes.

3960. You went through a watertight door for that purpose? - Yes.

3961. How many of you went through that watertight door when you did? - About six or seven - seven.

3962. How many of you helped to open the watertight door? - As we got into each section the men were in it, in their own boiler rooms. At No. 1 boiler room we had to lift the door up, and when we got to the next section there were men belonging to that section in it.

3963. You lifted No.1; how many of you did it? - Three - three on the pump.

3964. What did you do it with? How did you do it? - With a pump handle.

3965. You turned that? - Yes.

3966. Was it two or three turned that handle? - Two or three.

3967. When you had got into No. 1 boiler room, who told you to go into No. 2? - We had to open the doors and we had to work through.

3968. And you continued through to No. 4? - Yes.

3969. Were you told to stop then? - Yes.

3970. Who told you to stop? - One of the engineers.

3971. What did you understand this was being done for? Why were you opening these watertight doors and going through these boiler rooms? What was the object of it?  
- To allow the engineers to get at the pumps and valves, I think.

3972. Did you know at all why you did not go into No. 5 boiler room? - Yes, I had an idea.

3973. Why? - On account of the water - too much water.

3974. You think that was why? - Yes.

3975. Did you hear anything about that at the time you were in No. 4 boiler room? I mean, did you hear that you were not to go into No. 5 because there was too much water, when you were in No. 4 boiler room? - No.

3976. Then how do you know? - Well, I judged that. In my own estimation I thought that was the reason we did not open the door, because there was too much water in No. 5. *The Attorney-General:* I have a notice which I will read, so as to get it on the note, which my friend has handed me. It is a notice which is pasted on the bridge on the watertight door apparatus.

*The Commissioner:* Where the button is?

*The Attorney-General:* Yes. "In case of emergency, to close watertight doors on tank top, press bell; push for 10 seconds to give alarm; then move switch to 'on' position and keep it there. Note: Doors cannot, however, be operated mechanically whilst switch is on."

*The Commissioner:* That means that the switch must have been taken off?

*The Attorney-General:* Yes.

*The Commissioner:* Before these doors could be opened by the handle in the way described by the Witness?

*The Attorney-General:* Yes; that is as I understand it.

*The Commissioner:* My recollection is that there is the same notice on the "Olympic."

*The Attorney-General:* That may be.

*The Commissioner:* I think I remember reading it.

*The Attorney-General:* My friend will correct me if it is wrong, or Mr. Wilding, but as I understand the effect will be that when the bell is pressed and the switch is on, then the watertight doors to the tank top come down. They cannot be raised again from there. They must be raised, I suppose, down below. That is right?

*Mr. Laing:* Yes.

*The Attorney-General:* They would have to be raised down below one at a time. When you have released the clutch at the top they drop by gravity.

*The Commissioner:* I do not know that there is any significance in it at all, but those doors which he opened were never closed again.

*The Attorney-General:* I understand not from what he says. Those are the 12 doors which are operated from the bridge, which communicate in that way, closing the tank top. Your Lordship will remember the question was asked - I am only saying it so that we can have

it clear - at one stage you did ask the question about the closing of the watertight doors from the bridge. *The Commissioner:* I did.

*The Attorney-General:* Since then you have seen the "Olympic." The effect would be that these watertight doors could only be closed with this pressure on the button from the bridge - that is, the 12 to which we are now referring. There are 12 on the tank top.

*The Commissioner:* There are 12 doors that are closed automatically.

*The Attorney-General:* That is right, from the switch.

3977. (*The Commissioner.*) There is a question that one of my colleagues wants cleared up. (*To the Witness.*) You said that you supposed you did not go from No. 4 into No. 5 because there was a large quantity of water in No. 5? - Yes, my Lord.

3978. You remember saying that just now? - Yes.

3979. Is that a conclusion that you have arrived at, that there was a large quantity of water in No. 5, since the accident, or did you think it was the fact when you were in No. 4, and that was the reason? Did you then think that that was the reason for not going into No. 5? - Yes, my Lord.

3980. You thought then when you were in No. 4 that the reason you were not ordered to go into No. 5 was that there was a great deal of water there? - Yes. *The Attorney-General:* I understood him to mean that, my Lord.

*(The Witness withdrew.)*

**Page 103**

**THOMAS RANGER, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

3981. Are you a greaser? - Yes.

3982. Were you employed as greaser on the "Titanic"? - Yes.

3983. And do you remember on Sunday, the 14th of April, going on watch in the evening at 6 o'clock? - Yes.

3984. Was it your duty as greaser to oil the electric fans of the vessel? - Yes.

3985. That was one of your jobs? - Yes.

3986. Do you remember, just about 20 minutes to 12 that night, being in the electric workshop? - Yes.

3987. Where is that? Do you know what deck that is on? - On C deck, I think. 3988. Do you know what deck that is that you call C deck? - I do not think it is the letter "C"? - It is the top of the turbine engine room.

3989. It is E deck, my Lord. If you look at the E deck you will see it just abaft of the "engine casing" there.

*The Commissioner:* Aaft?

3990. (*The Attorney-General.*) Yes, abaft of the "engine casing" on E deck. (*To the Witness.*) Is it close to the fan store? - It is underneath the emergency dynamo.

3991. I think it is marked "Electric Store." If you look just abaft of the "engine casing"

you will find “turbine engine casing”; the next aft is the “Electric Store.”

*The Commissioner:* Yes, I see that.

3992. (*The Attorney-General - To the Witness.*) What were you doing there? - Repairing the electric fans.

3993. You were at work there with the chief electrician, were you not? - Yes.

3994. Do you remember feeling something happen? - Yes.

3995. Just describe it to us? - There was just a slight jar - just lifted us off our feet. 3996. Just a slight jar - just lifted you off your feet? - Yes, it just moved us like that (*demonstrating*).

3997. Did you take any notice of it as regards your work, or did you go on with your work? - No, we turned round and saw the turbine engine was stopped. We turned round and looked into the engine room and saw the turbine engine was stopped.

3998. (*The Commissioner.*) Was it stopped? - Yes.

3999. (*The Attorney-General.*) Do you mean at the time you felt the bump? - About two minutes afterwards.

4000. First of all you felt the bump? - Yes.

4001. Then did you go on with your work? - Yes.

4002. Then, if I understand you, about two minutes afterwards you looked around and saw the turbine engine had stopped? - Yes.

4003. Is that right? - Yes.

4004. Then what did your chief electrician do? - He went down below and stood by the main lighting engines.

4005. That would be down on the tank top? - Down on the bottom platform.

4006. It is the same one we were looking at just now, 3; I pointed out to you, first of all, there was a reciprocating engine room, and then we went along the boiler rooms. Now, if you go aft, the next to the reciprocating engine is the turbine-engine room, and just aft of that you will find an electric engine. That is what you mean, is it not? - Yes. Your Lordship will see on the big plan it is very well marked. There is the turbine engine which my friend, Mr. Rowlatt, is pointing out. Just abaft of that you see “electric machinery” in the centre. That you see from the tank top plan here and fresh water tanks at the sides. That is really only giving you there what you have on the tank top plan. *The Commissioner:* The chief engineer went below and stood by the electric engines? 4007. (*The Attorney-General.*) Yes. (*To the Witness.*) You stopped in the workshop, did you? - Yes.

4008. (*The Attorney-General.*) The chief electrician, not the chief engineer, my Lord. (*To the Witness.*) When did you get the order from your chief electrician? - About a quarter of an hour afterwards.

4009. Then you remained there in the workshop for a quarter of an hour? - Yes.

4010. Were you doing your work? - Yes.

4011. Mending an electric fan? - Yes.

4012. And during the time you were there, did you know that anything had happened? - I knew the ship had struck something.

4013. You knew that? - Yes.

4014. (*The Commissioner.*) By this time the ship had stopped, I suppose? - Yes. 4015. (*The Attorney-General.*) You got an order from your chief, did you? - Yes, to go and stop all the electric fans, the stokehold fans first.

4016. Do you know what that was for. So that the steam would not rise in the boilers, I think.

*The Commissioner:* I do not understand that.

4017. (*The Attorney-General.*) To keep the draught down, I suppose - to reduce the draught. I suppose that is the object of it. (*To the Witness.*) How many fans were there to close down? - There were 45 working.

4018. Did you then go to stop all those fans? - Yes.

4019. The 45? - Yes.

4020. Beginning at the stokeholds? - Yes.

4021. How long did that take you? - About three quarters of an hour. 4022. When you want to stop a fan in the stokehold, do you have to go into the stokehold itself to do it? - No, in the fan rooms.

4023. Where are they?

*Mr. Laing:* F Deck.

4024. (*The Attorney-General.*) I think your Lordship will find them all on F deck, four decks up. If you look at F deck you will see a number of fans marked. It is the same one which we were dealing with just now which had the tank top. If your Lordship will look at F deck you will remember the squash racquet court which we were dealing with there. Then passing along aft you came to the first one - "fans." Then there is a "boiler casing," and then you go along again, "boiler casing," "fans," then "fans" again, and so on. So that really what you had to do was to go from the E deck to F deck; is that right? - Yes. 4025. By the time you had stopped the 45 fans, did you see members of the crew going on deck? - No.

4026. When you had finished after the three quarters of an hour what did you do next? - I went back to the electric storeroom.

4026. Back again to E deck? - Yes.

4027. When you got to E deck did you go to the electric store room which you had been in before? - No, I went up the dummy funnel. There are four fans situated up the dummy funnel.

4028. Where is that? You have told us where the electric store room was. Now where is that? Is it forward or aft? - Aft.

4029. Is it immediately aft, or some way aft? - The after funnel of the ship leads down to it.

*The Commissioner:* The after funnel is a dummy funnel?

*The Attorney-General:* Yes; it does not serve fire at all.

*The Commissioner:* It is that funnel that is the dummy?

*The Attorney-General:* Yes, it is plain if you look at that.

*The Commissioner:* It is used for ventilation?

*The Attorney-General:* Yes.

*The Solicitor-General:* The six boiler rooms are grouped in pairs of two.

4030. (*The Attorney-General.*) The three forward funnels work the six boiler rooms; each one works two; and the third one works the one lot of double-ended boilers and the one lot of single; that is how it stands. (*To the Witness.*) Then you went up the dummy funnel to the boat deck? - Yes.

**Page 104**

4031. Then when you got to the boat deck what did you see? - I went from there to the second-cabin deck, aft, the starboard side.
4032. What were you doing that for? - I had stopped all the fans, and I went on deck to see what was being done.
4033. You got to the boat deck. You have told us you went up the dummy funnel to the boat deck? - Yes.
4034. You had no order to do that, but you had done your work? - Yes.
4035. Then when you got on to the boat deck, what did you see then? - Nothing. 4036. Before you go on from there, tell us this: Up to this time had you seen any water in the ship? - No.
4037. You had not seen any at all? - No.
4038. From the boat deck where did you go? - To the second-cabin deck.
4039. The second-cabin deck on the starboard side? - Aft - starboard side aft. 4040. I am not quite sure that I know which you mean by the second-cabin deck. Do you mean the deck where the second cabins are? - The second deck down from the boat deck.
4041. That is bridge deck B, according to the plan.
4042. (*The Solicitor-General.*) Is it where the second-class smoke-room is? - Yes. 4043. (*The Attorney-General.*) You will see the second-class, if your Lordship has a painted plan, is painted green. You will see it marked in the centre there, "Second-class smoke-room." (*To the Witness.*) What did you do when you got there? - There were about 20 more men there; 20 men stood there.
4044. Members of the crew? - Yes.
4045. Did you know what they were? - Firemen mostly.
4046. Were there any women there? - No.
4047. Were there any children? - No.
4048. Did you have any talk with the firemen and trimmers? - Yes.
4049. Well, just tell us, did you find out from them what was happening? - No, we heard that all the boats had left the ship then.
4050. That is just what I wanted to get. Let us get this quite clearly. You heard by that time all the boats had gone? - Yes.
4051. You were down in the second-class cabin and you saw no women and children - that is right, is it? - Yes.
4052. Only these 20 men of the crew? - Yes.
4053. What did you do then? - I went to the port side of the boat deck aft.
4054. And then? - There was me and a greaser by the name of Scott. We climbed up the davit and down the boat falls, and I got into a boat, and Scott dropped into the water.

4055. You are speaking of the port side as I understand? - Yes, port side.

4056. Did you notice at all whether there was any list on the ship at this time? - There was a slight list to port, Sir.

4057. Did you notice whether she was down by the head? - Yes.

4058. Badly? - Yes.

4059. Did you see at all whether the water was over her foc'sle deck; could you see that? - No, you could not.

4060. You could not see that? - You could not see whether her foc'sle deck was under water at the afterend of the boat.

4061. You could not see so far from where you were? - No.

4062. But you noticed she was down by the head; you could feel that? - Yes.

4063. I thought you told us that all the boats had left the ship? - This boat came back to the ship as they only had two men in the boat.

4064. She came back to the ship with only two men in her; is that it? - She never had enough men in the boat to pull her away.

4065. Not enough men to man her? - Yes.

4066. Was she full? - Full of women and children.

4067. Do you know what number the boat was? - No. 4.

4068. Did you get any orders to go down into the boat? - No.

4069. Was there anybody there on the boat deck; was there any officer there? - No, Sir.

4070. Is this right, that you saw one of the lifeboats, No. 4, come back to the ship? - Yes.

4071. And you and another man called Scott started, and you climbed the davits? - Yes, and down the falls.

4072. And you dropped into the boat? - And the other man dropped into the water.

4073. How many people were there in the boat? - I should think about 40.

4074. And how many men were there in the boat? - Two.

4075. Do you know who they were? - Perkins, a quartermaster, and Foley, a sailor.

4076. Those were the only men in the boat? - Yes.

4077. You do not mean the only seamen, but the only men? - The only men. 4078. Were there any other men standing at the ship's side when this boat came alongside? - No.

4079. Did they call out at all; did anybody hail you? - We never heard no one. 4080. How did you know when she came back; you looked over the side and saw her, I suppose? - Yes.

4081. Did you know then what she had come back for? - No, not till we had got back into the boat.

4082. If I understand you aright, she came back with 40 people in her, all told? - Yes.

4083. No orders were given? - No.

4084. There was no officer standing where you were? - No.

4085. And you and the other man climbed the davits and dropped down into the boat? - Yes.

4086. Did the boat then push off? - We pulled away from the ship after we got the man in the boat by the name of Scott.

4087. You picked him up after he had dropped into the water? - Yes.
4088. Do you remember which davit it was that you climbed? - The after davit of all, the port side.
4089. That is the davit for lifeboat No. 16. It is the aftermost one on the port side. If I follow correctly what you said, there was nobody there except you two? - No one - only us two.
- The Commissioner:* This was on the boat deck?
- The Attorney-General:* Yes.
- The Commissioner:* And all the boats had gone away by this time?
- The Attorney-General:* Yes, by this time, and she came back.
- The Commissioner:* There were no boats for any one to get into unless they climbed down the davits, or jumped into the sea.
4090. (*The Attorney-General.*) Quite. (*To the Witness.*) Did you see the vessel go down? - Yes.
4091. You got into the boat, and I suppose, pulled away from the side of the "Titanic"? - Yes.
4092. Did you help to pull the boat? - Yes.
4093. When you drew away from the "Titanic" did you lay-by, or, what did you do? - No, we only just got away in time before the ship went down.
4094. Just tell us what you saw of the ship going down; describe it to the Court? - The forward end of the ship went underneath and seemed to break off, and the afterpart came back on a level keel.
4095. Then, when she came back on a level keel, what happened to the afterpart of her, then? - It turned up and went down steadily.
4096. Turned up that way, stern up. (*Showing.*) - Yes.
4097. Did she remain like that at any time? - No.
4098. Will you just describe to us what you mean? - She just slowly turned up and went down. You could see the three propellers in the air.
4099. The foremost part of the afterpart of the vessel began to go down into the water? - Yes.
4100. And the stern went up? - Yes.
4101. And then you saw the propellers in the air? - Yes.
4102. And then that all disappeared? - Yes.
4103. Was there room in your boat for more people? - Yes.
4104. Did you go back? - We pulled back to the wreckage and picked up seven persons.
4105. Were they men? - Yes.

## **Page 105**

4106. Did you see the last Witness who was here just now? - Yes, that was one of the men.
4107. Dillon. Your Lordship will remember he said he was picked up by No. 4 boat. Now I will ask you just one question about the lights. When you went away in the boats, did you see any lights? - Yes, the lights were burning.

4108. The lights of the "Titanic"? - Yes.
4109. You would have a particular interest in the lights? - The emergency light engine was running as I passed it coming up the dummy funnel.
4110. Just above the electric store that was pointed out before. Now just tell us about the lights. You saw the lights of the "Titanic" as you moved away. Did you notice at all when the stern, the afterpart of the vessel, got on a level keel whether there were any lights then? - The lights seemed to be going out then. 4111. Did you hear any explosion? - No, Sir.
4112. When you say "The lights seemed to be going out," will you explain to us what you mean? You saw the vessel dive down? - Yes.
4113. The fore part of her? - Yes.
4114. When you say the forward end seemed to break off, and the afterpart came back on a level keel, and then you say the lights were going out. When she came back like that on a level keel were there any lights? - Right aft. The lights were right aft what were burning, on the afterend what was floating. 4115. You mean the afterpart of the aft end? - Yes.
4116. Where, the taffrail, or where? Did you notice? - Along here. (*Showing on model.*)
4117. Just about abeam of the dummy funnel, do you mean? - Yes.
4118. And did they continue burning then right away aft to the taffrail? - Yes, right aft.
- The Commissioner:* I do not understand this.
4119. (*The Attorney-General.*) How long did you see them burning? - The lights gradually went out as the aft end of the ship went under.
- The Commissioner:* That is what I do not understand. I should have thought that the lights would either remain all alight or all go out.
- The Attorney-General:* When the water gets over the dynamo it would stop them, would not it?
- The Commissioner:* They were being worked, as I understand, at this time by the emergency dynamo.
4120. (*The Attorney-General.*) Yes. That, if it were working, would be as he describes, just about abreast of the dummy funnel, directly underneath it. As I understand it, he says the lights were burning in the afterend. (*To the Witness.*) I suppose that when the emergency dynamo got into the water the lights would go out? - Yes, it stops the fuse. *The Commissioner:* I understood him to say - I do not know whether I am wrong - that aft of the dummy funnel some of the lights were out and some of them were in. *The Attorney-General:* I understood him to say so at first, but I understood him to alter that, and at last I think he was right in what he said. At first I took the same view as your Lordship. I understood him to say he was dealing then with the afterpart of the ship which had righted itself on to a level keel.
- The Commissioner:* She was only at the top of the water for a few minutes.
4121. (*The Attorney-General.*) Yes. And then he says from the point which he marked for us there, which was just about abreast of the dummy funnel right away aft to the taffrail the lights were burning. (*To the Witness.*) Is that right? - Yes. 4122. (*The Commissioner.*) All the lights were burning? - All the lights aft. 4123. (*The*

*Attorney-General.*) At the afterend of the aft part of the ship they were all burning, but nothing forward, I understand. - No.

**Examined by Mr. SCANLAN.**

4124. Had you any light in this No. 4 lifeboat? - No.
4125. When you started to descend by the falls did you know there was a boat below? - We could see it coming back to the ship.
4126. Was that from the reflected light from the ship itself? - Yes.
4127. After you had picked up seven persons I take it that you still had less than 50 on board your lifeboat? - Yes.
4128. Had you then accommodation for still more people? - A few more, Sir, but it would not give you room to pull the oars in the boat.
4129. Had you sufficient seamen in that boat, when you got in and Scott, to properly man that boat? - No, Sir.
4130. How many men would be necessary to adequately man that lifeboat, and enable you to row? - 10 I should think.
4131. 10 men? - 10 men.
4132. What did you do; were you rowing? - Yes.
4133. Were those who were there unable to row the boat? - The men we got out of the water, Sir, were not fit to pull the oars. We had to rub them to fetch them round.
4134. Had you difficulty all the time in rowing this boat and navigating her? - Yes, there was not room.
4135. At the time you left by the falls, were there a number of deckhands near you? - No.
4136. They had remained down below at the time you came up to the upper deck? - Yes.
4137. Had you a boat station given to you? - Yes.
4138. What boat were you in? - No. 6 was my boat.
4139. Had you had any exercise, any practice, any boat drill? - No.
4140. Do you know something about the management of lifeboats, rowing boats? - Yes.
4141. Have you been at sea long? - About 16 years.
4142. Have you been on a number of liners? - Yes.
4143. Was it usual on the liners you have been sailing on to have regular boat drill and boat masters? - In the Royal Mail Company it is.
4144. Do you know if this No. 4 boat had a compass? - I could not say, Sir. 4145. Had she water - drinking water? - I do not know.

**Examined by Mr. HARBINSON.**

4146. When you came up the dummy funnel, how much of the "Titanic" continued to be lighted? - All the part that was out of the water.
4147. How much of it then was out of the water? - Three parts of the ship.
4148. How much of the ship was served by this dynamo that you have described; was it the upper portion? - All over the ship. 4149. It served the whole ship? - I believe so.

4150. The wires that carry the current are protected, I understand, by indiarubber, is not that so? - Yes.
4151. Am I right in suggesting that immediately water reaches the wires and finds an entrance between the indiarubber - pierces the indiarubber, or gets into the indiarubber, what is known as a short circuit of the line immediately occurs. Is that right? - Yes, they fuse.
4152. They fuse, and the lights go out? - Yes.
4153. So that as the "Titanic" gradually sank short circuits would be produced and there could only be light remaining in the portion above water? - That is so.
4154. At the time that you came up, the only portion lighted was the stern? - Yes.
4155. How many people did you see about there? - About 20 men.
4156. Only 20 men? - In the part of the ship I went to.
4157. You did not see any passengers? - No.
4158. There were none about? - I did not see any.
4159. No officers? - No.
4160. No one at all? - No.
4161. No confusion? - No.
4162. Did you hear any cries at the time? - No, not till the ship was going down. 4163. When you attempted to get into No. 4 boat did you see any people struggling in the water? - No.
4164. None at all? - No.

**Page 106**

**Examined by Mr. EDWARDS.**

4165. Did you hear any order or any signal to get to your boat station? - No.
4166. Can you say in relation to the fore funnel at what point the ship broke off? - About the second funnel from forward - between the first and second funnel from forward.

**Examined by Mr. LEWIS.**

4167. Did you hear the band playing on the ship? - Yes.

**Examined by Mr. COTTER.**

4168. Will you tell us whether there were any fidleys on board the "Titanic"? - I do not know.
4169. You do not know whether there were any fidleys from the stoke-hold? - No. 4170. I suggest to you that the after funnel was simply used in place of fidleys? - There was a ladder to go up the after funnel.
4171. It is a way for the sailors and firemen or anybody from the engine room or stokehold to get on deck? - Yes.

4172. Is there any place on the boat deck where the sailors can go and get fresh air, or where do they go to get it? - Sailors and firemen are not allowed on the boat deck, not unless their work lay there.
4173. You do not know that in some ships there is a place for them to go to on the boat deck to get fresh air, and even to smoke? - I could not say.
4174. When you saw the fore end of the boat break off, did the afterend come back suddenly or slowly on to a level keel? - She came back slowly.
4175. You heard the last Witness state that the patent bulk head doors in the stokeholds had been opened after they had been closed automatically from the bridge? - Yes. 4176. Is it your opinion that, after the forward end had fallen off, the leaving open of these doors caused the afterend of her to sink? - That I could not say.
4177. (*Mr. Cotter.*) I am only asking for your opinion. These ships, I may state, are supposed to float if they break in two, if the bulk-head doors are all acting as they ought to act.

**Examined by Mr. LAING.**

4178. How can you tell from your electric shop how the turbine is working? - Because there are two arms come up as the turbine engine stops.
4179. You have to go and look to see? - No, you can turn round and look through the wires in front of you.
4180. When you looked did you find that the turbine had actually stopped? - Yes.
4181. And when you noticed that it was two minutes after the shock? - Yes.

*(The Witness withdrew.)*

**GEORGE CAVELL, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

4182. Are you a trimmer? - Yes.
4183. And at the time of the accident on the 14th April were you at work? - Yes.
4184. Trimming coal? - Yes.
4185. Can you tell me which section you were in? - No. 4 section.
4186. Were you one of the regular trimmers for No. 4 right through the trip? - Yes. 4187. How many coal bunkers are there in No. 4 section? - There are six doors and four bunkers.
4188. Two on the starboard side and two on the port side? - Yes.
4189. And six doors? - Yes.
4190. How many trimmers are there to a section? - Four trimmers to a section.
4191. So that you would have three mates with you? - Yes.
4192. Had the fires in No. 4 been lighted the first day when the ship started? - Yes.
4193. And had they been burning all the time? - Yes.

4194. At the time this accident happened, do you remember which bunker you were in, starboard side or port side? - Starboard side.

4195. Were you in the bunker at the time? - Yes.

4196. Is that bunker in No. 4 aft of the furnaces of the boilers? - Yes.

4197. The boilers are in front of it? - Yes.

*The Solicitor-General:* If your Lordship has the plan which we have referred to as No. 3, the one with the tank top, you will see which bunker it was. The bottom plan, which is the tank top plan, shows a thick black line marked "G," which is one of the watertight bulkheads. Does your Lordship see "G"?

*The Commissioner:* It is not marked "G" on my plan.

*The Solicitor-General:* It is between No. 4 and No. 3. *The Commissioner:* Yes, I see.

*The Solicitor-General:* I think your Lordship in your plan will find that the word "coal" is written on the starboard side in the place where the bunker is.

*The Commissioner:* Yes, and on the port side too.

4198. (*The Solicitor-General.*) Yes. This man was on the starboard side. (*To the Witness.*)

Were you actually in the bunker at the time, Cavell? - Yes.

*The Solicitor-General:* Your Lordship says there is no "G" on your plan. If your Lordship will look for a moment at the big plan I will have the spot pointed out for you.

*The Commissioner:* The fact of the matter is this: I have had a plan furnished to me of the "Olympic." They are practically the same - for all purposes they are the same, but I have not got the same letters.

*The Solicitor-General:* We will find it for you.

*The Commissioner:* It does not create any confusion.

4199. (*The Solicitor-General.*) Mr. Rowlatt is just putting the point of the pointer on the bunker. Your Lordship will see that the vertical line is marked "G" there at the bottom. (*pointing.*) (*To the Witness.*) That is where you were, Cavell? - Yes.

4200. Was there anybody else with you in the bunker at the time? - No.

4201. Tell us what happened? - I felt a shock, Sir, and with that all the coal round me fell around me. I had a job to get out myself.

4202. You felt a shock and the coal fell in the bunker. Did the shock knock you over? - It did not have time to knock me over. The coal surrounded me before I knew where I was.

4203. You were carried down with the coal? - Yes.

4204. And you got out? - Yes.

4205. You got out into the stokehold there, I suppose? - Yes. After that I came up right up to the bunker door, and then came into the stokehold.

4206. Is that higher up, at a higher level? - Yes.

4207. And you climbed out of that, did you? - Yes.

4208. And you got into the stokehold? - I came down the ladder and came into the stokehold.

4209. On to the plate? - Yes.

4210. When you got there did you find that the signal for "stop" had appeared on a red disc? - Yes.

4211. Who was in charge - who would be the leading hand? - A leading fireman. 4212. In charge of No. 4? - Yes.

**Page 107**

4213. Did you hear him give any orders, or had they been given already? - I never saw him, Sir.

4214. Did you notice - had the dampers been put in by the time you got down? - No.

4215. Now tell us what happened or what you did? - After I came into the stokehold the lights in the stokehold went out.

4216. In No. 4? - Yes.

4217. Did that happen at once or was there a little time before that happened? - It happened as soon as I got into the stokehold.

4218. Out went the lights? - Yes.

4219. Did you notice whether the watertight doors fore and aft of your stokehold had been closed? - I heard the bell go and I knew in a minute what it was for.

4220. You heard the warning bell? - Yes.

4221. And so you knew they had closed? - Yes.

4222. When the lights went out what happened? - I went on deck to see what it was, and I saw people running along wet through with lifebelts in their hands.

4223. Did you go up the alleyway? - My mate said we had struck an iceberg.

4224. How far up did you go; what deck did you go up to? - The alleyway.

4225. Was it along the alleyway that you saw the people going? - Yes.

4226. Were they passengers? - Yes.

4227. (*The Commissioner.*) And they had lifebelts on? - They had lifebelts in their hands.

4228. (*The Solicitor-General.*) This alleyway that you came up to, I think, is on E deck.

Is it the working alleyway on the port side or is it the one on the starboard side? - On the port side.

4229. And to get up to it from No. 4 - I think we were told about No. 5, that there was a stairway that went over the boilers and came out in the alleyway? - You have to go across the boilers and up an escape ladder.

4230. Is there a different escape ladder from each section? - Yes.

4231. Did you get into the alleyway immediately above No. 4? - Yes.

4232. When you got up into the alleyway and you saw these passengers, was there any light in the alleyway? - Yes.

4233. So that the lights had not gone out there? - No.

4234. You said you saw people going along with lifebelts wet through? - Yes.

4235. And saying that she had struck an iceberg? - Yes.

4236. Can you remember which way they were going? - They were going towards after-way.

4237. Coming from the forward end? - Yes.

4238. Could you tell what class passengers they were? - I should think they were the third-class passengers.

4239. Your Lordship will see - perhaps it is possible for you to see it there on the plan - that the E deck on which the alleyway is, is the E deck, if you carry your eye forwards, which runs forward to the part marked "third-class and crew" (*pointing*). (*To the Witness.*) They were coming from there, were they? - Coming from forward to aft.

*The Commissioner:* The alleyway runs straight aft?

*The Solicitor-General:* Yes.

*The Commissioner:* The whole length of the ship?

4240. (*The Solicitor-General.*) Yes, practically. (*To the Witness.*) You went up, I understand, to get some lamps. Did you get them? - Yes.

4241. Did you go back to your stokehold? - Yes.

4242. With the lamps? - Yes.

4243. What about the lights in the stokehold? - They were on by the time I got back.

4244. (*The Commissioner.*) The lights only went out for a few minutes? - Yes.

4245. (*The Solicitor-General.*) It is the same story as No. 5, your Lordship sees. (*To the Witness.*) There is a thing I have not asked you that I ought to have asked you before. Up to the time that you left No. 4 and went up to the alleyway, had you seen water in No. 4?

- No.

4246. Not coming through the floor, or the sides, or anywhere? - No.

4247. When you came back to No. 4, and you found the lights were on again, did you see any water in No. 4? - No.

4248. When you got back to No. 4, do you remember hearing an order being given? - Yes.

4249. What was it? - Draw fires.

4250. Is that any part of a trimmer's work as a rule? - In an emergency. 4251. In an emergency you would do it, of course? - Yes.

4252. And did you lend a hand to draw the fires in No. 4? - Yes.

4253. And were they drawn? - Partly drawn.

4254. What would there be - 30 furnaces? - Yes.

4255. Were the firemen there helping to draw, too? - Yes.

4256. You say they were only partly drawn? - Yes.

4257. What happened then? - The water started coming up over her stokehold plates.

4258. In No. 4? - Yes.

4259. Did that happen gradually or did it happen suddenly? - It came gradually. 4260. The water - you moved your hand, you raised it; did it seem to come up from below? - Yes.

4261. As far as you saw in No. 4, did any water come in from the side of the ship? - Not so far as I saw.

4262. When the water came up through the plates what was done then? - We stopped as long as we could.

4263. That is right? - And then I thought to myself it was time I went for the escape ladder.

4264. They were still drawing the fires, these men, were they? - Yes.

4265. How high did the water get above the plates they were standing on? How much water were they standing in before they left? - About a foot.
4266. Working up to their knees? - Yes.
4267. Scraping the cinders out? - Yes.
4268. Just one other thing. When you were in No. 4, as you have described, did you see anything of the engineers coming in through the emergency door behind? - No.
4269. You did not notice that? - No.
4270. Through the watertight door? - No.
4271. You know what I am referring to, Cavell, do not you? - Yes.
4272. There was a watertight door behind and a watertight door before you? - Yes. 4273. As far as you knew, and as far as you observed, was the watertight door which was abaft of you raised at all? - No, Sir.
4274. Not as far as you know? - No, Sir.
4275. Of course, there would be a lot of steam in No. 4, would not there? - Yes.
- The Commissioner:* Are you suggesting that that door was open?
- The Solicitor-General:* My Lord, we have had evidence that it was. The last Witness said he opened it.
- The Commissioner:* Which door are you talking about? You are talking about the door between 4 and 5.
- The Solicitor-General:* I was not, my Lord, with great respect. If I said No. 5 I made a mistake. I said there were two doors, one in front of him, and one behind him.
- The Commissioner:* The one in front of him was not open.
4276. (*The Solicitor-General.*) I know, my Lord. I wanted to draw his attention to the difference. (*To the Witness.*) Just to be quite clear, I am talking, you know, about the one? - Through the passage between the bars.
4277. As far as you know that was not opened when you were there? - I cannot say that.
4278. (*The Commissioner.*) You mean to say that you do not know? - I do not know.
- The Commissioner:* That is all it comes to.
4279. (*The Solicitor-General.*) Yes, my Lord. (*To the Witness.*) There would be a lot of steam, would not there? - There would.
4280. And were all the men there working as fast as they could? - Yes.

## Page 108

4281. This watertight door is in a sort of tunnel, is it not? - Yes.
4282. You say you worked as long as you could, and then you came up the emergency ladder? - Yes.
4283. Where did you go? - I came down again.
4284. What, down into No. 4 again? - Yes.
4285. Why did you do that? - Because I could see nobody about in the alleyway.
4286. (*The Commissioner.*) Why did you go back? - I thought it was all right, my Lord.
4287. (*The Solicitor-General.*) You got up again as far as the alleyway; you found nobody in the alleyway; you thought it was all right and went down again? - Yes.
4288. Did anybody else do that with you? - No.

4289. When you came down again from the alleyway to No. 4, were there any other men in No. 4, or had they all gone? - I could not see any.
4290. Was the water the same height, or was it still rising? - I could not say. I never went right to the bottom.
4291. Then you came down, and I suppose you went up again? - Yes.
4292. When you got into the alleyway where did you go? - I went along on to the boat deck.
4293. The top deck? - Yes.
4294. Whereabouts on the boat deck did you go? - Right aft.
4295. Did you see whether the boats had been lowered, or whether they were still there on the boat deck? - There was only two boats left, and one they were lowering.
4296. Two boats left, and one they were lowering? - Yes.
- The Commissioner:* That is three he means.
4297. (*The Solicitor-General.*) No, my Lord, I think he means two? - Yes, two.
4298. Two boats left; one had not yet been lowered, and one was being lowered? - Yes.
4299. Did you look at both sides, the port side and the starboard side? - No.
4300. Which side did you look at? - The starboard side.
4301. When you say there were only two boats left you mean there were two boats left on the starboard side? - Yes.
4302. Do you know one way or the other whether there were any left on the port side? - I could not say.
4303. The two boats you refer to were the two right aft? - Right aft.
4304. Which was the one which was being lowered? - The second one from the end.
4305. The last but one? - Yes.
4306. Were there people on the deck? - They were all in the boat, barring five firemen.
4307. Was not there anybody left on the boat deck? - Only the men that lowered the boat.
4308. No women left? - I never saw any.
4309. And the men who were lowering the boats, were they members of the crew? - Yes.
4310. Did you see any officer? - Yes.
4311. Who was he? - I do not know his name.
4312. You do not know which officer it was? - No.
4313. What did you do? - I be alongside the other boat.
4314. I did not quite hear what you said? - I stopped alongside No. 15 boat.
4315. What happened to you after that? - The officer ordered five of us into it.
4316. And you were one of the five? - Yes.
4317. And the boat was lowered? - Yes.
4318. No. 15? - Yes.
4319. No. 15 was the last one; we have not had any evidence about that. It was No. 13 we have had evidence about. Did it get down to the water safely? - We lowered it just aft the boat deck to the first-class. We called out there for women. We got a few there till we got no more, and then we lowered down to the third-class, and we took more till we could get no more.
4320. First of all, you lowered from the boat deck to what you call the first-class? - Yes.

4321. Is that what one sees there, the open deck just below the boat deck (pointing)? - Yes.

4322. When you got there, you say you called out for more women? - Women and children.

4323. You mean called out from the boat? - Yes.

4324. And were there people there? - Only a very few came, Sir.

4325. And when they did come, was there room for them in the boat? - Plenty.

4326. Plenty of room? - Yes.

4327. And they got in? - Yes.

4328. About how many? - About five we got off the first-class.

4329. That is from the first-class deck - A deck? - Yes.

4330. Were there any men on that deck? - I never see any, Sir.

4331. You mean that you took into your boat everybody who came on deck A? - Barring what the officer may have stopped alongside the davits.

4332. The davits would be on the boat deck? - Yes.

4333. Then you were lowered a bit further, were you? - Yes.

4334. What do you mean by saying you were lowered to the third-class? - To the lower deck - here (*pointing on the model.*).

4335. My Lord, may I just ask him to point out the place, because I think it is a little important to know. Will you show me where your boat got to? You mean here (*pointing on the model*)? - There (*showing.*).

4336. (*The Commissioner.*) Just show me again, please. Go back to the model? - Here (*pointing*).

4337. (*The Solicitor-General.*) As it is in this model here it looks as though those decks were shut in with windows and casing. Was that so? - No.

*The Commissioner:* Well, Sir John, they were perhaps shut in for a certain length with windows, but perhaps the windows stopped at a point. It occurs to me that possibly there were no windows there, though there may have been windows towards the middle of the ship.

*The Solicitor-General:* Yes, my Lord. There is a boat at any rate which comes down here (*showing.*).

*The Commissioner:* But I thought you were suggesting, you know, that the passengers on this deck that he is now talking about could not get on to the boat because of the glass in the windows.

*The Solicitor-General:* I was not quite clear which deck he meant, my Lord.

*The Attorney-General:* I understand that these windows are windows that you can open and pull up just like you do in a railway carriage, only that they are bigger. They are to protect the passengers from wind and rain - for shelter purposes.

*The Commissioner:* I think those windows do not extend the whole length of the ship?

*The Solicitor-General:* No, they do not.

*The Commissioner:* And therefore it may be at the place where he was pointing there were no such windows?

4338. (*The Solicitor-General.*) Probably he can tell us. (*To the Witness.*) Do you remember whether when you got to this lower deck there were windows that had to be opened, or whether it was clear? - No.
4339. Which was it? - All clear.
4340. Then you called for more people there, did you? - Yes.
4341. And how many people came there? - Crowds of them.
4342. Did more come than you could take in? - No.
4343. For more than you could take in? - No.
4344. How many do you think you took in from the lower deck? - We took in about sixty, Sir.
4345. (*The Commissioner.*) That is in addition to the five that you had taken from the boat deck, from the upper deck? - Yes.
4346. (*The Solicitor-General.*) From deck A? - Yes.
4347. Perhaps you can tell us this - when you were ordered in at the boat deck you and five others, was there nobody in the boat already? - No.
4348. It was empty? - Yes.
4349. Then you made the first five to get into it? - Yes.
4350. Then it was lowered to the A deck and you took in about how many? - Five.
4351. About five more? - Yes.
4352. That would make ten? - Yes.

**Page 109**

4353. And then you are lowered to the lower deck, and you take in you think about 60? - Yes.
4354. That would make about 70? - Yes.
4355. Do you say that you took in everybody who came at that time at the lower deck? - Yes.
4356. You left nobody behind? - No, Sir.
4357. Can you tell me about these 60 - first of all were they men or women? - All women and children.
4358. Were there no men about? - Yes, Sir.
4359. You did not take them in? - No, Sir.
4360. Were they on this same lower deck? - Yes.
4361. How was that, were they standing back? - Yes.
4362. Did you see anybody there keeping order? - No.
4363. Were the men passengers, or stewards, or crew, or what? - They seemed to be third-class passengers.
4364. That is what you thought they were? - Yes.
4365. And they were standing back, were they? - Yes.
4366. And as far as you could see were all the women and children from there taken on board? - Yes.
4367. When you say they were third-class passengers what makes you think so? - I generally know the difference between a third-class passenger and a second.

4368. At this rate, you did not take any second-class passengers into your boat? - Not to my knowledge, Sir.

4369. (*The Commissioner.*) You think that the 60 women you took were all third-class passengers? - Yes, my Lord.

*The Solicitor-General:* Of course, the deck he is speaking of is, undoubtedly, a secondclass deck.

*The Commissioner:* Yes.

4370. (*The Solicitor-General.*) That was your impression, was it? - Yes. 4371. These women that you think came from the third-class, were some of them foreigners? - They were Irish girls.

4372. It is a nice question whether they are foreigners or not? Then, your boat, I suppose, was as full as it would hold, was it? - Yes.

4373. Who took charge of it? - One of the firemen.

4374. What is his name? - Diamond [Dymond].

4375. Then there was you, and were there only three others of the crew? - Four.

4376. Four others? - Yes.

4377. Diamond [Dymond] and yourself, and four others? - Three more.

4378. I thought so - Diamond [Dymond], yourself and three others? - Yes.

4379. Were the other three firemen too? - Yes.

4380. You pulled away from the ship a bit? - Yes.

4381. I do not propose to go into the details of this, my Lord, because it is simply duplicating previous evidence, and you were picked up by the "Carpathia"? - Yes.

4382. Had you got any room on your boat to take on board anybody more? - No.

4383. Perhaps I might just ask you this as there is a statement about it. Did you hear, or do you know at all from your No. 4 section what was the pressure of steam you were to get to? - 225 lbs. steam.

4384. Was that the order? - That was not the order. That is what steam there was.

4385. 225 lbs.? - Yes.

4386. You must explain it to me; how do you know that? - By the gauge.

4387. Do you mean you read the gauge yourself? - Yes.

4388. The gauge would be near the boiler? - Alongside the boiler.

4389. And when was it do you think that you read that gauge? - Just before I went into the bunker.

4390. You did? - Yes.

4391. Is that your regular course to look at the gauge before you go into the bunker? - No.

4392. But you think you remember that? - Yes.

4393. When was it that you went into the bunker; what was your watch? - 8 to 12 watch.

4394. You started work at 8, did you? - Yes.

4395. Do you remember about the gauge at any other time during this trip? - We had orders to keep 200 lbs. steam.

4396. You heard that those were the orders, to keep 200 lbs.? - Yes.

*The Commissioner:* Have you no better evidence on this point than this?

*The Solicitor-General:* I put the question because I saw there was a reference to it in the statement he had made, but I quite recognise it is not the best evidence.

*The Attorney-General:* All the engineers are drowned. We are getting the best evidence we can.

*The Commissioner:* Were there any engineers saved?

*The Attorney-General:* No, all the engineers were drowned. They all remained at the bottom of the vessel.

**Examined by Mr. SCANLAN.**

4397. Are you quite sure that you noticed on the gauge an indication of 225 lbs. steam?

- Yes.

4398. Do you know that those engines are only designed for a working pressure of 215 lbs.? - No.

4399. The boilers, of course, you are referring to? - Yes.

4400. Can you say what length of time elapsed from the collision until you first went into the alleyway when you saw the third-class passengers? - About an hour and a half.

4401. And do you say they seemed to be wet through then? - Oh, no. It was just on two hours by the time I saw them wet through.

4402. How long was it when you went up to the alleyway and saw those third-class passengers and they seemed to be wet through? - I give about two hours for that time.

4403. Two hours had elapsed then? - Yes.

4404. In what direction were those passengers going? - Right aft.

4405. When you found water in this compartment, No. 4, in which you were working were the pumps being used? - I do not know about the pumps.

4406. Could you see when you were leaving compartment No. 4 whether the watertight door had been shut or not? - The door was shut.

4407. You are quite sure it was shut? - Yes.

4408. (*The Commissioner.*) Which door is this?

4409. (*Mr. Scanlan.*) Are you referring to the watertight door between compartment 3 and compartment 4? - Between 4 and 5.

*The Commissioner:* There is no suggestion that that was open.

4410. (*Mr. Scanlan.*) No, my Lord. (*To the Witness.*) You know the corresponding watertight door between 3 and 4. Had you sufficient light at the time you were leaving No. 4 by the escape ladder to see whether or not that door was closed? - You cannot see that door from that stokehold.

4411. You could not see it from the stokehold? - No.

4412. (*The Commissioner.*) It is down a little tunnel? - Yes.

4413. (*Mr. Scanlan.*) You would not be in a position at any time to see whether it had been opened or not? - No.

4414. Do I gather from what you have told us that the crew in this lifeboat, No. 15, was yourself, Diamond [Dymond] and three firemen? - Yes.

4415. Any sailormen at all? - No sailormen.

4416. Was there anyone in that boat, No. 15, who knew about managing a boat? - Five of we crew did.
4417. Who took charge of her? – Diamond [Dymond].
4418. And is Diamond [Dymond] a trimmer? - A fireman.
4419. Had you sufficient of a crew to row safely? - We done our best, which we did; we managed her.
4420. Had you difficulty? - No, not to say difficulty.
4421. Had you ever been called to a boat station - I take it you had not - on the “Titanic”?  
- No. The only boat drill as I ever had was when we went to New York, on Sunday morning.
4422. But none on the “Titanic”? - No.
4423. Did you usually have boat drill on the other boats you have been on? - No. 4424.  
On any boat? - No.
4425. What other boats have you been on? - The “Adriatic,” the “Oceanic” and the “Olympic.”
4426. All White Star boats? - Yes.
4427. Do you mean to tell us that on none of those boats at any time have you had boat drill? - Only when we have been at New York for the week.
4428. For the week-end? - When we have stopped there a week we go up there on a Sunday.

**Page 110**

4429. Has it not been a practice on the White Star ships to muster the men to their stations? - I never had one yet.
4430. You have never been to a station? - No.
4431. How long have you been on the White Star? - Eighteen months.
4432. Prior to that had you been on any other lines? - No.
4433. That is your whole experience of the sea? - Yes.

**Examined by Mr. ROCHE.**

4434. What engineer was in charge of your section? - The engineer I think on our watch was Mr. Harrison.
4435. Did you see him when you came out of the bunker and went up the escape ladder?  
- No.
4436. The fires were still going when you left? - Not going, we drew what we could.
4437. You drew them? - Yes.
4438. Before you went up? - After I came down again - not the first time.
4439. Was Mr. Harrison still there then? - No, Mr. Farquharson was the only engineer I saw.
4440. Mr. Harrison was not there and Mr. Farquharson was then in the engine room? - Yes.

**Examined by Mr. HARBINSON.**

4441. There were a great number of third-class passengers on the liner? - Yes. 4442. Did you hear or see anybody giving them instructions where to go to? - The stewards I did.
4443. Did you see stewards? - Yes.
4444. What did you hear them say? - They were telling them to keep calm.
4445. Did they seem to be excited? - The passengers did.
4446. They were proceeding aft? - Yes.
4447. How long was it from the time you saw these passengers in the alleyway until you got into the boat on the boat deck? - About two hours.
4448. Two hours afterwards? - Yes.
4449. During the intervening time you had been down below? - Yes.
4450. You do not know what took place in the interval? - No.
4451. When you came on to the boat deck you saw no one there? - No.
4452. On the first-class deck you took all the women and children? - Yes.
4453. Were there many men left on the third-class deck? - No, very few.
4454. How do you know? - From what we saw there.
4455. You were in the boat? - Yes.
4456. You did not go on to the deck? - No.
4457. So that all your knowledge is confined to what you saw from the boat? - Yes.
4458. You say the men were standing back? - Yes.
4459. Was any one keeping them back? - Not to my knowledge.
4460. Could any one have been keeping them back without you knowing? - No.
4461. You say so. A number of them were Irish? - Yes.
4462. Were not there windows between the third-class deck and where you were in the boat? - No.
4463. No windows; space clear? - Yes.
4464. You could see all who were on the third-class deck? - Yes.
4465. Did you see any people further aft than the position you were in the boat? - No.
4466. Did you look? - No.
4467. Have you any idea as to how many of these passengers were Irish? - Most of them.
4468. Most of the people who were left behind? - I could not say what was left behind.
4469. On the deck? - I cannot say.
4470. But a number of Irish were with you in the boat? - Yes.

**Examined by Mr. LEWIS.**

4471. With regard to the inspection at Southampton, do the trimmers take part in that at all? - Which?
4472. The ordinary Board of Trade inspection? - No.
4473. They take no part whatever in it? - No.
4474. There is a boat list placed on board? - I never saw it.
4475. Did you look for it? - Yes.
4476. You looked for it and could not see it? - Yes.

4477. Did you have any difficulty in lowering your boat - boat 15? - No.
4478. Was there a plug in your boat? - We tried to find a plug.
4479. Could you find it? - I do not know whether they did or not. I know they asked for matches to find it. Whether they found it or not I could not say.
4480. They must have found something, I suppose. It evidently had a plug in or else you would have gone down? - You could put your hand over it.
4481. Was that done, do you know? - I cannot say.
- The Commissioner:* The boat did not go to the bottom?
4482. (*Mr. Lewis.*) No; so I understand, my Lord. (*To the Witness.*) You do not know whether a cork was thrown into the boat? - No.
4483. Anyway, there was a difficulty in finding the plug. With regard to these thirdclass passengers, you said when you came from your bunker that there were a large number hurrying on deck? - Yes.
4484. And then when you went to this boat deck there were very few of them? - Yes.
4485. Where do you imagine they went? - I should think they was in the boats. I never see them any more.
4486. If they were not in the boats, where do you think they went. Where were they going? - They were going right aft to the boat deck, the best way.
4487. How many were on watch at the time in your division? - There were ten firemen.
4488. What is a complete watch - 70 or 80, is not it? - Over that.
4489. 83? - About that.
4490. How many were saved? - Seven.
- Mr. Lewis:* 7 out of 83.

**Examined by Mr. LAING.**

4491. When you left your section No. 4 to go to the boat deck, did you pass along the alleyway? - Yes.
4492. Was there water in it? - No.
4493. None at all? - No.
4494. I mean the last time you went up? - I never saw any.
4495. There were five men in this boat. What did you do - lay to your oars? - Yes.
4496. Was that all you did? - Yes.
4497. That was all you wanted to do, was not it? - Yes.

**Page 111**

**Further examined by the ATTORNEY-GENERAL.**

4498. Did you see any lists like these up on the boat (*showing lists.*)? - No.
4499. You did not see any? - No.
4500. Do you know whether any of the others had their boat stations? - I cannot say.
4501. Did you never hear anything about boat stations the whole time you were abroad? - No.

*(The Witness withdrew.)*

*(After a short adjournment.)*

**ALFRED SHIERS, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

4502. Were you a fireman on the "Titanic" at the time of this casualty? - Yes. 4503. Did you join the ship on the day she left Southampton? - Yes.
4504. Did you see any boat's list? - Not at Southampton.
4505. After you left Southampton did you see any boat's crew list? - Yes, the Sunday afternoon.
4506. On the Sunday? - Yes, after we left Southampton.
4507. Not till Sunday, the day of the accident? - No.
4508. Where did you see it? - Posted outside the forecastle door.
4509. I suppose if you had looked there before you might have seen it before? - No, I saw them put it up.
4510. You saw it being put up on the Sunday? - Yes.
4511. What time on Sunday did you see it being put up? - It was after dinner, but I could not say what time.
4512. At what time do you dine? - At 12 o'clock, as a rule.
4513. Who was putting it up? - One of the engineers.
4514. After it was put up did you look at it and see what your boat was? - Yes.
4515. What was the number of your boat? - No. 3.
4516. At the time of the striking of the iceberg were you off watch? - Yes.
4517. It was the 8 to 12 watch, was it not? You were off watch? - Yes.
4518. Where were you? - In my bunk.
4519. Did you feel the shock? - Yes.
4520. On which side are your quarters, on the port side or the starboard side? - On the starboard side.
4521. What did you hear or feel? Did you hear anything? - The rumble - the shock. It was not much.
4522. What did you do? - I got out of my bunk and went up on the deck.
4523. When you got on deck, did you see anything? - I went on to the forecastle-head first, and underneath.
4524. On the forecastle-head did you see anything? - No.
4525. Did you see any ice? - I did on the deck - when I got out on the deck.
4526. Did you leave the forecastle? - Yes.
4527. And go where? - I left the forecastle and went underneath the forecastle-head.
4528. Did you see ice? - Not there.
4529. Where did you see ice? - On the forewell deck.
4530. Did you have a look round? - Yes.

4531. Did you see anything? - I saw the berg that was going away.

4532. Where was the berg away from you - on the port side or the starboard side, or ahead, or where? - On the starboard quarter, off the stern.

4533. It was off your quarter, was it? - Yes.

4534. How soon after you felt the striking of the iceberg did you see it away on your quarter? - About four or five minutes.

4535. Tell me what you did - that will give me an idea - did you get up at once? - Yes, I was reading in my bunk at the time.

4536. You got up at once? - I went up on the forecastle.

4537. Did you run up? - I walked up; our forecastle is only outside the companion ladder.

4538. Did you see the berg then? - No, not then.

4539. What did you do before you saw it? - Looked towards the window underneath the forecastle-head to see if there was anything there.

4540. That took a short time, I suppose? - It is only just a walk round from our room.

4541. What did you do next? - Came out on the deck; on the starboard side of the deck.

4542. Was it then you saw the berg? - I saw the ice then, and then the berg when I looked over the side.

4543. And then the berg was away on the starboard quarter? - Yes.

4544. About how far off? - I could not say; it was very dim then; I could just see it.

4545. It was a dark night? - Yes, a starry night.

4546. Starry, but dark. When you saw the berg could you judge whether your ship was stopped or going ahead? - When I looked over the side there was a slight way on her; she was moving, but not much.

4547. You were moving through the water? - Yes, but not much.

4548. What did you do after you saw the berg? - I went down to the forecastle again.

4549. Why did you go back to the forecastle? - It was no good stopping on deck. There was nothing there only to see it going away.

4550. You thought there was nothing the matter, is that so? - Yes.

4551. When you got back to the forecastle did you see anything which told you there was something the matter? - Not then.

4552. Did you go down into the forecastle? - Yes.

4553. Did you see anything or hear anything there? - No.

4554. Did you see any water? - Not then.

4555. Did you remain in the forecastle? - Yes.

4556. Did you go back to bed? - No. I sat on my bunk.

4557. How long did you sit on your bunk before you noticed or heard or saw anything? - Not long. There was a fireman there with his toe cut.

4558. Did you do anything with this fireman? - Yes.

4559. Did you take him somewhere? - Yes.

4560. Where did you take him? - To the doctor.

4561. Did that take just a short time? - Yes.

4562. After that what did you do? - There was no doctor there then.

4563. After you had taken him to the doctor's shop, where did you go to? - I came back again to the forecastle.

4564. On this occasion when you got back again

**Page 112**

to the forecastle, did you see anything? - Yes, the wind coming up through No. 1 hatch; air was forcing the hatch.

4565. You could see that, could you? - Well, you could hear it there.

4566. Did you see anything? - No, not then.

4567. Did you remain there? - No, I took this man down to the other part of the ship.

There was no doctor there at our place, and I took him under the alleyway towards the ship aft.

4568. After that did you go back again to the forecastle? - Yes.

4569. Now on this return to the forecastle, did you see anything? - Yes.

4570. What did you see? - Water coming up through the hatch.

4571. There are two hatchways, I see on the plan. Would it be No. 1 you are speaking of? - Yes.

4572. Where was the water? On what floor or deck was it when you saw it? - I do not know the No. of the deck.

4573. Where your quarters are? Was it on that deck? - No.

4574. Below that? - Below that.

4575. Was it coming up slowly or fast? - Slowly.

4576. Now, seeing that water, did you do anything? - No, we stood about watching it.

4577. How long did you stand about looking at it? - I could not tell you.

4578. Was it a short time? - That I do not know.

4579. What did you do? You stood about, you say? - Yes.

4580. What did you do next? - Went up on the deck again, the forewell deck. 4581.

When you got there, did you see any passengers there? - Not on our deck; not on the well deck; only the crew.

4582. What did you do when you got on the forewell deck? - I stood about talking with the crew.

4583. And what happened next? - I went down to the forecastle again.

4584. You returned to the forecastle? - Yes.

4585. When you got back to the forecastle on this occasion, did you again see the water? - No. I went down to put my coat on then, when I went down the next time.

4586. Was there water to be seen when you looked? - Yes.

4587. Had it got higher? - Yes.

4588. A good deal higher? - Yes.

4589. Did you clear out or remain there? - I remained there, and went up on deck again after that.

4590. When you got to the deck on this occasion did you see any people there - any passengers? - No, only the crew, with their lifebelts.

4591. They had their lifebelts on? - Yes, they had had orders to get them then.

4592. Did you remain there? - I went down to the forecastle-head to get my lifebelt.

4593. Did you get it? - No.

4594. Why was that? - There was none there for me.
4595. Where did you go to look for a lifebelt? - On the rack.
4596. They had all gone? - Yes.
4597. Had there been lifebelts there before? - Yes.
4598. You had seen them? - Yes.
4599. The other members of the crew had taken those that were there? - Yes.
4600. Then did you come up again? - I came up on the deck.
4601. Where did you go to then? - I stood round.
4602. Did you hear any orders being given? - Yes, one order came down to go up to the boats.
4603. Did you go up to the boats? - Yes.
4604. Which boat was yours? - No. 3.
4605. Did you go to No. 3? - Yes.
4606. When you got to No. 3 was there anything being done with No. 3? - No.
4607. Was there anybody at No. 3? - No.
4608. Any of the crew? - No, there was only me there.
4609. Were there any passengers there? - Passengers were getting into No. 7 boat.
4610. Was No. 7 boat being looked to? - Yes.
4611. You had got to No. 3. Did you remain at No. 3? - No, I walked down the deck just to look at this boat.
4612. No. 7? - No. 7.
4613. Did you help to get No. 7 away? - I helped to clear the falls.
4614. Were the falls in good working order? - They were new.
4615. Did they work properly? - Yes.
4616. Did you see that boat lowered down? - Yes.
4617. Where did you go to after that? - I came along the deck towards my own boat.
4618. No. 3? - Yes.
4619. When you got to No. 3 boat, your own boat, was there any officer at it? - No.
4620. Any other members of the crew? - Three or four firemen about.
4621. Where was No. 3? Was it in the chocks then, or was it outboard? - Outboard.
4622. Somebody had put it outboard? - Yes.
4623. You got back to it. What happened about it, did you remain at it? - Yes.
4624. What was done with regard to that boat? - Nothing then.
4625. Did you remain there till something was done? - Yes, I was in between the chocks of the two boats.
4626. What was done? - Nothing to that boat.
4627. Yes, I know, but later something was done? - No. 5 boat was filled up.
4628. After No. 5 was filled, did an officer come to No. 3? - No.
4629. Did somebody come to No. 3? - He sung round for any of the crew.
4630. Who sung round for any of the crew? - An officer.
4631. Did some of the crew come and attend to No. 3? - There were only two firemen.
4632. Was No. 3 attended to? - Not then.

*The Commissioner:* When will you get this man to say something which is material?

*Mr. Butler Aspinall:* It is very difficult, my Lord.

*The Commissioner:* He seems to have spent his time running about from one place to another.

4633. (*Mr. Butler Aspinall - To the Witness.*) Very shortly afterwards did somebody come and attend to No. 3? - I could not say.
4634. Was No. 3 swung out? - It was swung out off the chocks.
4635. It was? - Yes.
4636. Did you see it swung out? - Yes.
4637. Who swung it out? - I could not tell you.
4638. Some of the crew? - I do not know. I was not there then. I was not there when it was swung out.
4639. (*The Commissioner.*) Did you ever get to No. 3? - Did I get to No. 3? No. 5, Sir.
4640. (*Mr. Butler Aspinall.*) No. 3 was your boat? - No. 3 was my boat.
4641. (*The Commissioner.*) Did you ever get to it? - Yes.
4642. (*Mr. Butler Aspinall.*) Did you see it swung out, or was it swung out when you got there? - It was swung out. All the boats were swung out when we got up there.
4643. Were women and children put into No. 3? - No.
4644. (*The Commissioner.*) Was anybody put into No. 3? - No.
4645. Did it remain empty from the beginning to the end? - No, it came away after. He asked for any of the crew; he turned and asked me what I was. I said, "A fireman," and he said, "Get into the boat."
4646. (*Mr. Butler Aspinall.*) Did you get into it? - I got into No. 5 boat.
4647. You did? - Yes, the boat he ordered me to.
4648. You left No. 3 and got into No. 5? - No, I was in between the chocks between No. 3 and No. 5.
4649. (*The Commissioner.*) Did you ever get into No. 3 at all? - No, there was nobody in that boat then.
4650. You never got into No. 3? - No. We had to stand by the boats.

### **Page 113**

4651. (*Mr. Butler Aspinall.*) Were there any passengers about No. 3 boat? - No, only where they were filling the other boats.
4652. No passengers about No. 3, and no officer or seaman about No. 3? - There might have been seamen; I did not see them there though. 4653. Then you got into No. 5? Was No. 5 lowered? - Yes.
4654. Who were in No. 5? You were, who else? - One other fireman, a steward, and a quartermaster.
4655. And were there some women and children in No. 5? - Women, no children.
4656. Do you know how many women? - No.
4657. Was the boat full or not? - It was not full - as many as it would take off the davits was what the officer said - as many as he thought the boat would take off the davits. 4658. As many as the davits would support, I suppose he means, my Lord - as many as they would safely carry. (*To the Witness.*) When the boats were lowered were there other women left on the ship? - I never noticed any.

4659. When the boat was lowered what became of the boat? Did it remain close alongside the ship or row off a bit? - We had orders to row off a bit from one of the officers on top.
4660. And were the orders obeyed? - Yes.
4661. Did you see the vessel sink? - Yes.
4662. Did you look to see if there was any light in the boat? - No, there was no light.
4663. Did you look? - No, I did not; it was not my place.
4664. As far as you know, did anybody look for a light? - I could not say who looked before we got up there.
4665. Were there oars in the boat? - Yes.
4666. How many oars were being pulled? - Four.
4667. You did not count the number of the people in the boat? - No.
4668. You do not know? - No.
- Then you were picked up by the "Carpathia."
4669. (*The Commissioner.*) Can you give us any idea of the number of the people in the boat? - I could not.
4670. Were there 100 people in it? - No, my Lord.
4671. Then, you see, you can tell us something. Were there 60? - About 40.
4672. You see you can tell us if you try. Were they women or mixed? - Women.

**Examined by Mr. SCANLAN.**

4673. You have told the Court that an officer was giving orders on the boat deck shortly before you got into No. 5. Is that so? - Yes.
4674. Do you know who that officer was? - The officer who got into our boat mentioned his name when he gave him orders.
4675. Is this what you are trying to convey, that the officer who sang out for a crew for No. 3 was the quartermaster who got into your boat, No. 5? - No.
4676. Try and recollect. You have spoken of an officer on the boat deck singing out for a crew? - Yes.
4677. What officer was that? - I do not know.
4678. Was it because no crew came for lifeboat No. 3 that you were sent to the lifeboat No. 5? - No, the crew were there.
4679. Was there a crew for No. 3? - No, there was only me there for that boat, and I went for this other boat.
4680. Did the officer sing out for a crew? - He said, "Are there any of the crew here?"
4681. And was there any of the crew there except you? - Me and another fireman and a quartermaster.
4682. How long was it from the collision until that order was given by the officer? - I could not say.
4683. You have no idea at all? - No.
4684. An hour? - It may have been.
4685. Was there confusion amongst the officers and amongst the crew? - No. 4686. If there was no confusion amongst the officers and amongst the crew, how can you

account for this, that so long after the collision as the time you speak of when the officers gave the order the crew had not come to their boats? - They were all standing about; they did not think it was serious. So many had come up, those who heard the order.

4687. You spoke of an order having been given down in your quarters to go up to the boat deck? - Not in my quarters - off this deck. It came from the top deck; I do not know who gave the order.

4688. I suppose there must have been confusion among the officers and the men if they could not get proper crews for the boats? - No; there was one boat filled with women when I got up there.

4689. You found on the rack where your lifebelt should have been that there was no lifebelt? - Yes.

4690. Are we to understand from you that there were not provided in your quarters sufficient lifebelts for all the men there? - There was none there for me when I got there.

4691. And you did not see any of your fellow members of the crew having more than one lifebelt? - Yes.

4692. What? - Yes.

4693. Had some of them more than one? - Only the one lifebelt on them and holding one for another man to put on. That is all I saw.

*The Attorney-General:* We do not want unnecessarily to go into evidence about that, and we have not asked; but is it suggested that there were not enough lifebelts on the boat?

*Mr. Scanlan:* I only make the suggestion because this Witness in his evidence in chief said that there was no lifebelt for him when he came down to find it.

*The Commissioner:* What he said, Mr. Scanlan, was, as I understand, that there was a lifebelt for him in his bunk, but when he came, after he had been wandering about over the ship for some time (what he was doing I do not quite know), he found his belt had gone.

*The Attorney-General:* I only asked my friend because we do not want to go into this evidence with all the Witnesses. I do not think there is any question of there not being sufficient lifebelts on board.

*Mr. Scanlan:* There has not been any question. The only thing that suggested it was the evidence of this man himself.

*The Commissioner:* When he went back, after he had been wandering about, he found his belt had gone.

4694. (*Mr. Scanlan - To the Witness.*) What distance from the ship was the iceberg when you saw it? - I could not say.

4695. After you got on to the fore-castle deck? - I could not say; I do not know the distance.

4696. Can you give some idea as to this? What height was the iceberg standing above the water? - I could not say that.

4697. Was it higher than the fore-castle? - About that - higher than the fore-castle; it looked higher anyway.

4698. I suppose it must have been higher, as some of the ice from it fell on to the forewell deck? - Yes.

4699. Could you get a good view of it from where you were standing? - No, only dim.

4700. Was there a haze at the time; was the air clear, or was there a haze? - It was hazy. When I saw that berg it was hazy. The berg was in a haze.
4701. Had you a sufficient crew in No. 5 to man that lifeboat? - No. 4702. There was no light in the boat? - No.

**Page 114**

4703. I suppose you know that if there had been a light provided it would have been found in the usual place? - Yes.
4704. Where is the usual place in a lifeboat? - Underneath one of the thwarts of the boat.
4705. Was it looked for there? - Yes.
4706. By whom? - I do not know. When we got down into the water it was looked for.
4707. Do you know whether this boat had a compass? - No, I never saw one.
4708. Had it a sea anchor? - I do not know that.

**Examined by MR. HARBINSON.**

4709. Can you tell me how long elapsed from the time of the collision until you got to your boat No. 5? - Over half an hour.
4710. You got into the boat half an hour from the time of the collision? - I should say about three quarters of an hour.
4711. That is to say you got into the boat three quarters of an hour after the collision? - Yes.
4712. And the intervening time you spent going up and down? - Yes, it was after the fireman had cut his foot; I went for the doctor.
4713. After your passages up and down you saw what was going on; during this time that you were going to the forecastle backwards and forwards, you could see what was going on? - I saw men standing about.
4714. Your quarters, I understand, were very near the third-class - near the steerage quarters, in the front of the boat? - On the top part, the first door when you get down in our quarters.
4715. So that the steerage was quite close to you? - Yes.
4716. Did you hear any of the stewards or other officials of the White Star Line giving any instructions to the steerage passengers? - No.
4717. Could such instructions have been given without your hearing them? - Yes. 4718. Did you see any of the stewards or other officials going about while you were going up and down? - On the other deck - when I was going aft, I saw them then.
4719. In the front? - No.
4720. About the forecastle? - No.
4721. And so far as you know, none were given? - No.
4722. Now you say you saw a number of people standing about; who were they? - The crew.
4723. Did you see any of the third-class passengers coming out of their bunks? - No.
4724. None? - No.

4725. During none of the times when you were going up and down? - They were nowhere near the third-class bunks.
4726. Are not they at the front? - No, not that I know of.
4727. Do you know whether or not the male portion of the steerage passengers was in front of the boat, in the forecabin? - No, I do not know.
4728. You do not know? - No.
4729. You never saw any of them? - No.
4730. And you heard no instructions given? - No.
4731. Now who was supposed to give you orders in case of emergency? Under whose control were you supposed to be? - The engineer's.
4732. Were there any engineers about to give you any orders? - No.
4733. How did you come to go to the boat deck? - I was sent off the boat deck.
4734. And it was in answer to this order that you went to the boats? - Yes.
4735. How many officers were up there at the time? - I could not say.
4736. Did you see any? - No.
4737. You do not know who was the officer who told you to get into boat No. 5? - No; he was an officer.
4738. Did you see any officer or anyone giving instructions as to the manning of boat No. 3? - No.
4739. Were there many people on the boat deck at the time - many passengers? - No.
4740. When you went up there? - No.
4741. Were there many about boat No. 5? - That boat was filled.
4742. Boat No. 5 was filled? - Yes.
4743. Do you suggest that all the passengers practically on the boat were being taken away by boat No. 5? - All the women.
4744. Were there men left behind? - Yes.
4745. Many? - I could not say how many.
4746. Did you see men standing about? - Yes.
4747. Were they members of the crew or passengers? - I do not know.
4748. Do you know who manned boat No. 3? - No.
4749. Did you see it lowered? - I saw it come down after us into the water.
4750. How many people were in it? - I could not say.
4751. While your boat was being lowered did it stop at the third-class deck? - No.
4752. It went straight down? - It went straight down.
4753. Was your boat full? - What it would hold off the davits; they would not have any more in the boat.
4754. You do not know whether or not there were any women left behind on any of the decks? - No; it was the second boat lowered.
4755. After you came down you rowed some distance away? - Yes.
4756. Did you see the "Titanic" sink? - Yes.
4757. What did you do when you saw the "Titanic" sink? - I had orders to pull round the front of the boat.
4758. Did you do so? - Yes.
4759. Did you pick up any passengers? - No, we never got so far as that.

4760. Did you hear cries? - The women in the boat stopped that, and the officer who was in charge of the boat -
4761. Stopped them going round? - Officer Pitman told us to pull to the boat.
4762. Was he the officer in charge? - Yes.
4763. Where was he? Was he at an oar? - No, in the stern.
4764. And the women said, "Do not go back"? - "Do not go back."
4765. And what did he say? - We were pulling away and he told us to lay on our oars.
4766. And he did not go back? - We pulled again afterwards.
4767. Did the boat go back? - I do not know where it was; I was not steering the boat.
4768. You were at the oar? - Yes.
4769. As a matter of fact, did you hear cries at this time - Yes.
4770. Many cries? - Wailing noises.
4771. Were they far from you? - I could not tell you the distance.
4772. Could you see any passengers in the water? - No.
4773. You had not a light in the boat? - No.
4774. You did not pick up any passengers out of the water? - No.
4775. Had you room for more passengers? - There was room for more.
4776. There was room in the boat and the officer acting under the instructions of these female passengers refused to allow the boat to go back? - They said if they went back the boat would be swamped.
4777. Who said that? - The passengers - the females in the boat. 4778. What did he do? - He gave orders to lay on our oars.

**Page 115**

**Examined by Mr. LEWIS.**

4779. Have you ever received instructions as to what to do in the event of a collision or accident? - No.
4780. None whatever? - No.
4781. As a matter of fact I suppose you would have obeyed only orders given to you by the engineers or any other officer? - Yes.
4782. You were off duty at the time? - Yes.
4783. You sort of went about on a roving commission? - Yes.
4784. All parts of the deck? - I went to the well deck and to the forecastle.
4785. You did not see any disorder at all? - No.
4786. Did you see any of the passengers being left on the decks? - No.
4787. Is it customary to have any officer tell you in any way at all how you are to muster in the event of an accident? - No.
4788. So that as far as you were aware all you had to do was to wander about and await instructions? - We had no instructions. We had no lifeboat drill or anything of that kind. 4789. How long have you been in the employ of the White Star Company? - This is my first voyage with that Company.

4790. So far as the "Titanic" was concerned it had no drill whatever? - No. 4791.  
But you knew your boat? - Yes, that afternoon.
4792. Where did you get that information from? - The list.
4793. You saw a list? - Yes.
4794. Can you tell me why it was that so few men reported themselves to their boats.  
Have you any idea at all? You knew your boat number? - Yes.
4795. Can you explain why so few went? - No, I cannot.
4796. Did you leave many in your quarters? Were there many firemen left there when  
you went up? - There was none in my quarters when I went down for my belt;  
when I came up again they were on the deck.
4797. When you were in the boat, do I understand you heard the cries and you did not  
return because the officer was impressed by what the women had said that it was  
dangerous to go back? - Yes.
4798. I suppose if they had gone back, and there had been a matter of 100 people in the  
water, it would have been dangerous? - Yes.
4799. Very dangerous? - Yes.
4800. And you think that if the women did impress the officer, Pitman, not to go back,  
they were using common sense? Would you yourself, if you had been in charge,  
have gone back had you believed there to be a large number in the water? - I do not  
know.

You think it would have been very dangerous indeed?

**Examined by Mr. COTTER.**

4801. How long have you been going to sea? - Eleven years.
4802. What companies have you been in of first-class liners? - The Union Castle  
Company and the Royal Mail Company.
4803. Do those companies have general boat drill? I mean for all the crew? - Yes.
4804. Have you taken part in general drill? - Yes.
4805. Bulkhead drills as well as boat drills? - Yes.
4806. You knew exactly your station in those companies? - Yes.
4807. You did not have any drill in the White Star Line? - No.
4808. Now how did you know where your boat was? Had you ever been on the boat deck  
before? - No.
4809. So you simply had to roam round and find where your boat was? - No, I asked.
4810. Whom did you ask? - The quartermaster, when I got up on the deck. I asked  
him which was the starboard side.
4811. When you got to No. 5 what officer gave the order for you to go into No. 5 boat?  
- I do not know his name.
- The Commissioner:* He told us that three or four times.
4812. (*Mr. Cotter.*) You said that Officer Pitman was in No. 5 boat? - Yes.
4813. Was it Officer Pitman who gave the order? - No; there was another officer there.
4814. Who gave the order to lower the boat? - I do not know who that was.
4815. You do not know? - No.

4816. Did you assist to get the women and children into that boat? - Yes. 4817. Had you any difficulty? - No, I never had a difficulty.  
4818. Was the boat far from the ship's side when she was slung out? - About a foot.

**Examined by Mr. LAING.**

4819. Did the officer who told you to lower away No. 5 tell you what to do when you got to the water? - He did not tell me; he told the other officer.  
4820. What did he tell him? - When he got down into the water to take charge of that line of boats as they came down, and stand off at 200 yards.  
4821. Stand off the ship 200 yards? - Yes.  
4822. And Pitman, I think, was your officer that went in the boat? - Yes.  
4823. Was there water in your boat? - No.  
4824. Did you look? - Yes.  
4825. Were there biscuits? - Yes.  
4826. Was the officer on the deck who ordered your No. 5 boat to be lowered picking the crews for the boats? - He turned round and asked you what you were. 4827. And then told you to go into the boat if he selected you? - Yes.

**Re-examined by the ATTORNEY-GENERAL.**

4828. I think I understood you to say that on the Union Castle Line you had had bulkhead drills? - Yes.  
4829. How often did you have them? - Every Saturday.  
4830. What did you do? - Close the watertight doors, go to the boats, swing them out, and fetch them back inboard again.

*(The Witness withdrew.)*

**Page 116**

**CHARLES HENDRICKSON, Sworn.**

**Examined by Mr. ROWLATT.**

*The Attorney-General:* We have a considerable number of these Witnesses, and what we propose to do is to take those who can throw any further light on the matter, but not necessarily through the whole story. We can take them more shortly now to the particular incidents which are of importance in the Inquiry, without going through the whole narrative. Also, my Lord, what we propose to do, as far as we can, is to call at least one Witness from every boat, so that your Lordship will be able to exhaust the story with regard to the boats.

4831. (*Mr. Rowlatt.*) This man happens to have been in No. 1 boat. (*To the Witness.*) Were you a leading fireman on the "Titanic"? - Yes. 4832. You joined at Southampton? - Yes.

4833. You do not know anything about the voyage till the accident happened, I suppose? - No.

4834. Do you know how fast the ship was travelling? - 21 knots.

4835. How do you know that? - The revolutions she was turning.

4836. You know what the revolutions were? - Yes.

4837. How do you know that? - The second engineer told me. I made it my business to find out, in the watch previous.

4838. 76 revolutions? - Yes.

4839. You say that is 21 knots. If it is not so, we shall hear. You were off watch from 8 to 12 on this Sunday night? - My watch was the 4 to 8 watch.

4840. Was it then you heard about the revolutions? - That watch.

4841. You were in your bunk? - I was asleep when it occurred, and got pulled out.

4842. Were you awakened by the shock? - No.

4843. Who woke you? - One of my mates in the room pulled me out. I was dead to the wide - dead asleep.

4844. Which side of the ship was your bunk on? - The port side.

4845. When your mate woke you up - who was it woke you up? - T. Ford.

4846. He was drowned, was he not? - Yes.

4847. When he woke you up, did you go on deck? - Yes.

4848. Did you see the iceberg? - Yes.

4849. Where was it? - Just abaft the engine room when I got on deck. When I got on deck first I saw a lot of ice on the deck, and I looked out and saw an iceberg astern just abaft the engine room.

4850. You came up very quick? - No, I walked up behind the others who were walking up.

4851. Had the ship nearly stopped then? - She was stopped.

4852. At that time I think you did not think it was very serious? - No.

4853. And you returned below? - Yes.

4854. You were going to turn in? - I was going to turn in and the same man, Ford, came back and said there was water coming in down below, that is down the spiral staircase.

4855. Did you look down the staircase? - Yes.

4856. Did you see the water? - I saw the water rushing in.

4857. Just let us have it clear where that is. Do you see this plan? - Yes.

4858. Is that it (*pointing on the plan*)? - The lowest of all.

4859. You looked down here and saw it? - Yes, I saw the water rushing in here (*pointing on the plan*). I saw it running out of the fore part of the pipe tunnel right down at the bottom of the stairs.

*Mr. Rowlatt:* That is what it is marked upon the map, my Lord - "pipe tunnel." *The Witness:* That is the tunnel we go through from our quarters to go into the stokehold.

*The Attorney-General:* "Fireman's passage and pipe tunnel." You will find it on the same plan as the tank top we were looking at before.

*The Commissioner:* He got into the firemen's passage I understand? *Mr.*

*Rowlatt:* No, he did not, my Lord.

4860. (*To the Witness.*) You looked down the staircase? - Yes, the staircase leading to the stokehold.

*Mr. Rowlatt:* Your Lordship sees the spiral there.

4861. (*The Commissioner.*) Where were you looking? - Down the spiral stairway. 4862. And where did it lead from and to? - From our quarter to the stokehold, No. 11 stokehold, No. 6 section.

4863. (*Mr. Rowlatt.*) The spiral staircase led down to the bottom of the ship, and from there the fireman's passage and pipe tunnel led along to No. 6 section? - No. 6 section, No. 11 stokehold.

4864. Now where you saw the water coming - you saw it coming from aft, forward into the bottom of the spiral staircase? - From the starboard side.

4865. Are there two staircases? - Only one. There are two staircases, one up and one down, but there is only one our side. I was looking down the one on the port side - not down the staircase, but at the side of the staircase.

4866. You were looking down on the port side of the staircase? - Yes, and saw the water rushing in from the starboard side at the bottom.

4867. Are there two spiral staircases in that part of the ship or one? - Two. They are marked distinctly, one for going down and one for coming up.

4868. Which of the two were you looking down? - I was looking down the port one.

4869. Now is there a communication between the bottom of that spiral staircase and the bottom of the other one? - It is all open, just a handrail to go along.

4870. The water which you saw rushing down there could not have come from forward, could it, because there is a bulkhead across? - It came from the ship's side I am telling you, the starboard side.

4871. You could not see where it was coming in, but you saw it coming from the starboard side? - I saw it coming from the ship's side.

4872. When you want to go aft along the passage, how long is it before you come to a watertight door? - At the bottom of the tunnel.

4873. How far on - how far had you to go before you got to the first stokehold that you come to? - I could not give you the distance. There are two watertight doors there, I know.

4874. There are two bulkheads? - Yes, about 6 feet apart. There is one here, and the other is about 6 feet away from it.

4875. It is marked there "coffer-dam watertight" - do you know what that means? - No.

4876. When you get down to the bottom of this staircase this tunnel runs amidships straight aft? - Yes, straight aft.

4877. Amidships? - Yes.

4878. Then do you go some little way before you come to the first watertight door? - Yes.

4879. Then you go through that and you go about the same distance before you come to the next one? - No, they are about 6 feet apart, those two watertight doors. 4880. Are those two watertight doors both close up against the stokehold? - Yes. 4881. Till you get there you do not have a watertight door before? - No, we get down through the tunnel leading to the stokehold.

*Mr. Rowlatt:* It is very obscure upon the plan, my Lord.

*(The Solicitor-General explains the plan to the Commissioner.)*

4882. *(The Commissioner.)* Now, Mr. Rowlatt, in order that we may have it on the Note, I want you to state the effect of this Witness's evidence; let him listen to you and say whether it is right. *(To the Witness.)* Have you heard what I said? - Yes, Sir. *The Commissioner:* Now, listen to this gentleman

## Page 117

and see whether he tells us what you have been saying, and tells it properly.

4883. *(Mr. Rowlatt.)* There are two spiral staircases which go down to the bottom of the ship, one for going down and the other for coming up? - Yes. 4884. And they go down in the same space? - Yes. 4885. And when they get to the bottom they both reach a fireman's passage, which is like a tunnel running amidships fore and aft? - Yes.

4886. And you go along that from the bottom of the spiral staircase aft until you come just before where you get into the foremost stokehold, No. 6 boiler section, and at that point you go through two watertight doors in a space of about 6 feet. Is that right? - Yes, before you reach the stokehold.

4887. And as you are going down that tunnel on your right hand and on your left there will be iron bulkheads? - Yes.

4888. Whether those are watertight or not, I suppose you do not know? - They are iron bulkheads, one on each side.

4889. *(The Commissioner.)* Are they watertight or not? - I could not tell you that; I do not know.

*Mr. Laing:* Yes, they are.

*The Commissioner:* But this Witness does not know it.

4890. *(Mr. Rowlatt.)* No, my Lord. *(To the Witness.)* But what I want to get from you is this. You said you saw the water coming from the ship's side; do you mean that. You saw it coming through the ship's side? - No, coming from the ship's side.

4891. That was merely the direction from which you saw it travelling? - Yes.

4892. That is, into the space into which the spiral staircase is descending? - Yes. 4893. You could not tell whether the water was coming through the fore and aft bulkhead at the bottom of the staircase, could you? - No, I could only see the direction it came from.

4894. Was it coming hard? - Yes, it was more than rushing in; it was falling in. 4895. Did it strike you it was coming in at a point which was not at the bottom of the bulkhead? - Well, you could not exactly tell that. There was a lot of water there and from the way it was rushing in you could not exactly tell how it was coming.

4896. Did you go and report that? - Yes. 4897.  
To whom? - The second engineer.
4898. Do you know what his name was? - I met Mr. Hesketh first, the second engineer, and reported to him.
4899. Did he give you any instructions? - He told me to get some lamps after that and get some men with me, and get some lamps as we come along and take them down below.
4900. Where did you find Mr. Hesketh? - In the working alleyway on the port side of the ship.
4901. And where did you go and get the lamps? - In the engine room.
4902. You went right along the alleyway to the engine room? - I went right through.
4903. When you got the lamps did you go back with them? - I got all the lamps I could get that were ready. I got five, and left four or five men there to get more if they could. Then I came back by the engine room, went along and down the escape to go to No. 6 section. When I got down there I found I could not get any further, the water was up too high; so I came back by the escape again and went to No. 5 section.
4904. Did you go down No. 5? - Yes.
4905. Did you find Mr. Hesketh there? - No. When I got down there I met Mr. Shepherd; he said to me, "You have got the lamps, have not you?" and I said, "Yes, Sir." He said. "That is right, light them, and put them up by the water-gauges of the boilers." So I lit them up and took them up and came down below again, and Mr. Shepherd said to me, "Start drawing fires," and I said, "Yes." I went to pull the fires out when Mr. Harvey came and asked me if I would get some men down.
4906. Mr. Shepherd was an engineer? - Yes.
4907. He told you to draw the fires, and you went to get somebody to help you? - I was going to get the rake to start pulling some of the fires out when Mr. Harvey came to me. 4908. He is an engineer? - He is another Second Assistant; they were both Second Assistants. He asked me to get some men down to get the fires out. I went up top and saw a few and asked them if they would come down, and some went down.
4909. Did you get some more men? - Yes.
4910. You went forward to your quarters again? - Yes, they were the men belonging to the watch, the 8 to 12 watch.
4911. The men whose watch it was below? - Yes.
4912. When you got forward into the firemen's quarters, did you see any more water? - I saw the tarpaulin on No. 2 hatch like a big dome. I could not understand it at the time. I thought there must have been a hole or something in her.
4913. Blown up by the air from below? - Yes.
4914. That was No. 2 hatch? - Yes, I think it is No. 2 hatch - they say it is outside our quarters.
4915. We have heard this about No. 1, but I do not think we have heard it about No. 2. No. 1 hatch is the hatch which is in the open space, I think, outside the forecandle deck, in the well, is it not? - No, not on the well deck; I do not think so.

4916. No. 1 hatch is the one which is right up against the firemen's quarters? - That would be the only hatch. I was given to understand there was one forward of that.
4917. I see you are speaking of No. 1. You are speaking of the one which is up against the firemen's quarters on one deck and up against the trimmers' quarters on another? - Yes.
- The Commissioner:* Will you point it out on the map?
- Mr. Rowlatt:* I do not think you will see it from there, my Lord. I think it is this one (*pointing*).
- The Commissioner:* Well, that is the hatch.
- The Witness:* That is the one I mean, the one there.
4918. The one where the learned counsel is pointing now? - Yes. I thought there was one forward of that.
4919. (*Mr. Rowlatt.*) You say the tarpaulin was blowing up? - Yes, it was like a big dome.
4920. On which deck were you then? - On the same deck where I was looking down the staircase. Our quarters are on the bottom deck of the lot.
- The Commissioner:* What is the explanation of the tarpaulin being blown up in this way?
4921. (*Mr. Rowlatt.*) Can you tell us how it happened? - I should say it was water and wind blowing in the hole.
4922. The water pressing the air up? - Yes.
4923. Is that on deck E? Do you know which deck E is? Do you know which deck you were on? - The same deck.
4924. The same as where the alleyway was? - Yes, this hatch is alongside our quarters.
4925. Do you know the trimmers' quarters? - Yes.
4926. Were they on the deck below you? - No, they are above us; everybody is above us. There are only the leading hands and greasers on that one deck.
4927. You are a leading fireman? - Yes.
4928. And you have quarters of your own, the leading fireman? - Yes, and the greasers are on the other side of the ship, the starboard side.
4929. (*Mr. Rowlatt.*) That is deck G, my Lord; it is the deck just below the waterline. (*To the Witness.*) Did you see water then or only air? - No water that time.
4930. Did you report that? - I went down to the engine room to report that.
4931. You reported to Mr. Hesketh? - No, Mr. Farquharson.
4932. (*The Commissioner.*) All these gentlemen are dead, are not they? - Yes.
4933. (*Mr. Rowlatt.*) He was an engineer, too? - He was the senior Second Engineer.
4934. Did you see any other engineers there? - Yes.
4935. Who were there? - I saw the Chief Engineer and I saw Mr. Harrison, another Second Engineer, and some juniors; I do not know their names.
4936. Where were they going? - They were all just standing around in an ordinary way, standing by their stations.
4937. Can you give us an idea how long this was

after the first striking of the berg? - It must have been something like three-quarters of an hour.

4938. Did you go into the engine room? - Yes, to the bottom platform.

4939. Did you notice the watertight doors? - Yes.

4940. Were they shut or open? - They were both closed; the one leading to the stokehold and the other to the turbine room - they were both closed.

4941. You do not know whether they had been opened or not? - I could see they were shut. That is all I know.

4942. What happened after that? - As soon as I told Mr. Farquharson what had happened he spoke to those engineers, and three of them went one side of the engine room and three the other side. Where they went to I do not know.

4943. You do not know what that was for? - No.

4944. What next? - I came up after that and went on the middle and stood outside the store talking to the storekeeper.

4945. At that time did you think it a serious matter? - No, I did not think it was so serious as it was. It was going down a little by the head then.

4946. You heard an order to go to the boats, did you not, ultimately? - Yes.

4947. Did anything happen before that to speak of? - No; I think I had a bit of trouble to get through the steerage passengers with those lamps. They were in the working alleyway, going along with trunks and bags and portmanteaux.

4948. That is when you went with the lamps? - Yes.

4949. There was a crowd of them? - Yes, a big bunch of them.

4950. When you came aft again were they still there? - Yes, they were working their way aft; they were going towards aft.

4951. They were going aft with their luggage? - Yes.

4952. Did you see where they went to? - No, I did not trouble much about looking. I was on my own duty at the time.

4953. Did you ultimately come up from the engine room? - Yes.

4954. Were the steerage passengers still in the alleyway then? - Yes, they were walking about to and fro; some sitting on their luggage.

4955. There was no panic among them? - No, they were just walking about in an ordinary way.

4956. Did you hear any order to go on deck? - The only order I heard was when I went forward again, and the word came along, "We want a leading hand; all hands get lifebelts and get up on deck.

4957. Did you get your lifebelts? - Yes, we got our lifebelts, and we made our way up.

4958. Did you know what your boat was? - Yes.

4959. How did you find that out? - I saw it printed the same day; I saw the printed list up on the bulkhead.

4960. Was it a long list like this? (*Exhibiting a list.*) - Yes, just the same.

4961. Where did you see this? - I saw that on the top staircase outside the firemen's quarters.

4962. Do you know when it was put there? - No.

4963. When did you see it first? - I saw it on Sunday morning first.

4964. Do you think you would have seen it if it had been there before? - I could not say that.
4965. (*The Commissioner.*) What was the number of your boat? - No. 12.
4966. (*Mr. Rowlatt.*) Did you look for the list? - No, I never looked for it.
4967. You just noticed it? - Yes, I just noticed it and saw my name and saw my boat, and did not trouble any more about it.
4968. Did you go to your boat, No. 12? - Yes.
4969. That was on the port side of the ship, was it not? - Yes.
4970. Pretty well aft? - Yes.
4971. When you got there was it swung out or was it on the chocks? - It was swung out a little, but not out ready for lowering. It was inclined inwards on the ship's side so that anyone could step into it.
4972. Was any officer there? - Yes, when I walked along there I met an officer, who asked me who I was. I said, "A fireman." "All right, my lad," he said, "get along there," and sent me along. I went along aft.
4973. And you went to your own boat? - Yes, and there was not anyone there; there were some people along further, getting other boats away and getting into the boats.
4974. What did you do? - I got hold of a rope with a sailor. 4975. At which boat? - I could not tell you the number.
4976. Did you do that under anybody's orders particularly? - No, on my own. 4977. Did you help to lower away? - Yes, with a sailor.
4978. Was the boat filled? - No, they were getting filled at the time.
4979. Was it filled before you lowered it away? - As far as I could see it was.
4980. Filled from the top deck? - The boat deck.
4981. Did you assist in lowering other boats? - Yes, about five; I assisted in five boats, getting people into them and lowering them. 4982. All the time you were on the boat deck? - Yes.
4983. Were there women and children? - Yes, they were all pretty well mixed up. The women were nearer the ship's side than anyone else, all going along slowly into the boats.
4984. Was there order? - Oh, everything was very quiet, as if nothing had happened.
4985. Were all the women on that deck put into the boats? - All they could get hold of were put into the boats; all the women that could be found that were about there in the vicinity.
4986. Could you see any women that were not put into the boats? - No.
4987. How long were you up on the boat decks lowering boats in this way? - I could not say; somewhere about three-quarters of an hour or an hour, I should think. I was not taking particular notice.
4988. Had the people lifebelts? - As far as I could see, yes.
4989. After you had done all this, what happened then? - As far as I know I saw all those boats away on the port side.
4990. After that what happened next? - I came and could not see anyone round that I knew, so I took a walk round the other side of the deck, and walked up and down there, and heard the captain say they were to get all the women and children into

- the boats first. Someone came up and said, "Get the boats away as quickly as possible." Whoever the gentleman was I do not know. Then the captain walked along and gave his orders to the officers, whoever were there; they were walking up and down to see if they were being carried out.
4991. This was while the boats were being lowered? - The boats were being lowered at the same time.
4992. Then after the boats were lowered that you had been assisting in, where did you go? - To the starboard side of the deck.
4993. Did you see any people there? - Yes, there were not so many there as there were on the other side in the first place. There were a good many there.
4994. Did you do anything on the starboard side? - The boatswain called me and asked me to lend him a hand with the boat on the after side of the bridge.
4995. That is this little bridge which is *there*, No. 1 boat, was it not? - Yes.
4996. Did you assist to lower that? - To clear it - to clear the rope away and everything.
4997. Who were there at that boat? - I could not say; I knew the boatswain was there and an officer, and at the time the officer started firing rockets.
4998. Were there some other firemen there? - I found out afterwards there were.
4999. Did you start to get the boat ready? - Yes.
5000. How many of you were there at that time? - I suppose there would be about 20 of us; that would be passengers and crew mixed.
5001. Were there any women? - I think there were two women there.
5002. Could you tell whether the passengers

**Page 119**

- were first, second or third-class, or anything of that sort? - I could not say.
5003. Were the women put into the boat? - Yes.
5004. Who also was put in the boat? - I think it was three gentlemen and two sailors; and this officer - I do not know who the officer was - called out, "Are there any more women here?" and there was no answer. He said, "How many seamen are there in the boat?" They said, "Two." He said "Six firemen jump in." I do not suppose there were six firemen there. He said to me, "Jump in," and four got in beside myself.
5005. That was all on the boat deck? - On the boat deck.
5006. Was the boat then lowered? - No, it was on the davits; it was swung out ready for lowering. Soon after we got into it the officer sung out, "Are there any more passengers here?" There was no answer, and he started lowering away. That was after the rockets had been fired.
5007. How far did you lower her? - Right the way down.
5008. How many people were in her? - About 12 or 13, I think.
5009. Who was in charge? - One of the seamen as far as I know.
5010. Do you know his name? - Symons, or Simmons.
- The Commissioner:* Was this No. 12 boat?
5011. (*Mr. Rowlatt.*) No. 1 boat, the one you see hung out there, the emergency boat.

(*To the Witness.*) Was there any order given to the seaman in charge as to what he was to do with the boat? - Yes; he was told to stand off a little way and come back when called.

5012. Did you stand off? - Yes, we stood off a little way pulling around.

5013. How far? - 150 or 200 yards.

5014. Were you called back? - No.

5015. You simply lay there? - Yes, we lay about there, and pulled about.

5016. Did you see the ship sink? - Yes.

5017. When the ship sank, did you take up anybody else? - No. 5018. Did not you pick up anybody at all? - Nobody at all.

5019. After you left the ship's side? - No. None of them would not go back. I proposed in the boat we should go back, and they would not listen to me.

5020. (*The Commissioner.*) Who would not? - None of the passengers or anybody else. It was after the ship had gone then. 5021. Am I to understand, then, when you were picked up by the "Carpathia" there were only 12 people on board? - Yes.

5022. (*Mr. Rowlatt.*) How far off were you when the ship went down? - About 200 yards, as near about as I can make of it.

5023. How many oars had you? - Four.

5024. (*The Commissioner.*) And of these twelve how many belonged to the crew? - Seven.

5025. Then there were only five passengers? - Five passengers, two seamen I think, and five of us, firemen and trimmers.

5026. Five passengers; what were they, women? - Two women and three men.

5027. And there were only two women in this boat which held 12? - Yes. 5028. (*Mr. Rowlatt.*) Could you make good way through the water - I suppose you could? - Yes, pretty good.

5029. I must ask you to be a little more clear about it. You understand it is important, so be careful. Who was it objected to pulling back? - Well, the passengers.

5030. (*The Commissioner.*) There were only five passengers, as I understand, three were men and two were women and then there were seven of the crew? - Yes.

5031. Now did any of the crew object? - No, they never said anything.

5032. Then which of the five passengers objected the women or the three men, or all of them? - I think it was the women objected.

5033. The two women objected? - Yes.

5034. You had plenty of room in the boat? - There was plenty of room for another dozen.

5035. You had plenty of room? - Yes.

5036. Who was in charge of the boat? - A seaman.

5037. What was his name? - Symons or Simmons.

**Examined by Mr. SCANLAN.**

5038. Can you recollect whether any of the male passengers objected to go back? - No, I cannot remember that.

5039. Did you ascertain in the course of the night who those male passengers were? - I knew afterwards one of their names.

5040. What was the name? - Duff-Gordon.
5041. He was a first-class passenger? - As far as I know.
5042. Did you learn the names of the others? - No, I did not. I think his wife was there - Lady Duff-Gordon.
5043. Those are two. Now who are the others? - I do not know the others.
5044. Was there a servant of Sir Duff-Gordon there? - I do not know.
5045. A valet? - I do not know.
5046. How long before the sinking of the ship was it that No.1 boat was lowered? - About three-quarters of an hour.
5047. I want to put this to you specially: Can you recollect whether this passenger whose name you found out, or any other passenger, objected specially to your going to the assistance of the drowning people? - Only those I have mentioned; no one else; only Sir Duff-Gordon and his wife and this other lady passenger, whoever she was.
5048. Did his wife object? - Yes, they were scared to go back for fear of being swamped.
5049. (*The Commissioner.*) Will you tell me this: Was there, as far as you know, any danger of No. 1 boat being swamped if you did go back? - It would certainly be dangerous.
- Mr. Scanlan:* Now tell me this: How would it be dangerous, considering that you had a crew of seven in the boat, to go amongst the people who were screaming for help in the sea?
- The Commissioner:* Will you ask him if he heard anybody scream? I have not caught that he has said so yet.
5050. (*Mr. Scanlan.*) Did you hear people screaming for help? - Yes.
5051. Of course I take it that you obeyed the orders you got from the officer and rowed to a distance of 200 yards? - Yes.
5052. Is it not therefore clear that when the "Titanic" sank a number of people who had been left behind were in the water? - Yes.
5053. Just beside you? - Well, they were some distance off; they were not beside us.
5054. Will you tell my Lord what distance they were off? - About 200 yards. 5055. Then the cries of those unfortunate people would be heard by you and everyone in your boat? - Yes, certainly, we all heard them.
5056. You said, and it is to your credit, that you suggested that you should go back to the help of those people? - Yes; I proposed going back and they would not hear of it. 5057. In the presence of those cries for help from the drowning, were you the only one in the boat to propose to go back to the rescue? - I never heard anyone else.
5058. (*The Commissioner.*) Do you know the names of the other members of the crew who were on

## Page 120

- board this boat of yours? - I know the names of three or four.
5059. Give me their names? - There were Simmons [Symons], the Coxswain, myself, and Collins.

5060. What was he? - A fireman - Sheath.  
5061. What was he? - A trimmer - Taylor.  
5062. What was he? - A fireman.  
5063. Who else? - That is all I know the names of.  
5064. That is 4, and then yourself? - Yes.  
5065. (*Mr. Scanlan.*) When Lady Duff-Gordon objected did her husband reprove her? - Yes.  
5066. What? - Well, he upheld her in what she said.  
5067. He did not try to instill courage into her and get you back? - No.  
5068. With your knowledge of seamanship you were anxious to go back? - Yes. 5069. And you believed, I presume, that you could quite safely have gone back? - Yes, we could.  
5069a. (*The Commissioner.*) He has just told me in his opinion it would have been dangerous. It would have been dangerous, but we certainly could have gone back. 5070. (*Mr. Scanlan.*) If you had taken precautions, there being seven of you there could not you have restricted the number of people you would give shelter and accommodation to so as not to swamp your boat? - That all depends on the way you go in amongst them. We have no lights to see clear to go ahead.  
5071. You had no lights? - No.  
5072. Do you mean there was no lamp or lantern in the boat? - Not a lamp or lantern.  
5073. Not a compass? - No.  
5074. Nor biscuits? - Nor biscuits.  
5075. Not a sea anchor? - No, there was no sea anchor.  
5076. Nor water? - There was a breaker there; whether there was water in it or not I do not know.  
5077. (*The Commissioner.*) Did you look for all those things? - We looked for a light.  
5078. Did you look for a compass? - We looked for a compass.  
5079. What do you want the compass for? - I do not know; I do not understand them.  
5080. Was there anyone there who did understand them? - I suppose so; there were two seamen there.  
5081. What did they want the compass for? - To know what latitude and longitude they were in. What does a ship want a compass for?  
5082. A ship wants it to navigate? - And it is the same with a boat. A boat would want it to navigate.  
5082a. (*Mr. Scanlan.*) What time was it when you were taken on board the "Carpathia"?  
5083. (*The Commissioner.*) Wait a minute. Did you look for biscuits? - Yes, they looked for biscuits, I believe. I heard them say there was none there.  
5084. Did you look for biscuits? - No.  
5085. Did you see anybody look for biscuits? - No, I heard them saying there was none there.  
5086. Did anyone want any water? - Not that I know of.  
5087. Then you had no occasion to look into the breaker to see if there was water? - No.  
5088. Did you look for a sea anchor? - No.

5089. Did anyone look for it? - No.

5090. (*Mr. Scanlan.*) In the morning, when you were being taken on board the "Carpathia," it was broad daylight, was it not? - Yes.

5091. I suppose then you and everybody else could see whether those things were on board or not? - We never troubled about looking for them then.

5092. Could you tell my Lord the name of the officer on the "Titanic" who ordered the No. 1 lifeboat to be lowered with only five passengers in it? - No, I could not tell you who he was; I did not know him.

5093. Did any officer order you to lower? - The people on the deck were lowering the boat.

5094. (*The Commissioner.*) You did not lower it, of course? - No.

5095. (*Mr. Scanlan.*) Did anyone tell you to lower it? - That is a ridiculous question to ask, because we did not lower the boat. *The Commissioner:* He would not lower it.

5096. (*Mr. Scanlan.*) At the time of starting to lower you would be on a level with the boat deck? - Certainly.

5097. Therefore you were in a position to hear whatever order was given for lowering, if any order was given? - I heard the order, as I told you, "Lower away," but we did not lower the boat away.

5098. I recognise that, of course. What I ask you is who gave the order? - An officer.

5099. Can you tell me what officer he was? - No, I cannot; I do not know.

5100. Was he one of the Principal Officers of the ship? - I do not know.

*The Commissioner:* Now, I want to know - you may ask it, Mr. Scanlan - about the people, if any, who were standing about on the boat deck at the time the order to lower was given.

5101. (*Mr. Scanlan - To the Witness.*) At the time the order was given to lower No. 1, how many people were on the boat deck? - I did not see any at all there, about us; there were some further along aft.

5102. There were some further along aft? - Yes; other boats went out at the same time.

5103. Were there many people further along aft? - No, there were not a great lot.

5104. I mean on the starboard side? - Yes.

5105. There were people there? - There were people there, yes. They were getting the other boats out.

5106. Were they passengers? - I do not know; I could not see.

5107. Who were they? - I do not know.

5108. (*The Commissioner.*) Can you tell us this; were they men or women, or mixed? - I think it was all men, I did not see any women.

5109. (*Mr. Scanlan.*) Did you see any women there? - None at all.

5110. You had just immediately come from the port side to the starboard side, I think? - Before I came to the starboard side, yes.

5111. While you were over on the port side, just immediately before coming to this No. 1 boat, were there a number of people on the port side? - No, there was no one there.

5112. (*The Commissioner.*) I want to have it quite clear. When you got into No. 1 boat and when the order was given to lower it, were there other people standing about on the

deck who could have got into that boat? - No; not where we came away from; there was not any.

5113. Did you call for any? - No.

5114. Did no one call for any to go? - Someone in the boat called out and I believe the officer called out.

5115. What? - "Are there any more women or children about here?" No answer came.

5116. (*Mr. Scanlan.*) Of course, it was the common knowledge of all of you that there was a great number of people left behind in the boat? - Oh, yes; of course.

5117. And the officer who gave you the order to lower would know that, of course? - I could not say what he knew about it.

5118. You all knew it you say? - We knew it, yes.

5119. Do not you think if the working of the lifeboats had been at all properly organised you could have got a complement of passengers to comfortably fill your boat? - Certainly, yes.

*The Commissioner:* Now, what do you mean by that? Expand it.

5120. (*Mr. Scanlan.*) Were those passengers down below in the boat? - What do you mean "down below in the boat"?

5121. Well, a deck lower or two decks lower? - I never noticed any along those decks.

5122. You have said just now that you all knew that at that time when you were going away with five people in your boat, there were a number of passengers left behind? - On the boat deck, I told you.

5123. Where were the passengers that were left behind? - They were about where we were, all along the deck, scattered here and there, and

## **Page 121**

some going in other boats which they were getting away.

5124. Aft of where you were? - Yes.

5125. Did no one ask those people to come? - No; they sang out if there were any more women or children there, and there was no answer.

5126. So far as you know, there may have been even women and children amongst the crowd aft of you? - There may have been, I never saw any. If there had been any I might have jumped out myself and helped some of them along. I never saw any.

5127. How many would No. 1 boat have carried? - I should say about 25.

*The Commissioner:* Is No. 1 one of the emergency boats?

*Mr. Scanlan:* Yes, my Lord.

*The Witness:* It is this one here (*pointing on the model.*).

5128. (*Mr. Scanlan.*) It is the forward boat. We were told earlier today that one of those boats could accommodate 40 people; do you agree with that? - No, I do not. 5129. Had you a sufficient crew to row your boat? - Yes.

**Examined by Mr. HARBINSON.**

5130. That is to say there were 7 of you of the crew to row 5? - Yes, 5 passengers. 5131. It is the duty of the crew to exhaust every resource in order to rescue passengers, is it not? - Yes.

5132. What I do not quite understand is, that there being 7 of the crew, why you did not, despite the protests of these first-class passengers, go back to some of the drowning people? - Well, that is right enough, but the coxswain was in charge of the boat. *The Commissioner:* Speak a little louder so that I can hear? - There was a man in charge of the boat; he should know what to do best. It would not do for everybody to be in charge of a boat that is in her. When a man gets in a boat the coxswain takes charge and does everything.

5133. And the coxswain of your boat showed no inclination to pull back? - No, none whatever.

5134. You say that that attitude of his was due to the protests of the Duff-Gordon's? - Yes.

5135. You say you heard cries? - Yes.

5136. Agonising cries? - Yes, terrible cries.

5137. At what distance? - About 200 yards away.

5138. And yet, despite that fact, no effort was made to go in the direction whence those cries proceeded? - No, none at all.

5139. I think you said you saw a number of people on the boat deck at some distance from you? - Yes.

5140. Who was the officer in charge who ordered the seven members of the crew to get into this boat No. 1? - I do not know him.

5141. (*The Commissioner.*) I cannot understand this. Was there any discussion on board this boat as to whether you should go to these drowning people - any talk? - No, only when I proposed going back, that is all.

5142. Do you mean to tell me that you were the only person that proposed to go back? - I never heard any others.

5143. And to whom did you speak? - Anyone who was there who was listening. 5144. Did you speak to everybody? - I spoke to everyone there; I shouted out in the boat.

5145. Now tell me what each person said. - Those people I have mentioned before, I have told you what they said.

5146. Well, tell me again? - They said it would be too dangerous to go back, we might get swamped.

5147. Who said that? - Sir Duff-Gordon.

5148. Did anyone else say it? - No; his wife as well, that was all.

5149. Those two - two of the five passengers. Did anyone else say it? - I never heard anyone else.

5150. Was it Simmons [Symons] who was in charge of this boat? - Yes.

5151. What did Simmons [Symons] say? - He never said anything.

5152. And after these two people said it would be dangerous what did you say? - I never said any more.

5153. Then am I to understand that because two of the passengers said it would be dangerous you all kept your mouths shut and made no attempt to rescue anybody? - That is right, Sir.
5154. (*Mr. Harbinson.*) Now, before this boat was launched you say there was a number of people on the boat deck some distance from you? - Yes.
5155. Did you hear of anyone going down to those people, telling them there was room in this boat? - I did not.
5156. You did not suggest to anybody before the boat was launched that its full complement should be taken? - No.
5157. Was the boat lowered straight down? - Yes, to the water.
5158. It did not stop at the third-class deck? - No, it came straight down.
5159. Did you see people on other decks as it was lowered? - I did not notice any.
5160. You knew there must have been hundreds of people on the ship? - There must have been, I know.
5161. Yet this boat was put off under those conditions? - Yes.
5162. And no effort was made when it reached the water to get it filled with passengers? - No, we were told to stand off, that was all.
5163. You told us you saw, some time after the collision, after the impact - a number of third-class passengers as you went down. I think you said you had some trouble with the steerage passengers in the alleyway? - I had no trouble; I had to go through them with those lamps.
5164. You saw them there with their luggage? - Yes.
5165. How long would this have been after the collision? - About three-quarters of an hour.
5166. Which way were they going? - They were going along aft.
5167. Was anybody giving them instructions where to go? - No one at all.
5168. No one at all? - I never saw anyone there, and heard no one.
5169. And you heard no one tell them where to go? - No.
5170. Those people were left to their own resources? - They were going along on their own.
5171. Did the passages seem to be choked? - They were pretty thick; they were not choked.
5172. You did not see anything of these people? - No, nothing at all.
5173. You did not hear any of the stewards reassure them in any way? - I did not see any stewards.
5174. And so far as you could see there was no organisation amongst the members of the crew? - No.
5175. And no directions given to the passengers as to what to do? - No.
- The Commissioner:* A question of that kind conveys nothing to my mind. What do you mean by saying there was no organisation. How many of the crew did he see?
- Mr. Harbinson:* He says he saw none.
- The Commissioner:* Then he could not tell whether there was any organisation. A general question of that kind is of no use.

*Mr. Harbinson:* With great respect, my Lord, I put it to him as far as he knows. *The Commissioner:* He may know nothing, you know. He does not appear to know much.  
5176. (*Mr. Harbinson - To the Witness.*) You did not hear? - No.  
5177. Have you heard that over 60 percent of these third-class passengers were drowned?  
- I do not understand this percentage.

**Page 122**

**Examined by Mr. EDWARDS.**

5178. Did you see the second lady get into the boat? - No, I did not.  
5179. What age lady was she? - I could not tell you.  
5180. Was it in fact Mrs. Astor? - I could not tell you.  
5181. Have you heard that it was Mrs. Astor? - No, I do not know her.  
5182. Have you seen what purports to be an article by Lady Duff-Gordon making accusations against the crew of this particular boat? - Say that again, will you?  
5183. When you were in New York, did you see an article written by Lady Duff-Gordon concerning this boat? - What do you mean, an article?  
5184. Well, some writing in a newspaper? - No.  
5185. Have you heard that there was such an article? - I heard there was something printed about Lady Duff-Gordon calling everyone down, or something of that.  
5186. And calling down the members of your particular crew? - No, I do not think so; I never heard anything about that.  
5187. Was any money given to you by any passengers when you got on the "Carpathia"? - Yes.  
5188. What did you receive? - An order for £5.  
5189. Who was that from? - Duff-Gordon.  
5190. What did the other members of the crew get? - The same.

**Examined by Mr. LEWIS.**

5191. I take it as far as you are concerned you were prepared to go back? - Yes. 5192. The fact that you afterwards received £5 did not weigh with you. You did not know at the time you were to receive £5, I take it? - No.  
5193. (*The Commissioner.*) Are you sure? - Yes.  
5194. (*Mr. Lewis.*) You swear that no offer was made at the time? - No.  
5195. (*The Commissioner.*) Then the present of the £5 came as an agreeable surprise when you got on board the "Carpathia"? - Oh yes, of course. I think it was the day before we docked in New York we got that.  
5196. It was on board the "Carpathia"? - Yes.  
5197. (*Mr. Lewis.*) I take it that if there was an arrangement with any of the other members of the crew to do a certain thing for a certain price, they would of necessity give the same sum all round? - Yes.  
*The Commissioner:* You seem to understand all about it. I do not know why they should.

*Mr. Lewis:* I am putting the question, my Lord.

5198. (*The Commissioner.*) You do not put a question; you make a statement. If you would put questions it would be far better. (*To the Witness.*) Did you see this money given to the others? - Yes.

5199. Were you all together when the money was given? - Yes.

5200. Where were you? - On the promenade deck of the "Carpathia." 5201. And who gave it to you? - Duff-Gordon.

5202. Mr. Duff-Gordon? - Yes.

5203. Did he call you all together? - Yes, we all went up together.

5204. Did he call you up? - He sent for us, I believe. 5205. And you all went up? - We all went up.

5206. Did you know what you were going for? - No.

5207. What did you suppose you were going for? - He promised us this present previous to this.

5208. Then when did he promise the present? - After we got on board the "Carpathia," but we did not know what it was.

5209. What did he say when he promised the present? - He said "See me later on, I am too busy now."

5210. No; what did he say when he promised the present? - He said; "I am going to make a little present to the members of the boat's crew."

5211. You are quite sure there was no hint of any present before you got on board the "Carpathia"? - In the early hours of the morning before we were picked up he said he would do something for us.

5212. When was this? - Just before we were picked up, after we sighted the "Carpathia."

5213. Had nothing been said before that? - Not to my knowledge.

5214. (*Mr. Lewis.*) Was not there any discussion at all regarding the advisability of turning back? - No.

5215. Nothing whatever? - Nothing at all.

5216. You merely said you thought you ought to go back, and there it stopped? - Yes.

5217. I take it you are used as a seaman to obeying orders? - Yes.

5218. You got into the boat with no idea of going off yourself in place of someone else, but you obeyed instructions? - Yes.

5219. You considered that, having made this suggestion to the person in charge, and being used to discipline and orders, so far as you were concerned, the matter was ended?

- Yes.

5220. You are used to obeying instructions? - Yes, I have always done.

5221. Does this boat list contain the names of all the members of the crew. I understand you saw a list of your stations? - No, the list we had up was only our own men, our own quarters, firemen and trimmers and greasers.

5222. Just your section? - Yes.

5223. I take it similar lists were placed in other departments, so far as you are aware? - Yes.

5224. They practically embrace the whole of the members of the crew? - Yes. 5225. The crew amounts to something like 900 approximately? - Somewhere about that.
5226. And if it were in the nighttime there would be a large number off duty? - Yes, there would be more off duty at nighttime.
5227. Most of these men would be expected to go to their boat stations if they saw the list and knew their number? - Yes.
5228. Do you know whether the boat accommodation is for just over 1,000? - No.
5229. At any rate you know there is not sufficient boat accommodation to take the whole of the 1000 and the crew? - Yes.
5230. Would you be surprised to know that there is not much more accommodation than sufficient to take the crew if they are all mustered together? - I do not suppose there would be enough to take the crew.
5231. As a matter of fact there was a little more. You do not know who it was gave the order for six firemen to go into this boat? - No, it was an officer. Who he was I do not know.
5232. Do you remember a fire in a coal bunker on board this boat? - Yes.
5233. Is it a common occurrence for fires to take place on boats? - No.
5234. It is not common? - No.
5235. How long have you been on a White Star boat? - About five years.
5236. When did you last see a fire in a coal bunker? - I never saw one before. 5237. It has been suggested that fires in coal bunkers are quite a common occurrence, but you have been five years in the White Star line and have not seen a fire in a coal bunker? - No.
5238. Did you help to get the coal out? - Yes.
5239. Did you hear when the fire commenced? - Yes, I heard it commenced at Belfast.
5240. When did you start getting the coal out? - The first watch we did from Southampton we started to get it out.
5241. How many days would that be after you left Belfast? - I do not know when she left Belfast to the day.
5242. It would be two or three days, I suppose? - I should say so.

### **Page 123**

5243. Did it take much time to get the fire down? - It took us right up to the Saturday to get it out.
5244. How long did it take to put the fire itself out? - The fire was not out much before all the coal was out.
5245. The fire was not extinguished until you got the whole of the coal out? - No. I finished the bunker out myself, me and three or four men that were there. We worked everything out.
5246. The bulkhead forms part of the bunker - the side? - Yes, you could see where the bulkhead had been red hot.
5247. You looked at the side after the coal had been taken out? - Yes.

5248. What condition was it in? - You could see where it had been red hot; all the paint and everything was off. It was dented a bit. 5249. It was damaged, at any rate? - Yes, warped.
5250. Was much notice taken of it. Was any attempt made to do anything with it? - I just brushed it off and got some black oil and rubbed over it.
5251. To give it its ordinary appearance? - Yes.
5252. You are not a professional expert and would not be able to express an opinion as to whether that had any effect on the collision? - I could not say that.

**Examined by Mr. COTTER.**

5253. Can you tell us what are the dimensions of that bunker? - I could not tell you.
5254. Was there any scene at the boat before you got into it or after you had got into it, affecting scenes, I mean, between husbands and wives? - I saw some on the port side. 5255. I mean in your boat? - No.
5256. Did any gentleman come to the side of the boat before you lowered away? - I never noticed anyone. As soon as I got in the boat they started lowering.
5257. Who gave the order to lower? Do you know? - The officer.
5258. You do not know the officer? - No.
5259. Who lowered the boat? - I do not know.
5260. You did not see anybody at the falls? - No; the only man I saw was the boatswain. He said, "Jump into the boat."
5261. Was he standing by? - He was standing by the fall.
5262. Being a petty officer, he has the right to give an order? - Yes, but whether the order came from him or not I do not know; but I do not think it was from him.
5263. You did not know any of these passengers? - No.
5264. Have you seen the papers in New York where it states Mrs. Astor was in that boat, calling it the captain's boat? - No, I never saw that.
5265. When you got on the "Carpathia" did anybody besides Duff-Gordon speak to you out of that list of passengers that were on your boat? - There was one fellow, an American, was talking to us, but nothing in particular, not with regard to the wreck.
5266. No one suggested about giving any money, or anything like that? - No. 5267. As a matter of fact, while you were rowing about during the night there was no suggestion made? You heard none? - No, not then, not till just before we were picked up
- after we sighted the "Carpathia."
5268. After you sighted her there was a suggestion? - Yes.
5269. Who made the suggestion? - This Duff-Gordon.
5270. What did he say? - He said he would make us a little present for this and send a wire privately to our homes to let them know we were all right.
5271. And also himself I suppose? - I suppose so.
5272. Did the other lady that was in the boat give you any promise? - No.
5273. She said nothing at all? - No.
5274. Did the American give you any promise? - No.

*Sir Robert Finlay:* I have communicated with my friend Mr. Aspinall that we desire that this Witness should be detained.

*The Commissioner:* Yes.

*Sir Robert Finlay:* Perhaps your Lordship will allow my friend Mr. Laing to examine tomorrow morning. *The Commissioner:* Yes.

*(The Witness withdrew.)*

*(Adjourned to tomorrow at 10.30 o'clock.)*

## **Wreck Commissioners' Court.**

SCOTTISH HALL,  
BUCKINGHAM GATE,  
*Friday 10th May, 1912.*

### **PROCEEDINGS**

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## **LOSS OF THE S. S. "TITANIC."**

### **SIXTH DAY.**

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third-class passengers. (Admitted on application.)

## Page 126

*Sir Robert Finlay:* With regard to the witness in the box, Hendrickson, I am informed that the surviving officers will arrive at Queenstown this morning and Liverpool tomorrow morning. Under those circumstances I should ask your Lordship's permission to adjourn the cross-examination of this witness until Tuesday, when there will be an opportunity of getting any information which any of them may be able to give with regard to his evidence.

*The Commissioner:* I think that is reasonable. Will you, Mr. Attorney-General, let your junior prepare for me a list of boats with the crews they had on them and the number of passengers, and, if he can give it to me, the proportion of men to women.

*The Attorney-General:* Yes.

*The Commissioner:* I do not think, so far, the evidence has attempted to distinguish between classes - I do not quite see how it could.

*The Attorney-General:* No. We are attempting to do that, we are doing it ourselves as we proceed. Of course, it is not possible to do it properly until we have called a few more witnesses.

*The Commissioner:* No, it is not.

*The Attorney-General:* Then your Lordship shall have it. I quite appreciate that you want it; you want the boats.

*The Commissioner:* Yes, the numbers of the boats and giving me the effect of the evidence as to how each boat was manned, and what number it carried, and what the proportion of men to women was.

*The Attorney-General:* Yes, we can give the reference also to the evidence. I do not know whether your Lordship sees this piece of white paper; I understand Mr. Wilding has put it here. (*Pointing on the model.*) Your Lordship will remember these pieces.

*The Commissioner:* I have not seen that piece.

*The Attorney-General:* This is a new piece. This is a piece carrying out what was said by Hendrickson yesterday so as to show the spot at which the water was coming in.

*The Commissioner:* When he was looking down the spiral staircase?

*The Attorney-General:* Yes, Mr. Wilding has placed that there, I understand.

*Sir Robert Finlay:* Yes.

*The Attorney-General:* It is so much easier to fix it in one's mind.

**FRANK HERBERT MORRIS, Sworn.**

**Examined by Mr. RAYMOND ASQUITH.**

5275. Is your name Frank Herbert Morris? - Yes.

5276. And were you first-class bath-room steward on the "Titanic"? - Yes.

5277. At the time of the collision I think you were asleep? - Correct.

5278. Were you wakened by the shock? - No. Were you called by someone? - Yes.

5279. By another steward? - By the saloon steward.

5280. Were you told to get up and dress and go on deck? - Yes.

5281. Did you dress and take your lifebelt? - No, I did not dress right away; I sat on my bunk for a while; then the second steward came in and told us to go on deck. 5282.

How long was that after the collision, do you know? - I could not swear to the time.

5283. About how long? - About ten minutes or a quarter of an hour. 5284.

Did you go up to the boat deck? - Yes.

5285. Did you meet anyone on the way? - I met the second steward.

5286. Did he give you any orders? - He told us to go below and get bread from the baker's shop.

5287. And did you do that? - I did.

5288. Did you find any bread? - No.

5289. Did you then go up to the boat deck? - Yes.

5290. Did you know your boat station? - I did.

5291. Had you seen a boat list? - I had.

5292. When had you seen the boat list first? - In the first-class pantry.

5293. But when? - On Thursday.

5294. Which was your boat? - Port 16.

5295. That was the aftermost boat on the port side? - Yes.

5296. Did you go to that boat? - I did.

5297. Was there an officer directing operations there? - Well, I could not tell you that.
5298. Was there some one who seemed to be in charge? - Well, I believe there was a sailor or quartermaster; I could not swear who it was.
5299. And were the passengers being put into that boat? - Yes.
5300. Were they put in on the boat deck or was the boat lowered to another deck? - No, put in on the boat deck.
5301. Were any orders given about who was to be put in? - Women and children first.
5302. Did you help to put them in? - I did.
5303. Was the boat lowered then? - I did not stand by 16 all the time.
5304. Did you see No. 16 lowered? - No, it was being lowered away while I was standing by No. 14.
5305. Could you say how full 16 was when you saw it? - It looked pretty full to me, but I could not swear to the number.
5306. Did you see anyone refused who wished to get into boat 16? - The women and children were crying and we had great trouble to get the women into the boats.
5307. You had great trouble in putting them in? - Yes, we had to push them in.
5308. Did any men try to get in? - Not in 16; they did in 14.
5309. Fourteen was the next boat you went to? - Yes.
5310. And in that boat some men tried to get? - Yes, some third-class passengers who were foreigners.
5311. Did they succeed in getting in? - No.
5312. Was there an officer in charge of No. 14? - Well, there was in the last part, when the boat was pretty well full, Officer Lowe came along.
5313. Did you get into boat No. 14? - After I was called.
5314. You were told to do so? - Yes.
5315. Was that by the Fifth Officer, Mr. Lowe? - Yes.
5316. Were any other members of the crew in that boat? - I think there were two firemen, two sailors, and I think there were two more stewards besides myself.
5317. That would make seven members of the crew altogether? - Yes.
5318. (*The Commissioner.*) Three stewards; did you say, two firemen? - I believe there were two firemen, but I could not swear.
5319. And two sailors? - Yes.
5320. (*Mr. Raymond Asquith.*) Do you know the names of any of them? - No. 5321. How many women and children had you. Can you say at all? - Well, I counted 53 when we pulled away from the "Titanic." 5322. You counted 53? - Yes.
5323. Fifty-three women and children apart from the men? - Yes.
5324. Apart from the crew? - Yes.
5325. Were there any men passengers? - Yes.
5326. How many? - I think I counted two, but I could not swear, not to be correct. 5327. Do you know whether they were first, second, or third-class? - One was a second-class passenger.
5328. (*The Commissioner.*) One of the men? - Yes.
5329. (*Mr. Raymond Asquith.*) You cannot say about the other? - No.

5330. Can you say to what class the women belonged? - I think some were third-class passengers, the ladies, Irish women.
5331. You think some of them were Irish women? - Yes, by the way they spoke. 5332. I do not know whether you can say at all, how many you thought were Irish women? - No.
5333. Was the Fifth Officer in the boat himself? - Yes.
5334. What orders did he give you after you were lowered? - He told us to pull away from there, and not to pull too far.
5335. How far away did you pull? - About a quarter of a mile on a rough estimation.
5336. And did you wait there till the "Titanic" sank? - No, when we pulled away from her, Mr. Lowe asked how many were in the boat, and he said we had not enough, and he said we would have to pull back and see who we could pick up.
5337. You are now speaking of the time before the "Titanic" sank, are you? - Yes. As we were rowing round in the vicinity of the "Titanic" we came upon four lifeboats, and Officer Lowe asked who was in charge, if they had an officer, and they said "No"; and he said, "Consider yourself under my charge." Then we put our women and children into their boats, and then he asked if our sail was all right, and we put up the mast of the sail because he said it might be useful in the night. After the boat was down he said we would have to do our best to try and pick up as many as we could.
5338. (*The Commissioner.*) Did you pick up any passengers from any other lifeboat? - No.
5339. Did you put any of your passengers into any other lifeboat? - We put all our passengers in.
5340. Then did it leave your boat empty? - Yes.
5341. And what did you do then? - We pulled towards the wreckage to see who we could pick up.
5342. That is to say, after the "Titanic" had gone down? - Yes. 5343. And how many did you pick up? - Three.
5344. Did you pick up no more? - No; we only heard those three crying for help.
5345. And when you were picked up by the "Carpathia" were there on your boat only the seven men of the crew and these three persons whom you had picked up? - No, because we had picked up another collapsible boat that was making towards the "Carpathia."
5346. What happened with that boat? - The gunwales had not been properly fixed of this collapsible boat.
5347. Did you take the passengers on the collapsible boat into your boat? - Yes. 5348. How many were there? - I think there were about eighteen; I could not swear to the number at the time.
5349. Now, did you take any more people on board your boat before your boat was picked up by the "Carpathia"? - No, only the three we picked up out of the water.
5350. Did you take any more? - No.

5351. Then you had eighteen that you took from the collapsible boat? - Yes.

5352. And three you had taken out of the water? - Yes.

5353. That was 21? - Yes.

5354. And you had the seven men of the crew? - Yes.

5355. That is 28? - Yes.

5356. When you were picked up by the "Carpathia" that was the number you had on board? - Yes.

5357. How many was your boat constructed to carry? - I suppose the lifeboat is constructed to carry about 60 or 70.

5358. (*Mr. Raymond Asquith.*) Apart from these three whom you picked up out of the water, did you see anyone else alive in the water? - No.

5359. Did you row about and look for people? - We were rowing all night.

5360. On the scene of the wreck? - Yes.

5361. With regard to the people whom you took off the collapsible boat, were they women or men, or both? - I think there were some men; we were a little excited to try and save them because they were on the point of sinking, and I never took that much notice who they were, but I think there were women amongst them, but they were nearly all men - three stewards were amongst them.

5362. Were they the only members of the crew in the collapsible boat? - That is all I could recognise at the time.

5363. You think there were some women, but they were mostly men? - Yes.

5364. (*The Commissioner.*) Now, can you tell me when you arrived on the "Carpathia" how many men and how many women were there in your boat? - I could not tell you; I think there were about six or seven, but I could not swear to it.

5365. Six or seven what? - Women.

5366. Out of the 28? - Yes, I think there were that number, but I could not swear. Out of the 28, as I understand, there were 10 of the crew, perhaps I was wrong.

*Mr. Raymond Asquith:* I think there would be 11, counting the Fifth Officer.

5367. *The Commissioner:* Of the 18 that you took from the other boat, I understand that three were members of the crew? - Yes.

5368. And you already had seven? - Yes.

5369. That was 10? - Yes.

5370. You picked three people from the water? - Yes.

5371. Were they men or women? - Men.

5372. Was any one of those three a member of the crew? - Yes, one.

*The Commissioner:* Then you are right, Mr. Asquith, there were eleven.

5373. (*Mr. Raymond Asquith - To the Witness.*) Are you quite sure that you are right in saying this boat was No. 14? - Yes.

*Mr. Raymond Asquith:* I ask that question, my Lord, because another witness named Scarrott, has given evidence who says he was in boat 14, and he describes the boat as having about sixty-four.

*The Solicitor-General:* It is the second witness that was called, my Lord.

*Mr. Raymond Asquith:* One of them must have made a mistake about the number.

*The Commissioner:* It is not so far wrong, Mr. Attorney.

*The Attorney-General:* No.

5374. (*The Commissioner.*) This man says there were fifty-three passengers in his boat, No. 14, and seven that would make sixty; and then for some reason or another they were transferred to another boat. There would be about sixty in this boat No. 14 according to this man. (*To the Witness.*) I want to know this: Can you tell me what boat it was you transferred your passengers to? - I could not tell you.

5375. Did you transfer them all? - Yes.

5376. They were nearly all women? - We transferred all the women and children.

5377. Why did you do it? - Well, I suppose this was Officer Lowe's idea: if we rowed back to the wreckage and picked up a lot, our boat would not hold them all. That was his idea, to save as many as possible.

5378. (*Mr. Raymond Asquith.*) Did you know a man named Scarrott, a seaman? - No.

5379. You cannot say whether he was in your boat or not? - No.

5380. Was there fresh water in your boat? - Yes.

5381. Do you know whether there were any compasses or provisions? - We never attempted to look.

5382. (*Mr. Scanlan.*) Had your boat a light? - Well, they looked for a lamp, but did not find it; the boat was full at the time when we were looking for it.

5383. (*Mr. Raymond Asquith.*) Did you pick up another collapsible boat after? - Yes, full up.

5384. (*The Commissioner.*) You came up to another collapsible boat full? - Yes. 5385.

(*Mr. Raymond Asquith.*) You mean you transferred the people from the second collapsible boat to your boat? - No, we picked up two boats altogether.

5386. (*The Commissioner.*) By picking them up you mean you came up to them? - Yes, we took one collapsible boat in tow.

## **Page 128**

### **Examined by Mr. SCANLAN.**

5387. I think the idea of transferring your passengers into the other boat was to give you a free boat to go to the rescue of people who were drowning? - I expect that was Mr. Lowe's idea; I was not in charge.

5388. Is it the case that you could only see three people in the water? - Oh, we saw hundreds in the water, but they were not crying for help; they might have been unconscious, they might have been dead, we could not say to that.

5389. In getting your boat station for No. 16 that meant the arrangements were that in emergency you would go to 16? - Yes.

5390. But you were sent to 14? - No, I was not sent to 14.

5391. *The Commissioner:* He went to 16.

5391a. (*Mr. Scanlan.*) Yes, my Lord. (*To the Witness.*) But the boat you went with was 14? - Yes.

5392. The purpose of giving you this station was that you would be one of the crew of No. 16? - Yes.

5393. Can you tell me whether, of the seven who were in No. 14, who rowed away in No. 14 when it was lowered, any single one of them was given as his station this No. 14?

- I could not tell you that.

5394. Do not you think, if there had been a muster, that the men would better have been able to go at once to their own stations? - They might have done so; they might have been called upon for other orders.

**Examined by Mr. HARBINSON.**

5395. Coming up from the saloon that night was there any evidence of confusion on the boat deck? - None at all.

5396. Or in any part of the ship? - There was a little confusion round boat 14 with those foreigners, the men. That is all the confusion I saw.

5397. Were there many women there at the time? - There did not look to be many.

5398. Had many other boats been launched at this time on that side? - I helped to lower 12 away.

5399. You say that a number of your crew, you believe, were Irish? - Not the crew.

5400. I mean your passengers? - Yes.

5401. Those who were in your boat? - Yes.

5402. When did you discover that; was it on the boat deck or afterwards, during the night? - On the boat deck.

5403. Were all the women who were standing round taken into the boat. Did you leave any behind? - Some women got into the other boats, I believe; but I could not say.

5404. But your boat was not full at that time? - I did not count; I do not know what the carrying capacity of the boats is.

5405. Who gave you the order to lower? - Officer Lowe.

5406. How long was it after your boat was lowered until you transferred the women and children to the other boat you have mentioned? - I could not tell you the time.

5407. Was it before the sinking of the "Titanic"? - I believe it was.

5408. You believe it was? - I believe so; I am not going to swear to it though.

5409. You said you pulled about a quarter of a mile away? - Yes.

5410. Were you that distance from the "Titanic" when she sank? - No, we were making towards her when she sank.

5411. Do you suggest that having at this time transferred the women and children from your boat to another boat, it was only possible to pick up three passengers? - Yes.

5412. Did you hear many cries? - No, I did not.

5413. You knew, of course, that there must have been a great number of people left behind on the "Titanic"? - I expect so.

5414. Was it very dark at the time? - Yes.

5415. Did you pull about and look for other passengers? - Yes, I did - we all did. 5416.

Did you shout or in any way try to attract the attention of passengers who might be in the water? - No.

5417. You did nothing? - All was silent.

5418. All was silent? - Yes, we just heard a cry here and there for help.
5419. Have you been in this hall while other witnesses have been giving evidence? - I have one or two days, but I have not stopped here.
5420. Did you hear one of the witnesses say yesterday that the cries were agonising? - No.
5421. You did not hear that? - No.
5422. Would that statement, if it were made, have been true? - The cries when she went down were awful.
5423. After the "Titanic" sank, were you not in a position to go close to where she had gone down? - No, we never knew whether there would be any suction or not.
5424. From where you were lying by you could see the position of the "Titanic" and see lights on the "Titanic"? - Yes.
5425. Was it not your duty immediately the "Titanic" sunk to pull to the place where she had been, to try to rescue any passengers that might be in the water? - We did so. 5426. And you say it was only possible under all the circumstances to rescue three? - Yes.

**Examined by Mr. COTTER.**

5427. How long have you been in the employ of the White Star Line? - I believe about five years.
5428. Were you in any other company before that? - No.
5429. Have you ever taken part in boat drill? - I have.
5430. Or bulkhead drill or fire drill? - Yes.
5431. Can you tell us whether there were any hand bulkhead doors on board the "Titanic," and where were they situated, to your knowledge? - There were some in the working alleyway.
5432. You know where the third-class dining-rooms are? - Yes.
5433. Were there any bulkhead doors, separating those dining-rooms, in the alleyways leading from one section to another? - Yes.
5434. What deck are those bulkhead doors on? - Some on E deck in the working alleyway on the port side, and the starboard side I believe, where the first-class passengers were, and some on F deck.
5435. You know where they are? - Yes.
5436. Where were you when the ship struck? - We were asleep.
5437. In the glory hole? - Yes.
5438. Were you in your bunk? - I was; I was asleep.
5439. Did anybody come and tell you there had been an accident? - The saloon steward came and woke us and said, "She has hit something."
5440. Were there any orders from the Second Steward or the Chief Steward? - From the Second Steward. He came in about 10 minutes after. 5441. That is Mr. Dodd? - Yes.
5442. What did he say? - "All go up on deck and take a lifebelt with you." 5443. Did he suggest you should stand by your boats? - I never heard him give that order. He gave us orders: "All up on the boat deck."

5444. The "Titanic" carries a bugler, I suppose? - Yes.
5445. Did you hear the bugle going at all, giving the call, "all hands to the boats"? - No.
5446. You would understand it if you had heard it? - We would have understood it all right.
5447. There was no call given? - No.
5448. Did you see the Chief Steward? - No.
5449. You did not see the Chief Steward? - No.
5450. Did you see the storekeeper? - Thompson? I saw one storekeeper.

**Page 129**

5451. Did he say anything about coming down to the storeroom, as something had happened? - I heard him tell some of the fellows to come to the storeroom and get biscuits.
5452. That is the duty of several stewards, providing they know their duties, and have had them told them, to go down to the storeroom to get biscuits to store the boats? - That is on the lifeboat list, I believe.
5453. Did any of them go down there to your knowledge? - Well, I believe there were a lot down there; I could not swear. I met some going down on the way.
5454. When you got on deck what did you see with regard to women and children? - I saw them all standing round the lifeboats. 5455. Many? - I could not swear to the number.
5456. Who was in charge; who did you see in charge, an officer or who? - I never saw any officer; I was not taking as much notice as that.
5457. Was there nobody giving orders at all on the boat deck? - I heard an officer shouting.
5458. What did he shout? - "Get the boats clear."
5459. Who told you to go down to the baker's shop for bread? - The Second Steward.
5460. Where was he when he told you that? - In the companion that leads from the deck up to the top deck.
5461. The man's companion? - Oh, no.
5462. The second cabin companion? - No, a working companion leading from E deck right through the pantries.
5463. It is a kind of crew's companion. When you got to the baker's shop was there anyone there? - When I was getting to the baker's shop I asked a fellow if there was no more bread left, and he said "No," that it had all gone up.
5464. Who was there? - Some stewards; I do not know their names.
5465. Was the chief baker there? - I did not see him.
5466. They had already sent the bread up. Did you join the ship in Belfast? - Yes. 5467. You went over to Belfast for her, so that you would have a thorough knowledge of the ship by the time you got to Southampton. Did you hear any orders given, if orders were given - for the stewards to know exactly how to get up to the boat deck? - Yes.
5468. Did you hear any orders for them to go and get the third-class women out? - No.

5469. Or the second cabin? - No.

5470. You heard no orders at all? - No. Orders might have been given, but I was not there when they were given.

5471. Had you any difficulty in lowering boat 14? - Not at first. When it was half way down the ship's side the tackle got hitched up.

5472. Could you account for that at all? - I think the tackle got twisted.

5473. Through its being new? - That might have been so.

5474. Had you much trouble in getting it into its ordinary shape to get down? - No.

5475. Was the ship listing to starboard when you were lowering that boat? - I think there was a list to port.

5476. A list to port? - I think so.

*The Commissioner:* That is the first we have heard of that, I think. Is there evidence that she had a list to port.

*The Attorney-General:* Oh, certainly, my Lord. I will call your Lordship's attention to it.

*Mr. Cotter:* Before she sank, my Lord; we have evidence that there was a list to port.

*The Attorney-General:* There is no doubt there is some already, and there is a good deal more to come.

*The Commissioner:* He is talking about the time when he was lowering his boat.

*The Attorney-General:* Yes. I am sure there is evidence.

5477. (*Mr. Cotter - To the Witness.*) How long was it from when she struck till you lowered boat 14. Can you give us some idea? - Well, in my own estimation I should say it was about 1 or a quarter past 1.

5478. That would be thirty-five minutes after she struck? - Yes.

5479. And she had a list to port then. Did your boat catch the ship's side at all going down? - No.

5480. She was clear all the way. Are there any foreigners in the stewards' department of the "Titanic"? - Yes.

5481. Many? - No, one or two, not many.

*The Commissioner:* I do not know what the point is; what you asked the question for. What is the point of it?

*Mr. Cotter:* I want to point out, my Lord, that there were Italians and Germans in this crew.

*The Commissioner:* But what is the point, supposing there were?

*Mr. Cotter:* The point is they would not understand orders if they got them. 5482. (*The Attorney-General.*) If your Lordship will look at page 104, question 4054, you will find one question yesterday put to the Electrician. I will read it: "We climbed up the davit and down the boat falls, and I got into a boat, and Scott dropped into the water." Your Lordship remembers that: "(2) You are speaking of the port side, as I understand? - (A.) Yes, port side. (2) Did you notice at all whether there was any list on the ship at this time? - (A.) There was a slight list to port." There is a good deal of evidence which your Lordship will hear about it.

5483. (*Mr. Cotter - To the Witness.*) Did you see anything of these men - the restaurant people? - No.

5484. You did not see them? - No.

**Examined by Mr. EDWARDS.**

5485. You said you rescued certain people from a collapsible boat which was in a sinking condition. Do you know what was the matter with the collapsible boat? - I should think the sides had not been fixed properly.
5486. You do not know of your own knowledge? - No.
5487. Can you give the name of any single one of the persons who was transferred from that collapsible boat to your boat? - Yes.
5488. Will you give the names? - Brown.
5489. What is he? - First-class Steward.
5490. Can you give any other name? - Lucas, First-class Steward.
5491. Anybody else? - And the First-class Barber.
5492. Do you know his name? - Gus Whiteman. [August Weikman.] 5493. Anybody else? - No.

**Examined by Mr. LEWIS.**

5494. How close were you to the spot where the "Titanic" sank when you picked up the three men? - Well, I could not tell you the exact spot where she went down, but we were pretty well near her, because when we rowed to these three persons there was wreckage all round us.
5495. You could only find three to pick up? - Who were shouting.
5496. You made every possible effort, I take it? - Our officer did the finest action he could have done.
5497. If there had been more you would have picked them up.

**Page 130**

**Examined by Mr. LAING.**

5498. You are a First-class Steward? - Yes.
5499. Would you be in a position to hear orders given to the Third-class Stewards? - No.
5500. With regard to the restaurant people, are they a separate gang altogether, a separate body? - Yes.
5501. Under some separate person? - Yes.
5502. Nothing to do with the stewards as stewards? - No.
5503. Were there any foreigners among the stewards - among the First or Second or Third-class Stewards, apart from the restaurant? - Yes, one or two.
5504. What were they? - Saloon Waiters.
5505. Could they talk English? - Oh, yes, very good.
- The Attorney-General:* I have no question.

*(The Witness withdrew.)*

**FREDERICK SCOTT, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

5506. *(The Attorney-General.)* Scott is the one who climbed down the davits with Ranger, the Electrician who was called yesterday. *(To the Witness.)* Were you employed as a Greaser on the "Titanic"? - Yes.
5507. Do you remember the Sunday of the collision, the 14th April? - Yes. 5508. You were on watch, I think? - Yes.
5509. You went on watch at 8 o'clock, did you? - Yes.
5510. In the ordinary course would that be from 8 to 12? - 8 to 12.
5511. Was your duty in the turbine department? - Yes.
- The Commissioner:* I see that Ranger spoke to the list to port?
5512. *(The Attorney-General.)* Yes, that is the one I called your attention to just now. That is the reference I did give. *(To the Witness.)* That is where the turbine engine is? - Yes.
5513. You were employed in the turbine engine room, starboard side? - Starboard side.
- 5514-5. Is that where you were when the collision happened? - Yes, just against the engine room door which parts the turbine room from the engine room.
5516. Oh yes, into the reciprocating engine room? - Yes.
5517. That is forward? - No, the after side of the engine room door, the after side of the main engine room.
5518. *(The Commissioner.)* The engine room door is forward of the turbine? - Yes, the forward side of the turbine door.
5519. *(The Attorney-General.)* Yes, forward of the turbine-room is the reciprocating engine room, and aft are the electric engines? - Yes.
5520. We have that from the plan. You were standing by the door. Just tell us before you felt anything at all, did you see anything done? - No.
5521. You felt something; what was it? - I felt a shock and I thought it was something in the main engine room which had gone wrong.
5522. We know it was about 11.40? - Yes, about 20 minutes to 12.
5523. Did you notice the two telegraphs in the engine room? - Yes; four telegraphs rang.
5524. Were there four telegraphs? - She got four telegraphs, two emergency ones. 5525. Two emergency? - Yes, and two for the main engine.
5526. What did you notice? - I noticed "Stop" first.
5527. To which telegraph did that come? - On the main engines.
5528. Let us get this clearly. I understand you are speaking now of the turbine room? - No, there are two stand-bys; you can see just the same in the turbine room; if you are standing at the engine room door you can see the two just the same.
5529. Where did you see those? - In the main engine room.
5530. That is where the reciprocating engines are? - Yes.
5531. The water-tight door is open? - Yes.

5532. And you can see through? - Yes.

5533. Now I think we follow. When you speak of the four telegraphs, are they all there? - Yes.

5534. Or are there any in your room? - No, there are none in the turbine room at all, Sir, all in the main engine room.

5535. Was the telegraph signal that came the emergency or the ordinary telegraph? - That is to the main engine room. It is different. They ring the two on the main engine room, and then they ring two others just afterwards, the emergency ones.

5536. Did you hear the two? - All four went.

5537. Did you hear the two ordinary ones ring first? - No, they all four rang together.

5538. What did they ring? - "Stop."

5539. Was that before or after the shock? - After the shock.

5540. What was the next thing? - Then the watertight doors went.

5541. Was any reply given to the telegraph orders from the bridge? - Yes, they rang back from the engine room; the two greasers at the bottom rang back.

5542. It would be their duty, I suppose, to ring back? - Yes.

5543. Did you see them do that? - Yes.

5544. After they got the order to stop? - Yes, they were feeding the engines, and were close handy at the time.

5545. They happened to be there? - Yes.

5546. Then the next thing that happened was something with reference to the watertight doors? - Yes, the watertight doors all closed.

5547. Did you hear any bell ring first? - No, not for the watertight doors.

5548. Do you mean that without any signal they came down? - Yes. 5549. Which watertight doors are you speaking of? - All of them.

5550. When you say "all of them," how many do you mean? - I think it is about six, leading down to the afterend of the tunnel.

5551. Do you mean not only in your engine room, but you are speaking also of what you could see aft; the other watertight doors had been open? - We had to go and open them up afterwards.

5552. I understand now what you mean. You are standing in the turbine engine room and there you have got water-tight doors fore and aft which were open, and aft you could see the other watertight doors were open? - Yes.

5553. Then, if I follow you correctly, what happened was, all those doors closed down at the same time? - Yes.

5554. What did you do after that? - After that we went up to the turbine room and down one of the escapes to let one of the greasers out in the after tunnel.

5555. That is into the electric room? - No, there is another tunnel after that one.

5556. Do you mean the aftermost one? - Yes, the aftermost one of the lot. 5557. That is the very last on the tank top, your Lordship will see. (*To the Witness.*) You went there? - Yes, and heaved the door up about two feet to let the greaser out.

5558. Who was the greaser there? - He was tunnel greaser, the one who looks after the tunnel.

5559. You had to release him? - We had to go and heave the door up.

5560. How many did it take to heave the door up? - Two of us.

5561. That you did by winding it up, I suppose? - Yes.

5562. Did you have to give any signal before that? - No.

5563. Did you get any order? - No.

5564. Did you do it by yourselves? - Yes, me and my mate on the other side of the engine room.

5565. Did you hear any signal given to the bridge? - From the engine room?

5566. Yes? - Yes.

5567. What? - When they rang the stand-by. Is that what you mean?

5568. Yes? - That is all I heard, and then they rang down, "Slow ahead!"

5569. Wait a bit. I will ask you about that in one second. Did you hear any message given by the Chief Engineer to release the watertight doors? - No.

5570. To release the clutch? - No. After we got the greaser out we came back to the turbine-room again, and the Engineer in the turbine-room told us to heave up all the watertight doors. That was after we came back from letting the greaser out of the tunnel. 5571. That would mean somebody must have telegraphed to the bridge? - Yes, somebody must have done.

5572. In order to release the clutches so that you could heave them up? - Yes. 5573. Then you had to go right to the afterpart of the ship there, had you, into the tunnel? - We went down the escape ladder.

5574. That was for the purpose of getting there in order to open up that watertight door which is the last, the aftermost watertight door? - Yes.

5575. That is the one which you did proceed then to heave up? - Yes.

5576. And then you released your mate who was there at work? - Yes.

5577. Then when you released him what did you do? - We had to go up the escape again, and we went down the turbine.

5578. You went up the escape then and got back again into the turbine engine room? - Yes.

5579. Did you leave the watertight door open? - Yes.

5580. And so far as you know, was it ever closed? - No, because they were all opened afterwards. We heaved them all up again. We went back and heaved up the one which we opened about two feet, we heaved it right up.

5581. Now let us follow it. The first time you go there to release your mate you heaved it up two feet? - Yes.

5582. That released him? - Yes.

5583. Then you went back to the turbine engine room? - Yes.

5584. Then when you got there did you get further orders about the watertight doors? - Yes, the engineer of the watch in the engine room.

5585. What did he tell you to do? - He told us to heave all the watertight doors up.

5586. Did you go right aft again to the aftermost tunnel? - Yes, we went right through.

We opened one up in the afterside of the turbine room, and then went right through them till we got to the after one, which we had opened up about two feet.

5587. Now, let us see if I follow. In order to get to the aftermost tunnel you would again have to go up the escape? - If we had not opened the doors we would have to go up the escape; but as we went through we opened them up.

5588. I thought you went up the escape and then opened them coming forward? - No.

5589. Did you open them going aft? - You are bound to, because the handle is this side of the door.

5590. The handle is this side of the door? - Yes; and then we passed through and opened up another.

5591. You would pass first of all from the turbine engine room? - Into the electric engine room.

5592. And you go into the electric engine room. When you say you opened them, how much did you open them? - Right up.

5593. Can you give us an idea how much that is? - Just over 6 feet, I think. I could walk through them easy without bending down.

5594. Then from the electric engine room at the afterpart you again opened in the same way? - To get into the tunnel.

5595. Then from the tunnel you come to the last water-tight door? - Yes.

5596. That again, you have to open from the afterend? - Yes.

5597. You open them and then you come to the place where your mate had originally been? - Yes, that is the after one of the lot.

5598. After having done that, you walk through again? - Yes, we go back into the main engine room then.

5599. And you left all those doors open? - All those doors open.

*The Commissioner:* Then all the watertight doors aft of the main engine room were opened?

5600. (*The Attorney-General.*) Yes. (*To the Witness.*) And, so far as you know, as I understand it, they never were closed? - No. Why they opened them was they had to go down the last tunnel but one and get a big suction-pipe out, which they used for drawing the water up out of the bilges.

5601. That tunnel is the one before you get to the last water-tight door where they went to get a big suction pipe? - Yes, it takes four men to carry it. I think I saw four men coming through with it. They took it to the stokehold. What they did with it I do not know.

*The Commissioner:* Will you get what time this was?

5602. (*The Attorney-General - To the Witness.*) What time was it? - About a quarter to one.

5603. (*The Commissioner.*) That is about an hour after the collision? - Yes. 5604. (*The Attorney-General.*) When you came back to the main engine room did you see whether the water-tight doors forward of the main engine room were open? - They must have been, because they could not take a suction pipe out to the stokehold if they were not.

5605. So that the suction pipe which they wanted, was taken right forward? - Taken into the stokehold. What they did with it I do not know.

5606. I only want to know whether you can remember. You say they must have been. Did you notice any of the water-tight doors forward of the main engine room open? - No, I never noticed them because I could not see them open. The men in the main engine room had to open them.

*The Attorney-General:* We have evidence that some of them were up to No. 5.

*The Commissioner:* Up to the division between 4 and 5.

*The Attorney-General:* Yes, that is right.

*The Commissioner:* If this evidence is right, there were no watertight bulkheads at all serving after a quarter to one from the bulkhead between four and five right away aft.

*The Attorney-General:* That is right, my Lord; that is as I understand the evidence. *Mr.*

*Laing:* May I interpose here and say that these watertight doors are fitted with a float so that if any material quantity of water comes the float automatically releases the door and it comes down again by itself.

*The Commissioner:* That is something I do not at present quite understand. You mean to say that there is some provision by which these doors work again automatically?

*Mr. Laing:* Yes.

*The Commissioner:* If water comes in to any extent?

*Mr. Laing:* Yes.

*The Commissioner:* We have not heard of that.

*Mr. Laing:* I only thought it right to tell your Lordship, having regard to what has been said about it.

*The Attorney-General:* We shall go into that a little later, and see how it would work.

*The Commissioner:* I was only saying, as far as I

## **Page 132**

could gather at present, there were no operative watertight bulkheads from the bulkhead between four and five, right away aft after a quarter to one.

*The Attorney-General:* I think that is right, my Lord. It is subject to this, that there was this automatic release which we shall have to hear something more about and discuss whether it was effective or not, and what happened when we get further evidence. But, so far as we know (and I rather gather it seems to agree with my friend Mr. Laing's evidence), there was no order. I am not asking for an admission which is to operate against my friend; I mean, so far as we know at present, there is no question after that of closing the watertight doors? *Mr. Laing:* Nothing that I know of.

5607. (*The Attorney-General.*) We do not know anything either. It may be there may be some evidence later; we shall hear. (*To the Witness.*) Will you go back a little to something you just mentioned before, that I want you to tell the Court a little more about; that is, orders that you heard in the main engine room. Do you remember? You were standing in the turbine engine room close to the door? - Yes.

5608. And you told us you heard what was going on in the main engine room? - The telegraph?

5609. Yes, I want you to tell my Lord what it was? - They rang down "Stop," and two greasers on the bottom rang the telegraph back to answer it. Then they rang down "Slow ahead." For ten minutes she was going ahead. Then they rang down "Stop," and she went astern for five minutes.
5610. (*The Commissioner.*) The orders were "Stop," "Slow ahead," and then "Astern"? - No, it was "Stop," and then "Astern." She went astern for five minutes. Then they rang down "Stop."
5611. "Stop," "Slow ahead" - 10 minutes, you say? - Yes, about 10 minutes.
5612. Then "Stop" again? - Yes, "Stop"; then she went astern for about five minutes.
5613. (*The Attorney-General.*) Did you hear the order about "Astern"? - Well, it was on the telegraph.
5614. What was the order? - "Go astern" - "Slow astern." Then they rang down "Stop," and I do not think the telegraph went after that.
5615. A telegram came "Stop"? - Yes, and I do not think the telegraphs went after that.
5616. (*The Attorney-General.*) The first order you heard was "Stop"? - Yes.
5617. Did the engines stop before the order came "Slow ahead"? - Oh, yes. 5618. They did stop? - Yes.
5619. Then when the engines had stopped the order came "Slow ahead"? - Yes. 5620. Can you tell us at all what time passed between the order "Stop" and "Slow ahead"? - I should say about 10 minutes or a quarter of an hour.
5621. "Stop," of course, comes at once? - It comes at once. They cannot stop the engines at once.
5622. That is what I want. They cannot stop them at once? - No; they are bound to let the steam get out of the cylinder first, otherwise they would blow the cylinder covers off if they tried to stop them at once.
5623. You would not know how long it would take to stop the engines? - No, I do not.
5624. I think you said ten minutes to a quarter of an hour "stop," then ten minutes "slow ahead" and then again "stop"? - Yes.
5625. Then how long between "stop" and "slow astern"? - I suppose that was a matter of about four or five minutes.
5626. That is between "stop" and "slow astern." And how long between "slow astern" and "stop" for the last time? - Five minutes.
5627. Did you hear those orders given before you went to the aftermost tunnel? - Yes.
5628. So that all this which you have told us happens before you go to release your mate? - Yes.

*The Commissioner:* I make out this would take about half an hour?

5629. (*The Attorney-General.*) Yes, that is what I make it. (*To the Witness.*) Was there a clock there? - Yes, the engineer had a clock. There is not one in the turbine-room; but he had one of his own for taking the count of the turbine engines, the revolutions that the engine is turning.

*The Commissioner:* Will you look at Dillon's evidence on this point at Question 3718?

*The Attorney-General:* Yes.

*The Commissioner:* And 3720?

*The Attorney-General:* I have it in mind, my Lord.

*The Commissioner:* I am told by one of my colleagues that it is directly in the teeth of this evidence.

*The Attorney-General:* I am afraid that is likely to happen more than once in the case.

*The Commissioner:* No doubt; we shall not get the same story from everyone. *The Attorney-General:* Of course this man is down in the engine room and he is telling us. I am going to see further whether we can exhaust the time. He is telling us by the clock. Of course we shall have to contrast it. He is a trimmer who was on duty in the engine room, and this man's business, so far as I understand, was always in the turbine department. *The Witness:* Yes.

5630. After you had heard all these orders can you tell me how long it was before you went aft to the aftermost tunnel to release your mate? - Well, I should say it was just over the half-hour I should think.

5631. You mean just over half an hour from when? - From the time the doors were lowered and we went and let him out.

5632. If that is right it would be very soon after you heard the last order given? - To stop?

5633. Yes. - No, it was about a quarter of an hour or twenty minutes after that. 5634. I want to see if we can exhaust the time. A quarter of an hour or twenty minutes after you heard the last order "Stop," you went to release your mate? - Yes. 5635. Then you came back at once? - Yes.

5636. How long do you think all that took, to release your mate and back again into the engine room? - About ten minutes.

5637. Then you got the order to open the watertight doors? - Yes.

5638. That, I think you said, was about a quarter to one? - Yes, about a quarter to one.

5639. (*The Attorney-General.*) That is right. I mean the time he gives at any rate tallies with that. It would then bring it up to about 12.40 or 12.45 and that is right.

That is why I was trying to exhaust it to see what happened. (*To the Witness.*)

When you came back into the engine room, did you wait for orders? - Yes, I went back into the main engine room then.

5640. And did you get an order to go up on deck? - Yes, the engineer came down and told everybody to go out of the engine room.

5641. Which one was it? - I could not say.

5642. But one of the officers? - Yes. I think it was one of the senior engineers.

5643. Was there any water to be seen? - No, it was as dry as we are here.

5644. That was so at all times; there was never any water there? - No water at all in either engine room.

5645. Then did you go on deck? - Yes, up the working alleyway.

5646. And then did you get orders? - Some of the firemen came down and told us we had to get some lifebelts.

5647. What did you do then? - We got them at the Third-class; from there we went up on the boat deck. There were two boats left then on the port side; lowered down to the ship's side they were then.

5648. Were there any on the starboard side? - No.

5649. Let us see if we can get this quite clearly. Did you look over the starboard side? - Yes, we went to the starboard side first.
5650. And you looked over the side? - Yes, the highest side of her where she had a list.

**Page 133**

5651. The highest side? - Yes, the port side was where she had listed over, and we went to the starboard side.
5652. It was the port side that had listed over? - Yes. We went up the starboard ladder and came *this* side of her. We looked, and there was no boat. We went to the port side, and there were no boats then lowered to the ship's side.
5653. Was it an appreciable list? Did you notice as you were walking? - I never took that much notice. I know she had a list that side.
5654. And you remember looking over the side? - Yes.
5655. Then you went back to the port side? - We went to the port side then.
5656. Then you looked over that? - Yes.
5657. Tell us what you saw? - I saw two boats then, and one of the boats was where the officer pulled a revolver out and shot it between the ship and the boat and said, "If any man jumps into the boat I will shoot him like a dog."
5658. That is Mr. Lowe, according to the evidence. Do you remember where these boats were? Were they forward or aft? - Aft. 5659. Aft on the port side? - Aft on the port side.
5660. There are four aft on the port side. Do you remember which of them you saw? - I know it was the two after-boats on the port side.
5661. That is 14 and 16 on the port side? - I do not know the number.
5662. That is right. They were the last. When you looked over the starboard side you were in the afterend? - In the afterend.
5663. Could you see at all whether there were any boats forward on the starboard side? - No. I saw a lot of lights a tidy distance away from the ship, and the chaps thought it was a ship overhauling us and somebody said they thought it was a lifeboat, and the others said they could not have got out so far; but we happened to find out it was a lifeboat. 5664. When you did look over the starboard side there were no boats either forward or aft? - No, not alongside the ship.
5665. So that all the boats either forward or aft had gone from the starboard side? - Yes. The only two left were on the port side, the afterend of the ship.
5666. (*The Commissioner.*) And they were the only two lifeboats left? - Round the ship, yes.
5667. (*The Attorney-General.*) Either lifeboats or emergency boats? - Yes.
- The Commissioner:* And they were 14 and 16.
5668. (*The Attorney-General.*) That is right? - They were full up with women. There were only two men in one boat and that was the one I got into. They pulled back for two more men, and we got in from the ship's side.
5669. (*The Attorney-General.*) He is right; that is boat 14; they took off two men? - Yes; we got up on the davits and went down the falls. I got halfway down and went into

the water. Ranger happened to get into the boat without getting wet. I was in the water, I suppose, about four or five minutes and they pulled me in.

5670. You were pulled in and taken into the same boat that Ranger was in? - Yes.

5671. There were only two men? - Yes.

5672. All the rest were women? - Yes; it was filled up with women.

5673. Any children? - Yes, one or two, but I cannot say how many, and I cannot say how many were in the boat, but I know she was full up. We pulled away from the ship's side and we had not been away long before the ship started breaking up, and her stern went up in the air, and you could see her three propellers nearly the same as you can see them on the model.

5674. You got away? - Yes; we had just got at the stern of her when she started breaking up.

5675. You say she started breaking up? - Yes; she broke off at the after-funnel, and when she broke off her stern end came up in the air and came down on a level keel and disappeared.

5676. It went up in the air and came back on a level keel? - Yes.

5677. Then did she go up again before she disappeared? - No.

5678. Simply sank? - She simply sank.

5679. (*The Commissioner.*) Where did she break? - The after-funnel.

5680. (*The Attorney-General.*) Do you mean between the third and fourth funnels? - No, the after-funnel. From the after-funnel to the stern of her.

5681. Do you mean the break was aft of her last funnel? - Yes, just aft of the last funnel.

5682. (*The Commissioner.*) Aft of the ventilating funnel? - Yes, that is right.

*The Commissioner:* Does this agree with the other evidence?

*The Attorney-General:* No.

*The Commissioner:* I thought the other witness made it more forward.

*The Attorney-General:* Yes, between the forward and the second funnels; and one of the witnesses said she came back and righted on her keel and then up-ended again, with her stern in the air, and then plunged into the water. There is, not unnaturally, some discrepancy about it. There is some evidence from one of the witnesses, who said the last funnel seemed to come towards him, then to go aft. Your Lordship will remember that.

*The Commissioner:* Yes.

5683. (*The Attorney-General.*) That will correspond, at any rate. It is the best description a man can give of what he saw on a dark night. (*To the Witness.*) You were behind her stern? - Yes.

5684. You could not see how far forward she parted? - No.

5685. When you were looking over the starboard side was there anybody near you? - Yes, all the engineers and firemen and all that.

5686. All the engineers? - Yes.

5687. Do you mean the officers? - Yes; the engineers that were on watch.

5688. Then, if I understand it aright, all the engineers had come up too? - They were all at the top.

5689. Did they come up when you came up? - Just afterwards, but some of them went up on the boat deck with me. They came up the ladder just behind me.

5690. When you say they were standing there, where were they standing? - Just against the electric crane aft.
5691. Will you indicate to us on the model where that is? - Yes, just about *here* (*pointing on the model.*)
5692. On the boat deck? - On the boat deck.
5693. That is the last you saw of them? - That is the last I saw of them.
5694. When the boat came to the port side we have heard either from you or from Ranger they shouted out from there they wanted two more men? - Yes.
5695. Were you and Ranger the only ones who ran to the port side? - Well, I do not know whether Ranger came over at the same time as me or not, but there were some stood on the port side then. There were a lot of firemen there, but they did not think about getting up on the davits to get out on to the falls.
5696. That had to be done? - Yes, we had difficulty to get out there with lifebelts on, because they are only about *that* wide (*demonstrating.*)
5697. You and he were the first to get out on to the davits and get down by the falls into the boat? - Yes.
5698. And so got away? - Yes.
- The Attorney-General:* I do not propose to go through the story again of the boat, because we have heard from two or three witnesses what happened in boat No. 14.

**Page 134**

**Examined by Mr. SCANLAN.**

5699. At the time of your leaving, going down from the davits, were there any passengers on the deck? - I could not say.
5700. You said that when you went for the lifebelts, you went to the steerage quarters? - Yes, we were ordered to go there.
5701. I suppose at that time you could not get to your own quarters? - Certainly not, we could not go there to get our clothes, let alone the lifebelts. 5702. There were lifebelts in your own quarters, I take it? - Yes.
5703. You were one of the last of the crew to leave the ship. Do you know where the collapsible lifeboats were kept on the deck? - No, I was never on the boat deck before - not till I went up and got on the boat.
5704. We have heard of two collapsible lifeboats of the four that were on the deck being lowered? - I never saw them.
5705. You never heard anything of the other two? - No.

**Examined by Mr. ROCHE.**

5706. I want you to tell me with regard to the engineers you saw on the deck, when did they come up? - They came up just after I did.

5707. How long was that? - It was 20 minutes past 1 when I left the engine room. 5708. How long before you climbed down the falls to the boat? - I should say about half an hour.

5709. Were all the boats launched then? - No; all barring two.

5710. Which of the engineers did you see? Can you tell me their names? - Mr. Farquharson. I do not know the names of the others.

5711. How many of them did you see? - I should say there were about eight of them.

5712. There are 20 or more in the ship? - Yes.

5713. You think you saw eight, of whom you can remember the name of one? - Yes.

5714. Were the pumps running at this time still? - Certain pumps were. 5715. What do you mean by certain pumps, most of the pumps, of the ship? - Circulating pumps.

5716. Where did the circulating pumps get their steam from? - That I cannot tell you.

5717. You do not know whether they got it from the main boilers or not? - No. 5718. You went from the turbine room back into the aftermost compartment in the tunnel? - Yes.

5719. You had to get through two watertight doors to get there? - Yes.

5720. Were they both open when you went? - Not when we went first, not when we released the greaser in the after-tunnel; they were closed.

5721. How did he get out? - We went up the turbine-engine room way along the working alleyway and down an escape.

5722. I follow. Did anyone send you to fetch him? - No.

5723. Did you get before you went up to the deck any summons to go on deck, or did you go on your own account? - No, we were ordered up out of the engine room.

5724. Who by? - The Senior Engineer, I think it was.

5725. Who was in charge of your section, the turbine room? - One of the juniors I think it was, about the sixth.

5726. What is his name; do you know? - No.

5727. Do you know the name of the engineer who ordered you out? - I think it was Mr. Farquharson.

5728. The gentleman you did see on deck afterwards? - Yes.

5729. And were the other engineers you saw on deck those belonging to your section, the turbine room? - They were doing six-hour watches then; some had come on at 8 to 2.

5730. But were the gentlemen that you saw, the engineers whom you saw, the engineers you had been connected with in the turbine room? - Yes.

**Examined by Mr. HARBINSON.**

5731. You said you could not get to your quarters to get your lifebelts? - No. 5732. Who told you to go to the third-class quarters? - One of the firemen I think told us to go along and get our lifebelts that way.

5733. To go and get lifebelts in the third-class quarters? - Yes.

5734. Now this was, I understand, about an hour after the collision? - This was 20 minutes past 1.
5735. When you were going to the third-class quarters did you see many of the thirdclass passengers about? - No.
5736. What section of the third-class quarters did you find those lifebelts in? - I cannot exactly point it out to you, but it was where some of the third-class sleep.
5737. In the sleeping quarters of the third-class passengers? - Yes.
5738. Had you ever been there before? - No.
5739. Who told you to go there? - One of the firemen.
5740. But who told you to go to this particular place? - The Chief Steward of the thirdclass.
5741. What is his name? - I could not tell you.
5742. Did you ever see him before? - Yes.
5743. He told you where to find those lifebelts? - Yes.
5744. These lifebelts were, I suppose, intended for use by the third-class passengers? - I do not know. I do not know whether they were spare ones or what they were.
5745. You know nothing further than you went and got them? - No.
5746. Were there many there? - Yes.
5747. You say you did not see any of the third-class passengers about? - No.
5748. How many men went along with you? - I should say about 30 or 40.
5749. Thirty or 40 went and got those belts? - Yes.
5750. You saw no one at all? - No; no passengers.
5751. Did you look for any? - No.
5752. You did not look for any? - No.
5753. How did you get from the position you were into the third-class quarters? Was it through the tunnel or up the ladder or how? What means of access was there? - Our engine room door leads up into the alleyway where the third-class is.
5754. The alleyway leads direct to the third-class sleeping compartments? - Yes.
5755. Where were those lifebelts kept? - Aft.
5756. But in a compartment by themselves? - Yes, up a little alleyway. There are seven alleyways there; I could not point out to you which one it was.
5757. Did you look into any of the third-class compartments to see if there were any of the passengers there? - No.
5758. Did you see any stewards about? - Yes, some stewards were getting belts there.
5759. They were looking after themselves also? - Yes.
5760. And taking these third-class lifebelts? - Yes.
5761. Was not it rather curious that you saw no third-class passengers at all? - No, I never saw one. There might have been some there if I had looked round, but I was not looking.
5762. You were not looking for passengers? - No.
5763. Did you see any women about? - No.
5764. Or any children? - No.
5765. How did you get from the third-class sleeping apartments to the boat deck? - I went to the third-class compartments and up the staircase.

5766. Was that the most direct way? - Yes.  
5767. Had you any difficulty in getting up? - No.  
5768. None at all? - No.

**Page 135**

5769. Did all the other members of the crew follow you? - Yes.  
5770. The 40 firemen? - Yes.  
5771. You all went in a bunch and got these lifebelts? - Yes.  
5772. And you all went up in a bunch? - No, we had to get them one at a time.  
5773. But you followed each other afterwards? - Yes.  
5774. How long were you occupied in getting these lifebelts? - Not long.  
5775. It is at any rate an appreciable distance from the sleeping apartments of the thirdclass passengers to the deck, is it not? - I should say we would get up in five minutes in a case like that.  
5776. Did you see any third-class passengers on your way from the sleeping apartments up to the deck? - No.  
5777. You saw none? - No, I never looked for any.  
5778. Your evidence is that during the whole of this time you did not see from beginning to end a single third-class passenger? - There may have been some about there, but I never noticed them.  
5779. You did not see them? - I never noticed any.  
5780. Were many belts left in the compartments? - I cannot say.  
5781. Were you one of the first or one of the last of the men? - I was about the fourth one to get a belt.  
5782. At the time did you think whom these belts were intended for? - No.  
5783. You made no inquiries? - No.  
5784. All you did was to go and get them? - Yes, the Chief Steward of the third-class told us.  
5785. Told you to do so? - Yes.  
5786. And you cannot tell me his name? - No.

**Examined by Mr. HOLMES.**

5787. Were there any third-class passengers by the boats? - I could not tell you; there were only two boats left; those were the two on the port side.  
5788. That is where you saw the shots fired? - I saw one shot fired, that was by the officer in one of the boats.  
5789. Do you know which officer it was? - No.  
5790. Do you know what it was that led to his firing the shot? - I could not tell you.  
5791. You did not see any confusion on deck? - No, none at all.  
5792. Did you see him fire any shots anywhere but into the water? - No, that is all I saw him fire - one shot between the ship's side and the boat.  
5793. You did not see the circumstances that led up to that? - No.

**Examined by Mr. EDWARDS.**

5794. When you got the order, "All out of the engine room," did you see any of the engineers coming up? - No, not at the time.
5795. Between the time when you left the engine room and the time that you say that you saw certain engineers on the boat deck, how much time had elapsed? - I should say about half an hour.
5796. Did you at the time, or immediately after you heard the order, "All out of the engine room," hear any orders given to close the watertight doors? - No.
5797. It has been said that there is a float that automatically closes the doors? - It works by electricity.
5798. Is not that float below the level of the engine room? - I cannot say; I never saw one.

*The Attorney-General:* We will give some evidence of it later on - we know something about it - so that you may ascertain what it is.

*Mr. Edwards:* All the engineers are gone, and I wanted to get something more than mere theoretical evidence.

*The Attorney-General:* Such evidence as we can give, we will call about it.

5799. (*Mr. Clement Edwards.*) Do you know anything at all about the working of the float? - No. I never saw a float.

**Examined by Mr. LAING.**

5800. Do you know the "Titanic" was fitted for about 1000 third-class passengers? - No.
5801. Was there a large number of lifebelts in the third-class accommodation? - Yes, in this locker there were.
5802. You know she only carried about 700 third-class passengers? - I could not tell you.
5803. Do you know of the little disc we have been told about which shows what the engines are doing? - The revolutions?
5804. No, a little red-coloured glass which shows when the engines are stopped? - I hardly follow you.
5805. We were told that when the engines are stopped - Oh, that is in the stokehold. We know inside when the engines are stopped; that is in the stokehold; that is when they ring up separate from the telegraph. That is a little thing about *so* big to show when the engine is stopped. That is rung by one of the engineers in the engine room.
5806. Is it your view that the engines were not stopped until after the crash? - No. We did 75 revolutions at 11 o'clock.

*Mr. Laing:* Your Lordship remembers Barrett, whose evidence was that the little red disc came up and he got an order about the dampers, and then followed the crash. *The Attorney-General:* Yes. Everything followed very quickly upon the other, but you are right in saying it was before.

*The Commissioner:* What is the reference?

*Mr. Laing:* Question 1855 down to 1862.

*The Commissioner:* Will you read it to me?

*Mr. Laing:* Yes. In Question 1856 he describes where he was, and at 1860 the question is: "Now just tell us what happened that you noticed?" - (A.) There is like a clock rigged up in the stokehold and a red light goes up when the ship is supposed to stop; a white light for full speed, and I think it is a blue light for slow." *The Witness:* I cannot say what light goes up in the stokehold.

*Mr. Laing:* "This red light came up. I am the man in charge of the watch, and I called out, 'Shut all dampers.' (Q.) You saw this red light? - (A.) Yes. (Q.) You knew that was an order to stop the engines? - (A.) It says 'Stop' - a red piece of glass and an electric light inside. (Q.) Shutting the dampers I suppose, would be? - (A.) To shut the wind off the fires. (Q.) To shut the draught off the fires. And you gave an order, 'Shut the dampers'? - (A.) Yes. (Q.) Was that order obeyed? - (A.) Yes. (Q.) What was the next thing that happened? - (A.) The crash came before we had them all shut. (Q.) They were shutting them when the crash came? - (A.) Yes." That is Barrett.

*The Attorney-General:* That is right.

*The Commissioner:* Can that be accurate, that the crash came after he saw the red light?

*Mr. Laing:* Yes.

*The Commissioner:* "This red light came up. I am the man in charge of the watch, and I called out, 'Shut all dampers.'" The red light means the engines are stopped.

*The Attorney-General:* No, the order to stop, I understand; it is the order to stop. It does not mean they are stopped.

*The Commissioner:* Until this morning I thought the order to stop and the stopping were fairly simultaneous.

*Mr. Laing:* So they are, my Lord.

## **Page 146**

*The Commissioner:* Apparently, according to the evidence we have heard this morning, it takes about ten minutes for the engines to stop. *The Attorney-General:* I do not think he said that, oh no.

*Mr. Laing:* He said some substantial time, but as a matter of fact it only takes a few seconds.

*The Commissioner:* He gave the order "Stop" and it was obeyed. I took down that this took about ten minutes.

*The Attorney-General:* Ten minutes between that and the next order, which was "Slow ahead." (*To the Witness.*) Is that right?

*The Commissioner:* I wish you would get it quite clear.

*The Attorney-General:* I think it is right.

*The Commissioner:* Will you allow me to ask so that I understand it myself?

*The Attorney-General:* Certainly, my Lord.

*The Commissioner:* You remember the order to stop? - Yes.

5807. That, I suppose, was obeyed instantaneously by the men in the engine room? - Yes.

5808. The next order was "Slow ahead"? - Yes.

5809. Now, what time elapsed between the order to stop and the order to slow ahead? -  
About 10 minutes.

5810. And what was happening during that 10 minutes? Had the ship ceased to move and the engines ceased to move? - When they rang down "Stop" they shut the steam off, and then it is bound to go on until the steam is right out of her.

5811. How long does that take? - About 10 minutes.

*The Commissioner:* That is what I understood.

*Mr. Laing:* That is what he said.

*The Commissioner:* That is to say, that although the engineers do all they can to stop the engines they do not in fact stop for 10 minutes. One of my colleagues says that is absurd.

*The Attorney-General:* So I think it is, from our evidence.

*The Witness:* Do you mean from the time they stop till they go again?

5812. (*The Commissioner.*) Let us get it clear. There comes the order to stop? - Yes.

5813. And that is obeyed by the engineers instantly? - Yes.

5814. But you say there is some steam that has to be exhausted? - Yes.

5815. And while that steam is being exhausted, although the engineer has stopped his engines - that is, say, done what is necessary to stop them - the engines continue to revolve? - Yes.

5816. Now how long after the engineer has put on the stop do the engines revolve? - About five revolutions.

*The Attorney-General:* We must take the 10 minutes to be, what I understood him to say, and what I think is clear now, between the order to stop and the going slow ahead.

*The Commissioner:* That is a very different thing altogether.

*The Witness:* That is what I thought you meant.

*The Commissioner:* The five revolutions are of no account, and therefore my first impression that "Stop" meant what it says was right. The engines had stopped. *Mr.*

*Laing:* Yes.

*The Witness:* It just turned five times, that is all.

5817. (*The Commissioner.*) And then they remained in that stopped condition for 10 minutes? - Yes.

*The Attorney-General:* That is the point.

*The Commissioner:* And then came the order, "Slow ahead." *The*

*Attorney-General:* That is it.

5818. (*Mr. Laing.*) The point I am upon is whether you felt the shock before the stop came or after? - After - no, before. It was when the shock came that they rang down to stop the engines.

5819. Do you say the shock came first? - No, afterwards.

5820. After the order to stop came the shock? - No.

5821. Very well, then you put it the other way? - When the shock came they rang down, "Stop the engines."

5822. (*The Commissioner.*) The shock comes and then the order to stop? - Yes. 5823.

That is what I understood? - We thought it was something in the engine room that had gone wrong.

*Mr. Laing:* That does not agree with Barrett and it does not agree with Dillon. Both of those witnesses put the stop order first and the shock very shortly afterwards. *The*

*Attorney-General:* I was going on to refer, your Lordship will remember, to the orders that came from the bridge; there is first the three bells and then the telephone.

*The Commissioner:* That comes from the crow's-nest.

*The Attorney-General:* From the crow's-nest to the bridge; then the telephone to the bridge, the response from the bridge; immediately then the order to the telegraph. The first order relates to the telegraph and gives the order which goes down to the engine room, "Hard a-starboard." That is what happened. We shall be able to fix it later when we come to examine all the evidence together.

*The Commissioner:* The question is in what order of events does the shock come. *The*

*Attorney-General:* I should say from the evidence it came after. I should think that the first thing that happened was the three bells, and the telephone, and then the order from the bridge, "Hard a-starboard," immediately after the order on the telephone. It is difficult to understand otherwise, because they did get the warning, although it is very shortly before, but immediately the order is given, and then came the shock, so far as we have had evidence from the bridge.

*Mr. Laing:* I accept that; that seems to agree.

*The Attorney-General:* I am only dealing with the evidence, as far as it has gone.

*Mr. Laing:* So am I.

*The Attorney-General:* It is very difficult, I quite agree with my learned friend.

*The Commissioner:* I understand what you are saying, Mr. Laing.

5824. (*Mr. Laing - To the Witness.*) Did you ever see the dial of this telegraph at all, or are you only going by the rings? - No, I saw it.

5825. Up to the time when you left the engine room, had you seen any water below at all? - No.

5826. Neither in the engine room nor any of the compartments which you saw? - No.

5827. Did you meet any water in the alleyway as you went up? - No.

5828. None at all? - No.

5829. Up to the last? - No.

5830. Did I catch you to say that you saw the lights of a number of boats belonging to the "Titanic" when you were on board? - Yes, on the starboard side well away from the ship.

5831. How many engineers do you think there were? - Eight I saw.

5832. Officer engineers, I mean? - About eight I saw on deck.

5833. There are 36 I am told, all told? - I think so.

5834. So when you said you saw all the engineers you must have meant all the engineers that you knew? - Yes.

5835. You saw only eight of them? - I saw eight of them.

5836. Out of 36? - Yes.

*The Attorney-General:* Your Lordship will find this dealt with at page 38 - I mean the question which you asked before about the proper order of the signals and orders. It is summarised at Question 993.

*The Commissioner:* Yes, the question beginning "You told us what happened." *The*

*Attorney-General:* Yes. "First of all the signal of the three bells" - I think I am summarising what he said - "then the telephone message, then it was repeated to the First

Officer, 'Iceberg right ahead'" - that is because another officer received the telephone message - "then the First Officer went to the telegraph to give an order to the engine room, and gave you the order 'hard a-starboard'? - (A.) Yes. (Q.) At any rate, up to his going to the telegraph as I follow you, there

**Page 137**

was no change of speed?- (A.) No, Sir. (Q.) What that order was you do not know? - (A.) No, Sir. (Q.) Then 'hard a starboard' and you immediately put up your helm?- (A.) Hard a-starboard. (Q.) Right over? - (A.) Yes. (Q.) What is it, 35 degrees? - (A.) Forty degrees. (Q.) Then you got the helm right over? - (A.) Right over, Sir."

*The Commissioner:* "Then she comes round two points and then strikes."

*The Attorney-General:* Yes. "Is that right? - (A.) The vessel veered" - round to port - "veered off two points" was his expression. It is in the Quartermaster's evidence.

**Re-examined by the ATTORNEY-GENERAL.**

5837. There are two matters I want you to help us upon, if you can. You told us the time when you got the order all the watertight doors were open. That was at quarter to one? - Yes.

5838. But I do not think you told us what time it was when you went up on deck? - When we left the engine room?

5839. Yes. - Twenty past one.

*The Attorney-General:* I do not think your Lordship has that?

*Mr. Laing:* Yes, I think so.

*The Attorney-General:* My friend says he thinks you have that.

*The Witness:* That was the time we left the engine room. Then we did not go straight up to the boat deck then.

5840. Can you give us any idea how long it was between that 20 past one and your getting on to the boat deck? - We had to go and get the lifebelts after that. From the time I got the lifebelts and all do you mean?

5841. Yes. You left the engine room at 1.20; you got eventually to the boat deck, and I want to know about what time it was you got on the boat deck? - About twenty to two I think it was when I got on to the boat deck.

5842. How long after you got to the boat deck was it till you got on to the davits and down the falls? - About a quarter of an hour, between a quarter of an hour and twenty minutes.

5843. That would bring it to about five minutes to two? - Yes.

*The Commissioner:* When he dropped into the water.

*The Attorney-General:* Yes. And we know it was about quarter-past two when she sank. That helps us now to see what was happening during this time, from 11.40 onwards.

*The Witness:* I think that was the only boat that took any of them out of the water. We pulled in between six and eight, I think it was, after she sank.

5844. Yes, you are quite right, we have the evidence about it. I am not only asking you about it because we have had it from other witnesses. But you are quite right; they did do it. Now there is one other matter, correct me if I am wrong, but I think you said you went to the third-class cabin to get the lifebelts? - Yes.
5845. That must have been some time between 20 minutes past one and 20 minutes to two? - Yes.
5846. When you got there did you see any passengers? - I never noticed any.
5847. Did you go to the third-class cabin aft or forward? - Aft. The lifebelts are kept in a locker in an alleyway.
5848. I would rather like to know what you did; I think it would be of some assistance to know what you did when you went to this third-class compartment. Did you have to pass along the cabins of the third-class? - Yes, you have to go right along the cabins.
5849. Is it on the same floor as the alleyway? - Yes.
5850. Your engine room opens upon the alleyway? - Yes.
5851. That is deck E. I think it is rather important to see where he went, my Lord. (*To the Witness.*) Then you passed along aft? - Yes.
5852. And along that alleyway are there third-class cabins both to port and starboard of you? - I do not know about that. As we are going aft there are cabins on the right-hand side, that would be the port side.
5853. It may be that there are not cabins on the starboard side of that alleyway? - That would be the port side, as I am walking aft; that is the right hand side of me.
5854. That we have got clear. If you pass along aft along that alleyway, on your right hand side, as you are walking aft, and therefore on the port side of the vessel, there are the third-class cabins? - Yes.
5855. Are there any on your left hand side as you are walking? - I cannot say.
5856. I do not make out there are? - I think that is the post office and hatchways. 5857. Yes; that is quite right. Now I want to know how far aft you went in order to get to this locker where the lifebelts were kept? - Not very far.
5858. Have you any idea how far? - No, I have not an idea of the distance. 5859. Do you remember, as you were walking aft, was the locker on your right hand side or on your left? - I cannot say, because we had to go up a little alleyway to it and turn round again. It was the first time I had ever been there. There are several alleyways there.
5860. (*The Commissioner.*) The alleyways down to the third-class berths? - Yes. 5861. (*The Attorney-General.*) Did you go up them? - No, I went straight along on the same alleyway.
5862. Just give us an idea; how many of the entrances to the berths do you think you passed? - About four alleyways, I think.
- The Attorney-General:* Your Lordship sees how the cabins run.
- The Commissioner:* I do. Did he pass the end of four alleyways?
5863. (*The Attorney-General.*) Yes, he passed the end of four alleyways. The thirdclass passengers would have to go down these alleyways to go to their berths? - Yes.
5864. You did not go down there? - No, I passed right along.
5865. And you passed three or four of these? - Yes, I think it is about three or four.

5866. That is the part of the third-class where the women and children were? - Yes.

5867. Did you see any women and children along there at all? - No.

5868. Either where you passed or looking further aft or further forward? - No, I never saw anybody.

5869. (*The Commissioner.*) Were the doors of the cabins open? - I cannot say.

5870. You did not go down the alley? - No.

*The Commissioner:* Will you ask him if the watertight doors are automatic there? 5871. (*The Attorney-General.*) I am going to ask some questions about that. I am going to ask some general questions about that, because we have not had it yet, and he may be able to help us. (*To the Witness.*) With regard to the water-tight doors, you have told us about those which close down automatically from the bridge, on to the inner bottom? - Yes, with electricity.

5872. That is right - from the electric switch. What I want to know is this; there are a number of other water-tight doors, are there not? - I have not seen any, only the doors which they lower down from the bridge. 5873. Do you only know those 12? - Yes, that is

## Page 138

all. There are other doors up in the working alleyways which they push to; they have about 12 catches on them.

5874. It is those we want to know about. There are other watertight doors? - Yes, those up in the alleyways.

5875. That is what I want to know something about. Those are not doors which close from the bridge automatically? - No, they swing like an ordinary door.

5876. How are they closed? - They have about 12 catches on them like handles and catches you turn over. You turn them either way.

*The Commissioner:* He says they swing.

*The Witness:* Yes.

*The Commissioner:* They slide, do they not?

5877. (*The Attorney-General.*) Some slide and some are on hinges. I do not know which these are? - Those are all on hinges which they have there.

*The Attorney-General:* I am told by those who ought to know better that they are sliding doors.

*The Commissioner:* Well, I saw some of them, and those I saw were sliding doors. 5878. (*The Attorney-General.*) So I understand. (*To the Witness.*) At any rate they are doors which close comparatively easily by hand. Is that it? - Yes.

5879. You were speaking just now about the alleyways, were you not? - Yes. 5880. Are you sure that watertight doors were there? - Well, I do not know whether they are watertight doors or not. I know there are doors.

*The Commissioner:* When he speaks of alleyways, they are passages between the berths of the third-class passengers, but they are small things of no consequence, and he did not go between any of them, but he went along the broad alleyway in which there are several

watertight doors. Will you look at this plan which I have (*handing the same to the Attorney-General.*). You will see where I have marked a red line.

*The Attorney-General:* That is right. That is where he walked.

*The Commissioner:* That is the passage he walked along.

*The Attorney-General:* Quite right.

*The Commissioner:* And going aft he would have small alleyways on his right going between the berths of the third-class passengers?

*The Attorney-General:* Quite right.

*The Commissioner:* Now, if you look along the broad alleyway he walked along you will find several watertight doors marked.

*The Attorney-General:* I do.

*The Commissioner:* And it is those I want to know something about.

*The Attorney-General:* I agree. Let me ask him to follow it along. Your Lordship is asking about these two through which he passed?

*The Commissioner:* Are there only two? I thought there were three.

*The Attorney-General:* I only see two.

*The Commissioner:* I want to know if they were open or shut. Those are not automatic? 5881. (*The Attorney-General.*) Your Lordship is quite right; it depends upon where you start from. If you start from the place where he came up there would be three. It had been marked red, and I thought that was the passage. There would be three from his coming up from his engine room if he passes along, assuming that he is going to the point, which I think is the one he indicates, which I am going to ask him about. (*To the Witness.*) Do you remember, as you passed along aft, coming to a locker which is amidships where the lifebelts were kept? - I cannot say, because we had to go up two alleyways to get to the locker. We had to go past the staircase where the third-class go on deck. We had to go by that and up a little alleyway and then turn to our left again.

5882. That is right?

5883. (*The Commissioner.*) Had you ever been there before? - No.

*The Attorney-General:* That is exactly what he would do to get to the place I am indicating, if your Lordship will look. I will mark it, if I may.

*The Commissioner:* Yes, certainly.

*The Attorney-General:* I put a blue mark round the locker. As the witness has described it, it quite accurately represents what he would do to get to that spot. He would pass a staircase there on the right, then he goes along in a straight line to the left and goes along another alleyway, and there he would get to the locker. That is quite right.

5884. (*The Commissioner.*) Did you go down any of the small alleyways between the berths of the third-class passengers? - No, Sir.

5885. You passed the mouth of several of them? - Yes, about three or four, I think.

5886. (*The Attorney-General.*) Do you know the Chief Steward's room? - Yes. 5887.

Was that just opposite the place where you got the lifebelts? - No, that is right in the alleyway, just against the staircase. We had to go round here and up another alleyway and turn round on the left to get to this locker. It is the place we used to go and get the stamps in the "Olympic," and I think this place was the same.

5888. There would be various offices on your left, as you are walking aft to get these stamps that you told us about and things of that sort? - Yes, the post office is just there on the left. We had to go past the third-class..

*The Attorney-General:* Now, I want you to tell us about these watertight doors. *The Commissioner:* Before you leave that, you say that the Chief Third-class Steward's bunk, or room, or whatever it is is just close to the locker where the lifebelts were? *The Attorney-General:* I tried to get something about it from him, but I doubt whether he knows it.

*The Commissioner:* He had never been in this part of the ship before in his life. *The Attorney-General:* It was in answer to a question I put to him about that that he said that was further forward that he passed that to get to the place he used to get the stamps in. Evidently what he means is that there are some offices that he would pass on the left as he walked aft, and he was referring to one of those.

*The Commissioner:* Yes, because he told us he had never been in this part of the ship before in his life.

5889. (*The Attorney-General.*) In point of fact there is the Second-class Purser's office, which would be very likely the office he was referring to. (*To the Witness.*) Now, I want to ask you about these watertight doors in the alleyway. Were they open? - Yes, they were open.

5890. That is to say you walked through these three doors, and, so far as you know, was there any order given to close any water-tight doors? - I cannot say up there.

5891. As far as you know, of course, the watertight doors closed down below would be closed from above, from the bridge, that we know? - Yes, Sir, but them in the alleyway they were open, and they were open at the time that I left the alleyway.

*The Commissioner:* It is obvious they were open. He could not have got along otherwise.

*The Attorney-General:* That is obvious, of course. I think we shall call evidence showing that everything was open there.

*Mr. Edwards:* There is one point, my Lord, in which there seems to be a little disparity between this witness and Grainger [Ranger]. This witness says that he was taken into boat 14. Grainger's [Ranger's] evidence was that it was boat 4. It may save confusion hereafter if the point is at once cleared up.

*The Commissioner:* Yes.

*The Witness:* No. 4 boat I think it was.

5892. What was No. 4 boat? - The boat I got into.

5893. (*The Solicitor-General.*) How do you know? - I asked a sailor after I got on the "Carpathia" what the numbers of the boats were.

5894. The other boats had gone? - This boat came back.

5895. (*The Commissioner.*) I thought I might have made a mistake about the number. I thought when he came up on the boat deck there were only two boats left? - Yes.

## **Page 139**

*The Commissioner:* And I thought they were Nos. 14 and 16.

*The Attorney-General:* Yes, 14 and 16.

*The Witness:* They were loaded away, Sir. We never got into those two boats.

*The Commissioner:* Were the two boats that were left Nos.. 14 and 16?

5896. (*The Attorney-General.*) I think we had better get it quite clear. (*To the Witness.*)

When you got to the port side there were two boats? - Two boats left.

5897. As I understand from all you said, the aftermost boats on the port side? - Yes.

5898. You did not get into either of those? - No. 5899. Those were just going away? - No.

5900. What happened? - I saw them rush to the ship's side from there. I went over to the starboard side again, and then we come back again.

5901. You came back again to the starboard side? - We came back from the starboard side to the port side again.

5902. When you came back to the starboard side there was nothing there, and you went back again to the port side? - Yes. 5903. The boats had gone away? - Yes.

5904. And then you found someone who called out that he wanted two more men? - Yes, right.

5905. And then you climbed up the davits and got down? - Yes, and that boat was No. 4.

5906. (*The Commissioner.*) Then you were pulled into No. 4 boat? - Yes.

*The Commissioner:* Yes, that is quite right, and that agrees with Grainger's [Ranger's] evidence. Mr. Edwards was quite right to call attention to it; it has saved confusion.

*(The Witness withdrew.)*

**CHARLES JOUGHIN, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

5907. Were you chief baker on the "Titanic"? - Yes.

5908. What was the staff of bakers under you? - Thirteen.

5909. Thirteen, and yourself as chief baker? - Yes.

5910. At the time when this accident happened, were you off duty? - Yes.

5911. In your bunk? - Yes.

5912. Did the shock wake you up? - I felt the shock and immediately got up. 5913. I do not think we need find the place exactly, but tell us, more or less, are your quarters in the aft or the fore part of the ship? - Amidship on the port side.

5914. Did you hear orders given which affected you? - No, Sir, just general orders - orders passed down from the top deck to the lower deck.

5915. You heard orders being passed down from the top deck to the lower deck? - Yes, what we call general orders.

5916. Those are called general orders, are they? - Yes.

5917. I suppose that if provisions were wanted it would be your department to look after that would it not? - No.

5918. What about bread? - The boats are provided with hard bread, what we call biscuits.

5919. Did not you hear any orders given about provisions for the boats? - Not directly from any officer. Word was passed down from the top deck and I received it eventually through other channels.
5920. What was it? - "Provision boats," or put any spare provisions you have in the boats, that was it.
5921. As I understand, the biscuits, the hard bread, would be in the boats already, or ought to be? - Yes.
5922. And it would only be the soft bread you had to think about? - Any surplus stuff we had around that was handy we would put into the boats.
5923. You heard that order passed along. Did you take steps to send up some provisions to the boats? - Yes.
5924. What was it you did, you and your men? - I sent thirteen men up with four loaves apiece, 40 pounds of bread each as near as I could guess.
5925. And your staff, your men, had they got stations for the boats? - Yes.
5926. And as far as you know did they know their stations? - Yes.
5927. Did these thirteen bakers go up with these loaves? - Yes.
5928. Did you go up on deck yourself? - I stayed in the shop for a little while, and then I followed them up the middle staircase.
5929. Which deck did you come out on to? - Eventually the boat deck.
5930. The top deck. The accident was at 11.40. Can you tell us the sort of time it was when you got to the boat deck? - How long do you think after the accident it was that you got to the boat deck? What time do you think it was? - I should say about half-past twelve, as near as I could guess.
5931. That is the time, as I understand, when you got to the boat deck? - About that time.
5932. The orders you speak of had been given, and you had already sent up the bread? - Yes.
5933. And you followed your men afterwards at about 12.30? - Yes.
5934. There is just another question about time you might help us over. You say it was half-past twelve when you got up to the boat deck. That was after these orders. Can you give us some sort of idea when it was you heard of the order for provisioning the boats? - I should say about a quarter-past twelve.
5935. Then the order is obeyed, and you get up there about half-past twelve? - Yes.
5936. When you got up to the boat deck had any order been given that you had heard about all hands going on deck? - The order had been passed round previous to that.
5937. It had? - Yes.
5938. That would be the general order, I suppose? - The general order.
5939. Had that order about all hands on deck been given before your bakers went on deck? - Oh, yes.
5940. Just two or three questions about what happened after that. Which was your boat? - I was assigned to No. 10.
5941. I do not think, my Lord, we have had any evidence about this boat yet. There are four boats on the afterpart of the boat deck on each side, and No 10 would be the first of the four? - The first one on the port side - the forward one.

*The Commissioner:* The most forward boat on the port side.

*The Solicitor-General:* No, the most forward boat of the aft boats.

*The Commissioner:* Yes.

5942. (*The Solicitor-General.*) It may be convenient, to remind your Lordship that the next one to it, No. 12, was the one that the man Poingdestre was in, and the next one to that, No. 14, is the one that Morris and Scarrott were in, and this one we have not dealt with. (*To the Witness.*) Did you go to your boat, No. 10? - Yes.

## Page 140

5943. And what did you find was the situation there? - Everything orderly. The Chief Officer was there.

5944. Is that Mr. Wilde? - Yes, Mr. Wilde.

5945. Were there passengers there? - A good many passengers there.

5946. What was happening, how far had things got? - They were getting the boat ready for getting the passengers in, and Mr. Wilde shouted out for the stewards to keep the people back, to keep the men back, but there was no necessity for it. The men kept back themselves, and we made a line and passed the ladies and children through.

5947. Who made the line? - The stewards mostly - stewards and seamen; they were all together.

5948. I think I caught you to say that though Mr. Wilde gave the order to keep the men back there was really no necessity, they kept back themselves? - Yes.

5949. Was the order good - the discipline good? - Splendid.

5950. No. 10 was being got ready. When you saw it had anybody got into the boat yet? - No.

5951. Now tell us about No. 10 in order: What happened? - It was swung out, the stewards, firemen and sailors all got in a line. We passed the ladies and children through.

5952. Into No. 10? - Into No. 10. Then we got it about half full, and then we had difficulty in finding ladies for it. They ran away from the boat and said they were safer where they were.

5953. You heard ladies saying that? - I am sure of that.

5954. (*The Commissioner.*) "When the boat was half full we had difficulty in finding more ladies"? - Right, Sir.

5955. "They ran away, saying they were safer where they were"? - Yes.

5956. (*The Solicitor-General.*) Up to this time, could you tell me had you seen any third-class passengers - women from the third-class? - Yes, Sir, plenty.

5957. So far as you saw, was any distinction made between the different classes - first-class ladies or second-class ladies or third-class ladies? - None at all.

5958. Of course, at ordinary times this boat deck is a first-class deck, a promenade, is it not? - Yes.

5959. And the third-class people would not get on to it? - It is railed off just from the boats, and the saloon passengers use it as a sunning deck.

5960. But at this time were there any barriers up? - No.

5961. You know the way, I suppose, that third-class people would have to go in order to get on to this top deck, they would have to mount some stairs, would not they? - They have to go up some stairs, but there was an emergency door from the third-class into the second-class leading up the broad staircase that was open very early.
5962. We will find where that is. There was an emergency door from there leading from the third-class to the second-class? - From the third-class alleyway, what we call the working alleyway, there is a wide door, and that was open early on.
5963. Could you tell us whether that door was open? - It was open.
5964. Let us just fix this. It opens, you said, into the broad staircase? - Yes.
5965. What staircase is that; who uses it as a rule? - Second-class passengers as a rule while at sea.
5966. Is that the staircase - correct me if I am wrong - that runs up the funnel place, as it were? - No, Sir, it runs up the centre of the ship to the second-class smoke-room and the decks.
5967. It is abaft of the fourth funnel? - Oh, yes, it is abaft the after-funnel.
- The Solicitor-General:* Will your Lordship look for a moment at the big section?
- The Commissioner:* It is all on this plan.
- The Solicitor-General:* If your Lordship has got it I need not trouble.
- The Commissioner:* This emergency door that you are talking about is, I think, on the same deck that the last witness was telling us about. *The Solicitor-General:* Yes, I think it is, my Lord.
- The Commissioner:* Then if you go up you get into what is called the second-class entrance into the dining saloon - the second-class dining saloon.
- The Solicitor-General:* My Lord, may I suggest that I think it is a little abaft of that.
- The Commissioner:* What is abaft of it?
- The Solicitor-General:* The staircase, my Lord. The second-class staircase appears to me to be a little bit further aft than that.
- The Commissioner:* Not according to my plan.
5968. (*The Solicitor-General.*) I think your Lordship is right; I beg your pardon. I see my Lord, now. (*To the Witness.*) Let us just fix this second-class staircase into which the third-class people get when this door is opened. Is it a stairway that rises through several decks up to the top? - Yes, and there is a lift, an electric lift.
5969. There is an elevator alongside at the same place as the staircase? - Yes.
5970. Your Lordship has got that, I think, on the plan? - That is the staircase in yellow. (*pointing on big plan.*)
5971. Is that the staircase and the elevator in the middle of it - the second-class staircase (*pointing on the big plan.*)? - No, it is the one further aft, is it not? It is immediately behind the aft funnel. That is the staircase. (*pointing on the plan.*)
5972. And the third-class people come along their alleyway through this emergency door and get direct into that staircase (*pointing on plan.*) - Yes.
5973. And all they have to do is to go straight up on to the boat deck? - Yes, that is right.
5974. Just tell us, please, how is it you know that emergency door was open for them? - Because I went down that way to my room after shutting the bakery door.

5975. You shut the bakery door, went down to your own room, and you saw this door was then open? - Yes.
5976. When you went down to your room and found this door open, did you at that time see third-class people coming up? - Coming along the alleyway some women, with two bags in their hands. They would not let go of them.
5977. A number of third-class passengers were coming up? - Yes.
5978. You have already helped us about the time. Could you tell us at all what time you think that was? - You say it was half-past twelve when you got on to the boat deck yourself? - That was just after I had passed the first lot of bread up, and I went down to my room for a drink, as a matter of fact, and as I was coming back I followed up my men on to the deck.
5979. Does that mean it would be about a quarter-past twelve? - A little after that.
5980. Something between a quarter-past twelve and half-past twelve? - Yes, about that.
5981. Now, just let us go back to boat No. 10 and finish it. You said that when it was about half full with women you could not find more women to pass along the line and put into the boat? - We had difficulty in finding them.
5982. What was done; what happened? - I myself and three or four other chaps went on the next deck and forcibly brought up women and children. 5983. You went down to the A deck? - Yes, to the A deck.
5984. And you mean you brought them up to the boat deck? - Brought them up to the boat deck - there are only about ten stairs to go up.
5985. Did not they want to go? - No, Sir. They were all sitting - squatting down on the deck.
5986. And you and three or four others brought them up? - Yes.
5987. Did you put them into the boat? - We threw them in. The boat was standing off about a yard and a half from the ship's side, with a slight list. We could not put them in; we could either hand them in or just drop them in.
5988. You said "a slight list." Was it the "Titanic" that had the list? - Yes, Sir. 5989. A list to port? - Yes, a list to port, and that made the boat swing out about a yard and a half.
5990. Supposing the ship was lying on an even keel with no list, how much space would there be

## **Page 141**

between the rail and the boat? - Just enough space to step into it.

5991. Did that fill your boat or was there still room? - Eventually it was filled - pretty well filled anyway.

5992. Was it filled from the boat deck? - Yes.

5993. You did not, I think, go away in the boat? - No.

5994. Although it was your boat? - I was supposed to be captain of the boat by the crew list.

5995. By the crew list you were in charge? - Yes.

5996. Why was it that you did not get in? - Well, I was standing waiting for orders by the officer to jump in, and he then ordered two sailors in and a steward - a steward named Burke. I was waiting for orders to get into the boat, but they evidently thought it was full enough and I did not go in it.
5997. Do you know who the two sailors were? - No.
5998. (*The Commissioner.*) How many men were put on board this boat? - As far as I could see only three - two sailors and a steward.
5999. (*The Solicitor-General.*) Two sailors and a steward named Burke? - Yes. That is all I could see.
6000. As far as you could see, were all the rest women and children? - Women and children.
6001. Was she lowered down? - Yes.
6002. And went away from the side of the ship - I did not see her after she was lowered.
6003. That is No. 10. There would be three boats on the port side? - Yes.
6004. Aft of that? - Yes; Nos. 12, 14, and 16.
6005. Was work being done in connection with them at the same time? - Yes, but a little later than us.
6006. Then, of those four, Nos. 10, 12, 14, and 16, was No. 10 the one that got into the water first? - Yes.
6007. Did you stay by the davits of No. 10 till she was launched? - Oh yes.
6008. And then where did you go? - I went "scouting round," as we call it.
6009. I want to know if you saw anything of Nos. 12, 14, and 16? - I did not see them go. I saw them filling up, but I went away. I went down below after that.
6010. No. 10 was your boat, and No. 10 had gone? - Yes.
6011. And then you went below? - Yes.
6012. As far as the boats are concerned, is that all you can tell us? - As far as those boats, yes.
6013. Now I want to ask you a question about the boat list. You say you knew that you were supposed to be in command of No. 10? - Yes.
6014. Had you seen a list like that up in the "Titanic" (*Showing list.*) - Yes, there was one in the kitchen, posted up on the Thursday with just the kitchen staff on it. 6015. The kitchen staff on the kitchen list was posted when? - On the wall in the kitchen.
6016. Which day? - On the galley, what call "D" deck. 6017. Which day? - On the Thursday.
6018. And did that list show as regards the galley staff, the cooking staff how they were distributed among the different boats? - Yes.
6019. You say it was on the Thursday, she left Queenstown on the Thursday, did she not? - Yes.
6020. Now we just want to finish your experience. You say you went below after No. 10 had gone. Did you stay below or did you go up again? - I went down to my room and had a drop of liqueur that I had down there, and then while I was there I saw the old doctor and spoke to him and then I came upstairs again.
6021. On to the boat deck? - Yes, on to the boat deck.

6022. Just tell us shortly what you did? - I saw that all the boats had gone - I saw that all the boats were away.
6023. That all the boats had gone? - Yes, that all the boats had gone.
6024. Do you mean forward as well as aft? - I could not see very well forward, and I did not look, because they went off first, as far as I could understand. 6025. At all events, all the boats had gone? - Yes.
6026. Yes, what next? - I went down on to "B" deck. The deck chairs were lying right along, and I started throwing deck chairs through the large ports.
6027. What did you do with the deck chairs? - I threw them through the large ports.
6028. Threw them overboard? - Yes.
6029. They would float, I suppose? - Yes.
6030. I think one sees why. Just to make it clear, why did you do that? - It was an idea of my own.
6031. Tell us why; was it to give something to cling to? - I was looking out for something for myself, Sir.
6032. Quite so. Did you throw a whole lot of them overboard? - I should say about 50.
6033. Were other people helping you to do it? - I did not see them.
6034. You were alone, as far as you could see? - There was other people on the deck, but I did not see anybody else throwing chairs over.
6035. Now by this time was the list of the ship the same, or do you think she was worse? - She had gone a little more to port.
6036. And about being down by the head, could you tell at all? - I did not notice anything. I did not notice her being much down by the head.
6037. Do you mean that the list to port was more serious than - ? - I thought so.
6038. Than being down by the head? - I thought so, yes.
6039. Then, after having thrown these deck chairs overboard, did you go up to the boat deck again? - I went to the deck pantry.
6040. Tell us what happened? - I went to the deck pantry, and while I was in there I thought I would take a drink of water, and while I was getting the drink of water I heard a kind of a crash as if something had buckled, as if part of the ship had buckled, and then I heard a rush overhead.
6041. Do you mean a rush of people? - Yes, a rush of people overhead on the deck.
6042. Is the deck pantry on A deck? - Yes.
6043. So that the deck above would be the boat deck? - Yes, I could hear it.
6044. You could hear it? - Yes.
6045. People running - yes? - When I got up on top I could then see them clambering down from those decks. Of course, I was in the tail end of the rush.
6046. (*The Commissioner.*) Clambering down, climbing down from where? - These rails *here* and steps. They came down *this way*. (*Showing on model.*)
6047. (*The Solicitor-General.*) They had run along as far aft as they could on the boat deck? - Yes.
6048. Did you see them clambering down to get on to the A deck so as to get further aft? - Their idea was to get on to the poop.

6049. You say that you heard this sound of buckling or crackling. Was it loud; could anybody in the ship hear it? - You could have heard it, but you did not really know what it was. It was not an explosion or anything like that. It was like as if the iron was parting.
6050. Like the breaking of metal? - Yes.
6051. Was it immediately after that sound that you heard this rushing of people and saw them climbing up? - Yes.
6052. What did you do? - I kept out of the crush as much as I possibly could, and I followed down - followed down getting towards the well of the deck, and just as I got down towards the well she gave a great list over to port and threw everybody in a bunch except myself. I did not see anybody else besides myself out of the bunch.
6053. That was when you were in the well, was it? - I was not exactly in the well, I was on the side, practically on the side then. She threw them over. At last I clambered on the side when she chucked them.
6054. You mean the starboard side? - The starboard side.
6055. The starboard was going up and she took a lurch to port? - It was not going up, but the other side was going down.

**Page 142**

6056. It is very difficult to say how many, I daresay, but could you give me some idea, of how many people there were in this crush? - I have no idea, Sir; I know they were piled up.
6057. What do you mean when you say, "No idea." Were there hundreds? - Yes, there were more than that - many hundreds, I should say.
6058. (*The Solicitor-General.*) You said this vessel took a lurch to port and threw them in a heap. Did she come back; did she right herself at all? - No, Sir. 6059. She took a lurch and she did not return? - She did not return.
6060. Can you tell us what happened to you? - Yes, I eventually got on to the starboard side of the poop.
6061. (*The Commissioner.*) Will you point out to me where you got to? - This is where I eventually got to. (*Showing on the model.*)
6062. You got on to the poop, did you? - Along *here* (*showing*).
6063. (*The Solicitor-General.*) What you said, I think, was that you got to the starboard side of the poop? - Yes, on the side of the ship.
6064. On the side of the ship? - Yes.
6065. Is that on the bulwark itself? - I do not know what you call it, Sir. It is the side.
6066. (*The Commissioner.*) "I got on the side of the ship by the poop"? - Yes. 6067. (*The Solicitor-General.*) You see on the model that part of it is painted black and part of it is painted white. Do you mean you were on the part that is painted black or the part that is painted white? - I got along *here* (*showing*), and eventually got hold of the rails *here*. This side *here* was like *this*. *This* side, instead of being like *this*, was like *that*.
- (*Showing on model.*)

6068. You got hold of the rail. Let Mr. Wilding turn the model up till you say how far you think it had gone. (*Mr. Wilding turned the model.*)? - I should say about that, but then the forward part is sloping. (*Showing on model.*)
6069. The forward part is down by the head? - Yes.
6070. Did you find anybody else holding that rail there on, the poop? - No.
6071. You were the only one? - I did not see anybody else.
6072. Were you holding the rail so that you were inside the ship, or were you holding the rail so that you were on the outside of the ship? - On the outside.
6073. So that the rail was between you and the deck? - Yes.
6074. Then what happened? - Well, I was just wondering what next to do. I had tightened my belt and I had transferred some things out of this pocket into my stern pocket. I was just wondering what next to do when she went.
6075. And did you find yourself in the water? - Yes.
6076. Did you feel that you were dragged under or did you keep on the top of the water? - I do not believe my head went under the water at all. It may have been wetted, but no more.
6077. Are you a good swimmer? - Yes.
6078. How long do you think you were in the water before you got anything to hold on to? - I did not attempt to get anything to hold on to until I reached a collapsible, but that was daylight.
6079. Daylight, was it? - I do not know what time it was.
6080. Then you were in the water for a long, long time? - I should say over two hours, Sir.
6081. Were you trying to make progress in the water, to swim, or just keeping where you were? - I was just paddling and treading water.
6082. And then daylight broke? - Yes.
6083. Did you see any icebergs about you? - No, Sir, I could not see anything.
6084. Did it keep calm till daylight, or did the wind rise at all? - It was just like a pond.
6085. Then you spoke of a collapsible boat. Tell us shortly about it? - Just as it was breaking daylight I saw what I thought was some wreckage, and I started to swim towards it slowly. When I got near enough, I found it was a collapsible not properly upturned but on its side, with an officer and I should say about twenty or twenty-five men standing on the top of it.
6086. (*The Commissioner.*) With an officer and what? - I should say roughly about twenty-five men standing on the top - well, on the side, not on the top.
6087. (*The Solicitor-General.*) Do you know which officer it was? - Yes, Mr. Lightoller.
6088. Mr. Lightoller and you think about twenty or twenty-five people? - Yes. *The Commissioner:* "Men," he said.
6089. (*The Solicitor-General.*) Yes, men, my Lord? - Yes, all men.
6090. You said something about its being turned on its side? - Yes.
6091. I wish you would explain what you mean? - It was like as if one of those lifeboats was on its side, floating on its side. (*Pointing to model.*)
6092. Then they were not in the boat, were they? - No.

6093. They were - ? - Standing on the side, holding one another's shoulders. 6094. Did you swim towards it? - Yes.
6095. Was there any room for you? - No, Sir.
6096. You agree, do you, that there really was not room for you? - There was not room.
6097. And so they could not take you in? - There was no room for any more. They were standing on it then.
6098. Did you stay near it? - I tried to get on it, but I was pushed off it, and I what you call hung around it.
6099. How much later on was it that you were picked up? - I eventually got round to the opposite side, and a cook that was on the collapsible recognised me, and held out his hand and held me - a chap named Maynard.
6100. Was he able to pull you out of the water, or was he only just able to help to support you? - No.
6101. He gave you a hand, and you kept treading water? - No. My lifebelt helped me, and I held on the side of the boat.
6102. You had been wearing a lifebelt? - Yes, all the time.
6103. So that your feet would be in the water? - Yes, and my legs.
6104. And you supported yourself by your lifebelt. I do not want to be harrowing about it, but was the water very cold? - I felt colder in the lifeboat - after I got in the lifeboat. 6105. You were picked up, were you, by a lifeboat later on? - We were hanging on to this collapsible, and eventually a lifeboat came in sight.
6106. And they took you aboard? - They got within about 50 yards and they sung out that they could only take 10. So I said to this Maynard, "Let go my hand," and I swam to meet it, so that I would be one of the 10.
6107. Did you swim to it, and were you taken in? - Yes, I was taken in. 6108. You have said you thought it was about two hours before you saw this collapsible, and then you spent some time with the collapsible. How long do you suppose it was after you got to the collapsible that you were taken into the lifeboat? - I should say we were on the collapsible about half an hour.
6109. That means that for some two and a half hours you were in the water? - Practically, yes.
6110. We may be able to identify this boat? - I do not know it.
- The Attorney-General:* We can identify it, I think.
6111. (*The Solicitor-General.*) This lifeboat that took you aboard - did it also take some men off the collapsible? - Yes.
6112. How many? - I could not tell you, Sir.
6113. You did not notice? - I climbed in and then she went alongside the collapsible afterwards, after I had got in, but I did not notice how many she took.
6114. Do you know an able seaman named Lucas? - No, Sir.
6115. Who has given some evidence here? - No.
6116. Can you tell me this. Did this lifeboat that took you aboard, and also took some others

aboard, keep you in it until you got to the "Carpathia," or were any people transferred? - All kept in it till we got to the "Carpathia."

6117. You do not know who was in command of the boat that picked you up? - Mr. Lightoller left the collapsible and then took charge of the boat till we reached the "Carpathia."

6118. And you say the collapsible kept company with the lifeboat, did it? - I do not know what became of that afterwards, Sir. It was half under water while we were on it. I do not know whether it righted itself. I do not know what became of it at all. 6119. After you and some of the others were taken on board this lifeboat, did that lifeboat rescue any other people that you know of? - No, Sir; it could not have done.

6120. It was too full? - It was filled right up.

6121. There was just room for Lightoller to get on board and take command? - There was only room for Mr. Lightoller to stand on the forward part. He had to stand on top and give orders.

6122. There was Mr. Lightoller and there was yourself. Do you know whether it took others on board, and how many? - It took a few more off the collapsible, but I did not recognise them.

6123. And this boat into which you got, the boat Lightoller took command of, what were the people who were in it - women, or men or what? - Mostly women. Bride was one that I recognised.

6124. The Marconi operator? - The Marconi boy. He was one that was taken off the same collapsible.

6125. He was on this collapsible, was he? - Yes, Bride and Maynard. Those two I recognised.

6126. Maynard was the cook? - Yes.

**Examined by Mr. SCANLAN.**

6127. Do you know whether any of the crew assigned to this boat, No. 10, went with her? - I do not know.

6128. You were captain of it? - I was supposed to be the captain of it.

6129. Can you give any explanation of the fact that from the evidence of yourself and most of the witnesses it does not appear that practically any of the men went with the boats to which they were stationed? - Of course I could not say about other boats, but I know I sung out the names of all the victualling department connected with the boat, and they were every man there.

6130. If there had been a boat drill or a boat muster, would it have helped the members of the crew to know their stations? - They know their stations very well. They knew exactly what to do, because they had been drilled already on the "Olympic." 6131. They had not all been on the "Olympic," I take it? - A great many of them - in fact most of them. It was practically a crew from the "Olympic."

6132. Was there any light in No. 10 when she went off? - I did not see any.

6133. Was there any light in the boat you got on to? - It was daylight.

6134. A crew of two sailors and one steward went with No. 10? - That is all I saw.  
6135. Is that all? - That is all I saw.  
6136. Was that sufficient for a big lifeboat? - I do not know anything about lifeboats, Sir.  
6137. But you were captain of one? - I am not skilled in boats; I am put down as in charge; but, then, I would always give way to a man with nautical knowledge in the boat. 6138. How many men would you expect with you in a boat of which you would have charge? - I should say about seven or eight.  
6139. When this boat, No. 10, was being sent off, was there space in the boat to take in a proper crew? - The space was there, but it was filled up with women and children. 6140. Do you know if all the four collapsible boats were sent off from the ship before she sank? - I do not know, Sir.

**Examined by Mr. ROCHE.**

6141. You were nearly two hours or three hours in the water, so I understand, and you can help us about a matter that has aroused a good deal of interest. How much assistance did you get from your lifebelt? Did it support you without your treading water yourself? - Yes.  
6142. It did? - Yes - splendid.  
*The Commissioner:* You cannot say.  
*Mr. Roche:* There have been a good many questions about it - whether that is so or not. That was with regard to a lifebuoy, it is true, but there have been many questions raised about this, and this gentleman is in a better position than practically anyone ever has been to give an opinion about it.  
6143. (*The Commissioner.*) What is this lifebelt made of - is it cork? - Cork.  
6144. That you tie round you? - These were a new patent, better than the old ones. You slipped it over your head, and it was like a breastplate and a backplate, and you tied two straps.  
*The Attorney-General:* One can be produced, no doubt.  
6145. (*Mr. Roche.*) It is very important to get it cleared up. This is the idea of the new patent, that instead of keeping it down here they put them on the body? - Mine fitted here.  
(*showing.*)  
6146. Did your men know how to get them on? - Everybody knew, it was so simple.  
6147. Did you show any of them? - There was no necessity to show.  
6148. Did it in fact support you throughout without your treading water? - Oh, no, you had to assist it.  
6149. (*The Commissioner.*) But you would not have sunk if you had not done anything? - No. It is only a case of keeping your head with one of those lifebelts.  
6150. (*Mr. Roche.*) And simply treading water and paddling? - Just paddling and you keep afloat indefinitely, I should say.  
6151. Now a few questions about two other matters. You mustered your own staff and got them up? - Yes.

6152. Did you do that of your own accord, or did you get directions to do so? - I did it of my own accord.
6153. You had no directions from anybody else? - There was a general order; I got no special directions.
6154. What was the general order; that is what I want to know? - All hands out - all hands out of your bunks. There were six of my men working.
6155. In this crowd of several hundreds that you told my Lord about, were you able to distinguish at all who they were, or what they were, whether they were all passengers or sailors or crew? - I could not make out.
6156. You could not make out who they were at all? - They were all mixed up.

**Examined by Mr. HARBINSON.**

6157. You have told us about the means of access from the third-class quarters to the boat deck? - I said from the third-class quarters into the second-class, and from the second-class there is a wide staircase up on to the second-class deck.
6158. And ultimately to the boat deck? - Yes.
6159. It leads to the boat deck? - Yes.
6160. And there is an elevator there also? - Yes.
6161. As a matter of fact, once the dynamos are flooded, and the wires are wet, that would prevent the elevator working, would not it? - I do not know anything about that.

**Page 144**

*The Solicitor-General:* There are the stairs.

*Mr. Harbinson:* There are also, of course, the wide stairs.

*The Commissioner:* The stairs that were indicated there. (*Pointing on the plan.*) 6162.

(*Mr. Harbinson.*) You said to my friend that this crew had served on the "Olympic." Do you seriously suggest that the crew was transferred from the "Olympic" to the "Titanic"? - No.

6163. (*The Commissioner.*) He did not say that? - I said a good many of them. 6164.

You said a good many of them had been on the "Olympic"? - A great many. Ten out of my 14 had all been on the "Olympic."

6165. (*Mr. Harbinson.*) That is only in the baking department? - That is one department only; but I know the stewarding was practically the same.

6166. You do not suggest that the fact that some of the crew had been on the "Olympic" would dispense with the necessity of the boat drill that my friend has referred to, and having further instructions given them as regards their positions in the boat? - No, that would not, but the previous experience on the "Olympic" would help them. That is what I mean to say.

6167. But it would not take the place of proper and adequate instructions? - It would do, it certainly would.

6168. Would it? - They would have the past experience to go on.

6169. Do you suggest that the fact of their having been previously on the "Olympic" would dispense with the necessity of the proprietors of the White Star Line giving proper instructions, and prescribing an adequate code for the members of the crew when they joined the "Titanic"? - No, I would not suggest that. *Mr. Laing*: What do you call a code of regulations?
6170. (*Mr. Harbinson.*) As regards their proper positions in the boat, and what they should all do in case of emergency. (*To the Witness.*) I think you have described quite a number of passages that lead from the third-class sleeping apartments to the second-class apartments, and then up to the boat deck. There are quite a maze of passages, I believe, in this ship? - I only described one passage, and that is what we call, on the ship, Scotland Road, the wide alleyway that leads from two or three sections of the third-class. It opens into an emergency door leading into the second-class. It is a wide alleyway.
6171. At normal times is that emergency door kept closed? - At normal times, yes. It is kept private.
6172. Would I be right in thinking that at normal times the third-class passengers would have no right of access to this door at all? - No, not in normal times.
6173. They would be forbidden to approach it? - They could walk past it, but it is never open. It is a kind of slide.
6174. So that, unless on this particular occasion special instructions were given to them as to the route they should follow they would not know where to go, would they? - They would not know unless they were given instructions. 6175. Did you hear any such instructions given? - Yes.
6176. By whom? - I saw the interpreter passing the people along that way, but there was a difficulty in getting them along because some of the foreign third-class passengers were bringing their baggage and their children along.
6177. Who was the interpreter? - I do not know his name.
6178. You do not know his name? - No.
6179. Where was he standing? - He was standing just abaft this emergency door leading into the third-class.
6180. He was pointing or directing those who came to the door? - Passing them along.
6181. That is at the door, but my point is this. Did you see or know of anyone going to the third-class quarters and giving instructions there to the third-class passengers? - No, Sir, I did not. I am out of that altogether.
6182. As to the course they should follow in order to escape? - I did not hear any orders.
6183. You did not hear any directions being given to these people to go to this door, when further instructions would be given to them? - I only saw and heard the interpreter doing his business.
6184. At what time was that? - That was when I was going down to my room after I had sent the first load of bread up, about a quarter-past twelve, or between a quarter and half-past twelve.
- 6185-6. Did you see any notice posted up or painted up in the neighbourhood of this emergency door giving instructions as to what third-class passengers should do in case of danger? - We are not allowed in the passengers' quarters.

6187. (*The Commissioner.*) Have you ever been in this place in this ship before? - I beg your pardon.
6188. Had you ever been along this Scotland Road alleyway? - Yes.
6189. Before this voyage? - I had been along it in Belfast while no passengers were on, but while passengers are on board the ship we are not allowed in their quarters.
6190. And you did not stop to look for any notices put up, if there were any? - No.
6191. (*Mr. Harbinson.*) You know the "Olympic"? - Yes.
6192. Are there any on the "Olympic," do you know? - I do not know. 6193. You say at the time this passage seemed to be obstructed by third-class passengers bringing their luggage? - Yes.
6194. Would that lead to any confusion? - It would.
6195. Did it, as a matter of fact? - There did not seem to be much confusion, only it hampered the steward; it hampered the interpreter and the men who were helping him, because they could not prevail on the people to leave their luggage.
6196. What width is this staircase that has been referred to leading up to the boat deck from the second-class department? - That is within three yards of the emergency door. 6197. Is it a wide staircase? - Yes, very wide. About six could go up abreast, I should say.
6198. I gather that unless some special instructions were given to these third-class passengers in their cabins it would be impossible for them to know of any proper means of exit and escape? - Just outside of this emergency door there are two wide staircases leading from the third-class quarters right on to the poop deck.
6199. That is not to the boat deck? - The well deck.
6200. How would they get from the well deck to the boat deck? - That would be a difficulty, because they would have to get up two or three ladders, two or three staircases. 6201. They would have to go up two or three staircases. As a matter of fact, when you came across to the boat deck, did you see some of the people on this poop deck? - Very few on the poop deck.
6202. Where were the people whom you saw? - In the well deck.
6203. All in the well deck? - Yes.
6204. And they would get from the well deck to the boat deck? - This was at the finish I saw the people. I never saw them in that quarter of the boat till the end.
6205. And you do not know? - I saw third-class passengers coming straggling through the kitchen, and they even had their baggage then.
6206. What part of the boat was the kitchen in? - On D deck, that is just the deck above the emergency door we are speaking about.
6207. How would they get from D deck to the boat deck? - Just a short staircase, which, under ordinary conditions is private for the crew, but I suppose they walked through it. One man had two bags slung over his shoulder and one in his hand, an Italian, or some nationality like that.
6208. When the boat gave this lurch that you have described to us you say a great many people were thrown into one bunch. Have you any idea of the class of passengers they were? - I could not say.

**Examined by Mr. EDWARDS.**

6209. You said when you went down to the pantry that you saw some water there. Did I understand you rightly about that? - When I went down to my quarters. 6210. Which deck is that on? - E deck.
6211. What time was this? - After 1 o'clock.  
*The Commissioner:* How long before the vessel went down?
6212. (*The Solicitor-General.*) You suggested he said that he saw some water. I thought he said he went to get a drink of water? - I went to the pantry, I said, to get a drink of water.
6213. (*Mr. Clement Edwards.*) I want to clear up the point about it - the water that he drank and the other that he saw. (*To the Witness.*) You went down to your quarters, you said? - Yes.
6214. And you there saw some water? - Yes.
6215. What time would that be? - A decent bit after one.
6216. (*The Commissioner.*) What did you say? - A decent bit after one.
6217. What water did you see, and where was it? - There was not very much water. It would just cover my feet, that is all. The list of the ship sent it down against my settee in the room.
6218. Sent it down from where? - I could not say where it came from.
6219. Was this place of yours on the port side of the ship? - Port side, amidships. 6220. (*Mr. Clement Edwards.*) Would you see the direction from which this water was coming? - I should say it came from forward.
6221. Was there much of it? - No, not much; it just went over my ankles I should say.
6222. Two or three inches? - That is all.
6223. Was it flowing at all rapidly? - No.
6224. You have said that when you were down, I think in the pantry, or was it again when you were in your quarters, you heard a noise that you thought was the cracking, the breaking of the ship? What time would that be? - A few minutes after I had been to my room, I should say - after half-past one.
6225. So that before you heard this noise like the breaking of the ship you had seen this water, on E deck in your quarters? - Yes.

**Examined by Mr. COTTER.**

6226. Are there any bulkhead doors in the alleyway outside your room? - One immediately outside.
6227. Is that forward or aft? - Forward of my room.
6228. And the water was coming from forward? - The water was coming from forward.
6229. So that if that bulkhead door had been closed it might possibly have kept the water out? - The door was not closed, but just about that time I saw two men coming and they said they were going to close it, but I did not see it closed.

6230. Was it closed after they said that? - I do not know; I walked upstairs.
6231. You went up on deck? - Yes.
6232. Your boat you told us was No. 10, and you were in charge? - That is the one I was sent to.
6233. You said that boat was a yard and a half from the ship's side. Was there any difficulty in getting the women into that boat? - Yes. That was through the list to port.
- Under ordinary conditions there would be no difficulty.
6234. But the boat was slung away from the ship through the list? - Yes.
6235. Did you assist to get some women into the boat? - I assisted to get most of them.
6236. You said you went down to the next deck to bring or try to force women up. Will you tell us - did you do that? - Yes.
6237. Who did you bring up? - I brought up two children and the mother - and a mother and a child, and other stewards were bringing up other women.
6238. What did you do with the children when you put them into the boat? - Handed them into the boat or dropped them in. 6239. Threw them in? - Threw them in.
6240. And what did you do with the mother? - We wanted to throw her in, and I think she preferred to try and step in.
6241. What happened? - She missed her footing.
6242. What happened then? - This steward named Burke got hold of her foot and she swung head downwards for a few minutes, but she was got into B deck. Somebody caught her into B deck - no, A deck.
6243. Did you ever see her again? - No.
6244. The children were saved? - The children were saved.
6245. You said that you never went into your boat. Why did not you go, seeing that you were in charge? - I would have set a bad example if I had jumped into the boat. None of the men felt inclined to get into the boat.
6246. You simply stood back to assist the women and children to get in? - We stood back till the officers should give us the word, and we never got it, so that we never jumped for the boat.
6247. When you found your boat had gone you said you went down below. What did you do when you went down below? - I went to my room for a drink.
6248. Drink of what? - Spirits.
- The Commissioner:* Does it very much matter what it was?
- Mr. Cotter:* Yes, my Lord, this is very important, because I am going to prove, or rather my suggestion is, that he then saved his life. I think his getting a drink had a lot to do with saving his life.
- The Commissioner:* He told you he had one glass of liqueur.
6249. (*Mr. Cotter.*) Yes. (*To the Witness.*) What kind of a glass was it? - It was a tumbler half-full.
6250. A tumbler half-full of liqueur? - Yes.
6251. When you were on the poop did you see anybody attempting to come up on to the poop after you - following you up? - It was an impossibility for them to get on to the poop.

6252. Are there no ladders going on to the poop? - But the ship was like *that*. (*Showing.*)  
The ladders would be astern. The people were all on the port side in one bunch.  
There was nobody on the starboard side; in fact you could not see.
6253. It has been stated that she turned practically perpendicular. I want to ask your opinion about that, because I think it is very important. Did you see the propellers come out of the water at all? - She was not far out of the water at any stage that I saw. 6254. So that to say that she stood up like that - (*showing.*) - would be wrong? - It would be absolutely wrong.
6255. She simply glided away? - She went down that fashion (*showing.*) It was a glide. There was no great shock, or anything.
- 6256-66. She simply glided away? - She simply glided away.
6267. When you got into the water and had swum to the collapsible boat you were pushed off, you say? - Yes.
6268. Who pushed you off? - I do not know.
6269. Did you say anything when you were pushed off? - No. 6270. You made no statement to anyone? - No.
6271. What condition were you in when you got to the "Carpathia"? - I was all right barring my feet, they were swelled.
6272. Were you able to walk up the ladder? - No.
6273. How did you get up? - On my knees.

**Page 146**

*(After a short Adjournment.)*

**Examined by Mr. LAING.**

*Mr. Laing:* May I mention a matter to your Lordship. The White Star Line will gladly welcome any gentleman who is appearing here in Court on behalf of those to whom your Lordship has allowed representation, to visit the "Olympic" on Monday at twelve o'clock, if they can conveniently be there at that time.

*The Commissioner:* The gentlemen do not appear to be all here at present, but I will mention it in a quarter of an hour or so, when I see them here.

*Mr. Laing:* We desire to extend a welcome to those gentlemen who are appearing here in Court on behalf of the representation your Lordship has allowed.

*The Commissioner:* Yes, I understand.

6274. (*Mr. Laing - To the Witness.*) With regard to questions which have already been asked you about your boat No. 10, you, as I understand, were captain of that boat and had a crew of some seven hands allotted to No. 10? - That was only out of the kitchen department.

6275. Seven of your department were allotted? - That is seven out of the kitchen and the bakery and butchers' department. That does not constitute the crew.

6276. You were the captain and there were seven of your department allotted to that boat? - Seven out of three departments, that is the cooking, baking, and butchering departments.
6277. When you got up on the boat deck you were there, and were your seven people there too? - Yes.
6278. And was Mr. Wilde the Chief Officer, there? - Yes.
6279. And was Mr. Wilde having this boat filled with women and children? - Yes, those were his orders.
6280. Were his orders being carried out? - Yes.
6281. Was the sea, as you have described it, like a pond? - Yes.
6282. And when this boat was full, or nearly full, did Mr. Wilde pick out the men to go in her to look after her? - Yes, he said "I want oarsmen."
6283. How many did he want? - He picked out two sailors and a steward.
6284. Three of them went with the boat? - As far as I know. I did not see any more.
6285. Had you heard that help was given or was expected? - We all knew - at least the word was passed round - that there were four or five ships rushing to us. The word was passed round, but there was nothing official.
6286. But you knew pretty well that help was expected and was coming? - Yes. 6287. And with the sea as it was, do you think three men were enough to keep this boat afloat? - I did under the circumstances, because there was no necessity for rowing. They were only there to calm the women, I thought.
6288. Calm the women and keep the boat floating until help arrived? - Yes. 6289. Was that the idea, do you think which Mr. Wilde was carrying out? - I do not know what he thought.
6290. Then there is another matter I want to ask you about. As to water, you say, as I understand, you only saw water on the alleyway? - I did not see it in the alleyway; I saw it in my room. My room is in what we call the skin of the ship, and the water was on the lower port side, just enough to cover my feet, that was all.
6291. *The Commissioner:* Your room is against the skin of the ship? - Yes.
6292. On the port side? - Yes.
6293. And the water that you are talking about was on the port side of your room? - Yes, the extreme port side.
6294. Did the water extend over the whole of the floor of your room? - Oh, yes, but the bulk of it was on the port side.
6295. You have said it was deep enough to come to your ankles; Where was it deep enough to come to your ankles? - On the port side.
6296. On the side which was nearest amidships, what water was there there? - I could not say, but I suppose a fraction less, that is all.
6297. (*Mr. Laing.*) Was there enough to wet your feet, and that sort of thing? - Yes, that is all.
6298. You have told us that you saw some men coming along to close the watertight doors on the alleyway? - Yes.
6299. Do you know who the men were? - No.

6300. Was it the last time that you were in the alleyway that you saw them coming? - Yes.

6301. And were they closing these doors? - They were setting about it.

6302. (*The Commissioner.*) With spanners? - Yes, one large spanner. The spanner is alongside the door in a click ready for use.

6303. (*Mr. Laing.*) The spanner is kept there so that anybody can use it? - Yes. 6304. That was the last time you were down the alleyway? - The last time I was on E deck.

### **Re-examined by the SOLICITOR-GENERAL.**

*The Solicitor-General:* I think, in view of this last bit of evidence about the water, it is worthwhile finding out where this witness's room is. *The Commissioner:* Exactly.

6305. (*The Solicitor-General - To the Witness.*) Your room is on E deck, I understand? - On E deck, amidships.

*The Solicitor-General:* Has your Lordship got the plan we have called No. 3? *The Commissioner:* I have got the plan of E deck.

*The Witness:* To save confusion, I was occupying, and have occupied on the "Olympic" and the "Teutonic," the confectioner's room because it is a better room. 6306. (*The Solicitor-General.*) That is a little bit further aft? - Yes.

6307. There is a room which is marked on my plan, "Confectioner and Second Baker" - That is right, that is the room I occupied.

*The Solicitor-General:* Does your Lordship see "Confectioner and Second Baker"? *The Commissioner:* I do.

*The Solicitor-General:* That is his room.

6308. (*The Commissioner - To the Witness.*) Was the room that you occupied abaft of the bulkhead? - Yes.

6309. Just abaft of it? - Immediately abaft the bulkhead.

6310. (*The Solicitor-General.*) Has your room got a porthole? - Yes, one.

6311. The portholes on E deck are not the bottom row, but the bottom row but one, I think. Mr. Wilding tells me that is so. Because F deck has also got portholes. That was, or had been, a calm evening, I think? - Yes.

6312. Though it was cold, do you know whether your porthole was open or not? - It was closed.

6313. On E deck are the portholes in practice opened from time to time? - Very, very often we keep them open the whole of the passage.

6314. You say yours was closed, in fact? - Yes, on account of the weather, it being a wee bit cold, I suppose.

6315. So far as you know, though, of course, you could only speak of what you heard or saw, was there any order given after the accident about closing the porthole? - I never heard any order.

6316. I suppose when this ship is riding on an even keel the water would be some distance below your porthole? - Yes, a considerable distance. 6317. And, of course, below the portholes on the deck below? - Yes.

*The Commissioner:* Does this model which I see here indicate the waterline on this particular voyage?

**Page 147**

*The Solicitor-General:* Yes, my Lord, I think it does, by the dotted line.

*The Commissioner:* Is it the top of the pink?

*The Solicitor-General:* I am told by Mr. Wilding it is a little lower than the top of the pink.

*Mr. Laing:* It is just a little below the pink.

*The Commissioner:* Is it marked on this model? If it is I cannot see it.

*Mr. Laing:* No, my Lord, it is not.

*The Solicitor-General:* I understood it was.

*Mr. Laing:* But we could have it put on if it is any convenience.

*The Commissioner:* It might be some convenience if you would have the waterline marked on this model.

*Mr. Laing:* We will put it on with a little strip of paper.

*The Solicitor-General:* Where one does see it, is on the upper of the two plans on this side of the room. There is the waterline indicated.

*The Commissioner:* There I see it - those two blue lines, one on the right and the other on the left, you mean?

6318. (*The Solicitor-General.*) Yes. (*To the Witness.*) Do you see the plan there? - Yes.

6319. E deck would not be the line immediately above that, but the line above that again? - Oh, no - I could tell you from the model here, but I cannot tell you from that.

*The Commissioner:* I am afraid I threw you out of your line of question.

6320. (*The Solicitor-General.*) It was only to see where we were, my Lord. (*To the Witness.*) Now, with regard to this water, did you think that the water was sea water, or did you suppose that owing to the ship having a list, water had poured from somewhere inside the ship? - My idea was she had shipped some water forward, or a quantity of ice that had melted and had run down; but I did not give it a second thought, because it was not serious.

6321. Was there anywhere else on E deck that you saw any indication of water at all? - No.

6322. (*The Commissioner.*) I should like to ask a question about it. Did the water come under the door of your cabin? - The door was open.

6323. Then it was flowing from the passage; it must have come in from the passage outside? - It must have come in, yes. There is a scupper just at the outside.

6324. That passage outside is what you call an alleyway, is it not? - Yes.

6325. Is that what you call Scotland Road alleyway? - Yes.

6326. That was a fairly wide passage? - Eight or nine feet, I think, I am not sure.

6327. Was there water on the floor of that passage? - Very little.

6328. As the ship listed over to port the water flowed down into your cabin and left the alleyway from which it came fairly dry? - Yes.

6329. Did you see or believe that more water was coming in while you were standing there? - I could not see any coming; I did not know where it came from at all.
6330. Had your cabin a coaming? - A very small one; less than two inches.
6331. Two or three inches? - That is all, a wooden coaming like a doorstep. 6332. (*The Solicitor-General.*) After you had been in your room and seen this water there, you came out again in the alleyway, I understand, did you not? - No, I went up the middle staircase, what we call the crew's staircase.
6333. Did you return to that same deck at all, or was it your last visit? - That was my last visit.
6334. And you told me you did not see water on that deck anywhere else? - Nowhere else.
6335. The only other thing is this. You say you saw men coming to close watertight doors; that is to say, those doors do not shut automatically? - That is right.
6336. Was that on E deck? - Yes, immediately outside my room.
6337. Watertight doors? - Yes.
6338. On E deck? - Yes.
6339. Was one aft of your room? - Immediately forward.
6340. Immediately forward of your room? - Yes.
6341. Then was it that watertight door, which you see on the plan is in the alleyway, which is in front of your room? - I am not sure, but I think it is No. 23 door.
6342. I do not know their numbers, but was it the one just forward of your room? - Yes, in the alleyway.
6343. And you actually saw them doing that? - Yes, they were working on it. 6344. You are quite right; it is No. 23 door? - We used to call it the skidoo door, on account of the number. That is how I remember the number.
6345. (*The Commissioner.*) I do not understand that? - It is an American joke.
6346. Will you explain it? - I could not explain it, my Lord.
6347. (*The Solicitor-General.*) At any rate it connects No. 23 with something about skidoo? - Yes.
6348. Did the men working at No. 23 door tell you they had got orders about it? - No, I did not speak to them.
6349. You do not know whether they were closing or had closed any other watertight doors? - No, I do not know.
6350. You spoke of seeing an interpreter in the third-class part of the ship trying to get the third-class people to come along and go up to the deck? - Yes.
6351. Did I catch you rightly to say the interpreter was doing it and men were helping him? - I could see two or three stewards.
6352. You could? - Yes.
6353. Third-class stewards? - I suppose they were, I am not quite sure.
6354. Trying to persuade the people? - Yes.
6355. And where was it these people that you saw were standing? - In the alleyway, just abaft the emergency door leading into the second-class.
6356. That is also on E deck? - Yes.

6357. Are the third-class cabins which are abaft of that also on the E deck? - There are some on E deck, and there are some on F deck below that.

6358. (*Mr. Clement Edwards.*) There is a question which I did not examine into, but which has arisen, if your Lordship will permit me. (*To the Witness.*) When you saw this water in your compartment did it lead you to any conclusion as to the special danger in which you thought the ship was? - No, not anything special. If it had been higher I should have thought something about it, but under the circumstances I thought it might have been a pipe burst, because there was a pipe burst on the "Olympic" from the engineers' quarters and we got the same water. It might have been the same thing.

*The Commissioner:* I think all the representatives of the different classes are here now, and I want to say that Mr. Laing, at the sitting of the Court this afternoon, mentioned that the White Star Company would place the "Olympic" on Monday at the disposal of the gentlemen who are here representing the different classes, so that if they choose to go and see her at 12 o'clock on that day they will be able to go over the steamer.

*Mr. Edwards:* May I say, my Lord, on behalf of my friends, we appreciate this, but it would considerably help us, and in the end I think might help the Court, if passes were also provided for experts to accompany the counsel and representatives who are engaged in this case, not in the sense of experts who may be called as witnesses, but rather as experts who with their special knowledge may fortify the counsel on matters of technical importance.

*The Commissioner:* What do you say to that, Mr. Laing?

*Mr. Laing:* My clients do not think that is a reasonable request to make. Their invitation is to the gentlemen who are representing the parties, like ourselves.

*The Commissioner:* I think you must be satisfied with the ordinary order, which is to the gentlemen who represent the interests. I think that is sufficient.

## Page 148

6359. (*The Solicitor-General - To the Witness.*) There is one other thing. You may be able to tell us about the electric light in the afterpart of the ship. You have described how you heard the breaking of the metal, the rending of metal, followed by this rush of people to the poop. At the time when you heard the rending of metal, were the electric lights burning in the part of the ship you saw? - The electric lights were burning right to the very last. I saw the time by my watch at a quarter-past two.

6360. You looked at your watch? - Yes.

6361. You were carrying it? - Yes, I had it in *this pocket* I was transferring it from *this pocket* to my stern pocket.

6362. And you looked at it as you did it? - Yes.

6363. Were you holding on to the rail at the time? - No, I was getting towards the rail. It was a quarter-past two then.

6364. And the electric light was burning then? - Yes.

6365. So that there was never a time when you were on that ship when there was not electric light where you were? - Right to the very finish that I saw.

6366. (*The Commissioner.*) Your opinion is it was burning until the afterpart of the ship went down. Do you mean that? - Yes, I saw it.

*(The Witness withdrew.)*

*The Solicitor-General:* You will see, my Lord, now that Mr. Wilding has put on that model the mark which indicates the waterline, as best he can estimate it at this time.

*The Commissioner:* Yes, I see that.

**SAMUEL JAMES RULE, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

6367. You were bathroom steward on board the "Titanic"? - Yes.

6368. Did you join her at Southampton? - Yes.

6369. As bathroom steward? - Yes.

6370. Did you hear anything at all about being in the neighbourhood of ice before the collision? - No.

6371. Where were you at the time of the collision? - In my bed.

6372. Were you asleep? - Yes.

6373. Would you help us to find out where you were from the plan? Where did you sleep? - On E deck.

6374. What part of E deck? - The afterpart. It is an eight-berthed room; eight people slept in it - the saloon steward, and the lounge steward, and deck steward - 6375. Was it starboard or port side? - Port side. It is next door to the chef's room. 6376. Was it forward or aft of the chef? - Forward, the same passage. The chef went past our door in that passage way.

6377. Who were the men who were with you in this berth? - At the time?

6378. Yes, what were they? Storekeepers? - No. The Linen Keeper, the Smoke Room Steward, the Deck Steward, the Lounge Steward, and the Second Bedroom Steward, and the Bathroom Steward, myself.

6379. Was there any other eight-berthed cabin close there? - No, the next one is twelve.

*The Attorney-General:* Your Lordship will see where it is if you look just forward of the "Engine casing" on the port side. Your Lordship has the room where Joughin was. Forward of that there is the chef and forward of that again there is a berth and in front of that another one. "Twelve superior stewards." It is the one which has the eight in, and it is marked "One barkeeper, six storekeepers," and something else. *The Commissioner:* Are you sure it is there?

*The Attorney-General:* It must be from what he says, because it is just abaft the twelve.

6380. (*The Commissioner.*) I can see the big berth a little further on. (*To the Witness.*) How many were there in yours? - Eight.

*The Attorney-General:* That is why it fixes it, my Lord.

*The Commissioner:* I see in the one I am looking at there are a great many more. 6381. (*The Attorney-General.*) This is the only eight one there. (*To the Witness.*) Were you asleep? - Yes.

6382. What woke you? - The stoppage of the engines.

6383. Did you feel any shock before that? - No.

6384. How many of you were there in the cabin at the time? - Three.

6385. All turned in? - Yes.

6386. Did you all wake together? - Yes, pretty well, I think. If they did not I woke them myself.

6387. Did you think that something was wrong? - I thought so when the ship stopped suddenly.

6388. Did you notice anything further with the engines? - Not until she went full speed astern.

6389. You did notice that? - I noticed that and the electric bells going in the fidley.

*The Commissioner:* Does he say full speed astern?

6390. (*The Attorney-General.*) Yes, that is what he said. (*To the Witness.*) You noticed the engines had been reversed? - Yes.

6391. I am not sure whether it was after that or at the same time that you heard the electric bells go to close the watertight doors? - The same time.

6392. What did you do then? - I immediately got up and dressed and went on deck.

6393. Were there lifebelts in your cabin? - Yes.

6394. Provided for everyone? - Yes, eight.

6395. Eight lifebelts for eight people? - Yes.

6396. Did you take any with you when you went on the boat deck? - Not then I did not.

6397. You went on the boat deck? - I went right up the stairs on to the boat deck.

6398. Was there any sign of excitement or agitation on the boat deck? - None whatever.

6399. What did you do then? - I walked right along the boat deck right forward and passed in on to A deck and down the stairs to each deck. 6400. What do you mean by each deck? - A, B, C, D, and E.

6401. Till you got to your deck? - Yes, eventually, and I spoke to several of the stewards on watch and asked them what was the matter, and they thought everything was correct. There was no excitement anywhere. As I passed down on each deck I saw groups of people, but there was no panic and no excitement; you would have thought it was the closing up of the public rooms we met at every night. People were grouped round talking, and nothing more that I saw. I went right down through B and C deck down to D and E deck back through the saloon to the pantry, and I stopped talking to the watchman there, and I passed down to E deck again to my room.

6402. To your room? - To my own room, back again. As there was nothing doing and no excitement we thought everything was right.

6403. You thought everything was going to be all right? - Yes.

6404. Did you know you had struck an iceberg? - I heard.

6405. When you got on the boat deck? - Yes.

6406. But you did not think it was anything serious? - No, nobody thought so.

6407. Nobody thought so? - No.
6408. Then you went back to your cabin? - Yes.
6409. Did you go to bed again? - No I stood talking to my two mates that I had left behind, and advised them to get up and dress in case we should be wanted. 6410. You told us you passed along these decks. Did you see any passengers? - On each companionway, I did, in groups. I recognised some that I knew.

**Page 149**

6411. You have said there was no excitement. Did that apply as well to the passengers as to the stewards, the persons to whom you spoke? - Yes.
6412. What was the next thing that happened when you got back to your cabin? - I was there perhaps 10 or 15 minutes when the chief bedroom steward came down and said the order was, "All hands on deck for the lifeboats," and the bedroom stewards were to see the passengers out of their rooms with their lifebelts and lock the rooms up.
6413. Did you then go up to the boat deck? - Yes.
6414. Did you take your lifebelt? - Yes.
6415. Does that mean that each one took one lifebelt? - We each took our own.
6416. (*The Commissioner.*) When you say "we," you mean the three? - Yes. 6417. (*The Attorney-General.*) Did you notice any list in the vessel at that time? - Not at that time.
6418. Was there any water in your cabin - any sign of water coming into your cabin at all? - No.
6419. When you got up to the boat deck did you get any other order? - No, as I passed up the staircase, I got to A deck and I saw Mr. McElroy the purser, and Mr. Dodd, the Second Steward. I thought to receive some orders from them, but there were no orders given, and I passed on to the next deck, the boat deck. It was on A deck I saw them. They were in deep conversation.
6420. On the boat deck did you get any order? - No.
6421. Did you get any order about provisions for the boats? - No.
6422. What did you do next? - I went forward to No. 3; I went forward till I got to No. 3.
6423. Did you know your station? - Yes.
6424. Was No. 3 boat your station? - No, No. 15. We got the number as we passed up through the pantry from the boat list.
6425. I want to understand that. There was a boat list? - Yes.
6426. Had you seen that before this night? - Yes.
6427. Where was that? - In the saloon pantry.
6428. And did that tell you your station? - Yes.
6429. Was your station 15? - Yes.
6430. Then when you came up you did not go to boat 15, you went forward to boat 3? - Yes.

6431. Why was that? - Well, I just merely went forward to see what they were doing, and my curiosity took me forward to see if I could hear any more of the damage, and I got busy at No. 3.
6432. Was the vessel at all down by the head then? Did you notice? - Yes, slightly.
6433. Boat No. 3 was on the starboard side? - Yes, starboard side forward.
6434. It was the second boat? - The second boat.
6435. Next to the emergency boat? - Yes.
6436. When you got there were any passengers there? - Well, of course there were some passengers, and some of the crew getting her ready.
6437. Was she being uncovered? - Had she been uncovered at that time? - She was entirely uncovered, and ready for lowering almost.
6438. She was almost ready for lowering? - Yes.
6439. Were there any passengers in at that time? - There were some in it.
6440. Were they men or women in the boat? - Women.
6441. Any children? - I could not say; I was a good way off.
6442. Were there any men in the boat? - I think so.
6443. Could you tell whether they were crew or passengers? - Mostly passengers, that I saw.
6444. In the boat? - Yes. Mr. Ismay was seeing them into No. 3 boat.
6445. (*The Attorney-General.*) I think this is the first time we have had No. 3 boat, my Lord. (*To the Witness.*) Was any officer superintending? - Yes.
6446. Who? - I think it was Mr. Lowe; I am not sure. It was a junior officer. I do not know him.
6447. Was there any confusion? - No.
6448. Everything was going on quietly and regularly? - Yes.
6449. Were the boats lowered from the boat deck to the A deck? - No, they took their passengers on from the boat deck.
6450. I said the boats. Did you see the No. 1 boat? - No. 1 would be in the water at that time.
6451. That was the emergency boat? - Because I heard an order given: "Stand off from the ship's side and come to when we call you." That was when No. 1 boat was in the water.
6452. I should like to get that clear. No. 1 boat was the emergency boat; the forward boat on the starboard side of the ship? - Yes.
6453. It was the boat in which Hendrickson was, the last witness yesterday, my Lord. (*To the Witness.*) I want you to repeat the order you heard given about that boat? - "Stand off from the ship's side and return when we call you."
6454. "Stand off from the ship's side and return when we call you"? - Yes.
6455. To whom was that order addressed? - To the people in the boat, I presume. 6456. To the people in No. 1 boat. Could you see how many there were in that boat at the time? - No.

*The Attorney-General:* It was the one with seven of the crew and five passengers in, your Lordship will remember.

6457. (*The Commissioner.*) The emergency boat was in the water when you were at No.

3 boat? - Yes.

6458. And this emergency boat had been dropped from the forward end on the starboard side? - Yes.

6459. And someone, I do not know who, gave directions to this boat to stand off from the ship's side and come back when called? - Yes.

6460. Who gave that order? - I could not say - some officer.

6461. (*The Attorney-General.*) Had you heard any other orders given to that No. 1 boat? - No.

6462. At this time, from what you have said, Mr. Ismay was standing close? - Yes, he was helping to get No. 3 out.

6463. Helping to get No. 3 boat out? - Yes.

*The Attorney-General:* Your Lordship will remember this order. It is on page 119, question 5011. Hendrickson's answer is practically to the same effect. The words are, "He was told to stand off a little way and come back when called."

*The Commissioner:* Yes, it is to the same effect.

6464. (*The Attorney-General - To the Witness.*) Was Mr. Ismay dressed at this time? - No, he had his slippers and a light overcoat on and no hat.

6465. Slippers, light overcoat and no hat? - Yes.

6466. You said he was helping. What was he doing? - He was just the same as any of the crew; he was doing all he could to assist to get the boats out.

6467. You saw passengers get in. Did you hear any refuse to get in? - No.

6468. Can you give us any idea how many people there were in this boat No. 3 before she was lowered? - No, I could not give you that, because I was a good way from her at the stern of the boat.

6469. You were at the stern? - Yes, at the fall.

6470. Did you see this boat lowered at all to A deck? - No, I think she went right into the water.

6471. (*The Commissioner.*) This is No. 3? - Yes; she could not take her passengers on at A deck.

6472. (*The Attorney-General.*) She could not? - No.

6473. That was because of the windows, I suppose? - Yes, closed in.

6474. What did you do after you saw this boat lowered? - I assisted in the next one.

6475. Which was that? - No. 5. They passed the cover down and I threw it on one side clear of the falls. Then I met some of the pantrymen coming up with provisions for the boat, and I placed all the provisions round to pretty well each boat on the deck. 6476. What do you mean by provisions? What provisions? - A box of biscuits and some bread.

6477. A box of biscuits and some bread, do you mean, to each boat? - Yes. 6478.

Did you stay with No. 5 until she was lowered? - No, I went on with the bread and the biscuits.

6479. After helping No. 5 you then went further aft. Did you go to the next boat? - No, I distributed the bread all round - the biscuits and bread to each boat.

6480. Had any of the boats been lowered on the starboard side by the time you got on to the boat deck? - No.
6481. They were all there. Then did you go along to each boat distributing provisions? - Yes.
6482. (*The Commissioner.*) Does this apply only to the starboard side or to the port side as well? - Only to the starboard; I never crossed to port.
6483. Does that mean that you distributed biscuits and bread to each one of the boats on the starboard side? - Yes, pretty well.
6484. (*The Attorney-General.*) If I follow the story it must be from No. 5, because No. 1 was already in the water? - Yes, No. 3 was down.
6485. But when you got to No. 5 you started? - Yes, I met the pantry men coming along with a case of biscuits and some bread. There were some five or six men came along.
6486. Is it your view that No. 1, the first boat on the starboard side, was in the water before any of the other boats were lowered? - Yes, on the starboard side.
6487. You got eventually to your boat, the aftermost boat on the starboard side? - Yes.
6488. That is No. 15? - Yes.
6489. Was she uncovered when you got to her? - Yes.
6490. What did you do? - The time I got there Mr. Murdoch had given orders to see the plug and rudder shipped and the tiller shipped, and everything ready, and then to call the men together into the boat.
6491. Mr. Murdoch was in charge then? - Yes.
6492. He was the officer superintending? - Yes.
6493. You say he called to the men to get into the boat. Will you tell us as nearly as you can what it was he said? - He said: "Some of you get into the boat." About six went in and he said: "That will do; no more; lower away to A deck and receive any women and children there are."
6494. "Lower away to A deck"? - Yes.
6495. Did you then go down to A deck? - I went along down the stairs to the boat and met her at A deck.
6496. Before she was lowered to A deck had she taken any passengers at all? - No, there were no passengers there.
6497. When you got to A deck was there an officer there? - There was someone in charge; I do not know who it was.
6498. Did you hear him give any orders? - To get all the women and children into the boat that we could find.
6499. Were there any passengers standing round on A deck at this time at the place where the boat was lowered to? - Yes, there were some.
6500. Women and children? - There were four or five women and children; four women and about three children.
6501. At this time had you noticed whether the vessel had any list? - Slightly.
6502. A list to which side? - To port.
6503. Can you give us any idea when it was you first noticed the list to port? - No, not particularly; not until I got down into the boat. I found she was pretty well up

- against the ship's side. I did not notice particularly in getting the other boats out that she had a list. 6504. You mean not until you got to your own boat? - Not till I got down to A deck.
6505. You did not notice it particularly, at any rate, until then? - No.
6506. Did you get those four women and three children into the boat? - Yes. 6507. Were there any more? - No, they sent scouts around and shouted out for any more women and children and waited quite a while, but there were no more women and children to be found.
6508. Then when she got these four women and three children there was plenty of room still in the boat? - Yes.
6509. Did you try to find any more women and children? - Yes.
6510. What did you do? - They sent scouts all round the port side and the starboard side looking for them.
6511. You say you sent scouts; have you any idea how many men went? - Three or four.
6512. Did you yourself go? - No, I was on the rail, passing the women and children on board.
6513. Did these men come back who had been out looking for the women and children? - Yes.
6514. How long after? - Three or four minutes - four or five minutes.
6515. Three or four or five minutes after they had started to look for the women and children? - Yes. They went on the port side. There was no one to be seen on the starboard side, the side we were on.
6516. No one at all? - No, only those who were round the boat.
6517. Do you mean no one at all, or no women and children? - No one at all, no women and children. I did not encounter anyone until I came downstairs; the deck was perfectly clear.
6518. Then did they find any women and children? - Only these three or four.
6519. We have heard of those - I mean after they went to look for them? - No.
6520. When they came back, what did they say? - There were no more.
6521. (*The Commissioner.*) They said there were no more? - No more on the deck.
6522. Does that mean no more women and children? - Yes.
6523. (*The Attorney-General.*) When there were no more women and children, what orders were given to you? - Mr. Murdoch said, "Fill the boat up; take in what you have got there, and lower away."
6524. "Take in what you have got there." What do you mean by that? Those already in the boat? - No, whoever was at the ship's side.
6525. Was she lowered to any other deck before she was lowered to the water? - No, she filled up from A deck.
6526. (*The Attorney-General.*) That does not quite agree with Cavell's story at page 108, question 4334. It is said that after you had taken passengers in at A deck the boat was then lowered to the 3rd class. Your Lordship will remember he pointed out on the model. (*To the Witness.*) Is that right? - She could not take anyone in below A deck.
6527. Which are you referring to as A deck? - The deck below the boat deck.

6528. The deck immediately below the boat deck? - Yes.
6529. Have you any idea how many got into the boat altogether? - Sixty-eight.
6530. Is that including passengers and crew? - Yes.
6531. That is all told? - Yes.
6532. From first to last? - Yes.
6533. Could you get any more into the boat? - No.
6534. Were there any other boats left besides yours? - No, that was the last in the davits.
6535. Then yours was the last boat to leave on the starboard side? - Yes.
- The Commissioner:* That is No. 15.
- The Attorney-General:* Yes my Lord.
- The Witness:* 11 and 13 were in the water; we very nearly got on top of 13 lowering down.
6536. (*The Attorney-General.*) Yes, I am going to ask you about that in a moment. Did you leave any people standing on the deck when the boat was lowered? - Yes, there were some left behind.
6537. Was there any attempt on the part of those to get into the boat? - There was a bit of a rush at the last when they said "lower away."
6538. (*The Commissioner.*) What were these people left behind? Were they men or women or what? - All men.
6539. (*The Attorney-General.*) Can you give us any idea of how many of the 68 who went into this boat No. 15 were women, and how many were men? - Four or five women and three children.
6540. And all the rest men? - Yes.
6541. That is about 61 men? - Yes.
- The Commissioner:* This seems quite contrary to the other evidence.
- The Attorney-General:* Yes, my Lord.
6542. (*The Commissioner.*) Now I want to be clear about this. Are you now talking about boat No. 15? - Yes.

## Page 151

6543. And where was it? Show it to me on that model? - (*The Witness pointed out the place on the model.*)
6544. (*The Attorney-General.*) There is no doubt about that, my Lord. Will your Lordship allow me to put one question to him to make it clear he is speaking of the same boat, No. 15. (*To the Witness.*) When No. 15 was lowered did you very nearly swamp another boat? - Yes, No. 13.
6545. You very nearly came on top of No. 13? - Yes.
6546. (*The Commissioner.*) How long were you at No. 15 boat? - When?
6547. When the passengers or whoever they were were going on board, how long were you there? - 10 minutes possibly - 10 or 15 minutes.
6548. How many people got on in 10 or 15 minutes? - We were about 10 or 15 minutes there before we started to take on anybody at all - when they were looking for the women and children.

6549. As I understand, first of all you got on a small number? - Yes.

6550. And then you sent out what you call three or four scouts? - Yes.

6551. And they came back and said there were no women or children to be found? - Yes.

6552. Then did men begin to go on board the boat? - Not until Mr. Murdoch gave the orders from above.

6553. And what order was it he gave? - He said, "There are no more women and children; fill your boat up and lower away."

6554. (*The Attorney-General.*) Could you tell whether the women who were on board were first-class or second-class or third-class passengers? - I think they were third.

6555. Who, the men? - The women.

*The Attorney-General:* I am asking now about the four women he said he put on. Why do you say that? - Well, I could not swear.

6556. What makes you think it? I want you to tell the Court what your reason is? - I fancy from the way they were dressed. In fact, I know one was, because she told me on the "Carpathia" that she had lost her husband.

6557. Could you tell whether there were any Irish women amongst them? - No. 6558. You could not tell? - No, because they were all in the middle of the boat and I was in the bows of the boat.

*The Commissioner:* I do not know how this witness Cavell can have made a mistake.

*The Attorney-General:* No, if your Lordship looks at page 109 - *The Commissioner:* I am looking at it now.

*The Attorney-General:* It is very difficult to understand.

*The Commissioner:* He is being examined by the Solicitor-General, and this is what he says: "(4353) And then you are lowered to the lower deck, and you take in, you think, about 60? - (A.) Yes. That would make about 70" - that would be the 60 and the seven, you know? - "(A.) Yes. (Q.) Do you say that you took in everybody who came at that time at the lower deck? - (A.) Yes."

*The Attorney-General:* He corrected that later.

*The Commissioner:* "You left nobody behind? - (A.) No, Sir;" and therefore he affirms that there were none but women and children, and he denies that any were men. *The Attorney-General:* If your Lordship looks at Question 4369, that puts it specifically.

*The Commissioner:* "(Q.) You think that the 60 women you took were all third-class passengers? - (A.) Yes, my Lord."

*The Solicitor-General:* Of course, the deck he is speaking of is, undoubtedly, a secondclass deck."

*The Attorney-General:* Will you read on?

*The Commissioner:* "(*The Solicitor-General.*) That was your impression, was it? - Yes. (Q.) These women that you think came from the third-class, were some of them foreigners? - (A.) They were Irish girls. (Q.) It is a nice question, whether they are foreigners or not. Then your boat, I suppose, was as full as it would hold, was it? - (A.) Yes. (Q.) Who took charge of it? - (A.) One of the firemen. (Q.) What is his name? - (A.) Diamond [Dymond]. (Q.) Then there was you, and were there only three others of the crew? - (A.) Four. (Q.) Four others? - (A.) Yes. (Q.) Diamond and yourself, and four

others. (A.) Three more.” Then it goes on to another point. *The Attorney-General*: Yes, it is very definite.

*The Commissioner*: Mr. Attorney, are you in a position to call evidence from the “Carpathia”?

*The Attorney-General*: I expect we shall be. I am not at present, but we shall be.

*The Commissioner*: Because one would hope that the “Carpathia” could give us some information as to what the people were who got out of this boat.

6559. (*The Attorney-General*.) Yes, we may be able to, but I am not very sanguine about that; but we will try. I am much obliged to your Lordship for the suggestion. We will see whether it can be done. (*To the Witness*.) Can you give me a little more information about those persons?

*The Commissioner*: I wish you would press him a little on the point.

6560. (*The Attorney-General*.) I am going to, my Lord. (*To the Witness*.) If you leave out the four women and the three children of whom you have spoken - I am not going to ask you anything more for the moment about those you picked up on the boat deck - are you quite sure that all the rest of the passengers who got in were men? - Yes.

6561. Quite certain of that? - Yes.

6562. You were helping to pass them into the boat? - Yes.

6563. So that if your memory is correct, you could not be mistaken about it? - No.

6564. (*The Commissioner*.) Do you know Cavell? - No.

6565. Have not you seen him here? - I could not say.

6566. (*The Attorney-General*.) We saw him, he was a very short man, boyish looking. Do you remember? - No.

6567. You do not know him at all? - No.

6568. Could you tell at all whether these passengers, the men who got in were first, second, or third-class passengers? - They were third-class.

6569. Third-class? - Third and second.

6570. Why do you say that? What makes you think they were third and second? - I was in conversation with them on the boat.

6571. And they told you? - Yes, in fact a second-class passenger pulled an oar with me during the night; he told me he was a second-class passenger.

6572. Did you talk to many of the passengers in the boat? - No, only just those immediately around me.

6573. Those who were just around you when you were in her? - Yes. I was in the bows of the boat.

6574. Is this a matter about which you are quite clear in your mind, and about which you cannot be making any mistake as to the number of women that were in that boat? - Quite right.

6575. It struck you as rather odd, did it not, that after the order that was given, “Women and children in the boats,” that you should have so many men? - Well, they were pretty well all cleared off that deck.

6576. Did you think when the vessel left that there were no more women on board? - No.

6577. Well, you knew there were some women left? - Well, I should imagine so. 6578. But you knew that the order was that the women were to go into the boat first and this was the last boat? - Yes.
6579. On the starboard side that is - we are speaking altogether of the starboard side? - Yes.
6580. (*The Commissioner.*) If these were all practically men, did it not strike you that you were not doing what you ought to do? You were not taking the women first. Did not that occur to you? - Well, of course, we took all the women who were there. We could not find any more.
6581. You took all the women that were on that deck opposite to that boat, but you knew that there were hundreds elsewhere. You knew that, I suppose? - Well, I imagined there would be some more.

## Page 152

6582. (*The Attorney-General.*) Why did not you go to look for them? - Well, because there were other people looking for them.
6583. But not at the time the men were being passed into the boat? - Yes, they were shouting out round the decks.
6584. Do you mean that when the scouts who went round that you have told us about, whilst the scouts were away, the men were getting into the boat? - No, not till the men came back.
6585. When the men came back and said there were no women? - No, Mr. Murdoch said, "Fill your boat up with what you have got there - men." 6586. After that did anybody go to look for women? - No.
6587. Was there a rush to get into this boat? - No, not particularly.
6588. "Not particularly" means there was some rush? - Well, there was a bit of a rush at the last, yes.
6589. Did the men seem anxious to get into the boat? - Yes.
6590. Pushing forward to get into the boat? - They all seemed anxious to get in.
6591. Alarmed because it was the last boat on that side? - Well, I do not know; I could not say whether they were alarmed.
6592. It looked like it, did it not? - Yes.
6593. Was the vessel then very much down by the head? - Yes, she was.
6594. Was she well listed over to port? - Yes, she had a slight list to port.
6595. Do you know a man called Diamond [Dymond]? - No.
6596. Do you know who took charge of the boat? - A man called Jack Stewart.
6597. What was he? - A steward; he was a steward called Stewart.
6598. A man who was a steward, whose name was Jack Stewart? - Yes.
6599. (*The Commissioner.*) He is alive? - Yes.
- The Commissioner:* Who is he?
6600. (*The Attorney-General.*) This is the first we have heard of him, my Lord. (*To the Witness.*) Who rowed? - Nearly everybody rowed who could get to the oars. I rowed for one.

6601. (*The Commissioner.*) You do not mean to tell me 60 or 70 people rowed? - No, everybody who could get to the oars. It was difficult.
6602. I thought you said nearly everybody? - Well, pretty well; they took turns.
6603. (*The Attorney-General.*) When this boat No. 15 was lowered what did you do? Did you go and lie off? - Yes.
6604. Did you wait? - Yes, we waited off.
6605. Could you see people on board? - No.
6606. How far off did you go? - About 500 or 600 yards.
6607. Could you see the lights of the vessel? - Yes.
6608. Her electric lights? - Yes.
6609. Did you see her go down? - Well, yes, I saw her.
6610. Were her electric lights burning to the end - to the last? - Very near to the last.
6611. Did you see her actually founder? - I did not see her actually go down at the last.
6612. After she went down, did you hear cries? - Yes.
6613. Before she went down did you see a number of people in the stern of the vessel, on the poop? - No.
6614. When you heard the cries, did you make any attempt to reach them? - We pulled back and pulled round.
6615. Did you? - Yes.
6616. Did you get near anybody - No, we never saw anyone.
6617. Did you try to reach anybody? - We pulled around the district, around the ship.
6618. (*The Commissioner.*) Your boat was nearly full? - Yes, we could not take many more. It was down in the water as it was.
6619. (*The Attorney-General.*) Supposing you had got to anybody, could you have taken them on board your boat? - Yes, we might have got them in, but there was not much room for anybody there.
6620. What? - There was not much room to pick up anybody.
6621. Was your boat far down in the water? - Yes, right to the gunwales.
6622. Did you see anybody on the deck or on the ship without a lifebelt? - No.
6623. Do you mean everybody had one? - Everybody I saw had one on.
6624. A lifebelt? - Yes.
6625. Can you give me the names of any one of the men who went to look for women and children? - I could not.
6626. Did you know any of them? - No.
6627. (*The Commissioner.*) Did those men get into the boat? - That I could not say.
6628. (*The Attorney-General.*) Did you see at all in what direction they went to look for the women and children? - They went round the deck on the port side on A deck.
6629. On the same deck? - Yes.
6630. Did they go to any other deck? - I do not think so.
6631. Why not? - That I could not say. I could not tell you why they did not.
6632. Then apparently, if I understand you, all that they did was to go round to the port side of the A deck and see whether there were any women and children there? - They went on both sides of A deck.

6633. On both sides of A deck? - Yes.

6634. Do you mean along the deck? - Yes.

6635. (*The Commissioner.*) Do you think they went not to find them? - No, they shouted pretty well all round.

6636. They were shouting, were they? - Yes.

6637. What were they shouting? - "Any more women and children for the boat." 6638. Were they shouting properly so that they could be heard? - So that anybody could hear them on the next deck.

6639. You heard them yourself? - Yes.

6640. And they could have been heard on the next deck? - Everywhere. 6641. (*The Attorney-General.*) Did you see any stewards or any men helping the women from the second-class deck on to A deck? - No.

6642. Have you seen Jack Stewart since you were in the boat with him which eventually was picked up by the "Carpathia"? - Not since I left Southampton.

6643. Did you mean since you left Southampton to come here? - Yes. 6644. (*The Commissioner.*) Then when did you see him in Southampton? - Last Tuesday week.

*The Commissioner:* You ought to know where this man is, Mr. Attorney.

*The Attorney-General:* Oh, I know, my Lord. All I said was, this is the first we have heard of him in this case, but, we know, and your Lordship shall see him, and Diamond [Dymond] also.

*The Commissioner:* He may help to clear this up.

*The Attorney-General:* Yes, it has to be cleared up.

*The Commissioner:* I am in a difficulty about this boat at present. Is Cavell gone?

*The Attorney-General:* I am afraid he has, but we can have him back.

*The Commissioner:* I wish you would keep him in sight so that we can see him again if necessary.

6645. (*The Attorney-General.*) Yes, my Lord. He was one of those who were released yesterday. We will take care to get him again. (*To the Witness.*) Do you know a man named Noss? - No.

6646. Or Clark? - No.

6647. In the boat with you as part of the crew? - No.

6648. Did you hear the officer shout out, "Stand back; women first" when the rush came? - No.

6649. I will put this story to you. Your Lordship will see I must call the witness later. "As we were being lowered several of the foreign passenger men rushed for the boat." That is what this witness says. That is right, is it not? - Yes.

6650. And did the officer shout out when the rush was made, "Stand back; women first." - I did not hear him.

**Page 153**

6651. Well, he must have shouted out something, must he not? - I did not hear him shout it.

6652. Did you hear him give any order? - No.

6653. Not when the rush was made for the boat? - Not after Mr. Murdoch said "Fill the boat up." I never heard any order after that.

6654. I am going to put it to you that you are making a mistake as to the time, if you will follow what I am going to suggest to you. I am putting to you that what really happened was that the rush that was made for the boat of which you have spoken was before Mr. Murdoch's order. Let me put to you the story. Just follow this: that there was a rush of a number of passengers for the boat, and Mr. Murdoch then shouted out "Stand back! Women first!" that you then proceeded to take in all the women and children that were there? - That is correct. 6655. That is correct? - Yes.

6656. That is what I put to you before, you know. Then there was a rush made for the boat before the officer called out "Stand back! Women first!"? - Yes.

6657. And then where was that that the rush was made? - When she came down to A deck.

6658. And then did you take in women and children? - Yes.

6659. How many? - What I told you before.

6660. The four and the three? - Yes. That is the only deck we took them in. 6661. I must put to you that you took in at that deck 22 women and children. Is that right? - No.

6662. Was it after that that Mr. Murdoch called out, "Is that boat full?" - Yes.

6663. Did you hear persons shouting out at the side of the boat whether there were any more women? - Yes.

6664. I mean not only the scouts who were sent to look for the women? - The man who was in charge on the deck was shouting out at the same time.

6665. Do you mean near the boat? - No, on the deck. The man that was looking after the deck, the officer - I do not know who he was - was shouting if there were any more women.

6666. Did you hear any reply made to that? - No.

6667. Did you hear anyone say to the officer: "There are no more women and children to be seen"? - Yes.

6668. You heard that? - I heard that.

6669. And what did he say then? - To fill up the boat.

*The Attorney-General:* This is a question really of numbers, my Lord. I cannot say anything further about it, as I have only got the depositions at present. Your Lordship will have to see the witnesses.

*(The Witness withdrew.)*

*Sir Robert Finlay:* My Lord, with regard to the question of experts which has been mentioned, we should have no objection whatever if the other gentlemen engaged in the case can agree upon an expert to go with them; we should not object to that in the very least, but we do not think there ought to be an indefinite multiplication of experts. *The Commissioner:* Then if you gentlemen can put your heads together, and agree upon one expert to go with you, the White Star Company will be glad that you should have him

with you. Find an expert in whom you all have confidence, and let him go with you to show you.

*(Adjourned till Tuesday next at 10.30 o'clock.)*

## PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC."

### SEVENTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third-class passengers. (Admitted on application.)

## Page 156

*Sir Robert Finlay:* Your Lordship will recollect that I asked that the cross-examination of the witness Hendrickson should stand over until today. After the rising of the Court on Friday I heard that Sir Cosmo and Lady Duff-Gordon were on their way to this country on board the "Lusitania." They will arrive late to-night. Under those circumstances, if your Lordship approved, I think it would be highly desirable that the cross-examination should be postponed say till Thursday or better Friday, in order that Sir Cosmo and Lady Duff-Gordon should have an opportunity of making their statement, and taking any steps they think proper.

*The Attorney-General:* Of course we should not raise any objection. I was going to suggest to my friend that if he will let us know as soon as he can what day he will be ready to go on with him, we will take care to have Hendrickson here.

*Sir Robert Finlay:* Say Friday.

*The Attorney-General:* Yes.

*The Commissioner:* Very well.

*The Attorney-General:* Your Lordship will remember we were examining Rule, the bathroom steward, on the last occasion. I propose now to take some other witnesses from the "Californian" steamer. The reason, as your Lordship will appreciate, is that we cannot always get them here. They are here today and I think it will be convenient to examine them now.

*Mr. Robertson Dunlop:* Will your Lordship allow me to appear on behalf of the Leyland Line - the owners, master and officers from the "Californian," who are to be examined today?

*The Attorney-General:* Of course, this question of the "Californian" raises an issue between the master and officers of the "Californian," and, certainly, one man who was employed as a donkeyman or as an assistant donkeyman. The question substantially is this: The "Californian" is said by this donkeyman to have seen the distress rockets fired from a vessel which, according to this man, was the "Titanic," and to have taken no notice of those distress rockets. There is no doubt, as I understand the evidence, that rockets were seen on this night and that the "Californian" was not at a very great distance

from the "Titanic," but whether it was the "Titanic" that she saw or not is a matter which can only be determined after we have heard the evidence. It is a little difficult again to say that that has a very direct bearing upon the particular questions which have been submitted so far for your Lordship's consideration. Some of the evidence undoubtedly will be material on these questions as to the position, what was seen and what precautions were taken by the "Californian," and the wireless messages that were sent and received, and they will be undoubtedly important matters for your consideration. This question, as between the donkey man and the master is a different matter, but it does seem to me that in view of the statements which have been made and the evidence that has already been given elsewhere about it, it would be desirable that your Lordship should hear what there is to be said. I propose therefore to ask them a few questions. I do not propose to go into it at any length, but to ask them on such as would be essential, so that your Lordship will be enabled to form some opinion as to whether or not this story told by the donkey man is right. At the present moment he is not in England.

*The Commissioner:* Who?

*The Attorney-General:* The donkey man. He left the vessel - as I understand, he deserted, but he is on his road and we are taking steps to have him brought here as soon as he arrives, so that he may tell his story.

*The Commissioner:* You are going to call others?

*The Attorney-General:* Yes, the master and officers and the Marconi operator, because they have to go with their vessel, and I thought it right your Lordship should have the evidence at once.

*The Commissioner:* I cannot deal with your application at present, Mr. Dunlop. If anything is said which I think requires explanation from your clients I will take care to let you know.

*Mr. Robertson Dunlop:* If your Lordship pleases, I may say the solicitors for the Leyland Line have taken statements supplemental to those taken by the Board of Trade, and I thought I might be able to clear up some matters which do not seem to be dealt with in the statements which have been given to the Board of Trade.

*The Commissioner:* Have you seen the statements which have been given to the Board of Trade?

*Mr. Robertson Dunlop:* Yes, my Lord.

*The Commissioner:* Have you shown your statements to the Attorney-General?

*Mr. Robertson Dunlop:* No, my Lord.

*The Commissioner:* Why not?

*Mr. Robertson Dunlop:* We had no time; we only got the statement late last night. I can show them.

*The Commissioner:* It appears to me it would be far better to let the Attorney-General see those statements so that he may deal with the whole thing. In the meantime, what you can do is to watch, and, if you find any attack is made upon your clients, then you can ask me to allow them to go into the box.

*Mr. Robertson Dunlop:* If your Lordship pleases.

*The Attorney-General:* It cannot affect the owners, I think; it may affect the master if the story were true.

*The Commissioner:* I understand this gentleman was applying on behalf of the owners and the master.

*Mr. Robertson Dunlop:* Yes, my Lord.

*The Attorney-General:* I do not see how it can affect the owners.

**STANLEY LORD, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

6670. (*The Attorney-General.*) This is the Master, my Lord, of the Leyland Line steamship, "Californian" of Liverpool. (*To the Witness.*) Are you the Master of the s.s. "Californian" of Liverpool? - Yes.
6671. She is owned by the Leyland Line? - Yes.
6672. Would you tell me her tonnage? - Net?
6673. Give me the gross and net? - 4,038 net; 6,223 gross.
6674. What is her full speed? - It depends on the consumption of coal. Do you mean on a full consumption of coal?
6675. Yes? - 12 1/2 to 13.
6676. Did you leave London on April 5th? - Yes.
6677. For Boston? - For Boston.
6678. You arrived there, I think, on April 19th? - Yes, 4 a.m.
6679. Did you carry any passengers? - No.
6680. Do you carry passengers at all? - Sometimes we do; we have accommodation for passengers.
6681. You have a certificate as a passenger ship? - Yes.
6682. How many passengers would you carry? - 47 we have accommodation for.
6683. And what crew? - 55.
6684. Full complement? - 55.
6685. And how many boats do you carry? - 6.
6686. How many of those boats are lifeboats? - 4.
6687. (*The Commissioner.*) What are the other 2? - One is a gig and the other a pinnace; they are not lifeboats.
6688. (*The Attorney-General.*) And how many will your lifeboats carry? - The 6 boats carry 218 altogether.

**Page 157**

6689. You have no difficulty in carrying more boats than are required for crew and passengers? - We have boat accommodation for double the crew and passengers it will carry.
6690. Do you remember on Sunday, April 14th, sending a wireless message to the "Antillian"? - 6.30 on the 14th.
6691. Is that ship's time? - Yes, ship's time for longitude 47° 25.'

6692. Did you give him the position of some icebergs? - I gave him the position of the ship at 6.30, and I told him the icebergs were 5 miles south of me. *The Commissioner*: What was the name of the boat?

6693. (*The Attorney-General*.) It was a message sent to the "Antillian." Your Lordship will see in a moment what happened. (*To the Witness*.) Giving the position of three large icebergs, was it? - Yes.

6694. Would you tell me the position that you gave him? - Forty-two deg. five min and 49 deg. 9 min.

6695. Forty-two deg 5 min N and 49 deg 9 min W? - Yes.

6696. The three icebergs were reported five miles to the southward of you? - Yes. *The Commissioner*: Forty-two deg 5 min and 49 deg 9 min. was the position of his ship?

6697. (*The Attorney-General*.) Yes, my Lord. On the chart it is a little to the right of the spot marked as that at which the "Titanic" sank - five miles to the southward the icebergs were. (*To the Witness*.) Did your wireless operator tell you whether any other vessel had picked up that message? - *Witness*: He did.

6698. Did he tell you anything about the "Titanic"? - He told me he had offered it to the "Titanic" and he said, "All right, he had it."

6699. He said, "All right, he had it"? - Yes. *The Commissioner*: What does that mean?

6700. (*The Attorney-General*.) That meant he had already received the information - *The Witness*: He had picked it up whilst we were sending it to the "Antillian."

6701. Later on did you have to stop on account of ice? - I had to stop and reverse engines.

6702. Would you tell us what time that was? - 10. 21 p.m.

6703. That also was ship's time? - Yes, ship's time for that same longitude.

6704. Where were you then? - Forty-two deg five min N, and 50 deg 7 min. W.  
*The Attorney-General*: We shall have to do this with several vessels later on, my Lord; it will be very useful if we agree, at any rate, upon the spot as we proceed, so that we see we get the same spot as your Lordship's assessors have marked for you. We make it the spot is just under the fringe marked as "the field of ice between March and July," and the spot is just under the "J," where she stopped.  
*The Commissioner*: I can hand this plan down. You will see where the blue or the red mark is, and I have written "Californian" above the round spot in pencil. It is not quite under "July"; it is a little to the east of "July." Do you see it? *The Attorney-General*: Yes, my Lord, I do.  
*The Solicitor-General*: Probably that is the first position.  
*The Attorney-General*: I agree that is the first position, but what we are speaking of is the spot where she stopped and reversed engines because of ice. I think it is just under the fringe below the "J" in "July"; in the field of ice. *Sir Robert Finlay*: That is right.  
*The Attorney-General*: We are agreed that is the right spot, my Lord.  
*The Commissioner*: Very well.  
*The Attorney-General*: I think it is convenient to mark them on the chart as we proceed.  
*The Commissioner*: At some time I shall want a chart, but not now - it is not convenient

now - marked with the position of these different vessels at the different times that are referred to in the evidence.

*The Attorney-General:* Your Lordship shall have it, and the direction in which they are proceeding.

*The Commissioner:* And also the probable position of the "Titanic" at the time those messages were sent off.

6705. (*The Attorney-General.*) Yes, your Lordship shall have that. (*To the Witness.*) You were telling us that you stopped and reversed engines because of ice. What sort of ice was it? - Field ice.

6706. Where was it? - Right ahead of me.

6707. Did it stretch far? - As far as I could see to the northward and southward.

6708. You could see it although it was night? - Oh, yes.

6709. Then you stopped and reversed engines, and what did you do then? - I turned round and headed E.N.E. by the compass. I twisted her head to E.N.E.

6710. Where had you been heading before? - S. 89, W. true.

6711. You turned to E.N.E. by the compass? - Yes, by the compass. 6712. Did you then stop? - We stopped.

6713. Till? - 6 o'clock next morning. 5.15 we moved the engines for a few minutes and then we stopped on account of the news we received, and waited till 6 o'clock. 6714. It was daylight then, I suppose? - It was daylight then.

6715. Now close upon 11 o'clock did you see a steamer's light? - I did.

*The Commissioner:* 11 o'clock when?

*The Attorney-General:* At night, my Lord.

*The Commissioner:* This was on Sunday night?

6716. (*The Attorney-General.*) Yes. (*To the Witness.*) This was on Sunday night that you had stopped? - After we had stopped.

6717. And you saw a steamer's light. Was it approaching you? - It was approaching me from the eastward.

6718. How did it bear? - I did not get the bearings of it; I was just noticing it casually from the deck.

6719. Where was it? On your quarter? - It was on the starboard side.

6720. What did you see - what light? - I just saw a white light to commence with. 6721.

Did you then ask your wireless operator what ships he had? - Yes, I went to his room and I asked him what ships he had.

6722. That means from what ships he had had messages? - What ships he had been in communication with.

6723. What did he say? - "Nothing, only the 'Titanic.'"

6724. Did you think that the vessel approaching you was the "Titanic"? - No, I remarked at the time that was not the "Titanic."

6725. How could you tell that? - You can never mistake those ships - by the blaze of light.

6726. I am not quite sure that I understand you - you told us you had seen one light? - First.

6727. Then as she was approaching you, did you see more? - I saw more lights.

6728. Did you see any sidelights? - I saw a green light.

6729. And did you see any deck lights? - A few.

6730. It was sufficiently close for that? - Oh, yes, she was getting closer all the time.

6731. About what distance approximately did you consider she was from you? - At 11 o'clock?

6732. I was going to ask you the distance at the time this conversation took place, and you said it was not the "Titanic"? - I suppose she was six or seven miles away. That is only approximately.

*The Commissioner:* What lights did you see at the time this conversation was taking place.

6733. (*The Attorney-General.*) I thought that was what he was saying. (*To the Witness.*) Will you tell us what lights you saw at the time you had this conversation with the Marconi operator? - I saw one masthead light and a few other white lights, but I do not say I noticed the green light then; I was not paying a great deal of attention to her. 6734. (*The Commissioner.*) Were the white lights bearing from east on your starboard side? -

**Page 158**

Coming from the eastward on our starboard side, my Lord.

6735. And you saw some other lights. What were they? - They might have been anything - lights from the portholes, doorways, or anything at all.

6736. But no coloured light? - I did not notice any then. *The Commissioner:* I understand it now.

6737. (*The Attorney-General.*) You said it was not the "Titanic." Did you give him any directions? Did you tell him to let the "Titanic" know? - I said, "Let the 'Titanic' know that we are stopped, surrounded by ice."

6738. Do you remember at what time that message was sent? - About 11 o'clock.

6739. About 11 o'clock that night, ship's time? - Ship's time.

6740. Did you hear whether that message was acknowledged by the "Titanic"? - Not until the next day.

6741. It was not reported to you till the next day? - No.

6742. What was the report given to you? - That he told him to keep out - stand by; that he was busy with Cape Race. That is what I understood the message. 6743. You heard that from your Marconi operator, I suppose? - Yes.

6744. That an answer had been received from the "Titanic"? - Yes, telling him to keep out - that he was busy.

6745. What is the meaning of "keep out"? - Well, do not interrupt him.

6746. Do not interrupt because he, the "Titanic" operator, was busy? - Was busy. 6747. I think I understood you to say he was getting into touch with Cape Race? - That is what they were doing, I think; they were signaling with Cape Race.

6748. (*The Commissioner.*) "We are busy getting into touch with Cape Race"? - They were communicating with Cape Race then.

6749. (*The Attorney-General.*) I am going to call the operator, my Lord. (*To the Witness.*) Did you continue to watch the approaching vessel? - Yes.

6750. Till what time? - Half-past 11. I was standing on deck watching it.

6751. All this time you were stopped? - We were stopped.
6752. What size steamer did she appear to you - can you give us some idea? - She was something like ourselves.
6753. Something like yourselves? - Yes.
6754. Medium size? - A medium size steamer.
6755. Did you see your third officer attempt to communicate with him? - I did.
6756. How? - By a Morse lamp.
6757. A Morse lamp? - Yes.
6758. Did he get any reply? - No.
6759. By this time had you been able to detect her sidelights at all? - I could see her green light then.
6760. How far do you judge she was when you could see her green light? - Well, I saw it some time between 11 and half-past; I do not know exactly.
6761. What distance do you think she was from you when you could see the lights? - About five miles.
6762. As much as that? - About that, I should think.
6763. Did you give any directions to your second officer with reference to this ship? - After the second officer relieved the deck.
6764. At what time did he relieve the deck? - Ten minutes past 12.
6765. Just before that was there any other officer on deck? - The third officer was on deck until 12.
6766. With you? - Well, I was up and down off the bridge till 12 o'clock.
6767. Then at 12 o'clock the second officer relieved the third officer? - Ten minutes past 12.
6768. You were still on deck? - Yes.
6769. And did you tell him anything with regard to this vessel? - I told him to watch that steamer - that she was stopped.
6770. She was stopped? - The other steamer was stopped.
6771. When did you notice the other steamer was stopped? - About half-past 11. 6772. And he was to let you know if she did what? - If she altered her bearings or got any closer to us - drifted towards us.
6773. Did the ice extend at all to the eastward or westward of you? - It seemed to me to be running more north and south, but whilst we were stopped we were surrounded by loose ice.
6774. From north to south was the field? - Yes.
6775. Then when you stopped you got surrounded by the loose ice? - I ran into the loose ice before I could stop - before the ship was brought up.
6776. There was ice between you and this vessel? - Yes.
6777. And then you noticed this vessel had stopped at half-past 11, presumably also on account of the ice? - On account of the ice.
6778. Can you tell us at all how this ship was heading? - She was heading to the westward, that is all I can tell you.
6779. Could you tell her bearing at all? - Well, I have heard it since. I heard what it was at midnight - S.S.E. from us by compass.

6780. That was at midnight? - Yes.

6781. (*The Commissioner.*) Was the compass correct? - No.

6782. (*The Attorney-General.*) What variation? - The variation that day at noon was 24 3/4. She was about 24 when we were stopped; the deviation would be about 2E, making an error of 22W.

*The Commissioner:* Are these minute particulars of importance?

6783. (*The Attorney-General.*) No, I do not think they are, my Lord. (*To the Witness.*)

Did you speak to the second officer again later about going down below? - I went into the chart room at a quarter-past 12.

6784. Is that below? - No, it is on the bridge deck, just below the upper bridge.

6785. Then did you speak to him through the speaking tube? - At 20 minutes to 1. 6786.

Did he say whether she had changed her position? - I asked him if the steamer was the same. He said it was the same; he had called her up once, but she would not reply to him.

6787. Then you went to lie down in the chart room? - Yes, I told him I was going to lie down in the chart room then.

6788. A little later did he whistle down the tube and tell you she was altering her bearings? - A quarter-past 1.

6789. Did he say how she was altering her bearings? - Towards the S.W.

6790. Did he tell you whether he had seen any signal? - He said he saw a white rocket.

6791. From her? - From her.

6792. A white rocket? - Yes.

6793. (*The Commissioner.*) She did not change until what time? - A quarter-past 1 it was reported to me first.

6794. And then what was her bearing? - She was altering it slightly towards the S.W.

6795. It was then that you saw the rocket? - It was then that we saw the rocket.

6796. Did you see it? - No.

6797. The second officer saw it? - The second officer saw it.

*The Attorney-General:* Your Lordship has the spot marked on the chart showing where the "Titanic" was when she sank? *The Commissioner:* Yes.

*The Attorney-General:* It is not necessary to call attention to that because I think your Lordship has it before you? *The Commissioner:* Yes.

*The Attorney-General:* You will see exactly what relation this has to the "Titanic." *The Commissioner:* I do not follow it very well.

*The Attorney-General:* Have you the spot marked of the "Titanic" sinking? I think it is just at the sounding 2084.

## Page 159

*The Commissioner:* Is it right Mr. Attorney that at this time the "Titanic" would be bearing to the S.W. of where the "Californian" was? *The Attorney-General:* To the S.W. yes.

*The Commissioner:* Is it also true as this witness is telling us, that the vessel of which we do not know the name was also bearing to the S.W.?

*The Attorney-General:* I understand him to say so.

6798. (*The Commissioner - To the Witness.*) Is that so. Did you hear him? - I did my Lord. The steamer was heading S.S.E. by compass till 10 minutes to 1.

6799. Yes I know it was, but at the particular time we are talking about it was heading S.W. - Towards the S.W.

6800. I do not know what that means. Does it mean not S.W. What does towards "S.W." mean. Does it mean S.W. or does it not? - It does not mean exactly S.W.; she was heading towards the S.W.

6801. Well, near enough. Is it the fact - am I right in supposing that this vessel, the name of which you apparently do not know, from which a rocket appeared, was at the time that the rocket was sent up in the position in which probably the "Titanic" was? - No.

6802. Well, then, you have conveyed to me an erroneous impression. How did this rocket bear to you? - I have never heard the exact bearing of it.

6803. But your second officer is alive, is he not? - Yes.

6804. Have you never asked him what the bearing of that rocket was? - He told me it was heading towards the S.W. Between the bearings S.S.W. and S.W. would be a distance of at least 5 miles and she was going slowly between those two bearings.

*The Commissioner:* Mr. Attorney, again I want to know this: Apparently the "Titanic" (although it is very inaccurate because the chart is so small) would be at this time 14 or 15 miles away from this vessel?

*The Attorney-General:* Yes.

*Sir Robert Finlay:* I thought 19 miles.

*The Commissioner:* I do not think it matters very much.

*Sir Robert Finlay:* 19, Southerly by W.

*The Commissioner:* I am told 14, but let us assume it was something between 14 and 19. This mysterious vessel would be between the "Californian" and the "Titanic," and must have been well within sight of the "Titanic." *The Attorney-General:* Yes.

*The Commissioner:* We have heard about the mysterious light that was seen, the imaginary light as it was called, that was seen from the "Titanic," but dismissing that light, was there any light or any vessel seen by any witness from the "Titanic" at this time?

*The Attorney-General:* There is some evidence of it certainly.

*The Commissioner:* Of what?

*The Attorney-General:* There is some evidence of a light having been seen.

*The Commissioner:* I know; I say, dismissing that imaginary light, is there any evidence of any ship having been seen at this time or about this time by the "Titanic"? *The*

*Attorney-General:* No, I do not think so.

*The Commissioner:* What is in my brain at the present time is this, that what they saw was the "Titanic."

*The Attorney-General:* I know.

*The Commissioner:* That is in my brain, and I want to see whether I am right or not.

*The Attorney-General:* It certainly must have been very close.

*The Commissioner:* Clear it up if you can.

*The Attorney-General:* I think it will clear up as we go on - at least, as far as it can be cleared up. It is a point your Lordship will probably have to determine on the evidence.

*The Commissioner:* Yes, and therefore I want the evidence put before me as clearly as possible.

6805. (*The Attorney-General - To the Witness.*) Can you tell us whether you saw one or two masthead lights? - I only saw one.

6806. You only saw one? - The third officer said he saw two. *The Attorney-General:* Now that is important.

*The Commissioner:* That is very important, because the "Titanic" would have two.

6807. (*The Attorney-General.*) Yes, that is it - two masthead lights. (*To the Witness.*) You only saw one, but the third officer said he saw two? - And the second officer said he saw one.

*The Attorney-General:* Very well; we will hear their accounts from them.

*The Commissioner:* I am sorry to interrupt you, but it is not satisfactory to me. When was it the third officer said he saw two lights? The third officer by this time was below; I do not know what you are talking about now.

6808. (*The Attorney-General - To the Witness.*) When was it the third officer told you he had seen the two lights? - Before 12 o'clock.

6809. Before 12 o'clock? - Before midnight. At the time I saw one, he saw two.

6810. Were you on deck when he told you this? - He told me the following day, I think; I do not think it was mentioned that night.

6811. He told you next day he had seen two white lights when on deck about 12 o'clock? - Yes, two masthead lights.

6812. Is the third officer still in the ship? - Yes. 6813. Will you tell me his name? - Mr. Groves.

6814. (*The Attorney-General.*) He will be called, my Lord. (*To the Witness.*) Will you tell us what he said to you next day about these two lights? - I asked him the next day or the following day - I do not remember exactly, it is so long ago - how many lights the ship had, and he said "two." I remarked that I only saw one.

6815. (*The Commissioner.*) Now I want to know this. You had seen only one, and you and he were on the deck together, as I understand you? - Yes.

6816. Why did you ask him how many there were? - Well, I was curious about this "Titanic" accident. I was trying to locate the ship that was supposed to be between us and the "Titanic."

6817. Were you in doubt as to whether you had seen one or two lights? - I had not myself.

*The Commissioner:* Then I cannot understand why you should ask him how many lights he had seen if you yourself had no doubt whatever about it.

6818. (*The Attorney-General.*) If he did see two lights it must have been the "Titanic," must it not? - It does not follow.

6819. Do you know any other vessel it could have been? - Any amount.

6820. Which - I mean, at this particular time, you know, and at this particular spot. Can you suggest any other vessel it could have been? - Well, I do not know.

6821. Carrying two lights? - That particular spot? The spot mentioned here as 19 miles away is not, in my opinion, where the "Titanic" hit the berg. 6822. Within a radius of 20 miles of you? - No, 30 miles.

6823. Do you mean she was further from you? - She was 32 miles from where I left the wreckage.

6824. (*The Commissioner.*) Has the third officer ever expressed any opinion to you that it was the "Titanic" he saw? - No, my Lord. 6825. Never? - Never.

6826. (*The Attorney-General.*) I must put this to you. Do you remember about a quarter-past 11 on that night, that is the night of the 14th, his telling you that he had noticed a steamer - that is, the third officer, Mr. Groves? - No, I do not.

6827. A steamer about three points abaft the starboard beam, 10 to 12 miles away? - No, I do not.

6828. Did you ask about her lights? - Not then.

6829. At any time? - No. A quarter to 12 was the first time I ever mentioned anything to him about the steamer, that I recollect.

6830. Did he say to you that she was evidently a passenger steamer? - No.

6831. And did you say to him, "The only passenger steamer near us is the "Titanic"?" - I might have said that with regard to

## Page 160

the steamer, but he did not say the steamer was a passenger steamer.

6832. You might have said what? - The "Titanic."

6833. What about the "Titanic"? - The "Titanic" we were in communication with. 6834. That is not what I put, you know.

*The Commissioner:* No, and it is not what he said.

*The Attorney-General:* That is a very different thing.

6835. (*The Commissioner.*) You said, according to your statement, "The 'Titanic' is the only passenger steamer near us." You said that to him? - She was. 6836. But you said it to him? - I do not recollect saying it.

6837. You have just told me you did say it. Do collect your mind. Did you say it? - I do not recollect saying it.

6838. (*The Attorney-General.*) Did you know of any other passenger steamer near you except the "Titanic"? - I did not.

6839. But you knew the "Titanic" was not far from you? - I had no idea where the "Titanic" was.

6840. But you had been in communication with it? - Yes; I had never had its position.

6841. Did you tell him to call her up with the Morse lamp? - I did not; he had already called her up.

*The Commissioner:* I do not know whether you are going to leave it here?

*The Attorney-General:* No; I am going to call other evidence about it.

*The Commissioner:* I mean with this witness.

6842. (*The Attorney-General.*) No, I am not going to leave it. (*To the Witness.*) Who was Mr. Stone? - The second officer.

6843. It was he who relieved Mr. Groves? - Yes, at 10 minutes past 12.

6844. Do you know whether the steamer was pointed out by Mr. Stone to Mr. Groves? - He told me afterwards that she was.

6845. And that it was a passenger steamer? - I never heard that.

6846. That he had said that it was a passenger steamer? - I never heard that. 6847. (*The Commissioner.*) You do not give answers that please me at present. You said just now as plainly as possible that you answered the third officer, I think it was, and said: "The only passenger steamer near us is the 'Titanic.'" You now suggest that you do not remember whether you said that or not? - I do not recollect saying anything to him about it, my Lord.

6848. Could you have forgotten such a thing? - Well, I have heard so many stories about the "Titanic" since that I really do not know what I heard that night.

6849. (*The Attorney-General.*) But that would be rather an important matter, would it not, if you thought the steamer that was approaching you was the "Titanic"? - I never thought it. I saw a steamer.

*The Commissioner:* This is exactly what you said: "I might have said that the only passenger steamer likely to be near us is the 'Titanic.'"

6850. (*The Attorney-General - To the Witness.*) You might have said that. That is what you said before. That is right, is it not? - I might have said it; I do not recollect it.

6851. Did you know the steamer had stopped from 11.40, whatever she was? - I know she stopped round about half-past eleven.

*The Commissioner:* Will you remind me, Mr. Attorney, how the mysterious imaginary light bore from the "Titanic"?

*The Attorney-General:* It is not very satisfactory. It is said by some witness two points on the port bow; by another a point on the port bow; and by another it is said to have been on the starboard or broad on the starboard. Nobody is very satisfactory about it. Of course, your Lordship will remember it is rather difficult to know after she struck the iceberg how she was heading. We have not any very definite or clear evidence how the "Titanic" was heading. We cannot tell.

*The Commissioner:* Therefore, it comes substantially to nothing more than this: that there are witnesses from the "Titanic" who believe that they did see the white light of a ship?

*The Attorney-General:* Yes, and one of them said he saw sidelights. Your Lordship will hear some further evidence about it.

*The Commissioner:* Yes; one of them said he saw a sidelight.

*The Attorney-General:* Yes.

*The Commissioner:* It was a red light, was it not, the sidelight?

6852. (*The Attorney-General.*) Yes, quite right, my Lord. (*To the Witness.*) I think you did see your third officer signaling with a Morse lamp from the bridge? - I did.

6853. And that he got no reply? - He got no reply.

6854. Did it strike you as a curious thing that he got no reply. Did you think about it at all? - I did. It did not strike me as being very strange.

6855. You knew, of course, you were amongst ice? - Yes.

6856. And that the other vessel might also be amongst ice? - Yes.

6857. Have you an apprentice on your vessel called Gibson? - Yes.

6858. Do you remember his coming down into the chart room? - I do not.

6859. After 1.15, when you went to the chart room? - I have a recollection of Gibson opening and closing the chart room door some time between half-past 1 and half-past 4.

6860. You remember that? - I remember that.

6861. Do you remember what he opened and closed the chart room door for? - I do not.

6862. Was it to come and tell you something? - I could not say. I said, "What is it?" and he did not reply; he closed the door.

6863. At half-past 4 by your ship's time were you called by the chief officer? - Yes.

6864. Were you on deck about 20 minutes to 12? - I was on deck, yes.

6865. And at what time did you leave the deck to go to your chart room? - A quarterpast 12.

6866. Did you see that the deck lights of this vessel appeared to go out? - Not to me.

6867. Did the third officer make any observation to you about that? - No.

6868. Did he say to you that her deck lights seemed to go out? - No.

6869. Or that nearly all her deck lights seemed to go out? - No.

6870. (*The Commissioner.*) Was nothing said to you about her deck lights? - Not to me.

6871. Was anything said to anybody as far as you know? - I have heard since that the remark was passed.

6872. Who made the remark and to whom? - The third officer, I think, remarked to the second officer.

6873. When? - I do not know when.

6874. Have you never asked? - I have never asked, no.

*The Commissioner:* You hear what he says?

6875. (*The Attorney-General.*) Yes, my Lord. (*To the Witness.*) Let me finish, first, what happened during that night. You were called by the chief officer? - At 4.30, yes.

6876. What did he say? - He told me it was breaking day and the steamer that had fired the rocket was to the southward.

6877. Was still to the southward? - Yes.

6878. (*The Commissioner.*) Who told you this? - The chief officer at 4.30. 6879. What is his name? - Mr. Stewart.

6880. (*The Attorney-General.*) 4.30 ship's time, day was breaking. The steamer which had fired the rocket was still to the southward. Did you know she had fired a number of rockets? - I did not.

6881. According to you did she fire only one rocket? - Only one rocket.

6882. Have you never heard from other officers that she fired a number of rockets? - Since.

6883. When did you hear that? - The next day.

6884. Who told you? - The second officer first.

6885. What did he say? - He said she had fired several rockets in his watch - no, the chief officer told me, about 5 o'clock, that she had fired several rockets.

*The Attorney-General:* My Lord, I think it very desirable that the other witnesses from the "Californian" should be out of Court whilst this witness is giving evidence. *The*

*Commissioner:* By all means.

*The Attorney-General:* If your Lordship will direct it.

*The Commissioner:* Where are the other witnesses from the "Californian"? (*The officers of the "Californian" stood up in Court.*) Well, gentlemen, I think you had better leave the Court at present. (*The officers retired.*)

6886. (*The Attorney-General.*) Had you heard this vessel had fired altogether 8 rockets? - When.

6887. Before the chief officer came to you at 4.30? - None.

6888. Do you know that Gibson was told by the second officer to call you? - I do now.

6889. You do now? - Yes.

6890. When did you hear that? - The next day.

6891. What time the next day? - At about 7 o'clock.

6892. In the morning? - In the morning.

6893. That the second officer had told Gibson to go to the chart room to call you? - Yes.

6894. And was that for the purpose of telling you that this vessel had fired 8 rockets? - Several rockets, I understand.

*The Commissioner:* Is that the man who did come into his room?

*The Attorney-General:* Yes.

*The Commissioner:*, And went away, according to this witness, without saying anything?

6895. (*The Attorney-General.*) Yes, my Lord, that is according to the evidence. (*To the Witness.*) Gibson, the Apprentice, had been told by the second officer to go to the chart room to tell you that the vessel had fired altogether eight rockets, or, as you say, several rockets, and that the vessel had disappeared? - Had steamed away. That was the message that I understand was given.

6896. I am putting to you, you know, that what was said was the vessel had disappeared? - No, it was never mentioned, "disappeared," to me.

6897. What did you think it was firing rockets for? - When? I did not know anything about these rockets until 7 o'clock the next morning.

6898. But you saw one rocket fired? - I heard of one rocket. I did not see it fired.

6899. You heard of one? - Yes.

6900. That was before you went to the chart room? - No, at a quarter-past 1.

6901. Were you on deck then? - No.

6902. Did you remain in the chart room when you were told that a vessel was firing a rocket? - I remained in the chart room when he told me this vessel had fired a rocket. 6903. I do not understand you. You knew, of course, there was danger in this field of ice to steamers? - To a steamer steaming, yes.

6904. You knew there was danger? - Yes.

6905. That is why you stopped? - Yes.

6906. And you knew also that it was desirable, at any rate, to communicate with the

“Titanic” to tell her that there was ice? - Yes.

6907. You had done that? - I had done that.

6908. And you knew that this vessel, whatever it was, that you say had stopped? - Had stopped, yes.

6909. I do not understand - it may be my fault? - Shall I explain to you? 6910.

What did you think this vessel was firing rockets for? - I asked the second officer. I said, “Is that a company’s signal?” and he said he did not know. 6911. Then that did not satisfy you? - No, it did not.

6912. I mean whatever it was it did not satisfy you that it was a company’s signal? - It did not, but I had no reason to think it was anything else.

6913. (*The Commissioner.*) That seems odd. You knew that the vessel that was sending up this rocket was in a position of danger? - No, my Lord, I did not.

6914. Well, danger if she moved? - If she moved, yes.

6915. What did you think the rocket was sent up for? - Well, we had been trying to communicate with this steamer by Morse lamp from half-past 11, and she would not reply.

6916. This was a quarter-past one? - Yes, we had tried at intervals from half-past eleven.

6917. What did you think he was sending up a rocket for? - I thought it was acknowledging our signals, our Morse lamp. A good many steamers do not use the Morse lamp.

6918. Have you ever said that before? - That has been my story right through - my impression right along.

6919. (*The Attorney-General.*) Just let me put this to you. When you asked him whether it was a company’s signal he said he did not know. That would not satisfy you? - No. 6920. Was it then you told him to Morse her and find out what ship it was? - Yes. 6921. After the white rocket had been sent up? - After the white rocket had been sent up.

6922. And did you tell him to send Gibson, the apprentice, down to let you know his reply? - Yes.

6923. You did? - I did.

6924. What was the message that Gibson brought down to you then? - That morning? I did not get it, not to my knowledge. I never got it.

6825. You had seen the rocket or you had heard of the rocket? - Yes.

6926. You want to know what the rocket is? - Yes.

6927. You have been trying to find out by Morsing him? - Yes.

6928. And you have failed? - Yes.

6929. Then you say to him that Gibson was to come down and tell you what the result of the Morse signaling was? - Yes.

6930. And then, I suppose, you remained in the chart room? - I remained in the chart room.

6931. Then, so far as you were concerned, you did not know at all what the rocket was for? - No.

6932. And you remained in the chart room? - Yes, I remained in the chart room. 6933. And you did nothing further? - I did nothing further myself.

6934-5. If it was not a company's signal, must it not have been a distress signal? - If it had been a distress signal the officer on watch would have told me.

6936. I say, if it was not a company's signal, must it not have been a distress signal? -

Well, I do not know of any other signals but distress signals that are used at sea. 6937.

You do not expect at sea, where you were, to see a rocket unless it is a distress signal, do you? - We sometimes get these company's signals which resemble rockets; they do not shoot as high and they do not explode. 6938. You have already told us that you were not satisfied that was a company's signal.

You have told us that? - I asked the officer, was it a company's signal.

6939. (*The Commissioner.*) And he did not know? - He did not know.

6940. (*The Attorney-General.*) You have told me already some few minutes ago - ? -  
Very well. Sir.

6941. That you were not satisfied it was a company's signal. You did not think it was a company's signal? - I inquired, was it a company's signal.

6942. But you had been told that he did not know? - He said he did not know.

6943. Very well, that did not satisfy you? - It did not satisfy me.

6944. Then if it was not that, it might have been a distress signal? - It might have been.

6945. And you remained in the chart room? - I remained in the chart room.

6946. Expecting Gibson, the Apprentice, to come down and report to you? - Yes.

## Page 162

6947. Gibson did come down? - So I understand.

6948. But you know perfectly well that he came? - I know now.

6949. Did you know then? - I did not.

6950. I think you told us you heard Gibson open and close the door? - Yes.

6951. And you said, "What is it?" - Yes.

6952. And he said nothing? - He did not say anything.

6953. And you were expecting him to come down and tell you what the meaning of the rocket was? - But in the meantime I was asleep.

6954. (*The Commissioner.*) Yes, but you were not asleep - at least, I suppose not - when you said to the boy, "What is it?" - I was wakened up by the opening of the door - the banging of the door.

*The Commissioner:* There is one matter I want. When was the Morse signal first used?

6955. (*The Attorney-General.*) You hear my Lord's question? - Half-past 11 at night.

6956. And no reply was ever obtained? - No reply.

6957. So it would follow from what you have said, would it not, that if your man Gill says he did see a distress signal he was right? - No. At the distance we were away from that steamer, if it had been a distress signal we would have heard the report.

6958. I do not understand. From what you have been telling us just now you did not know that this rocket which you saw was not a distress signal? - Well, I am under the impression it was not.

6959. Why? - Because we did not hear the report; we were close enough to hear the report of any distress signal.

6960. How many miles off were you? - About four or five - four to five miles. 6961. Let us go back to the story. At half-past 4 in the morning, when the chief officer called you, do you remember saying to him that the second officer had said something to you about a rocket? - Yes, I said that. 6962. Did you then go on the bridge? - Yes.

6963. Do you remember just before 5 o'clock a conversation with your chief officer? - I do.

6964. About the steamer? - About this, which he said was a yellow-funneled steamer.

6965. What was it? - Do you mean the whole of the conversation?

6966. I only want the substance of it? - Well, I was conversing with him about the probability of pushing through the ice, to commence with. I was undecided whether to go through it or to turn round and go back, and we decided to go on, so I told him to put the engines on and stand by. He did so. Then he said, "Will you go down to look at this steamer to the southward?" I asked him, "Why, what is the matter with it?" He said, "He might have lost his rudder." But I said, "Why? He has not got any signals up." "No, but," he said, "the second officer in his watch said he fired several rockets." I said, "Go and call the wireless operator." 6967. Did he? - He did.

6968. Did he go to the wireless operator? - Yes.

6969. Did the wireless operator come back, or did the chief officer come back? - The chief officer came back some time after.

6970. How long after? - I suppose 15 to 20 minutes.

6971. And what did he say? - He said, "There is a ship sunk."

6972. Did he tell you what ship? - No; he went back to the wireless room straight away.

6973. Did he come back a few minutes after that? - Some time after that. He said, "The 'Titanic' has hit a berg and sunk."

6974. What did you say then? - I left the bridge and went to the wireless room myself.

6975. Did you say anything at all about these rockets? - To him, then?

6976. Yes? - No.

6977. Or anything about the ship you had seen the night before? - No.

6978. Or about the possibility of that having been the "Titanic"? - No.

6979. Or about the vessel that had been stopped about 11.40? - No, I never mentioned a thing to him then. I went right to the wireless.

6980. Or about the vessel you expected to hear about from Gibson? - No.

6981. Or whether Gibson had been sent down by the second officer to tell you anything about that steamer? - No.

6982. It never occurred to you at all? - Not then.

6983. Were you quite comfortable in your mind when you heard the "Titanic" had sunk, in reference to your own actions? - Well, I thought we ought to have seen her signals at 19 miles, that was the only thing that was worrying me.

6984. Do you mean rockets? - Her distress rockets - if she had fired any, which I presume she had.

6985. You ought to have seen them? - I thought we might have seen them at 19 miles.

6986. Have you ever heard what the steamer was that according to you sent up rockets if it was not the "Titanic"? - No, I have never heard anything about it.

6987. We know from the evidence in this case that the "Titanic" did send up rockets for some considerable time? - Yes.
6988. So far as I understand from you, you do not know of any other steamer which, on that night, and about this time, sent up rockets? - I do not.
6989. Does not it strike you now that that steamer you saw sending up rockets must have been the "Titanic"? - No.
6990. Not now? - No, I am positive it was not the "Titanic."
6991. Why are you positive it was not? - Because a ship like the "Titanic" at sea it is an utter impossibility for anyone to mistake.
6992. That must depend upon the distance you are from her? - Well, my distance, according to my estimate, is 4 to 5 miles.
6993. But might not she have been a good deal further off? - I do not think so. I do not think we would have seen her sidelights.
- 6994-5. Of course, if you saw her green light about 4 or 5 miles away, that would show to you that she must have been a pretty big ship, would it not? - It would not follow; there are so many steamers have electric lights now. You see sidelights a great deal further than you used to.
6996. If she was 4 or 5 miles away her light must have been at a high elevation from you, must it not, for you to see it? - A steamer something like ourselves, as I said before.
6997. I mean her sidelight must have been pretty high from the water if you could see it 4 to 5 miles distant? - The "Californian" is 40 feet above the water, and I said she was a steamer something like the "Californian."
6998. Now let us understand where we are about it. Am I right in this, that you cannot suggest any other passenger steamer that was in that neighbourhood at that time - that is midnight - except the "Titanic"? - I only saw one steamer, passenger steamer, of any size that day, and that was the "Mount Temple."
6999. I wish you would answer the question I am putting to you. Is the result of your evidence that you cannot suggest the name of any other passenger steamer that was in the neighbourhood of your vessel at about midnight on the 14th April? - No, I cannot.
7000. You cannot suggest any other steamer that sent up rockets at 1 o'clock or between 1 and 2 in the morning of Monday the 15th April, except the "Titanic"? - No, I have not heard of any.
7001. Did you receive a message from the "Virginian" at 6 o'clock that morning? - Yes.
7002. That the "Titanic" had struck a berg? - "Passengers in boats; ship sinking."
7003. And it gave you the position? - Latitude and Longitude 41° 46', 50° 14'. 7004. And did you at once start for that position? - I did.
7005. What course did you make? - I made from 6 until half-past anything between S. and S.W. I was pushing through field ice.

**Page 163**

7006. That was of course in order to reach the position of the "Titanic"? - Yes. *The Attorney-General*: Has your Lordship got the chart before you?

*The Commissioner:* Yes.

7007. (*The Attorney-General.*) That is very much the course that he would take to go from the spot that he has indicated just below the "J" to the spot of the figure "4" in the soundings which marks where the "Titanic" sank. (*To the Witness.*) The course that you were making was S 20° W., was it not? - No, I was endeavouring to make S. 16° W., as near as possible. 7008. S 16° W.? - Yes.

7009. Was that direction the one from which you had seen the rocket? - I did not see the rocket.

7010. Or from which you had heard the rocket had been seen? - I did not hear as to the bearing of the rocket then.

7011. Had not you heard? - I had heard of rockets, but no particulars of bearing then.

7012. Or where the steamer was - how she bore at all? - No. 7013. Nothing about her? - No.

7014. Did you about half-past 7 pass close to the "Mount Temple"? - I did. 7015.

She was also stopped? - She was stopped.

7016. (*The Attorney-General.*) The captain of the "Mount Temple" will be called before your Lordship. (*To the Witness.*) About the same time did you get a verbal message from your operator that the "Carpathia" was standing by the "Titanic"? - Yes. 7017. And to have boats ready and lifebelts? - Yes.

7018. And then you eventually saw the "Carpathia." I need not go through that part of the story. Did you eventually get to the position of the foundering of the "Titanic"? - The real position or the position given?

7019. The position given? - I passed that position.

7020. When did you pass that position? - I must have passed that position I should say about half-past 7.

7021. That is the position given of 41° 46' and 50° 14'? - Yes.

7022. Did you cruise round the vicinity of the wreck? - I cruised round there until 11.

7023. How did you know what was the position? - I got a good observation at noon that day.

7024. I do not quite understand what you mean. You said just now that you passed the position indicated to you by the wireless messages? - Yes.

7025. Where the "Titanic" had sunk? - Yes.

7026. Did you see anything at all there? - The "Mount Temple" was in the vicinity of that position.

7027. She was near there? - Yes.

7028. Did you see any wreckage? - Not where the "Mount Temple" was.

7029. Did you see any wreckage anywhere? - I did.

7030. Where? - Near the "Carpathia."

7031. What did you see? - I saw several boats, deck chairs, cushions, planks.

7032. Collapsible boats? - I saw two collapsible boats.

7033. Did you see any bodies? - No.

7034. Any lifebelts floating? - No.

7035. Any wreckage? - Yes.

7036. Much? - Not a great deal.

7037. Did you cruise round and search? - I did.
7038. To see if you could find any bodies or any living persons? - I did. I did not see anything at all.
7039. I should like to understand from you, if you say that the position indicated to you was wrong, what do you say was the position? - The position where I left the wreckage was 41° 33' N., 50°, 1' W.
7040. One further general question. I want as to what you did. On your vessel on the Sunday evening, April 14th, when you came amongst the ice, did you take any precautions? - Yes, I did.
7041. Tell us what you did. I want you to tell my Lord what you did? - I doubled the look-out. We had one man at the crow's-nest and a man at the forecandle head, and I was on the bridge myself.
7042. Just let us understand that. Where had you a man on the look-out before you doubled your look-out? - In the crow's-nest.
7043. And then did he report ice? - As I reversed the engines that night there were two reports. I do not know which man reported them, or whether each reported one.
7044. I do not think you are quite following, or it may be I am not. At 8 o'clock you had a report about ice, had you, from your look-out? - No.
7045. When did you? - At about 22 minutes past 10.
7046. As late as that? - Yes, it was reported then.
7047. When did you double your look-out? - Eight o'clock.
7048. Why did you double the look-out? - Because we had passed bergs during the afternoon and we had had a report of bergs from east-bound steamers.
7049. You had reported to the "Titanic" that you had passed ice at half-past 6 that day? - Yes.
7050. You doubled the look-out. You had one man at the crow's-nest? - Yes, and one man right in the bows of the ship.
7051. Was that before you doubled the look-out, or is that doubling the look-out? - That is doubling the look-out.
7052. That is what I want you to tell us. What is the addition that you made? Was it the man on the forecandle head? - The man on the forecandle head.
7053. Knowing there was ice about you had one man in the crow's-nest? - Yes.
7054. And then as an extra precaution you put a man on the forecandle head? - Yes.
7055. That is right, is it? - Yes.
7056. Did you find it better for detecting ice; to have a man right in the bows like that? - Well, I do not know. This is my first experience of field ice. I think I saw the ice myself before they did.
7057. Did you have glasses? - I was not using them at the time. I looked through glasses after I had first seen it and could not make anything of it.
7058. Gill left your ship in Boston, did he not? - He did.
7059. Was he simply a donkey man? - Assistant donkey man? - Assistant donkey man.
7060. And he did not return? - He did not return.
7061. He had not a discharge? - No, he deserted; I entered him as deserted. *The Attorney-General*: Yes, you gave notice.

**Examined by Mr. SCANLAN.**

7062. When you went down from the bridge to the chart room did you lie down? - No.  
7063. But you went to sleep? - When?  
7064. (*The Commissioner.*) When did you lose sight, and how, of the ship the lights of which you had seen? - The second officer reported to me he last saw her at 2 o'clock, and it was then bearing S.W. 1/2 W. by compass.  
7065. Is that the last so far as you know that was seen of that vessel from your ship? - As far as I know it was, my Lord.  
7066. And was she at this time about 5 miles away? - No, she must have been more by then.  
7067. How many miles? - I think 8.  
7068. You were both stopped, you know, all that time? - No, she was steaming, my Lord.  
7069. I thought you told us that this steamer stopped? - She did at half-past 11.  
7070. And when did she begin to go on again? - From the second officer's report she commenced about 1 o'clock - 10 minutes to 1. 7071. She could not steam very quickly, I suppose? -

**Page 163**

- No, she would not be steaming very quickly.  
7072. She was in the middle of the ice? - Yes.  
7073. And then at 2 o'clock, the time when we know the "Titanic" went down, the vessel vanished? - He saw her stern light through the glasses faintly.  
7074. And that was the end of her? - That was the last he saw of her.  
7075. And she has never been heard of since? - Not to my knowledge.  
7076. (*Mr. Scanlan.*) Can you say when you went to sleep on the Monday morning? - I told the second officer I was going to lie down at 20 minutes to 1.  
7077. When Gibson came into your room did you look to ascertain the time? - Not to my knowledge; I do not recollect Gibson coming into the room.  
7078. I think you recollect his having spoken to you? - I said, "What is it?" 7079. Can you say what time that was? - I cannot.  
7080. When did your Marconi operator come off duty? - So far as I was concerned he went off at 11 o'clock, after he had sent the last message.  
7081. At 11 o'clock on the Sunday night? - Yes.  
7082. When you were in doubt as to the name of this ship and as to the meaning of her sending up a rocket, could you not have ascertained definitely by calling in the assistance of your Marconi operator? - When? At 1 o'clock in the morning?  
7083. Yes? - This steamer had been in sight, the one that fired the rocket, when we sent the last message to the "Titanic," and I was certain that the steamer was not the "Titanic," and the operator said he had not any other steamers, so I drew my conclusion that she had not got any wireless.

7084. I think you said from the appearance of the green light which you saw before going down from the bridge, you thought it was an electric light? - Did I say that?
7085. Yes. Well, you said that many steamers have electric lights? - They have. 7086. Did you think whether or not it was an electric light? - I did not think anything about it; I was not at all concerned about the steamer.
7087. Had this steamer which you saw, and which you say was, at all events, about the same size as your own, had an electric apparatus, and had you obtained the assistance of your operator, you could have got into direct communication with her, whoever she was? - You say if she had an electric apparatus?
7088. If she had a Marconi installation? - If she had had a Marconi, and we had, of course we could have got into communication.
7089. You had the Marconi? - Yes, we had.
7090. Would not it have been quite a simple thing for you at that time when you were in doubt as to what was the name of the ship, and as to what was the reason of her sending up rockets, to have wakened up your Marconi operator and asked him to speak to this ship? - It would if it had worried me a great deal, but it did not worry me. I was still thinking of the company's signal.
7091. At all events, now in the light of your experience, would it not have been a prudent thing to do? - Well, we would have got the "Titanic's" signals if we had done.
7092. If you had done you would, in all probability, have got the message from this vessel? - No. I do not think so. In my opinion that steamer had not got wireless at all. 7093. What reason have you for thinking that this steamer, a steamer which you say was, at all events, as big as your own, had not got wireless? - At 11 o'clock when I saw her the operator told me he had not got anything only the "Titanic." I remarked then, "That is not the 'Titanic,'" judging from its size and the number of lights about it; and if he only had one ship, then it was not the "Titanic." I do not see how he could still have that ship.
7094. But as a mere matter of precaution, when you were in doubt and left word that someone was to come down to your cabin and give you a message, would not it have been a proper thing to have tried the experiment? - Well, I was waiting for further information. I had a responsible officer on the bridge who was finding this out for me.
7095. At all events, having your Marconi apparatus it would have been no trouble whatever? - None whatever.
7096. To have got your operator to come to his room? - He was in his room.
7097. And he could have spoken this vessel? - If she had had wireless.
7098. If you had done this you would have found out whether she had wireless? - Very likely. If she had had it we would have got her.
7099. If she had had it you could have ascertained directly in what trouble she was when she sent up the rockets? - Yes.
7100. Is it in ocean-going vessels the usual practice and a recognised rule to double look outs in presence of ice, in a fog and in a haze? - Yes.
7101. Is that known by every captain? - I do not know. I know.
7102. It is the general rule? - As far as I know.
7103. Did you observe between 8 and 10 o'clock that night that there was a haze? - No, I did not.

7104. Can you say that there was not? - In my opinion there was not.

*The Commissioner:* Do you know of any evidence except the evidence we have already heard, Mr. Scanlan, as to the existence of this supposed haze?

*Mr. Scanlan:* I do not know anything else, my Lord; but what impresses me is that the look-out man on the "Titanic" not only himself says that there was a haze, but he says that his companion in the crow's-nest remarked on the haze to him.

*The Commissioner:* Yes, I remember that, and I am asking you whether you know of any other evidence except that which we have heard?

7105. (*Mr. Scanlan.*) No, my Lord, I do not know. (*To the Witness.*) Is it possible that in regard to vessels separated by a distance of 19 miles there might be a haze on the horizon with one of them, and not a haze on the horizon with the other? - I have seen that.

7106.. I mean it is a local effect? - I have seen that.

7107. Is a haze commonly produced by the presence of ice? - I do not know, I have not had a great experience in ice.

7108. You have not had a great experience in ice? - No.

7109. Is it not well known that ice is more easily seen the nearer you are to the water, especially field ice? - I do not know, I have not heard that.

7110. You have not heard that? - No.

7111. You have not had much experience of ice? - No I have not; of field ice this is my first experience.

7112. When you first had warning of the presence of ice did you slow down? - No.

7113. You did not slow down? - No.

7114. Is it not usual to slow down in the presence of ice? - No, not in clear weather.

7115. At what speed were you going? - 11 knots.

7116. But if you are in a haze is it usual to slow down? - In an ice district, yes. 7117.

When you stopped on account of the ice what lights were you showing? - Two masthead lights, the red and green sidelights, and a stern light.

7118. How far do you think from your ship her lights would be observable by another ship? - The masthead lights?

7119. Yes? - I suppose the masthead lights you would see 7 or 8 miles - 8 miles I should think.

7120. Suppose the "Titanic" was 7 or 8 miles from you between 11. 30 and 12 o'clock, would those on her bridge have been able to see your lights? - Easily. 7121. Do you practise your hands at boat drill? - We do.

## **Page 165**

7122. Regularly? - Once a passage.

7123. And have you a boat muster? - Well, that is a boat muster.

7124. What does it consist of? We have not heard yet what a proper boat muster consists of. Will you explain it to my Lord? - I do not know if it is a proper boat muster, but I can tell you what I do. I usually muster all hands on deck; the chief officer calls the names over, and as they pass him they report their boat, and they also report

their fire station from the boat list. They line up by their boats. When every man has reported the boat he belongs to and his fire station I usually have a fire drill; I report a fire in one side of the ship, and they run to that side and connect the fire hose; and I usually swing a couple of boats out on the other side.

7125. Are your lifeboats provisioned in case of accident before you commence a particular voyage? - They are provisioned all the time with water and biscuits.
7126. And a compass? - A compass, lamp, oil, sea anchor.
7127. Are all those in each boat before the voyage begins? - They are in all the time.
7128. All the time? - All the time.
7129. In readiness for any emergency? - And renewed every voyage.
7130. Then all your hands know exactly the station to go to? - They do.

**Examined by Mr. ROCHE.**

7131. You had never been in ice before? - Not in field ice.
7132. You stopped your engines at half-past 10 when you got amongst it? - 20 minutes past.
7133. And you did not put them ahead again until something after four in the morning? - The first move was 5.15.
7134. You were treating the ice, so to speak, with great respect, and behaved with great caution with regard to it? - I was treating it with every respect.
7135. May I take it that you were not anxious if you could help it, between 10 o'clock and 5 o'clock, to move your engines? - I did not want to move them if I could help it. They were ready to move at a moment's notice.
7136. Was that the reason, perhaps, why you were not so inquisitive as to these signals as you might otherwise have been? - No, that had not anything to do with it.

**Examined by Mr. HARBINSON.**

7137. I understand when you saw ice first this evening it was before 6? - It must have been about 5.
7138. So that it was pretty clear daylight then? - It was perfectly clear - a beautiful day.
7139. So that, it being clear at that time, you did not consider at that moment that it was necessary to slacken speed? - No.
7140. But assuming that you had first heard of ice at 11. 30 that night, would not you have considered it necessary? Did you, as a matter of fact, that night later on slacken speed? - Not until 20 minutes past 10.
7141. You were only going 11 knots an hour? - That was my full speed.
7142. Thirteen, I thought you said? - Driving. On my consumption then, 11 knots. 7143. Having seen ice and knowing you were on the verge of an ice-field, would you not have considered, provided you could have driven the ship at that speed, that 21 knots an hour would be grossly excessive? - Oh, I do not know anything about that.
7144. Under the conditions, ice being in the immediate vicinity, is not that a very high speed? - It was a clear night.

7145. It may have been. Is not it a high speed? - Twenty-one knots is a high speed.
7146. A very high speed? - Yes, very fast.
7147. And an ice-field is very dangerous? - If you hit it.
7148. And at night it is sometimes not easy to see ice? - I do not know. I saw it. 7149. You may have. So you tell us. But do you not consider that 21 knots an hour, or, rather, 45 knots in two hours, was a grossly excessive speed? - I really do not know. It all depends on how quickly that ship handles.
7150. That is to say, on how quickly she responds to the rudder? - To the rudder and engines.
7151. Now, supposing you saw ice right ahead, what message would you send down from the bridge to the engine room? - It all depends what the ice was like.
7152. Supposing you saw a berg of ice on your starboard side? - One solitary berg?
7153. Yes? - On my starboard side?
7154. And you were making for it head on? - That would be right ahead; that would not be on the starboard side.
7155. Slightly to the starboard? - I should starboard the helm; go further away from it.
7156. What direction would you give as to the engines? - I would not give any.
7157. You would go right on? - I would go right on if it was a single berg.
7158. There were two engines, a starboard engine and a port engine on the "Titanic." Suppose you sent the message, "Starboard engine ahead; port engine reverse," what effect would that have on the steamer? - It would twist her head to port.
7159. Would it turn the steamer in her own length? - I do not know; I have no experience of 21 knot steamers.
7160. You have not? - No.
7161. Would it be likely to get rid of the berg quickly? - Oh, yes, to get away from it; that would be the idea of stopping the port engine or reversing it.
7162. Reverse the port and keep ahead with the starboard? - That would twist it quicker.
7163. At once? - Very quickly.
7164. That would be the quickest way of altering the course of the steamer? - I should think so.
7165. You have told us you have four lifeboats for a crew of 102? - Four lifeboats and two ordinary ships' boats.
7166. Is that the normal complement for cargo boats like yours to carry, prescribed by the Board of Trade? - We have more, I think, than are really required.
7167. (*The Commissioner.*) Is it a crew of 102?
- Mr. Harbinson:* Yes.
- The Witness:* That is including the passengers.
- Mr. Harbinson:* I am including passengers and crew.
7168. (*The Commissioner.*) But you had not any passengers? - No, we only had 48 at the time.
7169. (*Mr. Harbinson.*) But you have a carrying capacity of 102? - Yes.
7170. And four lifeboats to make provision for them? - Yes, and two ships' boats.
7171. Is four lifeboats the number of boats prescribed for steamers of your class by the Board of Trade? - I do not know; I think that would be excessive. They do not

require you to carry double the boat accommodation for the crew you have in the ship. *The Commissioner:* I do not want to hurry you at all, but we are not at present concerned to inquire whether this ship, the "Californian," was properly supplied with lifeboats. If I am to sit here and inquire into the manning and equipment of every vessel referred to I shall never finish.

*Mr. Harbinson:* Quite so, my Lord.

*The Commissioner:* I do not want to hurry you or to shut out anything, but do not ask needless questions.

## **Page 166**

*Mr. Harbinson:* If I may say so, my Lord, of course, I accept your Lordship's suggestion. The point I was going to make was that if this proportion of lifeboat accommodation had been provided for the "Titanic," of course the whole of the passengers would have been saved.

*The Commissioner:* Well, that may be. You can do that without asking these questions.

7172. (*Mr. Harbinson - To the Witness.*) Now I want to put a further question to you about the look-out men. You have a crow's-nest on your boat? - Yes.

7172a. Is it an able-bodied seaman you keep posted there usually? - Yes, always.

7172b. Is it a most responsible position? - Oh, I suppose it is.

7172c. To detect danger ahead? - Yes.

7172d. Do you not think that the responsibility of that position would be better satisfied if a junior officer was also posted in the crow's-nest along with the able-bodied seamen? - Do you mean in my own ship?

7172e. In any ship. I ask you now from your general experience as a captain and a seagoing man? - No. If you have an officer on the bridge, I think that is quite sufficient.

*The Commissioner:* Now that is not the answer you wanted. He is giving you an answer that you did not want, and I respectfully submit you may leave him alone now.

### **Examined by Mr. CLEMENT EDWARDS.**

7173. I think you said that you did not give any instructions to the Marconi operator to try and ascertain the name of this vessel? - No; I did at 11 o'clock.

7174. Not after 11 o'clock? - Not after 11 o'clock.

7175. You have given evidence, I believe, before the American Court of Enquiry? - I have.

7176. Did you at that Inquiry, in reply to a question, say "about 1 o'clock I told the operator to call the ship again"? - No.

7177. So that if you are so reported, it is untrue? - It is.

7178. You said, I think, that when the lad came you have a faint recollection - *The Commissioner:* Have you got the print of the shorthand note of the evidence of this witness in America?

*Mr. Clement Edwards:* I have not, my Lord, but I have what purports to be a verbatim question and answer given by this witness before the American Enquiry. *The Commissioner:* Where does it come from?

*Mr. Clement Edwards:* Reuter's Agency, my Lord.

*The Commissioner:* Was it telegraphed to this country verbatim?

*Mr. Clement Edwards:* Yes, my Lord.

*The Commissioner:* Well, read it to him. Put it to him specifically.

*The Attorney-General:* I have it, my Lord; I cannot say I have read it.

*The Commissioner:* Put it specifically to him.

*Mr. Clement Edwards:* There are certain matters into which this witness has given testimony this morning, and it would be more convenient, if I may respectfully suggest it, if I put to him certain quite specific questions.

*The Commissioner:* Follow your own course.

7179. (*Mr. Clement Edwards - To the Witness.*) You said, I think, that you have no recollection of the lad Gibson saying anything when he came to the chart room in the morning? - No, I have no recollection.

7180. Did you tell the American Court of Enquiry -

*The Commissioner:* I understood you to say something different from that; I understood you to say that the boy said nothing.

*Mr. Clement Edwards:* That is what I understood the witness to say now. *The*

*Commissioner:* Oh, no; now he says that he does not remember that he said anything. I understood him first to say that the boy came in and shut the door, that he then said to the boy, "What is it?" and that the boy behaved in a most extraordinary manner by shutting the door and going away.

7181. (*Mr. Clement Edwards - To the Witness.*) What do you say? - Do you remember the lad saying anything or not? - I do not remember him saying anything.

7182. (*The Commissioner.*) Do you remember that he said nothing? - He did not say anything to me as far as I know.

7183. (*Mr. Clement Edwards.*) Did you tell the American Court of Enquiry, "I have a faint recollection of hearing the cabin boy about four o'clock saying something about the ship still standing by"? - I did not.

7184. As a matter of fact you were expecting the lad to come back with a message from the officer as to whether the ship was still there? - Not to come back; I was expecting him to come down for the first time.

7185. So that you were expecting a message from the lad? - I was expecting a message from the officer.

7186. (*The Commissioner.*) By the lad? - By the Apprentice.

7187. (*Mr. Clement Edwards.*) And you said nothing of that before the American Court? - About what you have just read?

7188. Yes? - No.

7189. Did you tell the American Court that "there were flashes of light from this ship; they might have been signals of distress or Morse messages"? - No, Sir.

7190. You said nothing about flashes of light? - I said the Second Officer reported this one rocket which I have mentioned here this morning.

7191. Did you say anything at all about there being flashes of light, and they might have been Morse signals? - No.
7192. Nothing at all? - Nothing at all.
7193. You have said that there was no haze that night? - Yes.
7194. Did you tell the American Court of Enquiry that the light that night was very extraordinary; the conditions were very deceiving? - I told them it was a very strange night; it was hard to define where the sky ended and the water commenced. There was what you call a soft horizon. I was sometimes mistaking the stars low down on the horizon for steamer's lights.
7195. What is that condition of things due to, if it is not due to a haze? - I do not know; just a flash, that is all.
7196. What do you suggest as a characteristic of the atmosphere on a night of that sort? - I really could not say. We could see a light the full limit of my vessel.
7197. You have said that when you heard from the "Virginian" in the morning that the "Titanic" had gone down, and when you heard that she was 19 miles away you did say something about: "Well, you ought to have seen her signals"? - I did not say it; I thought it.
7198. Did you tell the American Court of Enquiry that at 19 miles distance it would be utterly impossible to see either distress signals or Morse flashes? - I did not say "utterly impossible."
7199. Do you say it was impossible? - No. I said I did not think it would be possible to see them at that distance. If they were seen they would be so low on the horizon they might be shooting stars.
7200. You now think that it was possible? - That we might have seen them.
7201. At what time did you think it was possible? - At half-past six the next morning I was thinking about it.
7202. Before you were asked these questions at the American Enquiry, you thought it was possible to have seen these lights? - I thought it might have been possible.

**Page 167**

7203. And you told the American Enquiry that you thought it was not possible? - I did not think it was possible.
7204. When did you first hear of the message from the "Titanic" that you were to shut up and keep off as they were busy? - Some time during the morning of the 15th.
7205. Did you regard it as an insulting message? - Oh, no.
7206. Did either of your officers regard it as an insulting message? - No.
7207. (*The Commissioner.*) Is a record kept of these messages? - Yes, my Lord.
7208. By the operator? - By the operator.
- The Attorney-General:* We are going to call him.
7209. (*Mr. Clement Edwards.*) Why did you tell them that you were surrounded by ice? Did you want to warn them that you were in danger at all? - It is usual, when we see it, to send out messages that we have seen it to all ships in the vicinity.

7210. When you said that you were surrounded by ice, was that to warn them of your danger? - No; to warn them, so that they would know if they were in the vicinity, or pass the word on to other steamers.
7211. That is to say, it was a message of courtesy? - A message of advice. 7212. It was rather a snub, was it not? - Who for?
7213. For them to tell you in reply to that, "Shut up, and keep off"? - I suppose it was, more or less.
7214. And did your officer who received it take it as so? - I do not think so.
7215. You had no conversation with him about it? - I asked him the next morning what they said. When I heard that the "Titanic" had sunk, I sent along and asked him whether he delivered the message I sent at 11 o'clock. He said he had, and they told him to please keep quiet, or shut up.
7216. To shut up? - Something like that; they were busy.
7217. Did you have any conversation with him as to the character of this message? - No.
7218. None at all? - No.
7219. Which officer was that? - That was the wireless operator.
7220. He reported to you directly? - He reported to me directly.
7221. Did he when he got that message report to the officer on the watch? - I was on watch myself then, at 11 o'clock.
7222. Then he did not report to you? - No; I do not think he came on deck again. 7223. Did not you tell the American Court of Enquiry that the operator did come to you at 11 o'clock, and that you then told him to try and find out what was the name of the ship that had stopped close by? - No.
7224. You did not? - No.

**Examined by Mr. LEWIS.**

7225. How long have you been in charge of a ship; how long have you been a Captain? - I beg your pardon?
7226. (*The Commissioner.*) You are asked how long you have had a captain's certificate? - Since 1901.
7227. (*Mr. Lewis.*) Do you consider it reasonable, seeing that you had very little experience of ice, to go below to the chart room and lie there? - When a ship is stopped?
7228. Yes? - Perfectly justified.
7229. Do you consider it reasonable, in view of the fact that you had been in communication with other ships that your wireless operator should have gone off duty at 11 o'clock? - Yes.
7230. Can you tell us what control you have over the operators? - I do not know that we have any great control. They are amenable to the discipline of the ship to a certain extent, but their hours I do not think I have anything to do with.
7231. They are under the control, I understand, of the Marconi Company? - To a certain extent they are.

7232. To what extent; can you tell us? - No.

7233. Can you tell us if you pay them? - No, they pay them.

7234. So that you have only control so far as the mere discipline is concerned? - If I wanted to get a message sent at any time, day or night, I would send it. 7235. Are you interested in messages received by the ship? - What is that?

*The Commissioner:* What do you mean by "interested"? Do you mean, "Does he receive any money in connection with them?" *Mr. Lewis:* No.

*The Commissioner:* What is it then?

7236. (*Mr. Lewis.*) I am anxious to know when messages are being received, important messages, whether the captain is at all interested to find out what is happening. (*To the Witness.*) I understand you were in communication with the "Titanic"? - Yes. 7237. Would you consider it dangerous for the "Titanic" to be so close to the ice? - I did not know where the "Titanic" was. I never had her position.

7238. I understand you to say she may have been a long way away? - Anywhere.

7239. She may have been close? - She may have been close or away past.

7240. If she had been 19 miles away, would not her position have been dangerous? - I did not know. I did not know at all how far the ice extended. 7241. It may have extended that distance? - It was more than likely.

7242. If the "Titanic" had been close to it, it would have been extremely dangerous to the "Titanic"? - If they were not keeping a look-out.

7243. Particularly to a large steamer? - If they were not keeping a look-out. 7244. We know now that it has been in evidence that they did have a look-out. You heard that, I take it, did not you, that they did have a look-out on the ship? - Yes. 7245. Under those circumstances, seeing that there was a possibility of the boat being near, do you consider it reasonable that you should go off duty? - Perfectly reasonable. I was looking after my own ship.

*The Commissioner:* These are answers that do not do you the least good, and they are not the answers that you want.

7246. (*Mr. Lewis.*) Very well, my Lord. (*To the Witness.*) Do you consider it reasonable, knowing that you were in communication with the "Titanic" that you did not make inquiries from the operator - that you went on till next day before knowing what the reply was from the "Titanic"? - He would give the message I knew, and if he could not give the message he would come back and tell me, I should have thought. 7247. You consider that reasonable? - I do.

**Examined by Sir ROBERT FINLAY.**

7248. Just a very few questions: Who appoints and pays the Marconi man on board your boat? - The Marconi Company, I understand.

7249. Cape Race is the south-east point of Newfoundland, is it not? - Yes.

7250. Is it the great point for trade messages? - Yes, it is, I believe.

7251. Now with regard to your own vessel, where is the best point for a look-out, on the stem or the crow's-nest, in your vessel? - The man in the crow's-nest on a clear day would see a light further than a man on the foc'sle head of the ship would; but

sometimes in hazy weather it is possible to see better from the foc'sle head than it is from the crow's-nest.

7252. And with regard to ice, where would that be best seen from? - On a clear night I think you

**Page 168**

would see just as well from the crow's-nest as you. would from the foc'sle head.

7253. You had one man only in the crow's-nest? - One only.

7254. And one only on the stem? - On the foc'sle.

7255. As a matter of fact, I think you said that you saw the ice before either of them? - I reversed the engines myself before they reported it. Just as they were reporting it I had reversed the engines.

7256. Only one other question. You came to the point where the "Titanic" had been reported as having foundered, 41° 46 N., if I rightly understood you, and 50° 14 W.? - Yes.

7257. How far from that point was the "Mount Temple"? - I think she was very close to it. I should think she had been looking for the "Titanic" boats or wreckage, or something, she was stopped there.

7258. You went on from that point? - Yes.

7259. In what direction did you proceed after that point? - I steered, as far as I recollect, about South or South by East true from there along the edge of the ice - the western edge of the ice.

7260. How far did you go till you got to the wreckage? - I passed her somewhere about half-past seven - somewhere in the vicinity of half-past seven. I got there at half-past eight.

7261. What rate were you going at? - We were driving all we possibly could. The chief engineer estimates the speed at 13 1/2. I estimate it at 13.

7262. You were about an hour? - We were an hour.

7263. Had you also any observations to enable you to fix the spot where the wreckage was found? - I had very good observations at noon and that afternoon.

7264. How long did you remain on the spot where the wreckage was? - We arrived at half-past eight - 11.15.

7265. Can you give us your noon observations? - Yes; 41.33 N. and 50. 9 W.

7266. That is your noon position? - That is my noon position on the 15th April.

*The Attorney-General:* That is the Monday morning.

7267. (*Sir Robert Finlay.*) When you left the scene of the wreckage, what course did you hold? - 11.20 proceeded on course N. 59, W. by compass.

7268. (*The Commissioner.*) Is that the ship's log? - This is the ship's log, my Lord.

7269. (*Sir Robert Finlay.*) What would that be true? - I think I was intending to make N. 89 W. I think that was my intention. The variation is 23 1/2, and I think the deviation was 5.

7270. What rate were you going? - I went slow. I came through the ice full speed to the ship, but I went back slow.

7271. Can you tell me, on your boat, do you supply the look-out man with glasses? - We do not.

7272. Why is that? - I have never heard of it before this Enquiry.

7273. In your experience, it is not usual? - I have only used them once, that was when I was looking for the "Titanic."

*Mr. Dunlop:* May I ask some questions of the witness?

*The Attorney-General:* I think you had better wait till I have finished. I am going to put something further to him, and I think you had better hear what he says first.

**Further examined by the ATTORNEY-GENERAL.**

7274. Mr. Stone is your Second Officer, is he not? - Yes.

7275. Did Mr. Stone send the Apprentice to report to you at any time? - Did he on this morning?

7276. I am speaking of this morning? - He told me afterwards that he had done so.

7277. At about 2 o'clock? - At about 2 o'clock.

7278. Did he tell you that there had been rockets sent up? - He did. That was the message the boy was supposed to have delivered to me. I heard it the next day. 7279. That is rather important, you see - that is the message which the boy was supposed to have delivered to you which you heard next day? - Yes.

7280. I want to put this to you. Did not the boy deliver the message to you, and did not you inquire whether they were all white rockets? - I do not know; I was asleep.

7281. Think. This is a very important matter. - It is a very important matter. I recognise that.

7282. It is much better to tell us what happened, Captain? - He came to the door, I understand. I have spoken to him very closely since. He said, I opened my eyes and said, "What is it"? and he gave the message; and I said, "What time is it"? and he told me, and then I think he said I asked him whether there were any colours in the light. 7283. That is what the boy has said to you. You have questioned him a good many times since? - Yes, I have questioned him since.

7284. Is he still an Apprentice in your ship? - He is.

*The Commissioner:* Is he telling the truth? - Is the boy telling the truth?

7285. Yes. - I do not know. I do not doubt it for a moment.

7286. (*The Attorney-General.*) Just think. You say you do not doubt it for a moment. Do you see what that means. That means that the boy did go to the chart room to you. He did tell you about the rockets from the ship and you asked whether they were white rockets, and told him that he was to report if anything further occurred? - So he said. That is what he said.

7287. Have you any reason to doubt that is true? - No; I was asleep.

7288. Then do you mean you said this in your sleep to him, that he was to report? - I very likely was half awake. I have no recollection of this Apprentice saying anything to me at all that morning.

7289. Why did you ask whether they were white rockets? - I suppose this was on account of the first question they asked, whether they were Company's signals. 7290. Do

just think? - Company signals usually have some colours in them. 7291. So that if they were white it would make it quite plain to you they were distress signals? - No, I understand some companies have white.

7292. Do really try and do yourself justice? - I am trying to do my best. 7293. Think you know. Mr. Lord, allow me to suggest you are not doing yourself justice. You are explaining, first of all, that you asked if they were white rockets, because companies' signals are coloured. I am asking you whether the point of your asking whether they were all white rockets was not in order to know whether they were distress signals? Was not that the object of your question, if you put it? - I really do not know what was the object of my question.

7294. And you think that is why you asked about it? - I think that is why I asked about it.

7295. I must ask you something more. Do you remember Mr. Stone reporting at twenty minutes to three to you that morning through the tube? - I do not.

7296. Is there a tube? - There is a tube.

7297. What is the tube? - A speaking tube.

7298. To your chart room? - To my own room.

7299. Were you in your own room? - No, I was in the chart room.

7300. Would you hear if he reported through the tube to you? - At a quarter-past one.

7301. He reported through the tube then? - At a quarter-past one.

7302. Listen to this - he reported to you at twenty minutes to three through the tube and told you that the steamer had disappeared bearing south-west half west. Do you remember that? - I do not remember it. He has told me that since.

7303. Have you any reason to doubt it? - I do not know anything at all about it. 7304. Have you any reason to doubt that Mr. Stone, the officer, is speaking the truth? - I do not see why he should not tell me the truth.

## **Page 169**

7305. (*The Commissioner.*), Is he a reliable, trustworthy man? - As far as I know of him he is.

7306. (*The Attorney-General.*) Is he still with you? - He is still with me.

7307. Listen to this: - "The Captain again asked me if I was sure there were no colours in the lights that had been seen." Do you remember that? - I do not.

7308. "And that he" - Mr. Stone - "assured you that they were white lights"? - He has told me all about this since, but I have not the slightest recollection that anything happened that way.

7309. He has told you of this - what he reported to you that night? - Yes.

7310. And you have no reason to doubt it? - If he is telling the truth I have not. 7311. Do you doubt it at all? - I do not know.

7312. This is what he says: "I assured him that they were white lights, and he" - that is you - "said 'All 'right.'" Have you no recollection of that conversation? - I have no recollection of any conversation between half-past one and half-past four that I had with the second officer.

7313. There is only one thing further I want to ask you, who is Mr. Stewart? - The Chief Officer.
7314. Was it he who called you at half-past four? - Yes.
7315. And was it he who told you that the second mate had seen rockets? - Yes.
7316. And did you reply "Yes, I know."? - I said, Yes, they certainly had told me something about a rocket.
7317. Do you observe the difference in the question I put to you and your answer? - You mentioned rockets; I mentioned rocket.
7318. That the second mate had said he had seen rockets, and you replied, "Yes, I know." Very well. Now I want to ask you something further. When you were not satisfied that the rocket which you had seen was a company's signal, there was no difficulty in your calling your Marconi operator, was there? - None whatever.
7319. If you had called him you would have been in communication with the "Titanic," as I understand it? - Yes, I believe she was sending out signals.
7320. And you would have received the "Titanic's" messages? - Yes.
7321. If the Marconi operator had been called up then, and he had put the receiver on he would have heard the "Titanic's" messages? - Yes.
7322. Do you understand Marconi telegraphy at all? - I know the idea of it. I cannot use it.
7323. Do you know the C.Q.D. signal? - I know it.
7324. And the S.O.S.? - Yes.
7325. Can you receive that signal? - They go too quickly for me. *The Commissioner:* What does C.Q.D. mean?
7326. (*The Attorney-General.*) C.Q.D. means "Come quick, danger." They are danger signals; and S.O.S. - I am not sure I am quite right about this - is the same signal which has been adopted by a Telegraphic Convention, which means "Save our Souls." The object of the S.O.S. is that it is a very short signal by the Morse code. That is, I understand, the reason why it is given in that way. (*To the Witness.*) So that anybody on your ship who had put the receiver to his ears would have then heard the "Titanic's" message, the C.Q.D. or the S.O.S.? - They would have heard the buzzing, yes.
7327. They would have been able to distinguish the signal as long as she was giving it? - The operator would. I do not think anyone else on the ship would.
7328. The operator would if you had called him? - Yes.
- The Commissioner:* He has produced apparently the log of this vessel. Have you examined it?
- The Attorney-General:* I have not.
7329. (*The Commissioner.*) I think you should. (*To the Witness.*) Is there any reference in the log to your steamer having seen these rockets? - No, Sir.
7330. Or this mysterious ship which was not the "Titanic"? - No, Sir.
7331. Is it not usual to record these things in the log? - We never realised what these rockets were, my Lord. If they had been distress rockets they would have been mentioned in the log.
7332. But the next morning you knew the "Titanic" had gone down? - Yes.

7333. Did you make no record then in your log of the signals that you had seen? - No.
7334. Why not? - We never took them to be distress rockets. The second officer's explanation to me of these rockets was that they were not distress rockets.
7335. Why was all reference to these rockets left out of the log? - If we had realised they were distress rockets we would have entered them, my Lord.
7336. Do you mean that nobody on board your ship supposed that they might be distress signals? - The Second Officer, the man in charge of the watch, said most emphatically they were not distress rockets.
7337. Is there anyone on board your boat who thinks that they were? - Not to my knowledge, my Lord. I have not spoken to any of the crew about it.
7338. (*The Attorney-General.*) Will you let me see the log. Who wrote it up? - The Chief Officer writes the log.
7339. (*The Commissioner.*) Mr. Stewart? - Yes; and initialed by each officer at his end of the watch.
- Mr. Dunlop:* I have a typewritten copy of the log here if you would like to see it. 7340. (*The Attorney-General.*) I would rather see the original. (*The log was handed to the Attorney-General.*) My friend, Mr. Edwards, put some questions about what happened at the Court of Inquiry in America. I have the Report from America, and I think it is right to put this to the witness. (*To the Witness.*) I see you said this in answer to Senator Smith, in America: "When I came off the bridge at half-past ten I pointed out to the officer that I thought I saw a light coming along, and it was a most peculiar light. We had been making mistakes all along with the stars, thinking they were signals"? - "Most peculiar night," I think that should be.
7341. It may be. "We could not distinguish where the sky ended and where the water commenced." That is right, is it not? - Yes, that is what I have said. *The Commissioner:* When is this witness going to sea?
7342. (*The Attorney-General.*) When does your ship sail? - Saturday, Sir. 7343. (*The Commissioner.*) Where will you be in the meanwhile? - I am going back home, Sir.
7344. Where is home? - Liscard, Cheshire.
7345. (*The Attorney-General.*) 10, Ormond Street, Liscard, Cheshire? - Yes.

**Examined by Mr. DUNLOP.**

7346. When did you go on duty on the Sunday morning? - I got up the usual time - 7 o'clock in the morning.
7347. And were you on duty the whole of that day? - I was on deck practically the whole of that day.
7348. Had you got reports from east-bound steamers of the presence of ice? - Yes. 7349. And were you keeping a look-out for ice in consequence of those reports? - I was.
7350. And I think on that day you encountered ice as we have heard? - We did.
7351. You retired to your chart room at 12.15? - 12.15.
7352. Did you undress? - No.
7353. Did you fall asleep at first? - I did not fall asleep before twenty minutes to one.
7354. And at 12.40 you got the report from the Second Officer that the steamer

which had previously been seen was still in the same position? - Still in the same position. 7355. (*Mr. Dunlop.*) At 1.15, you have told us, you got a report -

**Page 170**

*The Attorney-General:* I do not quite know what this is leading to. My friend is supposing to be cross-examining this witness. If not, I think it would be better to allow him to tell his story himself. I do not quite appreciate what my friend's position is. I quite understand that he is here for the protection of the master, and I am raising no objection to that, but in all the circumstances I think it would be better to let him tell a little of the story.

*Mr. Dunlop:* I am coming to the part I want him to speak about.

*The Commissioner:* I do not think any harm has been done.

*The Attorney-General:* I am only intervening so that it may not be done later. 7357. (*Mr. Dunlop.*) I have brought you to 1.15, the time that you got the second report? - Yes.

7358. You told us what that report was - that the steamer had commenced to alter her bearing to the south-west? - Yes.

7359. What did that report lead you to infer? - That she was steaming away from it.

7360. And if she was steaming to the south-west would the masthead lights in the ordinary course of things disappear? - Yes.

7361. And would she open then her stern light? - She would open her stern light. 7362. How far is the stern light supposed to be visible? - According to the law it is supposed to be visible at two miles.

7363. One mile is the law? - Is it one mile?

7364. But sometimes they show much further? - Much further.

7365. But they do not show so far as the masthead lights? - No.

7366. Might it be that the masthead lights disappeared, showing a stern light, which was not in fact visible at that distance? - Very likely, yes.

7367. At what time was it, do you think, that you fell asleep after 1.15? - I think it was somewhere after half-past one. I could hear the officer Morsing. I could hear the tick of the Morse machine over my head.

7368. Did you sleep soundly? - I must have done.

7369. If the Apprentice came to your room subsequently, are you conscious of anything that he said to you or what you said to him? - All I recollect saying is, "What is it?"

7370. Did you remain asleep until 4.30? - Until 4.30.

7371. Then did you go on the bridge? - I went on the bridge.

7372. And I think you afterwards heard of the sinking of the "Titanic"? - Yes. *The Commissioner:* We have had all this, you know.

7373. (*Mr. Dunlop.*) I am coming now, my Lord, to the questions I wanted to put. (*To the Witness.*) You were surprised about the "Titanic." Did you question your Second Officer as to why you had not been called? - I did.

7374. What was his explanation to you? - He said that he had sent down and called me; he had sent Gibson down, and Gibson had told him I was awake and I had said,

“All right, let me know if anything is wanted.” I was surprised at him not getting me out, considering rockets had been fired. He said if they had been distress rockets he would most certainly have come down and called me himself, but he was not a little bit worried about it at all.

7375. If they had been distress rockets he would have called you? - He would have come down and insisted upon my getting up.

7376. And was it his view that they were not distress rockets? - That was apparently his view.

7377. The position which the “*Virginian*” reported to you was, I think, 19 1/2 miles South, 16 West, of your position? - Yes.

7378. How many miles had you, in fact, to steam to get to the place where the wreckage was found? - I should think 30 miles at the least.

7379. Were you able to proceed to the position indicated by the “*Virginian*” on a direct course? - No.

7380. What prevented you from doing that? - The ice.

7381. Can you indicate what the condition of the ice was between where you were lying and the place where the wreckage was found? - Ice-field - dense ice-field.

7382. Can you tell us what the extent of the ice-field was? - The width of it? 7383. Yes, the width of it from your position to the position of the wreck? - It was running north and south after the style of a T, and the T was dividing the position where the “*Titanic*” was supposed to have sunk and where we were. I suppose for the two or three miles all the way down to where she was it was studded with bergs and loose ice. 7384. If any vessel was proceeding in a south-westerly direction towards the place where the “*Titanic*” was she would encounter this field ice? - Yes.

*The Commissioner:* You are falling into the error that the Attorney-General warned you not to fall into. You are putting the words into the man’s mouth. You might as well hand your proof to him and tell him to read it out.

7385. (*Mr. Dunlop.*) Did you prepare a rough sketch to show the position of the ice and also the course which you took from 6 a.m. to 8.30 a.m.? - Yes, I did, I drew a rough sketch of it.

*Mr. Dunlop:* I would like your lordship to see the sketch he has made.

*The Commissioner:* Hand it up.

(*The sketch was handed in.*)

*The Witness:* It is not to scale or anything.

*Mr. Dunlop:* Does that sketch show the position of the field ice? - Yes.

7386. And the various icebergs? - Yes, and the various icebergs round.

7387. And it shows the course, does it, which you took to avoid the field ice on your way to the “*Titanic*”? - Yes.

7388. I think you had to cut through first of all 3 miles of field ice? - Two or three miles.

*Mr. Dunlop:* That is between 6 and 6.30. Does your lordship see the three miles of field ice?

7389. (*The Commissioner.*) Where did you draw this thing? - I drew that in Boston, my Lord.

7390. Before you were examined in the American Court? - Yes.

7391. Where were you in Boston when you drew it? - Aboard the ship.
7392. Who was with you? - No one.
7393. You sat down and did it yourself? - Yes.
7394. (*Mr. Dunlop.*) Was that after you had been summoned to give evidence at the American Enquiry? - No.
7395. Before that? - Before.
7396. (*The Commissioner.*) What did you do it for? - After the statement that this man Gill made in the papers that we were supposed to have ignored the "Titanic" signals I knew at once there would be an Enquiry over it.
7397. You drew it for the purpose of showing that you had not ignored the signals? - I did it for the purpose of showing where we were and the course we traveled on our way down to the ship.
7398. But you wanted it in order to meet the charge that was made? - I did, my Lord.
7399. (*Mr. Dunlop.*) Your Lordship will see they first of all cut through three miles of field ice. (*To the Witness.*) Then at 6.30 you steered a southerly course and passed the "Mount Temple" and stopped at about 7.30? - Yes.
7400. Was there another vessel near the "Mount Temple"? - There was a two-masted steamer, pink funnel, black top, steering north down to the north-west.
- The Commissioner:* Have you seen this rough sketch?
- The Attorney-General:* No.
- The Commissioner:* Do you want to see it?
- The Attorney-General:* Yes, I should like to see it.
- (*The sketch was handed to the learned Counsel.*)
7401. (*Mr. Dunlop.*) After 7.30 had you to navigate through the field ice again? - Yes, I ran along till I got to the "Carpathia" bearing north-east and then I cut straight through the ice at full speed.

## Page 171

7402. From 7.30 to 8.30? - We were not going through ice the whole of that time. We were running till it must have been about eight.
7403. Supposing you had known at 1.15 a.m. that the "Titanic" was in distress somewhere to the southward and westward of you, could you, in fact, have reached her before she sank? - What time did she sink?
7404. (*The Commissioner.*) Do not you know? - I have heard so many different rumours of that out in the States that I really do not know.
7405. What time do you think she sank? - Somewhere between 2 and 3.
7406. (*Mr. Dunlop.*) Assuming that she sank somewhere between 2 and 3, could you, in fact, if you had known at 1.15 a.m. in the morning that the "Titanic" was in distress to the southward and westward of you, have reached her before, say, 3 a.m.? - No, most certainly not.
7407. Could you have navigated with any degree of safety to your vessel at night through the ice that you, in fact, encountered? - It would have been most dangerous. *The*

*Commissioner:* Am I to understand that this is what you mean to say, that if he had known that the vessel was the "Titanic" he would have made no attempt whatever to reach it?

7408. (*Mr. Dunlop.*) No, my Lord. I do not suggest that. (*To the Witness.*) What would you have done? No doubt you would have made an attempt? - Most certainly I would have made every effort to go down to her.

7409. Would the attempt from what you now know in fact have succeeded? - I do not think we would have got there before the "Carpathia" did, if we would have got there as soon.

*The Commissioner:* You must leave this sketch with me.

*The Attorney-General:* And perhaps we might keep the log till the other officers have been examined.

*The Commissioner:* Mr. Dunlop, what is this long statement in pencil on this piece of paper?

*Mr. Dunlop:* Something at the back, my Lord?

*The Commissioner:* Yes.

*Mr. Dunlop:* I have not seen that. I have only seen the plan.

*The Commissioner:* There is a very long statement on the back.

*Mr. Dunlop:* I have not seen that, my Lord. Perhaps that is something he wrote out.

7410. (*The Commissioner - To Capt. Lord.*) What is this long statement on this piece of paper on which you have made a chart? - They were the notes I made in Boston at the time I made the sketch.

7411. Are these notes supposed to tell the story from your point of view? - Yes, private notes I made.

*(The Witness withdrew.)*

**JAMES GIBSON, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

7412. Is your name James Gibson? - Yes.

7413. How old are you? - Twenty.

7414. Just give us your address? - 38, Railway Terrace, Southport.

7415. Were you an Apprentice on the "Californian"? - Yes.

7416. And on this night, between Sunday, 14th, and Monday, 15th, what time did you go on watch, on duty? - Twelve o'clock midnight. 7417. Was your watch the middle watch? - Yes.

7418. Twelve to four? - Yes.

7419. Which of the officers was in charge in the middle watch? - The Second Officer.

7420. Is that Mr. Stone? - Yes.

7421. He would be on the bridge? - Yes.

7422. When you came on duty at midnight did you find that your ship had stopped? - Yes.

7423. We have been told she stopped some time before half-past ten? - Yes.

7424. When was it that you saw any ship's light round you first? - About twenty minutes past twelve.

7425. What was the light that you saw? - A white masthead light and a red sidelight.

7426. Could you see both those lights clearly? - I could see the red light with the glasses.

7427. You used glasses to see the red light, the port light, but you could see the white light, could you, with your naked eyes? - Yes.

7328. Could you see more than one white light? - I saw a glare of lights on her after deck.

7429. You mean the port-hole lights? - A glare of white lights on her after deck. 7430. I do not think you quite answered the question I was putting to you. Did you or did you not see any second white steamer lights? - Not distinctly, sir.

7431. Do you mean you are not sure whether you could see it or not? - No. 7432. Not sure? - No.

7433. Do you know at all which way your ship, the "Californian," was heading? - I was told afterwards that she was heading east-north-east.

7434. So that she was really pointing in the opposite direction to the direction she had been steaming? - I could not say.

7435. She was going from the east to the west? - I do not know what she was steering.

7436. She was going from Europe to America? - Yes.

7437. And she was pointing how? - East-north-east.

7438. Where did the lights of this steamer you have spoken of bear from you? - Right on the starboard beam.

7439. Would that be broad on the starboard beam? - Right on the starboard beam. 7440. Did you form any view as to how far away the ship was? - From four to seven miles.

7440a. You thought she was from four to seven miles away? - Yes.

7441. Did you notice anything about her masthead light, her white light? - Yes.

7442. What was it? - It was flickering.

7443. Did you form an opinion about it; what did you think she was doing? - I thought it was a Morse light calling us up.

7444. That would be using her masthead light to send Morse signals? - I did not know it was the masthead light then.

7445. Using a light to send Morse signals? - Yes.

7446. Did you report this? - I went to the keyboard and called it up. I went to our keyboard and called her up.

7447. Is the keyboard that you speak of the keyboard, that would work your Morse signaling? - Yes, Sir.

7448. When you work your Morse signaling with your keyboard, what is the light that you flash? - On top of the bridge.

7449. Do you know how to use the keyboard and send Morse signals? - Yes.

7450. So that you went to your keyboard to send them? - Yes.

7451. When you tried to call up this steamer with your Morse signals, could you get into communication with her? - No, Sir; the lights were still flickering.
7452. Could you read at all the message, if it was a message, which this flickering light was sending? - Yes, Sir.
7453. You could? - Yes.
7454. What was it you read? - I did not read any message.
7455. Could you read it if it was clear? - I could have done if it was a Morse light, but I looked at

**Page 172**

- her through the glasses afterwards, and found it was a masthead light.
7456. Then the light went on flickering, did it? - Yes.
7457. And did you look at it then through glasses? - Yes.
7458. And when you did that you say you made out that it was a masthead light? - Yes.
7459. And did you come to the conclusion that she was not sending any Morse messages at all? - Yes.
7460. You have told us, I think, that the officer of the watch was Mr. Stone, the Second Officer? - Yes.
7461. Did you report to him; did you call his attention to the lights you had seen? - Yes.
7462. I suppose this would all take a little time. You said about a quarter-past twelve you noticed the light first. By the time you had finished your attempt with the Morse signaling what time would it be? - About getting on for 25 past.
7463. A little later than that, did the Second Officer, Mr. Stone, say anything to you about this ship? - At five minutes to one.
7464. What was it he told you? - That she had fired five rockets.
7465. That was at five minutes to one? - Yes.
7466. Had you not been on the bridge all the time? - No, Sir. I went down at twentyfive minutes to and came up at five minutes to one.
7467. You went down at twenty-five minutes to one and came up at five minutes to one, and it is when you come up that this message is given? - Yes.
7468. Could you still see her lights? - Yes, Sir.
7469. Was she still in the same position? - No, Sir. She was about two and a half points before the starboard beam.
7470. Can you tell us whether your ship during that hour had been heading the same way, or whether she had shifted her position? - The ship was swinging round.
7471. Your ship was? - Yes.
7472. Of course, if your ship was swinging round, even though the other ship was stationary, after a bit her lights would bear differently from you? - Yes.
7473. When you say it was 2 1/2 points upon the starboard beam, do you mean forward of the starboard beam? - Before the beam. 7474. Five and a-half from the bows? - Yes.
7475. You say that the "Californian" was swinging. Can you tell me, do you know, which way she was swinging? - She was swinging towards the nor'ard.

7476. Now, I just want to get what happened after that. You have told me that the Second Officer said to you that the ship had fired five rockets? - Yes.
7477. Did he tell you anything else about what he had been doing while you had not been there? - He told me that he had reported it to the Captain.
7478. Did he tell you what the Captain had instructed him to do? - Yes.
7479. What was it? - To call her up on the Morse light.
7480. Did he tell you whether he had tried to call her up on the Morse light? - Yes.
7481. Had he? - Yes.
7482. What had been the result? - She had not answered him, but fired more rockets.
7483. Did you see her fire these further rockets? - I saw three rockets.
7484. You saw three? - Yes.
- The Commissioner:* Does this mean that there were ten rockets fired by this time?
7485. (*The Solicitor-General.*) I was just going to find out the same thing. (*To the Witness.*) Let us get it quite clear. The Second Officer had told you, you say, that she had sent up five rockets? - Yes.
7486. And you say that you saw three rockets? - Yes.
7487. Did the Second Officer tell you of any more than the five? - No.
7488. Then as far as the report to you went he told you of five before you came back at five minutes to one? - Yes.
7489. And after that you saw three more yourself? - Yes.
7490. How soon was that after you had come back at five minutes to one? - As soon as I went on the bridge at five minutes to one. I called her up as soon as the Second Officer told me.
7491. You called her up on the Morse? - Yes.
7492. You mean the Second Officer gave you orders to do that? - Yes.
7493. And she did not respond to you? - No.
7494. And then you saw these rockets? - Yes.
7495. Give me an idea of the time - would that take long, or was it at once? - Well, I called her up for about three minutes, and I had just got the glasses on to her when I saw her fire the rocket. That was the first one.
7496. The first of the three? - Yes.
7497. You say you had just got the glasses on to her. Did you see it through the glasses? - Yes.
7498. How did you see the second one? - With the eye.
7499. With the naked eye? - Yes, without the glasses.
7500. And the third one? - With the eye.
7501. What colour rockets were they? - White ones.
7502. When you got your glasses on the vessel and saw the first rocket going up through them, could you make out the vessel at all? - No, Sir, just her lights.
7503. (*The Commissioner.*) Still this glare of light? - Yes.
7504. Did that indicate, that glare of light, that this was a passenger steamer? - No, Sir.
7505. (*The Solicitor-General.*) When you saw the first of these three rockets through your glasses did you report what you saw to the officer? - Yes.
7506. Did he tell you whether he saw the second or the third rocket? - Yes, Sir.

7507. Did he? - Yes, Sir.
7508. He said he did? - Yes.
7509. Was he using glasses, too? - No.
7510. He saw it with his naked eye? - Yes.
7511. What happened after that? - About twenty minutes past one the Second Officer remarked to me that she was slowly steaming away towards the south-west.
7512. Had you remained on the bridge from the time that you saw these three rockets until then? - Yes.
7513. Had you been keeping her under observation? - Yes.
7514. Looking at her with your glasses from time to time? - Yes.
7515. What had you noticed between one o'clock and twenty minutes past one, looking at her through your glasses? - The Second Officer remarked to me, "Look at her now; she looks very queer out of the water; her lights look queer."
7516. You are sure that is what he said - "She looks very queer out of the water"? - Yes.
7517. Did he say what he meant? - I looked at her through the glasses after that, and her lights did not seem to be natural.
7518. (*The Commissioner.*) What do you mean by that? - When a vessel rolls at sea her lights do not look the same.
7519. But there was no water to cause her to roll, was there; you were not rolling? - No.
7520. There was no sea to cause her to roll? - No, Sir.
7521. (*The Solicitor-General.*) He made this observation to you. Did you look at her then through your glasses? - Yes.
7522. What did you see? - She seemed as if she had a heavy list to starboard.
7523. She seemed to have a list, and you thought a list to starboard? - Yes. 7524. Looking at her through your glasses, what was there that you could see of her which made you think that? - Do you mean that her masthead light was not immediately over the other lights? - No, Sir.
7525. What was there to show you? - Her lights did not seem to look like as they did do before when I first saw them.
- The Commissioner:* What was the difference?

### **Page 173**

7526. (*The Solicitor-General.*) Could you describe them at all, Gibson? - No, Sir. 7527. You have told us what the officer said to you. Did you think yourself when you looked at her through the glasses that something was wrong? - We had been talking about it together.
7528. (*The Commissioner.*) I should very much like you to tell me what you had been saying to the officer? - He remarked to me -
7529. I should like you to tell me what were you saying to each other? - He remarked to me that a ship was not going to fire rockets at sea for nothing.
7530. Who said that? - The Second Officer.
7531. A ship is not going to fire rockets at sea for nothing? - Yes.
7532. I daresay you agreed with him? - Yes.

7533. What took place after that between you and him? - We were talking about it all the time, Sir, till five minutes past two, when she disappeared.

7534. (*The Solicitor-General.*) Till five minutes past two, when she disappeared? - Yes.

7535. (*The Commissioner.*) Then do I understand from you that the Second Officer came to the conclusion that this was a ship in distress? - No, Sir, not exactly. 7536. What do you mean by "not exactly"? The second officer said to you, "A ship does not fire up rockets for nothing"? - Yes, Sir.

7537. Did not that convey to you that the ship was, in his opinion, in distress? - Not exactly in distress, Sir.

7538. What then? - That everything was not all right with her.

7539. (*The Solicitor-General.*) In trouble of some sort? - Yes, Sir.

7540. Just think for a minute about this conversation. Do you remember whether the Second Officer and you said anything about ice being dangerous? - No, Sir.

7541. You mean that nothing was said about that? - No.

7542. Your ship had stopped? - Yes.

7543. Because it was not safe. Just think a minute. Was not anything said between the officer and you about it? - No, Sir.

7544. Was anything said between the second officer and you as to whether this was likely to be a passenger steamer? - No.

7545. What did you think? - I thought she was a tramp steamer, and I told him so. 7546. You thought she was a tramp steamer, and you had seen her sidelight at what you thought was between four and seven miles away? - Yes.

7547. And you had seen a blaze of light in the afterpart? - A glare of light.

7548. Four to seven miles away? - Yes.

7549. And you thought she was a tramp steamer? - Yes.

7550. (*The Commissioner.*) Did you expect to see a glare of light on the afterpart of a tramp steamer? - Yes, Sir, on some of them.

7551. (*The Solicitor-General.*) That is until she disappeared at five minutes past two that you have spoken about? - Yes.

7552. What were the orders which the Second Officer gave you when she disappeared? - "Call the Captain and tell him that that ship has disappeared in the South-west; that we are heading West-south-west, and that she has fired altogether eight rockets." 7553. Did you report that to the Captain? - Yes.

7554. Where did you go? - Into the chart room.

7555. Was the chart room door shut? - Yes.

7556. Did you open the door and go in? - Yes.

7557. Did you find the Captain there? - Yes.

7558. Did you speak to him? - Yes.

7559. Did you give him the report you were ordered to give him? - Yes.

7560. What did the Captain say? - He asked me were they all white?

7561. The rockets? - Yes, were there any colours in the rockets at all?

7562. What did you tell him? - I told him that they were all white.

7563. Did he give any instructions? - No.

7564. Did he say anything further? - He asked me the time.

7565. What was the time? - Five minutes past two by the wheelhouse clock.  
7566. You told him that, did you? - Yes.  
7567. Did he ask you anything further? - No.  
7568. Or tell you anything further? - No.  
7569. And did you go away? - Yes.  
7570. (*The Commissioner.*) Was he awake? - Yes, Sir.  
7571. (*The Solicitor-General.*) Did you return to the bridge? - Yes.  
7572. Did you report that you had done what you were told to do? - Yes.  
7573. Was there anything further that you noticed until you got close to 4 o'clock? - Yes.  
7574. What was it? - About 3. 40 the Second Officer whistled down to the Captain again.  
7575. Twenty minutes to four? - Yes.  
7576. Did you see him doing it? - Yes.  
7577. Did you hear what he said? - No.  
7578. Did anything happen after that? - Yes.  
7579. What? - I saw three more rockets, Sir.  
7580. How much after? - That was about twenty minutes to four.  
7581. Just about the same time? - Yes.  
7582. These further rockets that you saw, were they before or after the Second Officer had telephoned to the Captain? - After.  
7583. Just think for a moment. You are sure about the time, are you? - Not exactly, Sir.  
7584. But you have said 3.40 - twenty minutes to four? - Yes. 7585. Are you sure you mean that? - Yes.  
*The Commissioner:* I thought that the Captain's evidence was that it was about 4.30 when this boy was supposed to have given him that message?  
*The Solicitor-General:* Oh, no.  
*The Commissioner:* What time was it? - Oh, yes, I have made a mistake.  
*The Attorney-General:* At 4.30 the officer came.  
*The Commissioner:* What time did the boy come in with the message to the Captain?  
*The Witness:* Five minutes past two.  
*The Solicitor-General:* And he reports at once the rockets that he had seen.  
7586. (*The Commissioner.*) Now, am I to understand you to say that at twenty minutes to four the same morning you saw three more rockets? - Yes, Sir.  
7587. Were they reported to the Captain? - I reported them to the Second Officer.  
7588. Did he report them to the Captain? - No.  
7589. Why not? - I do not know.  
7590. If they were really there, why were not they reported to the Captain? - I do not know, Sir.  
7591. Are you quite sure that these three rockets were ever seen by you at all? - Yes, Sir. I saw the first one, and I reported it to the Second Officer, and we looked out for more to see if we could see any more - and we saw two more.  
7592. (*The Solicitor-General.*) You say you saw the first one? - Yes. 7593. Do you mean you saw it with your naked eye? - Yes.  
*The Commissioner:* Did any of the boats of the "Titanic" fire Roman candles? 7594. (*The Solicitor-General.*) Yes, my Lord, Roman candles. (*To the Witness.*) If it was

twenty minutes to four it was not very far off the beginning of dawn, was it? - No, dawn was just breaking.

7595. Had it got any lighter? - Yes.

7596. Could you see when you saw this flash at all how far away you thought it was? - It was right on the horizon.

7597. What sort of a light was it? You called it a rocket? Was it a flash; did you see it go up into the sky? - Yes.

7598. What colour was it? - White.

7599. And you called Mr. Stone's attention to it, did you, and then there were two more seen? - Yes.

7600. I understand that is after Mr. Stone had spoken on the tube to the Captain? - Yes.

7601. Do you say he did not report these three further lights to the captain at all? - No.

7602. When you saw these three further lights did you get your glasses on to the place? - Yes.

7603. Could you see any sign of a ship? - No.

#### **Page 174**

7604. No sign of a masthead light? - No.

7605. No sign of a sidelight? - No.

7606. Nothing except these flashes? - That is all. 7607. Is that right? - Yes.

7608. Then I think you went off your watch at four o'clock? - A quarter to.

#### ***(After a short adjournment.)***

7609. *(The Solicitor-General.)* There is very little more I want to ask him, my Lord. *(To the Witness.)* I want to be quite sure first of all that I have got accurately the message that you were told to give to the Captain after the ship had disappeared about five minutes past two. Just tell us again exactly, what it was the Second Officer told you to tell the Captain? - To call the Captain and tell him that the ship has disappeared in the S.W., that we were heading W.S.W., and that she has fired altogether eight rockets.

7610. When the ship disappeared she had got a little on to your port bow? - Yes.

*The Commissioner:* Will you ask him what he understood by the word "disappeared"?

7611. *(The Solicitor-General.)* Yes, my Lord. *(To the Witness.)* You say you were told to report that the ship had disappeared. What did you understand by "disappeared"? - We could not see anything more of her.

7612. *(The Commissioner.)* Did it convey to you, and did the man who was speaking to you, in your opinion, intend to convey that the ship had gone down? That is what I understand by disappearing. Did you understand him to mean that? - No, my Lord.

7613. What did you understand him to mean that she had steamed away through the ice? - That she had gone out of sight.

7614. Oh, yes. A ship goes out of sight when she goes down to the bottom. What did you understand by the word "disappeared"? - That is all I could understand about it.

7615. A ship that had been sending up rockets; then you are told to go to the Captain and say, "That ship which has been sending up rockets has disappeared." What did you understand the Second Officer to mean? Did not you understand him to mean that she had gone to the bottom? - No.

7616. Then what did you understand, that she had steamed away through the ice? - [No Answer.]

7617. (*The Solicitor-General.*) I want to follow out this last message and see what it means. You were to tell the Captain, and you did tell him, that this ship had disappeared to the S.W.? - Yes.

7618. And that your own ship was heading W.S.W.? - Yes.

7619. So that when this ship disappeared she was lying a little on your port bow? - Yes.

7620. You see this piece of paper I am holding up. I call the top the north, here is the west, and here is the south. The S.W. is at this corner. If you were in the middle of the paper she disappeared to your S.W.? - Yes. 7621. And you were heading W.S.W.? - Yes.

7622. Now, shortly before that had this ship which had disappeared been lying on your starboard bow? - Yes.

7623. So that you were more like *that (demonstrating.)*? - Yes.

7624. And as you swung round so that she passed from being on your starboard bow to being on your port bow, did you continue to see her sidelight or did her sidelight disappear? - Her sidelight disappeared.

7625. That is her red light? - Yes.

7626. And after her red light disappeared could you still see her masthead light or her white light? - Just a glare of it.

7627. Do you mean that it did not shine as brightly as it had been doing? - Yes.

7628. That is what you mean? - Yes.

7629. Did you look at her through the glasses after her sidelight had disappeared? - Yes.

7630. Did you ever see anything which you took for her stern light? - No.

7631. One other thing about the lights. You have told us how you saw her through your glasses and saw the glare of lights in her afterpart? - Yes.

7632. When you saw her first. Now, tell me, when you first saw that glare of lights in the afterpart, could you see a line of lights? - No. 7633. It was more than a single light, was it not? - Yes.

7634. Could not you tell, when you first saw it, whether that glare of lights in her afterpart was running level with the water? - No.

7635. You could not tell. But, at any rate, you could see it through the glasses? - Yes.

7636. Now I wish you would just try and tell us what you mean when you say that later on, when you looked at her through the glasses, you thought she had a list, or you thought her lights looked queer; what was there about her lights to make you think that? - Her sidelights seemed to be higher out of the water.

7637. The sidelights seemed to be higher out of the water? - Yes.

7638. Do you mean that there was any time when you saw both sidelights? - Her red sidelight.

7639. And you say that watching her, you thought that her red sidelight did not stay at the same level, but got higher? - Yes.

7640. That was your impression was it? - Yes.

*The Commissioner:* That would make a list to starboard?

7641. (*The Solicitor-General.*) Is that why you thought she had got a list to starboard? - Yes.

7642. You thought her red light was rising out of the water, and so you assumed that the other side was dropping? - Yes.

7643. Did you call the Second Officer's attention to that? - Yes; he remarked it at the time; he told me to look through the glasses at it.

7644. He told you to look through the glasses at that very thing? - Yes.

7645. (*The Commissioner.*) When did you first make that statement to anybody - the statement that you have just made that you were told to look through the glasses, to observe this list? When did you first tell anybody of that? - This is the first time.

7646. You never told it till now in the witness-box? - I have spoken to the Second Officer about it since; that is all.

7647. But you have had a statement taken from you, have you not? - Yes.

7648. Did you say anything about it when you made the statement? - I do not think so.

*The Commissioner:* I suppose he did not?

*The Solicitor-General:* We have asked a good many things, my Lord, which are not to be found in the statements.

*The Commissioner:* I could tell quite well, you know, that he had never said it before.

7649. (*The Solicitor-General - To the Witness.*) Have you a clear recollection of that? - Yes.

7650. Just tell us. You say the Second Officer spoke to you about it; what did he say? -

He said, "Have a look at her now, Gibson; she seems to look queer now." 7651. You

have not said anything about her port light yet, you know; did he say anything more? -

No; I told him, "She looks rather to have a big side out of the water." 7652. Did you tell him what you noticed with the glasses about her port light? - I do not recollect.

7653. Did he speak to you about her port light? - No.

*The Commissioner:* I do not understand.

7654. (*The Solicitor-General.*) Just think it over and tell us as well as you can. You were asked by the second officer to look through the glasses at the ship? - Yes.

7655. And I think you told me that when he asked you to look at her through the glasses he said that she looked queer? - Yes.

7656. Did he tell you why she looked queer? - No.

7657. Just think a minute; do not hurry about it? - No.

## **Page 175**

7658. Had you noticed that she looked queer before he spoke to you about it? - No.

7659. You had not. Then you looked through the glasses? - Yes.

7660. And when you looked through the glasses what was it you saw? What was it that struck you? - That she seemed to be heavily listed to starboard.

7661. You were looking at her port light? - Yes.
7662. What did you see about her port light? - It seemed to be higher out of the water than what it was before.
7663. Did, you tell the Second Officer that you saw that? - I do not recollect it.
7664. Let us see. Had he got some glasses too? - Yes.
7665. Was he looking through his glasses? - I could not say.
7666. You were there, you know. - Yes, but it is dark on the bridge.
7667. Did not you say anything to him about what you noticed, about her red light? - I said she seemed to have a big side out of the water.
7668. Did he agree with you or did he not? - Yes.
7669. He did agree with you? - Yes.
7670. When you looked at this ship's red light and thought that it seemed queer, did you also look at her lights in the afterpart of her? - Yes.
7671. How did they stand in relation to the red light? - They did not seem to be the same as they were before.
7672. They did not seem to be the same as they were before? - No.
7673. You noticed that? - Yes.
7674. Did you mention that to the second officer that you saw that her after lights did not seem the same as they were before? - No; I do not think I said anything at all about it. 7675. Can you help us about it; tell us if you can. What was it about her after-lights, this glare of lights in the afterpart, which made you think they were not the same as before? What was the difference? - That I cannot say.
7676. Were they in the same position as they were before? - They were in the same position, but they seemed to look different. 7677. They merely seemed to look different? - Yes.
7678. Did you think from looking at them that the ship was lying on an even keel? - Not by the white lights alone.
7679. You mean the white lights would not have suggested to you that she was not lying on an even keel? - No.
7680. (*The Commissioner.*) Am I to understand that, as far as you could tell, the position of the white lights had not changed? - They seemed to have changed, but I cannot say how.
7681. Changed in what sense? How had they changed? - They did not look the same as they did before.
7682. I know; you have said that two or three times, and you have been asked what the difference was, and I should have thought you could have told us what the difference was. What was it? - I cannot say, my Lord.
7683. (*The Solicitor-General.*) Were they shining as brightly as they were before? - The same glare.
7684. Then it had nothing to do with the brightness of the lights? - No.
7685. But though the lights were of the same brightness, it struck you that they looked different somehow? - Yes.
7686. Cannot you tell us what the difference was? - No.

7687. You have told us about this red light, that you thought it was higher out of the water? - Yes.
7688. Did you look to see whether these after-lights seemed higher up out of the water, or lower in the water? - I noticed them all at the same time.
7689. What, the red light and the others too? - Yes.
7690. And do you mean that the white light seemed higher out of the water as well as the red light? - Yes.
7691. Did the Second Officer say anything to you about the white lights? - No.
7692. Or you say anything to him? - No.
7693. Then I understand the red light disappeared; you did not see that any more? - No.
7694. And the white lights continued to burn for a little time afterwards and then they disappeared; is that right? - Yes.
7695. I do not think you did give evidence in America, did you? - No.

**Examined by Mr. SCANLAN.**

7696. Did you know when the rockets were being sent up that they were being sent up as danger signals? - No.
7697. What did you think they were sent up for? - I thought they were some private signals.
7698. Who told you they were private signals? - Nobody told me.
7699. Had you ever seen private signals of that kind? - No.
7700. And never heard of private signals of that kind? - I have heard of private rockets, private signal rockets.
7701. When you came on deck, was the Third Officer there? - No, he had gone below.
7702. I understand you could not say whether or not the light was a masthead light or a signal light, until you took the glasses? - Yes.
7703. Did you find that you could see perfectly well with the glasses at that time of night? - Yes.
7704. When you signaled the Morse signals, what did you say to this ship? - I gave her the calling up sign.

**Examined by Mr. HARBINSON.**

7705. You said you thought this was a tramp steamer? - Yes.
7706. Why did you think so? - She had no appearance at all of a passenger boat. 7707. What time did it first dawn on you that this was a tramp steamer? - As soon as I looked at her.
7708. What time did you look at her first? - About a quarter or twenty past twelve. 7709. Who first attracted your notice to this boat? - I asked the Second Officer were there any steamers around.
7710. What did he say? - He said, "There is one on the starboard beam." 7711. Did he say anything else? - No.
7712. Had you glasses at that time? - No, I did not look at it with the glasses then.

7713. Could you see it then without the glasses? - I could see this white light.
7714. Only this white light? - That is all.
- The Commissioner:* All he saw was the lights, nothing else.
7715. (*Mr. Harbinson.*) Only the white light? - Yes.
7716. Why did you get your glasses? - I saw the light was flickering. I thought she was calling us up.
7717. And then you got your glasses and directed them on the boat? - Not before I called her up.
7718. You called her up first and got no reply? - Yes.
7719. And when you looked through the glasses what could you see beyond the masthead light? - Her red sidelight and a faint glare of light on her after deck.
7720. Did you mention what you had seen to Mr. Stone, the Second Officer? - No.
7721. Did you tell him about this glare of light on the after deck? - No.
7722. Was he looking at this boat through those glasses at the same time? - Not then.
7723. When did he commence? - I went off the bridge at 25 past.

**Page 176**

7724. And it was while you were away that you say he turned his glasses on the boat? - I do not know.
7725. At any rate, when you came back he told you that she had fired rockets? - Yes.
7726. Did he say anything else beyond the fact that she had fired rockets? - He told me that he reported to the Captain and the Captain had told him to keep calling her up with the Morse light.
7727. Did you again call her up with the Morse light? - Yes.
7728. (*The Commissioner.*) What was it made you think it was a tramp steamer? You saw nothing but the lights? - Well, I have seen nearly all the large passenger boats out at sea, and there was nothing at all about it to resemble a passenger boat.
7729. What is it you expected to see? - A passenger boat is generally lit up from the water's edge.
7730. This boat was apparently lit up, you know; there was all this glare of light. However, that is all you can say? - Yes.
7731. (*Mr. Harbinson.*) Did the glare of light that you saw on the afterpart of this boat seem to be a pretty considerable distance from the masthead light? - Yes.
7732. It seemed to be a pretty considerable distance? - Yes.
7733. So that she seemed to be a big steamer? - Well, a medium size steamer.
7734. Could you see how many funnels she had? - No.
- The Commissioner:* He could not see that; he could only see the lights.
7735. (*Mr. Harbinson.*) You used the expression that the Second Officer, Mr. Stone, told you she steamed away? - She slowly steamed away towards the S. W.
7736. Did he use the words "steamed away"? - Yes.
7737. Did he say he saw her? - He said, "She is steaming slowly away towards the S. W."
7738. Steaming away? - Yes.
7739. Towards the S.W.? - Yes.

7740. Did you fix your glasses on her at this time? - Yes, I was signaling her continuously.
7741. Could you see whether she was steaming away? - No. The Second Officer was taking bearings of her all the time.
7742. (*The Commissioner.*) The message he sent you with was that she disappeared? - Yes.
7743. (*Mr. Harbinson.*) Not that she steamed away, but disappeared? - Yes.
7744. The Captain made no reply? - He asked me if there were any colours in the lights, or were they all white.
7745. You saw no coloured rockets? - No.
7746. As a matter of fact is not there a code of rockets for use at sea? Do you know as a matter of fact whether there is or is not? - I know now there are only distress rockets used at sea and private signals used near the shore.
7747. And what colour are distress rockets? - White - any colour at all.
7748. Did you say anything to the Second Officer, Mr. Stone, or did he say anything to you, with reference to these rockets that were repeatedly sent up? - Yes.
7749. Did not you think it very curious that so many rockets should be sent up so close to one another? - Yes.
7750. Did you say anything to him about going to see the Captain and saying this seemed to be a serious matter? - No, he told me he had reported it to the Captain and the Captain had told him to keep calling her up.
7751. Did Mr. Stone say this vessel seemed to be in distress? - No; he said there must be something the matter with her.
7752. Did he make any remarks to you as to the Captain taking no action? Did he say anything to you at the time? - No.
7753. Are you sure? - Yes.
7754. (*The Commissioner.*) Did you say anything to yourself about it? - I only thought the same that he thought.
7755. What was that? - That a ship is not going to fire rockets at sea for nothing, and there must be something the matter with her.
7756. Then you thought it was a case of some kind of distress? - Yes.
- The Commissioner:* We are anxious to get the other witnesses from this steamer into the box, and unless you have something really important, I suggest you should finish.
- Mr. Harbinson:* I have finished, my Lord.
- Mr. Clement Edwards:* I have no question.
- Mr. Lewis:* I have no question.

**Examined by Mr. LAING.**

7757. I should like to ask one question. Did you hear any explosive signal? - No. 7758. Were those rockets which you saw go up explosives? Did you hear any explosion? - I did not hear any report at all.
7759. Any stars? - Yes.
7760. You could see stars? - Yes.

7761. You mean stars from the rockets? - Yes.
7762. Were they stars of any colour or were they white stars? - White stars. 7763. Do you know that a distress signal, the regulation distress signal, is a rocket throwing stars? - Yes.
7764. You knew that? - Yes.
7765. (*The Commissioner.*) And you knew it then, did you? - Yes.
7766. (*Mr. Laing.*) And each of those rockets which you saw, which you have described as white rockets, were they throwing stars? - All throwing stars.
7767. You have told us your ship's head was E. N. E. when you first saw this vessel? - Yes.
7768. And you saw her red light on your starboard beam? - Yes.
7769. Did you continue to see her red light? - Yes, it was about 2 points on the starboard bow.
7770. When the officer told you she was going away to the S. W. were you still seeing her red light? - No, it had disappeared then.
7771. Did you ever see her green? - No.
7772. To show you her red light she must have been heading to the northward of N. N. W., on your story? - Yes.
7773. And your head was falling away; which way? - To northward.
7774. To northward and westward? - Northward and eastward.
7775. You were heading E. N. E.? - Yes - to northward and westward.
7776. To the northward it was at any rate, and if you pass to northward you would get to the northward and west? - Yes.
7777. I understand you to say you got to W. S. W.? - Yes. 7778. What was causing that? - We were swinging round.
7779. You told us you never saw the green light of this vessel? - No. *Mr. Robertson Dunlop:* May I ask one question?

**Examined by Mr. ROBERTSON DUNLOP.**

7780. Was the glare of light which you saw on the afterpart of this vessel forward or aft of the masthead light? - Aft of the masthead light.
7781. So that you would be seeing her starboard side? - No, her port side.
7782. The glare of light which you say was aft, was aft of the masthead lights? - Yes.
7783. Was that to your left or your right as you were looking at her? - To the right. 7784. Do you mean the masthead light was to the right? - No, the masthead light was to the left.
7785. Was that before you saw her apparently steaming to the south-west? - Yes. 7786. Did you see her turn round? - No.

**Page 177**

7787. Had you a good opportunity of seeing whether she had two masthead lights or not - I understand you only saw one? - I only saw one.

7788. How long had you the one masthead light under observation? - From the time I first saw her to the time she disappeared.
7789. How long would that be? - A quarter-past twelve to five past two.
7790. And during that time were you using glasses? - Yes.
7791. Do you think you could have missed the second masthead light had it been there? - No.
7792. Had you a discussion with the Second Officer as to whether this vessel was a tramp or not? - Yes.
7793. And did he agree with you? - Yes.
7794. (*The Commissioner.*) Did he give his reason? - That she was probably burning oil lights; that was the cause of the white head mast light flickering.
7795. (*Mr. Robertson Dunlop.*) How long have you been at sea? - Three and a half years.
7796. And have you seen passenger steamers? - Yes.
7797. Large passenger steamers? - Yes.
7798. And medium-size steamers? - Yes.
7799. Seen them at night? - Yes.
7800. And have you been able to tell the difference between a large liner like the "Titanic" and a tramp? - Yes.
7801. From the appearance of her lights? - Yes.
7802. From the height of her lights? - No, from the quantity.

*(The Witness withdrew.)*

**HERBERT STONE, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

7803. What certificate do you hold? - A first mate's steamship certificate.
7804. And on the 14th of April this year were you serving on board the "Californian"? - Yes.
7805. What were you? - Second Officer.
7806. And on the night of the 14th of April was it your watch from 12 o'clock onwards? - It was.
7807. From 12 to 4? - Yes.
7808. Did you go on watch at midnight? - Shortly after.
7809. Did you find the ship stopped and surrounded by ice? - Yes.
7810. Was the captain up? - Yes.
7811. Did you speak to him? - Yes.
7812. Did he tell you anything? - Yes.
7813. What did he tell you? - He told me the ship was stopped, surrounded by ice, and he pointed out another steamer.
7814. He pointed out another steamer. What could you see of the other steamer? - One masthead light and a red sidelight and two or three small indistinct lights.

7815. Did he say anything to you when he pointed her out? - He asked me to tell him if the bearing of the steamer altered or if she got any closer to us.
7816. Is that all he said about her? - And that the Third Officer had called her up on the Morse lamp and received no reply.
7817. He told you that? - Yes.
7818. Did you look and see these lights yourself? - Yes.
7819. How far away did you judge they were? - Approximately about five miles. 7820. And how were they bearing from you at this time? - S.S.E. by the standard compass.
7821. Did the captain then leave you? - I went on the bridge and left the captain.
7822. I suppose you relieved the other officer and took charge? - Yes.
7823. Did the third officer make any communication to you about this steamer when you relieved him? - He told me the steamer had stopped about one bell and that he had called her up on the Morse lamp and got no answer.
7824. Did you continue to keep this vessel under observation? - The whole time. 7825. Was there any reason for that? - None whatever except that it was another ship, stopped in ice the same as ourselves.
7826. It interested you? - Yes.
7827. After a time did you make any communication to the captain? - Yes.
7828. How? - By means of the speaking tube.
7829. What did you communicate to him? - I communicated that I had seen white lights in the sky in the direction of this other steamer, which I took to be white rockets.
7830. What time was it you gave him that information? - Just about 1.10.
7831. Had you seen white lights? - Yes.
7832. Now, will you tell me what you had seen? - First of all, I was walking up and down the bridge and I saw one white flash in the sky, immediately above this other steamer. I did not know what it was; I thought it might be a shooting star.
7833. What was the nature of the flash? - A white flash.
7834. You did not know what it was? - No.
7835. How long have you been at sea? - Eight years.
7836. You know distress signals? - I know what they are, yes.
7837. Was it like a distress signal? - It was just a white flash in the sky; it might have been anything.
7838. I know, but what did it suggest to your mind? What did you say to yourself? What did you think it was? - I thought nothing until I brought the ship under observation with the binoculars and saw the others.
7839. Then you took up your glasses, apparently, and looked? - Yes.
7840. And how many more did you see? - I saw four more then.
7841. What were they, rockets? - They had the appearance of white rockets bursting in the sky.
7842. Did they come in quick succession? - At intervals of about three or four minutes.
7843. Now what did you think they were? - White rockets.

7844. What do you think they meant? - I thought that perhaps the ship was in communication with some other ship, or possibly she was signaling to us to tell us she had big icebergs around her.
7845. Possibly, what else? - Possibly she was communicating with some other steamer at a greater distance than ourselves.
7846. (*The Commissioner.*) What was she communicating? - I do not know. 7847. Is that the way in which steamers communicate with each other? - No, not usually.
- The Commissioner:* Then you cannot have thought that. Just attend to the question.
7848. (*Mr. Butler Aspinall.*) You are an officer and hold a certificate and have been to sea for eight years? - Yes.
7849. You had been keeping this vessel under close observation and saw five rockets go up in fairly quick succession. What did you think at the time they meant? You applied your mind to the matter, did you not? - Yes.
7850. Now, what did you think at the time? - I knew they were signals of some sort.
7851. I know; of course - signals of what sort did you think? - I did not know at the time.
7852. (*The Commissioner.*) Now try to be frank? - I am.
7853. If you try, you will succeed. What did you think these rockets were going up at intervals of three or four minutes for? - I just took them as white rockets, and informed the master and left him to judge.

## Page 178

7854. Do you mean to say you did not think for yourself? I thought you told us just now that you did think. - [No Answer.]
7855. (*Mr. Butler Aspinall.*) You know they were not being sent up for fun, were they? - No.
7856. (*The Commissioner.*) You know, you do not make a good impression upon me at present.
- 7856a. (*Mr. Butler Aspinall.*) Did you think that they were distress signals? - No.
7857. Did not that occur to you? - It did not occur to me at the time.
7858. When did it occur to you? Did it occur at some later time to you? - Yes.
7859. When? - After I had heard about the "Titanic" going down.
7860. So throwing your mind back after that information then you thought they were distress signals? - I thought they possibly might have been distress signals. 7861. (*The Commissioner.*) From the "Titanic"? - No, not necessarily.
7862. After you had heard that the "Titanic" went down, then it occurred to you that those might have been distress signals? - Yes.
7863. From the "Titanic"? - Not necessarily. They may have been from some other steamer. I did not think that vessel was the "Titanic."
7664. (*Mr. Butler Aspinall.*) Your vessel had stopped, had she not? - Yes.
7865. That was on account of the danger from ice? - Yes.
7866. Did that fact help you at the time to come to some conclusion as to what these signals meant - danger from ice you know, I suggest, followed by distress signals?

- I kept the ship under close observation, and I did not see any reason to suppose they were sent as distress signals from this ship.

7867. You communicated the fact to the Captain? - Yes.

7868. Through the speaking tube? - Yes.

7869. I think you said you left it to him to judge. Did he answer back? - Yes.

7870. What was his answer? - He asked me, "Are they Company's signals?" 7871. What was your answer? - I said, "I do not know, but they appear to me to be white rockets."

7872. Is that all you told him? - Yes; that I had called her up on the Morse lamp. 7873. No, I do not want to break away from what passed between you and the Captain; you told the Captain, you mean? - Yes.

7874. That you had called them up on the Morse lamp? - Yes, and received no answer whatsoever.

7875. When did you call her up on the Morse lamp - after the five rockets were seen? - Previously, and during the time that they were being sent up.

7876. Did that suggest anything to you - a ship showing five rockets, you signaling with your Morse lamp, and getting no answer? Did that suggest anything to you? - No, because I have often signaled ships before, and got no answer from them.

7877. Now, having given this communication to the Master, and having got his reply, did you continue to keep this vessel under observation? - Yes.

7878. Did the Master, when you had this communication through the tube, tell you to go on Morsing this vessel? - Yes.

7879. And did he tell you that you were to send him any news and give him any information that you had got? - When I received any information to send the Apprentice down to him with it. 7880. That is Gibson? - Yes.

7881. Was Gibson on the bridge at this time? - No, he did not see the first of the rockets.

7882. He came later, did he? - Yes.

7883. When he came, did you give Gibson any information? - I told him what I had seen.

7884. What did you say to him? - I told him I had seen those white rockets from the ship and that I had told the Captain about it.

7885. Did you say anything more to Gibson than that? - I told him the instructions I had had from the Master, and he at once went to the Morse lamp and called up the ship again. 7886. Did he get any reply? - None.

7887. Did you speak to Gibson about the meaning of these five rockets? - No, I did not.

7888. (*The Commissioner.*) Had not you and Gibson a conversation about them as to what they meant? - No.

7889. If Gibson says he had such a conversation, he is wrong? - We had no conversation about rockets then at all. Later on we talked about them.

7890. (*Mr. Butler Aspinall.*) After Gibson had come, and while he was there, did you see more rockets? - Yes.

7891. How many? - Three, in the direction of this steamer.

7892. In quick succession? - About the same period as the others.

7893. The same class of rocket as before? - Yes.

7894. Did anything pass between you and Gibson when those rockets went up? - Not as regards the rockets, no.
7895. Are you sure of that? You see you have got this vessel under observation; she has shown five, you have communicated with the Captain, he has asked you to give him more information and to send Gibson down; there is Gibson, and up go the three rockets: did not you say something to Gibson about the rockets, or Gibson say something to you? - He remarked to me once that he did not think they were being sent up for fun, and I quite agreed with him.
7896. That was my phrase, but at any rate you agreed with him. Now, just tell us a little more in detail what passed between you about this. Did either you suggest to Gibson or did Gibson suggest to you that that ship over there is probably in trouble and wants assistance? - No.
7897. Are you sure? - I made no remark about that at all, about the ship being in distress, the whole time.
7898. Did it never occur to you? - It did not occur to me after what the Captain said.
7899. But what had the Captain told you which would force your mind to the conclusion that that is a vessel which is not in distress? - He emphasised the fact about company's signals.
7900. But you knew they were not company's signals, did you not? - I said I did not think so.
7901. (*The Commissioner.*) You did not believe they were company's signals? - I had never seen company's signals like them before.
7902. Then what did you think they were? - I did not think what they were intended for; white rockets is what I saw them as.
7903. Wait. You did not think they were company's signals? - No. 7904. You did not think they were being sent up for fun? - No.
7905. What did you think? - I just thought they were white rockets, that is all. 7906. That you know because your eyes told you of it, but what did you think they were being sent up for? - Naturally, the first thought that crossed my mind was that the ship might be in trouble, but subsequent events showed that the ship steamed away from us; there was nothing to confirm that; there was nothing to confirm that the rockets came from that ship, in the direction of that ship. That is all I observed.
7907. You did not think they sprang out of the sea? - No.
7908. Where did you think they came from, if they did not come from that ship? - Possibly from a greater distance past the ship.
7909. You thought they came from some other ship? - Possibly.
7910. Have you ever said that before to anybody? - I told the Captain so.
7911. That you thought they came from another ship? - Possibly they might have come from another ship.
7912. Did you tell that to the Captain? - Yes, afterwards.
7913. When afterwards? - The next day.
7914. Have you ever said that to anyone before today, that you made that observation to the Captain? - Not that I know of.

7915. Then you tell us now for the first time in the witness-box. Has anyone ever suggested that these rockets possibly came from another ship, except you today in the witness-box? - From another ship from the one we had under observation?

7916. Yes. Has anyone ever suggested before you have suggested it today in the witness-box? - Yes, the captain and I had a talk over about it.

7917. Now when did you first say that the Captain and you had made this suggestion? Have you said it before this morning? - No, not that I know of, to anyone official. 7918.

Never mind about "official" - to any one at all? - Conversations between myself and the other officers on the ship; we talked about this ship the remainder of the passage. 7919.

Did you ever say to any officer that you and the Captain had talked about these rockets and had expressed an opinion that they might have come from some other ship? Have you ever said that to anybody till now? You have said it to me, you know? - Yes. 7920.

Have you ever said it before to anybody else? - Yes. I think I have said it both to the Chief Officer and to the Third Officer in conversation.

7921. Tell me what you said to the Chief Officer? - I have remarked at different times that these rockets did not appear to go very high; they were very low lying; they were only about half the height of the steamer's masthead light and I thought rockets would go higher than that.

7922. Well, anything else? - But that I could not understand why if the rockets came from a steamer beyond this one, when the steamer altered her bearing the rockets should also alter their bearings.

7923. That pointed to this, that the rockets did come from this steamer? - It does, although I saw no actual evidence of their being fired from the deck of the steamer except in one case.

7924. (*Mr. Butler Aspinall.*) Which is the one case? - One rocket that I saw that appeared to be much brighter than the others.

7925. Was that one of the five or one of the three? - One of the three.

7926. That, you felt confident, came from the vessel that was showing you these navigation lights? - I am sure of it. 7927. That you were sure of? - Yes.

7928. And you had further confirmation in the fact as you have told my Lord, that when the navigation lights altered their bearing, the rockets altered their bearings in a corresponding manner? - Yes.

7929. That would tell you as a sailor that it was almost certain that those rockets were being fired from that steamer which was showing you those navigation lights? - Almost certain, yes.

7930. I suppose, at any rate, now you have not any doubt but that that ship which was showing you the navigation lights was the ship which was showing you these series of rockets? - Except, as I say, that they were very low; they did not appear to go high enough to me.

7931. After you had seen the three rockets was Gibson sent anywhere by you? - He was sent by me previous to that.

7932. Where was he sent? - He was sent down to get ready some gear for streaming a fresh patent log.

7933. I do not think that is material. Did you at any time send down Gibson to make a report to the Captain? - Yes.
7934. When was that? - At two o'clock.
7935. How long after you had seen the three rockets? - I saw the last of the rockets as near as I can say about 1.40.
7936. That would be twenty minutes between seeing the last rocket and the sending of Gibson to the Captain? - Yes.
7937. During that time were you talking this matter over with Gibson? - No. I was watching the steamer by the compass with my binoculars.
7938. Was the steamer altering her bearing to your vessel during that period of time? - Yes, from the time I saw the first rocket.
7939. The first of the eight that you have told us of? - The second - excepting the first flash, which I was not sure about.
7940. You say you saw the steamer altering her bearing with regard to you? - She bore first S.S.E. and she was altering her bearing towards the south towards west.
7941. Under way apparently? - Yes.
7942. During that 20 minutes did you notice anything which you would call funny or odd about her light? - Yes.
7943. What did you notice? - On one occasion I noticed the lights looked rather unnatural, as if some were being shut in and others being opened out; the lights appeared to be changing their position - the deck lights.
7944. Her deck lights? - Yes, and I lost sight of her red sidelight.
- 7944a. That would be consistent with her altering her heading? - Yes.
7945. What was there funny about it? - Merely that some lights were being shut in and others exposed and I remarked to Gibson that the lights looked peculiar, unnatural, but when I took the glasses and brought her under close observation I took it to be due to the fact that very likely she was porting for some iceberg close at hand and was coming back on her course again, showing her other lights, the original lights.
7946. Is this right, that during this 20 minutes Gibson said this to you: "Look at her red light; is not there something funny about it"? Did anything of that sort happen? - Not her red light that I remember.
7947. Gibson has been here, and he told us that he directed your attention to the red light. If you do not remember it, say so? - I do not remember his saying anything about her red sidelight at all.
7948. At the end of those 20 minutes did you then send Gibson to report to the Captain? - Yes.
7949. What report did you tell Gibson to give to the Captain? - I told Gibson to go down to the Master and be sure and wake him up and tell him that altogether we had seen eight of these white lights like white rockets in the direction of this other steamer; that this steamer was disappearing in the S.W., that we had called her up repeatedly on the Morse lamp and received no information whatsoever.
7950. Did Gibson go away? - He went down.
7951. Did Gibson return? - He returned.

7952. When Gibson returned did he tell you what had passed between him and the Captain? - He told me he had woke the Captain up and given him my report; the Captain asked him the time and asked him if he were sure there were no colours in them, red or green.
7953. You mean the rockets? - Gibson assured him they were white rockets. 7954. Is that all? - Then he told me that as he shut the door he heard the Captain say something - what, he was not quite certain about.
7955. Did Gibson then remain on the bridge with you? - Yes.
7956. And after Gibson had returned did you continue to keep this ship under observation? - Until she disappeared, yes.
7957. What did you see of her which disappeared? - A gradual disappearing of all her lights, which would be perfectly natural with a ship steaming away from us. 7958. (*The Commissioner.*) What do you mean by all her lights? - The deck lights, which were in view. The masthead light would be shut in except for a slight flickering, the glare of it, and the red sidelight would be shut in altogether. The lights I would see would be the lights at the end of the alleyway or engine room skylight, and the stern light. 7959. (*Mr. Butler Aspinall.*) Did the stern light that you speak of as disappearing, suddenly become black or gradually fade away as if it was going away? - It gradually faded as if the steamer was steaming away from us.

## Page 180

7960. Did it have the appearance of being a light on a ship which had suddenly foundered? - Not by any means.
7961. (*The Commissioner.*) Can you give me an idea of the speed at which she was steaming away when these lights gradually disappeared? - No, it would be very difficult to express an opinion.
7962. Cannot you express any opinion? - I should say that at different times she was going at different speeds.
7963. Well, what speeds? What was the greatest speed? - I could not say.
7964. She was in a sea covered with ice? - Yes.
7965. You could not make any way; at all events you did not make any way at this time; you were standing stationary? - Yes.
7966. You thought she was steaming away? - Yes.
7967. In the same condition of water that you were lying in? - Yes.
7968. Did you really think so? - I did. The only confirmation I had of it was the bearings of the compass. Two ships remaining stationary could not possibly alter their bearings.
7969. You were swinging round? - We were slowly swinging.
7970. (*Mr. Butler Aspinall.*) When you saw her disappear, did you think something had happened to her? - No, nothing except that she was steaming away.
7971. Did you make any report to the Captain about this disappearance? - When I sent Gibson down at two o'clock I told him she was disappearing in the S.W. 7972. (*The Commissioner.*) Did you say to Gibson "Tell the Captain she is disappearing," or did you say "Tell the Captain she has disappeared," which did you say? - I could

not have said that she had disappeared, because I could still see her stern light. I saw this light for 20 minutes after that.

7973. (*Mr. Butler Aspinall.*) After she had disappeared, did you not make any report to the Captain? - No.
7974. Are you sure? - Not until about 20 minutes after that again.
7975. Well, you did, you see? - I thought you meant at that moment.
7976. I beg your pardon. Twenty minutes later you reported to the Captain. How? - About 2.40 by means of the whistle tube. I blew down again to the Master; he came and answered it, and asked what it was. I told him the ship from the direction of which we had seen the rockets coming had disappeared, bearing S.W. to half W. the last I had seen of the light.
7977. In view of the fact that when you saw her stern light last you thought nothing had happened to her, why did you make this report to the Captain? - Simply because I had had the steamer under observation all the watch, and that I had made reports to the Captain concerning her, and I thought it my duty when the ship went away from us altogether to tell him.
7978. (*The Commissioner.*) But why could not have you told him in the morning? Why wake up the poor man? - Because it was my duty to do so, and it was his duty to listen to it.
7980. It was of no consequence if the steamer was steaming safely away? - He told me to try and get all the information I could from the steamer. I got none and I thought it my duty to give him all the information I could about the steamer.
7981. Were you anxious about her? - No.
7982. Was he anxious about her? - No, as far as I could judge from his answers and instructions.
7983. (*Mr. Butler Aspinall.*) I want to take you back. You remember those 20 minutes you told me you were talking to Gibson - not all the time, but you and he were from time to time having a conversation about the ship, after the eight rockets, that was between 1.40 and 2 o'clock; it was 20 minutes? - Yes.
7984. Did anything of that sort pass? Did you say something of this sort to Gibson: "A ship is not going to fire rockets at sea for nothing"? - Yes, I may possibly have passed that expression to him.
7985. Well, do you think you did? - Yes, I think I did do so; it is quite possible.
7986. And were you talking about the ship all the time until she disappeared? - No.
7987. Are you sure? - Yes.
7988. Did you say this to Gibson, "Have a look at her now; it looks queer; she looks to have a big side out of the water"? - No, I did not say she had a big side out of the water; he remarked it to me.
7989. He remarked that to you? - Yes.
7990. Did you say, "Have a look at her now; it looks queer"? - That is at the time when I told him the lights appeared to be altering their position with regard to one another. Yes.
7991. Did you think it looked queer? - I merely thought it was a funny change of her lights, that was all. That was before I had looked at her through the

- binoculars. 7992. In view of the fact that this vessel had been sending up rockets, and in view of the fact that you said it looks queer, did not you think at the time that that ship was in distress? - No.
7993. Are you sure? - I did not think the ship was in distress at the time.
7994. It never occurred to you? - It did not occur to me because if there had been any grounds for supposing the ship would have been in distress the Captain would have expressed it to me.
7995. (*The Commissioner.*) Never mind about the Captain. You are being asked about what you thought yourself. Do you mean to tell us that neither you nor Gibson expressed an opinion that there was something wrong with that ship? - No, not wrong with the ship, but merely with this changing of her lights.
7996. Well, about this changing of her lights? - That is when I remarked that the lights looked queer. The lights, I said, not the ship.
7997. The lights are what I call part of the ship. The whole thing, lights and all, make up the ship. You want me to believe, do you, that, notwithstanding these rockets, neither you nor Gibson thought there was anything wrong on board that ship; you want me to understand that? - Yes.
7998. (*Mr. Butler Aspinall.*) I went back for a moment, but I want now to take you to the later period, when you spoke to the Captain and told him that the steamer had disappeared? - Yes.
7999. Will you tell me whether the Captain made any reply to that, and, if so, what? - He again asked me if I was certain there were no colours in those lights whatsoever. I again assured him that they were all white, just white rockets.
8000. Can you explain why it was that the captain should again ask you if you were sure there were no colours in the lights? - No.
8001. Have you no idea? You are a sailor? - Yes.
8002. You had been taking part in this matter, so to speak? - Yes.
8003. You were an onlooker paying careful attention, keeping those lights under observation, and then this question again comes from the Master. What did you think he meant by such a question? - I did not know, except that he had the thought in his mind that they may have been company signals of some sort.
8004. But do you really mean that? - That thought may have been in his mind; I did not say it was in his mind.
8005. Was it in yours? - That they were company's signals?
8006. Yes? - No, not that they were. They may possibly have been.
- The Commissioner:* Would there be any significance in the lights if they were coloured as distinct from white, Mr. Aspinall?
- Mr. Butler Aspinall:* As I understand it, white lights are distress signals; company's lights are very often coloured.
- The Commissioner:* Would distress signals be coloured?
- Mr. Butler Aspinall:* I have not got the exact wording of the regulation in my mind.

*The Attorney-General:* I do not think there is anything about that in the regulations. *Mr. Laing:* I have them here.

*The Commissioner:* "Rockets or shells throwing stars of any colour or description, fired one at a time at short intervals."

*Mr. Laing:* Private signals are dealt with by section 733. *The Commissioner:* What is a private signal?

*Mr. Laing:* A company's signal.

*The Commissioner:* What sort of signal is it?

*Mr. Laing:* It is a made up signal to show what particular line the ship belongs to.

*The Commissioner:* But how is the signal different from distress signals?

*Mr. Laing:* I think they burn different coloured flares or candles, or something of that sort. Sometimes they throw rockets. They throw balls, I know, sometimes - Roman candles.

*The Commissioner:* But Roman candles do not go up in the air.

*Mr. Laing:* No, but they throw up balls. It is dealt with by section 733 of the Merchant Shipping Act.

8007. (*Mr. Butler Aspinall.*) After this conversation with the Captain through the tube, did you later see anything more? - Yes.

8008. What did you do? - At about 3.20, just before half-past three, as near as I can approximate, Gibson reported to me he had seen a white light in the sky to the southward of us, just about on the port beam. We were heading about west at the time. I crossed over to the port wing of the bridge and watched its direction with my binoculars. Shortly after, I saw a white light in the sky right dead on the beam.

8009. (*The Commissioner.*) How far away? - At a very great distance I should judge.

8010. What do you mean by a very great distance? - Such a distance that if it had been much further I should have seen no light at all, merely a faint flash.

8011. (*Mr. Butler Aspinall.*) Was it the same character of light as the rockets, or something quite different? - It was so far away that it was impossible to judge.

8012. Did you think it could have come from the steamer you had been looking at before? - No.

8013. It was something different, you think? - Yes, because it was not on the same bearing, unless the steamer had turned round.

*The Commissioner:* And were these lights rockets? - I think not.

8014. (*Mr. Butler Aspinall.*) Did anything further happen between that time and the end of your watch? - Nothing further.

8015. Your watch ended at 4? - Yes.

8016. At 4 did you see the navigation lights of a steamer? - After 4 o'clock. 8017. When after 4? - Just after 4 o'clock - a few minutes possibly. The Chief Officer relieved me. I gave him a full report of everything I had seen and everything I had reported to the Master, his instructions, when the steamer disappeared, and the way she was bearing - the whole information regarding the watch. He looked over on the port beam, and he remarked to me, "There she is; there is that steamer; she is all right." I looked at the steamer through the glasses, and I remarked to him "That is not the same steamer; she has two masthead lights." I saw a steamer then just abaft the

port beam showing two masthead lights apparently heading much in the same direction as ourselves.

8018. Do you know what that steamer was? - No.

8019. That could not have been the steamer you have been telling us about I suppose? - I should say not.

8020. I want you to consider this. You gave a full report, full information to the Chief Officer, and then he looks over the side and he says "There is that steamer; she is all right." According to the story you have told us you know, when you saw this other steamer's stern light disappear you thought she was all right. What was there in your story to the Chief Officer which led him to make this observation: "There is the steamer; she is all right"? - I do not know what led him to make that observation.

8021. Why should he have said it, in view of the evidence you have given us here today you know? Do not you think you told the Chief Officer that you were fearful the steamer you had seen had gone down? - No. I told him the steamer had steamed away from us in a south westerly direction.

**Examined by Mr. SCANLAN.**

8022. Did you obtain a certificate from the Board of Trade as a mate? - As a first mate in steamships, yes.

8023. Was that certificate given to you after examination? - Yes.

8024. When did you obtain that certificate? - Last December twelvemonth.

8025. Is not part of the subjects of examination the signals of distress and the signals to be made by ships wanting a pilot? - Yes, the articles.

8026. That is one of the subjects in which you are supposed by the Board of Trade to be qualified before you get the certificate? - Yes.

8027. I suppose before you sat for that examination, you read something about signals? - I learned them.

8028. Do you mean to tell his Lordship that you did not know that the throwing up of "rockets or shells, throwing stars of any colour or description, fired one at a time at short intervals," is the proper method for signaling distress at night? - Yes, that is the way it is always done as far as I know.

8029. And you knew that perfectly well on the night of the 14th of April? - Yes.

*The Commissioner:* And is not that exactly what was happening?

8030. (*Mr. Scanlan.*) You have heard my Lord put that question. That was what was happening? - Yes.

8031. (*The Commissioner.*) The very thing was happening that you knew indicated distress? - If that steamer had stayed on the same bearing after showing these rockets - 8032. No, do not give a long answer of that kind. Is it not the fact that the very thing was happening which you had been taught indicated distress? - Yes.

8033. (*Mr. Scanlan.*) You knew it meant distress? - I knew that rockets shown at short intervals, one at a time, meant distress signals, yes.

8034. Do not speak generally. On that very night when you saw those rockets being sent up you knew, did you not, that those rockets were signals of distress? - No. 8035. (*The Commissioner.*) Now do think about what you are saying. You have just told me that what you saw from that steamer was exactly what you had been taught to understand were signals of distress. You told me so? - Yes.

8036. Well is it true? - It is true that similar lights are distress signals, yes.

8037. Then you had seen them from this steamer? - A steamer that is in distress does not steam away from you, my Lord.

8038. You saw these before this steamer steamed away from you? - I saw them at the same time the ship started to alter her bearings.

8039. (*Mr. Scanlan.*) But for a long time while this ship was stationary like your own, you noticed at frequent intervals that she was sending up rocket after rocket? - No.

8040. I thought that you told my learned friend that you had counted the rockets. Here is what you said. You said you had not your binoculars when the first rocket went up and you did not see the stars. Then you took your binoculars and you saw two other rockets and in each case you saw stars? - Yes.

## Page 182

8041. Did not those come in fairly quick succession one after another? - Yes. 8042. What do you mean by saying that you did not see them coming in quick succession one after another? - I said that the ship was altering her bearing from the time she showed her first rocket; she commenced altering her bearing by the compass. 8043. Is not this accurate? When you came on to your watch at twelve o'clock this ship was stationary? - Yes.

8044. And except for a change in her position towards 2.40 she was stationary all the time? - No she was not stationary.

8045. Was she moving? - She started to move as soon as I saw the first rocket. She was stationary up to that time. She was stationary by our compass, at least so far as I could tell.

8046. Do you mean to say she was swinging about? - She was not swinging so far as I could tell; she was steaming away.

8047. But have not you said to Mr. Aspinall that you only noticed her steam away towards four o'clock? - Certainly not; I made no such remark, I think.

8048. When did you send word to the Captain that you noticed her steaming away.

8049. (*The Commissioner.*) It is 2 o'clock? - At 10 minutes past 1. I reported to the Master that she was altering her bearings, which was the same thing.

8050. (*Mr. Butler Aspinall.*) Altering her bearings did not mean steaming away? - I do not see how two ships can alter their bearings when stopped.

*The Commissioner:* You need not press this any further.

Mr. Scanlan: No, my Lord.

**Examined by Mr. HARBINSON.**

8051. Did you notice this ship had a list? - No, I did not.
8052. Are you sure? - Yes.
8053. Did you tell Gibson to look through his glasses, and that the ship had a list? - No; he remarked to me that it looked as if she had a list to starboard.
8054. Did you look? - I looked.
8055. (*The Commissioner.*) Did you notice it? - I did not. I remarked to him that it was owing very probably to her bearing and her lights were changing possibly. She had no list as far as I could see.

**Examined by Mr. LAING.**

8056. Did you ever see this vessel's green light? - No.
8057. If she was going away S.W. she must have gone under your stern? - No, she went across our bow.
8058. Were you turned round? - We were slowly swinging.
8059. She could not cross your bow showing you a red light? - Why not?
8060. Well, I do not think so; I may be wrong? - That is the light she would show, her red light.
8061. If you turn round - heading W.S.W. I think you said? - We were heading E.N.E. at the beginning of the watch and slowly turned round to W.S.W. When I lost sight of this steamer we would be heading then about W.S.W. and she would be about 2 points on our port bow. I saw then her stern light, not her red light. She shut in her red light.
8062. You must have seen her green light if it was showing, before she shut in her stern light? - If she shut in her red light. I did not say she shut in her stern light. She did not shut her stern light in at all the whole period.
8063. You are head E.N.E.? - Yes.
8064. She is abeam of you? - She is on our starboard beam.
8065. With her red light open? - Yes.
8066. Then you turned round? - We slowly swung to port the other way, swinging through to southward.
8067. You came round that way? - Yes, and brought her head - 8068. Right round *this* way? - Yes to W.S.W.
8069. And she goes away to the S.W.? - Yes as near as I could judge. That was approximate.
8070. She must open her green light to you? - No.
8071. (*The Commissioner.*) Is not that so? - She must have opened her green light to you? - To steam away to the S.W.?
8072. Yes. - No.
8073. Just follow it. Take that red book which perhaps makes it plainer, and put the two little boats on it.
8074. (*Mr. Laing.*) (*Demonstrating with models.*) Here is your ship heading E.N.E.? - Yes.

8075. Here is a vessel showing her red light on your starboard beam? - From the appearance of her lights, she was more *that way*, heading in the same direction as ourselves.
8076. Showing a red light? - Yes.
8077. Now you began to turn round through the southward? - Yes.
8078. Like this? - Yes.
8079. How far did you get? - To W.S.W.
8080. That is about it? - Yes.
8081. Now where does she go to? - To the S.W.
8082. She must, to go to the S.W., go round here?
8083. (*The Commissioner.*) She went across your bows? - It was merely our swinging that brought her across our bows.
8084. Never mind, she did come across your bows.  
*Mr. Laing:* She must have done.
8085. (*The Commissioner.*) How did she do it without showing her green light? - I did not see her green light at all. She ported. She shut in her red sidelight and showed her stern light.
8086. (*Mr. Laing.*) And came round like that? - I did not see the green light. 8087. (*The Commissioner.*) She must have shown her green light, you know? - We are heading W.S.W. and the steamer's stern was S.W. ahead of us. All we would see is her stern light. I did not see any sidelight at all after she started to steam away.

**Examined by Mr. ROBERTSON DUNLOP.**

8088. What kind of steamer did you judge her to be from the appearance of the lights you saw? - A smallish steamer.
8089. Judging from the appearance of the lights, could she possibly have been the "Titanic" in your opinion? - Not by any means.
8090. (*The Commissioner.*) Have you heard of any other steamer that was in that neighbourhood at that time? - No.
8091. I daresay you have been asking everywhere for this steamer? - There was no one to ask; no one to give us information about it.
8092. Have you been trying to find out? - Only by watching the newspapers. 8093. Have you found it? - No.
8094. You know the "Titanic" was there? - Yes.
8095. (*Mr. Robertson Dunlop.*) And there was another steamer which you say was there the next morning? - I saw three steamers the next morning.
8096. You said there was a steamer heading the same way as you were. How many funnels or masts had the steamer which you saw the next morning? - I could not see anything about her, except her two masthead lights.

8097. Had the steamer which you have referred to, whose lights you saw, one masthead light or two? - The first steamer I saw had one masthead light.

8098-9. If she had had a second masthead light could you have failed to see it? - I think not; I was bound to have seen it.

8100. For how long had you this vessel's stern light under observation? - From just about 1 o'clock to the time I lost her, I should say. The last light I saw must have been her stern light. It may have been the light at the end of an alleyway, or some bright light on deck.

8101. About how long do you think she was showing her stern light? - About an hour.

8102. When you saw she was altering her bearing, was she also altering her distance? - She appeared to be gradually getting further away from us.

8103. And what was the furthest she got away from you before you lost her lights? - I could not say; it would depend upon the height of her lights above the waterline. 8104. Have you any idea how far away she was when you last saw her stern light? - It is a very hard thing to say; I have no idea.

### **Re-examined by the SOLICITOR-GENERAL.**

8105. (*The Solicitor-General.*) May I ask one question, my Lord? (*To the Witness.*) Do you suggest there was any time when you saw nothing but the stern light and the masthead light of this steamer without any other lights from her deck? - No, I suggest no such thing.

8106. You do not suggest that? - No. *The Commissioner:* I thought he did.

8107. (*The Solicitor-General.*) It is clear now he does not. (*To the Witness.*) And when you say you saw the light which you call her stern light, you mean you saw a number of lights at the afterend of her and you supposed one was the stern light? - I took the brightest one to be the stern light.

8108. You have been asked questions how far the ship was away. Do you know any means on a dark night at sea by which you can see whether a light is a very powerful light some way off or a less powerful light not so far off? - Yes.

8109. How would you do it? - A powerful light generally throws a glow around it, into the surrounding atmosphere. The more moisture there is in the air the greater the glow you will see around this light.

8110. How much glow was there round these lights? - Very little.

*(The Witness withdrew.)*

*The Commissioner:* I do not propose to begin a new witness to-night.

*Mr. Robertson Dunlop:* May the captain go, my Lord?

*The Commissioner:* I would rather he did not go to-night. Wait till tomorrow till we have finished with these witnesses.

*(Adjourned until tomorrow 10. 30 o'clock.)*

**Wreck Commissioners' Court.**

SCOTTISH HALL,  
BUCKINGHAM  
GATE,  
Wednesday, 15th  
May, 1912.

## PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

### LOSS OF THE S. S. "TITANIC."

### EIGHTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of stewards. (Admitted on application.)

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the thirdclass passengers. (Admitted on application.)

**Page 186**

**CHARLES VICTOR GROVES, Sworn.**

**Examined by Mr. S. A. T. ROWLATT.**

8111. Charles Victor Groves, is that your name? - Yes.

8112. Were you second officer of the "Californian"? - Yes, I was on the ship's articles as second officer, but took the duties of third.

8113. You are referred to as third officer in the papers? - Yes.

8114. You remember Sunday, the 14th? - Yes.

8115. Was your watch from 8 p.m. till midnight? - Yes.

8116. And we know your steamer stopped because she got among the ice? - Yes.

8117. At 10.26 was it? - Yes, at 10.26.

8118. And you had had a double look-out. We have heard about that and I will not ask you again? - Yes, a double look-out.

8119. Since about 6? - Since about 6.

8120. Had you seen any icebergs, you yourself, in the afternoon? - Yes.

8121. Where did you see them? - About 5 miles to the southward of us.

8122. What time was that? - About 20 minutes past 5 when I saw them, when I relieved the bridge. I relieved the chief officer then for his tea.

8123. You are talking about the time by your clock? - Yes, ship's time.

8124. When you came on watch at 8 o'clock was it clear? - Yes, quite clear. 8125. Could you see the horizon? - No, you could not see where the horizon in the sky finished but you could see stars right down as far as the sea.
8126. According to your judgment was there anything in the shape of a haze? - No, nothing whatsoever.
8127. None? - None.
8128. Was the captain on the bridge? - Yes.
8129. How long did he stay there? - He stopped there till about 10.35 - perhaps a few minutes less than that, but about 10.35.
8130. When he left the bridge did he give you any orders? - No he did not, not at that time. But I saw him after that.
8131. Did he give you orders about other ships? - Yes.
8132. When was that? - Probably that was just before he left the bridge, about half-past 10, but the exact time he gave those orders I could not say.
8133. What did he tell you? - He told me to let him know if I saw any ship approaching us.
8134. Did you see any ships approaching? - Yes.
8135. Now, what did you see, and when? - As I said before, the stars were showing right down to the horizon. It was very difficult at first to distinguish between the stars and a light, they were so low down. About 11.10, ship's time, I made out a steamer coming up a little bit abaft our starboard beam.
8136. Now, did you look at the clock? - When I saw the steamer?
8137. Yes? - No.
8138. Why did you say 11.15? - I say it was about that.
8139. (*The Commissioner.*) I think you said 11.10? - Yes, I said about 11.10.
8140. (*Mr. Rowlatt.*) That is your judgment? - That is my judgment.
8141. When had you last looked at the clock? - Ten-twenty-six - well, I had looked at my watch; we had no clock on the upper bridge. I set that at 6 o'clock by the ship's clock.
8142. You saw a steamer? - Yes.
8143. What lights did you see? - At first I just saw what I took to be one light, one white light, but, of course, when I saw her first I did not pay particular attention to her, because I thought it might have been a star rising.
8144. When do you think you began to pay particular attention to her? - About 11.15.
8145. About five minutes after you first saw her? - About five minutes after I first saw her.
8146. Did you then see more lights than one? - About 11.25 I made out two lights - two white lights.
8147. Two masthead lights? - Two white masthead lights.
8148. Did you make out any other lights then? - Not at the time, no.
8149. You said that she was a little abaft your starboard beam? - Yes.
8150. How were you heading? - At that time we would be heading N.E. when I saw that steamer first, but we were swinging all the time because when we stopped the

order was given for the helm to be put hard-a-port, and we were swinging, but very, very slowly.

8151. You say you were heading about N.E.? - We were heading N.E.
8152. Did you notice that at the time? - Yes.
8153. Was that with a view to see in what direction the steamer was bearing? - No, for my own information.
8154. But it was at that time? - At that time, yes.
8155. Now, how did she bear, how many points abaft the beam did she bear? - Do you mean when I first noticed her?
8156. Yes? - I should think about 3 1/2 points, but I took no actual bearing of her. 8157. That would leave her S. by W.? - We were heading N.E. and she was three points abaft the beam.
8158. Your beam would be? - S.E.
8159. That would bring her about 7? - S. or S. by W. - S. 1/2 W.
8160. Could you form any judgment how far off she was? - When I saw her first light I should think she would be about 10 or 12 miles.
8161. Judging by the look of the light? - By the look of the light and the clearness of the night.
8162. (*The Commissioner.*) That was when you saw the one light? - Yes, when I say she was 10 to 12 miles away.
8163. (*Mr. Rowlatt.*) Did she appear to get nearer? - Yes.
8164. The lights clearer? - Yes, all the time.
8165. Was she changing her bearing? - Slowly.
8166. Coming round more to the south and west? - More on our beam, yes, more to the south and west, but very little.
8167. Did you report that to the captain? - Yes, because, as I said before, he left orders to let him know if I saw any steamers approaching.
8168. You went down to him? - I went down to the lower bridge, which is part of the saloon deck.
8169. (*The Commissioner.*) Would this be something after 11 o'clock? - Yes, my Lord, when I went down to him it would be as near as I could judge about 11.30.
8170. (*Mr. Rowlatt.*) What did you say to him? - I knocked at his door and told him there was a steamer approaching us coming up on the starboard quarter.
8171. (*The Commissioner.*) The door of what? - The door of the chart room. It is a Venetian door.
8172. (*Mr. Rowlatt.*) Did you say what sort of a steamer you thought she was? - Captain Lord said to me, "Can you make anything out of her lights?" I said, "Yes, she is evidently a passenger steamer coming up on us."
8173. (*The Commissioner.*) "Could you make anything out of her lights?" - Yes.
8174. "I said, 'She is evidently a passenger steamer'?" - Yes, my Lord.
8175. You added something to that answer? - "Coming up on the starboard quarter."
8176. (*Mr. Rowlatt.*) Did you say why you thought she was a passenger steamer? - Yes. I told him that I could see her deck lights and that made me pass the remark that she was evidently a passenger steamer.

8177. (*The Commissioner.*) "I said I could see her deck lights"; was that true? - Certainly, my Lord.

**Page 187**

8178. (*Mr. Rowlatt.*) How many deck lights had she? Had she much light? - Yes, a lot of light. There was absolutely no doubt her being a passenger steamer, at least in my mind.

8179. Could you see much of her length? - No, not a great deal; because as I could judge she was coming up obliquely to us.

8180. She was foreshortened? - Supposing we were heading *this* way she would be coming up in *this* way, perhaps an angle of 45 degrees to us (*demonstrating*).

8181. So that her side would not be greatly extended? - No.

8182. Now is that all you said to the captain before he said something to you? - Yes. He said, "Call her up on the Morse lamp, and see if you can get any reply."

8183. Did anything pass as to what passenger steamers you were speaking with the wireless? - Not at that moment.

8184. The first thing he said was, "Call her up on the Morse lamp"? - Yes.

8185. What did you say to that? - I went up on the bridge; I went away and went up on the bridge and I rigged the Morse lamp.

8186. (*The Commissioner.*) How long does it take to do that? - It is only a matter of taking a key out of a locker up *there* and just putting the plug in.

8187. A minute? - Yes, that is all.

8188. (*Mr. Rowlatt.*) Did you get any reply? - Not at first, no reply whatsoever. 8189. Did you afterwards? - Well, what I took to be a reply. I saw what I took to be a light answering, and then I sent the word "What?" meaning to ask what ship she was. When I sent "What?" his light was flickering. I took up the glasses again and I came to the conclusion it could not have been a Morse lamp.

8190. (*The Commissioner.*) Is the long and short of it this, that you did not get a reply, in your opinion? - In my opinion, no.

8191. You thought at first you had? - Yes, I thought at first I had.

8192. But you satisfied yourself that you were wrong? - That is so.

8193. (*Mr. Rowlatt.*) Did you go down again to the captain? - No, he came to the bridge.

8194. Was there anyone else there except you and he? - Not on the bridge.

8195. Did you tell the captain about the Morsing? - Yes.

8196. What did he say? - He saw a light flickering himself, and he passed the remark to me. He said, "She is answering you." This was just before I sent the word "What?"

8197. After that was done, did you have any more conversation with the captain about the steamer? - When he came up on the bridge he said to me, "That does not look like a passenger steamer." I said, "It is, Sir. When she stopped her lights seemed to go out, and I suppose they have been put out for the night."

8198. (*The Commissioner.*) You said, "It is"? - Yes, my Lord.

8199. Now, what about putting out the lights? - I said she put out her lights as she stopped.

8200. (*Mr. Rowlatt.*) You have not told us about that yet, but before you come to that, was there anything said at that time about the passenger steamers that you were in communication with by wireless? - Nothing whatsoever.
8201. Was anything said at any time about the "Titanic"? - After the captain came on the bridge.
8202. Was that before the lights appeared to go out? - No, that was after.
8203. (*The Commissioner.*) You said something about the lights of the ship going out. When did they go out? - At 11.40.
8204. Was the Captain standing with you? - No, my Lord.
8205. At that time? - No, my Lord.
8206. Had he gone away? - He had not been on the bridge again since about 10.35. 8207. You went on the bridge after he had told you to signal with the Morse light? - Yes.
8208. And you did signal and then, as I understand, the Captain came on to the bridge? - Not until after I was Morsing. I was actually Morsing when he came up.
8209. Very well, he came up and he remarked to you, "She does not look like a passenger steamer"? - That is so.
8210. And you said, "It is"? - Yes.
8211. Now you said something about the lights going out; what was it? - Well he said to me, "It does not look like a passenger steamer." I said, "Well, she put her lights out at 11.40" - a few minutes ago that was.
8212. Then had she put her lights out before the captain came on the bridge? - Yes, my Lord.
8213. When did she put her lights out? - At 11.40.
8214. And you told the captain this, did you? - Yes.
8215. What did he say to that; did he say anything? - When I remarked about the passenger steamer he said: "The only passenger steamer near us is the 'Titanic.'" 8216. He said that, did he? - Yes, my Lord.
8217. (*Mr. Rowlatt.*) What makes you fix the time 11.40 for her lights going out? - Because that is the time we struck one bell to call the middle watch.
8218. Do you remember that bell was struck at that time? - Most certainly.
8219. Did the steamer continue on her course after that? - No, not so far as I could see.
8220. She stopped? - She stopped.
8221. Was that at the time when her lights appeared to go out? - That was at the time that her lights appeared to go out.
8222. Were the lights you saw on her port side or her starboard side? - Port side. 8223. I want to ask you a question. Supposing the steamer whose lights you saw turned two points to port at 11.40, would that account to you for her lights ceasing to be visible to you? - I quite think it would.

*The Commissioner:* Mr. Rowlatt, at 11.40 the engines were stopped on the "Titanic."

*Mr. Rowlatt:* Yes, my Lord.

*The Commissioner:* I do not know whether that would cause a large number of lights to go out. They had a supplemental dynamo.

*Mr. Rowlatt:* I think the only evidence about lights going out was that at some time after this the lights in a particular stokehold went out for a short time.

*The Commissioner:* Oh, yes, I know that, but is it not the fact that at some time the lights in the ship, except the lights in the alleyways and the working parts of the ship did go out.

*Mr. Rowlatt:* I do not remember that there is any evidence of that; I do not know how it would be. I do not know whether those who sit with you could indicate whether it would necessarily follow the engines stopping. I should imagine the engines stopping would not put the lights out.

*The Commissioner:* Did that emergency apparatus working the electric light supply the whole ship with electric light?

*Mr. Rowlatt:* I am not in a position to answer that question at the moment.

*The Commissioner:* Did it, Mr. Laing?

*Mr. Laing:* No, my Lord; the emergency dynamo does not supply the whole of the lights.

*The Commissioner:* It supplies only, as I understand, the lights in what you may call the working parts of the ship - the alleyways, the engine rooms.

*Mr. Laing:* And the deck cabins, I think.

*The Commissioner:* The deck cabins?

*Mr. Laing:* I think so.

*The Commissioner:* I do not think so.

*Mr. Laing:* Some of them, at any rate.

*Mr. Rowlatt:* It can hardly be that when they stopped the ship going forward the ship is plunged in darkness automatically. It only means they stopped the engines which actuate the propellers.

*The Commissioner:* At some time the light which was produced by the main engines did go out.

## **Page 188**

*Mr. Rowlatt:* The lights went out in a stokehold.

*The Commissioner:* I remember that. It came on again in a few minutes; in something like ten minutes it came back again. That was temporary.

*Mr. Rowlatt:* I apprehend that the engine which produces the electric light is not the same engine as the engine which turns the propellers.

*The Commissioner:* Which engine is it?

*Mr. Rowlatt:* I cannot tell your Lordship at the moment. We will find out.

*The Commissioner:* There is a separate engine which works what I call the emergency electric light machine, is not there?

*Mr. Rowlatt:* There is, my Lord.

*The Commissioner:* Now where is the engine that works the electric light when that emergency apparatus is not in use?

*Mr. Rowlatt:* I cannot point to it at the moment - it is immediately abaft the turbine. *The*

*Commissioner:* It is abaft the turbine?

*Mr. Rowlatt:* Yes.

*The Commissioner:* Very well. Now I understand it. Those engines would be going on just the same although the signal had come from the bridge to stop the main engines.

*Mr. Rowlatt:* Yes. I have got an answer from the witness which may throw some light upon it. He said that, in his opinion, the turning of the ship -

*The Commissioner:* I heard him. That would be when the order was given to change the direction.

*Mr. Rowlatt:* Hard-a-starboard; and your Lordship remembers we had evidence that the ship did answer to the extent of two points at once.

*The Commissioner:* Yes, she did answer her helm. Very well; two points you were saying?

*Mr. Rowlatt:* Two points, my Lord. The man at the compass said she altered her course two points.

*The Commissioner:* A change of two points to port would conceal the lights in the ship?

8224. (*Mr. Rowlatt - To the Witness.*) Did you say "would" or "might"? I do not want to put it too high? - In my own private opinion it would.

8225. You are speaking of deck lights? - Yes.

8226. Lights from the ports and windows? - Yes.

8227. Did you continue to see the masthead lights? - Yes.

8228. Did you see any navigation lights - sidelights? - I saw the red port light.

8229. (*The Commissioner.*) When did you see that? - As soon as her deck lights disappeared from my view.

8230. (*Mr. Rowlatt.*) Did it strike you that going out of the glare of the other lights could show up the port light? Is that what you mean? - Yes, it would do.

8231. I mean, you are not suggesting that the port light was opened, having been shut in before? - Oh, no.

8232. I only want to understand. You cannot see a red light in the midst of the glare of the deck lights. That is what you mean? - Yes, because of the blaze of the white lights. 8233. Was that at 11.40? - Yes. 8234. It was after this that you had a conversation with the captain about the "Titanic"? - Yes.

8235. (*The Commissioner.*) Did the captain see these lights disappear? - Not to my knowledge, my Lord.

8236. Was he there when you saw them disappear? - Not on the bridge.

8237. Where was he - in the chart room? - I could not be certain where he was at that particular moment. When I spoke to him about the steamer coming up astern he was in the chart room.

8238. But at the time you saw the white lights of the steamer disappear he was not standing with you? - No, my Lord.

8239. It was after you had seen those white lights disappear that you had a conversation with him in which he said to you "the only passenger steamer is the 'Titanic'"? - That is so.

8240. (*Mr. Rowlatt.*) Did you have any further conversation with the captain? - I did not.

8241. Did he stay on the bridge or go down again? - I do not think he would have been up there for more than three minutes at the outside with me.

8242. Then he went down again? - He did.

8243. Did you stop on the bridge? - I stopped on the bridge.

8244. Did you continue to observe the steamer? - After I had tried ineffectually to Morse her I did not pay any particular attention to her.
8245. Did you not notice her or did you notice her? - Oh, I noticed her certainly. 8246. Was she keeping her same position? - The same position, yes. We were swinging slowly to port, very slowly.
8247. Did you not take her bearing by the compass? - Not that steamer's bearing, no.
8248. She would appear to be coming round more towards your stern? - No, she would appear, as we were swinging, to be working towards our head.
8249. I thought you were swinging to port? - No, we were swinging to starboard - that is, to the right hand.
8250. How long did you stay on the bridge? - I stayed on the bridge till something between 12.10 and 12.15.
8251. And were you then relieved by Mr. Stone? - I was.
8252. (*The Commissioner.*) 12.15? - I could not be sure of the exact time.
8253. You were relieved by whom? - Mr. Stone.
8254. (*Mr. Rowlatt.*) The last witness we had yesterday, my Lord. (*To the Witness.*) Was he the first person that came on the bridge after the captain went down? - Was there anybody else there? I only want to know whether I have missed out anything? - No, there was nobody up on the bridge from the time that the captain left until Mr. Stone came up. 8255. Very well. Did you point out the steamer to Mr. Stone? - Yes. 8256. Did you tell him what you thought she was? - Yes.
8257. What did you say? - I pointed out the steamer to him and said, "She has been stopped since 11.40"; and I said, "She is a passenger steamer. At about the moment she stopped she put her lights out."
8258. (*The Commissioner.*) Wait a moment: "I pointed the steamer out to Stone and said, 'She is a passenger steamer. She put her light out.'" "Do you mean by that she shut her light out? - She shut her lights out, my Lord. *The Commissioner:* "About 11.40."
8259. (*Mr. Rowlatt.*) To get it quite clear, at that time was it your impression she had put her lights out or shut them out? - At that time it was my impression she had shut them out, but I remember distinctly remarking to him that she had put them out.
8260. (*The Commissioner.*) That means that she had shut them out? - Yes.
8261. That is what you intended to convey? - Yes.
8262. That she had shut them out? - Yes.
8263. By changing her position? - By changing her position.
- The Commissioner:* Is that right, Mr. Rowlatt; is that the answer you expected? *Mr. Rowlatt:* I was asking for information, my Lord, because I thought he had said before that he thought she had put her lights out because of the time of night.
- The Commissioner:* I think he did say something of that sort.
- Mr. Rowlatt:* I thought he did, and I asked for information to get it clear.
8264. (*The Commissioner - To the Witness.*) Did you say that you thought she had put her lights out because of the time of night? - I did say that, I think, my Lord. 8265. Then which is it to be, that she shut them out because she was changing her

position, or that she had put them out because, in your opinion it was bed-time on board the ship? - Well, at the time the lights disappeared I thought

**Page 189**

in my own mind she had put them out because in the ships I was accustomed to before I joined this company it was the custom to put all the deck lights out, some at 11, some at 11.30, and some at midnight - all the deck lights except those absolutely necessary to show the way along the different decks. But when I saw the ice I came to the conclusion that she had starboarded to escape some ice.

8266. You came to the conclusion then, did you, while you were on the bridge? - Yes, my Lord.

*The Commissioner:* It comes to this, Mr. Rowlatt, at first he thought the lights had been put out, but when he reflected about it and observed she changed her position he thought she had shut her lights out, which is a different thing.

8267. (*Mr. Rowlatt.*) I do not know that he said he observed that she changed her position. (*To the Witness.*) This vessel was stopped at this time, was she not? - Yes.

*Mr. Rowlatt:* He accepted my suggestion, my Lord, that if the vessel did change her course it might shut her lights out; it would shut her lights out.

*The Commissioner:* I think you are right. What he said was the change of two points to port might, or, as he said, would, obscure the lights.

*Mr. Rowlatt:* We know she changed two points - the vessel we are talking about changed two points.

*The Commissioner:* Would a change of two points such as we know took place on the "Titanic" cause the two white masthead lights to alter their relative positions?

8268. (*Mr. Rowlatt.*) Yes. (*To the Witness.*) Would that be so? - Yes, it would, but I do not think at that distance the difference would be perceptible.

8269. It would bring them a little nearer together? - Yes, a little nearer together.

8270. Did you notice anything of that sort? - No, I did not.

8271. You went off the bridge? - Yes.

8272. Where did you go? - The Marconi house.

8273. Is the Marconi operator, Mr. Evans? - Yes.

8274. Did you find him there? - I did.

8275. Was he asleep? - He was asleep.

8276. He had gone to bed? - He had gone to bed, yes.

8277. Did you wake him up? - Yes.

8278. And have some conversation with him? - Yes.

8279. What passed? - The only thing I remember asking him was "What ships have you got, Sparks?"

8280. "Sparks"? - Yes.

8281. Is that his name? - No, it is the name he gets on the ship.

*The Commissioner:* Seeing he is the operator, you know why he is called "Sparks."

8282. (*Mr. Rowlatt.*) You asked him what ships he had got. What did he say? - Only the "Titanic."

8283. Did you take his instruments and put them to your ears? - Yes.
8284. Could you read a message if you heard one? - If it is sent slowly - yes.
8285. Did you hear anything? - Nothing at all.
8286. How long did you listen? - I do not suppose it would be more than 15 seconds at the outside - well, 15 to 30 seconds. I did it almost mechanically.
8287. Did you do anything more before you turned in? - I may have said a few more words to him, but I have no recollection, but when I left his house I went straight to my cabin.
8288. And went to bed? - And went to bed.
8289. (*The Commissioner.*) What time was it you were talking to this man whom you call Sparks? - As near as I can judge it would be between 12.15 and 12.20.
8290. (*Mr. Rowlatt.*) What time did you turn out again in the morning? - About 6.40; I did not notice the time particularly.
8291. Were you woke up by the chief officer? - Yes.
8292. Who is that? - Mr. Stewart.
8293. Did he come to your room? - Yes.
8294. Did he tell you you were wanted on the bridge? - He did. 8295. (*The Commissioner.*) 6.40, was it? - About it.
8296. "Stewart, the chief officer, told me to come on the bridge"? - Yes.
8297. (*Mr. Rowlatt.*) Did he say why? - Yes. He said, "The 'Titanic' has sunk, and the passengers are all in the lifeboats in the water ahead of us," or words to that effect.
8298. (*The Commissioner.*) The passengers were in the lifeboats ahead of you? - Yes. 8299. (*Mr. Rowlatt.*) Did you see Mr. Stone? - I saw Mr. Stone almost immediately after the chief officer left my room.
8300. Where was he? - He was in his room.
8301. Is that close to yours? - Yes, two or three yards away, that is all; diagonally opposite.
8302. Do you mean you went out of your room before you dressed and saw him? - Yes, I jumped straight out of my bunk and I went to his room.
8303. Had he been on the watch from 12 to 4? - From 12 to 4.
8304. Now, did he tell you anything had happened in his watch? - Yes, he told me he had seen rockets.
8305. Did he say where the rockets were, or what sort of rockets, or anything of that sort? - As far as my recollection goes all he said was he had seen rockets in his watch, but at that time I did not pay particular attention to what he said, except that he had mentioned rockets.
8306. You do not remember more than that he mentioned rockets? - No, nothing more.
8307. You do not remember anything more passing with him at that time? - Well, I went to his room for the purpose of asking him if he was right about the "Titanic," and he said, "Yes, old chap, I saw rockets in my watch," and I went straight back to my cabin. 8308. (*The Commissioner.*) This conversation is important. (*To the Witness.*) When you went from your own cabin, before you dressed, to his cabin you naturally went to ask more about the "Titanic"? - Yes.
8309. You had just heard that she had gone down? - Yes.

8310. Now try to recollect what the conversation you had with Stone was? - I went only to his door; he was just getting dressed himself then, and I said, "Is this right, Mr. Stone, about the 'Titanic'?" I told him what the chief officer had said. He said, "Yes, that is right; hurry up and get dressed; we shall be wanted in the boats." He said, "I saw rockets in my watch."
8311. That conveys to me the notion that when he said he saw rockets in his watch he was referring to the rockets which he believed had come from the "Titanic." Did he give you that impression? - Well, it is rather difficult for me to say what impression I got then because I was rather excited, but I have told you what he said to me and what I said to him.
8312. (*Mr. Rowlatt.*) Did you dress? - Yes.
8313. And go up on the bridge? - Yes, I went straight up on the bridge as soon as I was dressed.
8314. What did you find when you got there? - Ice all round us and icebergs. 8315. Was your ship under way? - The ship was under way then, and I could feel her bumping the ice, and I knew she had got a good speed on by that. 8316. She had not started when you went off your watch? - No.
8317. You did not know when she did start, because you were asleep? - I was asleep.
8318. She had started when you were called, had she? - She was under way then. 8319. Were your lifeboats being swung out? - Yes, the lifeboats were being swung out then.
8320. This was about half-past six, I suppose? - Well, about half-past six; I said 6.40 when I was first called.
8321. Now it is getting on for 7? - I suppose by the time I got on the bridge it would be 6.50; but you understand the time is only approximate.
8322. I quite understand that. Were there any other vessels in sight? - Yes.

**Page 190**

8323. What were they? - There was a four-masted steamer abeam on our port side. 8324. What steamer was that? - I did not know at the time, but I knew afterwards she was the "Carpathia."
8325. Abeam on your port side? - Abeam on our port side.
8326. In what direction were you going? - That I could not say.
8327. You did not notice? - No.
8328. How far off was she? - I should think she would be about 5 miles - possibly more, possibly less, but about five.
8329. Did you look at her with the glass? - I did.
8330. Who asked you to do that, anybody? - The captain.
8331. Did you make out anything about her? - After I had been looking at her I made out she had her house flag half-mast. She had a red funnel with a black top. 8332. (*The Commissioner.*) She had what half-mast? - Her house flag.
8333. What is that? - Her company's flag.
8334. Is there any significance in its being half-mast? - It is half-masted for death, my Lord.

8335. (*Mr. Rowlatt.*) That is how you understood it at the time? - That is what I understood it to mean.
8336. It was because of the disaster to the "Titanic" that this vessel was flying her house flag half-mast? - Yes.
8337. What did your vessel do then? - We continued on our course for a little time after I had told the captain she had a red funnel with a black top and the house flag halfmasted, and the next thing that was done we starboarded.
8338. You made straight for her? - We made practically straight for her.
8339. Did you see any other vessel? - Yes, I saw two other vessels.
8340. At this time? - Yes. I fancy one of them was in sight at the same time as I noticed this four-master.
8341. (*The Commissioner.*) Do you know what they were? - I know what one of them was.
8342. What was it? - The "Mount Temple."
8343. (*Mr. Rowlatt.*) Where was she? - She was ahead, a little on our starboard side when I saw her first.
8344. Before you changed your course? - Before we headed for the "Carpathia." 8345. How far off was she, do you think? - Well, when I noticed her first - I had been paying particular attention to this other steamer - I should think she would be perhaps a mile and a half away from us.
8346. Nearer than the "Carpathia." - Much nearer than the "Carpathia." 8347. Was she stopped? - Stopped.
8348. In the ice? - In the ice.
8349. Did you see any other vessel? - I saw another vessel a little on our port bow; she was coming down almost end on.
8350. (*The Commissioner.*) You do not know her name? - I do not, but as far as I remember she had a black funnel. She was a small steamer.
8351. (*Mr. Rowlatt.*) Did you reach the "Carpathia"? - We did.
8352. What time did you reach the "Carpathia"? - I think it would be about 7.45. 8353. Did she signal to you first? - Yes.
8354. That the "Titanic" had struck an iceberg? - Not at first. The first signal shown was fixed on the jumper stay. That is a signal that she wanted to semaphore.
8355. Did she signal to you by semaphore? - Yes.
8356. What did she tell you? - I think the first question she asked was had we any survivors on board, survivors or people, I do not know which she said.
8357. Did you answer by semaphore? - We did.
8358. You said, No? - We said, No.
8359. Did she say anything more? - Yes; I think the next thing which happened was, I fancy, we asked him if we could be of any assistance, and he said, No.
8360. Were you personally signaling? - No, I was not, but I was reading it.
8361. Anything more - any more messages? - That passed between us? - Yes. 8362. (*The Commissioner.*) Tell us shortly? - He told us the "Titanic" had struck an iceberg at 12 o'clock and had sunk at 3, and they had 800 or 700 - I am not sure which - people on board, including Mr. Bruce Ismay. When we asked him if we could be of

any assistance they said, no. And then Captain Lord suggested that we should search down to leeward.

8363. Your captain? - Yes.

8364. Did you search to leeward? - Yes.

8365. Did you find anything? - Only boats and wreckage. 8366. Empty boats? - Boats with no people in.

8367. At about 9 a.m. did the "Carpathia" steam off? - Yes, almost exactly at 9 a.m., because I heard her bell strike.

8368. Did you search longer? - Yes, we searched longer.

8369. Till about 10.40? - Ten-forty exactly. That is when we resumed our course.

8370. After that did you see much more ice? - After 10.40?

8371. Yes? - Yes, we saw a lot of ice; we passed a big field; we passed through a particularly long field about half a mile wide, and we had to absolutely force our way through it.

8372. Was that further south than the wreckage you had seen from the "Titanic"? - I think it was about the same latitude, roughly, within a mile or so. But I never said we saw the "Titanic"; I said we saw the wreckage.

8373. Yes, and we assume the wreckage which you saw was the "Titanic" wreckage - that is what I meant? - Yes.

8374. Do you know whether you carry rockets on your ship? - Yes.

8375. What rockets do you carry? - Distress rockets.

8376. What are they? - Well, I have never seen one fired, so I could not say definitely.

8377. You have never seen one fired? - No.

8378. Is there any inscription on them? - I have not seen a rocket itself, either.

8379. You only know they are there? - I only know they are there.

8380. If you were in distress you would simply send up one of these rockets? - Yes.

8381. And then you would find out for the first time what it looked like? - In my own particular case I should.

**Examined by Mr. SCANLAN.**

8382. At the time you left the bridge was it a clear night? - Quite clear.

8383. Was it so clear that your captain could have picked his way, even through that ice-field to the ship which you saw? - He could have picked his way through there, but it certainly would not have been a particularly safe proceeding. There is no doubt he could have done it.

8384. You said when you first saw the ship she appeared to be about 10 miles from you? - Ten to twelve, I said.

8385. When she came to a stop what was the distance? - Well, I should think about five to seven miles.

8386. In the relative positions of your ship and this ship which you saw, would any person from her see your starboard light and one masthead light? - When she first stopped he could not have seen it before I left the bridge.

8387. In the position to which you had swung round, just at the time you were leaving the bridge, if any person from that ship or from a

boat lower down saw you, would they have seen the light you were showing then, your red starboard light? - It is a green light.

8388. I beg your pardon - your green light? - Yes.

8389. And the white masthead light? - They would have been able to have seen it from the ship undoubtedly, but as to a boat I am rather doubtful.

**Examined by Mr. HARBINSON.**

8390. Your captain stopped because of the ice-field? - Yes.

8391. That is because he considered it exceedingly dangerous? - That is so; at least, I suppose that is what he concluded.

8392. When you saw this steamer, at any time had you any doubt about its being a passenger steamer? - No doubt whatsoever.

8393. And you for your part never considered it was a tramp steamer? - No, I did not.

8394. And you told the captain, you have told us, that you believed it was a passenger steamer? - Yes, I told the captain that.

8395. And that you could see the two masthead lights? - I do not think I told him that I could see two masthead lights.

*Mr. Harbinson:* I think you told the Court here today -

*The Commissioner:* Do not take him all through the whole thing again. I have heard the whole of this. It does not help us to have it all over again.

8396. (*Mr. Harbinson.*) I do not intend to take him through it all, my Lord. (*To the Witness.*) You did see two masthead lights? - Yes, I did see two masthead lights.

8397. What did the captain say when you told him it was a passenger steamer? - Do you remember? - Yes, I do. He said to me, "The only passenger steamer near us is the

'Titanic.'"

*The Commissioner:* We have got it, you know. He said, "The only passenger steamer about here is the 'Titanic.'"

8398. (*Mr. Harbinson.*) The question I propose to follow that up with is this: Did the captain make any observation as to the distance at that time the "Titanic" should be away? Did the captain say at what distance the "Titanic" would be away at that time? - No.

8399. He said nothing? - Nothing.

8400. Did you know about what distance the "Titanic" should be away? - I had no idea.

8401. When you left the bridge you went to the Marconi operator's house? - Yes.

8402. And he told you the only steamer he had got was the "Titanic"? - Yes.

8403. Did he tell you whether or not he had had any message from the "Titanic"? - No, he did not mention about any message at all.

8404. Or say what distance the "Titanic" would be away? - No, he did not know; he could not say.

8405. What time that night had the Marconi operator gone to bed? - That I cannot say, but it was some time previous to 12.15 or 12.20. That is all I know about it. 8406. If the Marconi operator had not been in bed, but up and in charge of his instrument, would he have been likely to hear the messages sent out by the "Titanic"? - As far as I know.

*The Commissioner:* You had better ask the Marconi man when he comes.

**Examined by Mr. LAING.**

8407. Two questions. Do you carry two masthead lights? - Yes.

8408. How many masts have you got? - Four masts.

8409. Where do you keep the after masthead light? - On the mainmast.

8410. And the forward one? - On the foremast.

8411. What sort of span is there between the two? - Longitudinally?

8412. Yes, is it short or long? That is all I want to know? - The distance roughly would be about 70 feet.

**Examined by Mr. HOLMES.**

8413. When you were searching for the wreckage, what boats exactly was it you saw in the water? - We saw the "Titanic" lifeboats. 8414. How many? - I think there were 7.

8415. Would that be boats cut adrift? - They were left by the "Carpathia."

8416. How many officers had you on the "Californian"? - Three.

8417. What watches did you keep? - The ordinary sea watches; 4 on and 8 off. 8418. All through the day? - All through the day and night.

8419. What is the average range of an ordinary ship's sidelight? - Two miles. 8420.

And the masthead light? - Five miles; that is the distance they are supposed to show.

8421. They do show a little further on a clear night? - Yes.

**Examined by Mr. CLEMENT EDWARDS.**

8422. When you first went on deck that evening with the officer at about 10 minutes to 7, how long had your ship been under way at that time? - I do not know.

8423. Was she under way when you were wakened? - She was under way then, yes.

8424. You do not know at all what time? - No.

*The Commissioner:* I think we have had it in evidence.

*Mr. Clement Edwards:* There was a statement by the captain, my Lord. 8429.

Did you get good sights? - Perfectly good sights.

*Mr. Clement Edwards:* Six o'clock, my Lord; it is in his logbook.

**Examined by Mr. ROBERTSON DUNLOP.**

8425. In the logbook it is stated that when you stopped your ship in the ice the position of the ship was 42° 5' N. and longitude 50° 7' W. Is that accurate? - Well, it is bound to be accurate if the captain put it in.

*The Solicitor-General:* This witness would not know, would he?

8426. (*Mr. Robertson Dunlop.*) You were on duty from 10.20 when you started until 12.15? - Yes.

8427. The position of your vessel had been signaled to the "Titanic" at 6.30. Did you know that? - No.

8428. Did you take part in ascertaining the position of your ship at noon on the 15th? - Yes.

8429. Did you get good sights? - Perfectly good sights.

8430. And the position which you found was 41° 33' N.; and the longitude, do you remember what it was? - No.

8431. 50° 9' W. Do you know how far it was you had steamed between noon and the time you left the wreckage? - On the Sunday or Monday?

8432. On the 15th, on the Monday. You take your position at noon on the Monday shortly

## Page 192

after leaving the wreckage, and I want you to help me to fix the position of this wreckage? - In reference to our noon position?

8433. Yes; you have the noon position. How far do you think you had traveled from the time that you got on your way after searching round the wreckage until your noon position? Do you think it would be about five miles? - No, more than that; about 11. That is in distance.

8434. You would be in the same latitude then as the wreckage was found? - That I could not say.

8435. Do you know your course? - At 10.30 we altered the course to N 60° W by compass.

8436. If the "Titanic" was in latitude 41° 33', which is the position she has given, and the position in which the wreckage was found, and your vessel was, as stated in the log, in latitude 42° 5', the "Titanic" would be some 33 miles to the southward of the position where you were lying stopped? - If she stopped in 41° 33' and we were in 42° 5'. 8437. Yes? - Yes, about 30 miles.

8438. And if the "Titanic" was 30 miles to the southward of the position where you were stopped, I do not suppose you could see any navigation lights at that distance? - No, none whatsoever.

8439. Nor indeed any rockets at that distance? - I could not say about rockets, but I should not think it was likely.

8440. If this vessel which you did see was only some 4 or 5 miles to the southward of you, do you think she could have been the "Titanic"?

8441. (*The Commissioner.*) That is a question I want this witness to answer. (*To the Witness.*) Speaking as an experienced seaman and knowing what you do know

- now, do you think that steamer that you know was throwing up rockets, and that you say was a passenger steamer, was the "Titanic"? - Do I think it?
8442. Yes? - From what I have heard subsequently?
8443. Yes? - Most decidedly I do, but I do not put myself as being an experienced man.
8444. But that is your opinion as far as your experience goes? - Yes it is my Lord.
- Mr. Robertson Dunlop:* That would indicate that the "Titanic" was only 4 or 5 miles to the southward of the position in which you were when stopped.
- The Commissioner:* If his judgment on the matter is true it shows that those figures, latitudes and longitudes that you are referring to are not accurate. That is all it shows.
- Mr. Robertson Dunlop:* The accuracy we will deal with, my Lord.
- The Commissioner:* I mean to say, if what he says is right, it follows that the figures must be wrong.
8445. (*Mr. Robertson Dunlop.*) You will appreciate, Mr. Groves, that if the latitudes are right it follows that your opinion must be wrong? - If the latitudes are right, then of course I am wrong.
8446. If the latitude of your ship and that of the "Titanic" are anything approximately right, it follows that the vessel which you saw could not have been the "Titanic"? - Certainly not.
8447. Were the two masthead lights which you saw wide apart indicating a long ship? - They did not look particularly wide apart.
8448. Did they indicate to you a long ship? - Well, I can form no judgment as to her length. She was coming up obliquely to us.
8449. And at that distance at which you saw her, it would be difficult to estimate the height of those lights? - Oh, quite difficult.
8450. Then what was there in the appearance of those two masthead lights to indicate that this vessel was the "Titanic"? - Nothing in the appearance of the masthead lights at all.
8451. What, apart from the masthead lights, was there to indicate to you that this was a large passenger steamer? - The number of deck lights she was showing.
8452. When you saw these deck lights, was the vessel approaching you obliquely? - Obliquely, yes.
8453. So that the deck lights would not indicate to you the probable length of the steamer showing them? - Well, no.
8454. They would be all bunched up? - They would be bunched up together. 8455. That being so, how did those deck lights communicate to you that this was a large passenger steamer? - Well, as I said before, by the number of her lights; there was such a glare from them.
8456. You mean from the brilliance of the lights? - Yes, from the brilliance of the lights.
8457. But I suppose a small passenger steamer might have brilliant light? - She would have brilliant light, but they would not show the light I saw from this steamer. *The Commissioner:* Has any small passenger steamer been heard of in this locality at this time?
8458. (*Mr. Robertson Dunlop.*) You have told us that you did see on the following morning a steamer whose name you do not know? - A small steamer, yes.

8459. Was she a passenger steamer? - That I could not say.
8460. Have you tried to find out her name? - No, I have not; I took no further interest in her.
8461. (*The Commissioner.*) What size boat was she? - I never saw her broadside; I only saw her end-on.
8462. You told me it was a very small boat? - It was a small boat. I judged that from her end-on view.
8463. Was it much smaller than the boat the lights of which you had seen the night before? - I should judge so.
8464. (*Mr. Robertson Dunlop.*) Was she a vessel about your own size? - No, in my opinion she was considerably smaller.
8465. Before the vessel which you saw stopped, on what course did she seem to you to be steering? - Do you mean the steamer I had seen at 11.40?
8466. Yes, before she stopped at 11.40 you had had her under observation for some time, noticing her movements? - Yes, but I took no notice of the course she was making except that she was coming up obliquely to us.
8467. Was she making to the westward or to the eastward? - She would be bound to be going to westward.
8468. Was she? - She was bound to.
8469. Did you see her going to westward? - Well, I saw her red light.
8470. If she was going to the westward and was to the southward of you, you ought to have seen her green light? - Not necessarily.
8471. Just follow me for a moment. She is coming up on your starboard quarter, you told us? - On our starboard quarter.
8472. Heading to the westward? - I did not say she was heading to the westward.
8473. Proceeding to the westward? - Yes.
8474. And she is to the southward of you? - She is to the southward of us.
8475. Then the side nearest to you must have been her starboard side, must it not? - Not necessarily. If she is going anything from N. to W. you would see her port side. At the time I left the bridge we were heading E.N.E. by compass.
8476. Never mind about your heading. I am only dealing with her bearings. She is bearing S.S.E. of you - south-easterly? - About south.
8477. She is south of you and apparently proceeding to the westward? - Yes, some course to the westward.
8478. Does it follow from that that the side which she was showing to you at that time must have been her starboard side? - No it does not follow at all. If she is steering a direct west course, yes.
8479. Did you see her green light at all? - Never.
8480. When the captain came up at 11.30 and you reported her to the captain, what lights was

**Page 193**

she then showing? - The captain did not come up at 11.30.

8481. When did he come up? - About 11.45 on to the bridge.
8482. You reported to the captain at 11.30? - About 11.30.
8483. And then the captain at some time looked at her and said, "That does not look like a passenger steamer"? - That was about 11.45 on the bridge.
8484. What lights was she then showing? - Two masthead lights and a sidelight, and a few minor lights.
8485. Some deck lights? - A few deck light, yes; that is what I could see.
8486. Is that before or after you say the deck lights had gone out? - That was after the deck lights went out.
8487. What were those deck lights that you saw when the captain came on the bridge? - I do not think that then I could see more than 3 or 4.
8488. Had those lights gone out or had they come into view again after going? - I do not quite follow.
8489. You have told us the deck lights had gone out? - Yes; when I say that the deck lights had gone out I mean that they disappeared from my view.
8490. They disappeared from your view, and then apparently some of them again came into view? - Yes.
8491. Was that indicating that the vessel was swinging? - Well, it might do.
8492. Turning her head in the ice as you were? - It might do.
8493. When you turned into your berth that night about 12.30 did you think there was any vessel in distress? - No.
8494. (*The Commissioner.*) You had seen no rockets? - I had seen no rockets, my Lord.
8495. And nothing in the appearance of the lights which you say, and the going out of those lights which you have described, led you to think that vessel was in any way in distress? - Nothing whatsoever.
8496. But was, like yourselves, stopped in the ice? - That is so.
8497. And it was not until the next morning that you heard anything had happened? - Not until next morning.
8498. When did you go on watch? - At 8 o'clock.
8499. The captain states that he was on the bridge at 11 o'clock and was there till 11.30? - I say he was not.
8500. You say he was not? - Most emphatically.
8501. Most emphatically? - Most emphatically.
8502. There must be a mistake somewhere? - Well, it naturally follows, does it not?

**Re-examined by the SOLICITOR-GENERAL.**

8503. You were the officer of the watch, as I understand, from 8 p.m. till midnight. Would you then be keeping the scrap log? - I was keeping the scrap log.
8504. Your ship was under way from 8 o'clock until about 20 past 10 of that watch, was she not? - Yes.
8505. And then about 20 past 10 she stopped, and she was stopped for the rest of the watch? - Yes.

8506. Who would make a dead reckoning and find out where she was at 10.20? - Well, the captain; he would work it. I never work it. 8507. Is the scrap log here? - No, it is not kept.
8508. (*The Commissioner.*) Is it destroyed from time to time? - It is destroyed from time to time. There is one log always kept, of course, but the scrap log is destroyed from time to time.
8509. (*The Solicitor-General.*) I want to know a little about this. Before the scrap log is destroyed in what sort of a book is it kept? - It is copied from the scrap log into the printed log.
8510. Into this fair copy - this book which I have here? - Yes.
8511. Is the scrap log kept in a book? - Yes.
8512. It is not kept on loose sheets of paper? - No, in a book.
- The Commissioner:* Just follow that up.
8513. (*The Solicitor-General.*) I am going to, my Lord, if I may. (*To the Witness.*) And this book in which you kept the scrap log, for how many days, or weeks, or months is the book good for? - It varies.
8514. Is it as big a book as *this* - as your official log? - Oh, no; it is a thinner book. 8515. How much thinner? How many weeks will it take? - It is my duty to rule that book up myself. It all depends. If we want a piece of paper on the bridge we occasionally tear a piece out of it; and whenever we take occasional observations we work them on the back.
8516. I want you to give me an idea how big a book is the book in which the scrap log is kept? - I do not think it would take more than 25 days.
8517. (*The Commissioner.*) How long had you been out? - We left London on the 5th April in the early morning - Good Friday.
8518. Did you leave with a new scrap logbook? - We always have several of them on the ship; it is a cargo book we have. 8519. There is only one in use? - Yes.
8520. How long had this logbook been in use? - I think I must have started it when we left London.
8521. (*The Solicitor-General.*) That would be April 5th? - Yes.
8522. And you reached Boston, when? - On April 19th, I think it was. 8523. And you just made the return journey from Boston here? - No, Boston to Liverpool.
8524. That is what I mean. You think you started your scrap log on April 5th, and you went across the Atlantic to Boston; that did not use up your scrap logbook, did it? - No, certainly not.
8525. Then did you use the same scrap logbook for the return voyage from Boston to Liverpool? - As far as my recollection carries me we started it again when we left Boston, but I have a recollection of ruling up another one after leaving Boston.
8526. On the voyage back from America to Europe? - Yes.
8527. You have a recollection of that. But you see, if this scrap logbook was newly started when you left on April 5th, it would not be used up in the course of your return voyage from America to England? - Not solely for that voyage, but I have told you we used a back page for occasional observations, or if we wanted a piece of paper to write any note on or anything like that.

8528. Who told you to rule out a new scrap logbook on the voyage back from Boston to Liverpool? - I did it myself; nobody told me to.
8529. (*The Commissioner.*) What does “rule out” mean? - Well, rule the pages in the forms required. First of all, we put “Hours” - *The Commissioner:* Yes, I see what you mean.
8530. (*The Solicitor-General.*) Do you suggest that the old scrap log had at that time been filled to the last page? - When I started this new book we had evidently finished the old one, otherwise I should not have started it.
8531. Where is that old one? - The old one? The one for the voyage out?
8532. Yes, the one which you were partly using for the return voyage? - I expect it was thrown away.
8533. Where was it thrown away to? - I expect it went over the side. 8534. Did you throw it over the side? - I did not.

## Page 194

8535. (*The Commissioner.*) Who did? - I do not know; it was only my suggestion that it was thrown over.
8536. (*The Solicitor-General.*) You did not see it thrown over? - No.
8537. The captain might be able to tell us. You would know this book was the book which contained the real record for the 14th April? - Of course I knew that.
8538. And by that time, of course, you, and others on your ship, knew quite well there was a very serious Enquiry being made as to the position of your ship and what she was doing on the 14th April? - Certainly.
8539. And by that time you knew that there was some discussion as to whether the ship which you had seen was the “Titanic” or some other ship? - That was a discussion amongst ourselves.
8540. And you knew there was a discussion in America and the newspapers? - I did not know that our ship had been mentioned in the papers until we got to Boston. 8541. This was after you left Boston, you see? - Yes, certainly, I knew then.
8542. You cannot tell us whether it was destroyed or not? - No, I cannot say definitely, certainly not.
8543. (*The Commissioner.*) Had you a log slate? - No, my Lord.
8544. You had nothing but this book? - Only the book. Log slates are out of date now, my Lord.
8545. When did you write up the logbook - I do not mean the scrap logbook, but the logbook. When did you write it up? - I do not write it up at all.
8546. When was it written up on board your steamer? - That I cannot say. The chief officer writes that up.
8547. (*The Solicitor-General.*) The chief officer? - Yes.
8548. (*The Commissioner.*) Would he write it up every day or once every two days? - I fancy he writes it up every day.
8549. (*The Solicitor-General.*) That would be Mr. Stewart? - Yes.

8550. I do not know whether your recollection will enable you to tell me, but I had better ask you. As you were making entries in the scrap logbook from 8 to 12 that night, do you know whether you made any entry as to any ship that you saw? - No, no entry whatsoever relating to any ship.

8551. You had gone off watch before there was any question of rockets? - Yes. 8552. You must have seen the scrap logbook the next day when you came on duty; do you know whether it contains any entry of rockets being seen? - I saw none myself.

8553. (*The Commissioner.*) Did you look to see if there was any reference as to rockets? - No my Lord, I did not.

*The Commissioner:* Then you must be careful how you answer.

8554. (*The Solicitor-General.*) You had come on duty, in one of the watches; would you come up at 4 o'clock in the morning? - No, about 6.50. That is on the Monday morning.

8555. That is what I mean. Then when would you come on duty and be the officer on the watch and have to keep the scrap log? - It is my duty between 8 and 12 under ordinary conditions.

8556. By that time you had heard the news about the "Titanic"? - Yes.

8557. Knowing that, did not you look back in the scrap log and see what entries had been made by your colleague between midnight and 4 a.m.? - No, I did not.

8558. It would be on the very next page, would it not? You turn over the page I suppose when you get to midnight? - Yes, we finish a page when we get to midnight. 8559. You would have only to turn back one page and see the record made by the officer of the watch from midnight to 4 a.m. as to what he had seen? - Yes.

8560. And you did not do it? - No, I did not do it.

*The Solicitor-General:* We had better get the chief officer I suppose.

8561. (*The Commissioner.*) Yes. If you had been on the bridge instead of from 8 to half-past 12, from 12 to 4, and had been keeping the scrap logbook and had seen a succession of white rockets with stars going up from this vessel which you speak of or from the direction of this vessel, would you in the ordinary course of things have made a record of the fact in your scrap log? - Most decidedly, that is what the logbook is for. 8562. So I should have thought. Then it would have been the business of the man who had charge of this book to record those facts? - I think so, my Lord.

8563. Who was he? - Mr. Stone was on watch.

8564. And, therefore, if Mr. Stone did what you think was his duty, this scrap logbook which was thrown away, or which, at all events, cannot be found, would contain a record of these rockets having been seen? - Yes, my Lord, but it is not my duty to criticise a senior officer, though.

*The Commissioner:* I am asking what is the ordinary practice. Do you want any of the other officers back, Mr. Solicitor?

*The Solicitor-General:* I have Mr. Stewart here, who is the chief officer, and the captain is here also.

*The Commissioner:* You must exercise your own discretion.

*The Solicitor-General:* I think I will call Mr. Stewart now.

*(The Witness withdrew.)*

**GEORGE FREDRICK STEWART, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

8565. Your name is George Frederick Stewart? - Yes.
8566. Were you the chief officer on board the "Californian"? - Yes.
8567. And on Sunday, 14th April, at what time did you go off watch? - Eight o'clock.
8568. Eight o'clock in the evening? - Yes.
8569. Then, as we have heard, the third officer came on duty at 8 and took the 8 to 12 watch? - Yes.
8570. I think you turned in, did you not? - Yes, I turned in about half-past 9.
8571. Then your next turn of duty would come at 4 o'clock in the morning? - Yes. 8572. Did you go on duty at 4? - Yes.
8573. On the Monday morning? - Yes.
8574. Relieving Mr. Stone? - Yes.
8575. Did you find that your ship was stopped? - Yes.
8576. And did Mr. Stone report to you what had happened on his watch? - Yes, he told me very briefly.
8577. What did he tell you? - He told me he had seen a ship four or five miles off when he went on deck at 12 o'clock, and at 1 o'clock he had seen some rockets. 8578. Did not he say how many? - No, he did not say.
8579. Did not he say what sort of rockets? - I asked him; he said they were white rockets.
8580. This ship would have been in the ice or near the ice too? - Yes.

**Page 195**

8581. Did you realise that your ship had stopped because the ice was dangerous? - Well, it was not safe to go on at nighttime.
8582. When Mr. Stone told you that he had seen a ship some miles off which had been throwing up rockets, what did you suppose the rockets must have been for? - I asked him what he did. He said the moment she started firing the rockets she started to steam away.
8583. *(The Commissioner.)* What steamed away? - The ship that was firing the rockets.
8584. Fired the rockets and then started to steam away? - Yes.
8585. *(The Solicitor-General.)* Did he tell you that five rockets had been observed, and then three more? - I do not think he did.
8586. Just to return to the question I put to you - because you have not quite answered it. I ask you, as an experienced officer, when you were told this ship which was in the ice had been throwing up white rockets at night, what did you suppose she was throwing up her rockets for? - I thought what had really happened was she had seen a ship firing rockets to the southward, and was replying to them.

8587. (*The Commissioner.*) Will you repeat that to me? What did you think? - I thought the ship he saw firing rockets was replying to some other ship to the southward.
8588. Replying? Do you reply to another ship by firing rockets? - Well, my Lord, he told me he had called him up repeatedly by the Morse lamp and the ship did not answer.
8589. But I do not understand this replying by means of rockets. Did you ever hear of such a thing? - Well, I never heard of such a thing, but he might have replied to let them know he had seen them.
- The Commissioner:* You are supposing now something you have never heard of happening before.
8590. (*The Solicitor-General.*) Let me follow. Did it not enter your head when you heard this, that those might be distress signals? - Yes.
8591. It did? - Yes.
8592. What made you think they might be distress signals? - Because they were rockets.
8593. They were from the description just what you would expect if they were distress signals? - They were white rockets.
8594. And did Mr. Stone tell you he had reported to the captain? - He told me he had reported to the captain, yes.
8595. At 4 o'clock - of course it was still dark - did you take the glasses and scan the surrounding water? - Yes.
8596. Did you see anything? - Yes, I saw a steamer to the southward.
8597. At 4 o'clock in the morning? - Yes.
8598. What was it you saw at 4 o'clock in the morning? - I saw two white masthead lights and a few lights amidships.
8599. Did you ask Mr. Stone whether this steamer you saw then was the one he had seen? - Yes.
8600. You did? - Yes, I did, and he said he had not seen that steamer before. 8601. So that, according to him, it was not the same steamer? - Well, he did not know; he said he had never seen that steamer till I pointed it out to him.
8602. Now, just think a moment. Did not you ask Stone if he had thought that was the ship that had fired the rockets? - Yes, I believe I did.
8603. You think you did? - Yes.
8604. You gave a statement, you may recollect, to the Receiver of Wrecks? - Yes.
8605. And when you asked Mr. Stone that question what did he say in reply? - He said, "I do not know; I do not think I have seen that steamer before."
8606. I will put this to you. Is not this right? Did not you say, "I asked Stone if he thought this was the ship that had fired rockets, and he said" - that is, Stone said - "he did not think it was." Is that right? - I do not know.
8607. (*The Commissioner.*) Did you read the statement that you signed? - Yes. 8608. Just look at that paper and read from it what it was you signed. (*A document was handed to the Witness.*) Is that the paper you signed?
8609. (*The Solicitor-General.*) Is that your signature at the end? - Yes.
8610. Will you kindly read what you will find at the back of the first page and then on the top of the second page? *The Commissioner:* Read it out.

8611. (*The Solicitor-General.*) "This was 4 a.m." Do you see that? - "He called the captain, and the latter asked him whether they were company's signals. Stone replied he did not know. I asked him during our own talk were they distress signals, and he said he did not think they were. He said he had informed the captain on three occasions at intervals."

Go on. What I asked you to do was to read at the bottom of the page and the top of the next.

*The Commissioner:* Mark it with a pencil.

*The Solicitor-General:* Yes, I will. (*To the Witness.*) I beg your pardon. I was pointing to the wrong place. I think I have marked it now for you in the margin with pencil.

(*handing the document to the Witness.*)

8612. (*The Commissioner.*) Now read it aloud.

*The Witness:* "I looked to the southward and saw a light. On looking through the glass I saw two masthead lights and a lot of lights amidships, apparently a four-masted steamer. This was 4 a.m. I asked Stone if he thought this was the ship he had seen, and he said he did not think it was."

8613. *The Solicitor-General:* He told you he did not think the ship you had pointed out was the ship that had fired the rockets? - Yes, he did not think it was.

8614. Did you call the captain a little later on? - Yes.

8615. About what time? - About 4.30.

8616. When you called the captain did you tell him what Stone said he had seen? - I told him that the second mate told me he had seen rockets in the middle watch.

8617. Not a rocket, but rockets? - Rockets.

8618. What did the captain say to you when you said that? - He said: "Oh, yes; I know."

8619. (*The Commissioner.*) Is that all he said? - He said. "Yes, I know, he has been telling me."

8620. (*The Solicitor-General.*) That was all he said? - That is all he said.

8621. Did the captain come on the bridge? - At once.

8622. You were still stopped. Did you hear from him what his plans were? - He talked about the possibility of going through the ice and proceeding on our voyage.

8623. Did not you ask him whether he was not going to see what that ship was that had thrown up rockets? - Yes, after he had spoken about proceeding on the voyage I asked him if he was going to the southward to see what that ship was.

8624. When you asked him that, was the ship you referred to a ship that you thought had been in distress? - Yes.

8625. When you asked him that, what did he say? - He said, "No, I do not think so; she is not making any signals now."

8626. What time was it that this happened? - Half-past four.

8627. When he came on the bridge could you see the ship that you had pointed out? - Yes.

8628. That is the ship that Mr. Stone said he did not think was the ship that had thrown up the signals? - Yes.

8629. Did you and the captain look at this other ship together? - Yes.

8630. Did you tell the Captain that Mr. Stone, who had been on watch, thought this was not the ship that had thrown up the signals? - No. 8631. You did not? - No.
8632. Did the Captain say this: "No, she looks all right; she is not making any signals now"? - Yes, I believe those were his exact words.

**Page 196**

8633. When the Captain said: "She looks all right," what was he referring to? - She just looked like an ordinary steamer stopped.
8634. The Captain was referring to the vessel you had picked up? - Yes.
8635. Did not you tell the Captain that according to Mr. Stone, who had been on watch, that was not the steamer that had thrown up the rockets? - No.
8636. You did not? - No.
8637. Had you forgotten it? - I do not know; I did not tell him that.
8638. If Mr. Stone, who was on the watch when it happened, was right, there was no comfort to be got from the fact that that steamer looked all right? - He told me the steamer that had fired rockets had steamed away to the south-west, and he last saw her about two o'clock, just faintly with glasses; she steamed away from him.
8639. Then did you suppose that the steamer which you could see at 4.30 was the same steamer? - I thought she might have drifted back - that she had found that she could not get through the ice.
8640. (*The Commissioner.*) Now, think about what you are saying. Do you want me to understand that you thought it was possible that the ship which had steamed away after throwing up the rockets had drifted back and was there before your eyes?
- The Solicitor-General:* At half-past four?
8641. (*The Commissioner.*) In the morning? Do you want me to believe that? *The Witness:* I thought she might have come back, or she might have known something about the other ship.
8642. Have you ever made that suggestion to a living soul until now? - I do not believe so.
8643. It comes out for the first time in the last minute? - I thought all the time that that ship had something to do with it or knew something about it.
8644. But you never told anybody so until now? - No.
8645. (*The Solicitor-General.*) On that day you thought she might have drifted back? - Or go back.
8646. Did you say drifted? - Yes, but I did not mean it in that sense of the word.
8647. You did not mean drifted back? - No.
8648. (*The Commissioner.*) What did you mean? - That she had come back.
8649. She had steamed back? - Yes.
8650. (*The Solicitor-General.*) Anyhow, you and the Captain at half-past four in the morning were talking about this steamer as though it was this steamer which had thrown up the signals, although the officer of the watch who had seen the signals told you it was not? - Yes.
8651. And you never told the Captain of that mistake? - No.

8652. (*The Commissioner.*) Did you ever say to Stone afterwards, "Why, that is the steamer of last night, and it has drifted back"? - No.
8653. (*The Solicitor-General.*) It was a little later than that that your wireless people heard that the "Titanic" had sunk? - Yes.
8654. When you heard that did it occur to you that the steamer that had been sending up distress rockets might have been the "Titanic"? - Not the steamer we saw.
8655. That is not what I asked you. I will put the question again, if I may. When you heard that the "Titanic" had sunk that night, did it occur to you that that steamer which you had heard had been sending up rockets, might have been the "Titanic"?
8656. (*The Commissioner.*) Now, come; answer that question? - No, I did not think it could have been the "Titanic."
8657. (*The Solicitor-General.*) Have you ever ascertained what the steamer was which was sending up rockets, if it was not the "Titanic"? - No.
8658. It is your business to write up the logbook from the scrap log? - Yes.
8659. Who keeps the scrap logbook, and where is it kept? - It is just kept for the day, that is all.
8660. I am not sure that I understand. You do not mean there is a new scrap logbook for every day? - It is all bits that are torn out and destroyed. The logbook is written up every day and the officer signs it.
8661. Do you mean that at the end of the day when you have written up your log from the scrap logbook, you tear out the page of the scrap logbook and destroy it? - Yes.
8662. (*The Commissioner.*) Day by day? - Yes.
8663. (*The Solicitor-General.*) Are you quite sure of that? - Yes.
8664. That was the practice, was it, on this ship? - Yes.
8665. Now let me tell you at once why I press you about this. While you have been out of this room we have had in that box the Third Officer, and I have been asking the Third Officer why he did not turn back in the scrap logbook and read what was written for the previous day. He did not suggest to me that it would probably be torn out you know. Now do you suggest it is torn out day by day? - Yes.
8666. Always? - Always.
8667. (*The Commissioner.*) Is it a book with a back to it? - No, it is only a small book with a paper back.
8668. Never mind; it is a book with a back to it. Is it the size of a penny memorandum book? - It is about *that* wide and *that* long. (*demonstrating.*) 8669. It is a sort of diary - something like a diary? - Yes.
8670. And it is bound in a paper cover? - Yes.
8671. So that if you wanted to do so you would have to tear out each page and throw it away? - Yes, cut it out with a knife about a quarter of an inch from where the book is sewn into the cover.
8672. (*The Solicitor-General.*) Why do you do that? - Because we only keep the one log.
8673. But why? - By the company's instructions.
8674. (*The Commissioner.*) I never heard of this. Are you instructed by your owners to destroy the scrap log as the voyage goes along? - Yes, my Lord.
8675. (*The Solicitor-General.*) Day by day? - Yes.

8676. (*The Commissioner.*) Does your steamer belong to the same company that practically owns the "Titanic"? - We belong to the Leyland Line, my Lord.
8677. Yes, I know, but is that part and parcel of the International Marine? - A part of it, my Lord.
8678. That is to say, it belongs to the same company that the "Titanic" belonged to? - I cannot say as to that, my Lord.
8679. I daresay you do not understand the arrangements between them, but you are part and parcel of the International Marine? - Yes.
8680. And the "Titanic" was part and parcel of the International Marine? - Yes, my Lord.
8681. Am I to understand that those instructions are given to all the steamers controlled by that company, that is to say, to the White Star, the Leyland Line, and others? - I cannot say that, my Lord.
8682. (*The Solicitor-General.*) You are speaking of your own steamer? - Yes.
8683. Are those instructions you speak of to be found in any book? - Yes.
8684. They are, are they? - Yes.
8685. I do not suppose you have the book here? - No.
8686. Just tell us from your recollection what is it one would find in the book about this?  
- That the scrap log was to be put on a slate and rubbed off every day, or else in a book in which the page can be destroyed.

*The Solicitor-General:* The owners are represented here, my Lord; no doubt they can prove it if it is so.

*The Commissioner:* Will you inquire about that, Mr. Laing?

*Mr. Laing:* Yes.

*Mr. Robertson Dunlop:* I will make inquiries what the instructions are, and what the practice is with regard to these scrap logs.

*The Commissioner:* Is there anyone here who can tell us now?

*Mr. Robertson Dunlop:* I have no one here who can tell us now, but I will make inquiries during the Adjournment.

*Mr. Laing:* I can tell your Lordship what the practice is. The practice, so far as the White Star vessels are concerned is that the scrap logs are not to be kept. They are torn off a block or pad day

## **Page 197**

by day. What is called the chief officer's log is kept and handed in as soon as completed, to the owners; but the scrap logs are not kept.

8687. (*The Solicitor-General - To the Witness.*) I clearly understand in your case you do not use a slate? - No.

8688. And you do not use a pad? - No.

8689. You use a book with a cover? - Yes.

8690. And stitched? - Yes.

8691. Have you got the cover? - I think so.

8692. And you will find it if you can. We should like to see it. Now I have here the log which you wrote up - the 13th April, the 14th of April on the next page, and the

- 15th. The page runs from midnight to midnight, and then the noon observations are in the middle across the page? - Yes, just the same as that.
8693. I see on the 13th April, at noon (I am taking latitudes), you were  $43^{\circ} 43'$ ? - Yes.
8694. And I see that on the 14th April, twenty four hours later, you were  $42^{\circ} 5'$ ? - Yes.
8695. You were going rather more southerly? - Yes.
8696. Of course, the ice came from the north, I suppose? - Yes.
8697. Does it set in a southerly direction? - Yes.
8698. So that in the course of those twenty-four hours you had made southerly some 39 minutes of latitude? - Yes.
8699. Before you next took the noon observation your vessel had stopped? - Yes.
8700. Because she stopped about 10.20 or 10.21, on Sunday evening? - Yes.
8701. And she had stopped because of the ice? - Yes.
8702. Who made the calculation to find out what her latitude was when she stopped? - The Captain gave the position at 10.21.
8703. The Captain did that? - Yes.
8704. Was there any reason that you know of why between noon on the 14th of April and the time when she stopped, she should have altered her course and ceased to go on more to the south? - No.
8705. There is no reason you know of? - No.
- The Commissioner:* I would like to understand as I go along. Do your questions suggest this log has been doctored?
8706. (*The Solicitor-General.*) What I want to know is, how they arrived at the latitude which is put down, I presume, by dead reckoning at 10.20. I am right; it would be by dead reckoning you would get it? - Not only that; I had the Pole Star at half-past ten. 8707. (*The Solicitor-General.*) I am making no suggestion, but I want to understand, because there may be a mistake. What I notice is that at noon on the 13th April your latitude was  $43^{\circ} 43'$  at noon on the 14th April it was  $42^{\circ} 5'$ , and yet when she stopped, 10 1/2 hours later than noon, about half-past ten, the latitude by dead reckoning is still given as  $42^{\circ} 5'$ ? - Yes, but we were going more westerly then, I believe, from noon.
8708. Keeping on the same latitude since noon? - Yes.
8709. Could you tell me when you changed your course? Look at the log and tell me. Start from noon on the 14th April, Sunday. Can you tell me from your log when you changed your course? - N.  $61^{\circ}$  W. at noon.
8710. Is that altered at noon? - Yes.
- Mr. Robertson Dunlop:* It altered at 9.40 and 9.55.
8711. (*The Solicitor-General.*) Would that keep you on the same latitude? - Yes.
8712. What do you mean by N.  $61^{\circ}$  W.? Is that magnetic? - That is compass.
8713. Do you know what the deviation of your compass is? - About 5 degrees, I believe - 5 1/2 degrees I believe it was.
8714. Which way? - W.
8715. Then if you allow for the deviation what does your course come to be then? - About W.
8716. And is that from noon? - Yes.

8717. In the log for the 14th April where the course might be indicated the entry is “various.” Is that so? - The 14th April?
8718. Am I wrong? - On the 15th April it is “various” in the morning.
8719. Now turn back to the 14th; what about it there? - That is the course for the previous 24 hours.
8720. When you make your noon observation? - Yes; a summary for the 24 hours. 8721. Now, I should like to follow this. As far as your memory serves you, did you enter into that logbook everything that you found on the scrap log sheet? - Yes.
8722. You observe there is nothing at all in your logbook about seeing distress signals? - Yes.
8723. Is there anything? - No, nothing.
8724. Nothing at all? - No.
8725. No reference to any of these events of the night at all? - No.
8726. (*The Commissioner.*) Does that convey to you that there was no reference to those events in the scrap log? - Yes, my Lord.
8727. (*The Solicitor-General.*) Give us your views. Supposing you were keeping the scrap log on a watch when you were in ice, and supposing you saw a few miles to the southward a ship sending up what appeared to you to be distress signals, would not you enter that in the log? - Yes - I do not know.
8728. (*The Commissioner.*) Oh, yes you do? - Yes, I daresay I should have entered it, but it was not in our scrap logbook.
8729. (*The Solicitor-General.*) That is not what I asked you. What I asked you was - apply your mind to it - supposing you had been keeping the scrap log in those circumstances and you saw distress signals being sent up by a ship a few miles from you, is that, or is not that, a thing you would enter in the log? - Yes.
8730. (*The Commissioner.*) How do you account for it not being there? - I do not know, my Lord.
8731. It was careless not to put it in, was it not? - Or forgetful.
8732. Forgetful? Do you think that a careful man is likely to forget the fact that distress signals have been going on from a neighbouring steamer? - No, my Lord.
- The Commissioner:* Then do not talk to me about forgetfulness.
8733. (*The Solicitor-General.*) The scrap logbook is intended to be kept at the time, is it not, as the things happen? - Yes, Sir, but they generally write them up at the end of the watch.
8734. And you were there at 4 o'clock at the end of the watch? - Yes.
8735. And Mr. Stone told you then at 4 o'clock that he had seen these signals? - Yes.
8736. (*The Commissioner.*) And they had been sending messages to the Captain about them? - Yes.
8737. (*The Solicitor-General.*) Three times? - Yes.
8738. And you were just going to take over the ship for the next watch and take charge of this same sheet of paper? - Yes.
8739. Did not it occur to you that it was odd that there was nothing entered on the scrap logbook? - I did not notice the scrap logbook at that time. 8740. You did not notice it? - No.

8741. You made entries on the same sheet of paper between four and eight o'clock, did not you? - Not till eight o'clock. 8742. At eight then? - Yes.  
8743. Did not you notice it then? - I noticed there was nothing on it then.  
8744. But by that time you had had the message that the "Titanic" had sunk? - Yes.  
8745. Did not you notice it then? - I noticed there was nothing there. 8746. You did notice it? - Yes.  
8747. Then you did at eight o'clock notice there was nothing in the scrap logbook about what had happened between midnight and four? - Yes.  
8748. And you have told us, in your view, it would be right to make such entries? - Yes.  
8749. Did you ever speak to the Second Officer about it? - No.  
8750. Never? - No.  
8751. (*The Commissioner.*) Or to the Captain? - No.  
8752. Or to anybody? - No, my Lord.  
8753. (*The Solicitor-General.*) This piece of paper, whatever it was in the scrap logbook for 15th April, would be used until midnight on the 15th, would not it? - Yes.

## Page 198

8754. Then would you write the entries into the logbook from the scrap logbook? - Yes.  
8755. And do you say you then destroyed the record for April 15th? - Yes.  
8756. When you destroyed it did you notice then there was no record on it about these distress signals, did not you notice that? - No, I just copied it off as it was.  
8757. There is just one other question I must put to you because we are going to call the Marconi operator. You have told us that during your watch between four and eight, you went in to see the Marconi operator, did not you? - Yes.  
8758. Try and remember what it was that you told him? - I told him to get out and see what the ship was to the southward.  
8759. I want you to be as accurate as you can. Do you think that is all you said to him? - I think so.  
8760. What this ship was to the southward? - Yes.  
8761. What did you mean by "This ship to the southward"? - The ship that I could see, Sir.  
8762. The ship that Mr. Stone had already told you was not the ship that had sent up the rockets? - Yes.  
8763. You think that is what you asked him? - Yes.  
8764. I must just put it to you. Did not you go to his room and did not you say to him that rockets had been seen during the night? - I do not think so, Sir.  
8765. You do not think you did? - No.  
8766. And did not you ask him whether he could find out with his Marconi apparatus whether anything was amiss? - I told him to call up and see what that ship was to the southward. I remember that distinctly, Sir.  
8767. Did not you ask him whether he could find out whether anything was amiss? - I do not think so - No, Sir; I do not remember that.

8768. Did you at that time think that anything was amiss? - I thought something had happened, yes.

8769. But you do not think you said that? - I do not think so, Sir.

**Examined by Mr. SCANLAN.**

8770. With reference to the navigation of your own ship, did you think it was dangerous on that night, the Sunday night, to proceed? - Yes.

8771. What circumstances caused you to think that? - The ship was surrounded by ice.

8772. Was there any haze? - None at 4 o'clock.

8773. You went off watch at 9.30? - Eight o'clock I went off watch really. 8774. But you did not leave the deck till 9.30? - I was out on deck for a few minutes until 9.30.

8775. About that time was there any haze? - I did not notice any; I do not think so. 8776. Had you been in charge and seen distress signals would you have proceeded to the vessel in distress? - Yes, Sir, I think I would.

*Mr. Harbinson:* I ask this witness nothing.

**Examined by Mr. CLEMENT EDWARDS.**

8777. When you went on duty again at four your ship was still stationary? - Yes.

8778. What time did you start moving? - 5.15.

8779. At that time you were surrounded by a considerable lot of ice? - Yes.

8780. What pace did you make for the first three or four miles? - We were going very, very slow.

8781. How slow? - I could not tell you what we were going; I was not very much on the bridge after that time.

8782. Cannot you give us any idea of the pace? - I could not give you any idea. 8783. Just crawling through? - Just crawling through the ice.

**Examined by Mr. ROBERTSON DUNLOP.**

8784. I want to ask you about this logbook. When do you write up the logbook? - As a rule between 8 o'clock in the morning and noon.

8785. Do you remember when you wrote up the log entry of 14th April, after you had stopped in the ice? - Yes, I wrote that up just before noon on the 15th.

8786. Do you write it up from your scrap log? - Yes.

8787. And then you say that after you have written it up from the scrap log you destroy the sheet of paper? - Yes.

8788. Tear it out of the book? - Yes.

8789. And is that the practice which you were following before April 14th? - Always.

8790. And the practice which you have since followed? - Yes.

8791. You have been asked some questions by my friend about the course you were steering. I think the course you steer across the Atlantic is changed from time to time? - Yes.

8792. You are sailing on the Great Circle? - Yes.

8793. I see that at 9.40 on the 14th April the course was altered to north 60 west, and again at 9.55 to north 59 west? - Yes.
8794. From time to time there is an alteration of course of about a degree one way or the other? - Yes.
8795. Is that in the ordinary course of navigation and apart from the presence of ice? - Yes.
8796. At 6.30 your log, if you look at it, records passing two large icebergs, and gives the latitude and longitude? - Yes.
8797. Is that the latitude and longitude of your ship at the time these icebergs were passed? - Yes.
8798. When did you get the observation of the pole star that enabled you to fix your position? - About half-past 7.
8799. P.m.? - P.m., yes.
8800. That is about an hour after you passed these icebergs? - Yes.
8801. Did you get your position before or after the ice was reported to the "Antillian"? - I do not know what time it was reported to the "Antillian."
8802. Apparently we may take it from what was said just now that the wireless message was sent to the "Antillian" and received by the "Titanic" at 6.30? - Yes. 8803. Do you know what position was given to the Marconi operator? - No.
8804. He will tell us. Assuming the position given to the Marconi operator was latitude 42.3 north, I find in your log latitude 42.5 north? - Yes.
8805. What is the explanation of the two degrees' difference of latitude? - Two miles on account of observation.
8806. Two minutes of difference - is that your explanation? - I had the star then. I thought the star was more accurate.
8807. Is the explanation this: That at 6.30 the latitude given to the Marconi operator was latitude by dead reckoning from your noon position? - Yes.
8808. But at 7.30, an hour later, you got an observation which enabled you to fix your actual position? - Yes.
8809. Which differed two minutes north of the position by dead reckoning? - Yes.
8810. And is that observation at 6.30 recorded in your log of this star an accurate one? - Yes.
8811. Is there any room for doubt about the accuracy of that position there? - No. 8812. Then at 10.21 there is an entry that the ship was stopped in latitude 42.5 north and longitude 50.7 west? - Yes.
8813. Do you know who took that position? - The captain gave us that position.

**Page 199**

8814. Did you or not subsequently verify this position? - Yes.
8815. When did you verify it? - The next day.
8816. And did you find this position to be accurate? - Yes.
8817. At noon on the 15th did you take observations to fix your position? - Yes.
8818. Who was taking part in these observations? - All the officers took them.

8819. Did you get good sights? - Very good sights.
8820. Did the sights taken by the various officers agree? - They all agreed.
8821. And was the position as ascertained by those sights latitude 41·33? Can you tell me? - Yes, 41·3 N., 50·9 W.
8822. That is your noon position? - Yes.
8823. Are you able from working back from that noon position to fix accurately the position of the wreckage which you came up to at 8.30? - Yes.
8824. How many miles had you traveled between the time you proceeded on your course and when you took this position? - About four or five miles.
8825. According to your log, you proceeded on your course at 11.20? - Yes.
8826. And you stopped close to the "Carpathia" at 8.30? - Yes. 8827. And remained until 11.20? - Yes.
8828. And between 11.20 and noon you say you traveled some four or five miles? - Yes.
8829. Were you encountering ice at the time? - Yes.
8830. Is the position stated in your log as the position in which you were searching for the boats of the "Titanic" accurate or not - latitude 41·33 north and longitude 50·1 west? - Yes.
8831. Was that the latitude and longitude in which you found the wreckage? - Yes. 8832. How many miles was the position of the wreckage from the place where you had been stopped from 10.21 the night before until six o'clock that morning? - About thirty miles.
8833. Do you know in what direction, thirty miles? - About south a little east.
8834. Assuming the "Titanic" struck the iceberg in the position which was reported by the "Virginian" at 6 a.m., according to your log, latitude 41.46 north and longitude 50.14 west, how far was that position from the place where you were stopped? - About 19 or 20 miles.
8835. And bearing how? - Bearing about south-south-west - south, a little west. 8836. Could the "Titanic," assuming she was in either of those two positions, or was to the eastward of either of those two positions, by any possibility have been visible to anyone on board your ship while you were lying stopped in the ice? - No.
8837. Do you think her rockets could have been seen in the latitude in which she was? - I do not think so, Sir.

*The Commissioner:* All this does not impress my mind much. It all proceeds upon the assumption that all these figures are right. The other evidence to my mind is of vastly more importance. However, I do not want to shut you out from it, you know. 8838. (*Mr. Dunlop.*) You have heard my Lord's observation. Have you any reason to doubt the accuracy of these latitudes? - No, Sir.

*The Commissioner:* The previous officer told me, in answer to a question, that I think you yourself suggested, that he was satisfied that it was the "Titanic," and at present I do not mind telling you that is my attitude of mind. You may perhaps change it.

*Mr. Dunlop:* I hope to succeed, my Lord.

*The Commissioner:* What do you think?

*Mr. Dunlop:* I submit, my Lord -

*The Commissioner:* Oh no, I am not asking you - I am asking the witness.

8839. (*Mr. Dunlop - To the Witness.*) What do you think? - I do not know, Sir.

*The Commissioner:* That is a very safe answer.

8840. (*Mr. Dunlop.*) Have you formed any opinion? I suppose you have been thinking about this a good deal and discussing it with the officers, and may I say with others in New York? - Yes.

8841. Have you ever considered whether the vessel which was reported to have been sending up rockets was, or could have been, the "Titanic"? - I do not think it could have been, Sir.

8842. (*The Commissioner.*) What? - I do not think it was, Sir.

8843. You think it may have been? - I think if it had been the "Titanic" there would have been no doubt about it.

8844. Do you think it may have been the "Titanic"? - No, Sir. 8845. (*Mr. Dunlop.*) You were proceeding to Boston? - Yes.

8846. The "Titanic" is said to have been going to New York? - Yes.

8847. (*The Commissioner.*) Have you ever found out what it was, if it was not the "Titanic"? - No, my Lord.

8848. Has anybody found out what it was? - No, my Lord.

8849. (*Mr. Dunlop.*) Have you ever found out what that steamer was which you yourself saw on the Monday morning? - No.

*The Commissioner:* That is the steamer which Stone, I think, said was not the steamer that he had seen the night before.

8850. (*Mr. Dunlop - To the Witness.*) But it was a steamer that you saw on the Monday morning? - Yes.

8851. What kind of a steamer was she? - A four-masted steamer with one funnel.

8852. Have you been able to ascertain what her name was? - No.

8853. Does it surprise you that you have not been able to find out the name of the steamer that was firing rockets at midnight? - Well, we never knew what ship that was that we saw to the southward.

*The Commissioner:* Do not you think that if there had been a steamer firing rockets at that time we should have heard something about her by this time?

*Mr. Dunlop:* Your Lordship may yet.

*The Commissioner:* I know; but we have not so far, and you see it is a month since this happened.

8854. (*Mr. Dunlop - To the Witness.*) If you were proceeding to Boston and the "Titanic" to New York, if you proceeded on your ordinary course and she proceeded on her ordinary course, what difference of latitude would there ordinarily be between the tracks of the two steamers? - At that point I believe it would be about thirty or forty miles.

8855. If you were both doing what you intended to do? - Yes.

8856. Now I want to ask you about the reports which the Second Officer made to you when you came on duty at four o'clock. I do not think we have got this clearly. You told my friend the Solicitor-General that the Second Officer reported that about 1 o'clock the steamer he was referring to had fired some rockets? - Yes.

8857. You remember saying that do you? - Yes.

8858. When the Second Officer told you that, what did you say? - I asked him what she did then.
8859. Did you ask him whether they were distress signals, for example? - Yes, I asked if he thought they were distress signals.
8860. And what did he reply to you? - He said, No, he did not think they were; they did not make any report.
8861. (*The Commissioner.*) Who said that? - Mr. Stone, my Lord.
8862. (*Mr. Dunlop.*) The Second Officer. (*To the Witness.*) Did he give you any reason for thinking that they were not distress signals? - He said he thought they might have been replying to somebody else to the southward.
8863. Did you ask him what kind of rockets they were - whether they made any report or anything of that kind? - Yes, Sir.
8864. What did he say? - He said, No, they did not make any report, and they did not leave any trail in the sky, and they did not seem to go any higher than the masthead lights.
8865. And did he mention these matters as reasons for thinking that they were not distress signals? - Yes.
8866. But signals made by way of communication with some other vessel to the southward? - Yes.

## Page 200

8867. Did you ask, or not, what he thought this vessel had been firing rockets for? - Yes, Sir.
8868. Did he state any opinion to you? - He said he thought she was answering to somebody else.
8869. Supposing a vessel had been to the southward of your position and between you and the "Titanic"; and supposing she had seen the signals of the "Titanic," would you be surprised if she had signaled in reply by means of rockets? - No, Sir.
8870. If this vessel had no wireless telegraphic apparatus, or did not understand, or did not use the Morse signals, was there any other means of acknowledging the "Titanic's" signals than by these rockets? - I do not think so.
8871. Did you see the nature of the ice, between six o'clock and 8.30, the next morning? - Yes.
8872. While you were steaming in the direction of where you supposed the "Titanic" to be? - Yes.
8873. Do you remember what course you had to steer? - No.
8874. Were you able to proceed direct to the position of the "Titanic" given by the "Virginian," or had you to skirt the edge of the ice-field? - We went along the edge of the ice-field, I remember that.
8875. Did you see what kind of ice there was to the south-west of the position where you were? - It was thick field ice.

8876. Supposing this vessel which was seen during the midnight watch had in fact been proceeding to the south-west in answer to signals from the "Titanic" - proceeding in that direction - could she have reached the "Titanic"? - I do not think so.
8877. Unless she skirted the ice in the same way that you were able to do at daylight? - Yes.
8878. May that be the explanation of why you had not been able to find out the name of this vessel and why she was not there when you reached the "Carpathia"? - Yes.
8879. Did the Second Officer say what the movements of the steamer had been which had fired the rockets? Did he report to you that at 4 o'clock? - He said she steamed away to the south-west.
8880. Did he say what happened to her lights, and what he saw of them? - He said he saw a stern light as she was going out of sight, and it got very faint, so faint that he had to use the binoculars to get the bearing of it.
8881. Was there any report made of the lights having disappeared in the sense of a vessel having foundered? - Not at 4 o'clock.
8882. Or anything of that kind? - No.
8883. Was that the impression which his report created on your mind? - No. 8884. When he reported that the vessel had steamed away, what did you gather from the way in which he made his report of what he told you that had happened to this steamer? - That he had gone down to the other ship.
8885. Gone down to the south-west? - Yes.
8886. Did you ask him whether he had seen anything else? - He said he thought there was a light to southward about 20 minutes to 4.
8887. And when he stated that, what did you do, if anything? - I looked and I could see a light to the southward.
8888. What was the vessel which was showing the light which you saw to the southward at 20 minutes to 4? - I saw the lights at 4 o'clock. She had two masthead lights and a few lights amidships.
8889. That was the light which the Second Officer, as I understand, had told you he thought he saw - the light to the southward at 20 minutes to 4? - Yes.
8890. He told you that at 4 o'clock, and then you say you looked at it and you picked up the light? - Yes.
8891. Was that the light of this four-masted one funnel steamer which you afterwards saw at daylight? - Yes.
- 8892-3. Did you draw the attention of the Second Officer to that light? - Yes.
- The Commissioner:* Now, Mr. Dunlop, do get on.
8894. (*Mr. Dunlop.*) And it was then that there was some discussion as to whether that was the vessel that had been exhibiting the rockets which he had seen during the middle watch? - Yes.
8895. Did he say whether he had seen this vessel before or not? - He said he had not seen that ship before.
8896. Is it easy or not to say from what particular lights distress signals may be exhibited - whether it was this vessel or some other vessel? Is it different from lights only or masthead lights? You see what I mean? Was it easy for him to be able to be sure

whether the vessel that was exhibiting the rockets was not the vessel which you drew his attention to shortly after 4 o'clock? - No, I do not think so.

*The Commissioner:* I do not very well understand the question, and I certainly do not understand the answer.

8897. (*Mr. Dunlop.*) My Lord, I will try and put it again more clearly. (*To the Witness.*) The Second Officer, as you told us, said that he did not think the vessel which you pointed out to him was the vessel that had previously been firing the rockets? - Yes.

8898. Is that a thing that he could be sure about? - I do not think so.

*The Solicitor-General:* He has given evidence, you know.

8899. (*Mr. Dunlop.*) I want to know your opinion, because you were there and you saw this vessel and the position in which this vessel was. Did the Second Officer report to you the direction from which he had seen these rockets? - Coming from the steamer?

8900. Yes? - He said she had gone away to the south-west.

8901. And in what direction was it that you saw this light which you were able to pick up? - About south.

*Mr. Edwards:* May I suggest that your Lordship asks this witness this question: How many funnels the "Carpathia" has?

8902. (*The Commissioner.*) Can you tell us how many funnels the "Carpathia" has? - One funnel, my Lord.

### **Examined by Mr. COTTER.**

8903-4. How many masts has the "Carpathia" got? - Four masts.

8905. Is it in your mind at all that it was the "Carpathia" you saw? - No; I thought it was a yellow funnel boat when the sun was up.

8906. Are there any instructions issued by your company about the Marconi apparatus in time of trouble, either on your own ships or any other ships? - No, I do not know of any.

8907. None at all? - No.

8908. What took you to the Marconi House at the time you went there? - The Captain sent me to call the Marconi man to see what ship was to the southward.

8909. The Captain sent you? - Yes.

8910. What time did the Captain come up to the bridge? - Half-past four.

8911. When did you first hear that the "Titanic" had sunk? - When I went to the Marconi House.

8912. How long after you had got to the Marconi House did you find out that the "Titanic" had sunk? - I could not exactly say how long it was - the time I took to get the operator out and to his machine.

8913. He was in bed? - Yes, asleep.

8914. And he got to his machine? - Yes.

8915. Did the Marconi operator tell you where he had got the information from? - He said he had the "Frankfurt."

8916. Would it not have been the right thing, I ask you, as Chief Officer, assuming that you saw these lights in close proximity to the ice and rockets also going up - would it not have been the right thing to have gone immediately to the

**Page 201**

the operator, and asked him to get into communication if possible with this ship? - Yes, I think so now.

8917. But would not you do it as your duty? - I saw a ship to the southward there, but she would not answer.

8918. But assuming that you could not get any definite reply from her, would it not have been the best thing to have gone and got the Marconi instrument into operation to see if you could get into touch with her? - Yes, now I think so.

*(The Witness withdrew.)*

*The Solicitor-General:* What we propose to do, subject to your Lordship's approval, is to recall the Third Officer and the Second Officer just on this one point about the log, so that your Lordship may have the evidence about it, and then we propose to call the Marconi operator.

**CHARLES VICTOR GROVES, Recalled.**

**Examined by Mr. ROWLATT.**

8919. I want to ask you one or two questions about the waste logbook to clear up something. I understood you to tell us that the waste logbook, as a book, was destroyed.

Is that so? - Not as a book, no, Sir.

8920. How is it destroyed? - Page by page.

8921. Every day? - Not necessarily every day. I do not think it is done at any stated intervals, but I do not have anything to do with the destroying of it.

8922. Perhaps you can tell us this. On April 15th, when you came on duty, had the page before been destroyed? - That I could not say, but I hardly think it would be. 8923. You could not tell as to any particular days when they were destroyed? - No.

*(The Witness withdrew.)*

*The Commissioner:* I think you have got the evidence now about the logbook and the scrap logbook.

*The Solicitor-General:* Your Lordship does not care about having the other officer again?

*The Commissioner:* No, I do not think so. I may tell you that the effect of these things on my mind is this - That it is the practice to tear out the sheets of the scrap log from time to

time and destroy them. But, you know, that does not get over my difficulty that apparently, if this evidence is true that has been given in the box, there was no entry of any kind in that scrap log of these rockets having been seen.

*The Solicitor-General:* I understand, my Lord.

**CYRIL F. EVANS, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

8924. Are you the Marconi operator on the steamship "Californian"? - Yes. 8925. Do you remember Sunday, 14th April? - Yes.
8926. You have no one to help you, I think - no assistant - with the Marconi apparatus on the ship? - No.
8927. Can you tell us what time you turned in on the Sunday night? - Half-past eleven, ship's time.
8928. During the Sunday, this 14th of April, had you been on duty with your Marconi apparatus from time to time? - Yes.
8929. I think starting about 7 o'clock in the morning? - Yes.
8930. When you get a certain way across the Atlantic do the Marconi operators keep New York time for the purpose of their messages? - Yes, when they get to 40 west.
8931. When you get to the Meridian 40 west? - Yes.
8932. Were you in that part of the Atlantic where New York time is kept by the Marconi operators? - Yes.
8933. Have you got your records there, or do you remember them - the hours I am going to put to you? - I have my logbook.
8934. Would not it be as well for you to have it? - The Chief Officer has it. 8935. I have no doubt he would let you have it. Perhaps, while they are getting it you can tell me this: What is the difference between New York time and ship's time at the place where you stopped? - One hour and fifty-five minutes.
8936. That means one would have to add 1 hour 55 minutes to New York time to get at your ship's time at the place where you stopped? - Yes.
- (The Marconi logbook was handed to the Witness.)*
8937. We have heard something about communications between you and the "Antillian"? - Yes.
8938. Is that another ship of the same line, the Leyland line? - Yes.
8939. Can you tell us what time it was that you were communicating with the "Antillian," and then tell us what the message was you sent? - 5.35 p.m. on the 14th. 8940. That is New York time? - Yes.
8941. In ship's time then that would mean 7.30, would it not? - Yes. 8942. p.m.? - Yes.
8943. What was the message which you sent the "Antillian" at that time? - It was a message reporting ice. "To Captain, 'Antillian,' 6.30 p.m. apparent time, ship; latitude, 42.3 North; longitude, 49.9 West. Three large bergs five miles to southward of us. Regards. Lord."

8944. "Lord" - that is the name of your Captain? - Yes.  
*The Commissioner:* Did you say that was sent at 7.30?
8945. (*The Solicitor-General.*) He was sending it at 7.30. (*To the Witness.*) That is information, so I understand, as to what they had seen at 6.30? - Yes.
8946. You are sending at half-past seven a message which the Captain had asked you to send? - Yes.
8947. And the message referred to the fact that an hour before apparent ship's time there had been icebergs seen to the southward? - Yes.
8948. Did the Captain write out this message and give it to you to send? - Yes. 8949. I just want you to go back for a moment to the message; there was one point I did not quite follow. You began by telling us the message started by a reference to your latitude and longitude. Did that refer, as you understood it, to the position you were in at half-past seven, or to the position you were in at half-past six? - Half-past six apparent time ship.
8950. So that it gave the other ships news of whereabouts in the Atlantic these icebergs were? - Yes.

## Page 202

8951. Did you hear anything of or from the "Titanic" about this time? - Yes, a little after.
8952. Did she ring you up, or did you ring her up? - She called me up.
8953. What does that mean? Is it just to find your position, or what? - No. If you have not had another ship before, whichever ships hears the other one first you call him up and you offer him a "T.R."
8954. What does "T.R." mean? - "Time rush"- when a ship gets him. It is what we call the official "T.R."
8955. (*The Commissioner.*) What does "T.R." mean? - It means "time rush."  
*The Commissioner:* What does "time rush" mean? - I do not know the significance of it.
8956. (*The Solicitor-General.*) I fancy it is merely a *memoria technica*. (*To the Witness.*) It is merely a convenient message to use? - Yes.
8951. Let us see if I follow it properly. When the "Titanic" sends out a message as other ships get nearer to her with apparatus they can hear that the "Titanic" is sending out a message, cannot they? - Yes.
8958. When they get within a certain range? - Yes.
8959. And when that happens, do you communicate back again? - Yes.
8960. To say that you are there? - Yes.
8961. Then the "Titanic" knows that you are within her range, and you are able to say that you have heard the "Titanic"? - Yes.
8962. Is that what a "T.R." is? - Yes; and then we exchange times to see if our clocks are the same. That is why we call it a "T.R."
8963. You exchange times? - Yes, and which way we are bound.
8964. Ship's time? - No, if we are working on New York time we exchange New York time.

8965. So that that is a check to see that each ship has got the right time? - Yes. 8966. I see from the statement you have made that upon this happening you offered him what you call an "S.G."? - Yes.
8967. What is an "S.G."? - "S.G." is a prefix. When you send "S.G." he knows that there is a service advice message coming through.
8968. It means that you are offering him some information if he wants it? - Yes.
8969. And what was the information that you were prepared to offer the "Titanic"? - I told him "'S.G.' ice report."
8970. That means that you were in a position to give him some news about ice? - Yes.
8971. Is this shortly after half-past seven? - Yes.
8972. What did the "Titanic" say to you when you offered your ice report? - He said, "It is all right. I heard you sending it to the 'Antillian,' and I have got it."
8973. Did you cease communicating with him? - Yes.
8974. That is all about 7.30, or a little later, is it not? - Yes.
8975. There is nothing more, as I follow you, until your ship stops? - No.
8976. Which we know she did, about 10.25 - your ship's time? - Yes.
8977. Did you go on deck when you found the ship had stopped? - Yes.
8978. I think you found the Captain and the Chief Engineer discussing the matter? - Yes.
8979. And then did the Captain make a communication to you and ask you to do something? - Well, Sir, he was talking about the ice then; he was talking to the Chief Officer. I asked him if anything was the matter, and if he wanted me. A little after that he came along to my cabin to talk to me.
8980. What did he want to know? - He asked me what ships I had got.
8981. That means, what ships you were in touch with? - In communication with.
8982. What did you say? - I said, "I think the 'Titanic' is near us. I have got her."
8983. Did you say "I think the 'Titanic' is near us" or "is nearest"? - Near us.
8984. (*The Commissioner.*) "Nearer" is it you are saying? - She was "near us." 8985. (*The Solicitor-General.*) As far as you know, was there any ship with Marconi apparatus that was nearer you at this time than the "Titanic"? - Not as far as I know. I had not the "Titanic's" position.
8986. (*The Commissioner.*) What time was this - about what time? - Five minutes to eleven.
8987. (*The Solicitor-General.*) Ship's time? - Yes.
8988. What did the Captain say when you said that? - He said, "You had better advise the 'Titanic' we are stopped and surrounded by ice." 8989. Did you call up the "Titanic"? - Yes.
8990. Can you give me the time? - It was 9.5 p.m..
8991. New York time? - Yes, 11 o'clock ship's time.
8992. What did you say? - I said, "We are stopped and surrounded by ice."
8993. Did you get an answer from the "Titanic"? - They said, "Keep out."
8994. Just explain to us, will you, what that means? - Well, Sir, he was working to Cape Race at the time. Cape Race was sending messages to him, and when I started to send he could not hear what Cape Race was sending.

8995. Does that mean that you would send louder than Cape Race to him? - Yes; and he did not want me to interfere.

8996. That would interrupt his conversation with Cape Race? - Yes.

8997. So that he asked you to "keep out"? - Yes.

8998-9. In ordinary Marconi practice is that a common thing to be asked? - Yes. And you do not take it as an insult or anything like that. *The Commissioner:* What did you say?

9000. (*The Solicitor-General.*) "You do not take it as an insult or anything like that." (*To the Witness.*) Do I understand rightly then that a Marconi operator, like other people, can only clearly hear one thing at a time? - Yes.

9001. Have you any means of knowing - do you judge that he had heard your message about ice? When you say you sent this message and he said "keep out," did he say that after he had got your message? - The very minute I stopped sending.

9002. (*The Commissioner.*) You cannot tell, I suppose, whether he heard what you said? - He must have heard it, my Lord, but I do not know whether he took it down. 9003.

Would he hear what you said, or would he merely hear that you were speaking? You see, as I understand, he was getting messages from two points - from Cape Race and from you. He could not hear both, I suppose, at the same time? - No, my Lord. 9004. And he may not have heard what you said, though he may have known that you were trying to speak to him. I do not know, you know; I am only asking? - Well, my Lord, my signal would be much stronger than Cape Race's.

9005. You think that he would have heard you, and you would, as it were, obliterate Cape Race? - Certainly, my Lord.

9006. (*The Solicitor-General.*) I notice, Mr. Evans, in the evidence you gave in America, you said your message would come to him with a bang? - Yes.

9007. And the other message would be faint. Is that right? - Yes.

9008. We shall hear a good deal about this later on. Now will you tell me this? You spoke about speaking to him and his hearing you. Is it spelt out with a code or with an alphabet? - Spelt out with an alphabet.

9009. Is it the ticking of a needle? - No, Sir, the clicks in the 'phone. You read off them.

9010. Long clicks and short clicks? - Yes.

9011. How is it that he would know when he got your message coming to him with a bang that it came from you? - By my call signal. 9012. You begin with that, do you? - First of all.

9013. You say who you are? - First of all you give his call signal, and then yours afterwards.

9014. And then you gave him this message, spelt it out, that you were stopped in ice; and then he replies to you, "Keep out." How do you know he was talking to Cape Race? - I heard him beforehand.

### **Page 203**

9015. You could hear him? - Beforehand, and directly after that.

9016. (*The Commissioner.*) What was it you heard? - Before that, my Lord? 9017. No. What was it that you heard which conveyed to you that he was in communication

- with Cape Race? - Directly afterwards he called up Cape Race - a few seconds after.
9018. After he had said to you "Keep out"? - Yes, my Lord.
9019. (*The Solicitor-General.*) Could you overhear what he was saying to Cape Race? - Yes.
9020. What was it he said? - He said, "Sorry, please repeat, jammed." 9021. That means that somebody else had interrupted? - Yes.
9022. After that did you hear him continuing to send messages? - Right up till I turned in.
9023. It was not your business, and I have no doubt you did not listen in detail to what they were, but could you tell, as a matter of fact, whether they were private messages? - Yes, all private messages. You can tell by the prefix.
- The Commissioner:* That means messages from passengers.
9024. (*The Solicitor-General.*) Yes, business and private messages for the passengers. (*To the Witness.*) You can tell that by what you call the prefix, the sound that is sent first of all? - Yes.
9025. And that continued, you say, till you turned in? - Yes.
9026. When was it that you turned in? - Eleven-thirty p.m., ship's time.
9027. You had been at work since 7 o'clock in the morning, except intervals for meals? - Yes.
9028. Was it your regular course to turn in about that time? - As a rule. It all depends where we are.
9029. And when you turn in you put down I suppose the receivers, or whatever they are? - I hung the 'phones up. The detector was also stopped.
9030. What is the detector? - The detector is the arrangement for detecting the signals - making the signals audible in the 'phones which has to be wound up. 9031. And that would stop would it? - Yes.
9032. So that after you had turned in, supposing the "Titanic" sent out the signals C.Q.D., or whatever they might be, you would not hear them? - No, Sir, not unless I got the 'phones.
9033. And your instrument would not repeat them? - No.
9034. You turned in. Do you recollect the second officer, Mr. Groves, coming into your room a little later? - Yes, I have a faint recollection of it.
9035. Can you give me any idea as to what sort of time it was? - About a quarter-past 12, I think.
9036. Mr. Groves' watch ended at midnight, you know? - Yes.
9037. And he came in you say at about a quarter-past 12? - He stopped up on the bridge, I think, for 10 minutes until 10 minutes past 12 with the other officer to get his eyes in.
9038. When Mr. Groves came into your room, what did he do? - He asked me what ships I had got; if I had got any news.
9039. Yes, what did you tell him? - I told him I had got the "Titanic." I said, "You know, the new boat on its maiden voyage. I got it this afternoon."
9040. You got it this afternoon. Had you got the "Titanic" earlier than half-past 7? - No.

9041. When you said "This afternoon," you mean at half-past 7"? - Yes, Sir, that was right.
9042. That is right, is it? - Yes.
9043. By New York time it would be 4.30 or 5 o'clock? - Yes.
9044. Did anything more happen then? - I do not remember Mr. Groves picking the 'phones up, but Mr. Groves says so.
9045. That he picked them up and put them into his ears? - Yes; of course, I was half asleep.
9046. Did he tell you, as far as you recollect, then at a quarter-past twelve of anything that he had seen since the ship had stopped? - No.
9047. He only came in and asked what ships you had got? - Yes. He generally comes in my room and has a talk.
9048. He generally does that? - Yes. He comes and has a chat.
9049. Just to find out what the news is? - Yes.
9050. And then, I think, you went to sleep? - Then I went to sleep. He switched out the light and shut the door.
9051. The next thing I want to know is this. Mr. Stewart is the Chief Officer, is he not? - Yes.
9052. Do you remember Mr. Stewart coming into your room later on? - Yes, in the morning.
9053. Can you tell me what time it was? - 3.40 or 3.45, New York time.
9054. (*The Solicitor-General.*) Do you mind timing it into ship's time for us? *The Commissioner:* It is inconvenient to have two times. I have taken it down hitherto in ship's time.
9055. (*The Solicitor-General.*) It is certainly much more convenient, my Lord. (*To the Witness.*) You have only to add one hour 55 minutes to it, have not you? - Yes.
9056. So that 3.45 New York time is 5.40 ship's time. Is that right - about twenty minutes to six? - Yes.
9057. It was getting light? - Just after dawn, I think.
9058. You remember Mr. Stewart coming into your room at that time, twenty minutes to six? - Yes.
9059. Just tell us carefully, if you will, what it was he said? - He said: "There's a ship been firing rockets. Will you see if you can find out whether there is anything the matter?"
9060. (*The Commissioner.*) Find out what? - If there is anything the matter. 9061. (*The Solicitor-General.*) Did you ask him any more about the rockets? - No, I jumped out of my bunk and took up the 'phones at once.
9062. You took up the 'phones immediately? - Yes.
9063. If you had been asked to do that at any time in the night you could have done it, could not you? - I could have done it.
9064. And would have done it, of course? - Yes.
9065. When you get hold of your instrument you send out a call don't you? - I listened at first to see if anybody was working.
9066. You listened first? - Yes.

9067. But you did not hear anything? - No.
9068. And then not hearing anything did you send out a call? - Yes, C.Q.
9069. That is call C.Q. is it? - Yes.
9070. Is that a general call up? - A general call for all ships to answer. 9071. Did you get an answer from anybody? - Yes.
9072. From what ship? - The "Mount Temple" first.
9073. That is a Canadian Pacific vessel, I think? - Yes.
9074. Did you get any information from her? - He said, "Do you know the "Titanic" has struck an iceberg, and she is sinking," and he gave me her position.
9075. You have got his message there, have you? - No, - I mean to say you do not call those messages, you know.
9076. (*The Commissioner.*) Was it the "Mount Temple" said that the "Titanic" had struck an iceberg? - Yes.
9077. (*The Solicitor-General.*) You would not keep a record of this? - It is just simply conversation, Sir.
9078. Did you say, "She is sinking"? - He said, "She is sinking." 9079. The "Mount Temple" said, "She is sinking"? - Yes.
9080. Did he give you the position of the "Titanic"? - Yes.
9081. The position that we have had mentioned in the case several times? - Yes.
9082. Did the "Mount Temple" say what she was doing? - No. The "Frankfurt" jumped in then. He told me the same thing and gave me the same position.

**Page 204**

9083. What line does the "Frankfurt" belong to? - She is a German boat; I think it is the Norddeutscher Lloyd. I know it is a German boat.
9084. What did the "Frankfurt" say? - The "Frankfurt" told me the same thing. The Chief Officer was in my room at the time.
9085. You have told us that Mr. Stewart came in and gave you this information of what had happened during the night, and asked you to find out whether anything was the matter. You say you jumped out of bed and used your instrument. Was Mr. Stewart there? - Yes, Sir. I gave him the position, and he went off to get the Captain. 9086. When you heard these messages from the "Mount Temple" and from the "Frankfurt" did you tell Mr. Stewart what you heard? - I wrote down the position and gave it to him.
9087. You wrote down the position on a piece of paper and gave it to him? - Yes. 9088. Did it take any time calling these ships up and getting the answer? - About five minutes, not more than that.
9089. So that it was about a quarter to six ship's time? - Yes.
9090. When you gave Mr. Stewart the message and the position what did he do? - He went off to the Captain and fetched the Captain. Then I got the "Virginian" and asked him for an official message.
9091. What line does the "Virginian" belong to - the Allan line, is it not? - Yes.

9092. You asked the “Virginian,” did you, for an official message? - Yes, so that I could give it to the Captain.

9093. What was the message that you got from the “Virginian”? - It gave the position of the “Titanic,” and said she was sinking, passengers in boats.

*The Solicitor-General:* Have not you got the actual message there? You might just as well have it?

*The Commissioner:* What was the position?

9094. (*The Solicitor-General.*) I think you will find it is in the message. I have it here: “‘Titanic’ struck berg; wants assistance; urgent; passengers in boats; ship sinking. His position, 41.46 North, 50.14 West. - Gamble, Commander.” Is that right? - Yes.

9095. That is the message from the “Virginian”? - Yes, I have it here, Sir.

9096. I think I read it right, did not I? - Yes.

9097. Did you get any news as to whether any vessels were going to this spot to see if they could help? - The “Frankfurt” told me they were going along, and the “Virginian” told me so, and also a Russian boat.

9098. What is the name of the Russian boat? - The “Birma,” Russian-American Line.

9099. She has also got wireless, has she? - Yes, but not our system.

9100. Could you tell sufficiently? - Yes. We all unite in case of an emergency like that.

9101. Did these different vessels that you speak of give you their position? - No, Sir; they gave the “Titanic’s.”

9102. Only the “Titanic’s”? - Yes.

9103. Then you knew they were going to the spot, but you did not know where they were going from? - I knew the “Frankfurt” had passed us during the day before, I think it was.

9104. She is a faster boat than you? - She was going the opposite way, and she passed us. She turned back and went towards the scene of the disaster.

9105. You knew she was nearer Europe; she was more to the East? - Yes.

9106. Apart from that, did you know the actual position of these other boats that said they were going to her assistance? - No. I knew that the “Virginian” was coming up from Cape Race way.

9107. (*The Commissioner.*) Yes, but you did not know their position? - No, my Lord.

*The Solicitor-General:* That is what I wanted to know.

***(After a Short Adjournment.)***

9108. (*The Solicitor-General.*) What I wanted to know further was this, about the system. When you turn in and leave your instrument as I understand from what you have told me, a motor stops, your little motor? - No, the detector, it has to be wound up.

9109. Is the effect of that that there would be no means by which you would know whether a distress signal was being sent out by another ship? - No, unless I had the ‘phones on. There has been nothing invented so far. There was in the very old sets, but it was done away with because it could not be relied on.

9110. So that you have to rely upon the sense of hearing in your ears, applied to the receiving instrument set against your ears? - Yes.

9111. And, of course, you cannot do that when you are asleep in bed? - No. 9112. The other thing I wanted to be clear about was this. I suppose the range of your communication depends upon the strength of your installation? - For sending, yes.

9113. You heard the "Titanic" speaking to Cape Race? - Yes.

9114. Could you hear Cape Race speaking to the "Titanic"? - No. 9115. Could you hear Cape Race at all? - No.

9116. But evidently the "Titanic" could hear Cape Race? - They had a higher area, and I understand they had a more sensitive detector.

9117. Now, take your installation. What sort of range, what radius of area would you be able to cover with your apparatus; could you speak to a ship 100 miles off? - Yes; the furthest distance I have got so far is 250 miles. My power is cut down. The ship is only a 60-volt dynamo ship; most ships have 100 volts.

9118. So that your installation was comparatively weak? - Oh, no, I get 250 miles. *The Solicitor-General*: Of course, this witness can give evidence of what happened when they got to the "Carpathia," but we have got it without.

**Examined by Mr. SCANLAN.**

9119. I think you said to your Captain on the Sunday evening that the "Titanic" was near you? - I said I thought she was near us.

9120. What basis had you for saying she was near you? - The strength of the signals.

9121. You also state that when you gave a message to the ship of your own line you gave your position? - Yes.

9122. You commenced the message by giving your position? - Yes. 9123. When you gave the final message to the "Titanic" did you commence that message by giving your address, so to speak - your position then? - No.

9124. Would the "Titanic" be able to judge from the distinctness of your message that you were near them? - Yes; you cannot judge a distance accurately.

9125. What impression did you have as to the distance the "Titanic" was from you? - Well, he had very good signals, very clear signals, and he has got a good power. 9126.

Would that indicate roughly a certain number of miles - that you must be within a certain number of miles? - By the strength of the signals I should say he was not more than 100 miles off us in the afternoon. I heard him working a long time before I got him.

**Page 205**

9127. When you were speaking to him at night, when you gave the message that you were surrounded by ice, what I want to know is, could he form an idea that ice was very near him?

*The Commissioner*: The ice?

9128. (*Mr. Scanlan.*) That he was not far from the position of which this gentleman was speaking. (*To the Witness.*) In whose employment are you? - The Marconi Company.

9129. Are you liable to come to your machine any time you are called upon by the officers of the ship? - Well, personally I would myself, but we have no instructions to that effect to my knowledge. We are under the command of the Captain. 9130. (*The Commissioner.*) Do you sign on with the ship's officer's? - Yes.

**Examined by Mr. HARBINSON.**

9131. You cannot work day and night? - No.

9132. If there had been another operator on this boat to have taken your place when you went to bed at 12 o'clock? - Half-past 11.

9133. He would have got this C.Q.D. signal sent out from the "Titanic"? - Yes.

**Examined by Mr. LEWIS.**

9134. Do I understand you are on the ship's articles? - Yes.

9135. I take it only as a matter of form? - To bring us under the Captain's control. 9136. To what extent has he control over you? - The Captain has command over everybody in the ship, has he not? - That is why we have to sign on.

9137. To what extent can he interfere with your duties as an operator? You are in the employ of the Marconi Company? - Yes.

9138. Do you receive instructions from them when engaged, as to your duties? - Well, we have instructions as to our hours; if we want to get into communication with the land, we generally stop up later.

9139. I am not asking the instructions from time to time. I want to know whether you are given instructions when you are first employed as to your duties and so forth - when you are first employed by the Marconi Company? - We are told to take orders from the Captain.

9140. There are certain duties laid down; I presume they give you certain instructions. Do not you have instructions as to your duties on board ship? - Not to my knowledge.

9141. There are no printed instructions issued? - There is one about calling the C.Q. at even hours, so that you can always get somebody at that time.

9142. Are you allowed to get into communication under ordinary circumstances with a ship with another system, say the De Forest system? - Not under ordinary circumstances; we are not supposed to.

9143. Have you had instructions on that matter? - No written instructions.

9144. What sort of instructions have you with regard to communication under ordinary circumstances with ships having other installations? - We are not to communicate with them.

9145. You are not to communicate? - No, except in case of distress or anything like that.

9146. Is that under the International Code? - Perhaps you are not aware; that is by agreement with the different countries? - The only other one is the American one, and America has not come under the International Convention.

9147. America has not come under it? - No.

*The Solicitor-General:* We shall call another witness.

9148. (Mr. Lewis.) I will defer that, as I understand another witness will be called. (*To the Witness.*) When you approached the "Carpathia" did you find any difficulty in getting into communication with her? - Yes.
9149. You tried to communicate did you? - Yes, but I heard him say this; he said that he had picked up twenty boat loads, I think it was.
9150. Did they tell you the same thing as the other boat did, to shut up? I understand you did not think it was rude, but on another occasion another boat told you to shut up. He told you to do the same? - Yes.
9151. You had a communication from the "Frankfurt" and the "Birma," had you? - Yes.
9152. What systems are those? - I am afraid I made a mistake before, because the German company and our company is a combined company really, and we always communicate with them; but with the Americans we are not supposed to. 9153. What system had the German boat? - It is the Telefunken system.
9154. Did I understand you to say it is a joint system? - A joint system, Marconi and the other.
9155. And the "Birma" is the De Forest? - The American De Forest, yes.
9156. (*The Commissioner.*) The "Birma" is a Russian ship; she has a different system? - Yes.
9157. (Mr. Lewis.) You say that is an American system? - The United Wireless Company of America, so I understand.
9158. Is that the system employed on the "Birma"? - Yes. 9159. Not the De Forest? - It is the same thing.
9160. You had no difficulty with them. Did you ever have any difficulty with those ships by that system? - They jammed us a good deal.
9161. That is in the ordinary course? - Yes.

**Examined by Mr. CLEMENT EDWARDS.**

9162. When Mr. Stewart came to your cabin was your ship moving? - No.
9163. How soon after he came to your cabin did your ship start moving? - Ten minutes or a quarter of an hour, I think.
9164. Did he say anything to you about a ship being to the southward, would you find out what she was? - No, not to my knowledge.
9165. How soon did you get into touch with the "Carpathia"? - I did not get her until I got nearly alongside of her.
9166. What time was that? - About half-past 8, I think.
9167. From the time you started moving till you got alongside, have you any idea how far you had traveled? - No, I was in my room most of the time, or else I was running up to the bridge.
9168. Could you tell what the revolutions were; whether it was working rapidly or slowly? - I do not think so; I am not much judge of that.
9169. You are not able to judge? - No, I know the ship was trembling a bit through hitting the ice.

**Examined by Mr. COTTER.**

9170. Is it not the fact that she was supplied every trip with a chart of the North Atlantic?  
- Yes.
9171. Have you a copy of the chart you had on the "Californian"? - No, but that chart is only amongst ourselves. They are square charts. They are not made out like ordinary charts.
9172. I want to look at the chart? - We are not marked on that chart because we have not got a regular run.
9173. But the "Titanic" would be marked on it. First class passenger ships would be marked on that, giving the positions going across the Western

**Page 206**

- Ocean? - I do not know. I have not got one of the "Titanic."
9174. Did you have a chart at all? - No.
9175. Have you seen a Marconi chart? - I should think so.
9176. You had none on the "Californian"? - I had got some. 9177. When did you get it? - The other trip before.
9178. The voyage you were on I mean? - The trip before that.
9179. You got none for the last trip? - No.
9180. Is it not the fact that you get them every trip? - Yes, it was an oversight on my part.
9181. So that you can locate a ship and get some idea of the radius she is in in the Western Ocean? - It is a chart made out so that we can know for our own convenience when to expect communications from other ships, but you cannot say that a certain ship is going to be there at a certain time.
9182. But within a range of 100 miles or so you would have an idea where to pick her up? - Yes.
9183. And you had not got a chart? - No, I had got a South Atlantic chart because I made a mistake. We went to New Orleans on the first trip, and the next trip we came back to London; we did not go back to Liverpool; and in the hurry of getting off again. I did not get another chart.
9184. You took no chart? - No.
9185. If you had had a chart with the "Titanic" on it, it would have given you a better idea where she was than you had? - No, it would not at all.
9186. What is the use of the chart then? - Simply to show us when to expect communications with other ships.
9187. That is the point. At a certain time she would be in a certain place? - You cannot say a ship will be in a certain place at a certain time.
9188. It would give you the radius; I do not mean the miles? - It would give you the longitude West.

**Examined by Mr. DUNLOP.**

9189. With regard to the distance at which you say the "Titanic" was when you got into communication with her, did you give evidence at the Court of Inquiry in America? - Yes.
9190. And you remember in answer to Senator Smith, saying this, "You cannot tell by the strength of the signals where anybody is"? - "You cannot tell exactly" were my words.
9191. Can you tell within 100 miles? - It is very hard to say. There is some peculiarity in every boat. You can tell she is getting nearer by the strength of the signals or something like that.
9192. When you were communicating with the "Titanic" on the Sunday, whether she was 100 miles away or 200, you could not tell from the sounds of the message which she sent to you, could you? - You cannot tell exactly; it is impossible.
9193. Did you say further, when referring to the message that you received from the "Titanic": "I thought he was very much south of me, because we were bound for Boston and we were north of the track; we were following the track of the 'Parisian'"? Do you remember saying that? - Yes, the captain told me to expect the "Titanic" to be away to the southward of us.
9194. When you said that the "Titanic" was near to you, within your radius, do you think she was? - I could not tell.
9195. You could not tell within 100 miles or 200 miles? - No, you cannot tell.
9196. All you thought you could tell was that the "Titanic" appeared to be the nearest vessel to you that had wireless telegraphy with which you could correspond? - Yes, that was my view.

**Re-examined by the SOLICITOR-GENERAL.**

9197. If you get within communication of a ship which has wireless telegraphy, unless you know whether its installation is a strong one or a weak one, have you any means of seeing whether she is very near or whether she is further off? - Well, you could tell by the strength. If she is a very long way off and you have tuned accurately to her, and you find her signals are very weak, you can say she is a good distance off.
9198. Does not it depend on the strength of her own discharge as well as upon the strength of the signals that you receive? - Yes.
9199. So that you need to know whether she has a strong installation or not? - But you can always tell by the sound of the spark. A strong installation has a singing spark; a coil set has a bad spark.
9200. I think I heard you say, "I heard the 'Titanic' long before I got her"? - Yes. 9201. You could tell that she was sending out messages though you were not able to respond to them, is that it? - The reason I did not try and get her before that was he was working, he was busy with different ships, and all the rest of it. You have to wait before you start. The bigger ship, the faster ship, is the controlling ship; therefore he would be senior to myself.
9202. That is the rule, is it? - Yes.

9203. And as you had heard the “Titanic” for some time, could you tell us from what you heard whether she was getting nearer to you as time went on? - Yes.

9203a. Was she? - Yes.

9204. You say you continued to hear her until you turned in at half-past 11? - Yes. 9205. When you turned in, from what you could hear of her, was she nearer to you than she had been before? - Yes, her signals were stronger, getting much better.

9206. Very much stronger? - Yes.

9207. I think this is what Mr. Cotter referred to when he spoke of a communication chart. (Holding up a chart.) Yes, that has only the longitude W. marked on it. You could not tell exactly where a ship is. (*The chart was handed to the Commissioner.*) 9208. It is not a navigation chart, or a geographical chart? - No, it is for our own convenience.

9209. It is a diagram? - Yes, you could not call it a map.

9210. Suppose a ship leaves Europe on a particular day and is due in America on a subsequent day, and you draw a straight line across, you can tell more or less when she will cross the different meridians? - That is it, exactly.

9211. And of course the steeper the line is the quicker the ship? - Yes.

9212. If it is a flat line it is a very slow ship, that takes a long time to get across; if it is a very steep line it is a quick ship? - Yes.

*The Solicitor-General:* Your Lordship sees that on the chart?

*The Commissioner:* Yes.

*The Solicitor-General:* You say your ship would not be on that at all? - We are not a regular ship.

9213. You do not go a regular journey backwards and forwards? - No.

9214. Does that communication chart enable a man to judge when it is likely that he will get within speaking distance of the different vessels in the Atlantic? - It is simply to give the operator an idea what ships to expect. There is one thing I would like to mention. When the ship is stopped and the dynamos are not going it does not mean that the machine is useless, because I have storage batteries as well. If the ship was going down I should not be able to use the ship’s power. I have my own storage batteries.

9215. You are speaking now of what was probably happening on the “Titanic”? - Yes.

9216. You have storage batteries as well as dynamos? - Yes.

## **Page 207**

9217. Supposing the dynamos on a ship like the “Titanic” stopped and you could not use the current which they make, you would then have recourse to your storage batteries?

- Yes.

9218. Would they be as powerful? - The storage batteries are not so powerful, no, but I have got 200 miles with them.

*(The Witness withdrew.)*

*The Solicitor-General:* From the “Californian” there is this donkeyman, Gill, who is not here at present, and who gave evidence in America. I have three or four other “Californian” witnesses, but it does not appear to me they would add anything. *The Commissioner:* Of course, I do not know what they have got to say; you must exercise your discretion.

*The Solicitor-General:* I have done my best to decide whether they would, from any point of view, add anything, and I do not think so, and therefore we do not propose to call any more unless Mr. Dunlop wants them.

*The Commissioner:* Do you want any more, Mr. Dunlop?

*Mr. Robertson Dunlop:* No, my Lord, I do not think they add anything.

*The Solicitor-General:* What should the “Californian” witnesses do?

*The Commissioner:* As far as I am concerned, they may go. I do not want them. I do not suppose anyone else does. Do you want them, Mr. Dunlop?

*Mr. Robertson Dunlop:* No.

*The Commissioner:* Very well, they may go. They are going to sea. I understand.

*Mr. Robertson Dunlop:* Yes, they are sailing on Saturday.

*The Commissioner:* I do not think it is necessary to keep them.

**JAMES HENRY MOORE.**

**Examined by Mr. BUTLER ASPINALL.**

9219. Do you hold a master’s certificate? - Yes.

9220. On the 14th of April were you master of the “Mount Temple”? - Yes. 9221. Is she one of the Canadian Pacific Railway fleet? - Yes.

9222. What size is she? - 6,661 tons register.

9223. And on what voyage was she? - West.

9224. What voyage - where was she going? - West, on our sixty-second voyage west.

9225. Is she fitted with a Marconi installation? - Yes.

9226. On the 12th April did you receive a message from the “Corinthian” informing you that there was ice? - On the 13th April.

9227. Where was that ice? - 42° 15’ N. and 49° 48’ W.; 41° 25’ N., 50° 20’ W. 9228. In consequence of that information did you alter your course? - I did.

9229. When you got that information what course were you on? - About S. 65° W.

9230. And in consequence of that information to what did you alter your course? - Just a little to the southward of that, because I went straight down to 50° W.; instead of going down to 52° and 47° W., I went down to 50° W. and 41° 20’ N.

9231. Why did you make that alteration in your course? - On account of the ice being there.

9232. You thought it safer to do so? - Safer to do so; yes.

9233. Now, I want to take your mind on to Sunday evening or rather Monday morning, the 15th April. On the early morning of the 15th did you get information from your Marconi operator in connection with the “Titanic”? - Yes.

9234. What was the information he gave you? - That the “Titanic” was sending C.Q.D. signals saying she was in distress and had struck an iceberg and wanted assistance.

9235. I think telling you that the "Titanic's" position was 41° 46' N., 50° 14' W.? - The first position I got was 41° 46' N., 50° 24' W. It was afterwards corrected to 41° 44' N. and 50° 14' W.
9236. In consequence of that information, did you proceed towards that position? - I immediately turned the ship round and steered east.
9237. At that time was your ship in ice or not? - No. I had not seen any ice at all up to that time.
9238. Later on, I think, about 3.25, did you meet pack ice? - Yes; I had met scattered ice before that, but that was the time I met the heavier ice.
9239. I think from that time onwards you continued to meet heavy ice? - Oh, yes. 9240. And at about daylight did you come up to the position? - In the vicinity of that position.
9241. In the vicinity of the position you had been given? - Yes.
9242. Did you see any signs of wreckage? - None whatever.
9243. And were you as you were proceeding to get there getting messages from various steamers as to this disaster? - Yes.
9244. And I think shortly before 8 a.m. you came in sight of the "Carpathia" and the "Californian"? - Yes.
9245. Now I want to ask you with regard to two matters I think you mentioned in your evidence in America. Whilst you were on your way to the position which had been given to you as to the disaster of the "Titanic," did you fall in with a small schooner? - Well, I could not say it was a small schooner or a large one. I simply saw the green light of a sailing vessel.
9246. I want you to tell me a little more about it. At what time was that? - Shortly after 3 o'clock.
9247. How far do you think you were from the place where the "Titanic" foundered? - At that time?
9248. Yes? - I should think about 15 or 16 miles.
9249. Were you on your bridge at the time? - All of the time.
9250. You saw a green light? - Yes, of a sailing vessel.
9251. Did you see the ship herself? - Not at all; it was dark.
9252. You could only see the green light, and I suppose beyond that you know nothing more about the schooner? - No.
9253. Later on did you see a light or lights of any other vessel? - I had seen the lights of a vessel proceeding the same way, but steering a little more to the southward than mine; I could see a stern light.
9254. At what time was that? - Shortly after we turned round.
9255. That is earlier than this. About what time was that? - Say one - between one and half-past one.
9256. You only saw a stern light? - We saw a stern light, and then the masthead lights as she was crossing our bows to the southward.
9257. Beyond that you know nothing of her? - I saw her afterwards in the morning, when it was daylight. She was a foreign vessel - at least, I took her to be a foreign vessel. She had a black funnel with a white band with some device upon it, but I did not ascertain her name.

9258. How are you able to say that the vessel that was showing you a stern light was the vessel you saw at daylight? - We saw her all the time.
9259. You kept her under observation? - Yes.
9260. Was she going west? - She was going east.

**Page 208**

**Examined by Mr. SCANLAN.**

9261. Have you instructions from your company as to what to do when you meet ice? - We are not to enter field ice under any conditions.
9262. Just tell us what your instructions are? - I have not got them here; they do not happen to be in these sailing orders although I have them. Those instructions we usually get that we are not to enter field ice, no matter how light it may appear.
9263. Not even in daylight? - At any time. We are not to enter field ice at any time, no matter how light it may appear.
9264. When you got warning there was ice ahead, what precautions did you adopt? - I simply steered down. I went down further to the southward.
9265. Did you decrease your speed? - Not at all; it was daylight.
9266. What is your highest speed? - About 11 knots.
9267. Do you make any change in the lookout? - If we expect to see ice we always double the lookout.
9268. On this occasion, in daylight, when you were warned there was ice ahead, did you double the look-out? - No, because I made sure I could pass that ice.
9269. At night, even going at 11 knots, do you double the look-out? - No, unless we expect to see ice.
9270. If you expect to see ice, do you double the look-out? - Oh, yes.
9271. When you double the look-out, just explain to my Lord what you do? - Put an extra hand on the forecastle head, besides the look-out in the crow's-nest.
9272. In ordinary circumstances have you two men in the - Only one.
9273. And one on the forecastle head? - Yes, or on the forward bridge. We have a lookout on the forward bridge.
- The Commissioner:* Not in ordinary circumstances.
9274. (*Mr. Scanlan.*) No. (*To the Witness.*) In ordinary circumstances have you any man stationed at the forecastle head? - No.
9275. Supposing there was ice ahead of you, would you double the look-out? - Certainly.
- The Commissioner:* I think you will have to give up that evidence.
- Mr. Scanlan:* I think your Lordship will observe that I want to make this point, that in any circumstances of danger there should be a look-out man on the forecastle head as well as in the crow's-nest.
- The Commissioner:* I understand that point.
9276. (*Mr. Scanlan - To the Witness.*) Supposing there happened to be a haze ahead, would you then put a look-out man on the forecastle head? - Yes.

9277. Would you diminish your speed if there was a haze ahead? - Not without it was so thick that we could not see a safe distance ahead.
9278. What lifeboats do you provide? - We had 20 lifeboats when we left London.
9279. And how many passengers? - 1,466; I believe that is about the number.
9280. And how many crew had you?
9281. (*The Commissioner.*) How many people altogether had you on board? - About 1,609; that is the crew and passengers.
- The Commissioner:* I did not hear how many passengers and how many crew. 9282. (*Mr. Scanlan.*) He said 1,466 passengers, my Lord. (*To the Witness.*) And what is the total of the crew? - 143 of the crew; that makes 1,609 altogether.
9283. Now, what is the capacity of each of your lifeboats? - On an average about 49 persons.
9284. You have lifeboat accommodation for 1,000? - Yes.
9285. And that is the extreme? - That is the extreme.
9286. Have you not increased your lifeboat accommodation? - We are increasing it now.
9287. What kind of boats are you supplying? - The ordinary lifeboats.
9288. (*The Commissioner.*) Where are you registered? - In Liverpool.
9289. Then I suppose you comply with the Board of Trade regulations? - Yes, my Lord.
9290. (*Mr. Scanlan.*) You are supplying now additional lifeboats? - Yes.
9291. Is that with a view of providing lifeboat accommodation for every soul on board? - Yes.
9292. Explain what class of boats you are providing? - Ordinary wooden lifeboats, and also the Berthon boats - at least, not Berthon boats but the semi-collapsible boats.
9293. Not the Englehardt? - I believe they are to be Chambers boats - a great number of them are to be Chambers boats, and then we will have two or three Berthon boats.
9294. Are the lifeboats sufficiently stout in their construction to live through a heavy sea? - Yes; they are approved by the Board of Trade.
9295. (*The Commissioner.*) That may be a different thing. Are those lifeboats, in your opinion, of any use in a rough sea? - Oh, yes, my Lord.
9296. Because we have been told by other people that the lifeboats on the "Titanic" would have been of no value in a rough sea? - I believe my lifeboats are well built, and they are very buoyant; and they would be able to live in almost everything, my Lord.
9297. It is not so much living; it is getting down from the deck to the water with a vessel rolling or pitching, or whatever it may be. Is it a practical thing to get these lifeboats down from the deck to the water with a ship standing 90 feet above the water? - I should say it is a very dangerous operation, because if there was any rolling of the ship and the boat came back against the ship's side, I am afraid there would not be any boat left, not at that great height.
9298. (*Mr. Scanlan.*) Even with a swell on, a fairly heavy roll, could not you lower your boats from the boat deck of the "Mount Temple"? - We could lower them down, but if the ship was rolling very heavily, you can understand, if the ship was swinging, the boats would come with a heavy swing against the ship's side.
9299. For strength and durability how do your lifeboats compare with the coastguard lifeboats? - I cannot say; I never examined any of them.

9300. But you are aware that in great storms these boats go out to the rescue? - Yes.
9301. You do not know anything of the construction of those? - No.
9302. Or how yours compare with them? - No.
9303. In order that a lifeboat may be serviceable in a disturbed sea, have you any suggestion to offer as to any method of safely lowering them or taking passengers from a lower deck than the boat deck? - The better plan would be if there is no motion in the ship to take them at the lower deck, because if you put too many people in the boats they are bound to break the boat down.
9304. The back of the boat might break? - The centre will break with a heavy weight. The boat is hung by the two ends.
9305. At what lower deck could the people be taken? - In a ship like the "Titanic," I believe she has doors; the passengers could be taken from there.
9306. Yes, she has doors on the third class deck; but how would you get the passengers lowered from those doors into the boat? - If the doors were in a line with the boats they could easily pass through the doors into the boats.
9307. Do you think it would be a practical suggestion to lower the boat from the boat deck practically empty, and to have your passengers on the third class deck, and to have them let down from the third class deck into the boat? - If the weather permits, and it is practicable.
9308. Could that be done in rough weather? - I do not think so.
9309. Then you have no suggestion as to what could be done to save passengers in rough weather? - No.

**Page 209**

**Examined by Mr. HARBINSON.**

9310. Does ice at sea give any other indication of its approach beyond a coldness in the atmosphere? - In certain cases the atmosphere appears luminous on the horizon.
9311. As a matter of fact, does a haze usually envelop an ice-field? - Not usually.
9312. You said you heard on the morning of the 15th from your operator about the "Titanic" signals? - Yes.
9313. What time did you hear? - 12.30 by my clock.
9314. How many operators have you on board? - One.
9315. He had not turned in at the time? - He had turned in, but he had his ear-pieces on at the time.
9316. He had not divested himself of them. Now would you consider it safe in the neighbourhood of an ice-field, provided your boat had the power, to go ahead at 21 knots an hour? - It would be most unwise to go that speed at nighttime.

**Examined by Mr. HOLMES.**

9317. Out of the crew of 143, how many were officers? - We had 4 officers.
9318. Four officers under you? - Yes.

9319. And what watches did they keep? - Double watches when near land or in the ice track.
9320. What length of time would that mean? - Four hours on and 4 hours off. 9321. Throughout the day? - Yes, that is when we are in the vicinity of ice or in the vicinity of land.
9322. And in mid-ocean? - We keep single watches.
9323. Four hours on and 8 hours off? - Yes.
9324. You have been asked about the power of these boats to live in the sea. Do you know that recently, when the crew of the "Chesapeake" had to take to their boats, they were for 7 days in mid-Atlantic in their lifeboats? - I had not heard of it.
9325. May we take it that you are increasing your lifeboat accommodation beyond the Board of Trade regulations because you consider those regulations are inadequate? - We are putting sufficient boat accommodation in for all the passengers that we shall carry. 9326. Is that because you consider the present Board of Trade regulations are inadequate? - That is right.

**Examined by Mr. CLEMENT EDWARDS.**

9327. What in your view is the right number of men for manning a lifeboat capable of holding 70 people? - You ought to have at least four seamen in it.
9328. When you say four seamen, do you mean four A. B.'s? - No, seamen. We could put firemen in there. Very often firemen can pull a boat just as well as a sailor. 9329. You say four seamen. What number of other hands do you think in addition? - Those are sufficient for the oars and one officer; someone to take charge of the boat, some petty officer or certificated officer which ever boat it is.
9330. One qualified officer and four seamen who are capable? - I do not say a qualified officer; I say a petty officer; it may be a certified officer or a petty officer.

**Examined by Mr. COTTER.**

9331. When you left London on your last voyage did you have any boat drill before you left? - Not before we left.
9332. You had no boat drill at all? - No, not before we left.
9333. Was there a Board of Trade Surveyor there? - We passed the ship on the 27th of March; the Board of Trade passed her on that date, the 27th March, 1912.
9334. Did the Board of Trade Surveyor examine the boats at all? - Yes.
9335. Did he see one swung out and lowered? - I cannot say; I was not on board. I was away home. I live in Liverpool.
9336. You are speaking of a boat that holds 49? - Yes.
9337. And you say four seamen would be sufficient for that. How many seamen would be required for a boat which would hold 68?
- The Commissioner:* I thought he answered that.
9338. (*Mr. Cotter.*) He was speaking of a boat with four oars, I think? - Yes.
- The Commissioner:* He answered the question with regard to a boat holding 70.

9339. (*Mr. Cotter.*) You were not speaking of a boat which would hold 70? - No, 49. *The Commissioner:* Then I mistook the question which you put, Mr. Edwards. Did not you put a boat which held 70?

*Mr. Clement Edwards:* Yes, evidently I did not make my question perfectly clear.

*The Commissioner:* It was perfectly clear to me.

9340. (*Mr. Cotter - To the Witness.*) A boat that would hold 68 people would require a larger number of seamen? - Yes; I should put six men in a boat like that.

9341. (*The Commissioner.*) I want to understand this. Supposing the sea was quite smooth and the question was about saving the passengers, I suppose the more crew you put into a boat the less passengers you could put in? - That is true.

9342. If the sea were perfectly smooth, would you then in order to save more passengers put in a less crew? - Certainly, my Lord.

9343. (*Mr. Cotter.*) Is it not a fact that a boat that will carry 68 people will require nine? - You can have six at the oars and an officer in charge.

9344. There are four seats in the "Titanic" boats? - You want to save passengers. If you are in a cargo steamer and you are only saving your crew, then you will have so many men allotted to these boats; you will have so many firemen, and so many seamen, and so many stewards, and so many engineers.

9345. Is it not the fact that you have the same thing in the first class passenger liners if you have proper drill? - That is quite right.

9346. Do you have bulkhead drill? - We have no doors in our bulkheads. We have no doors in them except in the engine room in the tunnels. There are two watertight doors there.

9347. Only down below in the tunnel? - Yes.

9348. And she carries how many passengers? - I have had 1,800 people in her.

9349. 1,800 people? - Yes, passengers.

9350. (*The Commissioner.*) It was 1,600 before? - I have carried over 1,800 passengers.

9351. (*Mr. Cotter.*) What is the deck you have your bulkhead doors in? - The main deck.

9352. You have them along the main deck? - No, we have no bulkhead doors at all. They are solid. We have bulkheads rising to the main deck.

9353. But you have entrances through them? - No, we have not.

9354. How do the people get along the deck? - They cannot get through there; they have to come up.

9355. (*The Commissioner.*) They have to climb up over the top of the bulkhead? - We have ladders up there. When we have steerage passengers there they must go up on to the main deck. We have no doors through the bulkhead at all.

9356. (*Mr. Cotter.*) They have to climb right over the top. As a matter of fact, they have to go upstairs

## Page 210

to go downstairs? - They have to live downstairs, and what need is there to go up and then down again?

9357. Take the main deck. She has other decks besides the main deck? - Yes. 9358. But go along the main deck - ? - We have a sheltered deck. We have only three decks, we have not got nine, and the three decks are the ones which have bulkheads, and those bulkheads have no doors in them except down in the engine room in the tunnels.

**Examined by Mr. LEWIS.**

9359. Do you consider that a good plan - a bulkhead of that description? - I do.
9360. Do you know if the look-out men's eyes are tested in any way? - Yes.
9361. Who by? - The ship's doctor.
9362. Is that done every voyage? - Yes.
9363. Do you know whether that is a regulation of the Board of Trade? - I am not aware of any.
9364. It is simply for your own satisfaction? - Yes.
9365. On your boats I am not sure whether you have boat drills? - We have boat drills every passage - once every passage.
9366. I understood you to say that you think one officer and four seamen sufficient to man a lifeboat of your size? - That is if you wish to save any passengers.
9367. How many seamen would you say would be required to get the boats ready and lowered? - It just depends how the boats are fixed. With some boats all you have to do is to throw a fender down when your falls are held tight and your boats are shoved right out; it will not take more than two or four men; two men could lower them.
9368. How many A. B.'s have you on your boat? - We have 25 hands on deck. 9369. In a case of emergency how long do you think it would take to lower your 20 boats? - In the case of going back to the "Titanic" we took about an hour to put them all out. That is, the boats that were under the davits.
9370. I did not catch your answer? - We went back to the "Titanic's" assistance. We put all the boats out, with the exception of two. They were all ready for lowering in less than an hour, as far as I could judge.
9371. All ready for lowering? - Yes.
9372. But there would be the question of lowering? - That is not a very difficult thing.
9373. How long do you say it would take to get your boats absolutely ready and put down into the water the whole 20, remembering, of course, that you lose your men as you put them in? - You would have to get the men there. If that is the case, you could call up the sailors; you could call up your firemen.
9374. In the case of emergency you would call up your firemen to assist you that could be spared? - Certainly. 9375. Did you have your regulation number of A. B.'s on your boat, as required by the Board of Trade? - Yes.
9376. None extra? - None extra - at least, I do not think so.
9377. Do you intend putting on extra men now? - We have more than the Board of Trade calls for.

9378. With these extra boats do you intend to put on extra men? - I do not know; we have 16 able seamen.

**Examined by Mr. LAING.**

9379. Have you had a long experience in the North Atlantic trade? - Twenty-seven years.

9380. And do you run to Montreal in the summer and St. John's in the winter? - Yes.

9381. Have you ever tried using binoculars for your look-out? - No.

9382. Is that a new idea to you? - Yes, it is.

9383. With regard to yourself, on this voyage did you get a Marconi notice that ice was about? - Yes.

9384. Was it fine clear weather? - Yes.

9385. Did you keep your speed? - I did.

9386. I suppose in time you saw ice? - I saw no ice at all until I went back to the "Titanic's" assistance.

9387. You saw nothing until you turned to go South? - Until I turned to go North and East.

9388. Was the ice further south than you had known it? - I never knew it to be so far south before. Not in my whole experience of 27 years, I never knew it so far South.

9389. And you are constantly running backwards and forwards? - For 27 years. 9390.

With regard to your ship, how many passengers can she carry when you are full up? How many are you allowed to carry? - I do not know. There is no limit put on. We were to have taken 2,200 from Antwerp this last voyage. 9391. (*The Commissioner.*) Passengers? - Yes, my Lord.

9392. Then it was contemplated that you might have passengers and crew to the extent of 2,300, or something like that? - Passengers alone, my Lord.

9393. And crew? - We carried, I suppose, about 160 crew.

9394. That would be nearly 2,500? - Yes.

9395. And the lifeboat accommodation would not be increased? - No.

9396. (*Mr. Laing.*) With regard to the look-out, do you put a man on the look-out on the forecastle head in foggy weather? - Yes.

9397. And hazy weather? - Yes.

9398. Weather in which you blow your whistle; is that what you mean? - Even when we do not. When it is really necessary to blow the whistle we always put a man in the crow's-nest, and when we meet ice we put a man forward on the look-out on the forecastle head.

9399. That is in hazy weather? - Yes.

9400. Do you usually carry one man in the crow's-nest? - At nighttime; not in clear weather in the daytime.

9401. In the daytime you do not have a look-out at all? - We have an officer on the bridge.

9402. But you do not have a man in the crow's-nest or one on the forecastle head? - No.

9403. But at night you have, as a rule, a man in the crow's-nest? - Yes.

9404. But, if it is hazy weather, a man on the bow as well? - Yes.

9405. Your instructions seem to be that you are not to enter field ice? - Not to enter it on any account.
9406. You meet constantly field ice on your way to Montreal, do you not? - Yes, but we go round it.
9407. And when you say it is not wise to go 21 1/2 knots - I think your expression was in the neighbourhood of ice - did you mean field ice? - Field ice.
9408. (*The Commissioner.*) And you have never gone through field ice except when you went to the position where the "Titanic" was lost? - No; I did not pass any ice at all. 9409. You never in your life have been in field ice? - Yes, I have been through field ice when I was in other Companies, my Lord, but not with the Canadian Pacific Railway. 9410. Did you consider it was dangerous when you were with the other Company? - Of course, we took every precaution. If it was very heavy, we would not attempt to go through it.
9411. But you did go through it? - We did go through it, but still we would never attempt it if it were heavy. Light scattered field ice we would go through without any trouble.
9412. But with the present company you would not even do that? - We have instructions not to go into field ice no matter how light it may appear. On my voyage before last I went 30 miles south to clear some ice. I saw some ice and went down 30 miles to the south, and I wrote to my Marine Superintendent and told him what I had done and he said I was quite right in doing so, my Lord.

**Page 211**

**Re-examined by Mr. BUTLER ASPINALL.**

9413. For what part were you bound? - St. John's, New Brunswick.
9414. At the time you received the information from the Marconi operator that the "Titanic" was sending out messages of distress, what was your latitude and longitude? -
- 41° 25' N., 51° 14' W.
9415. If so, you were south of the position from which the "Titanic" was sending messages? - Yes. I steered N. 65° E. true, from my position to the position the "Titanic" gave me.

*(The Witness withdrew.)*

**JOHN DURRANT, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

9416. (*The Solicitor-General.*) This is the Marconi operator on the "Mount Temple," my Lord. Your Lordship will find that he has heard a great number of messages going to and from the "Titanic," and he therefore can give us in chronological order a great deal of the story so far as it is told by means of those wireless messages. (*To the Witness.*) Is your

name John Durrant? - Yes. 9417. Are you Marconi operator on board the "Mount Temple"? - Yes.

9418. Which was bound, as we know, for St. John's, New Brunswick. Were you the only Marconi operator on board? - Yes.

9419. And in your ordinary day's work what time do you turn in? - Never before 1 a.m. I have a good sleep after the midday meal, and I never turn in before 1 a.m.. 9420. You take a time off? - After my midday meal for about three hours.

9421. And then you can keep on working till 1 o'clock in the morning? - Yes. 9422. At what time do you start work the next morning? - Half-past seven.

9423. What is the range of your Marconi installation on the "Mount Temple"? - I get about 150 miles in the daytime, and something over 200 at night.

9424. Why is it that it is more at night? - They say it is the sun's rays cause refraction.

9425. Anyhow it is some scientific reason? - Yes.

9426. I suppose you are on the Ship's Articles of the "Mount Temple"? - Yes. 9427. But are you in the employ of the Marconi Company? - I am.

9428. And does the Marconi Company require you to keep a log? - Yes.

9429. A record of the messages which you send and receive and overhear? - Yes - not overhear.

9430. Only send and receive? - Yes.

9431. I know we are coming to some you did overhear. I think it is called a *proces verbal*? - Yes.

9432. Have you your copy there? - Yes.

9433. You have a copy there of what I have here? - Yes.

9434. Is this the *proces verbal* of the "Mount Temple" which you kept? - Yes, of that voyage.

*The Solicitor-General:* I think the clear course is to ask this gentleman, in order the entries which appear to be significant and important. Of course, there are a great many others, which only confuse them. I will take them out in order of time, if I may, right through.

*The Commissioner:* Can you let me have a copy of that document, or a copy of parts of it?

9435. (*The Solicitor-General.*) I can give your Lordship what has been extracted from it and I think that will be what your Lordship will wish. (*To the Witness.*) When one comes to the 14th April, the Sunday, you were on the American side of the Atlantic, and were you keeping New York time in your records? - I was keeping New York time.

9436. We have been told that to get back to ship's time in the sort of latitude where the "Titanic" struck, you would have to add 1 hour and 55 minutes? - In my case it is 1 hour and 46 minutes.

9437. Then if I add 1 hour and 46 minutes to the time you have written down I shall get what your ship's time was? - Yes.

9438. Before I come to the record which you have kept about the disaster, I want to ask this question. Before you heard anything about the "Titanic" having struck, had

- you received any warning messages about ice? - Yes; I think it was on the 13th, the day before, from the "Corinthian."
9439. The day before? - Yes. I think it was the 13th. My P. V. will tell you.
9440. I thought it was on Friday, the 12th. Will you look and see (*handing a document to the Witness.*)? - Yes.
9441. I think you will find it is about midnight between the 12th and 13th? - This is when I first had it (*pointing out on the document*).
9442. Did you notice, when you pointed to it, what was the time? - 8.45.
9443. 8.45 p.m. New York time would be the same thing in your ship's time as halfpast ten? - No, we were more to the east at that time; it would be later.
9444. At any rate it would be some time in that evening? - Yes.
9445. And some time on that evening - is it on Saturday? - Yes, you will see it at the top.
9446. Saturday, April 13th, you got a message? - Yes; a formal message from the Captain of the "Corinthian" to the Captain of the "Mount Temple."
9447. Was it simply that they had seen ice? - Yes.
9448. And did you report that to the Captain? - Yes, right away.
9449. Except for that message, did you get any other message about ice up to the time you heard the "Titanic" calling for help? - No.
9450. Now let us take the story in order of time, as you recorded it with the help of your Marconi apparatus. I am going to add 1 hour and 46 minutes to your time, so as to keep your ship's time all the way through? - In this copy I have New York time and ship's time both together.
9451. That is very convenient. Now tell us the ship's time when you first got a message as to the "Titanic" being in distress? - 12.11 a.m.
9452. Just read your account, as you have it there, of that message. - "Titanic" sending C.Q.D. Answer him, but he says, "Cannot read you, old man. Here my position, 41° 46' N. 50° 14' W. Come at once, have struck berg." I advised my captain.
9453. I have before me a document which suggests that he told you he could not read your message. - He did not get my call, but he knew it was somebody calling him, answering his C.Q.D., so he sent his position right away.
9454. That would mean that he told you what the latitude and longitude was? - Yes.
9455. And asked your ship to come at once as he had struck an iceberg? - Yes. 9456. Did you give the message to your captain straight away? - I gave it to the night steward and he took it up.
9457. That is 11 minutes after midnight your time. Is your next entry 10 minutes after that? - Yes.
9458. That would be 21 minutes after midnight? - Yes.
9459. What was it you heard then? - I have got down here, "'Titanic' still calling C.Q.D. is

answered by the 'Carpathia' and says 'struck iceberg come to our assistance.' Sends the position." 9460. Does that mean that you could overhear the "Carpathia" answering the "Titanic"? - Yes.

9461. And could you also overhear the message that the "Titanic" was sending to the "Carpathia"? - Yes.

9462. Did you hear the same latitude and longitude repeated by the "Titanic" to the "Carpathia"? - Yes.

9463. That is 12.21. Then five minutes after that, 12.26, is your next entry "'Titanic' still calling C.Q.D.?" Have you noted there about that time that you had turned your ship's course? - Yes.

9464. And started to their help? - Yes; that was about 15 minutes after we got the signal. It may have been sooner.

9465. At any rate by that time you had turned round? - Yes.

9466. Then 8 minutes after that, I think that will be 12.34, just over half-past 12? - Yes.

9467. Did you hear the "Frankfurt" answering the "Titanic"? - Yes. 9468. That is the North German-Lloyd boat? - Yes.

9469. Did you hear the "Titanic" giving her position to the "Frankfurt"? - Yes. 9470. Now, have you got your record of what he said? - Yes. "'Titanic' gives position and asks, 'are you coming to our assistance?' 'Frankfurt' replies, 'What is the matter with you?' 'Titanic' says, 'We have struck iceberg and sinking. Please tell captain to come'; and then 'Frankfurt' replied, 'O.K. Will tell the bridge right away.' Then the 'Titanic' said, 'O.K., yes, quick.'"

9471. (*The Commissioner.*) What does "O.K." mean? - All right.

9472. (*The Solicitor-General.*) It spells "Orl korrekt." (*To the Witness.*) That was the first time you had overheard a message from the "Titanic" that she was sinking? - Yes.

9473. Just about 25 minutes to 1? - That is it.

9474. Then following on that, I think another 8 minutes later, did you hear her calling S.O.S.? - Yes.

9475. Is there any difference from the point of view of urgency between this C.Q.D. call and the S.O.S call? - Myself, I should say that C.Q.D. would be more quickly jumped at than S.O.S.; C.Q.D. got a good name in the time of Jack Binns, and the public know C.Q.D. is a distress call.

*The Commissioner:* Can you tell me what it means? *The*

*Attorney-General:* Yes. "Save our souls."

9476. (*The Solicitor-General.*) They are both used, are they? - Yes.

9477. As I understand, you heard the "Titanic" about a quarter to 1 sending both signals? - Yes.

9478. After that could you hear the "Titanic" talking to these other ships? - Yes, she was calling the "Olympic."

9479. When was she calling the "Olympic"? - 12.43 ship's time.

9480. (*The Solicitor-General.*) If your Lordship has a copy corresponding to mine - I think you have - the bottom entry on the first page is "10.57 MGY calling MKC," and "MKC" means the "Olympic." (*To the Witness.*) What is the time equivalent to? - 10.57 is 12.43.

9481. Now tell us your next entry? - The "Caronia."
9482. That is another ship she got in touch with? - Yes, a long distance away.
9483. What was the time you heard her talking to the "Caronia"? - 12.45 ship's time. It is the "Caronia," the Cunard Line.
9484. (*The Solicitor-General - To the Witness.*) You got one a minute later, 12.46. What is that? - "'Titanic' calling 'Virginian' and C.Q.D."
9485. That is the Allan Line, the "Virginian"? - Yes.  
*The Commissioner:* This boat, the "Mount Temple," was never in a position to render active assistance.  
*The Solicitor-General:* It was 49 miles away, and it was making for her.  
*The Commissioner:* She could not possibly have reached her.
9486. (*The Solicitor-General.*) No, not possibly. She was doing her best. (*To the Witness.*) If you had broken in and tried to talk to the "Titanic" yourself, you would only have interrupted her talking to other people? - I should.
9487. So you keep it and only listen? - Yes, I never said a word after I got his position.
9488. And you told your captain of the "Mount Temple" the place, and then you spent your time in recording what you could hear? - Yes, that is the first rule in wireless telegraphy to avoid interference.
9489. (*The Commissioner.*) And all this time you were making your way towards the position of the "Titanic"? - Yes, the captain had doubled the watch down below.
9490. (*The Solicitor-General.*) Now pass on to the next entry I think you have got a record of the "Titanic" speaking to the "Olympic"? - Yes.
9491. What time is that? - 1.6 ship's time. "'Titanic' is answered by the 'Olympic' and tells him 'Captain says, 'Get your boats ready,' going down fast at the head.'" 9492. That is six minutes past 1? - Yes.
9493. "Captain says, 'Get your boats ready, going down fast at the head.'"? - Yes. 9494. You notice that message which you hear is within a few minutes of an hour from the time when you had first heard the "Titanic's" C.Q.D.? - Yes.
9495. Six minutes past 1. Then five minutes after that, 1.11, did you hear a message from the "Frankfurt"? - Yes.
9496. Just read it? - "Our Captain will go for you."
9497. That is the message sent to the "Titanic"? - Yes.
9498. And the next one? - Two minutes afterwards the "Titanic" was working the "Baltic."
9499. I think that is the first time we have mentioned the "Baltic," is it not? - Yes.
9500. That is 13 minutes past 1? - Yes.
9501. You have a record of that going on again three minutes later? - Yes.
9502. Now, 1.21 is it not? - 1.21. "'Olympic' sends M.S.G. to 'Titanic.'" 9503. Read that? - I did not take that. That was an official message which I am not supposed to take.
9504. At any rate you could hear the "Olympic" was sending messages to the "Titanic"? - Yes; it was an official message, something about lighting up all boilers.
9505. You could hear it was something of the sort? - Yes.

9506. We have independent evidence that that message was sent. The Captain of the "Olympic" sent a message they were lighting up every boiler and making for her as fast as they could. Did you hear the reply of the "Titanic" at 1.21? - Yes.

9507. What was it? - "We are putting the women off in boats."

9508. Then six minutes after that, at 1.27 - what was it you heard at 1.27? - "'Titanic' calling C.Q.D. says 'engine room flooded.'" 9509. And two minutes after that, 1.29? - Yes.

*The Commissioner:* Can you indicate to me where the water which is referred to here would be?

9510. (*The Solicitor-General.*) My friend Sir Robert Finlay suggests to me that I perhaps should ask the witness to look at the record to be sure he has got the actual words. (*To the Witness.*) Have you got your record there before you for 1.27? - Yes. 9511. Just read it exactly as it is? - You mean what I have in my log?

9512. Yes? - "'Titanic' calling C.Q.D., says 'engine room flooded.'" *The Commissioner:* That is what you read to me just now.

9513. (*The Solicitor-General.*) Yes. Let us follow what that means. (*To the Witness.*) Was it a message that was being sent by the "Titanic" to any particular ship, or was it being sent all the way round? - It was a general call, I take it.

## Page 213

9514. A general message? - Yes. When she took up the "Olympic" or the "Baltic," it was just "C.Q.D. engine room flooded."

9515. Just like when a ship sends C.Q.D. to anybody in call, so they sent that message to anybody in call? - Yes.

9516. Up to that time, except the C.Q.D. and S.O.S. message, had all the messages been addressed to particular ships? - No, he only sent one official message - no, he never sent any official message. The "Olympic" sent one to him.

9517. And when you say the message was "engine room flooded," does that mean you heard the word "engine" and the word "room" spelt out? - Yes; no abbreviation or code, or anything. Your Lordship will remember there are two engine rooms. The one where Mr. Asquith has the pointer is the more forward of the two - the reciprocating engine room, which drives the port and the starboard shaft.

*The Commissioner:* Then comes the turbine.

*The Solicitor-General:* Yes, behind that.

*The Commissioner:* And behind it, again, is the dynamo?

*The Solicitor-General:* Yes.

*The Commissioner:* Do I understand from this Marconi operator that the water had by this time found its way aft very considerably?

*The Solicitor-General:* Assuming the message was accurate.

*The Commissioner:* Did this message come by any code word?

9518. (*The Solicitor-General.*) I will ask him, my Lord. I understand not. (*To the Witness.*) Is there any single code word for "engine room"? - No; it was spelt out letter by letter. There was no abbreviation or code word in the message.

9519. (*The Commissioner.*) This was spelt out just as we read it here? - Yes.

9520. "Engine room flooded"? - Yes.

9521. (*The Solicitor-General.*) That is 1.27, your time? - Yes.

*The Commissioner:* This is a little more than half an hour before the ship disappeared.

9522. (*The Solicitor-General.*) I do not know how much correction would be necessary from the point of view of time. I thought one might perhaps ask him. (*To the Witness.*) Of course your ship was getting nearer to the "Titanic" all that time? - Yes.

9523. And she had been steaming towards the "Titanic" for an hour? - Yes, since 12.26, I have here.

9524. Since 12.26 and this is 1.27? - Yes.

9525. She had been steaming towards her for just an hour? - Yes.

*The Commissioner:* You are giving us New York time, are you not?

*The Solicitor-General:* No, my Lord, all the way through I am correcting the New York time to the ship's time, that is to say to this ship's time.

*The Commissioner:* The black figures printed here are New York time? *The*

*Solicitor-General:* Yes.

*The Commissioner:* And the figures I am marking as you go along are ship's time? *The*

*Solicitor-General:* Yes. I have no doubt they did not correct the ship's time while rushing to the assistance of the "Titanic," but it is the ship's time of the "Mount Temple" at the time she gets the C.Q.D. message.

*The Commissioner:* It would make very little difference surely; there would not be much difference.

9526. (*The Solicitor-General.*) No. (*To the Witness.*) What did you do on the "Mount Temple" to correct your time? Is it corrected at noon? - Yes, and I believe it is put on or back some time at night about 10, but that does not affect me at all.

9527. No, of course not. I quite understand. I think your Lordship will find if we have to go into it that the "Olympic" also received this message. I have here the print, and my record is that the "Titanic" says to the "Olympic," "Weather is clear and calm, engine room getting flooded." (*To the Witness.*) Just look in your record and tell me whether at this time you have any record of the "Titanic" saying anything about the weather? - No, I remember distinctly the "Olympic" asking him, "Captain says how is the sea around there?" and he replied, "Sea calm."

9528. Have not you got that down? - I have that after the "Engine room flooded." 9529. Within two minutes after? - Yes.

9530. And that is a message to the "Olympic"? - Yes.

9531. So that you have recorded within two minutes two statements which the "Olympic" has got recorded as happening at the same time? - Yes.

*The Commissioner:* I suppose the "Olympic" would get this message, "engine room flooded"?

*The Solicitor-General:* It is recorded by the "Olympic," my Lord. *The*

*Commissioner:* I thought it was a general message.

*The Solicitor-General:* Yes, it is sent out to anybody who can hear it. *The*

*Commissioner:* And he heard it?

9532. (*The Solicitor-General.*) I was not quite accurate in saying the “Olympic” had recorded it. I do not know whether she did or not. What I was looking at was the corresponding *procès-verbal* of the “Carpathia” and the “Carpathia” has got a record that they heard the “Titanic” answering the “Olympic” and saying, “weather is clear and calm. Engine room getting flooded,” (*To the Witness.*) You cannot tell, I expect, whether it was “engine room getting flooded” or “engine room flooded”? - I took particular care to get all these messages absolutely correct.
9533. You think that is quite correct? - I have it here, and I think it is correct too, “‘Titanic’ calling C.Q.D., says ‘engine room flooded’.” And answering the “Olympic’s” question, he said, “sea calm.”
9534. That takes one down to 1.29? - Yes.
9535. Now, two minutes after that, 1.31, did you hear the “Frankfurt” sending a message? - Yes, he asked, “Are there any boats around you already?” *The Commissioner:* Is that 1.29 or 1.27?
9536. (*The Solicitor-General.*) 11.41 is the same as 1.27 and 11.43 is the same as 1.29; and 11.45 is therefore the same as 1.31. I was taking them in order, I think. There are three, I am taking the third of those. At 1.31 what was it you heard the “Frankfurt” saying to the “Titanic”? - “Are there any boats around you already?”
9537. Did the “Titanic” make any reply? - No.
9538. Two minutes after that again, 1.33, did you hear the “Titanic” send a further message? - No, I heard the “Olympic” send a message to the “Titanic”; the “Titanic” acknowledged it.
9539. The “Titanic” acknowledged it? - Yes.
9540. I had better ask you now: is that the last message that you heard from the “Titanic”? - Yes.
9541. What is the time? - 11.47 New York time, that is 1.33.
9542. 1.33 your ship’s time? - Yes.
9543. (*The Commissioner.*) You do not know what that message was, the 1.33 message? - I did not take it, but it related to “are you steering south to meet us.” It was a message after that description.
9544. That was a message from the “Titanic”? - From the “Olympic” to the “Titanic” asking if he was steering southward to meet him - an official message.
9545. And then you said that the “Titanic” acknowledged it. I want to know whether you hear what the “Titanic” said? - Simply “R.D.” which is the code word for “received.”
9546. Simply “R.D.” acknowledgment? - Yes. 9547. But not saying anything? - No.
9548. (*The Solicitor-General.*) That is the last message that you hear from this ship. Could you tell at all during this time whether the messages from the “Titanic” were getting fainter? Did you notice that? - No, not in the least.
9549. You were getting nearer to her? - Yes. Allowing for my getting nearer they never got weak at all.
9550. They did not get weak at all, as far as you could see? - No. I presume the flooding of the engine room put the wires out of commission.

9551. (*The Commissioner.*) The flooding of the engine room did what? - Put the wires out of commission, my Lord.
9552. (*The Solicitor-General.*) If the dynamo which is usually employed for the Marconi is not available, have you got any storage batteries? You have, have you not? - Yes.
9553. Is it usual to have storage batteries? - Yes.
9554. Are the storage batteries kept in the Marconi operator's room? - Yes. 9555. That is high upon the ship? - Yes.
9556. Would he need to change over to get to the storage batteries, or would they come on automatically? - He could do it in a minute.
9557. He could do it at once. Do storage batteries send out as strong a message as the dynamos? - No.
9558. Much weaker? - Yes.
9559. That is 1.33. Then, I think, it was eight minutes after that, that is 1.41, that you heard the "Frankfurt" and the Russian ship the "Birma" calling the "Titanic"? - Yes. 9560. And still there was no reply? - No reply.
9561. At 1.56, four minutes to two, did you hear the "Olympic," the "Frankfurt," and the "Baltic," all calling the "Titanic" and no reply? - And no reply.
9562. Then what is your next entry? I think it is just a quarter of an hour later? - Yes, 2.11, "'Birma' tells 'Frankfurt' he is 70 miles from 'Titanic.'"
9563. This is the "Birma," the Russian ship? - Yes.
9564. "'Birma' tells 'Frankfurt' he is 70 miles from the 'Titanic'?" - Yes.
9565. Just give me the next two; I think they are important? - 2.36 I have "All quiet now."
9566. That is your record? - Yes, "'Titanic' has not spoken since 11.47 p.m." 9567. That means 1.33? - Yes.
9568. That was your record? - Yes.
9569. And then the next one? - 3.11.
9570. Who is this from? - "'Carpathia' calls 'Titanic' and says 'If you are there we are firing rockets.'"
9571. Just read the next two; I think we must have them? - 3.26 "'Carpathia' calling 'Titanic,' no reply." 3.44 "'Birma' tells 'Frankfurt' that he thinks he hears the 'Titanic,' so calls him and says, 'Steaming full speed to you, shall arrive you six in morning. Hope you are safe. We are only 50 miles now.'"
9572. Then I think two minutes after that you heard the "Carpathia" calling for her again? - Yes.
9573. And then an hour later I see you have an entry, 4.46, that is a quarter to five in the morning, "All quiet. We are stopped amongst pack ice." That is to say the "Mount Temple" was?
- The Commissioner:* Which is the first message from the "Californian."?
9574. (*The Solicitor-General.*) I think, my Lord, the first message from the

“Californian” in your copy would be numbered 3.25. Just run your eye down. Is not that right? - Yes.

9575. Let us take it down to that point. You have given me the “Carpathia” calling out at 3.46., then 4.46 “all quiet; we are stopped amongst pack ice.” That meant the “Mount

Temple” is. Then at 4.51 you heard the “Birma” and the “Frankfurt” working.

*The Commissioner:* I think the first is 3.25.

9576. (*The Solicitor-General.*) The next one, 3.20, what is that? - They are still working.

9577. And now the next one? - 3.25, were the “Californian” calls. 9578. What does that correspond to? - 5.11.

9579. That is it. What is it you say? - “Californian” call C.Q. I answer him and tell him the “Titanic” has struck an iceberg and sunk, and give him her position. 9580. That was 5.11 by your time? - Yes.

9581. (*The Solicitor-General.*) Your Lordship will remember the “Californian” operator. (*To the Witness.*) Now, does C.Q. simply mean a general call round? - All stations.

9582. So that anybody within range may pick it up and answer it? - That is one of the reasons they altered the distress call.

9583. Because “C.Q.” is so easily confused with “C.Q.D.”? - Yes.

9584. You have not, I think, got it recorded; do you remember what it was the “Californian” operator asked you at 11 minutes past 5? - He called “C.Q.” That was all. He never asked any question at all.

9585. Then you got into touch with him? - Yes.

9586. And you told him the “Titanic” had sunk? - Yes. 9587. And sent him its position? - Yes.

9588. And then I see you have it recorded 15 minutes later, that is at 5.26, that you heard the “Californian” speaking to the “Frankfurt,” and the “Frankfurt” sent him the same information? - Yes.

9589. (*The Solicitor-General.*) That exactly corresponds my Lord. (*To the Witness.*) I think you heard about 8 o’clock in the morning, your ship’s time, from the “Carpathia,” that she had rescued - ? - Twenty boat loads.

9590. And, of course, as we know, your ship did her best, but could not get to the spot in time? - No.

*(The Witness withdrew.)*

*(Adjourned to tomorrow at 10.30 o’clock.)*

## **Wreck Commissioners' Court.**

SCOTTISH HALL,  
BUCKINGHAM GATE,

*Thursday, 16th May, 1912.*

# PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

LOSS OF THE S. S. "TITANIC."

NINTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.)

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the thirdclass passengers. (Admitted on application.)

## **Page 216**

*The Solicitor-General:* My Lord, the witness, Mr. Durrant, the Marconi operator, has given all the evidence which I had in mind to ask him, and he is available here if there is anybody else who would wish to ask him questions; I do not know whether there is.

*Sir Robert Finlay:* I do not think so.

*Mr. Clement Edwards:* I was going to ask the witness two questions.

### **JOHN DURRANT, Recalled.**

#### **Examined by Mr. CLEMENT EDWARDS.**

9591. You said last night that at 5 minutes past 11 you got a general inquiry from the "Californian" and in reply you said the "Titanic" had struck an iceberg and had sunk. Had you been told by anyone that she had sunk, or was it your own conclusion? - Well, it was 11 minutes past 5, not 5 minutes past 11.

*The Commissioner:* It was in the morning.

*Mr. Clement Edwards:* Quite so, my Lord.

*The Witness:* I came to my own conclusions. More than that I had no official notice from the "Titanic" or any one else that she had sunk.

9592. Now from that time forward, I suppose you were close to your instrument for many hours and you could overhear any messages that were sent. Did you hear any message to the effect that the "Titanic" was steaming to Halifax? - No, there was no such message.

9593. Did you hear any message to the effect that all the passengers had been rescued? - No, not until the "Carpathia" had advised that they had rescued 20 boat loads; they gave no number of the passengers rescued.

*The Commissioner:* Do you want to ask anything, Mr. Lewis.

*Mr. Lewis:* Yes, my Lord.

#### **Examined by Mr. LEWIS.**

9594. After the “Titanic” had sunk, did you hear any message from the “Carpathia” to the “Birma”? - No.

9595. (*The Commissioner.*) Have you told us all you heard? - Yes.

*The Commissioner:* He has told us all.

*Mr. Lewis:* Very well, my Lord.

*Mr. Spratt:* Will your Lordship allow me to put one question to this witness in the unavoidable absence of my friend, Mr. Roche?

*The Commissioner:* What is the question?

*Mr. Spratt:* The question I wish to put is this: Dealing with the statement of this witness that he picked up at 1.27 a message” Engine room flooded” and the words were spelt out, the question I want to put to this witness is whether there is a code word for engine room in the ordinary course of events and whether there is any significance in the words “engine room” being spelt out, as opposed to the code word which might mean the boiler room, the engine space.

9596. (*The Commissioner - To the Witness.*) Is there any code word for “Engine room”? - No, my Lord.

*The Commissioner:* That answers that question.

**(*The Witness withdrew.*)**

*The Solicitor-General:* There is the witness Rule, who gave evidence on the 10th of May, at the end of the day. My friend, the Attorney-General, examined him. He begins at page 148 and he runs to the end of the day, pages 148 to 153. Your Lordship may remember he was a bath-room steward.

*The Commissioner:* Yes.

*The Solicitor-General:* Your Lordship will see there that though he gave evidence answering questions by the Attorney-General, the other Counsel here did not have an opportunity of putting questions to him. We broke off because we were going to call a different class of witness the next morning.

*The Commissioner:* Yes.

*The Solicitor-General:* I have him here and perhaps it would be as well if he went into the witness-box now.

*The Commissioner:* Let him go.

**SAMUEL RULE, Recalled.**

*The Commissioner:* Does any gentleman want to ask any question of this witness? *Mr.*

*Scanlan:* I should like to ask him one or two questions, my Lord.

**Examined by Mr. SCANLAN.**

9597. In your evidence a few days ago you said that Mr. Ismay was assisting on the starboard side to get people into the boats? - Yes.

9598. You heard an order given as to the lowering of the first boat from the starboard side, No. 1? - Yes.

9599. Was Mr. Ismay present when that order was given? - He was standing by No. 3.

9600. That was quite close to No. 1? - Yes.

*The Commissioner:* What do you mean by "quite close to No. 1"? - As far as Mr. Ismay was concerned, it would depend upon where he was standing.

9601. (*Mr. Scanlan - To the Witness.*) Could you indicate where Mr. Ismay was standing on the deck at the time the order was given to No. 1? - At the second boat.

(*pointing on the model.*)

9602. (*The Commissioner.*) Do you remember with reference to the second boat where about he was standing, was he at the stern, or at the bow, or at the middle. If you do not remember, say so? - The last I saw of him he was pretty well at the stern, at the after fall.

9603. (*Mr. Scanlan.*) Will you indicate on the model where he was standing? - Yes (*The Witness did so.*)

9604. And where were you standing? - I was just by the end of No. 3, between that and No. 5.

9605. (*The Commissioner.*) You were a boat's length away? - Not quite. 9606. (*Mr. Scanlan.*) At all events he was nearer to No. 1 at the time it was being lowered than you were? - Yes.

9607. When you heard this order given as to the lowering of No. 1, do you know that it had only 5 passengers? - No, No 1 was in the water at that time.

9608. You did not know how many were in it? - No, No. 1 was in the water at that time.

9609. Can you now remember the officer who was on the boat deck giving orders then? - No.

**Page 217**

9610. But are you sure it was an officer? - Well, I would not swear.

9611. Are you still satisfied that the boat in which you went away was No. 15? - Yes.

9612. You were asked on the last occasion if a previous witness named Cavell was in the crew of that boat with you. Have you seen him since? - No.

*The Solicitor-General:* He is here.

*Mr. Scanlan:* Would it not be well, my Lord, if this witness had an opportunity of seeing him, as there is confusion?

*The Solicitor-General:* We have him back.

*The Commissioner:* To identify him.

*Mr. Scanlan:* Yes.

*The Commissioner:* Let him come in. You can go on with your questions in the meantime.

9613. (*Mr. Scanlan - To the Witness.*) Did Mr. Ismay give any orders? - No.

9614. He just assisted to help the passengers in? - Yes.

9615. With regard to No. 15 had you a lamp? - No.

9616. I suppose you looked for it? - Yes.

9617. Had you a compass? - Not that I am aware of.

9618. We may take it from you that the crew of No. 15 consisted of seven men? - All in the boat together?

9619. Yes? - There were more than that.

9620. How many seamen were in the boat? - One.

9621. (*The Commissioner.*) What do you mean by a seaman? Do you mean an A.B.? - I could not swear whether he was an A.B.

*The Commissioner:* I am asking Mr. Scanlan. Do you mean A.B., because one of the witnesses said that he regarded one of the men out of the engine room as a seaman, because he said they could very often handle an oar very well.

*Mr. Scanlan:* I regard the deckhands, my Lord, as seamen.

*The Commissioner:* I wanted to understand in what sense you use the expression.

9622. (*Mr. Scanlan - To the Witness.*) When you say there was a seaman in the boat with you, do you mean one of the A.B.'s? - He was a deckhand. 9623. He would be either an A.B or an ordinary seaman? - Yes.

9624. Besides this seaman, how many of the ship's hands were in the boat, members of the crew? - That I could not say.

9625. I thought you said, in giving your evidence, that when the boat was lowered from the boat deck down to A deck there were six in her? - Yes.

9626. Six of the crew? - Yes.

9627. And, then, do you know any other member of the crew who got into her except yourself? - No.

9628. So that you would have had seven in her? - Yes.

9629. Could you recognise the members of the crew who were in her? - The only ones I can recognise were those in our department.

9630. From your department? - Yes.

*Mr. Scanlan:* I understand Cavell is here now, my Lord.

9631. (*The Commissioner.*) Very well; now just stand forward. (*Cavell came forward in Court.*) Now, Rule, look at that gentleman? - Yes, my Lord.

*The Commissioner:* Now what is your question, Mr. Scanlan?

9632. (*Mr. Scanlan - To the Witness.*) Can you recognise Mr. Cavell here as one of the boat's crew who were in No. 15 with you? - Yes. 9633. He was? - Yes.

9634. Are you still satisfied on your recollection of what happened on that night that you took in on A deck 60 men, male passengers? - 60? That I would not swear to.

9635. How many male passengers did you take in? - That I could not say.

9636. I thought you were very emphatic on the last occasion that all told in your boat, No. 15, you had 68 persons? - That was the count in the morning - 65 to 68.

9637. And that you had taken in four women and three children? - Yes, when I was there.

9638. Now if you had seven of a crew, that would leave 61 persons in the boat, and of these seven were women and children - four women and three children. At all events, you had 55 additional passengers? - Yes.

9639. Is it still your opinion that those 55 were all male passengers?

*The Commissioner:* To make your arithmetic correct it would be 54.

*The Solicitor-General:* Yes, that is right.

9639a. (*Mr. Scanlan.*) Yes, my Lord, 54. I thank your Lordship. (*To the Witness.*) Were these all male passengers? - No, I made a mistake there. *The Commissioner:* I cannot hear what he says.

9640. (*Mr. Scanlan.*) He says, "I made a mistake there." (*To the Witness.*) Will you explain to my Lord what mistake you did make? - I just counted the women I helped into the boat and the children. The others I did not see.

*The Commissioner:* What am I to understand now, because up to this time there has been a flat contradiction, as I understand, between this witness and that other man?

*Mr. Scanlan:* That is so, my Lord.

9641. (*The Commissioner - To the Witness.*) Now, then, am I to understand that you think the other man was right? - Yes.

9642. (*Mr. Scanlan.*) Do you mean that when you said the other day that all the others except the seven taken into that boat were men, that is all wrong? - Yes, I made a mistake.

9643. Were they all women? - Principally, I should say.

9644. Are you able to tell my Lord now how many men and how many women respectively you took in at A deck? - I could not say.

*The Commissioner:* Well, Mr. Scanlan, you are only making confusion worse confounded.

*Mr. Scanlan:* I think, at all events, it is important to have this discrepancy cleared up.

*The Commissioner:* Quite; I quite agree with you.

9645. (*Mr. Scanlan.*) I do not wish to leave it entirely here. (*To the Witness.*) Did you count yourself in the morning the total number of persons you had in the boat? - No. *The Solicitor-General:* I am sorry to interrupt, but I think it would be as well if that man Cavell went out of Court now.

*The Commissioner:* Where is Mr. Cavell? He had better retire. *The*

*Solicitor-General:* I think he had better go out.

**(Cavell left the Court.)**

9646. (*Mr. Scanlan.*) Here is what you said when you last gave evidence, in answer to the Attorney-General. I want you to listen to it. You were asked: "Can you give us any idea of how many of the 68 who went into this boat No. 15 were women and how many were men?" Your answer is: "Four or five women and three children." Then the next question is: "And all the rest men?" and you replied to that, "Yes"? - Yes, that is all the women and children I saw in.

9647. When you stated that all the rest were men, you understood what you were being asked? - I did not see all the men get in.

9648. But you knew that you were being asked as to the number of men, male passengers, who were in the boat? - Yes.

9649. Now, if you have made a mistake, can you explain how you came to the conclusion or can you tell us now how many men were in the boat and how many women? - Well, I took it from what I could see - I was in the bows of the boat - there were

most men forward. I could not see the women; the women were in the centre of the boat.

9650. The women were in the centre of the boat? - Yes.

9651. And is it still your evidence that although you did not know the numbers of men and women, the majority of the people in the boat were men? - Yes, as far as I could see. 9652. Is that still your evidence? - Yes.

9653. (*The Commissioner.*) I do not know what you mean by "As far as I could see." I suppose

## **Page 218**

these people were dressed in all sorts of garments? - Yes.

9654. Do you mean you had some difficulty in distinguishing men from women? - You would have at night.

9655. You got to the "Carpathia" at daylight? - Yes, just after the break of day. 9656. It was coming daylight. Had you a difficulty then in distinguishing the men? - Well, no.

9657. (*Mr. Scanlan.*) Did anyone make a count of the passengers? - Yes. 9658. Who did? - A man called Stewart.

9659. (*The Commissioner.*) Do you mean the "Carpathia's" steward? - No, on our boat - the man in charge of the boat.

9660. (*Mr. Scanlan.*) The man called Jack Stewart, and he is a survivor? - Yes.

### **Examined by Mr. HARBINSON.**

9661. Do you remember the Attorney-General asking you before it was lowered - that is No. 15 boat - to A deck, had she taken in passengers at all? - Yes.

9662. And you answered there were no passengers. Now do you remember being asked whether any passengers were standing on A deck at this time when the boat was lowered, and you said, "Yes, there were some." Then the Attorney-General says, "Women and children? - (A.) There were four or five women and children." And then do you remember this: "Did you get those four women and three children into the boat? - (A.) Yes. (Q.) Were there any more?" and did you say, "No, they sent scouts around and shouted out for any more women and children and waited quite a while, but there were no more women and children to be found?" - Yes. 9663. Is that correct? - That is correct.

9664. This was on A deck? - Yes.

9665. Where did they send the scouts? - Round A deck.

9666. How long did it take them sending those scouts round? - About six or eight minutes.

9667. Did they send them to any other deck than A deck? - I do not know.

9668. You do not know? - No.

9669. There was ample time to send them to other decks? - No, there was not. 9670. Was there any great hurry about the launching of this boat? - The officer, I think, was pretty anxious to get her ready because the ship was taking a list.

9671. Who was the officer who sent the scouts around? - I could not say his name. 9672. And it was after the scouts returned that the boat was filled with men? - Some more men got in.

*The Commissioner:* The boat was filled. Whether it was filled with men or not, we do not know.

9673. (*Mr. Harbinson - To the Witness.*) Well, more men got in? - Perhaps half-a-dozen.

9674. You have told my friend you do not know the exact composition of this crew, the numbers of men and women respectively? - No.

9675. (*The Commissioner.*) What do you mean by half-a-dozen more men got in. Do you say that after the scouts came back only six men got in? - About that.

9676. Then the boat was already full with the exception of those six men? - Yes.

9677. But they had been calling out for women all the time, had not they? - Yes. 9678. And the women had been getting in, and then they sent for more women, and then six men got in. Is that right? - Yes.

9679. (*Mr. Harbinson.*) I understood you to say when the boat was lowered to A deck there were only a few women and children standing round. Listen to this: The AttorneyGeneral asks you, "Were third class passengers standing around on A deck at this time at the place where the boat was lowered to? - (A.) Yes, there was some. (Q.) Women and children? - (A.) There were three or four women and children - four women and about three children"? - That is when I arrived there.

9680. On A deck? - Yes.

9681. And when the boat was lowered to A deck it was quite empty? - Bar the crew that entered from the boat deck.

9682. Except the crew? - Yes, six men.

9683. Then I understand that in answer to my Lord those four women and three children got in there? - When I got in there.

*The Commissioner:* No; I did not ask him anything about that. I asked him about six men who he says got in after the scouts came back, and apparently they completed the whole boatload.

9684. (*Mr. Harbinson.*) Perhaps I could make it slightly clearer this way, my Lord. (*To the Witness.*) There were only four women and three children, when the boat came down, standing on A deck? - I cannot say; I was not on A deck when the boat arrived. *The Commissioner:* If you are going to make it clear do not make a statement yourself, because you were not there, but ask him questions.

*Mr. Harbinson:* Yes, my Lord, I will do so.

*The Commissioner:* And elicit from him what the facts are.

9685. (*Mr. Harbinson - To the Witness.*) Is it accurate that when the boat was lowered to A deck you saw four women and three children standing there? - I was not at A deck when the boat arrived at A deck.

9686. You were not? - No.

9687. When you arrived at A deck did you see four women and three children standing there? - Yes.

9688. Were there some men standing there at the same time? - Yes.

9689. Did those women and children get into the boat? - Yes, I helped them in. *The Commissioner*: Do not repeat the thing over and over again. We have heard about the four women and the three children over and over again. There is no doubt that they got into the boat.
9690. (*Mr. Harbinson - To the Witness.*) Was it at that time that scouts were sent round the deck? - Yes.
9691. While the scouts were away did any men get into the boat? - No.
9692. (*The Commissioner.*) Then after the scouts came back six men got into the boat? - Yes.
9693. Did any more people get into the boat? - No, my Lord.
9694. Was the boat then launched? - The officer said "lower away"; he was frightened of the falls.
9695. (*Mr. Harbinson.*) Where did you get the crew and passengers all told of 68? - Off A deck.
9696. You do not know how many got in on A deck? - No. They all got in on A deck bar the crew from the boat deck.
9697. All men? - Where from?
9698. A deck? - Yes.

**Examined by Mr. CLEMENT EDWARDS.**

9699. How long were you taking passengers in from A deck? - I could not really say; perhaps about 15 minutes.
9700. Were they being passed through windows? - No. 9701. Do you say that A deck under boat 15 is an open deck on the "Titanic"? - Yes. 9702. Is it not the fact that on A deck on the "Titanic" the widows come right up to the edge? - Yes (*pointing on the model.*)
9703. *That is boat 15 (pointing on the model)?* - Yes.
9704. Then how do you say if the windows come right on to end these passengers were passed in? - They were passed in from A deck. 9705. But A deck comes right up *here?* - Yes.

**Page 219**

9706. That is to say the front of A deck is flush with *this?* - Yes.
9707. Do not the windows open? - No; it is a closed in deck.
9708. It is a closed in deck? - yes.
9709. That is what I thought. Now if it is a closed in deck, how do you say that the passengers were passed to the boat? - From A deck. 9710. But how if it is closed in - through the windows?
- The Commissioner*: The suggestion is, you know, that they could not walk through a sheet of glass. Did they walk through a sheet of glass? - No, Sir.
9711. (*Mr. Clement Edwards.*) There are windows all along there? - Not on A deck.
- Mr. Laing*: No, there are not.

*The Witness:* A deck is an open deck.

*The Solicitor-General:* You will find windows on the next deck.

9712. (*Mr. Clement Edwards.*) Then it is wrong information I have? - The windows are forward on A deck.

*Sir Robert Finlay:* The model is quite right.

*Mr. Clement Edwards:* But this, I understand, is a model of the "Olympic." I will say at once that my instructions are that on the "Titanic" the A deck is a closed deck right to the end, and is different to this model of the "Olympic."

*Sir Robert Finlay:* No, this model is made as it was on the "Titanic." *The*

*Commissioner:* Then we may take this as an exact model of the "Titanic"? *Sir*

*Robert Finlay:* Yes.

*The Solicitor-General:* That is so.

*Mr. Clement Edwards:* With very great respect to Sir Robert Finlay, I trust that will be proved, because my instructions are very positive upon this point as to the character of the construction of A deck.

*The Commissioner:* At the proper time I suppose this model will be proved.

*Sir Robert Finlay:* Certainly.

9713. (*Mr. Clement Edwards - To the Witness.*) You say A deck is an open deck? - Yes, aft.

*The Commissioner:* Did you hear his additional word "aft"? My recollection is that, although there are windows, they do not extend the whole length.

*Mr. Clement Edwards:* That is so, my Lord, on the "Olympic."

*The Commissioner:* You come to a point where the windows stop, and, for all I know, this boat may have been at that point.?

9714. (*Mr. Clement Edwards.*) You say that A deck is an open deck aft? - Yes.

*The Commissioner:* Not aft - near aft.

9715. (*Mr. Clement Edwards.*) What is the position at which A deck ceases to be a closed deck. Go to the model and point out? - The windows finish *there*; and *this* is open (*pointing on the model*).

9716. So that right away under the after-boats it is all open? - Yes.

### **Examined by Mr. HOLMES.**

9717. At the time No. 15 was lowered the "Titanic" was very badly down by the head? - Yes.

9718. So much so that you nearly came down on boat No. 13? - Yes.

9719. And there was, therefore, no time to waste in getting passengers in? - No. 9720.

Now as to the order in which the other boats were lowered. Are you quite satisfied that when you came on deck No. 1 was already in the water? - Yes.

9721. And that 5 and 3 were lowered after No. 1? - Yes.

9722. Just think carefully. Was not No. 5 lowered before No. 3, and No. 3 before No. 1? - No, I do not think so.

9723. You do not think so. Are you quite certain about it? - No. 5 was there.

9724. Are you quite sure Nos. 3 and 1 were not there? - No. 3 was on the deck.

9725. Was not No. 1 there also? - No; No. 1 was in the water.
9726. No. 1 was the emergency boat, which is swung right out? - Yes.
9727. Might it not be that because it was not in the same position as the other boats you did not notice it when you came on deck? - No.
9728. You say you do not know whether there were any officers there or not? - Forward?
9729. Yes? - I could not say.
9730. Was there anyone on the bridge then; did you see the captain? - No, I was a long way from the bridge.
9731. Did you hear any orders given at all? - No.
9732. To any of the boats as they were being lowered? - No.
9733. Nor to them in the water? - The only order I heard was to stand off.
9734. Was there any mention of gangways? - No; the only orders I heard was to come back to the ship when called.
9735. Which boats did you see lowered. Did you see Nos. 5 and 3 actually lowered into the water? - No.
9736. Neither of them? - No.

**Examined by Mr. COTTER.**

9737. How long have you been going to sea? - 40 years. 9738. How long? - About 40 years.
9739. How long have you been in the White Star Company's employment? - 35. 9740. Have you ever taken part in boat drill? - Yes.
9741. In the White Star Line? - Yes.
9742. So you have a thorough grasp of what boat drill really means? - Yes. 9743. Did you see a boat list with your number or the number of your boat on before you left Southampton? - Not before I left Southampton.
9744. When did you see it? - About the day after I left Queenstown.
9745. Where was it posted up? - In the saloon pantry.
9746. What position do you hold on board? - Bath steward on B deck.
9747. So you would have a thorough knowledge of the run of the decks? - Yes.
9748. So you would know whether A deck was covered in or whether it was not? - Yes.
9749. Where were you when the ship struck? - In my bed.
9750. In your bunk? - Yes.
9751. Who got you out? - Myself.
9752. Who called you up? - Myself; the stopping of the engines woke me.
9753. The stopping of the engines woke you up? - Yes.
9754. Did you get up out of bed because somebody told you, or did you go to see for yourself what was the trouble? - I just jumped up myself.
9755. Did anyone come to the glory hole and tell you to get up? - Not then.
9756. When did they come? - I got up and dressed immediately the engines stopped. The engines reversed.
9757. She reversed? - Yes.

9758. When did it stop? - Almost immediately and the electric bells below started ringing, and I dressed and went right up on deck.
9759. The electric bells started ringing; was that attached to the Stone-Lloyd doors, the automatic doors? - Down below in the fidley.
9760. You could hear them ringing? - Yes, from my room.
9761. Did anybody come then and give any orders? - No.

**Page 220**

9762. Did anybody receive any orders that night? - Not till later on in the night. 9763. Who gave orders then? - I come back to my room and the chief bedroom steward then came down.
9764. How long after she struck did you come back to your room? - Possibly it may be 20 minutes.
9765. When you got back to your room whom did you hear giving orders? - The chief bedroom steward came down. 9766. What is his name? - Penrose.
9767. Did you see the chief steward or second steward, or any officers along B deck? - I saw the second steward on B deck, in the deck pantry, as I passed up the second time, and the purser.
9768. What were they doing? - They were in conversation one with the other.
9769. Did anyone give the stewards' department any orders what to do? - They gave me no orders.
9770. Did you see any orders given by any of these people in position? - No. 9771. Did you see any stewards going forward or aft to the third class? - As I passed out on E deck, Muller, the interpreter, was getting all his people from forward aft, and they were taking their luggage with them on E deck.
9772. He was getting them from forward to aft? - Yes, the afterend of the ship.
9773. Were there any women among them? - No, all men.
9774. They were passing the men along E deck? - All the foreigners.
9775. And they were bringing the baggage along? - Yes, the trunks and valises and all that, with them.
9776. Was there any chaos in the alleyway? - None whatever; you would think they were landing on the tender taking their baggage to New York.
9777. Can you tell me how many bulkheads there are on E deck; that is Scotland Road as you call it? - Yes.
9778. How many? - I could not say.
- The Commissioner:* The plans will tell us that far better than this witness can. *The Witness:* There are two on the port side by the engine room, one outside our door, the next one is by the engine room door, and then aft there are two more before you get to the end of the third class.
9779. (*Mr. Cotter.*) The stewards would know where those bulkhead doors were? - Yes.
9780. Is it not the fact that it would be their duty if they had been taught or shown any drill, to close those doors immediately there was a collision? - Naturally it would be. 9781. No one went to close those doors that night? - No, because when I

- left the deck the interpreter was forcing people along the watertight doors in the alleyway. 9782. Showing it was taking in water forward, I put it to you the water would come along that deck and would get level with E deck, would it not? - Not that night, she would be down by the head. [Question originally refers to T deck - in place of E deck.] 9783. The water would find its level down E deck? - Yes.
9784. If the bulkhead door was closed then the water could not get along that deck? - There is no bulkhead door forward.
9785. Just think a bit? - No; on the starboard side there is; not on the port side. 9786. On the starboard side there is? - Yes on the starboard side, but not on the port side.
9787. I think you will find there is one on each side; just think it out; are you sure? - I do not remember one on the port because you go right up to the staircase to take you to the different decks.
9788. Where did you go after you left your room the second time? - On the boat deck.
9789. Had you heard any orders then? - No.
9790. You simply went on your own account? - Only what the chief steward said to the bedroom stewards, to see passengers out of their rooms with their lifebelts and lock their doors.
9791. (*The Commissioner.*) He told us this before.  
*The Witness:* And everyone else to go to the boat deck.
9792. (*Mr. Cotter.*) I will take you to your boat. There has been a little discrepancy. You were sitting in the bow, you say? - Yes.
9793. Was there anyone sitting with their back to you? - Yes.
9794. Is that how you made a mistake with regard to the number of women? - Yes.
9795. You found you made a mistake? - The part was full of men where I was sitting. There were two to each oar.
9796. So you thought it was full of men. It was like an optical illusion to you that night. Thank you.

**Examined by Mr. LAING.**

9797. Was there a steward called Stewart with you in that boat? - Yes.
9798. Was there a man called Lewis with you in that boat? - I do not remember.
9799. Was there a man called Diamond [Dymond], a trimmer? - That I could not say.

**Examined by the SOLICITOR-GENERAL.**

9800. I just want to get this clear. As far as you are clear, you have told us several times how many people there were in this boat, No. 15, altogether. You have given their number. Now, what is the number? - Sixty-eight.
9801. You are sure about that? - As far as Stewart told me.
9802. You heard it from Stewart? - Yes.
9803. Now we will take 68. You have told us several times that of the crew there were seven in the boat. Is that right? - The crew altogether, do you mean? *The Solicitor-General:* Yes.

*The Commissioner:* There were seven of the “Titanic’s” crew in your boat? You have told us so very often. I do not know whether you have some doubt about it now. 9804. (*The Solicitor-General - To the Witness.*) I do not want to put it on you if you are not certain. You told us how Mr. Murdoch stood on the top deck and told some of you to get into that boat? - There were six got in then.

9805. And you were one of them? - No, I did not get in then.

9806. You got in at A deck? - Yes.

9807. That is one amongst seven? - Yes.

9808. Is that all you know of the crew that were in that boat? - That is all I know, yes.

9809. Very well. This is clear. Now there is one other thing it seems to me you can tell us. You say six got in from the top deck, the boat deck, and the boat was lowered to the next deck, the A deck. Is that right? - Yes.

9810. Now, did all the rest of the people get in from the A deck? - Yes.

9811. And nobody got in below that? - No.

9812. You yourself got in from the A deck? - Yes.

9813. And what were you doing while this boat was level with the A deck? - After she got down to the A deck?

9814. Yes, lowered from the top deck to the A deck. When she was lowered she had six of the crew in her? - Yes.

9815. Now it comes to A deck? - Yes.

9816. What were you doing on A deck during the time the boat No. 15 was level with the A deck? - I was on the boat deck and came along to the A deck.

9817. You mean you followed the boat down? - Yes.

## **Page 221**

9818. And you came down to A deck yourself? - Yes.

9819. And when you got to A deck did you get into the boat at once? - No. 9820. What did you do while the boat was level with A deck? - I assisted the women and children in that I was speaking of. 9821. Where were you standing? - By the rail.

9822. That is what I want to know. You were standing by the rail and you helped them in? - Yes.

9823. Do you mean you remained standing by the rail until you got in? - On the rail, yes.

9824. You did? - Yes.

9825. All the time? - Yes.

9826. And when you got into the boat, by that time was the boat full or not? - Yes.

9827. You mean you got in then, one of the last? - Yes.

*The Solicitor-General:* I have got some other witnesses about this boat, my Lord; it is just to see how much he does know. I think it would be better to call my other witnesses about this boat instead of recalling Cavell for the moment.

*The Commissioner:* Yes.

9828. (*Mr. Cotter.*) May I ask one question? It may clear the air. (*To the Witness.*) Have you suffered in health since this accident? - Yes.

*The Commissioner:* Suffered in health?

9829. (*Mr. Cotter.*) Yes. (*To the Witness.*) Several nights without sleep? - Yes.

9830. Thinking of this disaster? - Yes; I have been to a doctor.

9831. You agree it has affected your memory a lot? - Yes.

9832. Have you been to a doctor? - Yes.

*Mr. Cotter:* I think that will clear the air a little, my Lord.

**(*The Witness withdrew.*)**

*The Commissioner:* I can understand it affecting his memory, but I cannot understand it having the effect of causing him to remember things that did not take place. I quite understand him forgetting things by reason of his illness.

*Mr. Cotter:* That night, my Lord, might have an influence on a man's brain. *The Commissioner:* Perhaps you know more than I do about it, but I should have thought it did not cause him to remember things that did not take place.

*Mr. Harry Barber:* May I say I am watching the case on behalf of the Stone-Lloyd system of watertight doors. Mr. Cotter, in examining the witness, referred to the watertight doors as the Stone-Lloyd doors. The Stone-Lloyd is not the system.

*Mr. Cotter:* I said "or automatic doors."

*The Commissioner:* Do not let us get into conversation about these matters.

**JOHN EDWARD HART, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

9833. Is your name Hart or Stewart? - Hart.

9834. Were you a third class steward on the "Titanic"? - Yes.

9835. And at the time when the collision occurred were you off duty and in your bunk? - Yes.

9836. What deck is your room on? - The glory hole below E deck, below the main working alleyway.

9837. Do you mean that it is on E deck, or below E deck? - Below E deck.

9838. Is it a room in which a number of third class stewards are together? - Yes. 9839. I see a room on the plan that is marked "42 third class stewards"; would that be it? - We have two rooms for third class stewards. They are both on the same level, but one is beside the third class dining room.

9840. And the other one? - The other is further along - more amidships.

9841. I see, which was yours? - Just beside the third class dining room.

*The Solicitor-General:* Has your Lordship got it? *The Commissioner:* Yes, I have just seen it.

9842. (*The Solicitor-General - To the Witness.*) It is marked "38 third class stewards," on deck F, I think? - I think it is.

*The Solicitor-General:* I think it is the more after one of the two, your Lordship sees.

*The Commissioner:* Is it marked, "42 third class stewards"?

*The Solicitor-General:* I understand him, my Lord, rather to suggest that it is the one in the afterpart of the same deck, a little further aft. There is another one marked, "38 third class stewards."

*The Commissioner:* Yes, I see it.

9843. (*The Solicitor-General.*) I think that is what he means. (*To the Witness.*) Close to the bakers? - Yes.

9844. There is a room for six bakers next door? - Yes.

9845. Very well, that is your room. Were you awakened by the collision? - No. 9846. Did somebody else come and wake you up? - Yes, somebody came along and woke me.

9847. You heard there had been an accident? - Yes, they said there had been an accident.

9848. I think at first you did not think it was serious, and did not take much notice of it? - Yes, and went to sleep.

9849. Who was it who came afterwards and gave instructions? - The chief third class steward, Mr. Kieran.

9850. (*The Commissioner.*) Is he a third class steward? - Yes.

9851. (*The Solicitor-General.*) What were the orders to pass along? - He passed several orders. To me he said, "Go along to your rooms and get your people about."

9852. Would your rooms be the third class passengers' rooms? - Yes.

9853. Which part of the third class accommodation is it that you were responsible for? - Section K and part of M, the adjoining section, on E deck.

9854. That is part of the after third class accommodation? - Yes.

9855. K and M? - Yes.

*The Solicitor-General:* Does your Lordship see on the plan of the E deck there is the letter "K" marked in that alleyway? *The Commissioner:* I see it.

9856. (*The Solicitor-General.*) And then further aft again M. (*To the Witness.*) They use those letters K and M, and the other letters of the alphabet to indicate the different watertight compartments? - No.

9857. Do not they lie between two watertight bulkheads? - Yes, there are two watertight bulkheads at the afterpart of the beginning of the third class.

9858. I thought K lay between two, and M between two others, and so on? - Yes, that is quite correct, K lies between two.

9859. (*The Commissioner.*) And M lies between two? - No, M lies between the afterpart and one bulkhead.

9860. (*The Solicitor-General.*) We mean the same thing, I think, Mr. Hart. I thought we noticed when we went to see the ship that they used the letters of the alphabet to indicate the different compartments right along? - That is it.

9861. Anyhow, your third class passengers were in the K section and in the M section? - Part of M, yes.

## **Page 222**

9862. Are the third class passengers accommodated in different parts of the ship according as they are single men or married couples, and so on? - Yes.

9863. And what is it you had in your section? - I had part single women and part married.
9864. Married couples, I suppose? - Yes.
9865. How many third class passengers had you in your sections altogether? - Somewhere about 58.
9866. (*The Commissioner.*) Altogether? - Altogether.
9867. Men and women? - All told.
9868. (*The Solicitor-General.*) That would be including children? - All told.
9869. And of those 59, how many would be in the married couples' part? - How many married couples, do you mean?
9870. Yes, or put it the other way, you have a certain number of married men with their wives and families and a certain number of single women. Just divide it up? - At the same time we had some married women travelling with their children.
9871. Give me some guide? - I will give you a rough estimate.
9872. Take your 58? - I had about nine married couples with children.
9873. I understand you had no single men? - No, no single men.
9874. That would mean that you had got nine men? - Nine husbands travelling with their wives.
9875. Nine husbands altogether? - Yes.
9876. And the rest would be either ladies travelling alone, or wives or children? - Yes.
9877. (*The Commissioner.*) Of the 58, nine were men? - Nine were men.
9878. All the others were women or children? - Yes.
9879. (*The Solicitor-General.*) When you got those instructions just tell us what you did? - The chief third class steward was there, and he said "Get your people roused up and get lifebelts placed upon them; see that they have lifebelts on them." I did so.
9880. I suppose most of those people would have retired for the night? - The majority had retired.
9881. Did you knock them all up? - Yes.
9882. Can you tell us so far as your third class passengers are concerned, did you go to each third class compartment and rouse up your people? - I went to each third class room and roused them.
9883. (*The Commissioner.*) Were most of them up or were they asleep? - The majority were up. They had been aroused before I got there.
9884. (*The Solicitor-General.*) They are not single cabins, these third class compartments, are they; not single berths? - They consisted of four berth-rooms and two berth-rooms, and two six berth-rooms.
9885. And what did you do about the lifebelts? - I saw the lifebelts placed on them that were willing to have them put on them.
9886. (*The Commissioner.*) Some would not put them on? - Some refused to put them on.
9887. (*The Solicitor-General.*) Did they say why? - Yes, they said they saw no occasion for putting them on; they did not believe the ship was hurt in any way.
9888. Up to this time were any instructions given for your people to go to any other part of the ship? - Not to my knowledge.
9889. Just tell us next what the next instructions were, or the next thing that you did. I will put the question in another way. You have told us that the instructions you got

from Mr. Kieran, that you were to rouse up your people and get lifebelts on them. Did he say anything about future instructions that would be given? - He said there would be further instructions; that I was to stand by my own people. 9890. So you were expecting further orders? - Yes.

9891. Now you can tell us what happened. What further orders were given? - He said, "Have you placed lifebelts on those who are willing to have them?" I said, "Yes." After that there was a large number of men coming from the forward part of the ship with their baggage, those that were berthed up forward - single men.

9892. Third class? - Yes. When I saw that my own people had the required number of lifebelts, or those who were willing to have them, I placed the remainder of the lifebelts in one of the alleyways beside which these people would have to pass in case any came through without lifebelts from the forward part of the boat.

9893. This is also on deck E? - Yes.

9894. You told us these third class passengers who were berthed forward came down to the aft? - Yes.

9895. That would be down that alleyway? - Yes, down to the afterpart of the ship. 9896. And whether a third class passenger is berthed forward or berthed aft, is the third class dining-room aft? - The third class dining-room runs from almost amidships to aft. 9897. What I mean is the third class passengers who are berthed forward would know their way aft, because they had been accustomed to go to the dining-room? - Yes. 9898. (*The Commissioner.*) What deck is the dining-room, is it below E deck; that would be F? -

*The Solicitor-General:* It is very clearly shown on that big section up there. Your Lordship sees "Third class dining-room," indicated amidships (*pointing on the section*).

*The Commissioner:* It is right amidships.

*The Solicitor-General:* Yes. Your Lordship sees the people who are berthed right forward would be quite accustomed to come back to that extent.

9899. (*The Commissioner.*) Yes, I see it. (*To the Witness.*) These men coming from the forward part of the ship would come along the alleyway and then go down a companion ladder and get to the dining saloon? - Yes.

9900. On the deck below? - Yes.

9901. (*The Solicitor-General.*) Where was it you saw them? - I saw them where I was placed in my part of the ship, where my people were. 9902. That is K and M? - Yes, on the main alleyway.

9903. I think the next thing you will be able to tell us will be the further instructions as to where these people were to go? - I waited about there with my own people trying to show them that the vessel was not hurt to any extent to my own knowledge, and waited for the chief third class steward, or some other officer, or somebody in authority to come down and give further orders. Mr. Kieran came back. He had been to sections S, and Q, and R to see that those people also were provided with lifebelts.

9904. S, and Q, and R are all in the extreme afterpart of the ship, are not they? - That is correct.

9905. S is on deck G, R is on deck F, and Q is on deck E, all in the extreme afterpart of the ship? - Yes.

9906. He had been there to your knowledge? - Yes, he had also his assistant with him, one by name, Sedginary. [Sidney Sedunary]
9907. (*The Commissioner.*) The chief steward and his assistant, Sedginary [Sedunary], went right aft, did they? - Yes. 9908. To S, R and Q? - Q, S and R.
- The Solicitor-General:* Your Lordship happened to say, "The chief steward." Of course, it is the chief third class steward. Your Lordship appreciates that?
- The Commissioner:* Yes.
9909. (*The Solicitor-General - To the Witness.*) Would those two people you have spoken of, Mr. Kieran and Mr. Sedginary, have any responsibility except for third class passengers? - No, I think not; that is their own department of the ship.

## Page 223

9910. What about the assistant; you say his assistant was with him? - Yes.
9911. In these compartments, do you mean? - Going around he went round with him.
9912. Did Kieran survive? - No.
9913. He was drowned? - Yes.
9914. And the other man? - The assistant also, he was drowned.
9915. You would have colleagues, other of the third class stewards, of course; do you know whether they were doing what you were doing? - All the men that had rooms were. 9916. All the third class stewards who had got rooms? - The third class stewards do not all have rooms. The third class stewards that had rooms went round to their respective sections and were doing the same as I was doing.
9917. (*The Commissioner.*) You mean those who had charge of rooms? - Yes.
9918. You mean to say they roused the passengers and tried to get them to put on lifebelts? - Yes.
9919. (*The Solicitor-General.*) How many third class stewards would there be who would have charge of rooms in the afterend of the ship? - Eight. 9920. As far as you know they were each engaged in doing this? - Yes.
9921. Now just tell us about the next thing? - I was standing by waiting for further instructions. After some little while the word came down, "Pass your women up on the boat deck." This was done.
9922. That means the third class? - Yes, the third class.
9923. Anything about children? - Yes. "Pass the women and children."
9924. "Pass the women and children up to the boat deck"? - Yes, those that were willing to go to the boat deck were shown the way. Some were not willing to go to the boat deck, and stayed behind. Some of them went to the boat deck, and found it rather cold, and saw the boats being lowered away, and thought themselves more secure on the ship, and consequently returned to their cabin.
9925. You say they thought themselves more secure on the ship.? Did you hear any of them say so? - Yes, I heard two or three say they preferred to remain on the ship than be tossed about on the water like a cockle shell.
9926. Can you in any way help us to fix the time, or about the time, when the order was given to pass the third class women and children up to the boat deck? Could you

- tell us how long it was after you were first roused, or how long it was before the ship went down? - Well, as near as I can. The vessel struck, I believe, at 11.40. That would be 20 minutes to 12. It must have been three parts of an hour before the word was passed down to me to pass the women and children up to the boat deck.
9927. (*The Commissioner.*) This would be about 12.30? - Yes, my Lord, as near as can be.
9928. (*The Solicitor-General.*) You say the word was passed down and you heard it? - Yes.
9929. And you had your other colleagues there, other third class stewards. Was the word passed along? - Yes, we were in a bunch. The whole sections are in a bunch. The word was passed right round, "Women and children to the boat deck," at somewhere about 12.30.
9930. When you heard it you would repeat it? - The word was passed along; it was said loud enough for anybody to hear.
9931. In order that your third class women and children should get from those quarters up to the boat deck, they would have to mount a number of decks and go up a number of stairs? - I did not take them that way.
9932. How did you take them? - I took them along to the next deck, the C deck, the first saloon deck.
9933. You are making it very clear. There is a third class stairway going up? - Yes.
9934. Did you take them by the third class stairway up to C deck? - I took them up into the after-well deck, that would be the third class deck up one companion to C deck.
9935. Do you see the plan (*pointing on the plan.*)? - There is no occasion; I know the ship.
9936. It is to help us, not you. You say there are a series of stairways indicated. It is the third class stairway going up, is it not? - Yes.
9937. The regular way by which third class passengers would go up if they were going to get to -? - The after-well deck.
9938. And is that the way you took them up? - Yes.
9939. As far as the C deck? - Yes.
9940. It is marked on the plan? - It is up one companion.
9941. It is marked on the plan, "Third class Entrance," I think? - I do not know how the plan is marked.
9942. Is it a wide stairway with rails dividing the stairs into sections? - Yes, it is very wide.
9943. So that 20 or 30 people could walk up abreast? - Well, hardly that.
9944. Well, 15 people? - I should imagine six aside could go up easily.
9945. That would bring them up then, as I follow you, to the C deck, to the after-well deck; and how would you get them from there to the boat deck? - I took them along to the first class main companion from there.
9946. (*The Commissioner.*) You did yourself? - Yes.
9947. (*The Solicitor-General.*) You led them, you guided them? - I went ahead of them.
9948. That would mean on C deck going forward. Would it mean passing the

second class library, and all that? - Yes. The beginning of that deck is the second class, and further along, the saloon.

*The Solicitor-General:* Your Lordship has the plan of C deck. I do not know whether that is before you now?

*The Commissioner:* Yes.

*The Solicitor-General:* Your Lordship sees he comes up to that deck by what is *there* marked as "Third class Entrance" in the extreme afterpart of the ship? *The*

*Commissioner:* I see that.

*The Solicitor-General:* Then he guides his people forward along that deck, past the second class part of the ship, where the second class library is marked.

*The Commissioner:* I see that.

9949. (*The Solicitor-General.*) And goes still forward until he comes to the first class stairs, which is next to what is marked "Barber's shop," a big stairway. (*To the Witness.*) Then did you guide them up that first class stairway to the boat deck? - Right to the boat deck.

9950. At that time, when you took up your people by that route, was there any barrier that had to be opened, or was it open to pass? - There were barriers that at ordinary times are closed, but they were open.

9951. They were open when you got there? - Yes.

9952. How many people of your lot did you take up the first time you went up this course to the boat deck? - Somewhere about 30.

9953. All women and children of the third class? - Yes, on that occasion, on the first occasion.

9954. And having got them to the boat deck, do you remember whereabouts on the boat deck you took them to? - Yes. I took them to boat No. 8, which was at that time being lowered.

9955. That is the fourth boat on the port side? - Yes.

9956. Practically opposite the second funnel, or a little more forward than the second funnel? - Yes.

9957. Did you leave them there? - I left them there and went back again.

9958. And when you went back what happened then? - But on the way of my getting back other passengers were coming along, third class passengers. They were also being shown the way to the boats. Amongst them were females - the husbands and fathers were with them.

9959. Who was showing them the way? - One by the name of Cox.

## **Page 224**

9960. Is he a steward? - Yes.

9961. One of your colleagues? - One of the third class stewards.

9962. Was Cox saved, do you know? - No.

9963. Did they follow the same route to go to the boat deck? - Well, by the way he was taking them they must have done.

9964. You returned to your people? - I returned to my own part of the ship.

9965. Did you bring up any more? - Yes, about 25. I had some little trouble in getting back owing to the males wanting to get to the boat deck.
9966. The men? - Yes. After the word was passed round for women and children, I was delayed a little time in getting a little band together that were willing to go to the boats.
9967. A band of women and children? - Yes.
9968. How many did you gather? - Somewhere about 25.
9969. Were those all people from the rooms you were responsible for? - No, also from other sections.
9970. Were they all third class passengers? - Yes.
9971. Did you guide them by the same route? - Yes.
9972. Where did you take them to? - I took them to the only boat that was left then, boat No. 15.
9973. This is an important thing. You say the only boat that was left? - That I could see.
9974. Do you mean the only boat that was left on either side of the ship? - I came along the starboard side of the vessel and on that side of the vessel that was the only remaining boat.
9975. That is the aftermost boat on the starboard side? - Yes, the last boat on the starboard side.
9976. That is the boat we have had some evidence about this morning. Can you tell me whether at that time there were any boats on the port side? - I cannot say, I did not go; the last boat I saw on the port side launched was when I took my first lot of passengers to boat No. 8.
9977. At that time when you took your lot of passengers to boat No. 8 on the port side were there any other boats left on the port side? - It is like this. From boat No. 8 I believe there is a big square right amidships. I did not look further.
9978. You mean there is a big empty space? - Yes.
9979. Of course boat No. 8 is one of the forward lot of boats? - Yes.
9980. You would come up by the main companion way, and coming up by the main companion way would come up almost opposite boat No. 8? - Yes.
9981. And so you went straight to it? - Yes.
9982. You really cannot tell us whether at that time the after boats on the port side were still there or not? - I cannot tell you.
9983. And when you came up the second time you say you went to the starboard side? - I came up on the starboard side. It was on the starboard side that I came up. I went across in the first place to the port, because at that time they were lowering away the port boats.
9984. You mean the first time you came on the boat deck? - Yes, and on my return to the deck the second time, I could see that there were no boats being lowered away from the port.
9985. You could? - Yes, from the open space which is right opposite. I then took them to the starboard side. There was on that side one remaining boat, No. 15.
9986. I see that in order to get from the first class companion up which you came to boat No. 15, you would come out on the boat deck, if you look at the model, just

- in front of the second funnel, and you would have to walk right back to the aftermost boat, which we see there. That is right, is it not? - Yes.
9987. And you could see, of course, that there were no boats left until you got to No. 16 [15]? - On the starboard side there were no boats left except that one.
9988. When you got with these people to No. 15 was there room for them in it? - Yes, they were placed in it.
9989. Now this is on the boat deck? - Yes.
9990. Not on A deck? - No.
9991. Do you mean that these people were put into it from the boat deck? - From the boat deck. The boat was lowered right flush with the rail on the boat deck.
9992. From the davits? - From the davits to the level of the rail to enable the people to get in easier.
9993. I had better tell you why, because it helps us all. We have had other evidence, you see, and it is not very clear from the other evidence where the people got in? - Am I clear?
9994. You are clear. Are you quite clear in your own mind that they got in from the boat deck? - Yes.
9995. (*The Commissioner.*) 25? - There were more than 25, but I took up 25.
9996. Your 25 got into No. 15 boat from the boat deck? - Yes.
9997. (*The Solicitor-General.*) I daresay you can tell us a bit further about it. When you got to boat 15 with these 25 people, were there any people in boat No. 15 already? - Yes.
9998. About how many, or who? - Well, I can give you a rough estimate.
9999. Yes, of course? - The last 25 were passed in from the boat deck.
10000. Your 25? - Yes.
10001. (*The Commissioner.*) Were they mixed, women and children, or were they women? - There were three children with them, my Lord.
10002. Twenty-two women and three children? - The boat was then lowered to A deck. We there took in about five women, three children, and one man. He had a baby in his arms.
10003. Five women, three children, and a man with a baby from A deck? - Yes; the boat was then lowered away.
10004. Into the water? - Yes.
10005. You were in her, as I understand? - Yes.
10006. Did you get in her from the boat deck? - Yes.
10007. At the time when your second contingent got in? - After; yes.
10008. How many people do you think were in boat No. 15 after she got into the water, and when she was saved? - I would not like to vouch for its accuracy, but I can give you an estimate.
10009. What is your estimate? - I should say somewhere about 70 after we left A deck.
10010. Another witness has told us he thinks 68? - Well, it is a rough estimate; it is pretty near it.
10011. Now let us see if you can help us as to how many members of the crew there were in boat No. 15. There is yourself, of course? - Yes.

10012. Can you tell us how many other members of the crew there were in boat No. 15? - I should say about 13 or 14 all told of the crew.
10013. There is a man named Cavell, a little short man, who is a trimmer? - Yes.
10014. Do you know him? - Yes.
10015. He was in the boat? - Yes.
10016. Do you know a bath room steward named Rule? - Yes, I know him.
10017. He was in the boat? - I saw him get out of the boat.
10018. That will prove it. Then a man named Diamond [Dymond] we have heard of; he was a fireman? - Yes.
10019. Was he in the boat? - Yes.
10020. Who was in charge of her? - This Diamond [Dymond] - at least, he had all the say, and so I take it he was in charge.
10021. I suppose so. Then I think there is only one other name I have heard, that is Lewis. Was there a man named Lewis, said to be a third class steward? Do you know about that? - I no doubt know them by sight, but we had nearly 60 third class stewards, and it is rather difficult to know their names.
10022. Then we have heard something about somebody called Jack Stewart. Is that somebody else? - Well, I know the name, but I would not

## **Page 225**

like to vouch for him being in the boat, as I did not see him.

10023. I want to be sure we do justice to you. You got your second contingent, 20 or 25, into the boat. They got in before you did? - Yes.
10024. Now, were any directions given about your getting into the boat? - Yes, I was ordered to get into the boat.
10025. Please, tell us about it? - After I saw my people in, the officer who had charge of the lowering away of that boat.
10026. That was Mr. Murdoch, was it not? - Yes, Mr. Murdoch. It was rather dark on the deck. He said, "What are you?" I said, "One of the crew. I have just brought these people up." He said, "Go ahead; get into the boat with them." 10027. And that is how you came to get in? - Yes.
10028. Let us take your estimate - 13 or 14 of the crew out of some 70? - Yes.
10029. That will leave us something like 55 others? - Yes, or 57.
10030. You have told us of that 55 or 56, some 25 were your contingent, your women and children that you brought up? - Yes.
10031. That is 25 out of the 55; that leaves about another 30? - Yes.
10032. And you have told us that, besides, there were taken in from the A deck five women, three children, and a man with a baby? - Yes.
10033. That knocks off 10 more? - Yes.
10034. That leaves 15 more people. Now, can you give us any idea whether those 15 remaining people were men, women, or children, or what? - Yes.
10035. Will you tell us? - There were about three male passengers and the rest were women.

10036. (*The Commissioner.*) Do the three that you talk about include the man who came on board with a baby in his arms? - No.
10037. Then there were four men? - There were four men.
10038. Four men and 13 or 14 of the crew? - Yes.
10039. Then out of the whole boatload of 70 there were about 18 men? - Yes. 10040. (*The Solicitor-General.*) And it follows that if that is right there would be about 50 women and children? - Yes.
10041. Your people that you were responsible for were third class people? - Yes. 10042. Can you tell us about the people that were taken in from the A deck, the five women and three children and the man with the baby; do you know at all what class they belonged to? - Yes.
10043. What were they? - They were also third class.
10044. And those people who were on the boat before your contingent got into it, what class did they belong to as far as you know? - I should imagine they were either first class or second.
10045. Then it comes to this, that as far as you can tell us, it was either first or second class people who were in that boat before you got there. Then your people got in and some more people got in from A deck, and those people you think were third class people? - Yes.
10046. When you left the third class part of the ship the second time, the last time, were there any more third class passengers down there? - Yes, there were some that would not come to the deck.
10047. They would not come? - They would not leave their apartments.
10048. Of course by that time you at any rate had realised that this was a very serious accident? - Yes, but they would not be convinced.
10049. Did you do your best to convince them? - Everybody did their best.
10050. Did you hear other people trying to persuade them? - Yes.
10051. On this second journey of yours, the last journey, did you see other stewards or not engaged in getting people? - Yes, I met several on the deck directing them the way to the boat deck. There was one man at the foot of the companion leading from the sleeping accommodation to the after-well deck; there was one man at the end of the companion leading from the well deck to the E deck, and there were others along the saloon and second cabin deck showing them the way to the boat deck. So that there was no difficulty for anybody who wanted to get to the boats to find their way there.
10052. There is a third class interpreter, is there not? - Yes.
10053. Did you see him about? - Yes.
10054. Some of your third class passengers are foreigners? - Yes.
10055. What was he doing? - He was trying to keep some of the foreigners quiet. 10056. We have been told that there is an emergency door that can be opened and will let people from the third class into the alleyway, so that they could use the second class companion? - Yes.
10057. You did not go by that route, I know? - No.

10058. Did you see whether or not that door was open? - Yes, I could see the door was open.
10059. Could you see whether it was being used as a means of getting from the third to the second? - The people that were coming from the forward part of the ship were making right for the after-well deck of the third class, and one was following in the others' train. 10060. And would they pass through that door? - No, they would have to pass that door but not through it.
10061. What I wanted you to tell me was, whether that door which you say was open in order that people could get through, was used at all? - I cannot tell you that; I saw nobody use it.
10062. When this boat No. 15 left the boat deck with your 25 women and children in it and then you following in as Mr. Murdoch told you, were there any other women and children on the boat deck there? - Yes, there were some first-cabin passengers.
10063. Women? - Women with their husbands, I take it.
10064. This was the last boat to leave, at any rate, on the starboard side? - Yes.
10065. Were there men there? - Yes.
10066. A number of them? - A number of them.
10067. What was the discipline? What was the order then? - Absolute quietness.
10068. On the boat deck? - Yes.
10069. And when this last boat No. 15 got to the A deck and took in these five women and three children and the man, were there any other people on the A deck? - Yes, there were some men.
10070. Men? - Yes.
10071. Do you mean that there were only men left on the A deck? - Yes.
10072. When the boat got to the A deck did you hear any orders given or any cry raised to see whether there were women and children? - Yes, there had been repeated cries before that boat was lowered, for the women and children.
10073. And were they looked for when it reached the A deck? - Well, there were stewards all round the ship. I take it that there were.
10074. I understand you to say that so far as you know there were no other women and children on the A deck? - No. I saw none.
10075. As a matter of fact, was there any room in your boat when it left A deck, or was it full? - Had there been any more women or children I take it they would have made room.

*The Commissioner:* There were some women.

*The Solicitor-General:* Not on the A deck.

*The Commissioner:* No, on the boat deck.

*The Solicitor-General:* His point is that those on the boat deck would not go. *The*

*Witness:* Had there been any more I have no doubt a place would have been found for them, even if they had to lie on others.

10076. Lord Mersey has just pointed out that you told us, on the boat deck where the boat left there were some women and their husbands. How was it they did not get into

the boats? - Because the cry was for the women and children, and the boat at that time was practically full of women and

**Page 226**

children, and these women would not leave their husbands.

10077. That is what I wanted, that was the impression you got, was it? - Yes.

10078. Did you hear any of them say so on the boat deck? - Yes.

10079. You did? - Yes.

10080. You have told us that you were one of a number of some 60 third class stewards? - Yes.

10081. Can you tell me how many third class stewards were saved? - Yes, I believe 11 or 12.

10082. Out of 60? - Yes.

10083. And you have told me that you had about 55 or 60 people to look after in the third class cabins that were your duty? - Yes.

10084. Can you tell me of those how many were saved? - I would not vouch for those that got away in other boats outside of the one that I was in myself.

10085. Do you know how many of your own lot of people you were able to save? - I would not like to say "able to save," but I saw in the same boat as myself those that I took to the boat - in the boat I got away in, No. 15. 10086. And the others? - They were not all mine.

10087. (*The Commissioner.*) They did not all come out of your section of the afterpart; some belonged to other stewards? - Yes, other sections.

10088. (*The Solicitor-General.*) I thought you might have been able to see them afterwards on the "*Carpathia*"? - Yes, I saw a lot of them.

10089. I thought that you could tell us probably how many people that were under your charge were saved? - I see what you mean. I should like to give you some idea. I saw about 20.

10090. Whom you recognise as being in the cabins you had? - Whom I recognised as being in my rooms.

10091. (*The Commissioner.*) That is 20 out of 58? - Yes.

10092. (*The Solicitor-General.*) The others came from other sections. I am told I may have made a mistake, and we ought to get it right. It is the first class companion up which you came. I said it was the one near the barber's shop. Is that right or not? - To tell you the truth, I did not know where the barber's shop was.

10093. Is it the main companion? - The main companion. 10094. The big one? - Yes.

*The Solicitor-General:* That identifies it. I see it is close to the purser's office. *The*

*Commissioner:* The companion forward of the boiler casing?

*The Solicitor-General:* Yes, my Lord, that is my meaning; it is the big one.

*The Commissioner:* And it would bring him up opposite No. 8 boat?

10095. (*The Solicitor-General.*) That is it. And, putting it another way, it would bring him up between the first and second funnels of the ship. (*To the Witness.*) That is the one, Mr. Hart, is it not? - Yes.

**Examined by Mr. SCANLAN.**

10096. At first, I take it, you were trying to assure the passengers under your charge that they were in safety? - Yes.
10097. When you realised that the position was very serious, what did you say to those people? - I told the people to lose no time in getting to the boat deck.
10098. Did you tell them the ship was sinking? - No, I did not know the ship was sinking.
10099. Even amongst the 49 [58] women and children for whom you were responsible, did some of those go back to their quarters? - Yes.
10100. And refused to go? - Yes.
10101. When those people refused to go, did you again go back to them and tell them that those in charge knew that the ship was in a very dangerous condition? - Yes; they were informed the second time I went back.
10102. You made it perfectly clear to them? - Everything was clear.
10103. At the time you were leaving in No. 15 boat, were there rockets being sent up? - Yes; rockets had been fired some time previous to that.
10104. You saw that yourself? - I saw the rockets fired; yes.
10105. Have you had boat drill during your experience as a steward? - Yes.
10106. On a number of ships? - Yes.
10107. You handled an oar yourself, did you in No. 15? - Yes.
10108. And you are quite accustomed to the handling of an oar? - I believe so. 10109. Have you had practice, some training, in handling lifeboats? - Well, I have had the usual boat drill on board ship, but previous to that I have had some exercise at rowing a boat.
10110. Is it the usual practice in ships you have been on to have boat drill? - Yes.
10111. What companies have you been with? - The American Line.
10112. And what else? - Only that.
10113. How often do they have boat drill there? - As a rule, one each way, out and home.
10114. Do you call that a boat drill or a boat muster? - Fire and boat muster.
10115. Do the stewards and the firemen as well as the A.B.'s and other deckhands take part in that boat muster? - Yes. They have to attend this boat muster, failing which, they are logged for non-attendance - fined.
10116. You had not a boat muster on the "*Titanic*"? - No.

**Examined by Mr. ROCHE.**

10117. You have told us that when you got the order to muster the women and children it was about half-past 12, you think? - Somewhere about that.
10118. Now I want you to give us your best estimate of the time when you left the ship - when the boat was lowered from the ship? - When boat No. 15 was lowered?
10119. Yes; it was the last boat, was it not? - Yes.
10120. What is your idea about the time then? - I should say about a quarter after one.
10121. You had been going between half-past 12 and a quarter-past one two or

- three times backwards and forwards from the deck to your quarters at K that you had charge of? - Yes.
10122. To do that you passed "Engine Room Casing"? - I could not tell you anything about the engine room casing.
10123. You pass along E deck, do you not? - No, I did not go along E deck.
10124. What deck were you on? - I was on E deck, but I went right aft.
10125. You never went as far as the engine room? - No.
10126. Was the electric light going all the time? - Yes.
10127. But what the engines were doing you do not know? - No; the light was burning brightly.
10128. But what the main engines were doing, you did not know? - I cannot vouch for what they were doing.
10129. Did you ever see any of the engineers on the boat deck? - No; I would not know them, perhaps, if I saw them.
10130. You would not know them at all? - No.
10131. How many officers did you see on the boat deck? You saw Mr. Murdoch? - I saw Mr. Murdoch on two occasions, the only two occasions on which I went to the boat deck.
10132. You never were on any deck below No. E deck at that time? - Yes, the third class dining room is below E deck; our own quarters are below it.
10133. The watertight bulkheads are there and extend up to E deck, I understand? - Yes.

**Page 227**

10134. They extend up as high as E deck. When you passed along to go to the third class dining saloon, was the watertight bulkhead in the way there, open or shut? - Open.
10135. It is F deck you are talking about? - It is the deck below E deck.
10136. It is F you are speaking of? - Yes; that is where the dining room is situated, and where I was sleeping.
- Mr. Roche:* When did you go there that night?
- The Commissioner:* What is it you are putting to him?
- Mr. Roche:* I am putting to him whether he was on a deck below E deck.
- The Commissioner:* Yes, and he says he was.
10137. (*Mr. Roche.*) When was that? You slept there. Your own berth was there? - Yes.
10138. You were there in your berth at the time of the collision? - Yes. 10139. You went up from there to E deck? - Yes.
10140. Pretty soon? - Yes, pretty soon, when I realised the ship's condition. 10141. When you went along to get up you passed the position where the watertight bulkheads were? - Yes.
10142. Were they open or shut? - Open.
10143. Did you go down on to that deck again at any time? - No.
10144. You cannot tell us at all whether those watertight bulkheads were open or shut? - No, I cannot tell you.

10145. How long after the collision was it that you went up? Five minutes, ten minutes, or only a few minutes? - Well, after the collision, on being aroused first by a man coming from forward, a steward, he said there had been an accident, and I closed my eyes and went to sleep again; I did not believe it.
10146. How long for, do you suppose? - Oh, I should imagine somewhere about 15 or 20 minutes.
10147. And when you left 15 or 20 minutes or longer than that, after the contact with the berg, the watertight bulkheads were open? - Yes.

**Examined by Mr. HARBINSON.**

10148. Did I rightly understand you to say that very shortly after the impact Kieran told you to go down to your people and rouse them up? - Yes.
10149. Did I rightly understand you also to say that you went round the whole of the two sections allotted to you? - Yes.
10150. Did you go to each of these cabins and arouse the occupants of each compartment? - Yes, those that were not already aroused.
10151. Those that were not already up or had not gone to bed. Now, I should like to know what are the means employed to prevent the third class passengers during the voyage from straying into the first and second class decks and quarters of the ship. First, are there collapsible gates? - Yes, gates that can be removed. Dividing the third class deck there is a companion; dividing the second class deck and the first class deck there is a barrier.
10152. Are those kept fastened during the course of a voyage - the barrier and the companion? - No.
10153. Are they open? - Well, the barrier that lifts over and the gate that fixes in, you can just take it out with your hand; it is never locked.
10154. Do I understand you to say that those gates are not locked at any time and the barrier is not fastened? - Not to my knowledge.
10155. So that at any time a third class passenger, by pushing the gate or by raising the barrier, can go to the second class deck or to the first class deck. Is that right? - That is correct. That is, of course, if there is nobody there on watch. There usually is a quartermaster standing by there or a seaman.
10156. Have you ever seen those gates locked? - No, I was not long enough on the ship to see them locked.
10157. I mean, any other ship. What ship were you on before you came on to this ship? - I have been in the whole four of the American Line boats.
10158. On any of the previous boats have you seen those barriers or gates locked to prevent the third class passengers straying on to the first or second class decks? - You see, the ships are built differently. The American Line boats are built entirely differently from the "Titanic."
10159. I want to make it quite clear. Is it the usual practice on trans-Atlantic passenger steamers to keep the gates locked and the barriers fixed so that they cannot be opened by third class passengers? - I do not know of it.

10160. Have you seen it? - I have not seen it. 10161. How many days had you been on the "Titanic" before the accident took place? What day did you join? - The ship left on the 10<sup>th</sup>, on the Wednesday; I joined the ship on the Friday before the Wednesday.
10162. You had been on board a number of days then, and during the time that you had been on board had you looked whether or not those gates were locked or the barriers fixed? - No.
10163. You had not looked? - No.
10164. Do I rightly understand you to say that you do not know whether they were locked or not? Is that the effect of your evidence? - No; I fail to understand you.
10165. You did not look whether the gates were locked or the barrier closed from the time you went on to the "Titanic" until the time of the accident. Is that so? - I do not see how they could be locked. I do not think so at all.
10166. Did you look to see whether the gates were locked or the barriers permanently fixed down? - Prior to the accident?
10167. Yes? - No.
10168. Therefore you do not know whether they were or were not? - Previous to the accident I cannot answer.
10169. Therefore at the time of the collision you do not know? - No. I say previous to the accident.
- Mr. Harbinson:* I quite follow you.
10170. (*The Commissioner.*) They were all down, as I understand, when you were bringing the passengers away? - Yes, my Lord.
10171. All three were opened? - Yes, my Lord.
10172. (*Mr. Harbinson.*) Did you see anybody open these gates or raise these barriers? - No, I did not see anybody open them; but I had to pass through them, and I saw them open.
- The Solicitor-General:* Not "opened" but "open."
10173. (*Mr. Harbinson.*) You saw them open? - Yes.
10174. You do not know who opened them? - No.
10175. You saw them open? - Yes.
10176. That was when you were taking up the first batch of third class passengers? - Yes.
10177. Do I gather rightly from you that it was a considerable time after the third class steward had told you to rouse up your people that you went about reassuring these people and telling them that the vessel was not hurt? - No; right from the very first we were trying to convince the people that she was not hurt.
10178. Did I understand you rightly when you said that "A large number of men were coming from forrard [forward], from the front part of the ship; I went about among my people trying to show them that the vessel was not hurt"? - Trying to "assure" them - not to "show" them.
10179. I accept your correction - "trying to assure them that the vessel was not hurt" - is that what you said? - That is so.
10180. Why did you on your own authority, after you had been told by the first class steward -? - By who?

10181. By your chief third class steward to go down and rouse these people - Why did you upon your own authority go round and tell them that

**Page 228**

the vessel was not hurt? - It was not on my own authority at all.

10182. Who told you to do that? - The third class steward told me to get my people about as quietly as possible.

10183. Why did he tell you to get them up? - I cannot answer why he did. I take it, on account of the collision. He must have had word that there had been an accident.

10184. And, knowing from him that there must have been an accident, and that he considered the accident was of such a character that these people should be roused, you went round among them, and tried to assure them that the vessel was not hurt? - In the first place.

10185. Why did you do that? - Because it was my instructions to.

*The Commissioner:* Why? - To keep them quiet; it is quite obvious.

10186. (*Mr. Harbinson.*) I put it to you that it was as a result of these assurances of yours that the people refused to go up on deck? - You put it to me as such?

10187. I put it to you that as a result of these assurances given to the people they refused to leave their berths? - I do not take it as such.

10188. Was it so? - It was not so. If you will pay a little attention you will find that some people were taken to the boat deck.

10189. Please do not be impertinent? - I do not wish to be impertinent.

10190. I suggest to you that it was as a result of these assurances given by you that they were declining to leave their berths? - You take it as such.

10191. I ask you, is that so? - I do not know.

10192. You do not know? - I do not think so.

10193. How many women refused to leave their berths? - Several.

10194. Could you give us any estimate? - I might if I think.

*The Commissioner:* His estimate in such circumstances is, to my mind, of no value at all.

10195. (*Mr. Harbinson.*) Were there half-a-dozen out of the 58? - I take it there was.

10196. You do not know? - I could not vouch for the number.

10197. Was it a small number compared with the number who came up with you? - Oh, yes.

10198. A very small number? - Yes.

10199. So that I am right in assuming that all except a small number responded to your warnings? - That I can account for myself in my own part of the ship.

10200. That it was only a small number who refused to leave? - It was only a small number who refused to leave.

10201. You have told us, I think, that there were sixty third class stewards? - Yes.

10202. How many of those sixty were in the afterpart of the ship? - None.

10203. Can you tell us how many were in the after, and how many were in the forward part? - No.

10204. You have no means of telling? - I could not tell you.

10205. Could you give us any estimate of the number of women and children who were in the afterpart of the ship - third class men, women and children? - No.
10206. You cannot? - No.
10207. Who will be able to tell me that? - No doubt the White Star Line can tell you. The single men were all berthed in the fore part of the ship.
10208. You can give us no estimate of the numbers of the third class passengers who were in the after portion? - No.
10209. And therefore you cannot tell me how many stewards were allotted to look after the third class passengers? - In the afterpart of the ship, I can.
10210. That is what I am asking you? - Eight.
10211. Eight stewards to look after all the third class passengers in that portion? - That is for the sleeping accommodation.
10212. It is a considerable distance, is it not, from the aft part of the ship to the boat deck? - Yes.
10213. You have told us that you saw a number of stewards placed at various portions to direct the third class passengers how they were to go? - Yes.
10214. About how many stewards were so placed? - I passed about five or six on the starboard side.
10215. Who else besides you, then, were bringing the people from their berths - rousing them and bringing them up to the boat deck? How many others? - Almost eight. A portion of the third class stewards were room stewards, of whom I am the only survivor. 10216. I understood that there were only eight third class stewards in the aft portion altogether? - To look after them.
10217. Who were stationed at various places to direct the third class passengers the way they were to go? - Not of that eight. 10218. There were five? - Five others.
10219. What class stewards were they? - I could not tell you. Stewards were placed all round the ship.
10220. Do you know who placed them there? - I cannot tell you.
10221. Do you know the stewards by sight who were placed to direct the third class passengers? - No.
10222. But you say they were not third class stewards? - They were not third class stewards.
10223. Did you see the emergency door open? - I saw it open - The swing door to the second class you mean?
10224. Yes? - Yes.
10225. Do you know at what time it was opened? - Yes, I can tell you. It was open at half-past 12.
10226. Would it be right if anyone said that a number of sailors were keeping back the third class passengers from reaching the boat deck? - Would it be right to do so?
10227. Would it be right if anyone said so? - I do not say that it would be right.
10228. I asked you would it be right if anyone said so? - I would not like to say it would be right.
10229. (*The Commissioner.*) Would it be true? - I should not think so.

*Mr. Harbinson:* It is not what you think. Did you see any sailors keeping back the third class passengers from reaching the boat deck?

10230. (*The Commissioner.*) Did you see anyone keeping the third class passengers back, so as to prevent them getting to the boat deck? - No, my Lord.

10231. (*Mr. Harbinson.*) You told us about a rush of men from the front part of the ship coming aft? - Yes.

10232. They were coming towards the third class quarters? - Yes.

10233. They were third class passengers? - They were.

10234. Why do you think they were coming aft? - Because I saw them coming aft.

10235. I quite realise that you saw them. But what was it caused them, do you think, to do that? Was it because they could not escape to the boat deck by the companion ladder leading to the front part of the ship? - I do not believe so.

*The Commissioner:* How can he know that? Do let us have some sort of order in these questions. How can he know why they did come aft? *Mr. Harbinson:* Did you form any opinion at the time?

10236. (*The Commissioner.*) Did you ask them why they were coming aft? - No, Sir, there was no occasion to ask.

10237. (*Mr. Harbinson.*) Did you form any opinion at the time? - I knew why they were coming aft.

10238. That is what I want to know. Why did they come aft? - Because the forward section had already taken water.

10239. And that was the only way they could escape? - Not necessarily, no. They could escape from the fore part of the ship.

## **Page 229**

10240. Up the companion ladder would have been the nearest way for them, would not it? - Yes.

10241. But they did not do that; they chose the other way? - They chose the other way?

10242. That is rather curious, is it not? - No, it is not curious at all.

10243. Is it not? - No.

10244. That is to say, they go the whole length of the ship and come up from the well deck at the back, rather than go up the companion ladder leading from the fore deck to the boat deck? - Perhaps the people did not stop to think where they were going to. 10245. If there had been anybody to show them, they would not have had occasion to think? - That may be so.

10246. According to you - and, of course, I am not disputing the accuracy of your figures at all - you took practically the whole of your section, the greater number of them, up; you took two batches? - Yes, but they were not all men.

*The Commissioner:* Oh, no, no. Do not make that mistake. They were not all from his section. A great many of them were from other sections.

10247. (*Mr. Harbinson.*) All your own went up except the few who refused to go? - All of mine went up except a few.

*The Commissioner:* Some of them went up and went back again.

10248. (*Mr. Harbinson.*) I will deal with that, your Lordship. (*To the Witness.*) Except the few who you say refused to go? - Yes; all went to the boat deck.

10249. Except the few who refused to go? - Yes.

10250. With regard to the ones who went up and went back again when they found, I think you said, it was rather cold on the boat deck, did they belong to the first or second lot that you took up? - How do you mean? Please say that again.

10251. You said a number went to the boat deck and returned to their berths? - They belonged to the first lot, because the second lot I saw placed in boat No. 15.

10252. The whole of them? - Yes.

10253. How many of the first lot returned to their berths? - I cannot tell you that.

10254. You cannot give any estimate? - No. I know I saw them to the boat deck. 10255. According to you, all the women and children, from the aft part of the boat who were taken up and who wanted to escape could have done so? - I do not doubt that for a moment.

10256. Can you explain how it was, that being so, that 55 percent of the women of the third class were drowned? - I cannot account for it - No, sir.

10257. I would like you to try and give us your opinion. That is a very high percentage, is it not? - I simply referred to those that I took up.

10258. (*The Commissioner.*) Were you ever in an accident of this kind before? - Something similar, my Lord.

10259. When was that? Were a great many people drowned? - There was nobody drowned.

10260. Then it was not an accident. Can you form any opinion as to what percentage of third class passengers might be expected to be drowned in an accident like this? - No, my Lord.

*The Commissioner:* Do not ask him such questions - they do not help me at all. *Mr. Harbinson:* If I may respectfully explain to your Lordship, after what he has said it raises a curious condition of affairs - That all the women could have escaped who wanted to escape, and yet the fact remains, as stated by the learned Attorney-General, that the percentage of the third class female passengers who were drowned was 55.

*The Commissioner:* I know, but you are wasting our time by asking a steward questions about percentages. He does not know anything about such things. Ask him about things that happened and that he saw, and that he can tell us of, and then we will form our own opinion as to what deductions are to be drawn from the facts.

*Mr. Harbinson:* I do not think I shall ask him anything more, my Lord.

**Examined by Mr. HOLMES.**

10261. At the time your boat was lowered, was the ship badly down by the head? - Yes.

10262. Had she a list? - Not that I noticed. I noticed she was badly down by the head.

10263. You did not notice any list either way? - No.

10264. Did you see any lights of ships out at sea? - When?

10265. At any time? - Yes.

10266. Before or after you were lowered into the water? - Before and after.

10267. In which direction? - On the starboard side of the ship.
10268. Bearing how from the ship? - I should take it bearing North.
10269. That would be on the starboard bow? - Yes, on the starboard bow.
10270. What were the lights like? - I saw two lights. I took them to be plain, ordinary white lights - two masthead lights.
10271. Masthead lights? - Yes.
10272. It looked like a two-masted ship? - Yes.
10273. Could you judge at what distance? - No. Distance on water is very hard to judge.
10274. Could they have been lamp lights in any of your small boats? - No. They would not be that high.
10275. Did you find a lamp in your boat when it was lowered? - No, there was no place to look for any lamp.
10276. Were there lamps in any of the other boats you saw in the water? - Yes.
10277. How many? - I saw three.
10278. Three other boats with lamps in them? - Yes, three other boats with lamps in them, and there may have been more.

**Examined by Mr. COTTER.**

10279. Is it not a fact that a bugle goes at nine o'clock every night at sea ordering third class women below? - Not to my knowledge.
10280. What time are they ordered below, off the decks? - It is the usual custom for the Master-at-Arms to go round and tell them when it is the proper time to go down - I believe somewhere about nine and ten.
10281. Between nine and ten they are ordered off the decks? - Yes.
10282. When you went below, or when you received the order from the Third class Steward, did not you, as a sensible man, think it was the only sensible order you could receive to go down and tell the women quietly to get out and get their lifebelts on? - Yes. But whether I had been told that by the Third class Steward or not, I would have done it. 10283. You knew that if you went down below and did not do it in that way you might cause a panic - they might be hysterical? - That was the idea in informing the people quietly.
10284. There were no orders given to tell the third class men - the single men living in the bow of her - to come up on the boat deck, were there? - Not to my knowledge.
10285. So that there was no necessity for a Steward to go there and show them the way to the boat deck at the top? - I believe that somebody went forward after the collision to try to see what damage was done after the collision had happened, and there met the passengers coming along. He came along with them. I believe that was the interpreter Mellor.
10286. He was bringing them along E deck? - The main alleyway, E deck.

10287. He would not take them up to the boat deck and mix them with the women? - I do not think he would, because he brought them along that way.
10288. When you went down below, did you find any difficulty in getting the women to leave their baggage behind? - Some were inclined to take their baggage, but they, of course, would not be Europeans. I take it they were foreigners.
10289. You found a difficulty in getting them to leave their baggage behind; they wanted to take it up with them? - I did not find any difficulty at all, because I had no foreigners.
10290. But the foreigners did not want to part with their baggage? - I have heard so.
10291. When you went back again the second time, did you go down to F deck? - No.
10292. You did not go down to F deck? - There was no occasion to go there.
10293. Where did you go to? - The second time I went to my station on this deck.
10294. Did you see any water along E deck? - I saw none.
10295. No water at all? - I saw none.
10296. You saw no water at all along any deck from the time she struck? - I saw no water to the time I quitted that ship, with the exception of outside the ship, of course.
10297. I said, "along the deck"? - No, Sir; I saw none.
10298. What ship were you in when you met with your last accident? - I was in the "St. Paul" when she collided with the "Gladiator."
10299. So that you would know what to do in the case of an accident? - I imagine I would, yes.
10300. Were all the third class stewards trying to get the women out, and showing them up to the decks? - Yes.
10301. My learned friend thinks there were only eight stewards in the third class. Will you tell us how many stewards there are in the third class? - There are somewhere about fifty-nine or sixty.
10302. Part of them were bed-room stewards, and part of them were table waiters, is that so? - Yes.
10303. And they would all be doing their little bit to get the passengers up? - They all helped to get the passengers away. Those that were not told off to their own rooms were sent on the boat deck to help in the best way they could.
10304. Did you notice between the dining room and the after section on F deck whether there were any bulkhead doors? - Yes, there were two.
10305. Did you ever see them closed on the voyage? - Yes, I saw them closed at bulkhead door inspection on the day after we left Southampton.
10306. Was there a general bulkhead inspection the day after you left England? - Yes; the Chief Officer came round with Mr. Andrews, the man representing Harland and Wolff's.
10307. Were the stewards told off to close those doors? - Yes; I myself was told off.
10308. And you closed a bulkhead door? - Yes.
10309. Do you know what you closed those bulkhead doors for - what that drill is for? - Yes; I take it as such, that in case anything should go wrong with the machinery leading from the bridge in closing those doors.
10310. These doors are hand doors? - No; they can be closed from the bridge as well.

10311. On E deck? - Yes.

10312. I think you are mistaken, my Lord. I do not think that is a fact? - I think so.

Anyhow, I closed them by hand with a big spanner.

10313. You turn a spanner with a wheel? - Yes; I turned it with a spanner.

10314. You are not sure about whether they can be closed from the bridge? - I would not be sure that they can be closed from the bridge on E deck, but I take it as such, by the overhead gear, that they could be closed from the bridge.

10315. The real object of that drill is, is it not, that in case of collision a man should go there and close the door? - Yes.

10316. Do you remember anybody doing it that night? - No, I do not.

**Examined by Mr. LEWIS.**

10317. When you returned from your first visit to the boat deck you told us you had some trouble to get back owing to the men trying to get up. What prevented you? - The stewards prevented these men getting up when the order was passed around for the women and children.

**Examined by Mr. MAURICE HILL.**

10318. When you passed from your "glory hole" to M and K sections, did you pass along F deck or did you go up at once on to E deck by the stairway? - I went on to E deck by the stairway.

10319. Just outside your quarters? - Yes.

10320. Were you at any time after that on F deck? - No.

*The Commissioner:* Do you want to ask this witness any more questions? *The*

*Solicitor-General:* Just one or two more, my Lord.

**Further examined by the SOLICITOR-GENERAL.**

10321. Some questions have been put to you by some of these gentlemen rather suggesting that you discouraged these third class people from doing what was best to save their lives. Did you do anything of the sort? - No, Sir, I would not take it that way. 10322. I suppose you found they got a little excited when they were asked to put their lifebelts on? - They were simply told to put their lifebelts on in a quiet manner to prevent any kind of a panic that might have ensued.

10323. And you did your best to discharge that duty? - Yes.

10324. Was that before any order had been passed along that these people were to go up to the boat deck? - Yes.

10325. And when the order was passed along that they were to be taken up to the boat deck, did you do your best to get them through? - I did my duty, Sir, to get them through.

*(The Witness withdrew.)*

**ALBERT VICTOR PEARCEY, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

10326. Were you a third class pantryman on the "Titanic"? - Yes.

10327. Had you been in the employment of the White Star Line for some five years? - Yes.

10328. You were transferred to the "Titanic" from the "Olympic"? - Yes.

10329. And were you employed as a third class pantryman on the first voyage of the "Titanic"? - Yes.

10330. Were you off duty when this collision occurred on that Sunday night? - Yes.

10331. Were you standing with others outside the pantry? - Yes.

**Page 231**

10332. Is that on E deck? - Yes, I think it is E deck. I am not quite sure. 10333.

Do you remember where it was? - Just outside the pantry door in the main alleyways. Just under the main alleyway of E deck.

*Mr. Laing:* Just behind the third class dining room.

*The Commissioner:* On what deck did you say?

10334. (*The Attorney-General.*) He said E deck, but I am not sure that he is right. - I am not sure I am right. I know it is just outside the pantry.

10335. I am going to put a question that will clear that up. Was it on the same deck as the third class stewards had their quarters? - Yes.

10336. On the same deck as the third class dining saloon? - Yes. *The Attorney-General:* Then it is F deck.

*The Solicitor-General:* It is marked, my Lord, "Third class Pantry" - just on the after side of it.

*The Attorney-General:* It is just after the third class dining saloon.

*The Commissioner:* No, it is apparently close to the boiler casing.

*The Attorney-General:* It is also abaft of the third class dining saloon.

*The Commissioner:* On the port side? - On the starboard side it is close to the dining saloon.

*The Attorney-General:* So it is, I think, on the other. Both on the port and starboard side it is just abaft of the third class dining saloon. The boiler casing is marked in between.

*The Commissioner:* On the plan I have there is only one dining saloon marked.

*The Attorney-General:* I think they are both marked "Third class Dining Saloon."

*The Solicitor-General:* The title is "Third class Dining Saloon." *The*

*Attorney-General:* It is all one? - your Lordship sees.

*The Commissioner:* Yes, I understand.

10337. (*The Attorney-General - To the Witness.*) Did you feel the collision? - Not at all.

10338. What was it that first indicated to you that there had been a collision with the iceberg? - There was just a small motion, but nothing to speak of.

10339. What happened immediately after this motion? - The order was "All watertight doors to be closed."
10340. Are you referring to the watertight doors of this F deck? - Yes.
10341. Were they closed? - Yes.
10342. Did you help to close them? - Yes.
10343. Did several other men help with you? - Yes.
10344. Where did you close them? - I closed them on towards aft. I closed the pantry doors of my pantry on the starboard and port sides.
- The Attorney-General:* Does your Lordship see them marked on the plan, on the starboard and port sides of the pantry.
- The Commissioner:* Yes.
10345. (*The Attorney-General.*) Both of them are on the afterpart of the pantry. (*To the Witness.*) You said you were a third class pantry man. What was your duty? Had you any duty in connection with the passengers? - No, not at all.
10346. You had not to look after them at all? - No.
10347. Your business was entirely in the pantry? - Yes.
10348. Who was the chief third class steward? - Mr. Kieran.
10349. Did he give any orders that you heard? - The order that I heard was, "Assist all passengers on to boat deck."
10350. (*The Commissioner.*) That meant, I suppose, "Assist all passengers"? - Assist third class passengers. When Mr. Kieran gave that he would mean to say the third class passengers.
10351. Get on to the boat deck? - All passengers get on to the boat deck.
10352. (*The Attorney-General.*) You understood that to mean the third class passengers who were under his charge? - Certainly.
10353. Was anything said about lifebelts? - I did not hear it, Sir.
10354. Did you help? - Yes.
10355. Tell us what you did? - The lifebelts I put on their heads, and I tied the strings round them.
10356. You helped them with the lifebelts - helped to tie them on? - Yes.
10357. Then when you had done that, where did you go? - I passed all the passengers I could see forward to the boat deck.
10358. How did you pass them forward to the boat deck? - Through the emergency door.
10359. Where was that emergency door to which you are referring? - The one right forward.
10360. Where does it lead through? - Right through the saloon companion.
10361. What saloon? - The first class.
10362. Right through the first class saloon companion? - Yes.
10363. That would be on the next deck, would it not, on the upper deck? - Yes.
10364. Deck E? - Yes.
10365. Would that be leading into the alleyway? - Yes.
10366. As the people came along there you passed them through this door, did you? - Yes.
10367. Where did the people come from? - They came from forward.

10368. The people came from forward? - The people came from forward.
10369. Were they men or women? - All men, Sir.
10370. They were all from forward? - Yes.
10371. You passed them up to that door; did you give them any directions? - Yes, passed the directions right up. There were stewards besides me.
10372. Right up the whole way? - Right through the saloon to the companion - right through that door right up the saloon companion leading to the top deck.
10373. To the boat deck? - Yes.
10374. And you and others directed them? - Yes.
10375. Were there stewards posted at stations all along the way? - Yes.
10376. From forward? - Yes.
10377. Up to the companion? - Yes.
10378. Did you go down to the passengers quarters at all? - No, not at all.
10379. It was not part of your duty? - It was not part of my duty at all.
10380. You were carrying out what you were told by the steward - to assist them up to the boat deck? - Yes.
10381. Did a great number of passengers come along that alleyway? - Yes.
10382. Did you remain there until there were no more coming along the alleyway? - As far as I could see.
10383. You remained there until you could see no more passengers coming along the alleyway; is that right? - Yes.
10384. What did you do then? - I went to the boat deck myself.
10385. What was the time then? - Between one and half-past. It was nearly half-past one.
10386. You had nothing to do with the passengers who came from the afterpart of the ship? - No.
10387. When you found there were no more passengers coming along, you went up to the boat deck yourself? - Yes, I went up to the boat deck myself.
10388. Did the other stewards go with you? - Yes.
10389. And those who had been stationed there and who had been assisting in the directions? - Yes.
10390. When you got to the boat deck will you tell us what you saw? - I saw two babies on the deck; I picked them up in my arms and took them to the boat.
10391. Do you know what boat it was you took them to? - A collapsible boat.
10392. Was there any officer there? - Yes.
10393. Who? - The Chief, Mr. Murdoch.
10394. Do you remember whether the collapsible was on the starboard or the port side? - On the starboard side.
10395. Did Mr. Murdoch give you any order? - Yes.
10396. What was it? - He told me to get inside with the babies and take charge of them.
10397. Were you attached to any boat; had you a station on any boat? - Yes.

**Page 232**

10398. What was it? - No. 3 on the starboard side.

10399. That was the second boat - the first lifeboat after the emergency? - Yes. 10400. Did you notice what had happened with regard to any of the other boats on the starboard side when you were ordered into the collapsible? - Not at all.

10401. When you came on the boat deck you did not see? - No.

10402. Did you notice whether No. 3 boat, your own boat, was there or not? - Yes, it was gone.

10403. You did notice that No. 3 boat was gone? - Yes, my boat was gone. 10404. Where was the collapsible when you were told to get into it? - By the side of No. 3 on the starboard side.

10405. On the starboard side? - Yes, on the starboard side close to number 3. That was the boat I was stationed in.

10406. Close by where number 3 would have been if it had been in its ordinary place? - Yes.

10407. Had it been moved or was it where you usually saw it? - It was where I always saw it.

10408. Did you notice whether the emergency boat had gone or not? - No. 10409. Did you notice anything more at all about the boats except that number 3 was gone? - No, I never noticed anything more.

10410. Were there people in the collapsible boat? - Yes.

10411. Were they women or men? - All women, Sir.

10412. And children? - Children and women.

10413. And some of the crew? - Five of the crew with the Quartermaster. 10414. Did that include yourself? - There were three Firemen, myself, and a Quartermaster.

10415. Do you remember how many you were in the boat? - Just about sixty-six.

10416. Does that include the crew? - That is without counting the crew.

10417. About sixty-six passengers? - Sixty-six passengers and five of the crew - seventy-one.

10418. (*The Commissioner.*) That means seventy-one in all, does it? - Yes.

10419. (*The Attorney-General.*) Did you count the passengers at all? - I took notice of the passengers - what there was there. I counted there were just about sixty-six.

10420. You mean when you could see? - Yes.

10421. Do you remember how the collapsible was launched at all into the water? - No. It is launched, of course. It is put down the side.

10422. It is put over the side? - It was swung out.

10423. By the davits? - Yes.

10424. Swung out by the davits? - Could you tell us, was that where No. 1 boat was or No. 3? - No. 3.

10425. That is what you mean, is it? - Yes.

10426. As I understand you, No. 3 boat, that is the first lifeboat on the starboard side? - Yes.

10427. And your boat took its place? - Yes.

10428. The collapsible boat? - Yes.

10429. And by means of the davits which were there ordinarily for No. 3 boat you were lowered into the water? - Yes.

10430. Probably that is how it is you noticed No. 3 boat was gone? - Yes.
10431. Were there any women or children on the deck in the neighbourhood of the boat when you left? - I did not notice. I never noticed at all.
10432. I want to quite understand what you mean when you say you never noticed. Do you mean that you did not see any, or you do not know whether any were there? - I did not see any women there at all.
10433. You did not see any women there at all; is that it? - Yes.
10434. That is in the neighbourhood of the boat, I asked you? - Yes.
10435. Did you notice whether there were any women and children on the deck at all when you left? - No.
10436. Do you mean you did not see any? - I did not see any.
10437. Your boat was launched over the side by means of the falls? What happened to it, do you remember? What happened when you first got to the water? Did it float all right? - Yes.
10438. Were the sides up - the canvas bulwarks? - Yes.
10439. Was it dry when you got into the water? - Yes.
10440. Who was in charge? - The Quartermaster.
10441. Do you remember his name? - No, I do not.
10442. Tell us what happened to it. I want you to tell us all you can. You got into the boat; there was the Quartermaster in charge. I suppose some of you started rowing? - Yes; I handed the babies over to the passengers, and I took the oars.
10443. You took the oars with the rest of the crew? - Yes.
10444. Did any of the passengers help you to row, or was it all done by you - the crew? - Done by the crew.
10445. How far did you row? Did you row right away from the ship? - Yes. We rowed away from the ship. We rowed her a distance out.
10446. You rowed out a distance from the ship? - Yes.
10447. You could not tell us how far? - No.
10448. Did you notice when you rowed away whether the ship had any list? - Yes, the ship had a list on her port side.
10449. Did you notice whether she was down by the head? - No, I did not notice. 10450. Did you notice whether she appeared to be going deeper into the water forward - did you notice that? - No.
10451. Then you rowed away? - Yes.
10452. Did you see the vessel go down? - Yes.
10453. Were you facing her when she went down? - Yes.
10454. Were her lights burning? - Yes, the lights were burning.
10455. Up to the last? - Yes.
10456. Can you give us any idea of how long it was after you had started rowing away from the "Titanic" before she sank? - No, I cannot. It was 20 minutes to two when we came away from her.
10457. That will help us. It was 20 minutes to two, you remember, when you started rowing away from the ship's side - is that right? - Yes. 10458. That is what you mean, is it? - Yes.

10459. Not when you came up on deck, but when you started rowing away? - Yes, when we got away. It was just in time.
10460. How do you remember it was 20 minutes to two? - Because I looked at the time.
10461. That is what I wanted to know. Where did you look at the time? - One of the passengers had the time.
10462. And it was 20 minutes to 2? - Yes.
10463. Will you tell the Court what you saw? Explain to the Court what you saw when the vessel sank? - Of course, when she sank she went down. She went down *this way (showing)*. I could not exactly say. I am only rough myself, and I cannot describe it. 10464. Let us see if we can help you. Did she appear to be plunging down by the head or the stern? - She was plunging forward.
10465. Did you see her stern out of the water at all? - Yes, Sir.
10466. Was the stern upstanding? - Yes.
10467. So that the stern was up in the water like *that (showing)*? - Yes.
10468. Could you see underneath her? - No.
10469. Could you tell that her keel was visible? - Yes, the keel was visible.
10470. Then, when you saw that, what did you next see happen to the stern? - She went down, you see. It upset me, and I could not exactly say.
10471. It upset you and you cannot give us a description of what happened? - No.
10472. Did you remain in this collapsible boat until you were picked up by the "Carpathia"? - Yes.
10473. And all your passengers? - Yes.
10474. As you went away with your 66 passengers and crew, and so you were picked up by the "Carpathia"? - Yes.

**Page 233**

**Examined by Mr. SCANLAN.**

10475. When this collapsible boat was lowered was the water practically up to the deck? - Not on that side - not on our side. That was the starboard side.
10476. Had you a light in this boat? - No.
10477. Was there a compass in it? - I do not know.
10478. Was there a supply of biscuits? - I do not know.
10479. Had you sufficient of a crew to row this boat? - No.
10480. Did you require the assistance of passengers? - No; we did not require them.
10481. You had 5 members of the crew in this boat? - Yes.
10482. How many would you have needed in order to row her? - It would want 8 - 8 or 9 crew.

**Examined by Mr. HARBINSON.**

10483. Did anyone give you any instructions to stand at the first class emergency door? - No.

10484. Did you hear anyone give any instructions to any of the other stewards as to where they were to stand? - No.

**Examined by Mr. COTTER.**

10485. Where is your third class pantry situated? - Amidships.

10486. From the time the vessel struck until you went to the boat did you go down to your pantry at all? - No.

10487. Did you go near to the third class dining room? - No.

10488. Did you see any stewards along E deck taking passengers aft - women passengers and children? - No.

10489. You did not see them? - Not E deck. You say aft. I was not there. I was at the other end.

10490. I mean taking them from forward to aft? - No.

10491. When you got up to the boat deck who was standing by that collapsible boat? Was there any officer there? - Yes.

10492. Who was it? - The chief officer, Mr. Murdoch.

10493. Did you see Mr. Lightoller about anywhere? - No.

10494. What officer got into your boat? Was there any officer there? - Only a quartermaster.

10495. There was no officer at all in your boat? - The quartermaster.

10496. He is the petty officer of the boat. Was there any water in the collapsible boat by the time you got to the "Carpathia"? - No. 10497. It was all right? - Yes.

*(The Witness withdrew.)*

**EDWARD BROWN, Sworn.**

**Examined by Mr. ASPINALL.**

10498. Were you serving as a first class steward on the "Titanic" on the occasion of this casualty? - Yes.

10499. Have you served in liners before? - Yes.

10500. In what ships? - The "Cedric," the "Teutonic," the "Oceanic," the "Adriatic," and the "Olympic."

10501. All White Star boats? - Yes, all White Star boats.

10502. Do you know what your boat was? - The boat that I was assigned to was number 5.

10503. Had you seen the list? - Yes, I saw the list on the Friday.

10504. At the time of the accident were you asleep? - At the time of the accident I was asleep.

10505. Were you awakened by the shock? - Yes.

10506. I do not intend to take you in great detail through the earlier part of your story, because we have heard it many times from other people, but did you at first think that there was no danger? - I never thought there was any danger.
10507. And then after some 20 minutes had passed were you told that you were wanted on the boat deck to help with the boats? - That was the time I thought it was. You cannot judge time very well. I thought it was 20 or 25 minutes.
10508. Did you go on the boat deck, and do what you were told? - Yes.
10509. To take this matter quite shortly, did you first help with boat No. 5? - Yes.
10510. Did you help the women and children into the boat? - Yes.
10511. Those were the orders? - Those were the orders.
10512. Then did you go from that boat to No. 3? - Yes.
10513. And help there again with women and children? - Yes.
10514. Then did you go from boat No. 3 to boat No. 1? - Yes, I went from boat No. 3 to boat No. 1.
10515. And helped with women and children? - Yes.
10516. Having done that, did you then go and help with a collapsible boat? - Yes. 10517. I want you to tell me which collapsible boat that was, the one on the port side or the one on the starboard side? - The starboard side - the one that was under number 1 boat.
10518. Did you get that collapsible boat to the davits? - We did, Sir.
10519. Did you then proceed to fill it up with women and children? - Yes. 10520. Was Mr. Bruce Ismay taking any part in connection with that boat? - Yes, he was calling out for the women and children first. He helped to get them into that boat and he went into it himself to receive the women and children.
10521. Was that boat filled? - It was filled.
10522. What was done with that boat? - Filled up and lowered over the side.
10523. Was it then lowered down to the water? - As far as I can say. I saw it going over the side from the boat deck.
10524. Up to the time that that boat was filled and lowered away was Mr. Ismay there doing what you have told us? - Yes.
10525. Did you see any more of Mr. Ismay yourself after that? - Not after that. 10526. After you had finished with that boat where did you next go to? - We turned our attention to another collapsible boat that was on top of the officers' house on the same side of the ship.
10527. That was a boat which lay on the top of the officers' quarters? - Yes.
10528. You tried to get that boat down to the deck? - Yes.
10529. Did you get it down? - Yes; we got two planks on the bow-end of the boat, and we slid it down on to the boat deck.
10530. Having got it down, the next thing, I suppose, would be to get it to the davits? - We tried that, and we got it about halfway and then the ship got a list to port, and we had great difficulty. We could not get it right up to the davits, so we had to slacken the falls. The ship took a list to port, and we could not get it up the incline right up to the davits.

10531. Did you do your best? - We did our best. We slackened the falls and made it fast.
10532. You did make it fast? - Yes, we did make it fast by slackening the falls, but we could not haul it away any further.
10533. Were you ever able to get it outboard so as to lower it? - No.
10534. Were there any women there whilst you were dealing with this boat that had come from the top of the officers' quarters? - There were four or five women that I could see there waiting to get into this boat if we got it under the davits.
10535. Whilst you were trying to get this boat up the hill, as it were, to the davits, did anything happen to the ship? - Yes, she put the bridge under then.
10536. She put the bridge right under water? - Yes, she put the bridge right under water.
10537. You spoke of a list to port, I think? - Yes.
10538. At the time that she put the bridge under water was the list considerable? - Yes.
10539. She was, of course, well down by the head then? - Very well down then, Sir.
10540. What happened to you when she put the bridge under water? - I found the water come right up to my legs *here*, and I jumped into the collapsible boat then. I cut the after fall, and I called out to the man on the forward end of the boat to cut her loose; she would float if we got the falls loose.
10541. Did this other man do that? - I could not say.
10542. Did she float? - I cut the ropes and then I was washed right out of her.
10543. You cut both falls? - No, only the after fall.
10544. What happened to the forward fall? - I could not say. I was washed out of the boat then.
10545. You were washed out of the boat, were you? - Yes.
10546. Did you notice what happened to these three or four women who had been standing there? - The last I saw of them they were in the water struggling.
10547. You could not help them, I suppose? - No.
10548. Then did you go down - did you sink? - When I got in the water I was in a whirlpool going round like this. (*showing*).
10549. Did you come up to the top? - Yes, I came up to the top.
10550. Had you got your lifebelt on? - Yes.
10551. Did you hear any noise from the ship as she went down under you - any explosions? - What I took to be an explosion, Sir - a great noise, a great report.
10552. When you came to the top of the water, what did you see round you? Did you see anything round you - wreckage or people? - Not then. There was no wreckage, but a lot of people in the water.
10553. Could you help me with regard to this; if you did not notice say so: Did you notice whether the bow broke off? - With the first report of that explosion I saw the afterpart of the ship giving a tremble like *this* (*showing*), and I thought by the afterpart going up like *this* (*showing*), and giving a bit of a tremble that the bow had fallen off. I might be wrong.
10554. But that was your conclusion from it? - Yes.

10556. I suppose your opportunities for observation were not very good at this time? -  
No. That part was practically under water then.
10557. When the afterpart gave this tremble, where were you then? - In the water; right  
before the forward funnel.
10558. Did you notice whether the lights of this afterpart were still lighted or not? -  
There were lights burning then.
10559. Could you see that? - Yes.
10560. After you had been in the water for some time did you see a black object? - Yes, I  
saw a black object.
10561. How long do you think you were in the water before you saw that? - It seemed a  
very long time.
10562. Was it a long time? - It seemed a lifetime to me.
10563. Did you swim towards it? - I did my best. I never swam in my life; but I kept  
myself up with the lifebelt, and I made my way the best I could towards it.
10564. Do you mean you cannot swim? - Yes.
10565. Then the lifebelt saved you? - The lifebelt saved me.
10566. Did that black object prove to be a collapsible boat? - Yes.
10567. I think it was half submerged, was it not? - Yes, submerged with the weight of  
men on it.
10568. How many people were there on it? - I should say there were 16 or 17 on it.
10569. You used the expression "with the weight of men on it." Were they men  
or were they some women? - They were all men then, Sir. The women we had on  
it were picked up after I got aboard of it.
10570. Did you get on to that collapsible boat? - I did.
10571. Did you remain on it? - I remained on it.
10572. Did you pick anybody up in that boat? - When I was there I saw them pick two  
up, a woman and a gentleman - a very big gentleman.
10573. You have spoken of the men on this boat. Were they passengers, or were they  
crew of the ship, or staff of the ship? - They were mixed up; there were some  
stewards, some firemen, and the rest passengers.
10574. Could you tell me how many were passengers out of the 16 men? - There was one  
fireman that I knew. I do not know whether there were any more or not.
10575. Do you know how many were passengers? - I know there were three stewards,  
and I know there was one fireman. I do not know how many more.
10576. (*The Commissioner.*) Do you know whether any of the 16 that you saw were  
passengers? - Oh, yes, Sir.
10577. How many? - You could not very well pick them out. I should say 10 or 12 of  
them were passengers.
10578. (*Mr. Butler Aspinall.*) I believe next day, to go on a little further, you first of all  
were picked up by No. 14 boat? - Yes.
10579. And taken to the "Carpathia," were you not? - Yes.
10580. Do you know a man called Joughin, the Chief Baker of the "Titanic"? - Yes, I do.

10581. He has been here, and he has told us that he swam to a collapsible boat that was in trouble, after he had been in the water for some time, and they refused to take him in.

Do you remember that incident happening? - That is another collapsible boat altogether.

*Mr. Aspinall:* That is not your collapsible boat?

*The Commissioner:* You gave me, Mr. Aspinall, or the witness did, the number of the boat that picked them up; what was it?

10582. (*Mr. Butler Aspinall.*) Boat 14. (*To the Witness.*) You were picked up by boat 14? - Yes.

10583. And we have heard it was the Fifth Officer, Mr. Lowe, who was in charge of that boat? - Yes.

*The Solicitor-General:* That boat is the one that Scarrott and Morris have given evidence about already.

10584. (*Mr. Butler Aspinall.*) Do you know if on your collapsible boat there was a man - a cook I think he was - from the cook's department by the name of Maynard? - No. He was on the upturned collapsible boat.

10585. That clears it up. Then you were taken on board the "Carpathia." I want you to tell me these two other matters which I think you can speak about. Whilst you were working down the last collapsible boat from the top of the officer's quarters to the deck, did you notice Captain Smith? - Yes, the Captain came past us while we were trying to get this boat away with a megaphone in his hand, and he spoke to us.

10586. What did he say? - He said, "Well, boys, do your best for the women and children, and look out for yourselves." He walked on the bridge. 10587. He returned then to the bridge? - Yes.

10588. And about that moment of time the ship took her last plunge? - Yes, a very few seconds after that.

## **Page 235**

10589. There is one other matter I want you to tell us about as you were on the ship to the end. Do you know what the Band were doing at the last? - I do not remember hearing the band stop playing. They were playing for a long time, but I do not remember hearing them stop.

10590. Where would the band be gathered; where would they play, do you know? - Right on the forward companion on the very top - on the boat deck forward companion.

*The Solicitor-General:* Between the first and second funnels.

10591. (*Mr. Butler Aspinall.*) Were they playing at the time when you were dealing with this collapsible boat from the top of the officers' quarters? - Yes.

10592. Up to as late as that your memory serves you? - Yes, they were playing then.

10593. (*The Commissioner.*) Do you mean up to the time when the Captain called out to you to look after the women and children? - Yes, they were playing a few seconds before that, Sir.

10594. (*Mr. Butler Aspinall.*) Just in order to get the names, if I can, of some of the people in your collapsible boat, do you know the names of any member of the crew that was in that collapsible boat? - Two besides myself.
10595. You know the names of two? - Yes.
10596. Will you give me their names? - Gus Whiteman, [August Weikman] the Chief Barber, the First class Barber, and W. Lucas, a First class Steward.
10597. (*The Attorney-General.*) You say Lucas was a steward? - Yes, a first class steward.

*(After a short adjournment.)*

**Examined by Mr. SCANLAN.**

10598. I believe that this collapsible boat which you failed to get into the water was practically a new collapsible boat the same as the others? - Yes, as far as I know, it was.
10599. And would have been serviceable if you had succeeded in getting it launched? - Yes.
10600. Did the fact that this boat was on the top of the officers' quarters make it difficult to get her near the davits? - No, Sir; not if the ship had been on an even keel; but when we got it down on to the boat deck the ship had a list to port.
10601. I know that was against you, of course. The other collapsibles were under the davits, were not they - under other boats? - They lie just behind the No. 1 davit. 10602. And I suppose if this boat had been placed under one of the ordinary lifeboats it would have been quite an easy matter, even with a list, to have launched it? - If it was right under the davits - Yes.
10603. As you were one of the last to leave the boat before she sank, I want to ask you this question: Did you observe just at that time the lights of any ship in your vicinity? - I never saw any, Sir.
10604. Or even when you got into the water and on to the raft? - Only the lights of our own boats.

**Examined by Mr. COTTER.**

10605. How long have you been going to sea? - Eight years.
10606. Have you been in any other company except the White Star Line? - My two first voyages to sea were in the Dominion Line.
10607. Do you know what boat drill is? - I do.
10608. What was the number of your boat on the "Titanic"? - No. 5. 10609. You saw that on the list? - I saw that on the list.
10610. In the pantry? - In the pantry.
10611. Had you any bulkhead door allotted to you? - No.
10612. Do you know anything about the bulkhead doors on the "Titanic"? - Which way do you mean?

10613. Where they were situated? - Of course, down below in the engine room department. I do not know anything about them; our department a little.
10614. Tell us what you know about the bulkhead doors and where they were situated? - On E deck, I know there are four there; that is on the port side. On the starboard side I know of two.
10615. Did you take any part in any bulkhead door drill? - No.
10616. You do not know whether the bulkhead doors were closed during the voyage, as far as it went, of the "Titanic"? - Not so far as I know.
10617. Now, I will take you up to the boats. When you got on deck you went to No. 5 boat, you stated? - Yes, I went to No. 5. That was my boat.
10618. And from there to No. 3? - Yes, No. 3.
10619. When you got to No. 1 did you receive any orders? - When I got as far as No. 1 boat I heard an order called out to cut the collapsible boat loose that was lying under No. 1 boat.
10620. You heard an order? - I heard an order given; I do not know who by. It might have been one of the officers, I do not know. I heard an order given to cut the collapsible boat loose.
10621. Did you go to the collapsible boat? - I did, and got my knife out and cut it loose.
10622. Did you see No. 1 launched? - No. My attention was on the collapsible boat, and I could not see what was going on in No. 1. I was that close to it (*showing*), but I could not see what went away in it or anything else.
10623. You never heard the order to launch No. 1? - No, I was working down below the collapsible.
10624. Did you see the first collapsible boat go away? - I did, off the starboard side.
10625. Was it launched from the davits? - Right from the davits, yes.
10626. Did you see Mr. Ismay about? - Yes, he was standing in the boat receiving women and children.
10627. He was standing in the boat? - He was receiving women and children in the collapsible boat when it was hanging over the side on the davits.
10628. Were there any women about after it had been launched? - I saw four or five women when we were trying to get the boat away.
10629. When you were launching? - When the first collapsible boat went there were no more women there to get in the boat and it was practically full then.
10630. How long from the launching of that collapsible boat with Mr. Bruce Ismay in it, was it that you saw the women? - I suppose it took us about 10 or 12 minutes to get the other boat down.
10631. That is when you were getting the boat off the house? - Yes, off the officers' house, and those women were waiting to get into the boat if we could have got it away.
10632. They came along after the first collapsible boat had gone? - Yes.
10633. How many men did it take to get that collapsible boat off the house? - I could not tell you the number; there were seven or eight on the top deck and two or three down below receiving it.

10634. Where did you get the planks from to put against the house to get the collapsible boat down? - Where they came from I cannot say, but they were there ready.
10635. Were they planks or masts or oars out of some of the other boats? - That I did not take much notice of, whether they were masts or what. I think they were the planks that held the awnings on the other boats.

**Page 236**

10636. You mean the fore-and-aft? - Yes.
10637. You had two fore-and-afters and put them there? - Yes.
10638. Was anybody hurt? - No.
10639. Had you any difficulty in sliding that boat off the house? - We put the bow of it on the planks and let it slide down.
- Mr. Cotter:* With your permission, my Lord, could we have the model canted over?
- The Commissioner:* Certainly.
10640. (*Mr. Cotter - To the Witness.*) Will you show us how far she had a list? Say when to stop. (*The model was moved.*) - That will do.
10641. She had a list to port? - Yes.
10642. And the bow down that way? - Yes.
10643. It was a cant on that way and a list to port? - Yes.
10644. When you started to bring the Englehardt boat off the house? - Yes. 10645. Did you land it down to the deck next to the house or near the davit? - Right alongside to the house, the length of the planks; we put them half-way between the house and the davits.
10646. You would have to pull your falls over from the davits, loose your falls and drag them over and fix them on the boat? - Yes, we did that when we found we could not push it up the incline. We had to slacken the falls.
10647. Suppose you had got them on the davits, with the list she had on, could you have launched her? - We should have launched it. We should have got it out, swung the davits out first and then put the people in. It would have been a little difficult, but I think we could have managed it.
10648. With a ship with a list like that? - Yes.
10649. With a 70 feet drop? - Yes, because the weight in the boat would slide it along the side of the ship.
10650. The water was well up then, was it not? You might have been able to? - She had her nose pretty low down then.
10651. You could not get the forward end or afterend of the falls cut away? - I cut the afterend myself; I do not know about the forward. I shouted for them to be cut away and that the boat would float then, but I do not know whether they were cut or not. I know the afterend was cut.
10652. Was there anybody in there? - There was a lot scrambled into it then; when the sea came on to the deck they all scrambled into the boat.
10653. How many? Can you give us an idea? - I have no idea - practically full. The boat was practically full, when the sea came into it, and washed them all out.
10654. Washed everybody out? - Washed everybody out of the boat.

10655. Washed the boat away? - No, it left the boat there. I do not know where it went to then. We were washed out of it; that is all I know.
10656. Was there anybody around you when you were in the water? - Yes, and well I know it, because they tore my clothing away from me with struggling in the water. 10657. Can you give us any idea when you were picked up? Was it dawn or daylight, or dark? - When I was picked up by our lifeboat?
10658. By the collapsible? - It was a good while after daylight.
10659. So you must have been in the water say about two hours and a half? - A long time I know.
10660. When you got in the boat were there many men in that boat? - Yes. I suppose there would be 12 or 14 men in it.
10661. Were they passengers or crew? - Mixed up.
10662. Could you give us any idea how many of the crew? - I really could not say; I could not pick them all out at that time.  
Can you give us any idea?
- The Commissioner:* He has told us there were 10 to 12 passengers. He has already said it: "I got on to the boat and was saved. We picked up a woman and a man; 10 or 12 were passengers."
10663. (*Mr. Cotter.*) How many were pulling when you got into the boat? - There was nobody pulling then because the boat was under sail when I got into it.
10664. Did they put out oars afterwards? - Yes, the officer asked for volunteers to row.
10665. Did you take an oar? - I did. There were three oars put out on the starboard side of the boat, and I took one on the port side.
10666. What condition were you in? - Were your feet or hands swollen? - My feet had burst my boots and my hands were all swollen up like *this (demonstrating)*.
10667. And you volunteered to take an oar? - Yes.
10668. And you took an oar? - Yes.

**Examined by Sir ROBERT FINLAY.**

10669. Only one question. Did you hear an order given in the alleyway about the watertight doors? - That was the first order I heard after I was woke by the shock.
10670. Just tell us what you heard? - Who gave it I do not know, but I heard an order in the alleyway outside our quarters to close all watertight doors.
10671. There are watertight doors in the alleyway? - Yes, lower down, further aft than our quarters are.
10672. And you heard that order given? - Yes.

*(The Witness withdrew.)*

**CHARLES DONALD MACKAY, Sworn.**

**Examined by Mr. RAYMOND ASQUITH.**

10673. Is your name Charles Donald Mackay? - Yes.
10674. You were a bathroom steward on the "Titanic"? - Yes.
10675. At the time the ship ran into the iceberg, were you in your quarters? - Yes.
10676. Were you playing cards? - I was playing bridge.
10677. Do you feel a shock? - Yes.
10678. Where were your quarters? - Amidships, practically amidships.
10679. Can you see this plan from there? Would it be *these (Pointing on the model.)*? - No, further forward than that.
10680. Which deck? - E, the working alleyway.
10681. Was it near the first class dining saloon you were? - Yes.
10682. Just abaft of that? - Yes, the afterend of the dining saloon, first class.
10683. Somewhere about *there (Pointing.)*? - Yes.
10684. Did you feel the shock? - Yes.
10685. Was it severe? - No, not too severe.
10686. You just noticed it. What did you do when you felt it? Did you come out into the alleyway? - Yes.
10687. You are speaking now of the alleyway on E deck? - The ship's working alleyway.
10688. On E deck? - Yes.
10689. Did you meet anyone there? - I met quite a crowd.
10690. Were you told something about what had happened? - No, we were told nothing.
10691. What did you do next? - The first order I heard was from the Second Steward to close all watertight doors on F deck.
10692. To close the watertight doors on F deck? - That was the first order I heard given.
10693. How long after the accident was it you

### **Page 237**

- heard that order? - A matter of about a quarter of an hour.
10694. And did you go to F deck to obey that order? - No. The third class chief steward was sent for, for his men to do that order.
10695. Was that Mr. Kieran? - Yes.
10696. Did you see the Captain about this time? - No, I saw the Captain a matter of about 20 minutes after that.
10697. What did you see him do? - I saw him come down the working staircase and go along, I presume, to the Chief Engineer's room. About 10 minutes after that I saw him come back.
10698. You saw him come back, too? - Yes, and go up the same staircase.
10699. Shortly after that, did you get another order? - All hands were to be called and to get out of their quarters and proceed to the passenger decks. 10700. Who gave that order? - The second steward, Mr. Dodd.
10701. You said something about passengers? - The bedroom stewards were ordered to their passengers' rooms to tell passengers to get on warm clothing and proceed to the top deck, the boat deck.

10702. I think you were not a bedroom steward, you were a bathroom steward? - Yes.

10703. Does that mean that you had no particular passengers to look after? - We were told to get on the top deck and assist the passengers with their lifebelts.

10704. Did you take your own lifebelt? - No.

10705. What did you do? - I went to the top deck as we were ordered.

10706. What did you do when you got there? - Assisted passengers on with their lifebelts.

10707. When you say the top deck, I suppose you mean the boat deck? - Yes.

10708. Did you receive another order after that? - No, not then.

10709. When did you get your next order? - After we helped the passengers on with their lifebelts we were told to take our boat stations at our respective boats.

10710. Did you know what your boat station was? - Yes.

10711. What was it? - No. 3, starboard side.

10712. And did you go to No. 3? - Yes.

10713. Did you help to put people on board? - I did.

10714. Whom did you put on? - Women and children, and assisted one or two men.

10715. One or two men? - Yes.

10716. Why did you put men into the boat? - Because there were no other women there available to go, I suppose.

10717. The order was to put women and children in, was it not? - Quite right.

10718. When there were no women to go, you put in some men? - Yes.

10719. Can you say how many men you saw get into boat No. 3? - I cannot tell you.

10720. Can you give us any idea? - A matter of perhaps three or four; that is about all.

10721. After you had filled No. 3, I suppose that boat was lowered? - It was.

10722. What did you do next? - I helped to lower that boat.

10723. What did you do after it had been lowered? - Came along the line to No. 5.

10724. That was the next boat aft? - Yes.

10725. Did you help to fill and lower that? - No, pardon me, No. 7.

10726. You did not go to No. 5? - No. 7 went before No. 5.

10727. No. 7 went after No. 3? - Yes, to the best of my recollection.

10728. Did you put women and children into No. 7? - Yes.

10729. Any men into No. 7? - I believe so - a matter of one or two. I cannot state how many, for I do not know who were crew and who were passengers.

10730. After you had done that to No. 7 what did you do next? - I went back to No. 5.

10731. And did you do the same thing there? - No, I just watched the proceedings.

10732. What did you notice when you were watching the proceedings at No. 5? - She was filled up and lowered the same as the rest.

10733. Who were put into her? Could you see? - I could not say.

10734. Were they men or women? - Well, women, I suppose. 10735. Did you see? - Women, I said.

10736. You said "Women, I suppose." Did you see? - Well, when I say women, I mean to say women were the majority. I cannot say how many men there were lowered in that boat.

10737. Can you say whether any men passengers were put into that boat? - I cannot say. It is a hard job to tell a passenger from the crew when they are just simply called up out of their bed with simply an overcoat on.
10738. I am not blaming you. After you had looked on at the loading of No. 5, what did you do next? - I went along to No. 9.
10739. Did you help there? - The same proceedings took place.
10740. Did you help to put people into No. 9? - No, I watched proceedings. 10741. Did the same thing happen there? Women were put in if there were women? - All the women and children were put in first, and to fill up the boat men came after.
10742. Eventually did you get to No. 11? - I did.
10743. The first boat you mentioned was No. 3? - Quite right.
10744. Had you been to No. 1 before that? - No. 1 was on the davits.
10745. Did you see who were in it? - Nobody.
10746. What happened next? Did you watch what was done to No. 1? - No, No. 1 was on the davits when I left No. 7. After that I cannot say. I cannot tell you when No. 1 was lowered.
10747. No. 1 was on the davits when No. 3 was being lowered? - Yes, to the best of my recollection.
10748. And there was no one in No. 1 at all? - No; no one stationed by it even.
10749. The order of events was that No. 3 was lowered first? - Yes.
10750. And then No. 7? - Yes, and then No. 5, and then No. 9, to the best of my ability.
10751. And No. 1 was still on the davits when No. 7 was being lowered? - To the best of my ability, yes.
10752. I understood you to say you did not see anyone put into No. 1 and cannot give any evidence about it? - No, no evidence at all.
10753. You eventually went to No. 11.? Describe what happened with regard to that? - No. 11 was lowered to A deck.
10754. First of all, were crew put into it on the boat deck? - No.
10755. No one put into it? - No.
10756. It was lowered to A deck? - It was lowered to A deck empty.
10757. Did you go down to A deck yourself? - No, the first order I heard given was, Mr. Wheat, the second assistant-steward, had an order from Mr. Murdoch to take charge of that boat.
10758. That was on the boat deck? - Yes. Steward Wilson and myself were ordered by Mr. Murdoch to collect all the women we could and take to that A deck, which we did. 10759. Did you collect women on the boat deck? - Yes, and we took them down the companion to A deck.
10760. About how many do you think you collected? - A matter of about 40 on A deck, we collected.
10761. On A deck? - Yes.
10762. But you told me you collected some from the boat deck? - Yes, I said a matter of about 40 on the boat deck.
10763. Which do you mean, the boat deck or the A deck? - The boat deck. We had our orders from the boat deck to collect all the women we possibly could.

10764. And you collected about 40 on the boat deck and took them down? - Yes.

**Page 238**

10765. (*The Commissioner.*) And took them down to A deck? - Yes.

10766. (*Mr. Raymond Asquith.*) Did you collect any more on A deck? - Yes. 10767.

How many more, about? - I cannot say; we collected a few more. I cannot tell you within two or three.

10768. I do not expect you to, but can you say roughly? - I can give you a rough estimate of what the boat carried.

10769. That is what I want to know? - That is counting men, women, and children, 74 to 78, counting nine children.

10770. (*The Commissioner.*) This is No. 11? - Yes.

10771. It took away 70 to 80, you say? - No, 74 to 78, counting nine children - not all adults.

10772. (*Mr. Raymond Asquith.*) You spoke of collecting some people on A deck itself? - Yes.

10773. When you say that, do you mean that you collected people who were already on A deck, or that you went to other parts of the ship and collected them there? - After we brought the people down from the boat deck that we collected, we filled up the boat from the A deck with passengers that were there.

10774-75. With the passengers that were already on A deck? - Yes.

10776. And you did not collect any others from other parts of the ship? - No.

10777. Can you say how many of that 74 or 78 that were in your boat were crew? - Yes, I could give you exactly - five stewards and one fireman rowing; the assistant second steward at the helm, two sailors, one forward and one aft.

10778. (*The Commissioner.*) Is that eight altogether? - No, that makes nine. 10779. (*Mr. Raymond Asquith.*) Nine, counting yourself? - I said five stewards, one fireman, two sailors (one forward and one aft), and the assistant second steward at the helm.

10780. (*The Commissioner.*) Then there were six stewards? - Well, one is the boss of the department; I hardly call him a steward.

10781. (*Mr. Raymond Asquith.*) Do you know the names of the sailors that were in the boat? - I could not tell you; I have not the slightest idea.

10782. Or of any other members of the crew that were in the boat? - Let me see. Yes, William Wilton was one.

10783. He was a steward? - Yes. Macmicken. [A. McMicken.]

10784. What was he? - A steward. Tessenger, [A. Thessinger.] Mr. Wheat and myself. That is all I can answer for. I cannot answer for the others because they were new men on the ship.

10785. Was the last name you mentioned a steward, too? - Mr. Wheat was the assistant.

10786. I thought you mentioned another name? - Tessenger. He was a bedroom steward on E deck. The other men were strangers to me; I cannot think of their names. 10787. (*The Commissioner.*) Macmicken, Tessenger, and who else? -

- Wilton, Macmicken, Tessenger, Mr. Wheat, and myself. They were the only men I can remember. The fireman's name I do not know; the two sailors' names I do not know, and the other stewards I do not know, because they were strangers to the ship. They never came from the "Olympic" to the "Titanic" with us.
- 10788-10789. (*Mr. Raymond Asquith.*) That means, including yourself, there were ten members of the crew in this boat? - Nine, do you not make it?
10790. I thought I made it ten, but it does not matter? - Five stewards, one fireman, two sailors, and the assistant second steward at the helm.
10791. But you have not counted yourself? - Yes, I am counting myself as one of the five.
10792. That makes nine. You have told us there were also nine children? - There were 74 to 78, counting nine children ranging up to six years of age.
10793. Were all the rest women, or were there some male passengers? - There were two second class ladies, one second class gent, one first class lady, and the rest were all third class ladies.
10794. The rest were all third class ladies? - Yes.
10795. How do you come to know that? - Well, I do know; I cannot tell you why, but I do know. They were all third class people bar the four I have mentioned, bar the crew which was nine.
10796. You mean you could distinguish the first from the third, and that you counted them? - I cannot distinguish altogether, but I know when I got on board the "Carpathia" I found out they were third class.
10797. That is what I wanted to know. What did you do when you got into the boat in the water with people in it? Did you row away from the ship? - No, we had a bit of difficulty in getting away.
10798. What difficulty did you have? - The after fall would not run clear in the first place - it took three men to get the stern of her away from the flush of the water running from the ship's side.
10799. After you got free, did you row away from the ship? - Yes.
10800. How far away? - To the best of my ability a quarter of a mile.
10801. Were you within sight when the ship went down? - We watched all proceedings.
10802. Did you see a light while you were in the boat? - A supposed light do you mean?
10803. Well, I do not know whether it was a supposed light or not. Did you see what you thought was a light? - Yes, we thought there was a ship's stern light. 10804. Was it a white light or a coloured light? - It was a reddish light.
10805. And you thought it was the stern light of a ship? - Yes.
10806. Could you say in which direction it was with regard to the "Titanic", whether it was on the port or the starboard side of the "Titanic"? - Well, when I say it was the stern light of a ship, I should suppose she was going the same way as ourselves.
10807. On which side of the "Titanic" was it? - Starboard.
10808. On the starboard side; and you thought it was the stern light of a ship going the same way as yourself in advance of you? - Yes.

10809. And did you row towards that light? - For a matter of about two hours as hard as we could row.

10810. And did you lose sight of it in the end? - Yes.

**Examined by Mr. SCANLAN.**

10811. Who was in charge of No. 11? - Mr. Wheat, the assistant second steward.

10812. Were all nine of you able to row? - Yes.

10813. And you found that nine of you could manage this boat, even with that very full load of passengers? - Yes.

10814. Had your boat a lamp? - No.

10815. Did you look for it? - Yes.

10816. Had she got a compass? - No.

10817. Did you look for it? - Yes.

10817a. You are quite sure it had not? - Yes.

10818. How long have you been going to sea? - 17 years the 7th of last May.

10819. I suppose you have experience of a number of lines? - Yes.

10820. Have you had training in the managing of lifeboats? - Yes.

10821. Where? - The Royal Mail Company, the Union Castle Company.

10822. And what others? - The American Line and the White Star.

10823. Is that training given to stewards and stokers and firemen as well as to sailors? - It is given to all hands in the ship.

10824. Does it go the length of getting you into the boats and rowing you round the harbour? - Yes.

10825. Is that frequently done? - Well, in one or two companies, yes, out of the four I have been in.

10826. What are the one or two in which it is frequently done? - The Royal Mail Company, the Union Castle, and the Union before the Union and Castle were amalgamated.

**Page 239**

10827. How often? - The day before sailing, and the day of sailing.

10828. And on those vessels is it also the practice to have during the voyage a boat muster or a fire muster? - On a seven weeks' voyage fire and boat muster takes place at the end of each week; fire muster on the Saturday, boat stations on the Sunday at the muster.

10829. On boats crossing the Atlantic, is there a boat muster each week? - One each end - not for the boats to be lowered in the water.

10830. I mean, calling the men on the boat deck and showing them their stations? - Yes.

10831. I call that a boat muster. Do you agree with me there? - Yes, a boat muster; that is quite right.

10832. Had you got a boat station? - Yes.

10833. What was it? - No. 3.

**Examined by Mr. HARBINSON.**

10834. I did not catch whether you picked anybody up after the "Titanic" went down? - No.
10835. You did not see anybody? - We could not have picked up anybody if we had seen them.
10836. The boat was so full? - Yes.
10837. You did not see anybody near you? - Nobody at all.

**Examined by Mr. HOLMES.**

10838. Are you quite certain about the order in which these boats were lowered, Nos. 3, 5 and 7? - I have told you to the best of my ability; I am open to contradiction.
10839. Do you know a man named Jewell? - No.
10840. He has told us that No. 7 was the first boat in the water on the starboard side? - I beg to differ.
10841. At all events you are satisfied that 5 and 3 were in the water before No 1? - Yes.
10842. When No. 11 was lowered, was No 13 still on the davits? - No; No. 13 was being lowered when we were on the water's edge. 10843. About the same time? - About the same time.
10844. And before you were lowered, did you get any order from the officer on deck what you were to do? - In what way do you mean?
10845. What you were to do when you got into the water? - No orders at all.

**Examined by Mr. COTTER.**

10846. When you got the boat lowered how far did you pull from the ship's side before you stopped? - A matter of about a quarter of a mile.
10847. Can you give us any idea of the time which elapsed between the lowering of No. 11 boat and when the ship struck? - No; I will not make any stated time, for I do not know.
10848. You cannot give us any idea at all? - I will not attempt to, because I do not know.
10849. Did you see the ship sink? - Yes.
10850. Did you row back again? - No.
10851. You simply rowed away? - We did not row at all; we stood off about a quarter of a mile. From the time we left the ship to the time she sank we were a quarter of a mile away watching all proceedings.
10852. How many women were in that boat? Can you give us any idea? - Well, I say there were 74 to 78.
10853. Women? - No, all told.
10854. I mean how many women? - Well, I will allow you to abstract it; there were nine crew and one second class passenger.
10855. A second class gentleman? - Yes.

10856. That is 10? - Yes.
10857. That makes 64 passengers? - Yes, counting nine children; I do not know what they were.
10858. Can you tell us in what order your boat reached the "Carpathia" the following morning? Were you the first or the last? - Now you have got me guessing. I should say we were the last but three or four in.
10859. Were there any complaints in your boat before you got to the "Carpathia"? - Yes.
10860. Can you tell us what the complaints were? - Yes, they complained about being crushed up so much, and they could not sit down properly, and other people complained because they had to stand all night.
10861. Any complaint against the conduct of the men? - Yes.
10862. What? - Because we smoked.

**Examined by Sir ROBERT FINLAY.**

10863. You were told to collect the women. That order was given to you on the boat deck? - Yes.
10864. Where did you collect the women and children from? - All round the boat deck.
10865. They were on the boat deck already? - Yes.
10866. Then you collected them there and took them down to A deck? - We collected all we possibly could. That would amount to, say 40. I cannot be right to perhaps five or seven.
10867. Who helped you to do that? - A man by the name of Wilton.

*(The Witness withdrew.)*

*The Solicitor-General:* What we propose to do, with your Lordship's concurrence, is this. There are two witnesses that one or other of my friends would like to have in the box, and they both give, so far as we can judge, important evidence, a man named Wheat and the Quartermaster Wynn. Then when we have called those two, as far as we can see at present, we shall have exhausted this class of evidence so far as regards survivors who came across in the "Lapwing." [Lapland] I have made inquiries from my friends representing different interests, and as far as I can understand, they none of them suggest that any of the others who have come across in the "Lapwing" [Lapland] would be helpful. Then you will have the officers and other gentlemen later. I am leaving out of my reckoning at the moment any further witnesses who deal with boat No. 1. As your Lordship knows, there is a reason for dealing with that separately, and we are arranging to take that tomorrow. I hope it will be possible to deal with these two quite shortly.

**Page 240**

**JOSEPH THOMAS WHEAT, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

10868. Is your name Joseph Thomas Wheat? - Yes.

10869. Were you assistant Second Steward? - Yes, assistant Second Steward.

*The Commissioner:* Does that mean a second class steward?

10870. (*The Solicitor-General - To the Witness.*) Does that mean a second class steward or not? - No.

10871. Just tell me who your superiors are in your own department? - The Chief Steward, the Second Steward, and the Purser.

10872. And you would come fourth, as it were? - Well, after the pursers; there are a number of them, quite a number of pursers abroad.

10873. You mean the purser rating; I see. Putting aside the purser rating, you have the chief steward and the second steward? - Yes.

10874. Was the chief steward saved? - No.

10875. Was the second steward saved? - No.

10876. At the time when this accident happened were you in your bunk? - No, just about to turn in.

10877. You were just going to turn in? - Yes.

10878. Did you hear the collision? - Yes, I heard a noise.

10879. As you judged it at the time, what did you think it was? - Well, I thought she had cast one of her propeller blades. It sounded to me like that.

10880. Have you been on a ship where that has happened? - Yes.

10881. And you thought it was that? - Yes, I thought it was the same thing. 10882. We must find out where your room was? - On F deck down by the Turkish baths.

10883. Is it the port or starboard side? - Port side.

10884. I see "Turkish Bath Attendants" and I see "Second Steward" marked. Those are on the side of the ship? - Yes, on the outside.

10885. Then I see on the inside, "Two assistant second stewards"? - Yes. 10886. That is your room? - Yes.

10887. You had a mate in your room with you? - Yes.

10888. Was he in the room with you at the time? - Yes, he was in his bunk.

10889. You roused him, I think, did you not? - Yes.

10890. Did he get up and find out what was the matter? - Yes. I asked him if he had heard any noise, and he said "No."

10891. What deck did you go to? - To E deck.

10892. That would be the deck immediately above you? - Yes.

10893. And what did you learn when you got to E deck? - Well, I met the night watchman. I think his name was Johnson. He told me she was making water badly forward.

10894. Was that man Johnson saved? - Yes.

10895. I think we have had him here as a witness; he is a Scotsman, is he not? - Yes.

10896. You met Johnson? - Yes.

10897. And he told you she was making water forward? - Yes.

10898. Did you go forward yourself? - Yes, I went forward myself.

10899. On the E deck? - Yes, forward on E deck.

10900. And what did you find when you went forward on the E deck? - I went down to the Post Office room, which is down on G. You will find a stairway leading from E down to the Post Office and baggage room.
10901. I want to trace this because I understand this is only a few minutes after the accident? - Ten minutes or a quarter of an hour.
10902. You were on E deck. You go forward? - Yes.
10903. And you go down as low as G deck? - Yes.
10904. Now will you tell me again which is the stairway by which you go down from E deck? - The first stairway leads down to the squash racquet court and then continues on down to the Post Office and baggage room.
10905. Is the stairway immediately aft of the squash racquet court? - No, forward of the squash racquet court.
10906. I thought forward of the squash racquet court was a bunker head? - When you go down to the squash racquet court you turn to the right to get to the squash racquet court.
10907. Is it the stairway which, when you get to G deck brings you close to the Post Office? - Yes.
10908. You went down that stairway? - Yes.
10909. And you think it was about ten minutes or a quarter of an hour after you had felt the collision? - About that, I should think.
10910. Now will you tell us what you found when you got down to G deck? - I saw the mail men dragging bags of mail up, which I took to be the registered mail. The water was already on that deck.
10911. It was already on G deck? - Yes.
10912. Did you get down to the actual level of G deck? - Yes, I was on G deck.
10913. You were standing there? - Yes.
10914. Was there water where you were standing? - No, it was just making up the stairs then, just making G deck.
10915. You mean coming up from below, the Orlop deck, to G? - Yes.
10916. Is there a stairway which goes down again from G deck to the deck below? - Yes, but that is behind those stairs. You turn round again to get down the stairs.
10917. I want you to tell us where you saw the water coming up as you say just making G deck? - It was almost flush with G deck when I got on it.
10918. Do you mean where this stairway is which leads down? - Yes.
- The Solicitor-General:* Your Lordship has that, no doubt.
- The Commissioner:* I have. This means that the water in this part of the boat had risen above the Orlop deck.
10919. (*The Solicitor-General.*) So I follow, at that part. Your Lordship observes this is the compartment of the ship which is immediately in front of the No. 6 section. No. 6 boiler section is the compartment next aft. (*To the Witness.*) Did you spend long enough there to see whether the water was rising rapidly or slowly? - Yes, it was rising rapidly. 10920. Did the water actually reach the deck you were standing on, G deck, while you were there? - Yes, it was just on G deck.

10921. Just reaching it? - Yes; it was over G deck before I left; it covered G deck.  
10922. Then what did you do? Where did you go? - I went upstairs to E deck again and went down to F deck to close the bulkhead doors on F deck by the Turkish baths. There are two bulkhead doors there.  
10923. And did you close those? - Yes.  
10924. Did you do that alone, or did somebody help you? - I closed the inside one myself, and then to close the other we had to go on top and turn that one with a key. Mr. Dodd and Crosby, the Turkish bath attendant, helped me.  
10925. Is Mr. Dodd the second steward? - Yes.  
10926. Now we will first identify the two doors. They are on F deck, are they not? - Yes.  
10927. I see just in line with the Turkish baths on my plan two watertight doors marked. One is a watertight door which is nearly amidships and the other is a watertight door more on the starboard side? - Well, they are both on the starboard side.  
10928. Yes, they are; quite right. Which was the one you closed first? - The inside one.  
10929. The one nearer amidships? - Yes.  
10930. And that one you closed unaided? - Yes.  
10931. Then did you pass at once to the other one which is on the outside? - Yes.  
10932. And that one you were helped to close? - That was closed from E deck.  
10933. It had to be closed from the deck above? - Yes, they are closed with a key.

## **Page 241**

10934. Did you go up to the deck above and help to close it? - Yes.  
10935. Now at the time when you closed the first of those watertight doors on F deck, the one that you closed unaided, was there any water on F deck as far as you saw? - No. 10936. You told us you thought it was about 10 minutes or a quarter of an hour before you went down and saw the water rising? - Yes.  
10937. Could you give us some idea, how long after that was, or should you say that you closed these watertight doors by the Turkish baths? - I do not suppose it would be more than five or six minutes.  
10938. Then you were a few minutes down looking at the water? - Yes.  
10939. When you say you closed these doors, do you mean you did this out of your own idea? - Yes.  
10940. Or had an order been given? - No, I did it on my own.  
10941. As far as you know up to that time, had any order been given about closing watertight doors? - No. I heard none.  
10942. What was the next thing after that? - After the bulkhead doors I proceeded up the stairs on to C deck. I had to pass D first, and before I got to C, Mr. McElroy was looking over the banisters.  
10943. Is Mr. McElroy the purser? - Yes. He saw me coming and told me to get the men up and get all lifebelts and all passengers.  
10944. What do you mean by getting the men up? - Most of them were down below at the time.

10945. By the men, do you mean the crew? - Yes, our own department.

10946. You would be one of the superiors responsible for a lot of the stewards? - Yes.

10947. You were to get them up? - Yes.

10948. Did you pass the word round? - Yes.

10949. You went to the stewards' quarters? - Yes. 10950. And gave these orders? - Yes.

10951. And did the stewards turn out? - Yes, they were nearly all out when I got down there.

10952. They were nearly all out already? - Yes.

10953. What was the next thing? - They were all round the decks getting the lifebelts on the passengers, and getting warm clothing on them, which took, I should think, about half an hour. Then we got the word to pass all women and children on to A deck on the port side.

10954. I want to get it in order. At some time you returned to your own room, did you not? - Yes, that may have been before I went to the glory holes.

10955. Try and get it in order for me, because I think you saw some water when you went to your own room? - That was later on.

10956. Very well, tell it us in the right order. - It was, I should think, about ten minutes or a quarter to 1 when I got the order from Mr. McElroy again to get all the men to the boats - to their stations.

10956a. That is, all your stewards? - Yes.

10957. Did you pass that order along? - Yes, for as many men as I could see there; and then I went down below again and went down to my own quarters. I think you will find there were about six or eight rooms down our quarters, the Turkish bath attendants. 10958. There is a cluster of rooms on F deck there? - Yes. I went and saw if all the people were out of those rooms first, and as I was coming up there was water running down off E deck on to F deck, down our section. 10959. Water running down off E deck to F deck? - Yes.

10960. That is, from the higher to the lower? - Yes, it had come from E deck and was running down on to F.

10961. Can you tell us where it was you found this water falling from E deck to F deck? - It was running down the stairway.

10962. Is that the stairway near your quarters? - Yes, the only stairway down there.

10963. (*The Commissioner.*) In great quantities? - No, not very much.

*The Solicitor-General:* Let us be sure I have the stairway which you are speaking of.

*The Commissioner:* Is he saying there was water running from D to E deck?

*The Solicitor-General:* No, my Lord, he has not said so yet; and I do not think he says so at all.

*The Commissioner:* From E to F?

*The Solicitor-General:* Yes. Your Lordship has the plan of E deck and F deck.

*The Commissioner:* I have.

*The Solicitor-General:* Will your Lordship look at the plan of F deck at the place where his own quarters were. It is the room marked "Assistant Second Steward." Now, next to that, immediately level with that is a stairway.

*The Commissioner:* Yes, going up to E deck.

10964. (*The Solicitor-General.*) If you trace it on the corresponding plan of E deck you see it again. (*To the Witness.*) Was that stairway which is opposite your quarters where the water was coming down? - Yes.

*The Commissioner:* Then it was coming down from E deck towards F deck down the stairway?

*The Solicitor-General:* Yes.

*The Commissioner:* But not in quantities?

10965. (*The Solicitor-General.*) I want to see what he says. (*To the Witness.*) Was there a stream of water, or was it merely trickling? - It was more than trickling, and it was not exactly a stream. It was more than trickling, though.

10966. Was it continuing to fall? - Yes.

10967. When you were there? - Yes.

10968. (*The Commissioner.*) What time was this? - I should think it would be about a quarter or ten minutes to 1.

10969. A little more than an hour after the collision? - Yes, about an hour, I should think.

10970. (*The Solicitor-General.*) Supposing the watertight doors in F deck had been shut, as you shut the two you know about, this water could not have come back along F deck, could it? - No.

10971. But, of course, there are no watertight doors in E deck? - There is one right forward on E deck alleyway.

10972. There is one? - Yes.

10973. But the bulkheads as a whole do not go up to E deck? - No.

*Sir Robert Finlay:* I think two bulkheads do go up to E deck.

10974. (*The Solicitor-General.*) In a sense you are right, and in a sense, I am right. What I mean is you cannot, on E deck, shut the door. I said the bulkheads did not come up to E deck. What I meant was, the top of the bulkhead is the floor of E deck, level with E deck? - You mean of the F deck bulkheads?

10975. I want you to help us about the water. You saw water that was apparently coming from E deck and falling down the stairway into F? - Yes.

10976. But you did not find water backing along F deck? - No.

10977. There are watertight doors on F deck, and you had shut two of them yourself? - Yes, I thought the water had come up the stairway leading down to the Post Office, and then ran along E deck, and then down on to F.

10978. And, of course, if the watertight doors on F deck forward of that had not been closed then water could have made its way along F deck, and would not have had to mount the E deck, and then return to F deck? - Yes, it would.

*The Commissioner:* Is the suggested explanation that F deck, forward of the watertight doors which he had shut were by this time full of water, and that the water had risen up to E deck? Is that the idea?

*The Solicitor-General:* That is the idea, my Lord.

*The Witness:* No, my Lord; in the section forward of the bulkheads where I shut the doors, I do not think there was water there at all.

10979. Then we are agreed. Where did the water come from, that you saw falling down the stairway between E deck and F deck? - I think that had come from the Post Office stairway.

10980. (*The Solicitor-General.*) That is right forward? - Yes, and there is no bulkhead between the stairway and those stairs on E deck.

**Page 242**

10981. I want to follow your idea; I think I do. You had already seen water in the stairway by the Post Office? - Yes. 10982. And that is on G deck? - Yes.

10983. And is there a stairway which mounts from that place near the Squash Racquet Court up to F deck, and from there up to E deck? - Yes.

10984. And assuming that the water rose high enough, is there anything there to prevent it from rising as high as E deck? - No.

10985. But supposing that the water rose there as far as F deck, it could not run aft on F deck, because you had closed the watertight doors? - It would come up the stairway. But the watertight doors are not near the Post Office.

10986. I know they are not? - The watertight doors are further aft.

10987. I quite follow? - There is nothing to stop the water from coming up to F deck. [There was no question 10988.]

10989. What I want to see is why it did not come along F deck? - Because the bulkheads were there.

10990. Because of the bulkheads, and because the watertight doors in the bulkheads were shut? - Yes, but there are no bulkheads forward by the post office.

10991. No, but there is a bulkhead between the place where the post office is and where your quarters are? - Yes, there are two bulkheads.

*The Solicitor-General:* I think your Lordship's suggestion is the one the witness means to make.

*The Commissioner:* What is that?

*The Solicitor-General:* That the water did rise in that stairway till it got to E deck, and that it then passed aft and fell into F deck.

*The Witness:* Yes.

*The Commissioner:* That is what he means?

10992. (*The Solicitor-General.*) Yes. (*To the Witness.*) You saw this water coming down from E to F. Were you there long enough to be able to tell us whether it was increasing in flow, or whether it was coming the same as it started? - No, I did not wait to see.

10993. You were only there a minute or two, I suppose? - Yes.

10994. Did you find any people in the quarters you had gone to search, or had they all left? - They had all left.

10995. They had all turned out? - Yes.

10996. And did you return then to E deck? - Yes, to the working alleyway.

10997. And did you go up this stairway, down which this water was coming? - No, I went further aft than that.

10998. You went further aft and then went up another stairway? - Yes. I came up the stairs out of my room; water was coming down there, but that was different from F deck, and then went through the emergency door on to E deck, the working alleyway. You will find "Emergency Door" right at the top of the stairs.
10999. We do. Was that emergency door open or closed? - Open.
11000. So that you did, if I follow you rightly, mount the stairs down which this water was coming? - Oh, yes.
11001. Then, when you got to E deck, the top of these stairs, you could tell whether the water was coming along E deck or not? - Yes.
11002. Was it? - It was coming from forward.
11003. From forward, along E deck? - Yes.
11004. Was it coming along that working alleyway? - No.
11005. Then where was it coming? - From the starboard side. The working alleyway was quite dry.
11006. (*The Commissioner.*) Was there a list by this time? - No, I did not notice any.
11007. (*The Solicitor-General.*) I want to trace that water. You saw it coming from forward, aft? - Yes.
- 11007a. The passage way which runs across? - Yes.
11008. Along, not the working alleyway, but the other alleyway, that is, on the starboard side? - Yes.
11009. And then, in order to fall down those stairs, it would have to turn a corner, would it not? - Yes.
11010. The passage way which runs across? - Yes.
11011. And then fall down those stairs? - Yes.
11012. When you got up to E deck was there a continuous stream of water doing that? - Yes, but it was not very much.
11013. (*The Commissioner.*) Give me an idea of the quantity, because I do not know what "very much" means? - Well, it would cover the stairs; just enough to cover them. 11014. Do you mean to say half of an inch or something like that? - Yes, something like that.
11015. And was it going down the stairs quickly, or merely trickling down? - No, it was running rather quickly.
11016. (*The Solicitor-General.*) You came up those stairs? - Yes.
11017. Give us an idea in this way; you must have met something? - Yes.
11018. Did it go over the tops of your boots? - Not over the tops of my boots; over my instep.
- The Commissioner:* Where was he when the water came over his boots?
- The Solicitor-General:* He mounts up the stairs down which the water is coming.
- The Commissioner:* Yes.
11019. (*The Solicitor-General - To the Witness.*) Is that where the water reached up to your instep? - Yes.
11020. (*The Commissioner.*) Not up the stairs? - Coming up the stairs, yes.

11021. That is a good deal more than 1/2 of an inch; do you mean to say that the water on the stairs trickling down or coming down the stairs was so deep that it reached up to the top of your boots? - No, I did not say that.

11022. I thought you said it came over your instep? - It had run from the top of the stairs over the tops of my boots.

11023. (*The Solicitor-General.*) Do not use that word instep, because different people mean different things by it. Take the ordinary heel of an ordinary boot. You were probably wearing heels? - Yes.

11024. Would it come to the top of the heel? - About the top of the heel of my boot. *The Commissioner:* I am sorry to trouble you, but when you have finished asking questions, will you explain to me what you understand his evidence to mean, with a pointer on that plan.

*The Solicitor-General:* Yes, my Lord; I will do my best. I think I can do it up to this point now, if your Lordship desires.

*The Commissioner:* Well, it will assist me if you will do that, if you will take the pointer and point me out on the plan the locality of the watertight doors that were closed, and then show me in what direction he means to indicate the water was coming.

*The Solicitor-General:* I see here marked on the plan "Squash Racquet," and your Lordship sees there is a stair (*pointing to the plan on the wall*).

*The Commissioner:* Tell me what deck you are pointing to.

11025. (*The Solicitor-General.*) I will. Your Lordship sees there is a stairway indicated by a number of ticks. I am now putting the end of this pointer on the level of the Orlop deck. As I follow the witness, that is the lowest deck to which he went in his description. He says he saw water rising in *this* compartment at *that* point up those stairs. (*To the Witness.*) Is that right? - Yes.

*The Commissioner:* Climbing up those stairs?

11026. (*The Solicitor-General.*) Mounting up those stairs. He had come to it, so he says, from his room, by coming down a couple of flights of stairs down *here*. He says the water was rising as he stood there, and that it reached as far as G deck. (*To the Witness.*) Is that right? - Yes.

*The Solicitor-General:* That is to say it ran up to *that* point while he was standing there?

*The Commissioner:* What deck is that?

*The Solicitor-General:* That is G deck.

*The Commissioner:* That is the deck above the Orlop deck?

*The Solicitor-General:* Yes. Then he says he went on his own motion aft in order to shut two watertight

## Page 243

doors which are on F deck, that is to say, which shut off this space. The watertight doors, as I follow, are somewhere back *here*.

*The Commissioner:* Which is the bulkhead in which they are placed?

*The Solicitor-General:* I think it is this bulkhead, and I think it will be found, if my friends are following on this plan, that *that* is the place.

11027. (*The Commissioner - To the Witness.*) Can you follow this plan? - I cannot see where the bulkheads are. (*The position was indicated to the Witness.*)? - Yes, I think it will be *there*.

11028. (*The Solicitor-General.*) There is the first class entrance immediately after? - Yes, it is just forward of the first class entrance.

11029. Then he came back along F deck to the point where the pointer is now, and the thing he shuts is a thing which in this diagram is marked with a thick black line. He shuts two of them, and then he says after that there were these orders given.

*The Commissioner:* Where does that bulkhead stop?

*The Solicitor-General:* That is the top of it, so that the floor above him, as your Lordship sees, is E deck, and the floor on which he would be standing when he shuts the doors is F deck.

*The Commissioner:* Yes.

*The Solicitor-General:* Then he says after some orders he returned to his own quarters, which are the other side of the ship; and when he got to his own quarters, which are on F deck, he found that water was falling down the stairway, which led from E deck to F deck. Perhaps the witness will tell me whereabouts the stairway would be. *The*

*Commissioner:* I do not quite understand where that water came from that was coming down stairs. How did it get up?

*The Solicitor-General:* It was coming from E deck. What I understand the witness to have said is, that he thinks that if the water, which he had observed mounting from the Orlop deck to G deck, continued to mount up that staircase *there* up to F deck, and then up to E deck, there would be nothing to prevent it running along E deck and falling down the stairway which led to F deck.

*The Commissioner:* I see. Then the forward part of the ship, forward of the bulkhead in which he closed the watertight doors, must have been full of water at that time. Is that so, Sir John?

11030. (*The Solicitor-General - To the Witness.*) Would that be so, do you think? - There is another partition between the mail room and the bulkheads that I closed. That has no bulkhead doors at all; it is just plain.

*The Commissioner:* Take D bulkhead, marked on the F deck. If you trace that D bulkhead upwards towards the port side of the ship, you come to a watertight door.

*The Solicitor-General:* Yes, my Lord.

*The Commissioner:* Was that shut or open?

*The Solicitor-General:* I do not know at all. I do not know whether the witness can tell.

*The Commissioner:* If that was shut, then, as I understand, water would not get into the space between E and F on that deck; but if it was open, then the water would come into both those spaces.

*The Solicitor-General:* Might I just ask Mr. Wheat to look at the plan?

11031. (*The Commissioner.*) Then it would come into the space between D and E, and then mount and get on to E deck and begin trickling down the stairs? (*To the Witness.*) Had she ever a list to starboard, as far as you know? - No, my Lord.

*The Attorney-General:* There has been no evidence of that yet.

*The Commissioner:* Because I do not understand the alleyway on the port side being dry.

11032. (*The Solicitor-General.*) I might ask him this to clear it up. (*To the Witness.*) You have evidently the design of the thing in your head. As far as you know, supposing that water began to rise in that stairway which you spoke of near the mail room, is there anything to stop it from rising from the Orlop deck to G, from G to F, and from F to E? - No.

11033. It is merely a question of whether there is sufficient water to rise? - Yes.

11034. Is there any watertight door that could be shut to prevent that? - No. 11035. So, as far as the stairway is concerned, it is open for the water to rise. Is there anything which would prevent water, if it got into the stairway on F deck from running aft on the F deck? - Yes, there is an iron bulkhead there.

11036. (*The Commissioner.*) Is that the bulkhead in which there are no doors? - Yes. We have no doors. I do not know whether there are any doors down below, but there are none in our department.

11037. (*The Solicitor-General.*) None on F deck? - No.

11038. So that it is a continuous partition at that point? - Yes, as far as our deck is concerned.

*The Commissioner:* I do not know, Sir Robert, whether you could explain it. *Sir*

*Robert Finlay:* I understand that what the witness suggests is that the water rose forward of this bulkhead D till it got to the level of E deck. It could not get through this bulkhead, therefore it rose vertically till it got to E deck, and then ran along E deck and then down.

*The Commissioner:* I understand that, but does not it follow from that, that all the part of the ship which was forward of the point where the water was rising was full of water?

*Sir Robert Finlay:* Not necessarily all, my Lord; it is highly probable.

*The Commissioner:* I do not see what part of it could not be full.

*Sir Robert Finlay:* What I mean is, if the water was coming in forward of this D bulkhead, getting into that division, it would rise.

*The Commissioner:* As I suggest?

*Sir Robert Finlay:* Yes, and then over the top of the bulkhead, along E, and down the staircase.

*The Commissioner:* And that is what I understand him to mean.

*Sir Robert Finlay:* That is my impression.

*The Commissioner:* Whether it is right or not, I do not know. I think you are right in a way. I mean, it does not follow that the forward compartments were necessarily full, although no doubt they would be if the vessel was holed at that part, Sir.

*Sir Robert Finlay:* Exactly.

*The Commissioner:* If she had had a tear right along, opening those parts, those parts would be full as well.

*Sir Robert Finlay:* They would be full on their own account, so to speak. I think the evidence does show she was ripped up; at least it suggests so far, that there was a rip up on the starboard side for a very considerable way.

*The Commissioner:* Yes, and right from forward, along.

*Sir Robert Finlay:* From forward. The same thing would in all probability have been going on in the forward compartments.

*The Commissioner:* Yes.

*Sir Robert Finlay:* What the witness describes would have taken place even if this compartment only had been open.

*The Commissioner:* Yes, I think I understand it now.

11039. (*The Solicitor-General - To the Witness.*) Have you a copy of the plan before you? - Yes.

11040. Look at the plan of F deck for a moment, will you? - Yes.

11041. Will you look where "Squash Racquet Court" is marked? - Yes. 11042. Now, I think the stairway which you are talking about is a stairway on the starboard side of that squash racquet court? - Yes, the starboard side.

11043. Now, what I would like you to explain, if you will, is this: Imagine yourself on F deck, standing on F deck at that point. Is there any watertight door at that level? - No.

11044. At that place? - No.

11045. It is a solid bulkhead without any openings in it? - There is an opening for the stairway to go down.

11046. Apart from the stairway? - There is nothing else.

#### **Page 244**

11047. Just look at the plan for a moment, because I cannot help seeing in that line, just a little on the port side "W.T.D."

*The Commissioner:* That is the one I was asking about.

11048. (*The Solicitor-General.*) That is what I want to follow - on the port side of the squash racquet court? - That would be in the third class; either the third class or one of the fidleys.

11049. It is marked in our plan as being between the squash racquet court and the place marked "Linen"? - There is no bulkhead door down the squash racquet court.

11050. You know all about it, and we want to know about it? - There is no bulkhead door there.

11051. "W.T.D." is marked *here (pointing on the plan)*? - That must be the other side of the bulkhead. There is nothing down there.

*The Solicitor-General:* Sir Robert has suggested to me on the large plan what appears to be the true explanation. I am still speaking of bulkhead D, as shown on the plan of deck F. If one carries one's eye along that bulkhead, from starboard to port side, it runs for a distance straight across the ship, and then it takes a right-angled turn and runs a little to the rear of the squash racquet court.

*The Commissioner:* Yes, then it turns back again.

*The Solicitor-General:* It turns back again, and it turns back again under the stairs. *The Commissioner:* It does.

*The Solicitor-General:* That is to say, those stairs indicated close to the word "Squash" are really stairs which start from the F level and mount up to the E level, so that the bulkhead runs under those stairs at the side.

*Sir Robert Finlay:* At the side?

*The Solicitor-General:* At the side and then under them.

*Sir Robert Finlay:* Immediately aft of the stairs.

*The Solicitor-General:* Immediately aft of them, and then takes a turn under them when those stairs have reached the next deck.

*Sir Robert Finlay:* Yes, that is to say, on the port side of the stairs?

*The Solicitor-General:* Then, still tracing out the bulkhead, immediately following that there is a watertight door shown, which Sir Robert thinks must have been shut, and I gather it is a watertight door which would normally separate the third class from the first class?

*The Witness:* No.

*The Commissioner:* You notice there is a watertight door also in the bulkhead that starts from C?

*The Solicitor-General:* There is, my Lord, in the same line, according to this plan. *The*

*Commissioner:* Therefore you have a watertight door which, if opened, would have let the water into the space between C and D, and you have another watertight door which if opened would have let the water into the space between D and E?

*The Solicitor-General:* Yes. Where this theory breaks down is, that the witness does not take the view that there is a watertight door there.

*The Witness:* Do you mean down by the Squash Racquet Court?

11052. Yes? - There is no watertight door there.

*The Commissioner:* Which is right, the witness or the plan?

11053. (*The Solicitor-General.*) We can only take the witness for the moment. (*To the Witness.*) Supposing you were coming up by those stairs from G deck round the side of the Squash Racquet Court, mounting up; you know those stairs which are immediately on the after side of the Squash Racquet Court, you see them there on the plan on F? - Yes. 11054. Supposing that you had got on F deck there, not up the stairs but on F deck - let me show you where I mean (*indicating the position on the small plan.*)

*Sir Robert Finlay:* My Lord, we have a larger plan here. I do not know whether your Lordship would like to look at it.

*The Commissioner:* I think I should. (*Sir Robert Finlay handed the plan and explained it to the Commissioner.*)

*The Attorney-General:* Is your Lordship satisfied?

*The Commissioner:* I think I know where the bulkhead door is. There is a door in the bulkhead at the bottom of the ship. There is none in the Orlop deck. The bulkhead as it rises into the Orlop deck has no doorway. When the bulkhead rises on to G deck it has no doorway in it at all; but when it rises on to F deck it has this doorway which you find in the plan in the D bulkhead by the linen room.

*The Attorney-General:* Between the linen room and the squash racquet court on the port side.

*The Commissioner:* Yes. Now that is the first open passage that there is in that bulkhead, after of course you leave the automatic door in the bottom of the ship. The door at the bottom of the ship would have been closed when the button was pressed?

*The Attorney-General:* Certainly.

*The Commissioner:* And you would have had then, with this particular bulkhead, a complete wall from the bottom of the ship, until you come to that watertight door which is by the linen closet?

*The Attorney-General:* Yes.

*The Commissioner:* And if that was shut - we do not know yet whether it was shut or not - we would have to get the water over the top of the bulkhead?

*Sir Robert Finlay:* That is it.

*The Commissioner:* In order that the water should find its way to the place where he saw it trickling down?

*The Attorney-General:* That is right.

11055. (*The Solicitor-General - To the Witness.*) You were a first class steward? - Yes.

11056. You had nothing to do with the third class? - No.

11057. Forward of this bulkhead, my Lord has been speaking about, it is third class, is it not, on the port side? - On A deck?

11058. On F deck? - I do not know of any door.

11059. I am not asking about any door. I say forward of the bulkhead it is third class? - Yes.

11060. Then you know nothing about that? - No.

11061. Your business is aft of that? - Yes.

11062. Whether there is a watertight door there or not, was there at that time when you were there any opening there? - No. 11063. You are sure of that? - Yes.

*The Solicitor-General:* I think your Lordship will find the watertight door shut from the third class side.

*The Commissioner:* If there was no opening there it means the door was shut. 11064. (*The Solicitor-General.*) Yes, it is the same thing. (*To the Witness.*) When you got up on to E deck did you see anything of any third class passengers? - There were a few there, five or six, I should say.

11065. Where were they coming from? - They were making from forward aft.

11066. Were they men? - Yes.

11067. Were they carrying their baggage with them? - They were carrying and dragging boxes and bags.

11068. Were they making their way aft towards the top deck? - Towards aft.

11069. Tell us shortly where you went? - From E deck up on to B deck up the service stairs.

11070. Tell us what happened there? - There I met Mr. Latimer on the B deck. 11071. He is your chief - the Chief Steward? - Yes, and he had his big coat on with a lifebelt over it and I told him to take his big coat off and put the lifebelt under it or his big coat would be no use to him. Then I went along forward and up the forward stairway up on to the boat deck and there I saw they were just filling No. 9 boat, starboard.

*The Solicitor-General:* I do not think we have heard anything about No. 9. *The*

*Commissioner:* I think this will be a convenient time to adjourn.

*(The Witness withdrew.)*

**Page 245**

*The Attorney-General:* With reference to Monday there is a question which has arisen.

*The Commissioner:* It would be better if we sat on Monday unless it is inconvenient to you. My convenience is entirely your convenience. It does not matter to me, but I thought

Commander Lyon, who desires to be somewhere else, could go to keep his other appointment and read the evidence that is given on Monday, afterwards. Is there any objection?

*The Attorney-General:* I see no objection.

*Sir Robert-Finlay:* I see no objection.

*The Commissioner:* I thought not. The reason why I want to sit on Monday is, I am afraid if we do not use such time as we have at present we shall find ourselves in an awkward position later on. I do not propose to sit on Saturday.

*The Attorney-General:* Then as I understand, what your Lordship proposes to do is to adjourn tomorrow evening till Monday?

*The Commissioner:* Yes, till Monday morning. Is that convenient to you?

*The Attorney-General:* Certainly I understand it is convenient to everybody.

*The Commissioner:* That will do, Mr. Scanlan, will it?

*Mr. Scanlan:* Yes, my Lord.

*The Attorney-General:* I think it will be desirable to have this made clear. I understand that none of the parties represented would object to Commander Lyon being absent on Monday and reading the evidence.

*The Commissioner:* I do not know.

*The Attorney-General:* I know your Lordship's view, but I do not want a question to arise.

*The Commissioner:* These gentlemen are sitting with me as assessors, and my present feeling is that I could go on without any of them, but I do not choose to. One of them has to go away for an appointment which is of some importance, and it occurs to me it would be far better for us to go on and let that gentleman read the evidence afterwards. Is there any objection?

*Sir Robert Finlay:* Not the slightest, my Lord.

*Mr. Scanlan:* I can say for myself, and I think for my colleagues here that none of us do object.

*The Commissioner:* I take it nobody objects .

*The Attorney-General:* No.

*Sir Robert Finlay:* By common consent, my Lord.

*The Attorney-General:* Your Lordship will remember on the occasion that Sir Robert Finlay applied that the cross examination of Hendrickson should be taken on Friday morning; and I suppose tomorrow morning we can go on with him the first thing?

*Sir Robert Finlay:* Or this witness might be finished.

*The Commissioner:* I think it would be convenient to finish this witness.

*The Attorney-General:* Yes.

*The Commissioner:* And then recall Hendrickson, and let Sir Robert examine him. *Sir Robert Finlay:* Very well, My Lord.

*(Adjourned until tomorrow, 10.30 o'clock.)*

## **Wreck Commissioners' Court.**

SCOTTISH HALL,  
BUCKINGHAM GATE,

*Friday, 17th May, 1912.*

### PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## **LOSS OF THE S. S. "TITANIC."**

### **TENTH DAY.**

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland.

(Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third-class passengers. (Admitted on application.)

MR. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian." (Leyland Line). (Admitted on Application.)

MR. H. E. DUKE, K. C., M. P., and MR. VAUGHAN WILIAMS (instructed by Messrs. A. F. and R. W. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff-Gordon. (Admitted on Application.)

## Page 248

*The Commissioner:* Mr. Attorney, I am reported to have made some observations last evening - and I have no doubt I am accurately reported - with reference to the Assessors who sit with me, and who are of such great assistance to me. What I said appears to be open to misconstruction. I did not mean to convey that the Assessors were not a necessary and a most proper part of the Tribunal; all that I intended to convey was that I thought that I could, when occasion required, proceed without the whole of them being here.

*The Attorney-General:* Yes, I understood your Lordship's reference to be in consequence of the necessary absence on public duty of Commander Lyon. *The Commissioner:* Of Commander Lyon, who desired to be away on Monday.

*The Attorney-General:* I think it would be better subject to your Lordship's view, that we should proceed at once to the recall of Hendrickson.

*The Commissioner:* Very well.

*The Attorney-General:* It would be better than going on with the witness we had yesterday in the box.

*The Commissioner:* You know better than I do.

*Mr. Duke:* If your Lordship pleases. As Hendrickson is to be recalled, I ask your Lordship's leave, on behalf of Sir Cosmo and Lady Duff-Gordon, to appear here to ask some questions of Hendrickson with regard to his evidence as it affected them.

*The Commissioner:* I think that is right, Mr. Attorney?

*The Attorney-General:* I have no objection.

*The Commissioner:* Apparently the evidence may be taken as casting some sort of reflection on those people.

*The Attorney-General:* It will probably be convenient, as my friend Mr. Duke is here, that we should decide what should be done with regard to the evidence directed to this point. Your Lordship will remember there were seven of the crew in the boat, including Hendrickson. We have them here. Your Lordship will remember that there were two ladies in the boat and three male passengers, including Sir Cosmo and Lady Duff-Gordon. In regard to the crew, we have all the seven here. It may or may not be necessary to call them, but they shall be in attendance, and I propose certainly to call - I state this for the information of my friend - so that he may know what I am going to do - to call the man who was in charge, Symons or Simmons, after Hendrickson; and then there was another able seaman on the boat whom I will call, and one of the firemen. Then there are some other firemen, trimmers, and, if necessary, we will call them. That would exhaust the crew. But as my friend Mr. Duke is appearing, of course, he is in a much better position to know what Sir Cosmo and Lady Duff-Gordon will say than we are, as we have had no communication with them and no proof, and it would be better, I suggest, although I do not mean in the slightest degree to insist upon it, that my friend should call them and that we should ask any questions that may occur to us in order to elucidate the point at issue, instead of our calling them. I do not really care which of us does it, only he has the material and we have not.

*Mr. Duke:* May I say to your Lordship with regard to that, that before Sir Cosmo and Lady Duff-Gordon returned they communicated with the Board of Trade that they would be present to give such evidence as was required; but they did not arrive in London, I think, until Tuesday. Their proofs were taken either Wednesday or yesterday - I think yesterday - and I saw my friend as we came in this morning, and I mentioned to him that I have proofs here; and if the Court thinks that the more desirable course is that I should hand to the Law Officers those proofs, and the Law Officers should examine them, I am content to do that. I am, of course, aware of the contents of the proofs, and I am ready to examine them if your Lordship thinks fit.

*The Attorney-General:* I have really no choice in the matter. I am quite ready to call them and follow the course that has been pursued here by calling them, and putting such questions to them as may be necessary for the purpose of elucidating the subject matter of this portion of the Inquiry if your Lordship thinks that that is the more convenient course.

*The Commissioner:* I think it would be more regular if you call them, Mr. Attorney.

*The Attorney-General:* As your Lordship pleases.

*The Commissioner:* And make them witnesses in connection with the Inquiry.

*The Attorney-General:* Certainly.

*The Commissioner:* If during the evidence anything should come out which appears to throw discredit upon either the lady or the gentleman, then I will allow Mr. Duke to ask them any questions which he thinks fit.

*Mr. Duke:* If your Lordship pleases.

*The Commissioner:* And see if it can be cleared up.

*The Attorney-General:* I shall be obliged if my friend will supply me with a copy of the proofs.

*Mr. Duke:* I will at once.

*The Attorney-General:* My friend will understand that I am making no complaints of our not having had any proofs from Sir Cosmo and Lady Duff-Gordon.

*Mr. Duke:* I am much obliged to my friend. I perfectly understood it, only I wanted to make it clear that Sir Cosmo and Lady Duff-Gordon desired to be present and give evidence.

*The Commissioner:* I think the examination of Hendrickson by you was complete? *The Attorney-General:* Yes, not only by us, but also by all those who represented the various interests.

*The Commissioner:* Yes.

*The Attorney-General:* Except the representatives of the White Star Line.

*The Commissioner:* Yes; Sir Robert Finlay applied for a postponement.

*The Attorney-General:* The evidence is at pages 109 to 116, and Sir Robert applied, as your Lordship quite correctly says, at first to defer it till the morning, and then, on the next morning, we agreed it should be deferred till this morning. If your Lordship would like the particular passages which bear upon this part of the Enquiry, you will find them at page 112, beginning at Question 4994. That is the beginning of the reference to Sir Cosmo and Lady Duff-Gordon. That continues for the whole of page 113, and then there are some further passages on page 115.

*Mr. Duke:* There is a little at the top of page 113, I think, Mr. Attorney?

*The Attorney-General:* That is only as to names, is it not?

*Mr. Duke:* Perhaps that is so.

*The Attorney-General:* I agree. I have noticed that, but that only gives the names of the persons who were in the boat.

*Mr. Duke:* I was referring to 5065 in particular.

*The Attorney-General:* Yes, quite right.

*The Commissioner:* Page 113?

*The Attorney-General:* Yes, my Lord. There is nothing very material there; you have already got it, but 5065 is the question my friend, Mr. Duke, referred to. It ends at 5070. It is only just a few questions, and I think if you read 5065, it is the only one which is of importance on this. Then if you will look at page 114 about Question 5132, and I think they continue to about 5170. Then on page 115, Question 5187, begins the reference to the money - that goes to 5190. There are just those four questions by Mr. Edwards. Then it is taken up again later in the examination by Mr. Lewis from the beginning; at Question 5192 it begins. It continues to Question 5219, and that is the end of it. Your Lordship will observe you put a series of questions from 5198 to 5212, which summarised the position as regards the money.

*The Commissioner:* Now, where is Hendrickson?

**Page 249**

**CHARLES HENDRICKSON, Recalled.**

*The Commissioner:* Now, Mr. Laing.

*Mr. Laing:* I have only one Question I want to ask him.

**Examined by Mr. LAING.**

11072. When your boat No. 1 was lowered into the water did you see any other steamers' lights near? - No.  
11073. Nothing at all? - No, I saw a light while I was on board the "Titanic." 11074. Before she was lowered, you mean? - Yes.  
11075. What light did you see? - I saw a bright light.  
11076. What did you take it to be? - A ship, five or six miles ahead of us.  
11077. I think you have told us when the officer told you to lower away he told you to keep near the ship and come back if called on? - Yes.  
11078. Did you hear any calling? - No.  
11079. Was there anybody using the megaphone on board? - I could not say; I do not know.

**Examined by Mr. DUKE.**

11080. The boat was what is called a dinghy, was not she? - Yes, an accident or emergency boat.  
11081. Are you a seaman? - No, a fireman.  
11082. Perhaps you are not able to express any opinion as to whether she was the sort of boat that was ever intended to navigate in the Atlantic? - I do not know; I do not understand a boat.  
11083. Were you there when the lifeboats put off? - Yes.  
11084. You saw them put off. I mean the lifeboats on the starboard forward quarter? - No, not the starboard, the port side.  
11085. I am speaking of the lifeboats on the starboard side forward? - I saw one or two, that is all.  
11086. Did you see the boat that was launched next before the dinghy was lowered? - I never took that notice.  
11087. Were you there at the time? - I was there at the bridge then - the fore end.  
11088. Was it Mr. Murdoch that was giving orders as to the boats? - I do not know.  
11089. Did you know Mr. Murdoch? - I did not know him. The only officer I saw there was the officer who fired the rockets.  
11090. Did not you see the officer who was giving the orders as to the boats? - I saw him, but I did not recognise him; I did not see his features.  
11091. Was that because of the darkness? - Yes.  
11092. Did you hear what he said? - He told me after we got into the boat and were lowering down: "Come back if you are called upon." 11093. Is that the first you know about it? - About what?  
11094. About the lowering of the boat - the manning of the boat and the lowering of her? Is that the first you know? - No, it is not the first. When I got round the boat, I was at the boatswain end at the same time the officer was firing his rockets. After the officer finished firing the rockets he sung out, "How many seamen are there in the boat?"  
11095. At that time were there men in this dinghy? - Yes, two seamen.

11096. You say the officer asked how many seamen there were? - In the boat. They answered, "Two."
11097. Did he then order in some firemen, or was it subsequently? - He called out, first of all, were there any more seamen there, and he got no reply, and he said, "Six firemen jump in that boat."
11098. And did the six firemen jump into the boat? - Five, I found out after.
11099. Were you one of the five? - Yes.
11100. Did you hear what he said about ladies or passengers? - He called out was there any more ladies about, and got no answer, and then gave the order to lower away.
11101. But before that had you seen the lady you now know as Lady Duff-Gordon? - Not at the time.
11102. Not at the time? - No.
11103. Had you seen her at all until you were in the boat and were rowing? - Not to take notice.
11104. Did you become aware of the circumstances under which she was in the boat at all? - No.
11105. Was the first you knew about her that she was in the boat when you were rowing? - The first time I saw the lady was in the boat.
11106. The first time you knew of her being there? - Yes.
11107. And you did not hear anything of the conversation which led to her going into the boat? - No.
11108. You were standing by. Had you become aware that she had refused to leave her husband and refused to leave the ship in either of the lifeboats that had been lowered on that side of the ship at that end? - No, I do not know.
11109. You did not know about that? Did you hear what the officer said when the boat had been lowered and was afloat? - The officer called out and said: "Stand by and come back if called."
11110. Now, stop a minute. Did he first say, "Who is the seaman who is there?" - Oh, yes. He called his name.
11111. Was it Simmons or Symons? - I do not know whether it was Symons or Simmons.
11112. We will call him Simmons. Did Simmons say - Simmons, the look-out? - I did not know his capacity at all.
11113. I am asking you what he said to the officer? - The officer told him to take command of the boat.
11114. Did the officer say to him, "Now you take command of this boat. These men are under your orders, and see they obey you"? - Yes, I remember that.
11115. And did he then say to him, "Follow the other boats"? - I never heard that.
11116. "Row as hard as you can for about 200 yards, to get away from the ship"? - No, I never heard that.
11117. Just think it over? - I do not remember it, Sir.
11118. You would not say he did not say it? - No, I would not say he did not say it, but I do not remember him saying it.
11119. Did the boat, in fact, stand by at 150 or 200 yards? - We were just pulling around there about that distance.

11120. Just let us see what was done. Was this what was done, that you did pull as hard as you could for some considerable time? - For a time, yes.
11121. Did you then rest a bit? - Yes.
11122. Did you then pull again? - We kept on resting and pulling.
11123. At the time the "Titanic" went down had you rested and pulled, rested and pulled, several times? - Yes.
11124. And all that time had you been pulling away from the ship in the direction the other boats had gone? - Yes, we were pulling about, and just keeping watch of them at the same time.
11125. By the time the "Titanic" went down were you many hundreds of yards from the ship? - I could not say.
11126. Have you any judgment at all about distances at sea? - As I said before, somewhere about 200 yards.

**Page 250**

11127. But you pulled in the first instance what you considered 200 yards, did you not, with a strong pull to get away from the ship? - Yes, but we were not pulling right straight away all the time. We were pulling away, and going along a little bit, and coming back again.
11128. I suggest you were pulling in the direction the other boats had gone and pulling away from the "Titanic"? - We were pulling away, yes.
11129. Up to the time the vessel sank. When the vessel sank she left the sea in darkness at the point where you had been able to see her lights? - Yes.
11130. And was all you were able to see of the "Titanic" the outline of the figure as the stern rose in the air and the boat went down? - Yes.
11131. Can you tell the Court whereabouts you were sitting in the boat? - In the bow.
11132. That would have been, as near as possible, to Horswill, who was keeping the look-out? - Yes.
11133. Simmons was in the stern of the boat? - Yes.
11134. And he was steering? - He was steering.
11135. And was Simmons there in charge of the boat and doing his duty in a very seaman-like way the whole of that night? - Yes.
11136. And in absolute command? - Yes.
11137. I understand you to say that you came to the conclusion the boat ought to have gone back? - Yes.
11138. When did you come to that conclusion? - At the time when she sank and we heard the cries. After we heard the cries, I sang out in the boat, "It is up to us to go back and pick up anyone in the boat." 11139. You thought that then? - Yes.
11140. When did you first tell anybody that from the time you were on board the "Carpathia"? I am not speaking of the time you were in the boat; I will deal with that presently. From the time you got on board the "Carpathia" until the present time, when did you first tell anybody that, while you were in the boat, you thought the boat ought to go back? - I told the Court here last week.

11141. Was that the first time you have told anybody? - The first time to my knowledge.
11142. Now, I understand your present impression to be that the boat was prevented from going back by the action of Sir Cosmo Duff-Gordon? - Yes, they protested against going back.
11143. When did you first make that statement to anybody? - Last Thursday. 11144. Did somebody take your proof of what happened on board this boat? - I could not say.
11145. Did not anybody take down a statement from you in writing of what you were able to say here to throw light upon the matter? - I never said anything about Sir DuffGordon at all. I made a statement which I gave at Plymouth, just the workings of the boat, what I knew went on on board the boat. *The Attorney-General:* He made a deposition.
11146. (*Mr. Duke.*) I follow. (*To the Witness.*) You have told the Court that you said "It is up to us to go back"? - Yes.
11147. To whom did you say it? - Well, to the men who were in the boat.
11148. The men that were in the boat. Some of them were your own comrades on board the ship? - Yes, of course.
11149. You know the name of every one of them, do you not? - Pretty well now, yes.
11150. Tell me to what man or to what person in that boat did you at that time say, "It is up to us to go back"? - I never said it to anyone personally.
11151. Not to anyone personally? - Not personally, no; I called out.  
*The Commissioner:* He did not speak individually, but he spoke to all of them.  
*The Attorney-General:* I have the deposition. I will ask my friend if he has seen it.  
*Mr. Duke:* No, I have not seen it.  
*The Attorney-General:* I notice he says this upon the point you are now crossexamining to: "I proposed pulling in to pick up any who should be in the water after the ship sunk, but the passengers objected, and it was not done. We left the ship about 1. 30 a.m., remaining near other boats until the 'Carpathia' came up." That is what he says about it in the depositions.
- The Commissioner:* When was the deposition sworn?
- The Attorney-General:* On the 25th. I am not sure whether it is the 25th or 28th April, on his return in the "Lapwing." [Lapland]
11152. (*Mr. Duke - To the Witness.*) You had forgotten that? - Yes.
11153. Is not your memory pretty good? - It is not so bad, I think.
11154. Have you been a good deal badgered about this business from first to last? - What do you mean, badgered?
11155. Bothered about it; asked questions about it by all sorts of people? - Yes, everybody asked questions about the turn out and everything.
11156. Before the time you made that deposition had you said to anybody that Sir Cosmo Duff-Gordon prevented that boat being put back? - Not to my knowledge, not before that time.
11157. From that time forward, or at any time until you named Sir Cosmo Duff-Gordon in Court here last week, had you suggested that it was Sir Cosmo Duff-Gordon who prevented that boat going back? - No, not to my knowledge; I had no cause to. 11158. Now, I was asking you what man in the boat you could name - or was

- intending to ask you - as a man who heard you, to your knowledge, say, "It is up to us to go back"? - I think Taylor was the nearest man to me in the boat.
11159. Was he on the same seat with you? - I think he was sitting alongside Sir DuffGordon.
11160. Did Taylor say anything to you? - Nothing at all; no one said anything.
11161. No one? - No one at all.
11162. No one said anything? - No.
11163. Do you mean that nobody said anything in answer to your suggestion? - He said it would be dangerous to go back; we should get swamped.
11164. Who? - Sir Duff-Gordon and Lady Duff-Gordon.
11165. To you? - I do not know whether it was to me. It was when I put this proposition to go back.
11166. The man you put the proposition to was Simmons? - No, any one at all; I called out for everyone to hear.
11167. The man to decide whether the boat should go back was Simmons, was it not? - Yes, he was the man in charge of the boat.
11168. Had everybody on that boat been perfectly obedient to his orders up to that time? - Yes.
11169. Was everybody on that boat perfectly obedient to his orders from that time? - Yes.
11170. Did you in Simmons' hearing so that effect could be given to anything you said, suggest so that Simmons could hear it, that you wanted that boat to go back? - I do not know whether he heard it or not.
11171. What was the use of suggesting it to anybody else, Hendrickson? - Well, I do not know.
11172. Was this a momentary impulse of yours, or had you thought about it? - No, it came across me after I heard those cries.
11173. You heard cries, and you say you said, so that somebody could hear, "It is up to us to go back"? - Yes.
11174. Did you have any conversation with Taylor? - No.
11175. Taylor was sitting alongside of you? - He was sitting on the next thwart to me alongside Sir Duff-Gordon.
11176. Who was the man alongside of you? - No one alongside of me.
11177. You were sitting on a seat alone? - I was sitting on a seat alone.
11178. Taylor was the next member of the crew to you? - Yes.
11179. Horswill was the seaman immediately ahead of you? - Yes.
11180. Do you think he heard you? - I do not know.
11181. He was a seaman and had more to do with the management of the boat than you? - I had nothing to do with the management of the boat at all.

**Page 251**

11182. Simmons had all to do and Horswill had something to do with the management of the boat? - I suppose so.

11183. The two seamen were in charge. Do you suggest you said, so that either of these two seamen could hear you, that you considered this boat ought to go back? - They should have heard me.

11184. Had you any sort of indication that Horswill heard you - the man close by? - I could not say whether he heard me or not.

11185. You could not tell? - No.

11186. If you thought the boat, in the name of humanity, ought to go back, why did not you say so to Horswill? - I did not want to tell one man personally; I called out.

11187. Did any seaman reply? - I never heard any.

11188. Did any fireman reply? - I never heard any replies at all about going back after that.

11189. Now, I suggest to you, that you are quite right in that answer, and that nobody addressed any observation to you upon the question whether the boat should go back. Is that the truth? - Certainly, it is the truth.

11190. That nobody said anything to you about the boat going back? - No.

11191. Nothing? - No.

11192. Then why do you say that Sir Cosmo Duff-Gordon prevented the boat going back? - I thought you were talking about the crew.

*The Attorney-General:* He said that before.

*Mr. Duke:* I am aware, but I am cross-examining; I want to deal fairly.

*The Witness:* You were referring to the crew.

11193. Well, go back to the others. None of the crew said anything? - No, I got no answer, only from Sir Cosmo and Lady Duff-Gordon.

11194. Now I will take you with regard to that. Did you consider whether they were right or wrong in the course which you suggest they said ought to be taken? - It would be right in one way and wrong in another, on account of ladies being in the boat.

11195. Did you consider whether they were right or wrong, because a serious imputation is put upon them? - I should say they were wrong. 11196. You think they were wrong? - Yes.

11197. Did you always think that? - What do you mean, "always"?

11198. From the time when, as you say, you wanted to go back and take the boat back, down to the time when you got to the "Carpathia" and onwards, were you always of opinion that they had done wrong in not taking the boat back? - I had other things in my mind as well as that. I never had that in my mind all the time.

11199. Were you on the best possible terms with Sir Cosmo and Lady Duff-Gordon on board the "Carpathia"? - Yes.

11200. Was the first time, so far as you know, that Sir Cosmo spoke to you, the time when the boat was alongside the "Carpathia," and there was some difficulty in getting up the rope ladder? - Yes, there was a little difficulty.

11201. Had Sir Cosmo ever spoken to you before that? - Yes.

11202. Where? - In the boat, he asked me if I wanted a smoke, and he gave me a cigar in the boat.

11203. That is one thing. What else had he said to you in the boat? - I do not remember him saying anything to me. He said he would get our names and send a wire home to our families if he could.

11204. But that was not said personally to you? - No.

11205. Was that your first personal conversation with him when the boat was alongside the "Carpathia" and there was some difficulty about getting up? - There was not any conversation, only we were trying to get this chair.

11206. A chair was being slung down to get the ladies up? - Yes, the boat was rocking about.

11207. That was the first time you spoke personally to Sir Cosmo Duff-Gordon? - Yes.

11208. Who was it on board the boat who had some conversation with you about his making a present to the crew? - First of all Collins come down to me and said, "Sir Duff Gordon wants our names."

11209. Was that when you were on board the "Carpathia"? - Yes. 11210. That is the first time you heard of it? - Yes.

11211. I will come back to what you said about it. I want to find out when you were in conversation with him. You were in conversation with him while the boat was alongside the "Carpathia"? - No, it was not a conversation at all.

11212. Well, did you take charge of his coat so as to help him to get up the ladder? - No.

11213. Did not you? - No.

11214. And give him his coat on deck? - No.

11215. On deck did Sir Cosmo say to you, either then or shortly afterwards, "Now I am going to make a present of £5 each to the men who were in the boat to make good the loss of their kit"? - No.

11216. Did he ask you to get a list of the men? - No.

11217. Did you get the list? - Yes.

11218. And is it in your own handwriting? - Yes, I made the list out, but he never asked me to make it out.

11219. And did you bring it to Sir Cosmo Duff-Gordon? - Yes.

11220. Before the men left the "Carpathia" these cheques were written, and you got yours? - Yes.

11221. Were you all photographed together by one of the passengers of the "Carpathia," you in your lifebelt? - Yes.

11222. Did not you believe at that time that you and everybody else on board that boat had done their duty? - Well, we did it to a certain extent.

11223. Now stop. Did not you believe when you were photographed together in a group, you and another, I think, in your lifebelts, that you and everybody in that boat had done your duty? - No, Sir. 11224. You did not? - No.

11225. Before you left the "Carpathia" did you and the other members of the small boat's crew write your names on Lady Duff-Gordon's lifebelt? - Yes. 11226. As a memento? - Yes.

11227. And you parted with the Duff-Gordon's in terms of respect? - Yes. We were asked to put our names on it, and we did it.

11228. Was the boat, at the time you got in her, rather crowded at the sides with oars and boat masts and things of that kind? - Yes; they were all on one side.

11229. There were oars, and were there boat masts. They are spoken of as poles? - Oars and a mast and a boat hook, I think.

11230. Which were stowed on one side, and which occupied a space? - Yes. 11231. And made the position of the passengers and members of the crew rather cramped, did it not? - Well, it did for a time until we got them out.

11232. Did you ever throw them overboard or get rid of them out of the way? - No.

11233. Were not they there stowed alongside the whole time, so that there was barely room for two people to sit abreast on the seats where the two people were sitting? - They certainly took up a space at the side of the boat. We had the oars out and then there was a little more room.

11234. Were not the people in the boat crowded by reason of the mode in which the seats had been packed while the boats were on the davits? - I could not say that.

11235. You did not notice that? - No.

11236. Tell me, with regard to the "Titanic" and Lady Duff-Gordon, from the time you first left off rowing, that is when you had got what was considered a proper distance from the vessel, to the time the "Titanic" went down, was Lady Duff-Gordon practically all the time violently seasick? - Not then; she was after.

11237. From the time you left off rowing in the first instance until very near the time you came in sight of the "Carpathia," was she violently seasick, and was she lying along upon the oars which were occupying the side of the boat where she was? - Yes, she was.

11238. Was not that her condition at the time the "Titanic" went down? - I could not say.

## Page 252

11239. I suggest to you, Mr. Hendrickson, that your statement that she took part in any conversation about the boat is a complete error? - That is what the lady said, what I am telling you; I am telling you the truth.

11240. How far off was she from you? - I reckon about 200 yards.

11241. I am not speaking of the ship, I am speaking of the lady. There were several seats between you and her? - I was in one seat here, and a gentleman was in *this* seat, and she was in the next one.

11242. She was in the second seat from you towards the stern of the boat? - Yes. 11243. Lying down - in a reclining position. She had her head down upon those oars and tackle? - Yes.

11244. I put it to you that at that time, the time the ship went down, she not only was not conducting conversation with anybody, but she was not in a condition to conduct conversation? - She was talking to her husband at intervals.

11245. I put it to you that her conversation to her husband was considerably after that time? - No; she got up now and again and lifted her head up.

11246. Was not the only communication which passed between her and her husband at that time the efforts the husband made to comfort his wife and to try and help her in her condition? - Yes.

11247. It was so? - Yes, when I saw them.
11248. Did that go on for a very long time when the boat was afloat? - For some time after the "Titanic" went down.
11249. Now, do you suggest it was in the intervals of these attempts of the husband to comfort his wife and relieve her from the trouble she was in - that physical trouble - that the conversation took place? - Yes.
11250. You say that? - Yes.
11251. You think that Lady Duff-Gordon heard you suggest that the boat should go back to the ship? - I could not say; I never said she heard me. I do not know who heard me.
11252. If she heard you, Horswill must have heard you? - She must have heard me to answer me.
11253. Let us see. She was on the second seat from you? - Yes.
11254. If she heard you Horswill must have heard you? - I do not know.
11255. The seaman who was alongside Sir Cosmo Duff-Gordon must have heard you? - He should have heard me, yes.
11256. The person who was alongside Lady Duff-Gordon should have heard you? - Yes, they should have heard me.
11257. Did you say anything so that Simmons could hear you? - I could not say whether he heard me or not.
11258. Did you consider at that time whether Simmons heard you or not? - No.
11259. What? - No.
11260. How was that? If you seriously, as you say, thought as a matter of humanity Simmons ought to take this boat back, how was it you did not consider whether Simmons heard you or not? - If he heard me he should have given me an answer.
11261. You think if he had heard you he would have given you an answer? - I do not know whether he would; he *should*, I said.
11262. Did you think he did? - No.
11263. You thought he did not. Why did you not repeat what you had to say, if you ever said it, so that it should go to the ears of the one man who could give effect to it? - It was up to the others, as well as me, to pass the word along if they heard me.
11264. Do you mean there was a little conversation between you and some other people about you as to whether it was up to you to go back? - No little conversation at all. I had no conversation. I called out, as I told you before.
11265. No talk? - No.
11266. None of the men about you replied? - No, no one at all.
11267. Are you sure now that any of the men about you heard? - They must have heard, they were there.
11268. Horswill must have heard? - They must all have heard, I should think.
11269. None of them made a reply? - None of them; none of the men.
11270. Simmons never had an opportunity of forming a judgment on your opinion that he ought to go back? - He had plenty of time. He should not wait for anyone's opinion, the man in charge.
11271. You say now Simmons ought to have seen for himself that he ought to go back?

- Of course, he did.

11272. And whether you communicated with him or not you do not know? - No, I do not.

11273. Could you see one another's faces in the boat at the time? - No. 11274. No? - No.

11275. Did you know Sir Cosmo Duff-Gordon from any other member of the party in the boat at that time? - No.

11276. Had you ever heard his voice up to then? - Yes.

11277. Where? - When he said about one man take command of the boat.

11278. Who said, "One man take command of the boat"? - Duff-Gordon. 11279. But the officer who dispatched the boat had given an order to them? - Sir Cosmo repeated it after.

11280. And you heard his voice? - Yes.

11281. Were there two Americans on board? - I knew there were men.

11282. Mr. [Abraham] Salomon and Mr. [Charles E.] Stengel? - I do not know their names.

11283. Have you any idea whether Stengel was in a position to hear this statement of yours, if you made it? - They should have heard it.

11284. Everybody in the boat should have heard? - If they were not deaf.

11285. Assume for a moment that Horswill did not hear and that Simmons did not hear, do you think you are mistaken in supposing that you shouted out that you ought to have gone back? - I am not mistaken at all.

11286. Supposing that Horswill did not hear it; assume for a moment that Horswill is here and that he heard nothing of the kind; how would you account for that? - I do not know; they were thinking of something else; they were too excited perhaps.

11287. Were you all very excited? - No; there was not any excitement.

11288. Was Horswill excited? - No; not that I knew of.

11289. If Horswill is here and did not hear a word from you on this subject, how would you account for that fact? - I do not know.

*Mr. Duke:* You cannot tell.

**Re-examined by the ATTORNEY-GENERAL.**

11290. The only matter upon which I want you to give us a little further explanation is how you were sitting in the boat, if you can? - I was sitting with my back to the bows. 11291. Well, you start from the bows; who was right ahead in the bow? - Horswill, I think.

11292. That is right. Was there anybody beside him, or was he sitting beside the bow? - There was another man; I think Collins was at the side of him.

11293. I think he was a fireman? - Yes.

11294. At any rate, he was one of the crew. Who was sitting in the next thwart? - I was sitting in that thwart.

11295. Was anybody next to you? - Taylor, I think, and Sir Cosmo Duff-Gordon were in the next thwart.

11296. With you? - No, I was alone on this thwart.

11297. That is what I want to get. You were alone; then in the next thwart, Taylor a fireman, and Sir Cosmo Duff-Gordon? - Yes.

11298. Then in the next one? - I do not know who was in the next one. Lady DuffGordon, I know. I do not know who the other was.

**Page 253**

11299. Do you mean another lady, or was it a man? - I could not say.

11300. Who was in the stern? - There was a man at the tiller, the coxswain, Simmons, that is all I know. It was dark, I could not see. I did not take notice when daylight came in.

11301. (*The Commissioner.*) When you were here last you suggested that something had been said in the boat before you reached the "Carpathia" about money? - No; the gentleman said he was giving us a present after he said he would send a wire home if he could.

11302. That was before you got on board the "Carpathia"? - Yes, we did not hear a word at all about any money until we got this a day or two before we got to New York. He said he would give us a present. He never said a word about money.

*(The Witness withdrew.)*

**GEORGE SYMONS, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

11303. Is your name Symons or Simmons? - Symons.

11304. And have you been at sea for nearly nine years? - Yes.

11305. You are an able seaman? - Yes.

11306. Have you crossed the Atlantic between England and New York many times? - Yes.

11307. How many times? - I say roughly about 58 to 60; I could not exactly say the correct number.

11308. As an able seaman? - Yes.

11309. And have you also acted as a look-out man? - Yes.

11310. (*The Attorney-General.*) Your Lordship will remember he comes into the story as look-out man also. (*To the Witness.*) I will ask you first of all about the look-out. On board this vessel, the "Titanic," you went to the crow's-nest? - Yes.

11311. When it was your duty to go on the look-out? - Yes, when it was my watch.

11312. What other vessels have you been in, liners, crossing between New York and England? - I was in the "Oceanic" for four years and four months, and three years of that I did on the look-out.

11314. And you were actually acting as look-out with Jewell on the "Titanic," I think, from 8 to 10? - Yes.

11315. You were relieved at 10 o'clock, the last watch really before she struck? - Yes.

11316. Whilst you were on the "Oceanic" did you at any time see icebergs? - Yes, once or twice.

11317. At night? - No, not at night, only in the daytime; but we have had orders before to keep a look-out for them in the night in the "Oceanic." 11318. Did you use glasses, binoculars? - Yes.

11319. Special glasses for night, were they? - No; they were an ordinary pair of glasses.

11320. Were they kept in a box in the crow's-nest? - In the "Oceanic" they were kept in a canvas bag.

11321. In the crow's-nest? - In the crow's-nest.

11322. For your use or the use of your mate on the look-out? - Yes. 11323. And you did find them useful? - Yes; very useful.

11324. Were there any on the "Titanic"? - No, none whatever. After we left Southampton and got clear of the Nab Lightship I went up to the officers' mess-room and asked for glasses. I asked Mr. Lightoller, and he went into another officers' room, which I presume was Mr. Murdoch's, and he came out and said, "Symons, there are none." With that I went back and told my mates.

11325. Was there a place for them in the "Titanic"? - Yes, a box in the port after corner.

11326. Of the crow's-nest? - Yes.

11327. Did you join the "Titanic" at Southampton? - Yes.

11328. After you left Queenstown, which, as we know, was 11th April, did you see the boat list up? - Yes, I saw a boat list after we got away from Queenstown, either on the Thursday night or the Friday morning early.

11329. Did you find it in the fore-castle? - On the door of the fore-castle, at the top of the companionway.

11330. Were there two boat lists posted? - There was one in the fore-castle, what they call the emergency boat list, and also on the fore-castle door was a general boat list, on which I found my name was assigned to No. 1.

11331. That is an emergency boat? - Yes, an emergency boat on the starboard side.

11332. You looked through the list? Did you notice how many seamen were assigned to the lifeboats? - Yes; there was not one but what had two seamen, and some had an officer. Whether there was more than that I could not say, but I know there was not one with less than two seamen.

11333. No one had less than two seamen, and to some of them there were two seamen and an officer. Is that right? - Yes.

11334. You know Sunday, the night of the 14th April; do you remember getting special orders from the bridge? - Yes; we had special orders about 9.30.

11335. 9.30 that night? - Yes.

11336. Through the telephone? - Through the telephone.

11337. Do you know from whom? - No, I could not say.

11338. From some officer on the bridge? - From some officer on the bridge. 11339. Can you tell me what he said? - "Keep a sharp look-out for small ice and bergs till daylight, and pass the word along." That was the order received by Jewell and me; we both heard it through the 'phone.

11340. Had you noticed anything to lead you to think you might meet icebergs before you got that message? - Yes; just a small conversation, I think, about 9 o'clock. My mate turned round from time to time and said, "It is very cold here." I said, "Yes; by the smell of it there is ice about." He asked me why, and I said, "As a rule you can smell the ice before you get to it."
11341. You thought you could? - Yes.
11342. Did you notice the temperature? - No, I could not tell you anything about the temperature. We were in the crow's-nest.
11343. You were relieved at 10 o'clock at night, and you went below? - Yes. 11344. And was the word passed along? - Yes, it was passed along at 10 o'clock by me and Jewell.
11345. You were relieved, I think, by Fleet and Lee? - Yes.
11346. Then did you go below and turn in? - Yes, I went below and turned in.
11347. What awakened you? - What awakened me was a grinding sound on her bottom. I thought at first she had lost her anchor and chain, and it was running along her bottom. I would not get up. The others got up, but I would not get up as I thought there was nothing the matter.
11348. You did get up eventually? - Yes; Hogg came down to me and told me I had better get up.
11349. Was he another look-out? - Yes, he was another look-out man.
11350. Hogg and Evans? - Yes.
11351. Hogg told you you had better get up and you started dressing, did you? - Yes.
11352. Whilst you were dressing was an order given? - There was an order came to the fore-castle door by the boatswain to "Stand by, as you may be wanted at any moment." 11353. Was that to you only, or to all hands? - To the hands in general who were in the fore-castle.

## Page 254

11354. "All hands stand by"? - Yes, "You may be wanted at any moment."
11355. You heard afterwards what the time was? - Yes, I did not know the time then.
11356. What time was this? - By the time I got on deck it must have been about one bell, a quarter to twelve.
11357. That was after you had this order from the boatswain? - Yes.
11358. Then you went on deck. Did you notice ice on the fore well? - No, I did not go to see the ice.
11359. What did you do when you got on deck? - I came on deck and I went into the mess room in the course of ordinary events to see if there was any coffee. From there I heard the water coming in to No. 1 hold. I looked down No. 1 hold, and hardly had I looked down there when the order came for "All hands on the boat deck."
11360. You said you looked down No. 1 hold. Before you got that order, "All hands on the boat deck," had you seen any water? - Yes, water coming in No. 1.
11361. Water in No. 1? - Yes.

11362. Much? - Yes, coming in a pretty good rush.

11363. (*The Commissioner.*) I thought you said you heard it? - I heard it first, and then I went and saw it through the gratings, the hatch gratings, as the tarpaulins were off. 11364.

(*The Attorney - General.*) Let us understand what it means. The tarpaulins were off? - Yes.

11365. There is a grating there? - Yes, there are gratings there.

11366. Were not the hatches on? - No, there were no hatches on at that place. 11367.

(*The Commissioner.*) What deck were you on when you saw the water through the grating? - I suppose you would call that the main deck - on the same deck as the forewell deck.

11368. Is it the same deck as that on which the long alleyway is? - No.

11369. Is it the one above it? - Yes.

11370. Were you looking down No. 1 hatch? - Yes, I was looking down No. 1 hatch through the grating when I saw the water.

11371. (*The Attorney - General.*) I think it must be two decks above, my Lord. I will ask him. (*To the Witness.*) It is under the forecastle deck you were? - Yes, under the forecastle.

11372. Then, did you have to go down two decks to get to the deck under the alleyway? - Yes; you would go down the stairs and then down a small flight of steps again.

*The Attorney-General:* What is called the shelter deck C is where he was, and your Lordship sees he has to get to deck E to the alleyway.

*The Commissioner:* On deck C?

11373. (*The Attorney - General.*) Yes, just under the forecastle deck. He is looking down No. 1 hatch. (*To the Witness.*) You saw through the gratings; the tarpaulin was off and the hatches were off? - Yes.

11374. There was nothing on the grating between? - There was nothing on the grating at that place then. Whether there were hatches at the fore end or afterend I could not say, but this was about amidships of the hatch.

11375. Could you see from which side the water was coming in? - No, you could not exactly see because the water was nearly up to the coamings of the lower hatch. 11376.

(*The Commissioner.*) You mean nearly up to the coaming of the hatch on the deck? - Yes.

11377. (*The Attorney-General.*) Let us be clear about this. You were standing on the deck below the forecastle deck, which is deck C? - Yes. As you stand on the C deck you look down through the gratings, and on the hatch below that is where the water was lapping around the tarpaulins and the hatch cover.

11378. There is a hatch with a grating over which you saw, from which the tarpaulin had been removed? - Yes.

11379. Then how far below that would it be before you got to the coamings of what you call the next hatch? - I could not exactly say the distance. 11380.

How many decks would it be? - It would be on the next deck.

11381. That makes it quite plain. Tell us as nearly as you can how many decks would you have had to go down to get to the water which was just touching, or just close to, the coamings? - The coamings of the hatch. You would only have to take the gratings off and there was the next coaming to meet you.

11382. How many decks would you have had to go down? - I could not say how many decks you have to go down to the steerage; but the coamings is the next hatch down below the one on C deck, the one we were standing on.

*The Attorney-General:* Your Lordship follows. The effect of that would be that the water would be up to D deck. It was coming into the coamings of the hatchway, which would be above D deck.

*The Commissioner:* No, I do not understand that.

*The Attorney-General:* Well, I did not think he meant that, but it is what he said just now.

11383. (*The Commissioner - To the Witness.*) Now, listen to me. There was a hatch upon the deck on which you were standing? - Yes.

11384. And that you supposed to be C deck? - Yes.

11385. Now, the hatchways were removed? - Yes, all the blind hatches were removed.

11386. And the tarpaulins were off? - Yes.

11387. And there was nothing but a grid or grating, through which you looked? - Yes.

11388. Now, this hatchway goes right down to the bottom of the ship? - Yes.

11389. There were coamings round the hatchway where you were standing? - Yes.

11390. Where would the next coamings be, down below? - I should think myself -

11391. Would it not be on the next deck? - I think myself a good two decks below, because there is a wide space from that upper coaming to the lower coamings. 11392. That may make a difference. Now, can you show me in the Court, without telling me what the number of feet are, how far below you, when you were looking through the grating, the coamings were where you saw the water? Just show me. Give me an idea. - I should think myself, from *that* deck *there* down to where *that* gentleman is sitting.

11393. Do you mean from the top; *this* roof that we see over *this*? - Yes, *this* platform.

11394. Down to the floor? - Yes, it may have been a little lower.

11395. That would mean two decks lower. The distance between the deck you were standing on and the next deck would be about how much - half *that* high? - About halfway, Sir.

*The Commissioner:* Then that would point to this, that it was two decks down?

*The Attorney-General:* Yes. I thought it was more from what he said.

*The Commissioner:* Well, it may be.

*The Attorney-General:* I will tell your Lordship why I thought so. If you look at the plan I should have taken it from the section to be between F and G decks, because, according to the plan, that is the first indication of coamings.

*Mr. Laing:* That is so.

*The Commissioner:* Very well; that is right, probably.

*The Attorney-General:* There is something like a coaming if you look at C, and then the next one is G.

11396. (*The Commissioner - to the Witness.*) Will you come round here? (*The Witness explained the plan to the Commissioner.*)

*The Commissioner:* He tells me, looking at this plan, he thinks that the water he saw was by the coaming on G deck.

*The Attorney-General:* Yes; I thought that is what he must mean.

*The Commissioner:* That would be about 25 feet below it, or something like that. *The*

*Attorney-General:* Your Lordship will remember - I do not know whether you noticed it on the "Olympic" - there was the same thing there. They go through various decks without coamings.

## Page 255

*The Commissioner:* Yes, until you go to this deck G.

*The Attorney-General:* Yes. That makes it right.

11397. (*The Commissioner - to the Witness.*) Now will you tell me how far below the top of the watertight bulkhead was this water at that time? - This water at that time, I should think roughly, was about a foot around the coamings, running around the coamings. What I want to know is, how far below the top of the watertight bulkhead would it be at the time?

*Mr. Laing:* 16 feet 3 inches.

*The Attorney-General:* Which bulkhead is that?

*The Commissioner:* The Admiral tells me it would be about 16 feet below the top of the bulkhead; so you see that the water he saw would have to rise, assuming the doors to be closed, 16 feet before it would break over the top of the bulkhead. Is there any watertight bulkhead, Mr. Laing, above deck E?

*The Attorney-General:* That is just what I am asking, my Lord. According to the plan it looks as if it reaches D in this particular bulkhead. It looks as if the bulkhead B reaches *this* particular place, that is, this particular bulkhead reaches deck D. I am just asking the question.

*The Commissioner:* I see the thick dark line which stops at the bottom of deck E, and then I see the line extending upwards, but it does not look to me as if it was intended to indicate a continuation of the bulkhead.

*The Attorney-General:* My friend, Mr. Laing, ought to be able to tell us; but it looks from the plan as if it does. Mr. Wilding will tell your Lordship at once. (*Mr. Wilding explained the plan to the Attorney-General.*)

*The Attorney-General:* It is right; it does go to D, my Lord; it is shown on this section. It does reach D.

*The Commissioner:* The collision bulkhead A does not go higher than the floor of deck E, does it?

*The Attorney-General:* I understand it does; it is stepped forward. *This* one is stepped aft.

*The Commissioner:* It is not shown on the plan.

*The Attorney-General:* No, my Lord; but I think this one is on my plan. It is stepped aft from G deck to D deck. Both A and B reach D deck.

*The Commissioner:* Mr. Wilding, will you come round here? (*Mr. Wilding explained the plan to the Commissioner.*)

*The Commissioner:* - *to the Attorney-General:* Will you look at this plan? I have marked in red pencil how high the bulkheads extend. (*The plan was handed to the Attorney-General.*)

*The Attorney-General:* Yes, my Lord, that is right. A is stepped forward to D deck, B is stepped aft to D deck.

*The Commissioner:* The water that he saw would be about 5 feet above the external waterline?

11398. (*The Attorney-General - To the Witness.*) You saw this water below the coamings? Is that below the coamings on which there are hatchway covers? - Below the coamings is where the hatches come on, and also the cover.

11399. That makes it quite plain that it is G deck. As I understand you, you did not have much time to look at it? - No, I had just time to see the water come in when the order came, "All hands on the boat deck."

11400. You say you saw water coming in; will you help us about that? Was it coming in fast? - Yes, coming in at what I call a moderate pace.

11401. Could you see where it was coming in from? - No, you could only discern by the look of it that it was rising from the starboard side.

11402. (*The Commissioner.*) I suppose the hatch covers and the tarpaulins were not on the hatchway of deck G? - Yes; the hatch cover was there, all covered up and battened down.

11403. How could you see the water? - I did not know it was coming in over this hatch.

11404. Through the hatch covers? - I could not see whether it was making its way through the hatch cover, but it was running over the hatch, and it looked as if it was mostly coming up the far end of the starboard side - the foremost corner. 11405. (*The Attorney-General.*) The hatchway in G deck was covered up in the ordinary way by the tarpaulin and hatches? - Yes.

11406. And battened down? - Yes, it was battened down.

11407. Did you see water over that hatchway? - No, it was not over.

11408. Where did you see it? - All round the coamings.

11409. They would be on the deck? - Yes.

11410. Raised on G deck? - Yes.

11411. Do you mean you saw the water round the coamings there? - Yes.

11412. Did you see any water on the tarpaulin? - I never took that much notice of the water on the tarpaulin. The only thing I noticed was the water coming round the coamings of the hatch.

11413. And I think you said from the starboard side particularly? - Yes, it looked as if it was coming from the starboard side in that corner, the foremost end.

*The Commissioner:* I took down from you that the water was nearly up to the coamings on deck G; that is inaccurate.

*The Attorney-General:* I am not sure that it is, with great respect.

*The Commissioner:* Nearly up to the coamings. He says it was running round the coamings.

11414. (*The Attorney-General.*) Yes, I think I know what he means. (*To the Witness.*) The coamings are above the deck, and the hatchways rest upon them in *that* way? - Yes.

11415. Explain in your own way. Will you explain to my Lord what you mean by saying that it was nearly up to the coamings? - Take that box, for instance; *there* is the hatch in the centre, and all round the hatch you would come to the bulkheads, which I suppose

you would call watertight bulkheads, and all around there was a foot, or it may be a little more or less, space between, allowing for the battens to go over the hatches; that is where the water was, right round the hatch.

*The Commissioner:* What he means, I think, is this, that the water he saw was nearly to the top of the coamings.

*The Attorney-General:* Yes.

*The Commissioner:* He means he saw it outside nearly to the top.

11416. (*The Attorney-General - To the Witness.*) After that you say as you looked at it you got an order to go on to the boat deck? - Yes.

11417. When you got on to the boat deck, what order did you get then? - The order I got on the boat deck from Mr. Murdoch, and also the boatswain was, they gave an order to uncover the boats and get the falls out. I assisted generally in the boats on the starboard fore end, 3, 5, and 7.

11418. Before you go on telling us what happened then, can you give us any idea what time it was when you noticed this water reaching nearly to the coamings of the hatch? - I should think, roughly estimating it, it would be about five minutes to twelve, because, as I was on my way to the deck, so they struck eight bells in the crow's-nest.

11419. When you got up there you told us you assisted to get 3, 5, and 7 ready on the starboard side? - Yes.

11420. Was No. 1 ready? - No. 1 was already swung out.

11421. That is the emergency boat? - Yes.

11422. It is always carried swung out, is it not? - Oh, yes.

11423. By the time you got to the boat deck had the seamen nearly all arrived on the boat deck? - Yes, I think they were pretty well all there.

11424. Had they gone to the boats on the starboard side? - They went to their respective stations, I believe, port and starboard side.

11425. Who was in charge of the starboard side? - Mr. Murdoch.

11426. Was there any difficulty, speaking generally, so far as you could see, in getting out these boats on the starboard side? - None whatever; they never worked better or more comfortably. I have never seen them work better in any ship I have been in.

## **Page 256**

11427. I did not catch that. I think you said you had never seen them work better on any other ship you had been in. Is that right? - Yes.

11428. Were there passengers on the deck when you arrived there? - Yes.

11429. Had they their lifebelts on? - Yes.

11430. Did they crowd round the boats at all? - No; they all kept good order; they kept back to give the men working room.

11431. Was there an order? - Yes, there was one order when we were at boat No. 3. Two or three men of some description, whether stewards or passengers I do not know, were asked to keep back to give the men room to work.

11432. And they did? - Yes.
11433. Were the boats lowered to the deck rail? - After we got all the covers out, the orders were given by Mr. Murdoch to start swinging them out. We started No. 5 first, and then we came back to 3, and then to 7.
11434. Five first, then 3, then forward again, and then? - that is aft? - Yes, that is the next one.
11435. Did you assist in putting passengers in any one of the boats? - I assisted in putting passengers in No. 5 and No. 3, and also assisted to lower No. 3 with the boatswain -
11436. Were you acting all this time under the instructions of Mr. Murdoch? - Under the instructions of Mr. Murdoch and the boatswain.
11437. What is the Boatswain's name? - Nichols.
11438. Were the passengers that you put into the boats men, women, or children? - Women and children. That was the order, and they were put in.
11439. That was the order you got from Mr. Murdoch? - That was the order, "Women and children first."
11440. Can you tell us when you began to help getting the boats out, was there any list of the vessel? - Oh, yes, there was a slight list, if anything in our favour, to starboard. 11441. (*The Attorney - General.*) Your Lordship asked the question yesterday about the list to starboard. We have heard from one man who says he saw it distinctly from the ship. We have heard of a list to starboard from a witness on the ship, but this witness says that he noticed a list to starboard at the first. (*To the Witness.*) Whilst you were on the ship did you see any list to port? - I never took particular notice of a list to port. The only way I know she had a list to starboard was when we were lowering away we were clear of everything. When we were being lowered away ourselves we were clear of everything. 11441a. (*The Commissioner.*) The list to starboard helped you? - Yes; it was all in our favour.
11442. (*The Attorney-General.*) You might have cleared away everything without a list, might not you? - Yes; but if she had had a list to port it would have made it difficult.
11443. Yes. Nobody said she had a list to port at that time. Now tell us about the emergency boat, No. 1.
- The Commissioner:* I suppose you will have some theory to explain the great list to port that there was, according to the evidence, on this ship before she went down?
11444. (*The Attorney-General.*) Yes. It is said the water came in on the starboard side, and so it requires some explanation. (*To the Witness.*) Speaking of boats 3, 5, and 7, did you see seamen placed in these boats under the order of Mr. Murdoch? - Yes, under the orders of Mr. Murdoch. They were given an order to get in, to get the plugs ready, to see everything was right in the boat, and told to stay there and take the women and children.
11445. Three lifeboats had been lowered away, 3, 5, and 7; were they lowered before you went to No. 1? - No, after we got the three boats out I went and assisted Wynn in clearing away one of the guys on B deck.
11446. Of what? - Of No. 1 boat. From there I went back to the boat deck and assisted generally in putting the passengers in Nos. 3 and 5.

11447. That was the first you had to do with No. 1? - Yes.

11448. You had already cleared away one of the guys? - Yes.

11449. And you went back again and helped to get out the boats 3 and 5? - Yes. 11450. And then after that what did you do? - After I went back on the boat deck we had orders to put the women and children in. I assisted generally, and they lowered down.

I do not know whether 5 or 7 went first; I could not say for certain. I was at No. 5; whether No. 7 went before it I could not say. When we got No. 5 away I went back to No. 3 and assisted there generally, and then I helped to lower the forward end of No. 3 along with the Boatswain.

11451. Then you saw 7, 5 and 3 lowered and away? - Yes, they were away when I went to No. 1.

11452. Then you went to No. 1, and did Mr. Murdoch speak to you then? - No, we did not go to No. 1; we were ordered to No. 1.

11453. And then you went? - We went to No. 1, and Mr. Murdoch asked who was assigned to that boat. I said I was, and he said, "Are you a sailor?" I said "Yes." He said, "Jump in and see the plug is in." After that he asked if there were any more sailors. Horswill replied, "I am assigned to that boat." He said, "Jump in." He next gave an order for five firemen to jump in, because there were no passengers around the deck at that time. Other members of the crew were assisting in getting the cover off of the surf boat lying under the emergency boat, if she had been in her place, if she was swung in.

11454. That is the collapsible, we call it? - As he gave orders I saw two ladies come running out of the foremost end of the top saloon deck, running towards the boat, and from there they asked Mr. Murdoch if they could get into that boat, and Mr. Murdoch said, "Yes; jump in." And then, after that, I saw three gentlemen come running up, and they asked if they could get into the boat, and he said, "Yes; jump in." Mr. Murdoch then looked around for more, and there was nobody in sight, only just the remaining members of the crew. He then gave an order to lower away. On the way down, just as we started lowering, he asked who was in charge of the boat. I replied, "Symons, the look-out." He replied, "Symons, take charge of that boat; make all those under you obey you; make them do what you tell them." I replied, "All right." When we were lowered down, just below B deck, we got hung up by a wire guy. I told them on the boat deck to stop lowering. They stopped lowering almost immediately. Then they asked me what the trouble was, and I said we were hung up by a wire guy. Someone came down on the next deck and chopped it away, and from there we proceeded to the water without a mishap and released the boat very satisfactorily.

11455. There was plenty of room in your boat? - Oh, yes.

11456. For a good number of passengers besides those you were taking away? - What do you mean?

11457. I mean there was plenty of room in your boat for more than you were carrying? - Yes; but the order was, "Lower away," and you had to obey orders.

11458. I am not making any complaint against you; I want to get the fact.

11459. (*The Commissioner.*) I want to be sure about this. Was there plenty of room in the boat for more persons when Mr. Murdoch ordered the boat to be lowered away? - Yes.

11460. Now why did he order the boat to be lowered away while it was not full? -  
Because, I suppose, he had looked around the deck for other people, as well as I did myself, and there was not another passenger in sight, only just the remainder of the crew getting the surf boat ready.
11461. I do not understand. What time was this? - I could not tell the time; I do not know.
11462. How long before the ship foundered? - Well, I should think myself if I say it was within half an hour I should not be far out. It may have been less.
11463. Half an hour is a long time? - Yes, it may have been less.
11464. Was there no time to find women and children to put into the boat? - I saw Mr. Murdoch running around there. I could not tell why he gave the order. I could not criticise an officer.

**Page 257**

He gave the order to lower away, and I had to obey orders. It is not a seaman's place to criticise an officer in that case.

11465. I am not asking you to criticise anybody; I am asking you to help me to find out, if I can, why Mr. Murdoch ordered this boat to be lowered into the sea when it was more than half empty? - That I could not tell you; that was his own discretion, I suppose; it was not for me to say anything to him.
11466. How soon after the two ladies had got into the boat, and the three men passengers, did Mr. Murdoch give the order to lower? - I should say, roughly, about three or four minutes.
11467. Three or four minutes after the three men passengers and two ladies got in the order was given to lower that boat? - Yes.
- 11467a. (*The Attorney-General.*) Was there any list to port at the time this boat was lowered? - The list was to starboard at the time the boat was lowered. That was everything in our favour going down. It was not much; it was very slight.
- The Commissioner:* The list was still to starboard?
11468. (*The Attorney-General.*) Yes. (*To the Witness.*) Before you left the boat deck had you noticed any rockets being fired from the bridge? - Yes, the rockets were going up simultaneously every minute, minute intervals, and that steamer's light was in sight, about a point and a half on the port bow, roughly between five and ten miles away, when they fired the rockets, and they were also working the starboard and port Morse lights.
11469. This was all, of course, before you left? - Yes, before we left.
11470. Whilst you were still on the boat deck? - Yes.
11471. Was this going on on the bridge? - This was on the bridge.
11472. Working the port and starboard Morse light? - Yes.
11473. Could you see the light? - Yes, plain.
11474. The light of a steamer, I understood you to say, or a vessel? - Well, a vessel, one white light.
11475. Where was it? - About a point and a half on the port bow as the ship was standing then.

11476. On the port bow? - On the port bow.
11477. How far distant did it appear? - Between five and ten miles.
11478. And after you put off in No. 1 boat did you still see this light? - Yes. I took the light to be that of a cod-bankman - or fishing vessel.
11479. You did not see any sidelights? - No sidelights whatever.
- The Commissioner:* Will you ask him when he first saw the white light?
11480. (*The Attorney-General.*) Yes. (*To the Witness.*) When did you first see the white light of which you have spoken? - After No. 3 boat was away.
11481. (*The Commissioner.*) Yes, but what time of night would that be? - That would be in the early part of the morning.
11482. What time? - That I could not say, because I did not know the time at the time. I should think myself it would be about one o'clock; it may have been a little after - between one and half-past.
11483. That would be about an hour before the vessel foundered? - Roughly. 11484. (*The Attorney-General.*) At any rate it was before you went to work on the boat deck at No. 1 boat? - It was after No. 3 boat was away that I saw the light.
11485. It was after that that you went to No. 1 boat to work? - Yes.
11486. Could you detect at all whether there was any more signaling about? Could you see if there was any vessel Morse signaling to you? - No.
11487. All you could see was your vessel Morse signaling to some other? - Yes. 11488. Do you remember getting an order from Mr. Murdoch to stand off a little way when the boat was lowered? - Yes, my orders were to pull away from the ship, not too far, and to stand by if I was called back.
11489. That we have not had from you yet. That is what I wanted. That is quite right. Your Lordship will see the importance of it all. You have it in mind. Question 5011 is what Hendrickson said about this He was cross-examined about it. That substantially agrees, I think, with what Hendrickson says. I will read you what he says: "We were told to stand off a little way and come back when called." That is right? - That is what Mr. Murdoch gave me.
11490. Now, at the time you left that No. 1 boat, was the fore-castle head of the "Titanic" under water? - After we got away the fore-castle head, the first lot of ports - that would be C deck under the fore-castle head, I think. What deck would you call that? That lot of ports *there* (*pointing on the model.*) was just awash under her name.
11491. That is at the top, just under the fore-castle head? - No; *these here* (*pointing on the model.*)
11492. It is the second row, really? - Yes, the second row.
11493. The first row under the well deck? - Yes, that is right.
11494. That was after you had got away in your boat? - After we got into the water.
11495. (*The Commissioner.*) And how far aft were those lights below the water? - They were just coming awash then.
11496. How far aft? Just turn to the model; take note of the ship and tell me how far aft those lights were under water? - Certainly the foremost ones were more submerged, if anything, than the after ones.
- The Commissioner:* Of course they were.

11497. (*The Attorney-General.*) Perhaps I may put it in a different form. Had it reached the mast? - No.
11498. Not as far aft as that? - No; not quite so far as the mast. 11499. Then you pulled away? - Yes.
11500. And did you see the "Titanic" go down? - Yes, I watched her.
11501. Now just tell us about that? - After I left the ship I gave the order to pull away. We were pulling very hard; we were pulling very steady; a moderate pull. After I gave that order we pulled away I should say about 200 yards, and I told them to lay on their oars, and just a little while after that, after I saw that the ship was doomed, I gave the order to pull a little further and so escape the suction.
11502. Now, just one moment. Just tell us why you say "after I saw the ship was doomed" you pulled away 200 yards? What was it that you saw that made you think that? - Because her forecastle head was well under water then. Her lights had all disappeared then. You could see her starboard sidelight, which was still burning, was not so very far from the water, and her stern was well up in the air.
11503. When you say all her lights went out, do you mean right away astern too? - No, just her foremost lights had disappeared, and her starboard sidelight left burning was the only light, barring the masthead light, on that side of the bridge that I could see.
11504. Then you saw her with her stern out? - Yes.
11505. Will you give us an idea what angle was her stern as far as you could see? How did it look to you; was it all up? - More like *that* with a cant. (*Describing.*) I do not know what position you would call it altogether.
11506. Was it out of water? - Yes.
11507. Did you see her keel? - No, you could not see her keel.
11508. (*The Commissioner.*) Could you see the propellers? - You could just see the propellers.
11509. (*The Attorney-General.*) You could see the propellers? - Yes.
11510. Then when you saw her like *that*, what was the next thing that happened? - Being the master of the situation, I used my own discretion. I said nothing to anybody about the ship being doomed, in my opinion. I pulled a little further away to escape, if there was any suction. A little while after that we pulled a little way and lay on the oars again. The other boats were around us by that time, and some were pulling further away from us. I stood and watched it till I heard two sharp explosions in the ship. What they were I

## Page 258

could not say. Then she suddenly took a top cant, her stern came well out of the water then.

11511. A top cant? - You know what I mean to say, she took a heavy cant and her bow went down clear.
11512. Head downwards? - Head down, and that is the time when I saw her lights go out, all her lights. The next thing I saw was her poop. As she went down like *that* so

- her poop righted itself and I thought to myself, "The poop is going to float." It could not have been more than two or three minutes after that that her poop went up as straight as anything; there was a sound like steady thunder as you hear on an ordinary night at a distance, and soon she disappeared from view.
11513. Let us see if we quite understand what you are saying about it. Suppose *that* is the stem and *that* is the stern. (*Describing.*) You saw her first of all with her stem downward? - Yes.
11514. I understand you to say you saw her stem downwards? - Yes.
11515. Did you see her head going well down? - Her head was going well down. 11516. And you saw her stern out of the water like *that*? (*Describing.*) - Yes, her stern was well out of the water.
11517. I understand you to say that at one period you saw her stern right itself? - It righted itself without the bow; in my estimation she must have broken in half. 11518. Can you form any idea from what part of the vessel it was that she appeared to right herself? - I should think myself it was abaft the after expansion plate.
11519. (*The Commissioner.*) Where is that? - That is the expansion plate. They have two expansion plates.
- The Commissioner:* Show it to me on that wooden model.
11520. (*The Attorney-General - To the Witness.*) Can you tell us where it was; which one you mean? - The one furthest aft.
11521. Where was it? - I should say it would be about abeam of the after funnel, or a little forward.
11522. About *there*? - Yes.
- The Attorney-General:* I do not know whether your Lordship saw on the "Olympic" what he means by the expansion plate; it is noticeable on the deck.
- The Commissioner:* I understand that.
11523. (*The Attorney-General.*) Then you saw her right herself - *this* part of her? - Yes; I saw the poop right itself.
11524. And then it went up? - Yes; then it went up and disappeared from view.
11525. And then went right down? - Yes.
11526. When you saw the "Titanic" go down did you hear any cries from the people that went down with the boat? - Yes.
11527. Did you try to rescue them? - I thought at the time, being master of the situation, it was not safe in any case to go back at that time.
11528. Do I understand from that, then, that your answer is that you did not try? - Not at that time; not as soon as the ship disappeared.
11529. Let us understand that. You heard cries? - Yes.
11530. And cries which you knew were of persons in distress? - Quite so.
11531. Gone down with the vessel? - Yes.
11532. Many, I suppose? - Yes, a decent few it sounded like.
11533. And you had plenty of room in your boat? - Yes.
11534. If you could have reached any one of those persons you could have saved the life of that person? - Yes, but I thought at the time, by using my own discretion, that it was not safe in any way to have gone back to that ship as she disappeared.

11535. But, apart from going back to the ship, you could have gone back, could you not, some way to pick up persons, without going into the seething mass of people? - The thing is those people, I suppose, would be together when they go down.
11536. But they do not all stop together? - No, that is true. They do not stop together as a rule.
11537. You were there with ample room? - Yes; we had room say for another eight or a dozen more in the boat. I do not know what the boat's complement is.
11538. The boat's complement is 40, and you had 12? - If there were 40 in that boat there would not be room.
11539. What? - I think myself if there were 40 in that boat practically when the sea rose in the morning it would not be safe.
11540. The sea did not rise. If the sea had risen I daresay it might have been so; but we are speaking of a calm night. The sea was quite calm at this time. You quite understood you were to be ready to go back if called? - That is right.
11541. Do you tell my Lord that you determined, without consultation with anybody, that you would not go back? - I determined by my own wish, as I was master of the situation, to go back when I thought that most of the danger was over.
11542. What? - I used my own discretion, as being master of the situation at the time, that it was not safe to have gone back at that time until everything was over.
11543. (*The Commissioner.*) I want to know why? What was it that you were afraid of? - I was not afraid of anything; I was only afraid of endangering the lives of the people I had in the boat.
11544. How? What was the danger? The ship had gone to the bottom. She was no longer a danger. What were you afraid of? - At that time the ship had only just disappeared.
11545. Never mind, it had disappeared, and had gone down to the bottom, two miles down, or something like that. What were you afraid of? - I was afraid of the swarming.
11546. Of what? - Of the swarming of the people - swamping the boat.
11547. That is it, that is what you were afraid of. You were afraid there were too many people in the water? - Yes.
11548. And that your boat would be swamped? - Yes.
- The Commissioner:* I am not satisfied at all.
11549. (*The Attorney - General.*) Now, I want to know a little more about that. Was the question raised about your going back to the people who were shrieking at this time? - None whatever.
11550. Do you mean to tell my Lord that nobody ever mentioned, amongst the people that you had in that boat, going back to try to save some of the people who were in the water drowning? - I never heard anybody of any description, passengers or crew, say anything as regards going back. Had there been anything said I was almost sure to have heard it.
11551. You mean nothing was said, either by you or anybody? - I used my own discretion.

11552. You have told us that several times. I understand that you used your discretion, and that you were master of the situation; we have got those phrases. What I am asking you about now is whether at that time you heard anything said by anybody on the boat about going back? - None whatever.
11553. Either by you or by any of the crew? - No.
11554. Or by any of the passengers? - No.
11555. Then, if I understand correctly what you say, your story to my Lord is; the vessel had gone down; there were the people in the water shrieking for help; you were in the boat with plenty of room; nobody ever mentioned going back; nobody ever said a word about it; you just simply lay on your oars. Is that the story you want my Lord to believe? - Yes, that is the story.
11556. (*The Commissioner.*) You told me that there were what you called “a pretty good few” - I think that was your expression - “in the water”? - Yes.
11557. Calling for help? - Yes.
11558. Could you see them? - No.
11559. Then you could not tell whether there was a swarm round your boat? - No, Sir; I was only going by the cries.
11560. Did not you think it was worthwhile trying to get near one or two of them. You could hear them, you know? - Yes, you could hear them.
- The Commissioner:* However, you did not do it.
11561. (*The Attorney - General.*) Did you ever go back to try to pick up any of these people? - Yes,

## Page 259

after we rowed a little way, as we were going for this self same light of my first story, we stopped; we laid on our oars. Then I gave the order to pull back, and told the men in the boat we would pull back to the other boats. I was going my way back then as near as I possibly could to the scene of the disaster after we met the other boat. I strained my ears to hear whether I could hear anybody, any person whatever making a cry.

11562. (*The Commissioner.*) And you heard no one? - I heard no one.
11563. They were all drowned by that time; is not that so? - I could not say that, Sir, because there were some picked up in a boat out of the water before daylight, according to the other story. Of course, I cannot say about other people.
11564. (*The Attorney - General.*) Did you know Sir Cosmo Duff-Gordon before he got into that boat? - No, Sir.
11565. Did you know Hendrickson? - I did not know Hendrickson then. I knew nobody only Oswald.
11566. Did you hear anybody in the boat say that you ought to go back to try and save some of the people? - No.
11567. Did you hear anybody talking in the boat at all at this time? - No.
11568. You were all silent? - We were all doing our work. They were saying nothing. I heard no conversation whatever.
11569. From the passengers or anybody else? - No.

11570. What part of the boat were you in? - I was in the stern.
11571. Close to the passengers? - There was a lady and a gentleman sitting in front of me. I was standing up in the stern.
11572. Where were the other passengers? - From what I could see in the morning when we came to get the daylight, there was one lady sitting on the other side, the fore side, by the fireman that was pulling. There was one of the fireman pulling at the starboard oar; and there was a lady sitting on the foreshore of him, and the gentleman was sitting like on the other side, on the port side further forward.
11573. Did you hear one of the passengers say that it would be too dangerous to go back? - No, Sir; I heard nothing.
11574. That you might get swamped? - No, I heard nothing.
11575. That was your view, that it was too dangerous to go back, because you might get swamped? - Yes.
11576. That is what you thought? - That was my own view, yes.
11577. Did you hear anybody express that same view? - No.
11578. Then, or at any time? - No.
11579. At any time? - No.
11580. Since. Have you discussed it since? - No.
11581. Have you never heard anybody say since that it was too dangerous to go back, that you might get swamped? - No. The first thing that I have seen about that was when I arrived in England on Saturday and I read Hendrickson's evidence in the papers. 11582. Who showed it to you? - I bought the paper myself and read it.
11583. I want to understand. You bought a paper, and then were you seen by somebody? - I was not seen by nobody. I was travelling in the train by myself. 11584. Have you been seen by any solicitors in the case? - What do you mean, Sir? 11585. Has any lawyer seen you about your evidence? - I have given evidence in two or three places.
11586. I would just like to understand what you mean about making a statement. Were you asked to make a statement to somebody representing Sir Cosmo and Lady Duff-Gordon? - Well, I was asked to make a statement, and I just simply told the truth. *Mr. Duke:* I wish you would emphasise the latter part of that - "on behalf of Sir Cosmo and Lady Duff-Gordon." He was asked to make a statement, but not so far as I am aware on behalf of Sir Cosmo Duff-Gordon - if you would not mind eliciting whether he says that or not.
11587. (*The Attorney-General.*) I will ask him again. Were you asked to make a statement by somebody on behalf of Sir Cosmo and Lady Duff-Gordon? - Yes, they did say they were representing Sir Cosmo Duff-Gordon.
11588. When was that? - It may have been Tuesday night or it may have been Wednesday night. Tuesday night I believe.
11589. You mean last Tuesday? - Yes.
11590. (*The Commissioner.*) Where was it? - At Weymouth.
11591. (*The Attorney - General.*) When did you arrive - Saturday night? - At Weymouth.
11592. When did you arrive home from America? - On Saturday morning at half-past seven at Liverpool.
11593. Where did you go to from Liverpool? - To Weymouth direct.

11594. Do you live at Weymouth? - Yes, that is my home.
11595. Had Sir Cosmo Duff-Gordon your address at Weymouth then? - That I could not say.
11596. Do you know how he got into communication with you at Weymouth, or somebody on his behalf? - I could not say.
11597. When you were at Weymouth did someone on behalf of Sir Cosmo and Lady Duff-Gordon get into communication with you? - Yes, they came down to see me.
11598. When did you get to Weymouth? - On Saturday evening.
11599. When was it that somebody came to see you on their behalf? - It must have been on Tuesday evening.
11600. Was that the first time that somebody had been to see you since your return to this country? - Yes.
11601. Was it a gentleman? - I beg pardon.
11602. Was it a gentleman - a man - who came to see you? - It was a gentleman.
11603. Two men? - A gentleman.
11604. Then you made a statement to him? - Yes, just a statement.
11605. (*The Commissioner.*) Did you know that he was coming? Had they written to you to say he was coming? - I just knew that there was a gentleman coming, but I did not know who he was.
11606. How did you know that there was a gentleman coming? - How did I know? - the message was brought to my house that somebody was coming to see me.
11607. Who brought the message? - By telephone.
11608. Where from? - That I could not say.
11609. Was it from somewhere in Weymouth? - Oh, yes; the message came through to Weymouth.
11610. Was the message from somebody in Weymouth? - No, Sir, that I could not say, because the man brought -
11611. How long before the gentleman came did you get this telephone message? - In the afternoon, Sir.
11612. How long before he came did you get the message? How long after the message did the gentleman turn up? - About six hours, I suppose.
11613. Six hours? - It may have been that.
11614. Did you ask through the telephone who he was? - I never had nothing to do with the telephone whatsoever.
11615. Who had? - The man brought me the message.
11616. Where from? - From a place in the town. That I could not tell you, I do not know.
11617. Who is the man? - That I could not tell you, Sir. Perhaps my parents might. I was not in at the time.
11618. (*The Attorney-General.*) When was it that you had the telephone message. Was it on the Tuesday? - It must have been on the Tuesday, yes.
11619. The message was given to your parents then? - Yes, the message was left with my parents.

11620. Had you communicated with Sir Cosmo and Lady Duff-Gordon since your return? - No, I communicated with no one.
11621. Had you ever given them your address? - Not as I know of. They asked me for my name aboard the ship, with one of the firemen. I cannot

**Page 260**

say for certain whether at the time I gave the address or not. I gave my name, but I think it was only my name.

11622. You do not know how they knew you were at Weymouth? - No, that I do not know.
11623. Do you know how they knew that you had arrived home? - No, I do not.
11624. No idea? - No.
11625. (*The Commissioner.*) Do you happen to know the name of the gentleman who came to see you? - No, I do not.
11626. You never asked him his name? - I never asked the gentleman's name.
11627. Have you ever seen him since? - No.
11628. (*The Attorney - General.*) How long was he with you? - I suppose, roughly, it might have been an hour, or it might have been a little more.
11629. (*The Commissioner.*) He took down what you said, I suppose in writing? - That I could not say, Sir, what he was doing of.
11630. (*The Attorney - General.*) Was he writing when you were there? - He just wrote down a little, but what he was doing of I could not say; I never said much, I just simply stated the truth, and that is all.
- The Commissioner:* I understand, Mr. Duke, you have heard nothing of all this?
- Mr. Duke:* I have just been inquiring, my Lord.
- The Commissioner:* You have heard nothing of it?
- Mr. Duke:* No, my Lord, I have not, but I have been inquiring, and I think presently I may be able to give your Lordship some information about it.
11631. (*The Attorney - General.*) Did you sign any statement at this interview? - Yes, I signed my name.
11632. What happened to the statement? - That I cannot say.
11633. Was it taken away by this gentleman? - Yes.
- The Attorney-General:* I call for it. Have you got it, Mr. Duke?
- Mr. Duke:* No, I have not got it, Mr. Attorney. I am making every inquiry I can. I think I know something about what happened about this now. I have been making inquiries.
11634. (*The Commissioner.*) It was not, I suppose, a newspaper gentleman? - That I could not say, Sir.
11635. (*The Attorney - General.*) Were you asked whether you were master of the situation? - Oh, yes, Sir; I was asked that.
11636. That is what the gentleman said to you? - Yes.
11637. The gentleman asked you, were you master of the situation, and I suppose you said "Yes"? - Certainly, Sir.
11638. Were you asked whether you exercised your discretion? - How do you mean

“exercised my discretion”?

11639. That was your expression today; it is not mine. Did that gentleman say to you, “Did you exercise your discretion”? - Is that for me to say in the Court here?

11640. I am asking you? - I know you are asking me, but is that for me to say?

11641. Whether the gentleman asked you that? - Whether the gentleman asked me that?

11642. Why should you be so shy about it? - I am not shy at all about it. 11643. Why do you want the protection of the Court? Why don't you answer the question? - You put the question to me, and I told you - the master of the situation.

11644. Just follow what I am putting to you. You say a gentleman was there with you? - Yes.

11645. And he put questions to you? - Yes.

11646. I am asking you, did he put this question to you: “Did you exercise your discretion as to whether you should go back or not”? - I told him “Yes.”

11647. *The Commissioner*: Then he did ask you the question, and you said “Yes”? - Yes.

11648. (*The Attorney - General.*) Did the gentleman tell you that you ought not to say anything about this? - The gentleman said nothing whatsoever to me, Sir. 11649. I do not quite understand why you should have objected to answering the question I put to you? - I think myself, Sir, like this. I do not know who the gentleman was, neither did I altogether at that time, and it was in my own private home; and I think myself it was not a case to put before the Court.

11650. Do not drop your voice - you thought it was not a case to put before the Court? - Not that question you put then.

11651. But why not? - I have answered it now, so that it has gone.

11652. I would like to understand why it is that you think that question ought not to be put to you. What is your objection to it? - I think myself, Sir, that what you do in your own private life is no business of no one. That is what I think, and that is a sailor's view of it.

11653. So that you thought that this conversation between you and this gentleman representing Sir Cosmo and Lady Duff-Gordon ought to be treated as private? - It was no business of nobody's.

11654. Neither of the Court's nor of anybody else? - Not in that regard, no, because there was nothing more than I just simply stated the outline of the thing.

11655. Did he ask you whether you had read Hendrickson's story to the Court? - No, Sir.

11656. Did he ask you whether you had heard anything about what Hendrickson had said to the Court? - No, Sir, not as I am aware of.

11657. What? - No, I knew what Hendrickson had said then.

11658. I am asking you what he put to you. Did he mention Hendrickson? - No. 11659. (*The Commissioner.*) Did you mention Hendrickson? - No, Sir.

11660. Now, just think. You had read Hendrickson's story? - Yes. 11661. And it was a very important story? - Yes.

11662. And this gentleman came to talk to you about Sir Cosmo and Lady Duff-Gordon who had been mentioned in Hendrickson's story? - Yes.

11663. Do you mean to tell me that neither you nor he mentioned Hendrickson's name at all? - Not Hendrickson's name - no, Sir.

11664. What do you mean by that. Did he mention somebody else's name? - I simply said that it was pretty good evidence what that man gave last week. No name was mentioned whatever.

*The Commissioner:* What is the meaning of that?

11665. (*The Attorney - General.*) "It was pretty good evidence what that man gave last week." Did you mean by "that man" Hendrickson? - Yes, I suppose that is what I meant.

11666. You did not mention his name? - No.

11667. But they knew to whom you referred? - I take it so.

11668. And you knew they had come to see you about that? - No, not about that question.

11669. Think. Do you mean to say you did not know that this gentleman had come to see you because of what had been said by Hendrickson to this Court? Is that what you are telling my Lord? - What do you mean, Sir, putting it that way? I do not quite follow what you mean?

11670. Do not you? - No.

11671. Let me try and put it to you again. Did not you know that this gentleman had come to see you because of what Hendrickson had said to this Court about what had happened in No. 1 boat? - I suppose that is what he did come there for, for protection, I suppose, to hear my story, and I gave him the brief outlines.

11672. You knew he had come because of what was suggested against Sir Cosmo and Lady Duff-Gordon? - I believe that is what it was for.

11673. Did not he tell you so? - He told me he was representing Sir Cosmo Duff Gordon.

11674. And did not he tell you he had come to see you about the story of this man Hendrickson, or of some man? - No; he just simply came and asked if I would give a brief outline of the story, and I gave it. 11675. A brief outline of the story? - Yes.

11676. How long did it take you to give that brief outline? - Just over an hour, I suppose.

11677. He put questions to you? - No - he may have put one or two now and then.

## **Page 261**

11678. You told me about the exercise of your discretion and your being master of the situation. Those you have told me about? - Yes.

11679. Did you say anything to him about having received any money from Sir Cosmo Duff-Gordon? Do speak up. - I was just thinking whether I said anything. I will not tell a lie.

*The Commissioner:* Do speak a little louder, please.

*The Attorney-General:* That does not want much thinking about, whether you had any money from Sir Cosmo Duff-Gordon.

*Mr. Duke:* You asked him whether he told the gentleman that he had received the money.

11680. (*The Attorney - General.*) I say it does not want much thinking about to recollect that you had the money. - That is right enough, but I am just thinking whether I

mentioned it or not to the man. It is no use my telling you a lie. I was just thinking whether I said it.

11681. (*The Commissioner.*) Now think, and tell us what the answer is? - Yes, I did tell him. I told him that at the time it was given me it was a surprise.
11682. A surprise? - Yes, it was a great surprise to me when I received it.
11683. (*The Attorney - General.*) That is what you told him? - Yes.
11684. How much did you have? - Is that a question to submit, Sir?
11685. (*The Commissioner.*) Yes? - £5.
11686. (*The Attorney - General.*) Have you had any more since? - No, none whatever.
11687. That is all you have had altogether? - That is all I have had.
11688. When did you have that? - About a day - it may have been two - before we arrived in New York on the "Carpathia."
11689. I understood you to say to my Lord just now that that came upon you as a surprise? - Yes, quite a surprise packet.
11690. You mean you had never heard of any present? - No, Sir, I heard of nothing.
11691. From Sir Cosmo Duff-Gordon? - No, Sir, I heard nothing.
11692. Either a present or a gift of money? - I only know I heard that they took my name, and I understood from the other fireman they were to send a wire to our parents.
11693. They were to send a wire to your parents? - That is what the other fireman said. Of course, I did not know the fireman's name at the time.
11694. Did you hear Sir Cosmo Duff-Gordon say anything at all in the boat? - No, Sir; I heard Sir Cosmo say nothing.
11695. How many hours were you in the boat before you were picked up by the "Carpathia"? - It must have been five or more.
11696. Did you hear any of the crew say anything? - No, Sir; they only gave a bit of a cheer when they sighted the "Carpathia" first.
11697. Are we to understand from you that during the whole time you were in the boat nothing was ever said until a cheer was raised when you saw the "Carpathia"? - There may have been a conversation among themselves, but I heard nothing.
11698. You did not hear it? - No. They may have been speaking among themselves.
11699. There may have been conversation going on without your hearing it? Is that what you mean? - Yes.
11700. Were not you surprised that nobody suggested that you should go back to pick up the people who were drowning? - Yes, I was rather surprised. 11701. You were rather surprised? - Yes.
11702. Were you looking towards the "Titanic"? Were you facing towards the "Titanic" or away from her when you were rowing? - How do you mean?
11703. When you were steering in the boat? - When I was steering away from the boat my back was turned. I was watching the "Titanic."
11704. Then, when you stopped and lay on your oars were you facing the "Titanic" then? - The boat was not. The boat was pulling away, but I myself was facing the "Titanic." I was watching the ship.

11705. When you heard the cries were you facing the vessel - or, rather, facing the place where the "Titanic" had been? - No, Sir; our stern was to the place then. 11706. Your back was turned? - Yes, we were a good way away at that time.
11707. And the other people would be looking towards the place? - The people that was rowing would be, Sir.
11708. That would be Sir Cosmo Duff-Gordon; he would be facing you? - I could not say. I could not see. You could not discern the people in the dark.
11709. You could not tell which way he was facing? - No.
11710. I would just like to understand the end of your story about this. You continued rowing and resting, as I understand, laying on the oars - that is the crew in the boat? - Yes.
11711. Until you sighted the "Carpathia"? - No. After we continued rowing, as I have said, we came back again. I stated that just now.
11712. Did you row towards the light that you had mentioned? - We were rowing for the light. The light was bearing roughly on our port beam when we were rowing away from the ship.
11713. And did you row towards it? - Yes, Sir, rowing after it.
11714. But it disappeared? - Yes.
11715. Did you appear to be catching it up at all? - No. I thought my own self she was gradually going away from us.
11716. Do you remember what time you were picked up by the "Carpathia"? - That I could not say.
11717. It was, of course, after daybreak? - Yes, a good time after daybreak.
11718. I see you gave evidence in America? - Yes, and there is one mistake there that I should like to correct.
11719. I think, your Lordship, you have that before you. I will hand it up. (*The copy was handed to the Commissioner.*) What is the mistake that you want to correct? - There is one mistake that was made there - that I rowed back, I think the Consul said, and saw the wreckage, but it should have been "I saw nothing."
11720. You may perhaps be referring to something else. You mean the deposition you made in America? - Yes, first of all before the British Consul.
11721. I suppose this is what you are referring to, My Lord, I am now referring to his deposition made on 2nd May, 1912. The only passages I find which refer to this at all are these, and I think they contain the part he now wants to correct. It is quite short. It begins: "Shortly after I had got on the boat deck I noticed rockets being fired at very frequent intervals from the bridge, Morse signals being used; and at about 12.30 I saw about one point on the port bow distant some five or six miles a light which I took to be the stern light of a cod bank fisherman." That is right? - That is right.
11722. "And after we had put off from No. 1 boat I saw this light still bearing in much the same direction and at about the same distance away. I saw no red or green lights at all at this time. At this time the fore-castle-head of the "Titanic" was all awash; and when we were about a quarter of a mile off I heard two sharp explosions following each other rapidly. The "Titanic" seemed to me to split in

two, the head disappearing completely, and the poop coming up and seeming to right itself for a moment, the lights all went suddenly out, and she seemed to take an upturn plunge, standing up on end, and with a roar she disappeared. We felt no effect of suction through her sinking at the point where we were, about a quarter of a mile away.” Now, listen to this, which I think is the only passage which relates to what happened when you were in the boat. “After waiting for a little we rowed back to where we thought the “Titanic” had disappeared, and it was difficult in the darkness to determine the spot, and we had no light in the boat, and we found nothing except some floating wreckage”? - That is where the mistake is - that  
“floating wreckage.”

**Page 262**

11723. What is it you want to correct? - “I saw nothing.” That is all.

11724. You saw nothing? - That is right, Sir.

*The Commissioner:* There is no reference here to any cries or to there being any people in the neighbourhood.

*The Attorney-General:* There is no reference, my Lord, of any kind to it. That is all the reference there is to what happened except the description of the sinking of the “Titanic” and the wreckage, which he now says is a mistake.

*The Commissioner:* The “floating wreckage”?

*The Attorney-General:* Yes, I think, my Lord, this might be put in. I will put it in.

11725. (*The Commissioner - To the Witness.*) There is one point, you know, that I want to ask you. You said that you were surprised that no one in the boat suggested that you should go to the assistance of these drowning people. Do you remember saying that to me just now? - Yes.

11726. That you were surprised? - I expected fully for someone to say something about it?

11727. That seemed reasonable? - Yes, that seemed reasonable, Sir.

11728. But you would not have thought it was reasonable if they had said it? - Not at that time, no Sir.

*The Attorney-General:* I am not going to read it now - it may be necessary to refer to it afterwards, but he has given evidence in America before the Committee. I think I handed that up, did not I?

*The Commissioner:* No, you have not handed me anything up.

11729. (*The Attorney-General.*) This is it (*The document was handed in.*) That is his testimony given before Senator Perkins. (*To the Witness.*) I just want you to hear what you said there. Listen to this. Is this right? “(Q.) What boat did you go from the ship in? - (A.) No. 1. (Q.) Who was in command of her? - (A.) I was. (Q.) How many passengers did you have on her? - (A.) From 14 to 20”? - Yes; that is what I thought I had there at the time, in the dark.

11730. (*The Commissioner.*) But you were not in the dark when you were sitting in this Court giving evidence? - No, Sir, not at that time.

11731. Then why did you say that you had from 14 to 20 passengers when you had only five? - I think, if I am speaking right, Senator Bourne asked how many was in the boat all told.
11732. (*The Attorney-General.*) I think, my Lord, if you read on that is all right. If you read on a little you will see he asked the question quite correctly, and evidently you misunderstood it? - That is right, Sir.
11733. He is asked: "How many passengers did you have on her?" I suppose he meant passengers in the boat. " (A.) From 14 to 20. (Q.) Were they passengers or crew? - (A.) They were passengers. At first they put in seven of the crew. There was seven men ordered in, two seamen and five firemen. They were ordered in by Mr. Murdoch. (Q.) How many did this boat carry? - (A.) I could not say for certain. It was one of the small accident boats. (Q.) After she got into the water would she take any more? - (A.) She would have taken more. (Q.) How many did you have, all told? - (A.) I would not say for certain. It was 14 or 20. Then we were ordered away. (Q.) You did not return to the ship again? - (A.) Yes, we came back after the ship was gone and we saw nothing." It still leaves it rather in doubt, I think, that is all there is about the numbers. (*To the Witness.*) Do you mean to say that the 14 or 20 that you said was meant to include everybody in the boat? - Yes, everybody.

*The Attorney-General:* But you knew you were only twelve, all told?

*The Commissioner:* It does not strike me that that is what it means. The question is put: "How many passengers did you have on her?" and the answer is: "From 14 to 20. (Q.) Were they passengers or crew? - (A.) They were passengers. At first they put in seven of the crew. There were seven men ordered in, two seamen and five firemen. They were ordered in by Mr. Murdoch. (Q.) How many did this boat carry? - (A.) I could not say for certain. It was one of the small accident boats. (Q.) After she got into the water would she take any more? - (A.) She would have taken more. (Q.) How many did you have all told?" Of course that may mean crew and passengers, but it does not read as if it did. *The Attorney-General:* Certainly; the earlier questions do not.

11734. *The Commissioner:* "(A.) I would not say for certain. It was 14 or 20. Then we were ordered away." But anyway you must have known perfectly well when you gave this evidence that the number in that boat of yours was 12 and no more. Why did you say 14 or 20? - How do you mean, Sir, at that time?

11735. Yes. In America before the Court there. You must then have known quite well how many there were in your boat? - Yes, Sir, speaking in that way.

11736. Why did you tell them in America that there were 14 to 20 people in the boat when you knew as a fact that there were only 12? - I think myself, Sir, that the mistake I made then was through the way they muddle us about there. *The Commissioner:* There does not seem much muddling about that.

11737. (*The Attorney-General.*) You were asked a very plain question: "How many passengers did you have in her? - (A.) From 14 to 20. (Q.) Were they passengers or crew? and your answer is, "They were passengers." - There must have been a mistake there, because I distinctly told Senator Bourne, or whatever his name was, the people that were in the boat.

11738. We have got exactly what you said; it was taken down in shorthand. "At first they put in seven of the crew." Did you know the names of the other passengers? - No.

11739. Did you know the names of any of the passengers? - No, Sir, none

whatever. 11740. When you were in America? - In America, yes, because I knew the gentleman then Sir Cosmo Duff-Gordon.

11741. But did you know anybody else? - No.

11742. I notice that there is nothing in your statement here or in the deposition to show that Mr. Murdoch had given you the order to go a short way off and stand by and come back when called? - No, there is nothing in the evidence. 11743. You never said that before? - I never said that before.

11744. Not till I asked you today? - Not till you asked me today. You put the question to me in a proper manner, whereas in America they did not, in that way of speaking. 11745. Did you tell the gentleman who saw you at Weymouth that that order had been given? - Yes, Sir.

*The Commissioner:* Is there anything in this American evidence about the money?

11746. (*The Attorney-General.*) I am going to ask him about that. There are two further things that I want to ask him, but I may as well put that to him first. Did you say anything in America about having received the £5? - Nothing whatever, and I was not asked, or asked to make a statement previously, of what was given in the boat. 11747. I may take it that nothing was said about it at all? - That is right, Sir.

11748. Just listen to what you said in America. This is just at the bottom of page 40 and the top of page 41 where you stopped just now, my Lord. "(Q.) You did not return to the ship again? - Yes, we came back after the ship was gone, and we saw nothing. (Q.) Did you rescue anyone that was in the water? - No, Sir; we saw nothing when we came back. (Q.) Was there any confusion or excitement among the passengers? - No, Sir; nothing whatever; it was just the same as if it was an everyday affair. (Q.) Was there any rush to get into either one of these boats? - (A.) No, Sir, I never saw it. I never saw any rush whatsoever. (Q.) Did you hear any cries of people in the water? - (A.) Oh, yes, Sir; I heard the cries. (Q.) Did you say your boat could take more? Did you make any effort to get them? - Yes, we came back, but when we came back we did not see anybody nor hear anybody. (Q.) Then, what did you do after that? - (A.). After we rowed around, we rowed around and picked up

## Page 263

with another boat, and both stuck together; one boat with a lot of people." I have called your attention to that. You see you were asked these very questions which we have been putting to you today, first, whether you heard cries of people in the water. You remember that? - Yes.

11749. Then you were asked whether you made any effort to get there, that is the people from whom you heard the cries? - Yes.

11750. It is pointed out to you that you had said your boat could take more? - Yes, I did say so.

11751. Your answer to that is, "Yes, we came back, but when we came back we did not see anybody nor hear anybody."? - That is quite right.
11752. Why did not you tell him what you have told us today, that you heard the cries, but in the exercise of your discretion and as master of the situation you had determined not to go back because you thought you might be swamped? Why did not you tell them that? - My idea of the whole concern was that they had us in three at a time in America - that you have not got there I expect - to get us through as quick as possible. He was putting his questions as quick as he possibly could to get us through - three of us; that was Hogg, Perkis, and myself.
11753. You realise that this does not give quite a true account, does it, as I read it to you? - No, not the same as I have given here.
11754. It leaves out altogether this important matter about whether or not you should go back to save these people? - Yes, that is left out.
11755. Nothing was said about that at all? - Nothing was said to me about that whatever.
11756. I do not quite understand, you know, why you suggest that you were muddled about it there. The Senator put this question to you: "Did you make any effort to get them?" and your answer is, "Yes, we came back, but when we came back we did not see anybody nor hear anybody." - That was the question that he put to me when I said that answer. I told him what I had done, which I do not expect is in that evidence. I told him what I had done - that we were rowing away and we came back again and turned round to pick up the other boats.
11757. You told him nothing about having determined not to go back in the exercise of your discretion? - No, I told him nothing of that.
11758. Why did not you when he asked you whether you took any steps to get the people back, tell him that part of the story; it is the most important part, is it not? - Yes, Sir, an important part.
11759. A thing which must have impressed itself on your memory? - Quite so, Sir.
11760. You have thought about it a good deal since? - Yes.
11761. You have realised that if you had gone back you might have saved a good many people? - Quite so.
11762. (*The Commissioner.*) And there is this question put to you at the end: "Is there any other incident that you wish to state that would be of interest to the public"? - No, Sir, not that I know of.

**Examined by Mr. SCANLAN.**

11763. I think you stated to Sir Rufus Isaacs that you had not given your address to Sir Cosmo Duff-Gordon? - I stated to you, Sir, that I did not give it to him on the ship. 11764. But you said, did not you, that Sir Cosmo Duff-Gordon was to send a telegram to your relatives? - That is as far as I understood from the fireman.
11765. So that Sir Cosmo Duff-Gordon had got both the name and address of you and of every other member of the crew? - He must have it if he gave it.

*Mr. Scanlan:* That was the paper that was produced by his counsel today.

*Mr. Duke:* You are quite mistaken, Mr. Scanlan.

11766. (*Mr. Scanlan.*) When did you first learn that one of your passengers in this boat was Sir Cosmo Duff-Gordon? - About two days after we were rescued. 11767. Do you mean to say you did not know during the time you were in the emergency boat? - Quite so; neither did I know till two days after we were rescued who the gentleman was.

11768. I suppose you knew that the "Titanic" had over 1,300 passengers? - Oh, yes. I do not know exactly the number, of course.

11769. And 892 of a crew - that altogether you had on board over 2,200 people? - I do not know the exact numbers, of course.

11770. Did you realise that you had not lifeboat accommodation for half the people you had on board? - Yes.

11771. You knew that? - Yes.

11772. Whilst you were assisting to lower and fill with passengers the other boats, Nos. 3, 5, and 7, you observed, did you not, each boat got a full complement of passengers? - She had a full complement to lower from the davits.

11773. Was yours the only boat that was lowered from that side without a full number of passengers? - That I could not say.

11774. Had you seen any of the other boats being lowered into the water with plenty of spare accommodation for passengers? - No, Sir; I did not see no more.

11775. Your boat corresponds exactly to the boat on the opposite side - to emergency boat No. 2? - Yes.

11776. Do you know that No. 2 boat took off 23 to 25 passengers, chiefly women. Did you know that? - No, Sir; I did not know that.

11777. At the time the emergency boat No. 1 was being lowered the position of the ship had not become very dangerous, had it? - No, not very dangerous.

11778. It would have been quite a simple matter to have kept No. 1 boat on the davits slung ready for taking on passengers until a search was made throughout the ship for passengers? - Well, yes, we could have done that.

11779. I beg your pardon? - Yes, that could have been done.

11780. Can you explain to my Lord how it is that this order was given for your boat to go away with only five passengers? - I cannot say, Sir.

11781. Was there any person directing operations on the boat deck besides Mr. Murdoch? - Mr. Murdoch and the boatswain.

11782. Who is the boatswain? - Nichols.

11783. Has he been saved? - No, Sir.

11784. Did you see Mr. Ismay? - No, Sir.

11785. On the deck at that time? - No, Sir.

11786. Did you know him? - Yes; I knew him by being on the "Oceanic" with him.

11787. Is it your evidence that there were no passengers, either male or female, on the deck? - I saw none.

11788. Did you see any person at all, passengers or crew? - The crew was there working at the surf boat, the collapsible boat as the gentleman said.

11789. Were not there people crowding aft of the boat - passengers? - What do you mean, "crowding aft."?

11790. Were not there a number of people aft of the emergency boat? - That I could not see from there. Those three boats there were gone.
11791. Knowing that you had not got accommodation for all the passengers you must have known and realised that there were plenty of passengers left behind in the ship, the “Titanic”? - Yes.
11792. Did the crew you had got into No. 1 prove sufficient to enable you to row this No. 1 boat? - Yes.
11793. The sea was calm? - Yes.
11794. And the night was calm? - Yes.
11795. The conditions could not have been more favourable for rescuing people? - No.

## Page 264

11796. (*The Commissioner.*) What seaboard had you in this boat? - That I could not give a satisfactory answer to.
- The Commissioner:* But you ought to have known that before making up your mind that there was a danger from swamping?
11797. (*Mr. Scanlan.*) Is it your evidence that you rowed away in obedience to the order from the officer to a distance of 150 to 200 yards? - No, it was a quarter of a mile. That is the distance I rowed.
11798. The evidence of Hendrickson is that you rowed away to a distance of 150 to 200 yards. Do you contradict that? - Yes; we rowed away to roughly about a quarter of a mile. 11799. If it is stated by Lady Duff-Gordon that you watched the boat go down from a distance of 200 yards, are you going to contradict that? - It was more than that, Sir. 11800. What was the order you had got from Mr. Murdoch? - To row away from the ship and to stand by to be called back.
11801. If you had gone away a quarter of a mile you could not have heard any call to come back? - No, Sir. When we rowed away at first we were not a quarter of a mile away. That was when the ship went down.
11802. Before the ship went down, when you were standing by to obey any order you might get from Mr. Murdoch, or the Captain, what distance was it? - Then we were about 200 yards.
11803. I put it to you that you remained stationary at a distance of 200 yards and watched the “Titanic” go down? - No, Sir, we were going further away all the time she was going down.
11804. And that while you were within 200 yards of the “Titanic” the people were screaming for help in the water, and that the cries were heard by you and everybody else in the boat? - Yes.
11805. 200 yards? - No, Sir, over a quarter of a mile.
11806. There would have been no difficulty whatever in rowing back a quarter of a mile? - Well no.
11807. Were any of your passengers seasick? - That I could not see, Sir.

11808. (*The Commissioner.*) Did you look? Was Lady Duff-Gordon seasick? - Lady Duff-Gordon I could not see; you could only just discern them. The only conversation that I caught once was Sir Cosmo Duff-Gordon trying to cheer Lady Duff-Gordon up. That was the only conversation - some words he spoke to her, and that was nearly at the break of daylight.
11809. (*Mr. Scanlan.*) You heard no complaint during the night that any of the passengers were seasick? - No, Sir, I heard no complaint whatever.
11810. Do you know that Hendrickson was sitting at the bow of this emergency boat? - He was in the bow.
- 11811-2. Was Hendrickson next to Sir Cosmo Duff-Gordon - the next seat to him? - That I could not say for certain.
11813. Do you know where Sir Cosmo Duff-Gordon was? - I should think from what I saw in the morning that he was about the second seat from forward.
11814. So that Hendrickson would be considerably nearer to Sir Cosmo Duff-Gordon than you were? - Oh! Yes, Sir, nearer.
11815. I suppose there was a good deal of conversation in the lifeboat? - If there was any conversation it was unknown to me. I never heard nothing.
11816. I mean in the lifeboat, this emergency boat? - There may have been conversation between themselves.
11817. So that it is possible that Hendrickson may have said, "We should go back and try to rescue these people who are crying"? - Yes. He may have said it, but I never heard it.
11818. And Sir Cosmo Duff-Gordon may have said, "It is not possible for us to go back"? - That I cannot say. He may have said it.
11819. When you say that you were surprised that no one asked you to go back, did you mean passengers? - Anybody, Sir.
11820. You expected - ? - Someone to say something.
11821. Some of the passengers? - I cannot say the passengers - anybody.
11822. Did you attribute to cowardice the fact that your passengers did not all ask you to go back? - No, Sir. I never had a thought in my head of cowardice.
11823. Looking back on this whole incident, and considering that you had a boat practically empty, with only five passengers, and accommodation for fifteen or twenty more, was it not cowardice that prevented the passengers and the crew from going back?
- No, I cannot see that.
11824. Can you give any other account? Can you account for it in any other way except by the exercise of what you are pleased to call your discretion? - That is right, Sir. That is the only thing I can see.
11825. You admit it was cowardly? - No, I do not admit it was cowardly.
11826. Is not a seaman, when the passengers in his boat are in danger, expected to run risks in order to save life? - Quite so.

*The Commissioner:* This is mere argument, Mr. Scanlan.

*Mr. Scanlan:* I shall not press it further, my Lord.

*The Commissioner:* Have a little mercy on the man.

11827. (*Mr. Scanlan.*) There is one point about your boat I want to ask you. Did you find this emergency boat properly equipped? - No, Sir; it never had no compass and no lamp in it.
11828. Was it deficient in any other respect? - I think - I will not say for certain - there were no biscuits in the boat.
11829. Did you find that binocular glasses were useful, especially at night on the lookout? - Yes.

**Examined by Mr. CLEMENT EDWARDS.**

11830. How was this £5 paid to you? - What do you mean, Sir.  
*Mr. Edwards:* It is a simple question.
11831. (*The Commissioner.*) It is a very simple question. What shape did you get it in? - Just in a form, Sir - a sheet of paper.
11832. (*The Solicitor-General.*) A cheque? - No, not a cheque.
11833. (*Mr. Clement Edwards.*) A £5 note? - No, a sheet of paper.
11834. It was an order? - Yes; an order.
11835. An order upon whom? - That I could not tell you, I have not studied it that much.
11836. Have you still got it? - No, Sir, not here.
11837. Have you got it at home? - Yes, it is at home.
11838. (*The Commissioner.*) Have not you changed it? - No, Sir. I have not got quite to that yet. I have a shot in the locker left.
11839. (*Mr. Clement Edwards.*) You are a pretty thrifty sort of man, are you? - Well, yes.
11840. Do you ever pay any money into the bank at all? - What do you mean? Is that a question to put? That is my own private affairs. I do not think that is right. That is not right, Sir.
11841. I see. Have you got a banking account? - It is not right for me to answer that.
11842. Have you paid any money into that banking account recently? - That is not for me to answer.  
*The Commissioner:* You want his passbook, you know.
11843. (*Mr. Clement Edwards.*) What have you done with this order? - It is at home, Sir.
11844. That is not paid in yet? - No, Sir; I still have that paper.
11845. What is the order for? - £5.
11846. Do you swear that? - Yes, by Heaven above, or God above, as you say.

**Page 265**

11847. (*The Commissioner.*) Five pounds or five dollars? - Five pounds, Sir. 11848. (*Mr. Clement Edwards.*) Did you get any money from anybody else? - No, Sir, none whatever.
11849. Do you know who the other passengers were? - No, Sir.
11850. Have you seen them since? - Seen them once on the "Carpathia," and that is all.
11851. You did not take the trouble to find out who they were? - No, they were of no interest to me.

11852. Was one of the ladies Mrs. Astor? - No.
11853. You are sure of that? - Yes, positive.
11854. You know Mrs. Astor independently, do you? - I saw her once before on the "Oceanic."
11855. You said that you did not see Mr. Ismay? - No.
11856. Were you about No. 3 boat when she was lowered? - Yes.
11857. Could Mr. Ismay have been giving directions to that boat without you seeing him? - The only man that was giving -
11858. Will you answer my question, please? - What did you say? Say it again.
11859. Could Mr. Ismay have been giving directions for the lowering of No. 3 boat if you were there without you seeing him? - I did not hear anybody giving any orders. 11860. Will you answer my question, please? - I can only say he may have been there or he may not have been there. That is all I can say to that.
- The Commissioner:* And it is a very good answer.
11861. (*Mr. Clement Edwards.*) We have heard something about a photograph. Were you taken in a photograph on the "Carpathia"? - Yes, I was took in several photographs this last month. It's quite nice to know you are so big.
11862. Were you taken in a photograph with the passengers and crew of your boat? - Yes, Sir.
11863. Have you got that photograph? - No, Sir; I have seen nothing of it.
11864. At whose request was it taken? - That I could not say.
11865. Who asked you to go into the picture? - The passengers that was around the "Carpathia" at the time.
11866. The particular passengers on this boat? - No, I did not know none of them.
11867. Did Lady Duff-Gordon ask you? - No, Sir, she never asked. We were all there together.
11868. Did Sir Cosmo Duff-Gordon ask you? - No, Sir.
11869. Did you write your name on a lifebelt? - Yes.
11870. At whose request? - At Lady Duff-Gordon's.
11871. When was that done? - It may have been a day or a couple of days before we got into New York.
11872. You told the learned Attorney-General that you thought in your discretion it would be dangerous to go back until everything was over? - No, not everything was over. 11873. That is what you said. - I mean to say my evidence was in that respect till I thought everything was safe for the boat to go back.

**Examined by Mr. HOLMES.**

11874. Did you realise when your boat No. 1 was lowered into the water that the "Titanic" was sinking? - No, Sir, not at that time.
11875. When did you first realise that? - When we got away from the ship.
11876. How soon after you got away? - About five minutes I suppose.
11877. You told us she had a list to starboard? - Yes, at that time.

11878. Did you actually see that by the deck? - The only way you could tell was by the lowering of the boat.
11879. You only judge she had it because of the way the boat went down? - If she had had a list to port the boat would have hung over her deck.

**Examined by Mr. LEWIS.**

11880. You really expected an order to return to the ship at some time? - Yes, I expected to go back with my passengers and land them aboard the ship again. 11881. And you knew when the ship sank you could not get an order from the ship? - No.
11882. You were either taking passengers off the ship or rescuing passengers after you were asked to be in readiness? - I do not know what that order was. The order that was given was to stand off and wait orders.
11883. What is the length of the boat you were in? - That I could not say.
11884. If Hendrickson had spoken loudly would you have heard? - I should think so.
11885. You have no reason to doubt Hendrickson's statement? - No reason to doubt it whatever. Had he spoken loud I was bound to hear.
11886. Do you know a fireman named Taylor? - No - I only just knew their names afterwards. I did not know none of them.
11887. You do not know where he was sitting? - No, not properly. 11888. And whether he was sitting alongside Lady Duff-Gordon and heard Hendrickson? - That I cannot say.
11889. If he heard Hendrickson it is possible you would have heard? - I should think so; if he heard him I suppose I ought to have heard him.
11890. If he said that a suggestion was made by someone, you would not doubt his statement, would you? - No. You cannot doubt his statement, because I cannot say whether he said it or whether he did not.
11891. (*The Commissioner.*) Or whether it is truthful or not? - Or whether it is truthful or not.
11892. (*Mr. Lewis.*) If he said he was opposed by a lady passenger, you would not doubt that would you? - You cannot doubt a man's word till you find out for certain. 11893. Or if he says a man passenger said it was dangerous? - Then you cannot doubt that.
11894. You would not doubt that? - No.
11895. And the lady may have said she was afraid of the boat being swamped? - She may have said it, yes.
11896. You said you went back to the wreckage after the ship sank? - Yes.
11897. (*The Commissioner.*) He went back and saw nothing? - Saw nothing.  
*The Commissioner:* Not to any wreckage.
11898. (*Mr. Lewis.*) The wreckage was mentioned in the American evidence. You went, at any rate, to the scene of the wreck? - As soon as possible.
11899. How long do you think it took you to get back to what you thought was the spot? - Half an hour or more; three-quarters of an hour nearly.
11900. Was there any conversation of any sort at the time of the sinking of the boat? - I never heard nothing.

11901. Nothing whatever? - No. If they were speaking between themselves, I was not hearing. I never heard nothing.

11902. I understand you to say that Sir Cosmo Duff-Gordon was quieting Lady DuffGordon? - Yes; once I heard that.

11903. Calming her? - Yes.

11904. Soothing her. Did he speak to her? - Yes, he spoke to the lady.

11905. You heard that? - That was at daylight, at the break of day; that was when the "Carpathia's" lights were in sight.

11906. If I were to suggest to you that immediately after the sinking of the boat, a few minutes afterwards, you gave the order to pull away, and that you did not pull to the scene of the wreckage, would I be speaking an untruth? - Yes, you would.

*The Commissioner:* You are not assisting me in the least by these questions.

**Page 266**

*Mr. Lewis:* Not in the least? I believe, my Lord, you will have evidence - *The Commissioner:* That may be, but I am thinking about the assistance that you are affording to the Court, and in my opinion, at present you are affording the Court none.

11907. (*Mr. Lewis.*) I am very sorry, my Lord, that you should think so. Personally, I think I am. (*To the Witness.*) You expected the people in that boat to say something? - Yes, you would expect to hear something of some description.

11908. What did you expect them to say? - You expect -

*The Commissioner:* I will not allow such questions to be put - "What did you expect them to say." How can it assist me in any way? *Mr. Lewis:* Because I want to know -

*The Commissioner:* You may ask him about facts - what he saw, what he did, what he said, what other people did and what other people said, but you must not ask this man about his expectations.

*Mr. Lewis:* I want to know, my Lord, whether he thought that the people in the boat would suggest going back.

*The Commissioner:* He has told us already that he was surprised they did not suggest it.

11909. (*Mr. Lewis.*) You have heard that all the other boats picked up passengers out of the water? - I heard it in the morning.

11910. Without any danger? - Yes, but how long was it afterwards?

*The Commissioner:* Don't you ask questions or we shall never get through. 11911.

(*Mr. Lewis.*) And are you still of the opinion, after hearing that, that it would have been dangerous to your boat? - Yes.

11912. You do not think you could have saved a few? - Not at that time.

***(After a short adjournment.)***

*Mr. Duke:* I made a statement to your Lordship this morning with regard to an interview which was had by some gentleman, whose identity at that moment I was not aware of, with the witness. As I made that statement, and as I now know the facts, I should like, if I may at some time, to tell your Lordship what I would have said then if I

had been aware of it when your Lordship mentioned it to me, which will make clear what the position is, and, if need be, I will call the people who were concerned. *The Commissioner:* I do not quite understand what it is you wanted to say.

*Mr. Duke:* It is very little, my Lord; it is this: Sir Cosmo and Lady Duff-Gordon were at sea; they were on their way from America to this country. Their solicitor, Mr. Tweedie, had no instructions except a cable message to inform the Board of Trade that they desired to attend at any Inquiry which might be held. He complied with those instructions. A member of their family, a connection of theirs, communicated with a firm of solicitors, and that firm of solicitors supposed they would act for Sir Cosmo and Lady Duff-Gordon, and thought it was the proper thing to try to ascertain, in view of Hendrickson's statement, what the other members of the crew said about this matter. One of those gentlemen saw the witness, and I have now the witness's statement here, which I am quite ready to hand to the Attorney-General. But that firm did not in fact act; and Mr. Tweedie, although he became aware that the interview had taken place, had no sort of connection with it, and Sir Cosmo Duff-Gordon had no sort of connection with it at the time it took place. If there is any question which is desired to be raised about it I will deal with it.

*The Commissioner:* Well, I think it would be better if you hand to the Attorney-General the statement that was taken down by this gentleman.

*Mr. Duke:* If your Lordship pleases, and if my friend thinks fit to enquire of me anything which will put him in a position to examine or cross-examine, of course I am at his disposal.

*Mr. Laing:* I have a few questions to ask of the witness, but I will follow my friend Mr. Duke.

*Mr. Duke:* I understand my friend intends to deal with totally different matters from those that I have to deal with.

*The Commissioner:* Quite.

### **Examined by Mr. DUKE.**

11913. Just answer me two or three questions. First of all, with regard to the sending off of this boat. So far as you are aware did anybody interfere with Mr. Murdoch's discretion as to the sending off of that boat? - No; I saw nobody interfere.

11914. Did the boat come along in its order to be sent off? Was it sent off when it was reached in its order, along the ship's side? - Yes.

11915. The boats, I suppose, were floated so that they would go astern? - Yes.

11916. And this was the forward boat? - Yes, this was the last boat forward.

11917. And below it was the surf boat, either below or outside? - That was inboard, the surf boat.

11918. The surf boat was inboard? - Yes.

11919. Would she have been swung from the same falls? - Yes.

11920. When she came to be floated? - Yes.

11921. Would that have anything to do with using despatch in getting off this boat or not? - Very likely, to get the falls up again for the other boat.

11922. They would have been wanted for the surf boat if she was wanted? - Yes. 11923. How long were you there during the getting out of that boat, getting her ready and getting her to the sea level and getting her afloat before she was actually afloat? - Do you mean the emergency boat?
11924. The emergency boat? - From the time we were there till she was afloat was about ten minutes.
11925. You think about ten minutes? - Yes.
11926. During the whole of that time was there anybody in communication with Mr. Murdoch, except the members of the crew under his orders? - Nobody except the members that were there that he was giving his orders to.
11927. Were you there for any length of time before that, before this boat was taken in hand? - No, we were working our way down through the line.
11928. Were you under Mr. Murdoch's orders while that was being done? - Yes, under his sole orders.
11929. Did anybody, so far as you are aware, during the whole of that time interfere at all with Mr. Murdoch's exercise of his duties? - No, I saw nobody interfere with him all the time he was in my sight.
11930. Now, a suggestion has been made, I do not know on what authority, that Mr. Ismay interfered in some way with regard to the launching of these boats. Did you see any interference by Mr. Ismay? - Nothing whatever.
11931. You knew Mr. Ismay by sight? - Yes.
11932. Was he there at all while these boats were being launched? - I never saw anything of him.
11933. So far as Sir Cosmo Duff-Gordon is concerned, did you see anything of him while the lifeboats were being launched? - No.
11934. Did you see what took place, or how it was that Lady Duff-Gordon was not one of the ladies who were put into one of the lifeboats? - I could not say.
11935. You did not see anything of it? - No.
11936. The first you saw was they presented themselves for this boat? - Yes. 11937. Now, with regard to the boat, you were a seaman? - Yes.

## **Page 267**

11938. Was she the sort of boat which would be adapted for navigating in the Atlantic? - I should not think she was, in any weather. She is there for saving life, being a lifeboat for any accident.
11939. For use in case of accident? - Yes.
11940. How far were you from land at this time? - I could not say; I should think by my own estimation about 1,300 miles from New York.
11941. You say it was dark on board the ship? - It was not very dark on board the ship, it was dark when we were going down the side.
11942. Was it dark, or light in the boat? - It was dark, very dark.
11943. You had no lamp? - No lamp whatever.

11944. Do you know how it was that the oars, and perhaps boat masts, or whatever they were - the tackle that was there - had been stowed in the sides against the thwarts? - They were stowed to the side.
11945. Would they in ordinary circumstances have been cleared out if the boat had been intended to be launched for a number of people? - No, I have always seen them kept in them before.
11946. They are kept there? - Yes.
11947. But did they occupy a good deal of what would have been sitting accommodation in the cross-seats? - Yes.
11948. Now with regard to the distance which you got from the "Titanic," how far away were you according to your judgment when the "Titanic" went down? - About a quarter of a mile; it may have been a little more.
11949. Are you pretty confident as to whether you were a quarter of a mile or not? - Oh yes, I am pretty confident of the distance.
11950. How long would it have taken you to row back? - It would have taken a good twenty-five minutes to half an hour to have got back to that ship, under the conditions, with four oars. There were only four oars there for pulling - four pulling places.
11951. There were four pulling places? - Yes, two each side.
11952. From first to last till the time you had made up your mind, did anybody try in any way to interfere with your judgment? - Nobody whatever.
11953. Now, it is suggested by gentlemen who were not there that you were afraid to go back. What do you say about it? - I was not afraid to go back - not in the least - no fear whatever. The only thing I knew was it was not safe to go back at the time.
11954. Were you clear in your own mind about that? - Yes.
11955. Had Sir Cosmo Duff-Gordon, or anybody else in the boat, anything to do with your making up your mind about that? - No, nothing whatever.
11956. Did you take the responsibility for it then? - Yes.
11957. And I understand you take it now? - I take it now.
11958. I daresay it is a good deal easier to talk about cowardice here than it is to make up your mind in a position like that? - That is right. Some of those people that talk like that should have been there.
11959. We will not discuss it, because they might not have got back. Now with regard to the money, when was the first time you heard any suggestion that anybody would get anything from Sir Cosmo Duff-Gordon? - About the second day before we got into New York.
11960. Even among yourselves, the men who had been in the boat, as far as you were concerned had you heard from them? - Nothing.
11961. That Sir Cosmo had said something? - Nothing.
11962. You had had your name taken by somebody? - Yes.
11963. Who was it? - By one of the firemen. I found out afterwards that Hendrickson was there.
11964. Hendrickson and another fireman, you think, were there together, and one of them took your name? - Yes, Horswill and myself both came together.

11965. That is the other seaman? - Yes; we had to stay in the boat around the bow till some of the other boats came alongside.

11966. Were you in communication with Hendrickson and the other men who formed the crew of the boat while you were on board the "Carpathia"? - Just once or twice.

11967. Were they there? Were they on board the "Carpathia"? - Yes.

11968. Did they come back in the same ship with you to England? - No.

11969. While they were there on board the "Carpathia," did either Hendrickson or any other man who was there suggest that you did wrong in the decision you came to not to go back at that time? - No. 11970. No one? - No one.

11971. When was the first time you ever heard a suggestion that you had been guilty of cowardice in not going back in that welter of people? - When I read the paper in Liverpool on Saturday.

11972. You had made your deposition in New York while you were there? - Yes.

11973. And you had attended before the Sub-Committee of the Senate? - Yes.

*The Attorney-General:* That was earlier; April, I think it was.

*Mr. Duke:* I am much obliged. (*To the Witness.*) You had attended before the SubCommittee and made a deposition before the British Consul?

*The Attorney-General:* Yes, the 2nd May.

11974. (*Mr. Duke - To the Witness.*) I do not know what the suggestion is about that money, but tell me this, while you were in New York were the newspapers full of scandalous stories about people who had been on board this boat, and whose lives had been saved? - Yes, also scandalous reports about myself. 11975. Was there any truth in them? - No, none whatever.

11976. Was this story about Sir Cosmo Duff-Gordon the only story that was set on foot about the people on board the ship? - That is all, Sir, the cowardice and the money. It was the only story that was in the papers.

11977. Was there a suggestion at that time that an American millionaire had bribed the crew to take him away, and that Mr. Ismay was a party to it? - Yes.

*The Commissioner:* I do not know that you need go into that.

*Mr. Duke:* These suggestions were made in cross-examinations by learned Counsel; they go through the country, and are read by all sorts of people, and there seems to be no remedy.

*Mr. Clement Edwards:* I was the Counsel who put the questions with regard to the money. I then had no knowledge whatever of similar statements having been made concerning this man in America.

*Mr. Duke:* Perhaps we shall find out why somebody suggested it.

*The Commissioner:* I know nothing about these things.

11978. (*Mr. Duke - To the Witness.*) I will ask you one other question about this matter. Were you aware of any inducement held out by anybody to take any particular person in that boat? - No, none whatever. I simply obeyed my orders.

11979. And was there any inducement to you to do anything which you did while you were in the boat? - No.

11980. What became of the lifeboats when they got to the "Carpathia," were they taken on board? - Some were, and there were one or two set adrift.

11981. Was this boat you were in, the dinghy, set adrift? - No, she was put on board.  
11982. She was put on board? - Yes.

**Page 268**

**Examined by Mr. LAING.**

11983. While you were on the look-out, up to 10 o'clock, what sort of a night was it? - Pretty clear, Sir, a fine night, rather hazy; if anything a little hazy on the horizon, but nothing to speak of.
11984. Would you describe it as a very clear night? - Yes.
11985. With stars? - Yes.
11986. With regard to what you said about binoculars, would you rather trust your eye for picking up anything than a binocular? - Well, it is all according to what you were picking up.
11987. If you were on the look-out on a fine, clear night would you rather trust to the eye than a binocular to pick up anything? - Yes. You use your own eyes as regards the picking up anything, but you want the glasses then to make certain of that object.
11988. You mean when you have picked up something with your naked eye, you like to examine it with the glasses? - That is right.
11989. I suppose your duty as a look-out man is directly you pick up anything with the naked eye to report it and then examine it with glasses? - No, as a rule you examine it before you report.
11990. Would not you report something before you took time to examine it if you had already picked it up? - It is all according to the weather you are in. You may have a beautiful clear day or night when you see these things a long time before they see them on the bridge. In hazy weather it does not matter, because whatever you see coming through the gloom, you report it at once.
11991. On a clear night do you mean you do not report? - Yes, but you make sure before you report because you see such a long way.
11992. You see such a long way with the naked eye, do you mean? - Yes, you can see a long way with the naked eye.
11993. When are the glasses useful to you? In foggy weather or hazy weather? - In hazy weather, in making the land, and also if you have an order to look out for bergs or derelicts, they are very handy. Also on a clear night if you are going west with stars falling, they are handy to pick up the difference between a star and a light.
11994. As a rule, do I understand you prefer to trust to your naked eye to begin with? - Well, yes, you trust your naked eye.
11995. With regard to Mr. Murdoch, was he loading and lowering all the boats on the starboard side you saw go? - Yes, all the ones I saw go.
11996. Did you hear any order given about a gangway? - No, I never heard any order about a gangway.
11997. You know what I mean by a gangway? - Yes, I know what you mean.
11998. You heard nothing about that? - No.

11999. Did he tell you to lie off a short way? - Yes.

12000. And come back when called on? - Yes.

12001. Did you hear anyone with a megaphone on the "Titanic" after you got down to the sea? - No one whatever.

12002. Is this your first shipwreck? - My first one.

**Re-examined by the ATTORNEY-GENERAL.**

12003. Do you know Mr. Lowe, the fifth officer? - I only knew him personally this trip.

12004. Was he close to the emergency boat No. 1? - I never saw him at all that night.

*The Attorney-General:* I have read the statement. I have no objection to my friend putting it in if he thinks it desirable.

*Mr. Duke:* I merely produced it for the information of the Board of Trade or the Law Officers.

*The Attorney-General:* I have only been very hurriedly through it, but I think I am right in saying that you do not mention in that statement that you had been ordered to pull away, to stand by, and to come back when you were called?

*The Witness:* No, in a statement like that you would not give it; you would give it to the proper people.

12005. It is not in it? - No, it is not in it.

12006. Did you hear an order given for the emergency boat to remain within hail of the ship? - No; the only order I heard given is what I have said.

12007. It is suggested that Mr. Lowe, the fifth officer, gave this order three times in a loud and distinct voice. Do you say you did not hear it? - I neither heard it, nor did I see Mr. Lowe. The only officer I saw was Mr. Murdoch.

*(The Witness withdrew.)*

**JAMES TAYLOR, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

12008. Is your name James Taylor? - Yes.

12009. Were you a fireman on the "Titanic"? - Yes.

12010. Were you one of the people who were in this boat No. 1? - Well, I think that was the number.

12011. The starboard emergency boat? - Yes.

12012. *(The Solicitor-General.)* I propose to go straight to that, my Lord. *(To the Witness.)* Was Symons, the man who has just been giving evidence, in charge of that boat? - Yes.

12013. Who was it ordered you into the boat? - An officer.

12014. Could you tell me who he was? - No, I do not know.

12015. You do not know which one, but one of the officers? - Yes.

12016. And when he ordered you in, did you get in? - Yes.

12017. When you got into the boat, were there any passengers in it? - Yes.
12018. Already? - Yes.
12019. What passengers were in it? - I do not know.
12020. Were they ladies or gentlemen? - Well, I did not know when I got into it, but I saw who were in it after we got away.
12021. We know the boat was lowered to the water, and we know there were two ladies in it and three gentlemen passengers? - Yes.
12022. Is that right? - Yes.
12023. Where were you sitting in the boat when it was got down to the water? - Amidships.
12024. Do you know a leading fireman named Hendrickson? - Yes.
12025. He was in this boat, was he not? - Yes.
12026. Where was he sitting? - Behind me.
12027. Do you mean the next thwart behind you? - Yes, forward of the boat.
12028. Near the bows of the boat? - Yes.
12029. Were you pulling an oar? - Yes.
12030. Was there anybody else on the same thwart as you? - Yes, a gentleman passenger.
12031. You would not know at the time, but do you know now who it was? - No. 12032. Do you know now it was Sir Cosmo Duff-Gordon? - I understand it is that gentleman now, but I did not know it at the time.
12033. You understand now it was that gentleman who was sitting beside you? - I understand now.
- I think Sir Cosmo is here now.
- Mr. Duke:* Yes, he is here. (*Sir Cosmo Duff-Gordon stood up in Court.*)

**Page 269**

- The Witness:* That is the gentleman who sat alongside of me.
12034. You and he were sitting on the same thwart? - Yes.
12035. And, as I understand, Hendrickson was on the thwarts immediately behind your back, on the thwarts next nearest to the bow? - Yes.
12036. Lady Duff-Gordon was in the boat; where was she sitting? - I could not tell you. There were two lady passengers, and I did not know which was Lady Duff-Gordon out of the two, and I do not know now.
12037. Was one of the lady passengers near you? - There was one next to me on the next seat, aft of me.
12038. Nearer the stern of the boat? - Yes.
12039. Where was the other lady sitting? - She was sitting right aft from what I can understand.
12040. But you say you do not know which was which? - No.
12041. Did you hear any order given to this boat No. 1 and to the man in charge as to what he was to do? - He was told by the officer, when we left the ship, to go a distance away from the vessel and stand by for readiness. That was by an officer, I do not know who he was. I do not know what his rating was or who he was. "And mind that the crew of the boat do as you tell them"; they were the officer's

- words when we left the ship. 12042. The officer gave the order that the boat was to go to a distance. Did he say about how far? Did he mention the distance? - I think it was 100 yards, if I am not mistaken; I think so.
12043. I will just put to you what we have been told already about it. Is this right, that Symons was told to stand off a little way and come back when called? - Yes.
12044. Hendrickson said that. Then what was done in the boat; where did the boat go - how far off? - Well, about that distance.
12045. About 100 yards? - Yes. Then we pulled a little further to save suction. 12046. We will come to that. But first of all you pulled off about 100 yards and then you lay on your oars? - Yes.
12047. How far away were you from the ship, do you think, when the ship went down? - About 150 yards to 200 yards.
12048. Then you had pulled a little further away by that time? - Yes.
12049. Would it be right to say that you were quite a quarter of a mile away? - Well, I do not know.
12050. What do you think? - The same as I say, 150 to 200 yards.
12051. Did you, or did you not, hear any suggestion made that the boat should return to the place where the "Titanic" had sunk? - There was a suggestion of going back.
12052. There was? - But who made it, I do not know.
12053. First of all, there was a suggestion. Do you know whether it was a man or woman who suggested it? - No.
12054. You do not know who suggested it? - No.
12055. Did you hear it suggested? - It was suggested.
12056. Now, when that suggestion was made, just tell us yourself, in your own way, what happened and who said anything? - I do not know who said it.
12057. Just tell us what you do remember. What did you hear? - The suggestion was made, there was a talk in the boat of going back, and there was a lady passenger who talked of the boat being swamped if we went back.
12058. A lady passenger talked of the boat being swamped if you went back? - Yes, and two other gentlemen in the boat replied to the same question, "We shall be swamped if we go back. It would be dangerous to go."
12059. (*The Commissioner.*) When you say two other gentlemen, you mean two passengers? - Two gentlemen in the boat.
12060. Two of the passengers? - Yes.
- The Commissioner:* Who was the other lady, Sir John?
12061. (*The Solicitor-General.*) That lady was Lady Duff-Gordon's companion or secretary, my Lord. I think her name was Miss Francatelli. (*To the Witness.*) You did not know the names of either of those two ladies, but can you tell me this? You say one of the ladies said if you went back you would be swamped. Was that the lady who was sitting on the next thwart to you, or was it the lady who was in the stern of the boat that said it? - I do not know which it was now. I heard the remark.
12062. Now the gentleman you now know as Sir Cosmo Duff-Gordon was sitting on the same thwart with you? - Yes.

12063. Did he take any part in this conversation? - No.
12064. When the lady, whichever the lady was, said you would be swamped if you went back, was there anything more said by anybody? - No one said anything else.
12065. But you say two of the gentlemen passengers agreed with the lady? - They said it would be very dangerous.
12066. What did you think yourself? - It would be dangerous.
12067. You thought it would be. Now, what order was given or what was done at this time, or just after? - An order was given to row away.
12068. Who gave that order? - The coxswain - to row away on our oars.
12069. "Row away on your oars." That would be Symons said that? - Yes. 12070. How long was that after the suggestion had been made about going back? - Well, I could not say.
12071. Well, did anything happen in the interval? - No.
12072. And did you row away? - On my oar, Sir.
12073. That means row away from where the ship had sunk? - No, it means row away with your oar.
12074. You mean "go on rowing"? - Yes.
12075. In what direction did you row? - I could not tell you.
12076. Of course it would be the coxswain who was steering, but did you or did you not follow the suggestion to return to the place where the ship had sunk? - I was willing with anyone else.
12077. Yes, but what happened to the boat? - Which boat?
12078. The boat you were in? - Nothing.
12079. An order was given to go on rowing? - Yes.
12080. So you moved your boat? - Yes.
12081. And this was after the suggestion that the boat should return? - Yes.
12082. Now, did it return, or did it go further away? - I cannot tell you. It was after the ship had gone.
12083. I think we can probably find it out in this way. When the "Titanic" sank, did you hear the cries of people in the water? - Yes.
12084. Did you hear them clearly? - No.
12085. Loudly? - No.
12086. Could not you hear them clearly? - No.
12087. What do you mean? - Well, it was not a clear sound.
12088. There was no doubt about the cries, was there? - No, no doubt about the cries.
12089. Could everybody in your boat hear them? - Yes.
12090. Were those cries going on when there was the talk in the boat as to whether you should go back? Just think. Were those cries going on when there was talk in the boat as to whether you should go back? - I could not say. 12091. Just think a minute? - No, I cannot remember.
12092. You have told me that the suggestion about going back was just after the "Titanic" sank? - Yes.
12093. Did not you hear the cries directly after the "Titanic" sank? - Yes.

12094. Now try again. Were those cries going on at the time of the talk as to whether you should go back? - I could not say.

12095. Well, what do you think? - Well, I cannot remember.

**Page 270**

12096. Where did the cries come from? - From some direction, Sir. They seemed to come from everywhere, in my version, from the state I was in when I was in that boat.

12097. I think we understand that. But when the suggestion was made to row back, did not you understand that to mean to row back to where the cries were? -

No, we had orders to row away on our oars - not to row back.

12098. No; just listen a moment. I am not asking you about your orders. You have told us there was a suggestion made in your hearing that your boat should row back? -

There was a suggestion by someone to go back.

12099. To go back where? - Ah!

12100. What? - Well, what I understand from my own estimation, it was back there, where the wreckage was.

12101. (*The Commissioner.*) To save life? - Well, I should understand that, Sir. 12102. (*The Solicitor-General.*) What were you to go back for? - That was all, to save life.

12103. Was that to go back to where the cries were? - I suppose so.

*The Commissioner:* It is quite clear.

12104. (*The Solicitor-General - To the Witness.*) When that happened I want to know did the boat go back to where the cries were, or did the boat go further away? - No, it stopped where it was for a long time.

12105. You said that the order given to you and the others was to go on rowing? - We did go on rowing.

12106. Now did you go on rowing towards the cries or away from the cries? - I could not tell you. I did not know in which direction we were going. I did not know where we were going, north, south, east or west.

12107. I am not asking you about the points of the compass. Just think a minute. You say you could hear the cries? - From everywhere, from my own version.

12108. Is what you tell me that you really do not know whether your boat did go back to the cries and where the boat had sunk or whether it did not? - I know the boat had sunk.

12109. Do you tell me you do not know whether your boat went back to where the "Titanic" had sunk? - No.

12110. You do not know? - No.

12111. Then what was the decision arrived at in your boat. You know you have told us you heard there was talk, a discussion, as to whether you should go back? - Yes.

12112. And you have said that one of the ladies said it was too dangerous and that you would be swamped, and you have said that two of the men passengers - ? - I did not say it was dangerous to the ladies; I did not say the lady said it was dangerous; I said the lady was frightened of being swamped.

12113. That is right, and you said two of the men passengers agreed with her and said so?  
- Well, they said it was dangerous; they thought we would be swamped.
12114. Did you go back into the danger, or not? - No, Sir.
12115. As far as you know did your boat ever get within reach of any one of the drowning people? - No.
12116. How much room was there in this boat, do you think; how many people could you have taken in? - About 25 to 30.
12117. Do you mean 25 to 30 in addition to those who were in it already? - Yes. 12118. I think it is right to ask you: Since you landed in this country have you been interviewed by somebody who said he came on behalf of Sir Cosmo Duff-Gordon? - Yes.
12119. Did you give him a statement, or not? - Yes.
12120. Did he write down what you said? - Yes.
12121. Did you sign it? - Yes. I thought I was signing a receipt for the money I received.
12122. You thought you were signing a receipt for the money you received? - Yes.
12123. Is that money which you received when the gentleman saw you on behalf of Sir Cosmo Duff-Gordon - ? - Sir?
12124. Was that receipt for money which you got when the gentleman saw you? - I got no receipt whatever.
12125. Was the receipt you thought you were signing a receipt for money which you got when the gentleman saw you? Is that right? - Well, that is what I understood.
12126. Did he give you any money? - Yes. 12127. What was it? - Seven shillings.
12128. Was that supposed to be for the time you had lost? - For my day's expenses.
12129. Did he come down to see you, or had you gone to see him? - I went up to see him.
12130. (*The Commissioner.*) Where were you, and where was he? - "The White Star," Trafalgar Chambers.
12131. In London? - No, in Southampton.
12132. You were there, and did he come to you? - He was there before I got there.
12133. (*The Solicitor-General.*) We do not want there to be any mistake. I may have suggested it to you. Did you know on whose behalf he came? - I asked him.
12134. And what did he tell you? - He told me he was there from London on behalf of Sir Duff-Gordon.
12135. And did you tell him what you have told us here in this Court today? - The same, Sir.

**Examined by Mr. SCANLAN.**

12136. Was there any mention made, while you were in the small boat, of a present that you and the other members of the crew were to get? - No.
12137. Are you sure? - Quite sure.
12138. When someone said something about going back, was that a member of the crew? - I do not know.
12139. Well, you say that those who objected were passengers. Is that so? - It was a lady.
12140. And two gentlemen? - There were two gentlemen, yes.

12141. They objected. I take it no member of the crew objected to go back? - No.  
12142. No member of the crew objected? - No.  
12143. And you say that for yourself you were willing to go back? - Yes.  
12144. Did you say to anyone that you were willing to go back? - Yes, not in the boat.  
12145. When? - Not in the boat, I never said I was willing to go back to anyone in the boat.  
12146. When did you say it? - Say what?  
12147. That you were willing to go back? - To a gentleman in the White Star office, or in the "White Star," Trafalgar Chambers, Southampton.  
12148. Did you have any conversation with the gentleman who was sitting on the same seat with you, about those poor people who were drowning about a couple of hundred yards from you? - No.  
12149. Did he express any opinion as to whether or not you should go back? - No.  
12150. Not a word? - No.

**Examined by Mr. HARBINSON.**

12151. Was it immediately the "Titanic" disappeared that the suggestion was made that you should go back? - I do not know.  
12152. You do not know whether or not she had gone at the time? - No.  
12153. Beyond this suggestion, was there any further discussion in the boat about going back? - No.  
12154. Did any person beyond the lady make any observation? - There were a couple of gentlemen said it would be very dangerous, and they were afraid it would swamp us.

**Page 271**

12155. Is that all the conversation? - Yes.  
12156. Although during the whole of this time you could hear these cries? - Yes. 12157. And was it after the lady spoke and the gentleman said it would be dangerous, that you proceeded to row away on your oars? - Yes, that is right.  
12158. How long did these cries last? - Well, I could not say.  
12159. And during the whole time that you heard them were you rowing on your oars? - No, not all the time.  
12160. Who told you to cease rowing? - Our coxswain.  
12161. How long did you continue to row on your oars? - Well, from my own estimation - well, I cannot say the time properly.  
12162. But there was no further conversation about going back to where the "Titanic" had been? - No.

**Examined by Mr. LEWIS.**

12163. Was it on Tuesday you saw the agent of Sir Cosmo Duff-Gordon? - Yes. 12164. Who sent you to Trafalgar Chambers? - Mr. Blake. Mr. Greenham came, the shipmaster, the superintendent engineer of the White Star Line.
12165. Have you seen anyone else? - Yes, I saw a man the day before in the Chambers, too.
12166. Who was that? - I do not know his name. I did not ask who he was.
12167. Have you seen anyone since? - No, only the man I have just mentioned, the day after.
12168. On the Tuesday? - Yes.
12169. On the day before did they say what they wanted you for? - They wanted me to give a statement.
12170. Did not they say who it was for - who they wanted the statement for? - No.

**Examined by Mr. COTTER.**

12171. Where were you when the ship struck? - In my bunk, asleep.
12172. What did you do after the ship had struck? - I went up on deck.
12173. Upon the boat deck? - No, the well deck.
12174. What did you do afterwards? - Stood there, and waited to see what we could see and hear.
12175. Did you get an order to go to the boat deck? - Yes.
12176. Who gave that order? - A leading fireman.
12177. When you got to the boat deck, was No. 1 boat swung out ready for launching? - Yes, the boat was swung out; it always is swung out.
12178. Was No. 3 swung out ready for launching? - I do not know.
12179. You do not know? - Not No. 3.
12180. Do you know where No. 3 boat is situated? - No.
12181. Had you a boat at all? - Yes.
12182. What was the number of your boat? - No. 5.
12183. Do not you know No. 3 is situated next to No. 5? - No.
12184. How did you know where No. 5 was? - Because I was told where it was as I was going there.
12185. Did you see any women round No. 5 boat? - Yes.
12186. What was the order when you got to No. 5 boat? - The order was nothing when we got there.
12187. The order was nothing? - Not when we got there.
12188. What did you see? - I saw a lot of ladies in the boat, and a lot of ladies getting in the boat, and children.
12189. Was there any officer there? - Yes.
12190. Did you know the officer? - No.
12191. Have you seen Mr. Lowe, the officer, since the disaster? - I might have seen him, but I do not know him by name. I might know him by sight.
12192. (*Mr. Cotter.*) Will Mr. Lowe kindly stand up? (*Mr. Lowe stood up in Court.*) Do you know that gentleman? - Yes.

12193. Did you see him on the night of the disaster on deck? - No, not that I know of.

12194. Why did not you go into your own boat? - Because I was ordered away.

12195. Who ordered you away? - An officer.

12196. Do you know the officer? - No.

12197. Did he order you to go to any other boat? - No, not that same officer. 12198. Did anybody else order you? - An officer ordered me to go and get No. 1 emergency boat ready.

12199. You do not know that officer, I suppose? - No.

12200. How do you know it was an officer at all? - Well, by his clothes. 12201. Can you tell the rank of an officer by the stripes on his arm? - I think this gentleman was in an overcoat. I took him to be an officer by the badge on his cap. There was a white star on there. I took him to be an officer.

12202. When you got to No. 1 boat, were there many women round it? - No. 12203. How long after you went to No. 5 was it that you went to No. 1? - I could not say the time.

12204. You could not say the time? - No.

12205. Can you give us any idea? - No, I cannot.

12206. Were all the other boats out. Just look at that model. Were those other three forward boats out, and gone before No. 1 boat? - Yes.

12207. They had all gone. No. 1 was the last boat at the forward end of the ship? - At the forward end of that ship.

12208. That was the last boat? - On that side.

12209. Which boat went before No. 1 then? - No. 5 went first.

12210. Which one went before No. 1? - An after one.

12211. That was No. 7 boat? - Yes.

12212. Did you see the first of those four boats go? - Yes.

12213. Which boat went first? - My own boat, No. 5.

12214. What went next? - The next one to that, *this* one (*pointing on the model.*) 12215. No. 3? Where were you when No. 3 was launched? - Alongside of it.

12216. Do you know Mr. Ismay? - No.

12217. Did you hear any gentleman, not in uniform, but in an ordinary suit, giving orders, or helping the women and children to get into No. 3? - No.

12218. Have you ever taken any part in any boat drill? - No.

12219. Never in your life? - Oh, yes.

12220. Where? - In the Union Castle Company.

12221. Did you ever see a boat's crew consisting of six firemen and one sailor? - No.

12222. So that when six firemen and one sailor got into that, you thought it was a peculiar proceeding? - They were ordered into it.

12223. They were ordered into it? - Yes.

12224. Now, when you got to the water did you hear anything said by any officer from the boat deck through a megaphone? - No. 12225. You heard nothing at all? - No.

12226. When you rowed away, by morning when you sighted the "Carpathia," did you hear any conversation in the boat? - When we rowed for the "Carpathia"?

12227. When you sighted the “Carpathia,” did you hear any conversation in the boat? - No.  
12228. If Sir Cosmo Duff-Gordon had spoken to anyone, would you have heard him? - I expect so, I was sitting alongside of him.  
12229. Did you hear him say this: “He would make us a little present for this, and send a wire privately to our homes to let them know we were all right”? - Yes. 12230. You did hear that? - Yes.  
12231. So you did hear a conversation? - Yes.  
12232. Who did he say that to? - He said that to me.

**Page 272**

12233. To you? - Yes.  
12234. (*The Commissioner.*) Now tell me again what it was he said to you in the boat, you know? - In the boat?  
12235. Yes; not on the “Carpathia,” but in the boat. What did he say? - He said to me he would write to our homes and our wives, and let them know that we were safe.  
12236. Well, what else? - That was all he said to me. That is all I heard of the conversation.  
12237. Did you hear him say anything about giving a present to anyone? - No.  
12238. Then you should be careful how you answer, you know.  
*The Witness:* That is the only present I understood - this message to our homes. 12239. (*Mr. Cotter.*) Did you hear him make this statement; I will put the question to you again: “He would make us a little present for this, and send a wire privately to our homes to let them know we were all right”? - No, that is not right. He said he would send a wire home; that is all I know; but as for any present I know nothing about it.  
12240. Did you hear any other gentleman make a statement? - No. 12241. In the boat? - No.  
12242. Did you receive any present when you got on the “Carpathia”? - Yes. 12243. What did you receive? - £5.  
*The Commissioner:* They each got £5.  
12244. (*Mr. Cotter - To the Witness.*) Was any statement made to you when you got the £5? - No; he only said, “This is a little present from me.” That was the only time a present was mentioned that I heard. That was three or four days afterwards.  
12245. When you were rowing to the “Carpathia,” what sort of a sea was on? - A calm sea.  
12246. Very calm? - What I should call calm, yes.  
12247. Did the boat rock at all? - Not a great lot.  
12248. Did she rock; did she roll? - No.  
12249. Was there anybody seasick in the boat? - Yes.  
12250. Who was seasick? - Lady Duff-Gordon.  
12251. How do you know it was Lady Duff-Gordon; you have told us you do not know her? - I told that gentleman there (*pointing.*) that I was told afterwards that it was Lady Duff-Gordon.

12252. You were told afterwards it was? - Yes, I told that gentleman there.
12253. Was that the lady who objected to the boat going back? - The lady that spoke of its being swamped.
12254. Was that the lady? - Yes.

**Examined by MR. DUKE.**

12255. This is Lady Duff-Gordon sitting here. Perhaps you do not know. That is the lady. Is that the one? - I think so.
12256. You could see nobody's faces in the boat, could you? - No, it was quite dark.
12257. You could not see this gentleman (*pointing to Sir Cosmo Duff-Gordon.*) could you? - Not like I can now.
12258. (*The Commissioner.*) Did he offer you a cigar? - Not me. *The Commissioner:* Did you light your cigar? *Mr. Duke:* He says "not me," my Lord.
12259. (*The Commissioner.*) Did you smoke? - Did I smoke? Yes.
12260. On the boat? - Yes, in the boat.
12261. And did the other men, the other members of the crew, smoke? - Some of them did.
12262. Where did you get your matches from? - Off of one of the crew.
12263. Did Sir Cosmo Duff-Gordon smoke? - I do not know, I cannot remember. 12264. (*Mr. Duke.*) You were out a great many hours during that night, of course? - Till about a quarter to six, I think it was.
12265. Till about a quarter to six in the morning, and it was an intensely cold night? - Yes.
12266. And during a considerable part of the night were various inmates of the boat lying down in the bottom of the boat to get shelter from the cold? - Yes.
12267. Both crew and passengers; is that so? - I could not say whether it was both.
12268. Various people lying in the bottom of the boat? - No, not various; only just one or two.
12269. Did you see where Lady Duff-Gordon, this lady who is sitting here, was seated while you were alongside Sir Cosmo? - I did not understand it was Lady Duff-Gordon at the time, but I think it was the lady who sat just in front of me on the next thwart in the afterpart of the boat.
12270. Just aft of you? - Yes.
12271. You were looking aft, of course, as you were rowing, and you think she was sitting on the next thwart? - Yes.
12272. Did you have any conversation with her? - No, Sir.
12273. What makes you say she was the lady who spoke? - I am not saying she was the lady who spoke.
12274. You are not? - No, I say I am given to understand from information afterwards that that was the lady.
12275. What I want to know is whether you tell the Court that the lady who was sitting on the thwart next to you was the lady who said something about the boat being swamped? - Yes.

12276. Are you sure of that? - Yes.  
12277. Quite sure of that? - Yes.  
12278. And that it was not the lady further along? - Yes.  
12279. Now, was not that lady, who was on the thwart in front of you as you sat, seasick during most of the time after the men first lay on their oars? - She was seasick a little of the time in the boat.  
12280. Was not she seasick at the time the "Titanic" went down? - Yes. 12281. And lying over - ? - On the gunwale of the boat.  
12282. Was that the time at which you suggest this conversation took place? - I could not tell you.  
12283. You do not know? - No.  
12284. Have you a distinct recollection about it at all? - No, I have not.  
12285. When did anybody first suggest to you that anybody on board that boat had prevented the boat being taken back towards the place where the "Titanic" was? - I do not know when that suggestion was made.  
12286. Has the suggestion been made by somebody? - To me?  
12287. Well, has it been made to your knowledge? - It was made as I know of, by my knowledge.  
12287a. Up to that time had you considered at all what took place in the boat that night?  
*The Attorney-General:* He does not say the suggestion was made. *Mr. Duke:* He says it was made. He said "it was made by my knowledge." *The Attorney-General:* He did not mean what you mean.  
*Mr. Duke:* I did not object to my friend cross-examining this witness when he called him, but I am trying to be regular.  
*The Attorney-General:* I am only suggesting there was a misunderstanding between you.  
*Mr. Duke:* I am much obliged, Mr. Attorney.  
*The Attorney-General:* I will clear it up when it comes to my turn, if you will not.  
12287b. (*Mr. Duke - To the Witness.*) I understood you to say, but you will tell me if I am right, that at some time or other you understood that somebody was suggesting that the people in the boat had not done their duty. Was that so? - No.  
12288. Not at any time? - No.  
12289. Now when did the question first arise of whether there had been any conversation in this boat about going back; that is, when did it first arise as far as you are concerned? - My version of it is this. I do not know whether you are talking about the crew, or the full boat. Are you talking

## Page 273

about the full contents of the boat, or only just the crew?

12290. Well, you tell me in your way what the answer is? - You put it about men refusing to do their duty.  
12291. Do not think I am suggesting it for a moment. What I wanted to know was whether you heard that somebody had suggested it? - There was a suggestion in the boat about going back by someone, who, I do not know.

12292. And then there was a reply by someone? - There was a reply by a lady about swamping us.

12293. And you say you think it was the lady who was sitting in the thwart in front of you? - And I heard a gentleman say it would be very dangerous to go back, and the other one replied to him it would be very dangerous to go back, we would get the boat swamped.

12294. Were they sitting in front of you? - Right in front of me.

12295. Do you know there were two passengers, neither of whom was Sir Cosmo, sitting between you and Symons, men passengers? - No; Sir Gordon was alongside of me. 12296. But from somewhere in front of you two passengers said it would be dangerous, and they thought the boat would be swamped? - Yes. 12297. That was not Sir Cosmo Duff-Gordon? - No.

12298. I want to ask you about this matter of money. Did you hear a conversation as you were coming towards the "Carpathia" about the men having lost everything they had? - Only their clothes.

12299. Yes; but was somebody saying the men had lost their kit, and it would not be replaced, as you were nearing the "Carpathia"? - Not that I know of. 12300. You did not hear it? - No.

12301. Then it is no use my asking you about it. Was there anything said on the "Carpathia" that the £5 apiece was intended to enable the men who had been sent in the same boat with Sir Cosmo and his wife, to replace their kit? - Not that I know of.

12302. You did not hear that? - No.

**Examined by Mr. LAING.**

12303. Just one question. When you were ordered into this boat, how long did you stay before you were lowered away? - We stayed a little while, I could not say what time it was, not properly.

12304. Were there any passengers on that deck that you could see when you were lowered away? - Not near that boat.

***(The Witness withdrew.)***

*The Attorney-General:* I am going to call another witness who was in the bow of the boat, but Captain Barr is here of the "Caronia." I think the questions to put to him are only two, and I would like to call him to let him go. He wants to get back. I hardly think it is necessary to call him; but I will tell your Lordship what the point is.

*The Commissioner:* Tell me what it is he is going to say.

*The Attorney-General:* Your Lordship will remember when I opened the case I told you that from the "Caronia" there was a wireless message sent to the "Titanic" at 9 o'clock in the morning, warning Captain Smith of ice.

*The Commissioner:* Yes.

*The Attorney-General:* And there was an acknowledgment by Captain Smith, somewhere about a quarter to ten that morning on April 14th, of the receipt of the Marconigram. I

will just read those two, and that is all I need do, I think; and I will give your Lordship the latitude and longitude in which he was. We can work it out afterwards for ourselves.

**JAMES CLAYTON BARR, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

*The Commissioner:* Just read those to him.

12305. (*The Attorney-General - To the Witness.*) You are master of the Cunard steamship "Caronia"? - Yes.

12306. You had left New York on April 10th of this year for Liverpool? - Yes. 12307. On that morning of the 14th of April, that is, on the Sunday morning, do you remember sending this Marconigram to the "Titanic"; "West-bound steamers report bergs, growlers and field ice in 42 N. from 49 to 51 W.?" - Yes, I remember sending it. 12308. That is sent, I see from your note, at nine o'clock in the morning. That is ship's time, I suppose? - Yes, ship's time.

12309. And did you receive a reply at 9.44 a.m., your ship's time? - Yes, as per that statement.

12310. The reply is: "Thanks for message and information. Have had variable weather throughout - Smith"? - That is true.

12311. Can you give us the latitude and longitude of your ship when you sent this Marconigram?

*The Commissioner:* I thought I had got it.

12312. (*The Attorney - General.*) No, that is what he says the west-bound steamers had reported to him. (*To the Witness.*) What I wanted was to get your position. We can work out for ourselves where you were? - I could not give you that position from memory. It is not usual to take the position on sending a message.

12313. But do you know about where you were? - Well, no, I could not even tell you about where I was then. He did not give me his, you know.

12314. (*The Commissioner.*) Can you give us the New York time? - I could not tell you without referring to the Log Book.

12315. Have you a Log? - I have not the Log here.

12315A. (*The Attorney - General.*) Will you send it to us? - I can do that, certainly.

12316. Will you do that and tell us as nearly as you can; it is only for the purpose of seeing where you were when you sent that Marconigram. Will you send it to us and we will work it out and produce to the Court what your position was? - Yes. 12317. (*The Commissioner.*) At 9 a.m., it was sent; was that ships time? - Yes.

12318. And 9.44, the answer; was that ships' time? - Yes, my ships' time - the time it was received.

*Mr. Scanlan:* I have nothing to ask this witness on the evidence he has given. I am submitting to your Lordship whether I would be in order to examine him on some general matters that have been brought up in this Inquiry as to look-out and lifeboats and manning. I submit the matter for your Lordship.

*The Commissioner:* I am not going to shut it out, but I think, as this gentleman is in a hurry to get away, you might forgive him, and let him go.

*Mr. Scanlan:* Yes, my Lord.

**Page 274**

*(The Witness withdrew.)*

**ALBERT EDWARD JAMES HORSWILL, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

*The Commissioner:* Where was this man in the boat?

*The Attorney-General:* He was right in the bow, my Lord; he is the other seaman. *The*

*Commissioner:* How many of the men from this boat have we had? We have had three.

*The Attorney-General:* Yes.

*The Commissioner:* This is the fourth?

12319. *(The Attorney - General.)* So far, we have had Hendrickson, Symons, and Taylor.

Now you are going to have the other seaman, who was in the bow. *(To the Witness.)* Are you an able seaman? - Yes.

12320. Were you on board the "Titanic"? - Yes.

12321. *(The Attorney - General.)* I want to go straight to the point, my Lord. *(To the Witness.)* Do you remember being ordered into the emergency boat on the starboard side?

- Yes.

12322. Who ordered you to get into the boat? - The First Officer, Mr. Murdoch.

12323. Do you know Mr. Lowe? - Yes.

12324. The Fifth Officer? - Yes.

12325. Was he about at the time? - I did not see him.

12326. Then you were ordered into the boat, and did you get in? - Yes.

12327. Were there any passengers in when you got into the boat? - No, nobody at all.

12328. After you had got in, five passengers were in your boat and you were seven crew all told? - Yes.

12329. That is right. Now there was plenty of room in the boat for others? - Yes. 12330. Do you remember what the orders were that were given to the boat when she was lowered? - Yes.

12331. Will you tell me what they were? - To lower the boat and lay off the ship.

12332. And come back when called? - Yes.

12333. Let me put it to you as we have had it. Was the boat told to stand off a little way and come back when called? - That is right.

12334. Did you proceed to row a little way off? - Yes.

12335. Where were you sitting? - In the bow of the boat.

12336. Did you see the "Titanic" go down? - No.

12337. Was your back to it? - No, I never saw it go down at all.

12338. Did you hear cries? - Yes.

12339. And when you heard cries you knew that they were cries from persons who had gone down in the "Titanic"? - Yes, I heard them, but I did not know whether they were from the other boats or from the ship.
- 12340-1. You did not know? - No.
12342. But you heard cries which you knew came from people in the water who were screaming for help? - Yes.
12343. Were you rowing? - Yes.
12344. Right in the bow? - Yes.
12345. So all except the coxswain would have their backs to you in the boat? - We were all facing the coxswain; those pulling were facing the coxswain.
12346. Then they would all have their backs to you except the coxswain. Do you remember how far you had rowed before the "Titanic" went down - before you heard the cries? - No, I could not say the exact time. 12347. Nor the exact distance, perhaps? - No.
12348. When you heard the cries did you hear anything said as to whether you were to go back or not? - No, nothing at all said.
12349. Do you mean from first to last nothing was said? - From first to last. 12350. Did you hear anybody suggest that you should go back to the people who were crying for help? - No.
12351. Do you mean that not one of you said anything about it? - No one suggested it at all. I never heard anybody suggest anything.
12352. Did you hear anybody say that if you did you might get swamped? - No, I did not hear anything at all, no suggestion whatever. I never heard any conversation at all.
12353. Did you hear anybody give any reason why you should not go back and pick up the people who were drowning? - No.
12354. Did you hear any conversation at all about it? - No.
12355. Was anything said by anybody? - I could not say.
12356. I only want to understand what you mean. It may be that you do not remember. Is that what you mean? - I do not remember anybody saying anything about it.
12357. You told me just now you did not see the "Titanic" go down? - No.
12358. Were you looking towards the "Titanic," or away from her? - I was looking to the coxswain. I had to obey the orders of the coxswain of the boat, and I did not have time to do anything but pull my oar.
12359. I do not quite understand what you mean. You heard the cries of the people who were in the water? - Yes.
12360. And were you rowing at the time? - Yes.
12361. Do you mean that no notice was taken of the cries by anybody on board? - I could not say; I had to obey the orders of the coxswain of the boat.
12362. I am not asking that; I understand that, of course, you would do what you were told by the man in charge of the boat? - That is right.
12363. I am not asking you about that; I want to know what happened? - We saw a light on the port bow of the ship, and we went to pull towards the light.
- The Commissioner:* That is the white light, I understand?

12364. (*The Attorney - General.*) Yes, my Lord. (*To the Witness.*) Was anybody sitting on the thwart close to you? - No, I was on the thwart by myself.

12365. As far as you were concerned you were talking to nobody? - No, I had conversation with nobody at all.

12366. And you heard nothing at all, is that right? - That is right.

**Examined by Mr. SCANLAN.**

12367. It would have been quite a safe thing to have gone back? - Yes.

12368. And taken in some people? - Yes, it would have been.

*The Commissioner:* Did you hear that question and answer, Mr. Attorney?

*The Attorney-General:* I do not think I did.

*The Commissioner:* He was asked whether it would have been quite safe to go to the rescue of these people and he said it would.

12369. (*Mr. Scanlan - To the Witness.*) Did it not occur to you that the proper thing to do under those circumstances was to row back? - It would have been the proper thing to do, but I had to obey the orders of the coxswain of the boat, so it was no good my suggesting anything at all.

12370. Had the coxswain on your boat said "Oh, we must not go back"? - There was no conversation. I never heard any orders from the coxswain at all.

12371. You must have been greatly touched when you heard those poor creatures screaming for help? - Yes.

12372. Did you suppress your feelings and say not a word to anybody? - Yes, that is right. I hardly

**Page 275**

knew what I was doing at the time, and I did not suggest anything at all.

12373. You had two ladies and three gentlemen in the boat? - That is right, Sir.

12374. Is this your evidence, that they also suppressed their feelings, and said nothing? - That is right. I did not hear them say anything.

12375. Did it not occur to you that it was really an inhuman thing to leave those people to perish when you could have gone to their assistance and rescued some of them? - It was inhuman.

12376. It was an inhuman thing? - Yes.

12377. Did you feel it to be so at the time? - I did feel it, Sir.

12378. Why did not you say something to those passengers? - I had to obey the orders of the coxswain of the boat. I was in the boat just the same as they were. *The Commissioner:* You will not get him away from that, you know.

**Examined by Mr. HARBINSON.**

12379. You said you saw lights on the port side? - Yes.

12380. When did you see those lights first? - I saw lights when I was clearing away the port emergency boat.

12381. Before you launched your boat? - Yes.
12382. Did you hear any order given to those in your boat about standing by? - Yes, stand by the ship after we had lowered.
12383. Did you hear Mr. Murdoch give that order? - Yes.
12384. You saw those lights before you were lowered? - Yes.
12385. Was there any conversation about the lights, as to what they might be? - No.
12386. Did you get any orders to row towards those lights? - No.
12387. How did you know you rowed towards them? - Because I looked round.
12388. And saw you were rowing in that direction? - Yes.
12389. From the time your boat was lowered did you commence to row towards those lights? - No, we pulled a little away from the ship and then stopped.
12390. How long did you stop? - I should say about a quarter of an hour. 12391. And then did you commence to row towards the lights? - Yes.
12392. Was that before the "Titanic" went down? - Yes, before the "Titanic" went down.
12393. So that when the "Titanic" went down you were actually rowing towards those lights? - Yes.
- And disobeying the orders that were given you?

**Examined by Mr. EDWARDS.**

12394. How long had this boat been ready to be lowered before it was in fact lowered? - The boat is always supposed to be ready, the emergency boats are.
12395. I will put in this way. How soon was this boat lowered after the last person got into it? - About five minutes after the last person got in.
12396. Do you know who the last person was? - No.
12397. Was it a lady or a gentleman? - I could not say.
12398. Did you see them going in? - Yes, I saw them getting into the boat. 12399. How long had you been in the boat before they got in? - A very few minutes; about five minutes.
12400. Who gave the orders to lower away? - Mr. Murdoch, the First Officer. 12401. How do you know that it was Mr. Murdoch? - We have been together long enough, we ought to know each other.
12402. You say it was Mr. Murdoch? - Yes.
12403. Was he the officer who gave the instructions about standing by? - Yes. 12404. As I understand, you were right up the front end of the boat? - Yes, right in the bow of the boat.
12405. In what position in relation to where you were was Hendrickson? - He was abaft me.
12406. With his back towards you? - Yes, back towards me.
12407. So I suppose it would have been possible for Hendrickson to have said something to somebody still further abaft without your hearing? - That is right, Sir.
12408. Did you see anybody seasick in your boat? - Yes.
12409. Who? - A lady.
12410. Where was she sitting? - The starboard side of the boat.

12411. Was she sitting alone? - I think there was another man pulling an oar alongside of her.

12412. How far away was that from you? - A very short distance, about two or three thwarts.

12413. Did you hear this lady say anything? - No.

12414. Nothing at all? Now, have you had a present? - Yes, I had a present given to me two days after we got on board the "Carpathia."

12415. When did you first hear anything about the present? - I did not know anything about that until they sent for me.

12416. Who sent for you? - Some gentleman.

12417. Who was that gentleman? - Mr. Duff-Gordon, I think.

12418. Has anyone seen you take a statement on behalf of Sir Duff-Gordon? - No.

12419. Nobody at all? - No.

**Examined by Mr. HOLMES.**

12420. Did you see whether there were any passengers, male or female, left on the deck when your boat was lowered? - I could not see any passengers at all before we got lowered.

12421. There were none there? - There were none there.

**Examined by Mr. COTTER.**

12422. Just one question. How long was it from the time the ship struck until your boat was lowered? - It is impossible for me to say.

12423. Can you give us no idea at all? - No.

12424. What was the number of your boat? - No. 1.

12425. Where were you when the ship struck? - In my bunk, asleep.

12426. What did you do when you got out of your bunk? - Dressed myself, and the boatswain came and said he did not want all hands on deck. Two or three seconds after he came and ordered us all up on deck and told us to clear away the boats.

12427. How long did it take to clear away the boats? - Ten minutes.

12428. How long did it take to clear the boats? - We cleared away the port side first and then were ordered across to the starboard side.

12429. Did you go straight to No. 1 boat then? - No. I was ordered to the port emergency boat. I was ordered to put the lantern in the boat and a chronometer. I did that and came out again, and I was sent to the starboard boats. Then I was ordered into No. 1 boat.

**Page 276**

12430. How many of the starboard boats were out when you got to No. 1 boat? - Before we got lowered?

12431. When you got round to No. 1 boat, how many of the starboard boats were swung out then? - About three or four were swung out. No. 1 boat was always swung out and No. 2.

12432. Was No. 3 swung out? - No.

12433. Where was it? - No. 3 boat was not swung out.

12434. Are you sure No. 3 boat was not swung out? - I was not there.

*The Commissioner:* Mr. Cotter, you are always disappointing my hopes. You begin by saying, "Just one question," and then you never keep your word.

12435. (*Mr. Cotter - To the Witness.*) When you were lowered to the water, was there any order given through the megaphone? - No, we had our orders before we started to lower.

12436. You were in the bow? - Yes.

12437. You would be looking towards the coxswain? - Yes.

12438. So that Hendrickson would have his back to you? - That is right.

12439. How far was Sir Duff-Gordon sitting from you? - I forget whether it was the second or the third thwart - the second thwart from me.

12440. And you could not hear any conversation? - No, no conversation at all.

**Examined by Mr. LEWIS.**

12441. You said you did not see the ship sink? - No.

12442. Did you hear anyone mention that she had sunk? - We heard a bit of an explosion and we thought she had gone then.

12443. "We thought"? - Yes.

12444. Did you say anything about that you thought it had gone down? - We never saw the ship go down. We thought she had gone down when we heard the explosions.

12445. Did you say anything to anyone about the explosions? - No.

12446. And no one said anything to you? - No.

12447. Do not you think it is rather strange that you did not say, "the ship has gone down," or "has it gone down"? - I did not say it, but I thought it myself, from my own feelings. I do not remember much at all about it. I only know that I heard explosions. *Sir Robert Finlay:* I have nothing to ask.

**(*The Witness withdrew.*)**

*The Attorney-General:* We have other members of the crew here, but I think it would be better to call Sir Cosmo Duff-Gordon straight away.

*The Commissioner:* If Mr. Duke wants them they can be called.

*The Attorney-General:* I have them, and if they are required I will put them in the box.

*Mr. Duke:* I may say that if Mr. Attorney finds in any statement anything which needs explaining by Sir Cosmo, it will be put to him, and if not I shall assume they make no statement reflecting upon either Sir Cosmo or Lady Duff-Gordon.

**Sir COSMO DUFF-GORDON, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

12448. Were you a passenger on board the "Titanic" on this voyage? - Yes.
12449. On the night of the disaster were you asleep at the time of the collision? - Yes.
12450. What woke you? - My wife woke me.
12451. Was that about a quarter to 12? - I think so.
12452. Just after the impact with the iceberg? - Yes.
12453. Did you get up? - Not at first.
12454. Did you hear that there had been a collision with an iceberg? - No. As soon as I got up I went out on the deck, and there saw two or three men, who said we were supposed to have run into an iceberg, but it was all right. I went the other side, and could see nothing.
12455. Was there any escaping steam at the time? - Well, the next time I went up it was dreadful - the noise.
12456. How long after was it you went up again? - I went up to the boat deck afterwards, and the noise there was perfectly indescribable.
12457. Do you mean from blowing off the steam? - Yes, from blowing off the steam.
12458. Did you notice whether the vessel had any list at all? - I did not, but the men I spoke to told me that there was.
12459. A list to starboard? - A list to starboard.
12460. Another passenger, do you mean? - Yes, another passenger; it was Colonel Astor.
12461. Who went down with the vessel? - Yes.
12462. Was she at that time down by the head? - He said so, I did not notice it; I am not accustomed so much.
12463. Did you then go back and tell your wife to dress? - Yes.
12464. Did you remain there while she dressed, or did you go up again? - I went up again later.
12465. Did you see whether anything was being done with the boats? - Yes, I saw men stripping the lifeboat.
12466. Did you go down to your cabin again? - I went down again then and I told her, and I began to dress myself.
12467. When you came up before you were not fully dressed? - No, not at all dressed.
12468. Had you heard at that time what the Captain's orders were? - No.
12469. Did the steward come to the cabin and tell you anything? - The steward came and said, "The Captain's orders are that the ladies are to put on lifebelts." 12470. And where were they to go? - To go up to the boat deck.
12471. Was Miss Francatelli accompanying your wife and you on this voyage? - Yes.
12472. Was she your wife's secretary? - Yes.
12473. Did they come up on the boat deck to you? - Miss Francatelli joined us in the cabin just at that time. We went up to the boat deck together. 12474. To which side of the boat deck did you go? - To starboard.

12475. Did you see lifeboats being lowered? - Yes, when we got up one was being either filled or lowered - the furthest aft of *those* three - (*pointing on the model.*) We came out of the gymnasium door.
12476. That is boat No. 7? - Yes, I suppose so.
12477. You mean the third one from the emergency boat in front? - Yes.
12478. Did you see whether there were men or women in that boat? - They were only putting women in.
12479. You saw it being lowered? - I think it was just being filled as we got there, and it was lowered almost immediately.
12480. With women and, I suppose, some crew? - Very few.
12481. Did you see any other lifeboat lowered? - I saw two other lifeboats lowered.
12482. Which were they? - The next two forward.

**Page 277**

12483. Five and three? - Yes.
12484. Were they filled with women and children? - The first one was No. 3 was partially filled with women, and then filled up with men when they could find no other women.
12485. That is boat No. 3? - Yes.
12486. Did you see how many women and children were in the boat? - No, I did not.
12487. What were your wife and Miss Francatelli doing during this time? - They were standing with me, they had refused to go.
12488. They had refused to go into the boat? - My wife had refused to leave me and go in the boats, and consequently we stood against the deck house while the boats were going.
12489. That means your wife and Miss Francatelli were asked to go into one of the lifeboats? - They were asked two or three times to go.
12490. But, as it meant going without you, you mean your wife would not go? - Exactly.
12491. Were there many people about on this deck at this time? - Yes, quite a lot. 12492. Did anybody attempt to force your wife to one of the lifeboats? - Yes, I think in No. 3 some men got hold of her and tried to pull her away.
12493. And she would not go? - No.
12494. Was the part of the deck where you were standing at this time when you saw the third lifeboat go down, clear or full of passengers? - Do you mean fore or aft?
12495. I mean by the time you saw the third boat lowered away? - When the third boat had been lowered I think everybody had disappeared.
12496. Were they firing rockets at that time? - Yes, they had just begun while they were lowering No. 3 lifeboat.
12497. Was there any conversation between you and your wife as to what you should do? - No, owing to the noise I think; but she said to me: "Ought not we to do something?"
12498. What did you say? - I said: "No, we have got to wait for orders." 12499. Then did you hear any orders given with reference to No. 1 boat.
12500. Yes, an officer - I do not know who he was - ordered -

12501. An officer? - Yes, I think it was the same officer who had been doing the other boats. We had followed them along. He said: "Man the emergency boat," and he said so to a number of, I think, firemen or some of the crew, some eight or ten of them who were standing there. I then spoke to him and I said "May we get into the boat?" and he said "Yes, I wish you would" or "Very glad if you would" or some expression like that. There were no passengers at all near us then. He put the ladies in and helped me in myself and we were joined by two Americans who came running along the deck. I think he then told two other or three other of the firemen that they might just as well get in, and then he put one man - I did not know his name until lately - in charge of the boat, Symons. 12502. Then did you hear an order given by the officer to the men in charge of the boat? - I heard him put the man in charge of the boat.
12503. Did you hear the order that he gave him? - Well; I do not quite think it was that order, no.
12504. What is the order that you heard him give? - My impression was that we were to follow the other boats and to row as fast as we could for the first 200 yards. That was the idea I have always had.
12505. I understand you to say you did not hear this order that that boat was to stand off a little way and come back when called? - It is quite likely I should not have heard it. I had other things to attend to; I mean, I was looking after my wife and one thing and another. It was quite natural.
12506. Where were you sitting in the boat? - I was sitting in No. 2 from the bows.
12507. No. 2 thwart? - Yes.
12508. And where was your wife sitting? - No. 3 on the starboard side. 12509. And Miss Francatelli? - In the stern.
12510. When the boat was lowered, did you think that the "Titanic" was in danger? - I thought it was in a very grave condition, yes.
12511. I do not know whether you can tell us, had she any list at this time? - I did not think it was a very great list, but we got down easily. The boat did not touch the side of the ship at all.
12512. You say you did not think there was any great list; but which side was the list? - In any case it would have been to our side if it was at all.
12513. To the starboard side? - Yes.
12514. But you are not sure there was any? - I was not very much noticing.
12515. The men got into the boat, and you noticed, I suppose, that there was room for more passengers in that boat? - There would have been more room if the oars and masts had been thrown away.
12516. I do not quite understand what you mean by that. You suggest there was not room for more people? - Of course there was room for more people, but we should have had to put away the oars and mast and sail, I think, and some boat hooks, and a lot of things that were lying alongside of us. There was only room for two on each side.
12517. Are you accustomed to boats? - Sufficiently.

12518. No one has suggested hitherto that there was not room? - I do not suggest it. I suggest it wanted rearrangement, otherwise we should have sat in the stern together. 12519. Can you give us any explanation why it was that this boat was lowered away with so few people in it when there were so many people left on the ship, which was in danger? - There were no people visible, I am quite sure of that, when I got into the boat. 12520. (*The Commissioner.*) But there were many people close at hand? - I do not know; there was no one visible certainly.
12521. (*The Attorney - General.*) There were many of the crew, were not there, on the ship close at hand at the time? - No, I think they filled up the boat with what crew there was there.
12522. Do you mean that after you and the crew had gone into the boat, there was nobody left but the officer? - The officer then told two more men, I think, to get in. I think he said, "You fellows," or "You boys may as well go," and those two got in, and whatever crew he kept with him lowered us.
12523. You had noticed that other boats had been filled with as many as they could possibly carry? - I presume so; I had not noticed very much; but there were no more to go. I am trying to say there were no more on that particular part, on that side of the deck anyway, there were no more in view.
12524. I want to understand what your view was about this, if I can. Did you think there was nobody left on the ship at this time? - Oh, no, but I certainly thought all the women had got off. I had seen all the women in my part, and I knew in other parts of the ship they were lowering boats. They are divided into four distinct portions for lowering there.
12525. You mean you knew they were lowering on the port side also? - Well, I did not know anything; I never moved except between the door of the gymnasium and the bridge. 12526. When you got into the boat and the men started rowing away from the vessel, as we know they did, how far do you think that your boat had got before the "Titanic" went down? - Well, I have always said 1,000 yards when telling anybody, but it is true I have only one eye and I am, therefore, presumed not to be a judge of distance, but I think it still.
12527. At any rate you are not able to form any accurate estimate of the distance, I understand? - Well, no, it got diminished in size very greatly as we moved away, and we had been rowing a long time.
12528. Did you notice this when they were rowing away? Did they continue rowing without stopping for what you consider a thousand yards' distance? - No, I think they rowed for 200 yards or so, and stopped; and then they rowed on again, I daresay, another 100 or 200 yards, and stopped again, and so on.

## **Page 278**

12529. According to the account we have had, it was certainly somewhere about that time, whatever the distance was, that the "Titanic" went down? - Yes.
12530. Did you hear the cries? - Yes, I heard the explosion first, and I heard, I will not say the cries, but a wail - one confused sound.

12531. We do not want unnecessarily to prolong the discussion of it, but they were the cries of people who were drowning? - Yes.
12532. There is no doubt about that? - Yes, I think so without doubt.
12533. Did it occur to you that with the room in your boat, if you could get to these people you could save some? - It is difficult to say what occurred to me. Again, I was minding my wife, and we were rather in an abnormal condition, you know. There were many things to think about, but of course it quite well occurred to one that people in the water could be saved by a boat, yes.
12534. And that there was room in your boat; that they could have got into your boat and been saved? - Yes, it is possible.
12535. And did you hear a suggestion made that you should go back, that your boat should go back to the place whence the cries came? - No, I did not.
12536. Do you mean that you never heard that at all? - I heard no suggestion of going back.
12537. Was any notice taken of those cries in your boat? - I think the men began to row away again immediately.
12538. Did they get any orders to do that? - That I could not say.
12539. That would seem rather strange, would it not? - No.
12540. (*The Commissioner.*) To row away from the cries? - To row - I do not know which way they were rowing, but I think they began to row; in my opinion it was to stop the sound.
12541. (*The Attorney - General.*) I think you said - correct it if you did not mean it - they were rowing away from the "Titanic" and then they rested, and then they rowed away some further distance? - They went on rowing, yes.
12542. And then I understand the "Titanic" went down, and I understand you to say they continued to row away. Do you mean by that they merely went on pulling? - They went on rowing.
12543. You do not know where? - I had been watching the "Titanic," of course, to the last moment, and after that, of course, one did not know where it had been.
12544. You do not mean to suggest they rowed back to the cries? - Oh no, I do not suggest that for a moment.
12545. They continued rowing away from the place where the "Titanic" had gone down, did not they? - I do not know. As soon as the "Titanic" had gone down of course one lost all idea of where she had been.
12546. At any rate, we shall be satisfied with this, that you knew they were not rowing towards the cries? - I did not think about it I must confess, I do not know which way they were rowing.
12547. Did not you think about whether or not your boat would be able to save any of the people who were in the water? - I do not know; it might have been possible, but it would have been very difficult to get back, the distance we were, and in the darkness, to find anything.
12548. What I want to understand is this, you said just now you did not think about it - did you mean that you did not think about whether or not your boat could save some of the people that were in the water? - I was not thinking about it. At that

- time I was attending to my wife, as I think I said just now. We had had rather a serious evening, you know.
12549. Did you hear one of the ladies say anything about the danger of being swamped if you went back? - No, I did not.
12550. Nothing of that kind? - No, I did not.
12551. Did you hear any discussion at all about being swamped? - No, I did not hear the subject raised; the subject was not raised, I think.
12552. Are we to understand that as far as you were concerned no notice was taken in your boat of these cries that came from the drowning people? - No.
12553. No conversation about it? - No, I think there was no conversation. 12554. No suggestion by you or by anybody else? - No.
12555. No question raised as to whether you ought to return or not? - No.
12556. And, if I follow you correctly, no thought entered into your mind that you ought to go back and try to save some of these people? - I do not think it would have been possible, for one thing.
12557. Would you mind answering. I want to follow your view? - What was the question?
12558. I understood from what you said, and correct it if it is wrong, that no thought entered into your mind at that time that you ought to go back and try to save some of these people? - No, I suppose not.
12559. (*The Commissioner.*) The last witness told us that in his opinion it would have been quite safe to have gone back. What do you say to that? - I do not know, my Lord, whether it would have been safe. I do not know. I think it would have been hardly possible.
12560. (*The Attorney-General.*) Why not possible? - I do not know which way we should have gone.
12561. (*The Commissioner.*) When I say "gone back," I mean go towards where the cries came from. - I do not know about that; I could not speculate.
12562. (*The Attorney - General.*) These cries continued for some time, did they not? - I said the men began to row very soon after the cries were first heard. 12563. But the cries continued for some time? - Yes, I believe they did.
12564. As the men proceeded to row away did the cries sound fainter? - Oh, you could not hear the sound at all when the men were rowing.
12565. Does that mean that in your boat they were not rowing when you heard the cries? - The moment the "Titanic" sank, of course everything stopped. There was a dead silence.
12566. And then you of course did hear the cries? - Yes, then we did.
12567. You mean you continued to hear the cries until the men started rowing again? - Yes, which was very soon, immediately, almost.
12568. We have heard from two witnesses that a suggestion was made that your boat should go back to try to save some of the people? - Yes.
12569. You have been in Court when at least one of them said it. I am not sure whether you heard Hendrickson? - Yes.

12570. What do you say about that? - I can only say I did not hear any suggestion, that is all I can say.
12571. And you know it has been further said that one of the ladies, identified by the last witness as your wife, was afraid to go back because she thought you would be swamped? - I heard that.
12572. And that, you see, was heard by a witness who was sitting on the same thwart as you were? - Yes.
12573. Did you hear your wife say that? - No.
12574. Or any lady? - No.
12575. Or any person? - No.
12576. Do you mean that it might have happened but that you do not remember anything about it, or do you mean that it did not take place? - In my opinion it did not take place.
12577. Do you mean it is not true what the men are saying? - It comes to that, of course.
12578. That they are wrong in their view? - I think so.
12579. Did you hear either of the other men say that if they did go back it would be dangerous because you would be swamped? - No, I did not.
12580. Nothing of the kind? - I do not think there was any conversation of the sort, or talk about it.
12581. We have heard what they have said, but so far as you are concerned, as I understand your statement, nothing was done at all? - No.
12582. You know now, do you not, that you might have saved a good many if you had gone back? - I do not know that.

**Page 279**

12583. You know that your boat would have carried a good many more? - Yes, I know that is so, but it is not a lifeboat, you must remember; there are no air-tanks.
12584. I must ask you about the money. Had you made any promise of a present to the men in the boat? - Yes, I did.
12585. Will you tell us about that? - I will. If I may, I will tell you what happened.
12586. Yes? - There was a man sitting next to me, and of course in the dark I could see nothing of him. I never did see him, and I do not know yet who he is. I suppose it would be some time when they rested on their oars, 20 minutes or half an hour after the
- “Titanic” had sunk, a man said to me, “I suppose you have lost everything” and I said “Of course.” He says “But you can get some more,” and I said “Yes.” “Well,” he said, “we have lost all our kit and the company won’t give us any more, and what is more our pay stops from tonight. All they will do is to send us back to London.” So I said to them: “You fellows need not worry about that; I will give you a fiver each to start a new kit.” That is the whole of that £5 note story.
12587. That was in the boat? - In the boat. I said it to one of them and I do not know yet which.

12588. And when you got on the “Carpathia”? - When I got on the “Carpathia” there was a little hitch in getting one of the men up the ladder, and I saw Hendrickson. It was Hendrickson that I saw distinctly, when he brought my coat, which I had thrown in the bottom of the boat. He brought it up after me, and I asked him to get the men’s names, and that list, in my belief, is his writing. It is merely a list of the names, and I think it is in Hendrickson’s writing.
12589. Did you know either of the other two male passengers? - No, I did not know them, not till the next day.
12590. They were Americans? - Yes.
12591. Did you say anything to the Captain of the “Carpathia” of your intention to give that money to the men? - Yes; I went to see him one afternoon and told him I had promised the crew of my boat a £5 note each, and he said, “It is quite unnecessary.” I laughed and said, “I promised it; so I have got to give it them.”

*(The Witness withdrew.)*

*(Adjourned to Monday next at 10.30 o’clock.)*

## **Wreck Commissioners' Court.**

SCOTTISH HALL,

BUCKINGHAM GATE,

*Monday, 20th May, 1912.*

## PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

# LOSS OF THE S. S. "TITANIC."

## ELEVENTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.)

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the thirdclass passengers. (Admitted on application.)

MR. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian." (Leyland Line). (Admitted on Application.)

MR. H. E. DUKE, K. C., M. P., and MR. VAUGHAN WILIAMS (instructed by Messrs. A. F. and R. W. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff-Gordon. (Admitted on Application.)

**Sir COSMO DUFF-GORDON, Continued.**

**Further examined by the ATTORNEY-GENERAL.**

12592. (*The Attorney-General.*) There are two questions I want to put to Sir Cosmo. (*To the Witness.*) I notice from what you said in your evidence (I am referring to question 12586, my Lord), that there was this conversation between you and the men, or one of the men, that you would give them a present of £5 each, and that was made, as I follow from what you have told us, quite early in the history of this boat. I want to ask you just a little about the time; I want to follow quite clearly when it was. Was it before or after the boat had gone back to try to pick up people? - I did not know about the boat going back. *The Commissioner:* What is the going back you are referring to?

12593. (*The Attorney-General.*) Your Lordship remembers Symons' evidence, I will refer you to it. I will put a question to him which I think will bring it to your Lordship's mind. (*To the Witness.*) According to you then the boat never went back? - No, I do not know where we were rowing about to.

12594. When I say went back - it never went to try to pick up some of the people who might be drowning from the "Titanic"? - No, I did not know of it.

*The Commissioner:* Where is Symons' evidence?

*The Attorney-General:* I will tell your Lordship the effect of his evidence. What he said was they did not go back when they heard the cries, but they rowed away, but that some time after they did go back. And then your Lordship put a question to him "But then the cries had ceased," and he said "Yes."

*The Commissioner:* I remember that. That did not seem to me to be a going back that was of the least importance.

12595. (*The Attorney-General.*) No, but that is what he did. Your Lordship will remember I cross-examined him upon his statements in America where he was asked whether he did go back when he heard the cries and when he said yes. I pointed out then that that was very different from the evidence he had given here and he admitted that it was. It is question 11561, page 258, where I put to him the question, "Did you ever go back to try to pick up any of these people." He said, "Yes, after we rowed a little way, as we were going for this self-same light of my first story, we stopped; we laid on our oars. Then I gave the order to pull back, and told the men in the boat we would pull back to the other boats." Did you hear that? - To pull back to the other boats? Do you mean that he said so?

12596. Yes. - I did not hear him.

12597. An order given by him to the men that were rowing? - I did not hear the order, no.

12598. "I was going my way back then as near as I possibly could to the scene of the disaster after we met the other boat. I strained my ears to hear whether I could hear anybody, any person whatever making a cry. (*The Commissioner.*) And you heard no one? - (A.) I heard no one. (Q.) They were all drowned by that time; is not that so? - (A.) I could not say that, sir, because there were some picked up in a boat out of the water before daylight, according to the other story. Of course, I cannot say about other people." Then your Lordship will remember at the end, I

put to him very definitely what he had said in America. That is at page 262. The particular passage bearing upon this is at page 263, Question 11749 - "Then you were asked whether you made any effort to get there, that is the people from whom you heard the cries? - (A.) Yes. (Q.) It is pointed out to you that you had said your boat could take more? - (A.) Yes, I did say so." I am putting to him that what his answer was in America. "Your answer to that is, "Yes, we came back, but when we came back we did not see anybody nor hear anybody.' - (A.) That is quite right." Then I put to him: "Why did not you tell him what you have told us today, that you heard the cries, but in the exercise of your discretion and as master of the situation you had determined not to go back because you thought you might be swamped? Why did not you tell them that? - (A.) My idea of the whole concern was that they had us in three at a time in America - that you have not got there, I expect - to get us through as quick as possible." He says he agrees that is not the same account as is given here; he left that out. That is the point I was on. (*To the Witness.*) What I want to know is whether you can assist us upon that at all. Did you know any effort was made to pick up people who might be drowning? - No, I did not.

12599. So far as you were concerned there was no attempt of any kind to pick up drowning people? - No; I did not know that the idea had arisen to go back at all.

12600. Of course if Symons is giving a correct account it would appear that orders were given there which you do not recollect? - Yes.

12601. Because he told the men to pull -

*Mr. Duke:* He says he did not hear it, not that he does not recollect it.

*The Attorney-General:* We will hear what he says about it. If my friend is drawing a distinction between what he did not hear and what he did not recollect, it is a little fine for me. (*To the Witness.*) I suggest to you if a man is speaking and you are there and he is giving orders to the men who are rowing in the boat there was no difficulty in your hearing; but it made no impression on your mind and you do not recollect it? - Yes, I do not; I did not hear it.

**Examined by Mr. SCANLAN.**

12602. Did you hear the order given when other boats on the starboard side were being lowered that women and children were to be first? - I do not know whether I heard the order, but I knew it was the orders.

12603. And that only women and children were getting in in any large numbers? - In much greater numbers, yes - few men.

12604. I suppose from the conversation amongst the passengers and the conversation you had had with officers you had become aware that the lifeboats did not offer accommodation for more than half the passengers and crew? - No, I did not know anything about it. I had not spoken to any officer or to passengers on that subject.

12605. That rule with regard to women and children was observed with regard to all the boats launched from the starboard side that you saw launched? - Yes, the three forward ones.

12606. With the exception of the one boat in which you left yourself? - No, the boat before that had, I think, a few women in, and they filled up with men passengers.

12607. But the boat in which you left was clearly an exception to that rule? - No, no exception at all. The woman who had been present had all gone in the three lifeboats.

12608. Could you see from your position on the starboard side how many women were on the port side? - No, I could see nothing at all of the port side.

12609. So that as far as your knowledge went at the time there might have been a large number of women on the port side waiting for boat accommodation in the lifeboats? - It is possible, of course.

12610. I think you asked the officer on the boat deck if he would allow you to go away in this No. 1 boat? - I said to him, "Can we go there," I think.

12611. Of course, the ladies were invited to go? - The ladies were not invited to go. The ladies had been invited to go to two or three previous boats and they refused to go absolutely. Then all the ladies had embarked, every one that was

### Page 283

visible, and I found myself suddenly in front, this boat being manned by some stokers.

12612. That request of yours applied, of course, only to yourself? - I did not consider it a request at all; I merely saw an empty boat, and I had two ladies with me, and I said, "May we go in that boat?"

12613. Could you see from your position on the boat deck at No. 1 whether the after boats on the starboard side had all been lowered? - No, I could not see; I could only see that section. (*pointing to the model.*)

12614. Could you see from that position close to No. 1 whether there were passengers along the boat deck at the afterend of it? - No; my impression was that there were no passengers as far as I could see.

12615. You said, in giving your evidence on Friday, that all the women in your part of the ship had gone? - Yes.

12616. Did you mean the women who were first class passengers? - I did not know what class passengers they were. There were a certain number of women outside the gymnasium door, and they had all been taken off. I do not know what class they were in the least.

12617. You did not even know whether there were other women on the boat deck on the opposite side or further aft who were waiting for accommodation in the boats? - No, I knew nothing of that sort.

12618. Under those circumstances, you asked permission for yourself to go in? *The Commissioner:* That is not quite accurate. He asked if he might go. Perhaps that is only a distinction without a difference.

*Mr. Scanlan:* I see that, my Lord. (*To the Witness.*) Do you recollect who was the officer in charge at the launching of lifeboat No. 1? - I did not know till, I think, two days ago.

*Mr. Duke:* It was not a lifeboat, Mr. Scanlan; it was the emergency boat.

*Mr. Scanlan:* We have known it since this Enquiry commenced as a lifeboat.

*The Attorney-General:* No.

*Mr. Duke:* If my friend insists for his own purposes in calling this boat by a wrong name, I can only protest against it.

*The Commissioner:* I think Mr. Scanlan has been very fair so far, and I do not think he is unfair at the present.

12618. (*Mr. Scanlan - To the Witness.*) With regard to this emergency boat, if Mr. Duke prefers you know now, do you, the name of the officer who was in charge when it was being manned? - Yes, I believe so.

12619. Who is he? - I think it is the fifth officer.

12620. Is that Mr. Lowe? - Yes, I think it is.

If Mr. Lowe is in Court perhaps he will be willing to be identified?

*The Commissioner:* Is Mr. Lowe here?

*The Attorney-General:* He will be here; I do not know whether he is here at the moment. (*Mr. Lowe stood up in the Court.*)

12621. (*Mr. Scanlan - To the Witness.*) Is that the officer? - I could not say; it was dark. I did not know it was he. I said I was told so two days ago.

12622. Of your own knowledge you do not know? - Of my own knowledge I can say nothing.

12623. Just as your party was about to embark on that boat did you hear the officer say, "Are you ready, Lady Gordon?"? - No.

12624. Did you have any conversation with the officer? - Nothing, except what I told you.

12625. Did he know who you were? - Not the least - at least, I do not know whether he knew me; I did not know him.

12626. I suppose most of the officers would know you? - No, not one of them. 12627. You are a frequent traveler? - I have never been across the Atlantic in that way before in my life.

12628. Did you see Mr. Ismay on the boat deck? - No, I did not.

12629. Did you know him? - No.

12630. So that you would not be able to recognise him? - Yes, I should have been then, because I had seen him at dinner that night.

12631. Did you see the captain that night? - Yes; it was the only time I did see him, I think.

12632. (*The Commissioner.*) Was the captain dining with Mr. Ismay? - No, my Lord; Mr. Ismay was dining alone with Dr. McLaughlin. [O'Loughlin]

12633. Is that right Mr. Ismay was dining alone? - Alone with Dr. McLaughlin. [O'Loughlin]

19634. I mean with one other man? - Yes.

12635. He was not giving a dinner party? - No, he was dining quite alone with Dr. McLaughlin [O'Loughlin]. I was three or four tables off.

The reason why I ask that question is that I have had sent to me by some lady, who says that her husband was drowned in this calamity, what is called a "menu" of a dinner given, as it is alleged, by Mr. Bruce Ismay. What it has to do with this Inquiry I am quite at a loss to know, but I do not believe myself that it is a menu of any dinner he gave at all.

*The Attorney-General:* At a later stage we shall call Mr. Bruce Ismay before your Lordship.

12636. (*The Commissioner.*) It is quite possible, I believe that this thing which was published in some French paper was a list of the dishes that could be had. It is a very common thing on board a ship to publish each day a list of dishes from which you can select? - Yes.
12637. However, you say Mr. Bruce Ismay was not giving any dinner? - None.
12638. Certainly not to the captain? - No, he was alone.
12639. (*Mr. Scanlan.*) Now, did you see the captain at dinner that night? - I do not know, I saw him just after dinner just outside.
12640. (*Mr. Scanlan.*) May I ask this question, my Lord. (*To the Witness.*) Was the captain in uniform when you saw him? - Yes.
12641. Or in evening dress? Was he in uniform or evening dress? - I think he was in evening uniform.
12642. Has your attention been called to what purports to be an article written and signed by Lady Duff-Gordon in the "Daily News" for April 20th? - I have seen it, I think; yes - at least, I have not seen that in the English papers; I saw one in the American papers.
12643. Have you seen an article by her in the "New York American"? - Yes, it was not by her, but I have seen what you mean.
12644. Do you know whether or not this is authentic? - If you tell me what it is about I could answer better.
12645. I will hand it to you. It is in the second column. (*Handing a paper to the Witness.*) It appears to be signed at the bottom you will observe. It is a single column article by Lady Duff-Gordon.
- The Commissioner:* What is the purport of it, Mr. Scanlan?
- Mr. Scanlan:* There are a good many things in it.
- The Commissioner:* Have they any bearing on this Enquiry?
- Mr. Scanlan:* Yes, considerable.
- The Commissioner:* Because you know the whole of this incident to my mind has only a small bearing on this Enquiry and I do not want too much time spent over it.
- Mr. Scanlan:* I quite see that, my Lord.
- The Commissioner:* Can you tell me what this article is?
- Mr. Scanlan:* There are statements in it as to icebergs having been pointed out before the collision occurred to Lady Duff-Gordon by officers on board the "Titanic."
- The Commissioner:* I think that is quite relevant.
- Mr. Duke:* I may tell Mr. Scanlan I am going to ask your Lordship's leave to call Lady Duff-Gordon whether anybody else calls her or not.
- The Commissioner:* I think it is not necessary. Of course, if you want it done, Mr. Duke.
- Mr. Duke:* Most urgently, both Sir Cosmo and Lady Duff-Gordon think it is essential it should be done.
- The Commissioner:* Very well, then it shall be done.

*The Attorney-General:* I had already communicated with my friend Mr. Duke about it and I told him what my view of it was; but of course my friend said he desired Lady Duff-Gordon called and there is an end of it. We shall call her. My friend is quite entitled to ask that.

*The Commissioner:* If she wants to go into the witness-box, she must go.

*Mr. Duke:* The position in which she is put by some of the insinuations is intolerable to a woman who believes that she has done all she should have done under the circumstances.

*The Commissioner:* I have not heard that she did anything that was at all different from what any other lady would do.

*Mr. Scanlan:* I respectfully disclaim any intention of making any insinuation.

*Mr. Duke:* We shall see.

*Mr. Scanlan: (To the Witness.)* Is it your evidence that while the cries of the drowning -

*The Commissioner:* No; do not let us depart from this point which I said might be relevant. *(To the Witness.)* Is it the fact that Lady Duff-Gordon had icebergs pointed out to her by officers of the ship before the calamity as far as you know? - No; it was not the case, my Lord.

12646. Did she ever write anything to that effect? - So far as I know Lady Duff-Gordon wrote nothing whatever in America.

*Mr. Scanlan:* I do not wish to press this any further.

*Mr. Duke:* I think your Lordship ought to know about this. I have looked at it. This is a column of matter in large type purporting to be signed by Lady Duff-Gordon, and said to be a series of statements by Lady Duff-Gordon.

*The Commissioner:* Tell me Mr. Duke does the lady repudiate having written it.

*Mr. Duke:* Absolutely, my Lord.

12647. *(Mr. Scanlan - To the Witness.)* Is it your evidence that while the cries of the drowning people were heard after the "Titanic" sank there was no conversation whatever between you and your fellow passengers or between you and the members of the crew? - I said that after the "Titanic" sank there was a dead silence.

12648. When the people were crying out for help were you all mute in the boat? - I think as soon as that occurred the men began to row at once.

12649. *(The Commissioner.)* And, as I understand, to row away from the cries? - I presume so, my Lord; I did not know which way.

12650. *(Mr. Scanlan.)* You made a suggestion in your evidence as a reason for not taking more people in the boat that there would have been more room if the oars and sails had been put away? - Yes.

12651. As a practical man you knew that it would be very easy to put the oars and sails away and take in people? - As a practical man, I must say I did not think anything about it.

*The Commissioner:* This does not help you much. It is admitted there was plenty of room in the boat for more people.

*The Witness:* I did not know it at the time, my Lord. I admitted that I know now that there was.

*The Attorney-General:* If that is the effect of Sir Cosmo's evidence up to now, it is news to me; it is news to me to hear Sir Cosmo say he did not think there was any room. I thought his evidence showed that there was some.

*The Commissioner:* I certainly understood so.

**Examined by Mr. HARBINSON.**

12653. Had you, during the course of that voyage after you left Queenstown, been in conversation at all with Mr. Ismay? - No, I had never spoken to him in my life.

12654. Do you know, after the impact, if any general alarm was sounded to give the passengers warning? - I believe not; I did not hear it.

12655. You did not hear it? - No; I heard nothing.

12656. Did you know that a message had been received from the "Carpathia"? - No.

12657. You did not hear so? - No.

12658. Saying she was coming to the aid of the "Titanic"? - No.

12659. Do I rightly understand you to say that 20 minutes after you got into the boat, that is after the boat had been launched -

*The Commissioner:* Have we heard of any message from the "Carpathia" received by the "Titanic" to the effect that the "Carpathia" was coming to the "Titanic's" aid? *The*

*Attorney-General:* I think you will hear something; but I do not think you have. We have had some messages. Yes, my Lord, there is one. I remember one of those read out by my friend the Solicitor-General when we were taking the Marconi operator. It is page 213.

There is nothing definite. I think the particular passage you want is this question, 9459, page 211: "I have got down here 'Titanic' still calling C.Q.D., is answered by the 'Carpathia,' and says: Struck iceberg; come to our assistance,' sends the position." That is the first. Then later on you get "The 'Carpathia' sends to the 'Titanic.'" We have got the whole series of messages, your Lordship will remember, but I do not think there is a definite message saying the 'Carpathia' is coming to the assistance of the "Titanic."

*The Commissioner:* I do not remember it.

*The Attorney-General:* I think your Lordship will hear about it.

*Sir Robert Finlay:* It is later, but I think it is after the "Titanic" sunk. *Mr.*

*Duke:* That is so.

*The Attorney-General:* I am not sure that you have that at all.

*Sir Robert Finlay:* Yes, on page 214, but it is quite immaterial, because it was after the ship had gone down.

12660. (*Mr. Harbinson - To the Witness.*) Did I rightly understand you on Friday to say that about 20 minutes after the "Titanic" sank, while you were in the boat, was the time when the conversation with reference to the presents took place? - Something of that sort; 20 minutes or half an hour, I should fancy.

12661. That was while those scenes, which we have heard described so often to us, took place and harrowing cries could be distinctly heard by you? - Oh, no.

*The Commissioner:* Why do you assume that?

*Mr. Harbinson:* I will put it in the form of a question, Was it?

*The Commissioner:* There is no evidence to that effect. It is very irregular to assume facts that are not proved.

*Mr. Harbinson:* At question 12586 Sir Cosmo Duff-Gordon says: "I suppose it would be some time when they rested on their oars, 20 minutes or half an hour after the 'Titanic' had sunk, a man said to me, 'I suppose you have lost everything.'"

*The Commissioner:* Yes, but consider the gloss you put upon the thing. You say that this conversation was taking place while the cries were still being heard. Now where is the statement to that effect?

*Mr. Harbinson:* It is in evidence that they heard the cries 20 minutes after the "Titanic" sank. There is evidence that the cries lasted for an hour and a half, and if they did they were audible 20 minutes afterwards.

*The Commissioner:* Where is that?

*Mr. Harbinson:* One of the witnesses on Friday.

*The Commissioner:* I am talking about this witness. Your duty is to assist me.

*Mr. Harbinson:* Yes, I am anxious to do so.

*The Commissioner:* Not to try to make out a case for this class or that class or another class, but to assist me in arriving at the truth; and you do not do it by trying to make out a case against one person or another; it does not help me a bit.

## Page 285

12662. (*Mr. Harbinson.*) I understand, my Lord. (*To the Witness.*) Did you hear the cries 20 minutes after the "Titanic" sank? -No, I cannot tell you at all about that.

12663. You cannot remember? - I do not think anything like that.

12664. You do not? - I do not think so; I cannot say. The men were rowing a great deal.

12665. Did you tell them to row to drown the cries? - No.

*Mr. Duke:* I appeal to your Lordship with regard to that question, and that class of question. The learned gentleman asks Sir Cosmo Duff-Gordon, "Did you appeal to them to row to drown the cries?" The ordinary rule of practice, as I understand, is that unless you have evidence which will warrant a gross imputation you do not make it by a question.

*The Commissioner:* Yes, but the ordinary rules of practice do not always apply. Perhaps they ought to, but they do not.

*Mr. Duke:* I am aware your Lordship has not the same control here which a judge in Court would have. At any rate, among members of the Bar it is usual to observe that rule.

*The Commissioner:* I will do my best to see the thing is fairly put.

*Mr. Duke:* I am obliged to your Lordship.

12666. (*Mr. Harbinson - To the Witness.*) Was not this rather an exceptional time, 20 minutes after the "Titanic" sank, to make suggestions in the boat about giving away £5 notes? - No, I think not. I think it was a most natural time. Everything was quiet; the men had stopped rowing the men were quite quiet lying on their oars doing nothing for some time, and then the ship having gone I think it was a natural enough remark for a man to make to me, "I suppose you have lost everything?"

12667. Would it not have been more in harmony with the traditions of seamanship that that should have been the time that you should have suggested to the sailors to have gone and tried if they could rescue any one? - I have said that I did not consider the possibility - or rather I should put it the possibility of being able to help anybody never occurred to me at all.

12668. That is to say would I accurately state your position if I summed it up in this way, that you considered when you were safe yourselves that all the others might perish?

- No, that is not quite the way to put it.

*The Commissioner:* Do you think a question of that kind is fair to this witness. The witness's position is bad enough. Do you think it is fair to put a question of that kind to him? I do not.

12669. (*Mr. Harbinson.*) If your Lordship says so I will not pursue it any further. (*To the Witness.*) Did you hear any lady in the boat make any protest against the boat going back? - No.

12670. There were only two ladies in the boat, of course? - Yes.

12671. Had you any conversation with Lady Duff-Gordon? - I spoke to her several times.

12672. About the time had you any conversation with Lady Duff-Gordon with reference to an attempt to rescue any other people? - I have said that the question did not arise in the boat.

12673. What was the nature of the conversation you had with Lady Duff-Gordon? - Simply hoping she was a little better, and so on. I was merely talking to her in a quiet way like that, saying nothing that I could possibly remember or repeat.

12674. Did you see the lights in the ship that we have heard so much about? - We followed what we thought to be a fishing boat or a sailing boat for a considerable time at starting.

12675. Were you following those lights at the time the "Titanic" sank? - I think we were. We were going in that direction.

12676. Did you hear, on Friday, Horswill say that at the time the "Titanic" sank you were rowing towards those lights? - I did not hear him say so, but -

12677. Would you think it would be true if he did? - I should think quite likely. 12678.

Had you heard the officer who was in control at the time No. 1 emergency boat was lowered give instructions that the boat should remain within a certain distance of the sinking liner? - No, I did not hear that. I said so, I think.

12679. Would it be right to say that from the moment you got into the emergency boat the boat proceeded away from the "Titanic" and in the direction of those lights? - I cannot say that. You see, it was pitch dark; when I say pitch dark there were stars, but it was complete darkness, and I did not know which way we were rowing.

12680. Did you hear any instructions given in the boat as to the direction which this boat should take? - In what boat?

12681. The emergency boat? - Did I hear it in the emergency boat?

12682. Yes? - No, I heard no instructions at all. By whom?

12683. By any person? - In the boat?

12684. Yes? - No.

12685. Did you hear any suggestions made? - What about?
12686. By any members of the crew or any of the passengers in the emergency boat to the coxswain as to the direction the boat should take? - No, I do not think I did. There was one man, one of the passengers called out two or three times, "Let us go that way,"
- "let us go the other;" but I do not think any notice was taken of it.
12687. "Let us go that way and let us go the other"? - I heard him through the night.
12688. Now we have it that a suggestion was actually made in the boat after the boat was lowered as to the direction in which the boat should go? - No, I cannot say it was a suggestion. The man said "There is a light there; go after that." I think no attention was paid to him at all.
12689. Was this a suggestion made by the man in the bow of the boat? - No, it was not; he was not in the bow of the boat.
12690. Where was the man sitting who made the suggestion? - The man who kept calling out those things?
12691. Yes, as to the direction that the boat should go? - Where was he sitting? 12692. Yes? - He was sitting two seats in front of me, he was sitting in the seat nearest the stern with his back to the stern; he was sitting facing.
12693. With his back to the stern? - Yes.
12694. Was that the man who was steering? - No.
12695. With his back to the stern? - He was sitting in the seat.
12696. With his back to the stern? - Yes.
12697. Was any reply made to that man when it was suggested going in a particular direction? - No, I think no notice was taken.
12698. Did you hear anything said? - No.
12699. You said nothing? - No. I said nothing. How do mean, I said nothing?
12700. Did you give no answer? - It was going on all night; it was not once he said it.
12701. Was an instruction given or did you hear anything said shortly after the "Titanic" went down? - No, I do not think anything was said then.
12702. Was it an answer to this suggestion of his as to the direction in which the boat should go that you said "I will give you a fiver"? - I really do not understand your question. You must put it plainly.
12703. Yes, I will put it quite distinctly. An instruction, or rather an observation was made by someone, that the emergency boat should go in a particular direction. Is not that so? - That was going on all the later part of the night by this man, yes, continually.
12704. Before the "Titanic" went down? - No, no, no.
12705. After the "Titanic" went down? - Yes, I really do not know, it seemed to be most of the time. He called "Boat ahoy," and so on.

**Page 286**

12706. The question I put to you is this: When you first heard this observation made with reference to the direction in which this emergency boat should go, was it then, 20

minutes after the "Titanic" sank, that you suggested that you would give them a fiver each? - No, I see what you mean now. No, it was not; not in any connection with it. The man calling out to go this way and that had no effect, I think on anybody, nor on this subject at all. It had nothing to do with it.

*The Commissioner:* If you will put your question plainly it would perhaps be understood better. Your question, as I understand it, really is this: "Did you promise a £5 note in order to induce the men in the boat to row away from the drowning people?" That is what you want to ask.

*Mr. Harbinson:* That is the effect of it.

*The Commissioner:* Well, why do you not put it in plain words.

**Examined by Mr. CLEMENT EDWARDS.**

12707. As I understand, your version of what took place on the boat deck is this; that you and Lady Duff-Gordon were standing there for some time; that there was an attempt made to induce Lady Duff-Gordon to get into one of the three lifeboats; that she refused, and that you saw those three lifeboats lowered. Will you explain why Symons, the captain of your boat, states that just before the boat was lowered the two ladies rushed from the saloon deck by themselves and asked if they could get into the boat, and that then you and the two other men passengers rushed and also asked if you could get in? - No, it is quite incorrect, the whole thing.

12708. It is incorrect? - Yes.

12709. Symons has made a mistake if you are right? - I did not know he had said that, but I daresay.

12710. This is what Symons said at question 11454, on the 10th day, at page 256: "As he gave orders I" - that is Symons - "saw two ladies come running out of the foremost end of the top saloon deck, running towards the boat, and from there they asked Mr.

Murdoch if they could get into that boat, and Mr. Murdoch said 'Yes, jump in,' and then, after that, I saw three gentlemen come running up, and they asked if they could get into the boat, and he said, 'Yes, jump in.'" That is incorrect? - Yes, that is quite a wrong story altogether.

12711. When you were in the boat, when the "Titanic" had gone down, you were so absorbed in paying attention to your wife that you could not think whether you ought to go back to the drowning people or not? - Well, you may put it in that way. 12712. I do not want in the least bit to misrepresent you: I think that is the way in which you put it on Friday? - No; I do not think I put it like that, but I was naturally absorbed as you say.

12713. You were asked, "Did it occur to you that with the room in your boat, if you could get to these people you could save some? - (A.) It is difficult to say what occurred to me. Again, I was minding my wife, and we were rather in an abnormal condition, you know. There were many things to think about."? - Yes.

12714. Does it occur to you that if it were perfectly natural, as you have said, to think of offering the sailors five pounds to replace their kit, it might have been equally

- natural, even though you were absorbed in your attentions to your wife, to think that there was some possibility of saving some of those poor people? - As I say, the possibility of being able to help I do not think occurred to anybody.
12715. Why do you suggest that it was more natural to think of offering men five pounds to replace their kit than to think of those screaming people who were drowning? - I do not suggest anything of the sort.
12716. Do you think it was natural then not to think of rescuing those people who were drowning? - It is a difficult question to answer if you put it like that. At the time I saw no possibility - I thought there was no possibility of doing so.
12717. I will put it. Do you still think that it was natural not to think about going back and saving some of those people? - I think it was still natural, but I concede that it would have been a very splendid thing if it could have been done.
12718. If it did not occur to you that you yourselves might go back with the few people in your boat, did it occur to you that you might have gone back to some of the other boats and put your passengers off so as to have had a free boat to do some rescuing? - No, it did not occur to me.
12719. That did not occur to you? - No.
12720. Did you come in sight of any of the other boats? - Not at that time, I think; one could hear them.
12721. What do you mean by that - you could hear them? - You could hear the oars moving all round us.
12722. Did you hail any other boat? - No, with the exception of what I said, that somebody said "Boat ahoy!" on many occasions. 12723. In your boat? - Yes.
12724. Is it not the fact that a man in charge of another boat hailed your boat? - No, not that I know of.
12725. Well, you know we have it here in evidence that the captain of one of the boats, No. 13, hailed your boat because he saw that there were very few people in it. You did not hear that hailing? - No, that is the first I have heard of it.
12726. Now, you have said that the first mention of this money was some 20 minutes or half an hour after the ship went down. Was it made to one or to two members of your boat's crew? - I made it to the lot of them, of course.
- Can you explain why the man sitting alongside of you should come here and say that nothing was said about money until you got aboard the "Carpathia"?
- The Commissioner:* I do not think you can ask this gentleman to account for the motives which induced other witnesses to make statements; you cannot inquire into that. 12727. (*Mr. Clement Edwards.*) Do you think there can be any doubt that the man who sat immediately alongside you heard your offer of £5? Do you think there can be any doubt? - No, none, of course.

**Examined by Mr. HOLMES.**

12728. You have had some of the evidence of the witness Symons read out to you, in which reference was made to Mr. Murdoch. Did you see Mr. Murdoch on the deck that night? - I did not know any one of the officers by sight at all. I know none. 12729. Did

- you see the captain anywhere about when your boat was lowered? - No. 12730. After your boat had left the ship did you hear any orders given by megaphone? - No.
12731. Did you hear anything said about gangways as your boat was being lowered? - No, I heard nothing.
12732. Had you seen the people being put into boats No. 5 and No. 3? - I had not seen them, because I was leaning at the back of the crowd. I was leaning against the deckhouse, but I knew they were being put in.
12733. Was there some difficulty in getting them to go into the boat? - I could not see that.
12734. Could you see whether anyone had to be forced to go into the boat? - No, I could see none of them. I was standing right back.
12735. But so far as you could see there were no people left on that deck, in fact, at the time when you got into the boat? - No, except a few of the crew.
12736. The crew who were lowering the boat? - Yes.

**Page 287**

**Examined by Mr. COTTER.**

12737. Have you seen the evidence of the witness Hendrickson? - Yes.
12738. When Hendrickson states that he suggested you should go back, did you hear that? - No.
12739. You did not hear him make that suggestion? - No.
12740. And he states that Lady Duff-Gordon objected to go back; is that true or untrue? - It is untrue. What do you mean? Will you say it again?
12741. He said he suggested that they should go back and try to save somebody? - Yes.
12742. And he also said that Lady Duff-Gordon objected and said the boat would be swamped, and he also stated that you upheld Lady Duff-Gordon's objection. Is that true or untrue? - It is not true.
12743. Do you know the man Taylor? - Yes.
12744. He sat next to you in the boat? - Apparently; I do not know that yet.
12745. He states he sat next to you in the boat? - Yes.
12746. And you had a conversation with him in the boat? - Did I?
12747. He said so? - I think I had a conversation with the man next to me. Taylor said he did not have a conversation of the sort with me.
12748. Taylor admits he had a conversation with you? - Here?
12749. Yes, here? - Oh, I was referring rather to this conversation about the £5 note.
12750. What I am trying to point out is this: Taylor was the man who sat next to you? - Was he?
12751. Yes? - I daresay I cannot say; it was pitch dark; I cannot say at all.
12752. He knew you, if you did not know him? - He said he did not, I remember. 12753. Yes, he said he knew you at the time. He did not know Lady Duff-Gordon until afterwards. She was pointed out to him, and now he knows her? - Oh! He states he heard her say that the boat would be swamped if it went back.

*The Commissioner:* He said he did not know who it was. *Mr.*

*Cotter:* But later he did, my Lord.

*The Commissioner:* Then he gave two inconsistent answers, because I read here “was there anybody else on the same thwart as you? - (A.) Yes, a gentleman passenger. (Q.) You would not know at the time, but do you know now who it was? - (A.) No. (Q.) Do you know now it was Sir Cosmo Duff-Gordon? - (A.) I understand it is that gentleman now, but I did not think at the time.” You should be careful not to assume that people said things when in fact they did not say them.

*Mr. Cotter:* I have it here, my Lord.

*The Commissioner:* Then will you read it.

*Mr. Cotter:* At page 272, question 12250, I asked, “Who was seasick” and the reply was “Lady Duff-Gordon.” *The Commissioner:* Yes.

*Mr. Cotter:* And I asked him then, “How do you know it was Lady Duff-Gordon; you have told us you do not know her? - (A.) I told that gentleman there (pointing) that I was told afterwards that it was Lady Duff-Gordon. (Q.) You were told afterwards it was? - (A.) Yes, I told that gentleman there. (Q.) Was that the lady who objected to the boat going back? - (A.) The lady that spoke of its being swamped. (Q.) Was that the lady? - (A.) Yes.”

*The Commissioner:* Your statement to this witness was that he knew Sir Cosmo Duff-Gordon when he was in the boat, and he did not. He says he did not. I am talking about Taylor.

*Mr. Cotter:* Taylor knows now it was.

*The Commissioner:* Yes, but that is a very different thing from knowing it when he was in the boat.

12754. (*Mr. Cotter.*) When Taylor states that Lady Duff-Gordon made that statement it is untrue? - Yes.

### **Examined by Mr. LEWIS.**

12755. You said in your evidence you were watching the “Titanic” until she sank, is that so? - Well, practically so, yes.

12756. And there was dead silence? - I cannot hear you.

12757. And there was dead silence when she went down? - There was silence when she went down, yes.

12758. Could you hear cries very distinctly? - No, not very distinctly. 12759. Might cries have lasted for an hour? - I do not think so at all.

12760. Were you close enough to hear anyone say there “My God, my God”? - No; that you have taken no doubt out of that story.

12761. This I take from the “Evening Herald”? - It is in the same story; I remember the words.

12762. I am not quite clear as to your answer to Mr. Cotter or Mr. Edwards as to the approach of the lifeboats. Did you see the other boats or merely hear them rowing after the “Titanic” had sunk? - I said we heard boats round us.

12763. Could you hear them rowing? - You could hear a boat rowing, yes.

12764. Supposing anyone had hailed that boat, could you have heard? - That I cannot say.

*The Commissioner:* Could he have done what?

12765. (*Mr. Lewis.*) Could he have heard if anyone had hailed the boat? - I should think so.

12766. I understand you to say you did not hear anybody say, "We are full up" on your boat? - I have not heard that remark at all yet - about being full up.

12767. Did you hear any other remark, such as "Do not go near that boat, they might jump on ours"? - No, I do not think so. When was this? I do not know when you are talking about.

12768. I am talking about after the "Titanic" had gone down, and you were rowing about in your boat. I suggest you were approached by other boats? - We approached one other boat just before we sighted the "Carpathia." It was early morning. Before it was light we came up close to it. We saw it, and very naturally rowed towards it to keep company, so as not to be left, and there was a conversation between a man in our boat and one of the crew in their boat. He called out "Who have you got there," and he answered and said whom had he got there.

12769. You do not remember being hailed and asked if you had room in that boat for more? - No, no, no; we were not, certainly.

12770. And you do not remember anyone saying "Do not go near the boat they might jump on ours"? - No, I do not think so.

*The Commissioner:* Is this all out of some newspaper?

*Mr. Lewis:* No, my Lord.

### **Examined by Mr. DUKE.**

*Mr. Duke:* I think there is no one else to cross-examine?

*The Commissioner:* No.

12771. (*Mr. Duke - To the Witness.*) I shall not ask you many questions, Sir Cosmo. I will ask you first of all with regard to those reports which were set on foot in America. Were there great numbers of them? - Yes, there were.

12772. And did you see many of them? - Yes.

12773. So far as you saw were they true or were they inventions? - They were all inventions.

12774. Did they report interviews with Lady Duff-Gordon? - Yes.

12775. Did you know whether they had taken place or not? - I knew they had not.

12776. You have been asked a great many questions

### **Page 288**

today to which I think you have said that that was what was said in those papers? - Yes.

12777. Now I come back to the real matter. First of all, will you bring your mind as closely as you can to the time before the emergency boat was launched? - Yes.

12778. How many lifeboats were launched in your presence? - Three.

12779. Had Lady Duff-Gordon an offer and pressure put upon her to go in each of those boats? - In each or in two of them - I am not sure.
12780. Two you know of? - Two I remember perfectly.
12781. And did she refuse to go? - She absolutely refused.
12782. Had Miss Francatelli the offer to go in each of those boats? - Yes, on each occasion.
12783. Did she refuse? - Yes, I asked her to go.
12784. And did you press your wife to go? - No, I did not press her to go.
12785. A conversation took place between you and her? - Yes.
12786. Now it is suggested, you know - perhaps you do not know - that there was some arrangement between the captain and Mr. Ismay and you by which a boat was to be put at your service. Is there a scrap of foundation for that? - No.
12787. Had you ever had any conversation with Mr. Ismay? - No.
12788. Down to the time this ship sank? - Never at all in my life, I have not.
12789. Had you any conversation with the captain? - Never.
12790. Was there any suggestion from you to anybody that either you or your wife or Miss Francatelli should be provided for in any boat up to the time you asked the officer of the boat if you might go in? - Never.
12791. Then it was suggested that Mrs. Astor was on board this boat. Is there any foundation for that at all in any way? - None.
12792. Did you know anything as to the boat in which Mrs. Astor had gone? - No, I did not.
12793. Just one question more with regard to all these matters. Was there anything in the nature of arrangement previous to your suggestion to the officer - might you go in that boat? - No, nothing.
12794. Now, with regard to the boat. At the time you got into it were you aware what amount of accommodation there was or was not in it? - No; I only knew that it was not a lifeboat, and we were bundled in over the side, and every available or visible seat was occupied, and I was unable to sit next my wife, which I wished to do. I could see nothing. It was quite dark on the deck, and it was quite dark in the boat, but I remember those oars alongside, which I could clearly see would have made the boat -
12795. Which occupied part of the thwarts? - I suppose the whole of the side seats. I did not know even that there were side seats.
12796. You do not suggest other than that there were additional places in that boat? - Oh, yes, there were.
12797. I daresay when the daylight came you were able to see what the boat could have done? - Yes.
12798. Now, with regard to an order given by the officer, will you tell me again as nearly as you can recall it what it was you heard the officer say to Symons with regard to the boat? - It was my impression - I am not very sure of it - I understood it was, "Follow the other boats and row fast for the first 200 yards."
12799. That was your impression? - That was my impression.
12800. Have you a distinct memory or not about that? - No, that is what I thought it was.

12801. When the boat had started from the ship's side it rowed sharply for some distance? - Yes.
12802. Then she rested? - Yes.  
How many starts and rowings and restings were there as far as you can recall, or can you recall, before the "Titanic" went down?
12803. (*The Commissioner.*) Can you recall anything about it in this connection? - Yes, my Lord, I can recall that they stopped rowing several times and went on again, I daresay, five or six times, or four or five times.
12804. Did you count them? - Oh, no.
12805. (*Mr. Duke.*) If I were to ask you if you had a vivid recollection of any of the events during the period after the boat had been launched and you were floated, what would your answer be? - I should say, "No - nothing vivid." I do not think it is possible to have a vivid recollection under those circumstances.
12806. You told the Attorney-General what your impression was as to the distance you had reached from the ship? - Yes.
12807. Do you profess to be certain about it or not? - No, but I have been telling friends we were about a thousand yards off; it was my impression then, and it is still, I suppose. 12808. I want to ask you a question about the period after the "Titanic" had sunk. From what quarter of the sea, as far as you could judge, were cries coming? Was there a distinct locality from which you could judge the cries were coming or not? - I think not. 12809. After the "Titanic" had sunk was there any object which would give you a mark or which would have given Symons a mark for rowing? - No, everything was dark. We had been watching that.
12810. The sea was dark? - The sea was dark.
12811. And it was dark in the boat? - Quite dark in the boat.
12812. Are you able to say if there was any definite direction of rowing during the first hour after the "Titanic" had gone down? - I do not think there was any definite order of rowing given at all. I did not hear.
12813. I did not mean by "direction" an order, but any definite direction? - No. 12814. That is an apparent destination? - No, I did not know of it.
12815. Up to the time when you had the conversation with the man who was beside you about his kit, had there been any suggestion from anybody as to what should be done with the boat? - No.
12816. Or whether she should row? - No, there was no suggestion at all.
12817. With regard to the sum of money you promised, have you told the Court the whole of the truth about that matter? - I told the whole incident on Friday.  
*The Commissioner:* I should like you to ask him in what circumstances on board the "Carpathia" the money was given.  
*Mr. Duke:* I am obliged to your Lordship, and I will deal with it. May I just complete this matter?  
*The Commissioner:* Certainly.
12818. (*Mr. Duke.*) First of all with regard to the time you were in the boat, was anything going on at the time of the conversation with one of the men about his kit which had anything at all to do with the disposition of the boat? - No, all was silence.

12819. You have told the Court that you do not know and you do not say it was Taylor. Were you sitting on the same seat during the whole time? - I was, but the man next to me changed once in the middle of the row to the "Carpathia." It was a stiff row, and the man got up and changed. The man next to me got tired. 12820. And there was a change of men rowing? - Yes.
12821. Was it before or after that change, as far as you are able to tell us, that the conversation took place about kits? - Before.
12822. Now bring your mind to the time when the boat came to the side of the "Carpathia." At that time was there any one man in the boat whom you could have distinguished from any of the others? - No.
12823. How did it come about that you distinguished Hendrickson from any other man in the boat? - There was a hitch with one of the men getting up the ladder, and they had to send down a rope to pull him up, and the only man that was

**Page 289**

left in the boat with me was Hendrickson. I spoke to him then, and I said, "Are you the man who was sitting next to me?" I understood him to say, "Yes." I said, "All right," and he said "Yes," or something of that sort.

12824-5. And had you then a conversation in regard to getting the names, or was it subsequently? - I think it was as soon as we got on board.

12826. Did Hendrickson give you some assistance in getting on board the "Carpathia"? - Yes, he did.

12827. When you and he were both on board the "Carpathia" what next took place with regard to money? - I said to him, "If you will get the men's names I will see that they get some money in a few days or give them a cheque shortly," or something of that sort.

12828. Did you say any more to him at that time? - No. Oh, do you mean later? 12829. No, I mean on that occasion about money. At the time when you and he were both on the deck together? - No.

12830. When was the next time you saw Hendrickson about the matter? - I saw him, I think, the next day. He came up and drew my attention to himself. I told him to. He had given me a list the same day.

12831. Did he give you a list the same day? - Yes, the same day.

12832. Some time on the same day as you went on board the "Carpathia" in the morning he brought you that list which I have handed in to my Lord? - Yes. 12833. Did he tell you which he was in the list? - Yes, I understood him to be Hendrickson.

12834. You told my Lord that he called attention to himself the next day, as you had bidden him do? - Yes.

12835. He touched his cap to you? - Yes.

12836. And did you have a conversation with him then about the matter? - No, I do not think so. I think I said, "I have not got this; I will see you tomorrow or the next day." 12837. Now, on your way to New York did you cause Miss Francatelli to write out a form of cheque for each of those persons whose name was in the list? - Yes.

12838. And did you sign those? - Yes.

12839. I think you had not a book of cheques? - No.
12840. And I think it is your common practice to draw cheques upon your bankers - Coutts, are they? - Yes.
12841. Upon notepaper? - Yes.
12842. Did Miss Francatelli write them? - Yes.
12843. Did she give them to you? - Yes.
12844. How did you get the men together? - I went on to the deck just by the smokingroom and saw Hendrickson down below, and beckoned him up and told him to get all the men together, and when they were up there I just gave them each their cheque, asking each fellow what his name was.
12845. Whereabouts on board the "Carpathia" was that? - That was on the deck just by the side of the smoking-room door.
12846. And was anything said as between you and those men when you were giving them each successively the cheque? - Yes. I said, "I am sorry I cannot give you money; but if you had it, you would probably spend it all in New York, so it is just as well it should be in a cheque which will enable you to start your kit again." That is all I said to them.
12847. Did anything more take place with regard to the giving of these cheques? - Well, when they were given, a friend of ours, a man we had met on board, came up and photographed the whole lot of us there, and I think one or two of the passengers snapshotted us.
12848. There were passengers with cameras? - Yes.
12849. And there was some snapshotting going on? - Yes. I think one was subsequently reproduced in a London paper in which Hendrickson happened to appear.
12850. Had he put on a lifebelt for the purpose of being photographed? - Yes, he had.
12851. It is suggested that Mrs. Astor was in that boat. There is the reproduction of the photograph, and does it show at the bottom that the group includes Mrs. J. J. Astor. Just look at it and see (*Handing photograph to Witness.*)? - Yes.
12852. (*Mr. Duke.*) It is in the Sphere, Mr. Attorney. (*To the Witness.*) It is quite a mistake, is it not. Who is the lady? - That is Miss Francatelli.
12853. That is the lady who is identified as Mrs. Astor. Now I want to go back to the time you were in the boat. You have told me of a man who was in the boat. I think you said a passenger who was constantly calling out while you were on the sea, "Boat ahoy, we ought to go this way, we ought to go that way." Do you know who he was? - Yes.
12854. Was he one of the other two men who had been passengers of the "Titanic"? - Yes.
12855. Did anybody take any notice of those exclamations of his? - No.
12856. Did they lead to any discussion either with Symons or Horswill or anybody else in the boat as far as you are aware? - No.
12857. Did they have any effect at all on the course the boat took? - Not the least. 12858. And from first to last from the time you and the other passengers were on board that boat, as far as you are aware, had anything that was said by any of you any effect on the direction taken by the boat? - No, nothing. *The Commissioner:* Is there anything more, Mr. Duke?

12859. (*Mr. Duke.*) I think there is only one general question, my Lord. (*To the Witness.*) So far as you were concerned, Sir Cosmo, when did the first suggestion reach you that you had failed to do in that boat anything you could have done? - When I arrived at Fishguard last Monday night.

12860. And found that Hendrickson had made his statement? - Yes. I was met there.

**Re-examined by the ATTORNEY-GENERAL.**

12861. One matter I want to ask you about. You heard a passenger talking, giving directions in the boat? - Well, he was not giving directions, but he was saying, "Let us go here," and "Boat ahoy."

12862. Was there any conversation between him and you as to which way you should go? - No, there was only one remark I made to him.

12863. What was that? - To ask him to be quiet.

12864. Was that Mr. Stengel? - Is it necessary to say who?

12865. Well, it is necessary, if you can. I do not know why you should not, if you can tell us. Can you tell us? - I can, perfectly. 12866. Well, who was it? - Yes, it was he.

12867. I asked you because I see he has been examined in America, and I want to call your attention to this statement of his. I am reading from the 30<sup>th</sup> April, my Lord, at page

14 of the Enquiry before the Senate Commission. "Do you know who gave directions? - (A.) I think between Sir Duff-Gordon and myself we decided which way to go." That is what Mr. Stengel said? - I think it is wrong.

12868. What? - It is not the case. There was no question at all. I never spoke to the coxswain in any way to give him any directions.

*The Attorney-General:* That is all I want to ask you.

*The Commissioner:* Do you want to ask anything, Sir Robert?

*Sir Robert Finlay:* No, my Lord.

*(The Witness withdrew.)*

*Mr. Duke:* Lady Duff-Gordon is here, Mr. Attorney.

*The Attorney-General:* My friend wishes Lady Duff-Gordon to be called, and, of course, I will examine her. I propose to take her at once to the point at issue.

**Page 290**

**LADY DUFF-GORDON, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

12869. Lady Duff-Gordon, you will remember on the night of this disaster to the "Titanic," you were wakened, I think, by the collision? - I was.

12870. I only want you to tell me one thing before we get to the boat, had there been offers to you to go into any of the lifeboats? - Oh, yes, they came and tried to drag me away.
12871. You mean some of the sailors? - The sailors. I was holding my husband's arm. They were very anxious that I should go.
12872. And you refused to go? - Absolutely.
12873. Well, eventually you did go with your husband, as we know, in what has been called the emergency boat? - Yes, I did.
12874. Just tell us quite shortly - I do not want to go into it in any detail - but quite shortly, how it was you went into that boat. Do you remember? - Oh, quite well.
12875. Well, would you tell my Lord? - After the three boats had gone down, my husband, Miss Franks and myself were left standing on the deck. There were no other people on the deck at all visible and I had quite made up my mind that I was going to be drowned, and then suddenly we saw this little boat in front of us - *this little thing (Pointing on the model.)* - and we saw some sailors, and an officer apparently giving them orders and I said to my husband "Ought we not to be doing something?" He said, "Oh, we must wait for orders" and we stood there for quite some time while these men were fixing up things, and then my husband went forward and said, "Might we get into this boat?" and the officer said in a very polite way indeed "Oh certainly; do; I will be very pleased." Then somebody hitched me up from the deck and pitched me into the boat and then I think Miss Franks [Miss Laura Francatelli] was pitched in. It was not a case of getting in at all. We could not have got in, it was quite high. They pitched us up in this sort of way (*indicating*) into the boat and after we had been in a little while the boat was started to be lowered and one American gentleman got pitched in, and one American gentleman was pitched in while the boat was being lowered down.
12876. (*The Attorney-General.*) I think it is right to say that Mr. Stengel rather confirms that statement if your Lordship will remember. It is not right according to him that the three of them came running up as Symons said. He says he did come up afterwards and was rolled into the boat. (*To the Witness.*) Now you will remember when you got into the boat, and before the "Titanic" sank, did the men start rowing away from the "Titanic"? - Oh, the moment we touched the water the men began rowing.
12877. Had you heard any orders given? - Yes.
12878. Do you remember what they were? - As far as I can remember, it was to row quickly away from the boat for about 200 yards.
12879. "And come back if called upon"? - No. 12880. You did not hear that? - Oh, no.
12881. I do not quite understand? - I did not hear that.
12882. You did not hear it? - No.
12883. As far as you knew all they had to do was to row out 200 yards? - Yes. 12884. Then did the men commence doing that? - At once.
12885. And did you hear any conversation at all in the boat before the "Titanic" sank? - No.

12886. Did you understand the question I was putting to you? - No, I did not hear it. In our little boat?

12887. Yes? - No.

*Mr. Duke:* She said no.

12888. (*The Attorney-General.*) But I have her proof before me, and that is why I was not sure she understood the question? - I have no recollection

12889. Let me ask you again. I am speaking to you of before the "Titanic" sank. You understand? - Yes.

12890. What I am asking you is: Before she sank did you hear the men saying anything in the boat? - No.

12891. Did you hear anything said about suction? - Well, perhaps I may have heard it, but I was terribly sick, and I could not swear to it.

12892. What? - I was awfully sick; I do not think I could swear to it.  
I am asking you about something which I understand you have said quite recently.

*The Commissioner:* Read it to her.

*The Witness:* Yes, will you, please?

12893. (*The Attorney-General.*) I am asking you about something which I only know from your statement to your solicitor. Did you hear a voice say, "Let us get away"? - Yes, I think so.

12894. Did you hear it said, "It is such an enormous boat; none of us know what the suction may be if she is a goner"? - Yes, I heard them speaking of the enormous boat. It was the word "suction" I was not sure of. I see what you mean.

12895. It is not what I mean, Lady Duff-Gordon. It is what you are said to have said to your solicitor? - Well, I may have said so.

12896. "Such an enormous boat"; that is referring to the "Titanic"? - Yes.

12897. "None of us know what the suction may be if she is a goner"? - That was, I am sure, long before the "Titanic" sank.

12898. That is what I was asking you? - Yes.

12899. I put it to you, but I do not think you appreciated the question? - No, I did not.

12900. It was before the "Titanic" sank? - Yes, it was before.

12901. Now after the "Titanic" sank you still continued to be seasick, I understand? - Yes, terribly.

12902. I only want to ask you one question about that. Tell me first of all do you recollect very well what happened when you were in the boat? - No.

12903. Your mind is hazy about it? - Very.

12904. There may have been some talk which you would not recollect, I suppose? - Well, I do not know.

12905. You think you might? - I think I would.

12906. I will put to you definitely what is said with reference to yourself. Did you hear after the "Titanic" had sunk the cries of the people who were drowning? - No; after the "Titanic" sank I never heard a cry.

12907. You never heard anything? - No, not after the "Titanic" sank.

12908. Did not you hear cries at all? - Yes, before she sank; terrible cries.

12909. Before she sank? - Yes.
12910. Did you see her sink? - I did.
12911. You mean you heard nothing at all after that? - My impression was that there was absolute silence.
12912. Were your men rowing? - Yes.
12913. What, all the time? - No, they began to row as soon as the boat went down.
12914. Did you hear a proposal made that you should go back to where the "Titanic" was sunk? - No.
12915. Did you hear any shouting in your boat. It would be better if you would attend to me? - I am listening.
12916. Did you hear anybody shout out in the boat that you ought to go back? - No.
12917. With the object of saving people who were in the "Titanic"? - No.
12918. You knew there were people in the "Titanic," did you not? - No, I did not think so; I do not think I was thinking anything about it.
12919. Did you say that it would be dangerous to go back, that you might get swamped? - No.
- Mr. Scanlan:* I have no question.
- Mr. Harbinson:* I do not wish to ask anything.

**Page 291**

**Examined by Mr. CLEMENT EDWARDS.**

12920. There is one question. Have you seen in the London "Daily News" what purports to be an article specially written by yourself in America? - I have.
12921. Did you write such an article? - No.
12922. It is an entire invention from beginning to end? - Which article?
12923. The one in the "Daily News" which appeared on the 20th April? - Yes, it is rather inventive. A man wrote it from what he thought he heard me saying.
12924. (*The Commissioner.*) Do you mean to say that somebody came to interview you? - Oh, quantities of people came to interview me.
12925. But this particular man from the "Daily News"? - No, he did not; he was a friend having supper with us the night we arrived.
12926. (*Mr. Clement Edwards.*) Will you kindly look at that article (*Handing the same to the Witness.*)? - What am I supposed to say?
12927. If you will look at the heading of the second column on this side you will see that it is an article supposed to be specially written by you, and what purports to be your signature appears at the foot of the column.
12928. (*The Commissioner.*) Are you looking at it now, Lady Duff-Gordon, for the first time? - For the first time.
12929. Do you mean to say you have never seen the "Daily News" with that article in it up to today? - Never; this is the first time. The last little bit here is absolutely a story.
12930. (*Mr. Clement Edwards.*) Absolutely what? - A story.

12931. Then if your signature appears there it is a forgery, is it? - Oh, absolutely. *Mr. Duke*: Do you mind letting me see that. (*The same was handed to the learned Counsel.*) I have never seen it till this moment.
12932. (*Mr. Clement Edwards.*) I want to use it for a moment (*The document was handed to Mr. Edwards.*) (*To the Witness.*) You say that a friend came and had supper with you, and you suggest he is responsible for what appears here? - I know he is.
12933. You know he is? - Oh, yes.
12934. Some of it may be true and some of it may be false? - Would you like me to tell you the story?
12935. I should like you to answer the question. Is this true that you watched several women and children and some men climb into the lifeboats, and did an officer say, "Lady Gordon, are you ready?" - It is not true that the officer spoke to me, but I did see women and children being handed into the lifeboats.
12936. Is it true that he said, "Lady Gordon, are you ready?" - It is untrue. 12937. Is this true: "I said to my husband, "Well, we might as well take a boat, although the trip will only be a little pleasure excursion until the morning"? - Quite untrue.
12938. That is untrue. Is it untrue that you said it was the captain's special boat, that five stokers got in and two Americans - Mr. Solomon, of New York, and Mr. Stengel, of Newark? - I do not remember saying that.
12939. It is true, is it not, that that number of persons did get in? - It was Mr. Solomon and Mr. Stengel and Miss Franks [Francatelli], my husband and myself. We were the passengers.
12940. "Besides those two passengers there were Sir Cosmo, myself, Miss Franks [Francatelli], an English girl." is it true you said that? - I think that might easily be.
12941. Is this true that you said this: "Numbers of men standing near by joked with us because we were going out on the ocean"? - No, that is not true. 12942. That is invention? - Absolutely.
12943. Is it true that you said that some of them said "The ship cannot sink," and that one of them said, "You will get your death of cold out there amid the ice." Is that true? - No, not true.
- Is it true that you said you were slung off and cruised around for two hours, and it did not seem very cold? - Quite untrue.
12944. Is it true that you said "I suddenly clutched the sides of the lifeboat. I had seen the 'Titanic' give a curious shiver." That is invention, is it? - Yes, quite.
12945. Did you say "Everything could be clearly made out; there were no lights on the ship, save for a few lanterns"? - No.
12946. Is this true that you said this: "We watched her - we were 200 yards away - go down slowly, almost peacefully"? - No.
12947. Did you say then, "An awful silence seemed to hang over everything, and then from the water all about where the 'Titanic' had been arose a Bedlam of shrieks and cries"? - No, I never said that.
12948. That is entirely untrue? - Absolutely.
- And is it true that you said this -
12949. (*The Commissioner.*) Who was this gentleman? - He was the editor of the

“Sunday American.” His name was Mr. Merrett.

12950. What is the “Sunday American”? - It is a newspaper. 12951. Is it published in London? - No.

12952. Where is it published? - In New York. I could tell you exactly how it came out if I were allowed to.

12953. (*Mr. Clement Edwards.*) Is this true that you said this: “Women and men were clinging to bits of wreckage in the icy water”? - No. 12954. “And it was at least an hour before the awful chorus of shrieks ceased, gradually dying into a moan of despair”? - No, I never said that.

12955. Did you say this: “I remember the very last cry; it was a man’s voice calling loudly, ‘My God, my God,’ he cried monotonously, in a dull, hopeless way.” That is untrue? - Absolutely untrue.

12956. “And we waited gloomily in the boats through the rest of the night, the stokers rowing as hard as they could to keep themselves warm”? - Quite untrue. *Mr. Duke:* May I borrow that?

*Mr. Clement Edwards:* Yes. (*Handing the paper to the learned Counsel.*)

#### **Examined by Mr. LEWIS.**

12957. Do you write for any American papers at all? - Yes, the “Sunday American.”

12958. Did you supply an article to the “Evening Herald”? - No.

*Mr. Duke:* I do not think Lady Duff-Gordon can hear; I cannot - whether “he” wrote or “she.”

*The Attorney-General:* She.

12959. (*Mr. Lewis.*) Do you write in the “Evening Herald”? - No. *The Commissioner:* Mr. Duke, do you wish to ask anything?

*Mr. Duke:* Yes, my Lord. I think Lady Duff-Gordon should explain about this article.

#### **Examined by Mr. DUKE.**

12960. When you were at New York you went to an hotel? - Yes.

12961. And that evening you had supper together with your husband? - Several people - six ladies.

12962. Did Mr. Merrett come there? - Yes.

12963. Was he a gentleman you had known? - A great friend of ours.

12964. Had you any idea of any publication of anything at that time? - Yes.

12965. What did he say to you? - After he had

#### **Page 292**

left us about half an hour he telephoned to me, and he said, “Mr. Hurst has just rung me up, and must have your story of the ‘Titanic’ wreck for tomorrow morning’s newspaper.” He said, “May I tell your story as I have heard it?”

12966. What did you say? - I said "Yes," and he tells me afterwards that he telephoned to their head office all he knew about it, and then a clever reporter put all that into words and it appeared next morning in the "New York American."

12967. Your friend told some clever American reporter what he had heard? - Yes.

12968. And then you were advertised as having written and signed this false article? - That is it.

12969. And was that published in various papers, did you find? - Oh, all over - everywhere.

12970. But you had not seen this in the "Daily News" till when? - Just now; here. *Mr.*

*Duke:* I think that is all I need ask.

*The Attorney-General:* I do not ask anything.

*The Commissioner:* Do you want to ask anything, Sir Robert?

*Sir Robert Finlay:* No, my Lord.

*(The Witness withdrew.)*

*The Attorney-General:* There are other members of the crew here, but I do not propose to call them. I understand my friend does not ask me to call them, and I do not suggest they would throw any light on the matter, or that anything they would say would contain any suggestion either against Sir Cosmo or Lady Duff-Gordon.

*Mr. Duke:* Upon that understanding that neither of the members of the crew corroborates either Hendrickson or Taylor upon that subject. I have nothing more to say.

*The Attorney-General:* No, I cannot do that; I will not do that.

*Mr. Duke:* Then I would rather my friend should call any witness he thinks will throw light upon it.

*The Attorney-General:* I can give no undertaking of that kind. I should have thought it was quite plain that I could not. I thought they would not be able to help us very much; I thought we had got the story.

*The Commissioner:* I do not think they will be able to help us at all, but still, in the circumstances, I think you must put them into the box. *The Attorney-General:* Certainly, my Lord; they shall be called.

*The Commissioner:* I hope you will be able to take those witnesses quite shortly. They are put into the box more for Mr. Duke.

*The Attorney-General:* Yes, my Lord. I will call Collins first.

*The Commissioner:* I do not know whether you desire the other two witnesses to be out of Court while Collins is examined.

*The Attorney-General:* I do not.

*The Commissioner:* If not, I think it would be convenient to have them in Court. Do you object, Mr. Duke?

*Mr. Duke:* No, my Lord, I concur, if I may say so.

*The Attorney-General:* All the other witnesses have been in Court whilst we have been enquiring into this part of the story.

*The Commissioner:* Very well.

**SAMUEL COLLINS, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

12971. Were you at the time of this disaster serving as a fireman on the "Titanic"? - Yes.
12972. Now you, in fact, got away, did you not, in the emergency boat on the starboard side? - That is quite right.
12973. I am going to take you straight to that. Did you help to lower that boat? - I helped to lower that boat - to get it ready to lower is not to lower it.
12974. And later on was it lowered? - It was lowered.
12975. And you got into it? - I was told to get into it.
12976. Who told you to get in? - Chief Officer Murdoch.
12977. Did you see some ladies get into that boat? - I did.
12978. How many? - Two, I think.
12979. That is right. Do you know how they came to get into it? - They were ordered by Chief Officer Murdoch.
12980. And did three male passengers get into that boat? - Two male passengers, I think.
12981. Do you know how they came to get into it? - Because they were ordered by Chief Officer Murdoch.
12982. When that boat was lowered to the water, did you hear any orders from that officer as to what was to be done with that boat? - I did.
12983. What were those orders? - Ordered by Chief Officer Murdoch to lay handy for further orders.
12984. Now was that boat then rowed away from the ship? - It was.
12985. How far do you think they rowed away? - I am not much of a judge of distance, but I will give you a slight idea - say, about 100 yards.
12986. We have been told that a man of the name of Symons was in charge of the boat. Is that right? - Yes.
12987. When you got the distance you have told us away from the ship, did you see that the "Titanic" was sinking, getting lower in the water? - We could not realise she was sinking, but we saw her going a bit further down by the head.
12988. After a time did you see her go down? - I saw her go down.
12989. After that did you hear any cries in the water from people? - Yes, I did.
12990. Was anything said by anybody about going back in the direction of those cries? - Nothing at all.
12991. Are you sure of that? - Nothing at all.
12992. Was the man Hendrickson in the boat? - Yes.
12993. Did Hendrickson mention or propose going back in the direction of those cries? - No, no one proposed it at all.
12994. Did Hendrickson say anything? - Not that I know of. He was close to me. 12995. That is just what I was going to ask; where were you sitting? - In the fore thwart of the boat.

12996. Which thwart was he in? - On the fore part of the fore thwart of the boat. 12997. If he had said anything in an ordinarily loud voice would you have heard it? - I would, certainly.
12998. Do you say he did not say anything? - I would have heard it if he had said anything.
12999. When the ship disappeared and you heard these cries, was nothing said at all by anybody in that boat? - Simply the word passed through the boat to pull for a short time to keep away from the suction.
13000. Who said that? - I could not tell you; it is impossible to say who said it, but we pulled for a short distance away to keep clear of the suction.
13001. Was it one of the passengers? - No, it was not one of the passengers, it was one of the crew.
13002. One member of the crew did mention the suction, did he? - Certainly, and it stands to reason there would be a great suction with a ship like that.
13003. What was done on the boat after this? - We pulled away a little bit from the ship when we saw her sinking, which was a thing I do not wish to explain to you; I do not wish to

### **Page 293**

give anything at all to you of an idea of the ship sinking, but I wish to tell you we pulled a little away, and the coxswain of the boat brought the boat round. I being in the fore thwart of the boat could see that he steered the boat round, and we must have pulled in the direction of where the ship sank.

13004. How far? - It is impossible to tell you how far.
13005. Do you wish us to understand that the boat was pulled back in the direction of the drowning people? - Yes, right in the direction of where the ship sank.
13006. Did you get close to them? - We got until we came into contact with the boats that left the ship after we left.
13007. But I meant close to the people where the cries had been? - Yes, where the cries had come from.
13008. Is it your evidence that you went back to where the cries came from? - As far as I can tell you, to my idea.
13009. Were the cries still going on while you were rowing back? - They continued about 10 minutes, and we heard nothing afterwards.
13010. While rowing back towards the direction of the cries, is it your evidence that those cries went on for about 10 minutes? - That is it.
13011. According to your evidence, this boat did go back and try to save life? - Well, of course, we would have saved lives if we had come across any to save.
13012. Your evidence is that the boat went back with the object of trying to save life? - To do our level best.
13013. Is that accurate evidence? - That is quite right.
13014. You are sure about this story you are telling us? - I am quite sure- sure as that I took the oath on that Book.

*The Commissioner:* You have got a proof there, I suppose?

13015. (*Mr. Butler Aspinall.*) Yes, my Lord; but I do not think it helps me. (*To the Witness.*) Did you make a statement before an official when you came to this country? - I did.

13016. You did tell him (*I see it here*) "We felt a little suction, but we pulled hard with our oars." That was pulling away? - That is quite right.

13017. "We went to the spot whence came the cries, but discovered nothing"? - That is right; that is as near as I can tell you.

13018. And then you said that as your boat was not full you could have saved quite half a dozen more people? - That is quite right.

*The Commissioner:* That is substantially what he says now.

13019. (*Mr. Butler Aspinall - To the Witness.*) Did you see a light while you were in the boat? - Yes, we saw a light.

13020. What did you think it was, a vessel's light or a star? - To my idea - I am not much of a sailor, but I have been a fireman for practically all my life - I thought it looked like a stern light, but it might have been a masthead light. In the distance it looked like a stern light.

**Examined by Mr. SCANLAN.**

13021. When something was said about suction, how far were you from the "Titanic"? - About 100 yards, as near as I can tell you, but I have given you to understand that I am no judge of distances.

13022. How long had you stopped in that position at 100 yards distant from the "Titanic"? - That is another hard question to ask me, because at a time like that time seems so long. It may have been 10 minutes or a quarter of an hour.

13023. Could you give my Lord any notion of the length of time? - We lay on our oars broadside to the ship.

13024. At that time did you hear someone in the boat say, "There is danger here; we had better row away from here. This is a light boat, and there may be suction when the ship goes down; let us pull away"? - No, Sir.

13025. If a passenger, Mr. Stengel, stated to the American Enquiry that he said that, is it untrue? - It is untrue.

13026. Is not this the case, that you were close to the bow of this boat? - On the fore thwart of the boat.

13027. And that Mr. Stengel was in the stern? - They were all in the stern of the boat. There was me and another man in the front of the fore thwart, and there was a sailor on the look-out in front of the boat. I do not know their names.

13028. Is it not possible that this might have been said by a passenger? - I would have heard it if it had been said on account of being in a small boat.

13029. You do not remember one of the passengers saying anything like this? - No.

13030. He said that he made this statement, and then he says, "The other passengers agreed, and we pulled away from the 'Titanic'"? - That is wrong.

13031. Then he is asked - "(A.) I beg your pardon, it is wrong to a certain extent, but when the suction was on I know there was something passed, but who said it I cannot answer at all. We pulled away just for the time of the suction, and it was for a very short time.
13032. There was some conversation about suction? - Certainly.
13033. But you do not know whether it was by a passenger or by a member of the crew? - I think the majority of it was passed between the crew.
13034. But you could not say whether one of the passengers said it? - I could not say for certain.

**Examined by Mr. CLEMENT EDWARDS.**

13035. Did you hear anything said in the boat about money? - Nothing at all. 13036. When did you hear any talk about money? - When I carried the coat of a gentleman whose name I did not know up the ladder.
13037. Then it was not Hendrickson who carried the coat? - No, it was not.
13038. Was it you who got the names of the crew? - No, the gentleman asked me to get the names of the crew, but I went naturally enough, as I would do, and told the others who were in the boat, and Hendrickson took it into his own hand.
13039. But you were the man asked to get the names? - Yes.
13040. And up to that time you knew nothing at all about it? - Not until we received the envelope; we did not know what it was, and it came as a surprise to us.
13041. Did you hear any lady in the boat say anything about the danger of swamping? - Nothing at all.
13042. Did you hear No. 13 boat hail you? - We heard one boat, but I could not tell you what boat it was.
13043. What did you hear? - The only thing I heard was that Hendrickson shouted to that boat passing some name: "Are you all right?" and the order came back, "Yes," and we said "All right." We passed the word right through then: "Keep as close together as we possibly can."
13044. Right through where? - As many of the boats as were round about.
13045. You saw a number of boats? - Not a number, but two or three. Of course, that is a number.
13046. Do you remember the number of either of the boats that hailed you? - I could not see the numbers of the boats in the dark; in fact, I did not know the numbers of the boats at all.
13047. Did you hear anybody shout out the number of the boat? - No, I did not. 13048. Did you hear anybody shout from a boat asking you to take some of their passengers on board? - No, there was no such thing. That is the only thing that was passed, "Are you all right?" and we said, "Yes," and the order was passed then, "Are you all right?" and they said, "Yes." The order was to keep close together.

13049. You had a lot of room in your boat? - Not a lot of room; we had room for a few more.

13050. Did it occur to you that you ought to go back immediately and try to pick up some people? - We could not go back quicker than we did.

13051. How soon after the ship went down did you go back? - It is hard to tell the time we turned round; as soon as we thought we were clear of the suction, the boat turned round; the coxswain turned the boat round, and I am sure we were pulling that way until we came into contact with these boats. That was the first time we came into contact with the boats.

13052. From the time the ship went down to the time you got to where you thought the cries had come from, how long a time was it? - I daresay we were pulling that way for a long while.

13053. How long? - I daresay for fully an hour one way and the other. I am not a navigator. I could not tell you. I had no compass to tell us which way we were going, but that is as near as I can tell you.

*Mr. Duke:* I have no questions.

*(The Witness withdrew.)*

**FREDERICK SHEATH, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

13054. Is your name Frederick Sheath? - Yes.

13055. Are you a trimmer? - Yes.

13056. Were you one of the people ordered into this emergency boat, No. 1? - Yes.

13057. Do you remember the boat being lowered to the water? - Yes.

13058. Did you hear any order given, as the boat was leaving the "Titanic," to Symons, who was in charge of the boat? - No.

13059. You did not hear it? - No.

13060. Where were you sitting in No. 1? - The after-mid.

13061. Were you rowing? - Yes.

13062. And the man called Symons was steering I think? - Yes.

13063. I want to see where you were. Was anybody else on the same thwart with you? - One lady, but I could not say who it was.

13064. Who was in front of you, next nearest the stern? - One gentleman whose name I do not know and Pusey, a fireman.

13065. And after that again in the stern of the boat? - There was a lady and a gentleman, and the coxswain Symons.

13066. You were on the second thwart from the stern? - Yes.

13067. Do you know who was behind you? - Only Taylor - that is all I know - a fireman.

13068. Taylor, who has given evidence here? There was another lady in the boat, was there not? - Yes.

13069. Where was the other lady? - Right aft.

13070. Do you mean nearer the stern than you? - Yes, right aft.

13071. This is what we want to know. When the "Titanic" went down did you hear any talk or discussion in the boat as to what should be done? - No.

13072. Nothing at all? - No.

13073. Did you hear any orders given by Symons? - No, only to pull away from the ship, that is all.

13074. You heard him say, "Pull away from the ship"? - Yes.

13075. Was the ship still floating then, or had the ship gone down then? - It was still floating, then, when we left.

13076. Still floating when he said that. Did you pull away from the ship? - Yes. 13077. I asked you if you remembered when the "Titanic" went down: Did you see it go down? - I saw it go down.

13078. When it went down what was your boat doing? Were you rowing, or resting on your oars? - We were resting on our oars.

13079. What I want to know is, after the "Titanic" went down, what was done by your boat then? - We pulled back again to the other boats.

13080. Did you hear any orders given as to what you should do? - I was not taking much notice of what he was saying; I was looking after myself. 13081. When the "Titanic" went down did you hear any cries? - Yes. 13082. Did the cries continue for some time? - Yes.

13083. You say your boat went back to the other boats? - Yes.

13084. Had these other boats left the "Titanic" before you or after you? - Some of them left before we did.

13085. Then they had not gone as far away from the "Titanic" as you had? - Well, we were all around; we all met one another. They must have gone as far away as we did. 13086. I just want to understand if you can help us. You say your boat went back. Do you mean it went back to where the "Titanic" had sunk? - I could not say where she sank; I am no navigator.

13087. That is what you heard the last gentleman say? - No, I never.

13088. Were you not here? - No.

13089. Were you not here when the last man gave evidence? - No; I was outside the curtains having a smoke.

13090. You say you heard the cries, and they went on for some time. Did you get near to any of the cries? - I could not say about getting nearer any of the cries.

13091. You could not say? - No.

13092. You do not remember any more conversation than that? - No.

*The Commissioner:* Does anyone want to ask this witness any further question. Do you, Mr. Duke?

*Mr. Duke:* No.

*(The Witness withdrew.)*

**ROBERT WILLIAM PUSEY, Sworn.**

**Examined by Mr. RAYMOND ASQUITH.**

13093. Is your name Robert William Pusey? - Yes.
13094. Were you a fireman on the "Titanic"? - Yes.
13095. Were you in this emergency boat No. 1? - I was in that boat.
13096. Did you hear any orders given as to what you were to do when the boat was lowered? - Yes.
13097. What? - I heard the orders given to the coxswain to push off clear of the ship; that is all I heard, and the last words I heard the officer say - which one I could not tell you - was "See that the boat's crew do what you tell them."
13098. How far did you row away from the ship? - About 200 yards, I should say.
13099. Did you then stop? - Yes, we lay on our oars.
13100. Did you see the ship go down from that point? - Yes, but not very clearly. 13101. Where were you sitting in the boat? - I was next opposite Miss Frank.
- [Francatelli]
13102. Miss Francatelli? - I could not tell you her name.
13103. Which thwart was that on? - There was Symons, Miss Frank [Francatelli], a gentleman and myself, and the gentleman looking forward and I was looking aft - on the second thwart from aft that was.
13104. After the ship went down, did you hear any cries? - I did.
13105. How long did they continue? - I should

**Page 295**

- say about a quarter of an hour or 20 minutes, something like that.
13106. While those cries went on were you standing still the whole time or did you begin to row again? - No, I believe we were lying on our oars. 13107. All the time the cries went on? - Yes, as far as I can recollect.
13108. Did anybody in the boat say anything about the cries? - Not in my estimation; I cannot bring it to recollection.
13109. Did anybody suggest that you should go back in the direction of the cries? - Not to my knowledge.
13110. Did you hear anything said at all about the cries? - I did not.
13111. Or about going back? - No.
13112. Did you remain stationary for about - I think you said - 20 minutes? - Near about 20 minutes, I should say; it may have been longer or it may have been shorter.
13113. What did you do then? - We cruised about after that, and then we saw this light, and we rowed for the light, and we came in contact with two more boats. They hailed us and asked if we had an officer on board, and we said, "No." They said, "Are you all right?" and we said, "Yes."
13114. When you began rowing you said that you rowed for the light? - Yes. 13115. You did not make any attempt to row back in the direction where you thought the "Titanic" had sunk? - I do not think we did.

**Examined by Mr. SCANLAN.**

13116. Did you hear any passengers say that the boat was a small one, and that there was danger in going back? - Nothing.

**Examined by Mr. HARBINSON.**

13117. Do you remember hearing anything said in the emergency boat about presents or about money? - Yes, I did.

13118. That is to say you do not remember any conversation about going back to where the cries were? - No.

13119. But you remember the conversation about the money? - Yes. I do, and I will explain to you how it came about too. Lady Gordon said to Miss Franks, "There is your beautiful nightdress gone," and I said, "Never mind about your nightdress madam, as long as you have got your life"; and then I heard someone forward at the fore end of me say - I said we had lost our kits and that our pay was stopped from the time she was a wreck - "We will give you a little to start a new kit." That was all I heard.

**Examined by Mr. CLEMENT EDWARDS.**

13120. When was this said? - After the "Titanic" was a wreck, after everything was quiet.

13121. How long would that be? - About 3 o'clock in the morning because we were rowing for the light when this was said.

13122. Had things become quiet before 3 o'clock? - Yes, we were rowing for this light half an hour or more.

13123. Just be careful for a moment will you and follow my question: How long after the "Titanic" went down did you first hear mention of this money? - I should say three quarters of an hour.

13124. Had the cries stopped then? - Yes.

13125. Had you hailed the other boats then? - Yes; they hailed us first and we answered them.

13126. Could you see what the numbers of the boats were that hailed you? - I could not say, and I do not know them; it was dark.

13127. Did either one of them ask you what room you had in your boat? - Nothing whatever; I never heard that mentioned.

13128. Were you asked at any time during the night before you got to the "Carpathia" if you had room in your boat? - Not to my knowledge.

13129. You had a lot of room in your boat? - I should say we had enough room for another dozen.

13130. Did you make any suggestion about going back to pick up the drowning? - No.

13131. Did it occur to you at all that you ought to go back? - No, it was not my place; I was not in charge of the boat; if that had been said I would certainly have gone back with the remainder.

13132. You were ready and willing to go back? - Quite willing.
13133. But you did not think it your place to suggest it? - No.
13134. Were you not surprised that somebody else did not suggest it? - Yes, I was.
13135. Did you express your surprise to any body? - No.
13136. Was there any suggestion made that you should go and join the other boats? - Yes.
13137. (*The Commissioner.*) I do not understand your frame of mind. You were surprised that no one made the suggestion that your boat should go back? - Yes. 13138. Then were you surprised that you did not make the suggestion? - No.
13139. Then you were surprised that no one else made the suggestion, but you were not surprised that you did not make it? - No.
13140. It is a curious state of mind? - We were half-dazed at the time, all of us on a job like that.
13141. (*Mr. Clement Edwards.*) Can you offer any explanation at all as to why your boat did not go back and try to pick up people? - Yes, she would have been swamped if she had gone back; that is my opinion about it.
13142. What reason have you for saying that you would have been swamped if you had gone back? - I hardly understand you.
13143. You say that if you had gone back you would have been swamped? - Yes. 13144. What reason have you for saying that you would have been swamped if you had gone back? - I meant to say that there were so many people in the water; you could hear that by the cries.
13145. Did anybody say in the boat that they were altogether? - No.
13146. Did anybody say it was dangerous? - No.
13147. Did anybody say that you might be swamped? - No.
13148. Does it not occur to you now that you might very well have gone back? - No.
13149. Wait until I have finished my question, will you? Does it not occur to you that you might very well have gone back with a good chance of picking up some stragglers outside the swarm? - Yes, right outside.
13150. Does it also occur to you that you might very well have gone to another boat and put your four or five passengers off into the other boat, and then gone back and helped to pick up some poor drowning people? - The boats could not take any more; they were full then.
13151. How do you know that? - We could see the people from the distance.
13152. What boats did you see that were so full that they could take no more? - I do not know the numbers, but you could see them all up round the gunwales of the boats.
13153. But you say that nobody in your boat hailed either of these other boats and asked if they could take some passengers on board? - No, that was not the hail at all. The hail was that they asked if we had an officer, and we said "No."

**Page 296**

13154. It did not occur to you that you might have unloaded your passengers by getting some of the other boats to take some of your passengers, and then gone back with

a practically empty boat to pick up some of the poor people in the water? - We did not do that.

13155. Did it occur to you? - No.

*(The Witness withdrew.)*

*The Commissioner:* That is all, is it not?

*The Attorney-General:* That is all.

*The Commissioner:* We have now finished with No. 1 boat.

*The Attorney-General:* We are going on now with the examination of Wheat, who was under examination. We have been through the boat list so far, but you have not had the evidence yet of five boats, 3, 8, 9, 10 and 16. We are going to call some evidence of those, and then we shall be in a position after that to give you a list together with a digest of the evidence with regard to each boat.

We are only going to call one or at most two from each of the boats.

*The Witness Wheat was called.*

*The Solicitor-General:* He appears to have selected this moment to leave, my Lord, but he is coming back again. I am sorry.

*The Commissioner:* Have you the number of the boat he was in?

*The Solicitor-General:* He was in boat No. 11. We wanted to call a stewardess, and I understand she is here and we can do it at once.

**Mrs. ELIZABETH LEATHER, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

13156. Were you serving as a first class stewardess on the "Titanic" on the occasion of this disaster? - Yes.

13157. Were you asleep, or rather, were you turned in at the time of the collision with the iceberg? - Yes.

13158. Did you get up? - Not for some time afterwards.

13159. When you speak of some time, do you mean in five minutes or half an hour, or what? - About half an hour or three-quarters.

13160. You thought there was no reason for getting up? - Yes.

13161. And your judgment is that in about half an hour or three-quarters of an hour you got up? - Yes.

13162. Would it be your business to look after some of the ladies in your part of the ship? - Certainly.

13163. And did you go to look after them? - They had already gone out of their rooms.

13164. By the time you got up you found they were all up? - Yes.

13165. Where did you go after you got up? - Up to B deck.

13166. Did you see any of your stewardesses about? - Yes, quite a number.

13167. Were the stewardesses, as far as you could see, all doing their duty? - Yes; they had blankets and ciderdowns to put round people.

13168. And as a class they were doing all they were being told to do were they? - Yes.  
13169. Looking after the lady passengers? - Yes.  
13170. You went to B deck; did you remain on B deck or did you go elsewhere? - I went down to the cabin again. 13171. To your cabin? - Yes.  
13172. I do not want to go into this in great detail. You went to your own cabin and then later on did you go up? - Yes.  
13173. To which deck? - To A deck.  
13174. Were you after a time helped into No. 16 boat? - Yes.  
13175. And you were ultimately taken on board the "Carpathia"? - Yes.

**Examined by Mr. SCANLAN.**

13176. Have you been for a considerable time a stewardess? - Yes.  
13177. Is it the practice on liners to give each stewardess a boat station? - Yes. 13178. And at some time on the voyage are the stewardesses as well as the other hands called to their stations? - Only on sailing days; there is then a boat muster.  
13179. But you had not that on the "Titanic"? - On the sailing day we all mustered in the companion to pass the doctor.  
13180. You mean the day you left Southampton? - Yes.  
13181. But were you told then what your boat station was? - No, we were supposed to look for it ourselves on the list.  
13182. But you had not been told the station you would take on the boat? - No. 13183. After the collision you and all the other stewardesses were doing their duty in helping the people as much as possible? - Yes.

**Examined by Mr. HARBINSON.**

13184. Do you know if after the collision any general alarm was sounded on the "Titanic"? - I do not know.

**Examined by Sir ROBERT FINLAY.**

13185. Before your boat put off did you hear the question asked whether there were any more women and children? - Yes, and there were no more to be seen when we went off.

*(The Witness withdrew.)*

*The Solicitor-General:* We have this man Wheat here now.

**Page 297**

**JOSEPH THOMAS WHEAT, Sworn.**

**Further examined by the SOLICITOR-GENERAL.**

13186. (*The Solicitor-General.*) You will remember, my Lord, he described what happened up to the time when he saw the water fall down the stairway from A deck to F deck, and he had just told us that he had gone up the stairway on his way to the upper deck. (*To the Witness.*) That is right, is it not? - Yes, Sir.
13187. I think you can tell us now [what] happened when you got to the boat deck? - When I arrived at No. 9 boat Mr. Murdoch was there with quite a number of our men passing women and children over from the port side into No. 9 boat.
13188. When you say "with a number of our men" does that mean with a number of stewards? - Yes; the victualling department.
13189. They were being put into No. 9 boat? - The starboard side.
13190. I think you had been getting your stewards up to their stations, had you not? - Yes, I had just come up from down below after doing that.
13191. Did you hear the orders which Mr. Murdoch gave as to what you were to do? - Yes; he told me to take the rest of the boat's crew down on to the next deck as they had to send the people off A deck.
13192. This is a little important, and we must get it clear. The next deck would be A deck? - Yes.
13193. Who was it you were to take down to A deck? - Our own men.
13194. The stewards who were to go into different boats as crew? - Yes.
13195. Did you do that? - Yes. I took about 70 men down altogether, I think.
13196. Stewards? - Yes.
13197. When you got your men down to A deck just tell us what you did - how you arranged them? - When we got the men down to A deck, I lined them all up two deep round the boats, for fear there was a rush.
13198. Did that keep a clear space next to the boats? - Yes, about six feet from the bulwarks.
13199. Had you heard the order that women and children were to go forward first? - Yes, that was the general order right through - "women and children only."
13200. Having had your men up, as you say, two deep round the boats, what was done about the women and children? - First I told the men off to make sure that the plug in No. 11 was in tight, and then I told five or six men, I cannot tell which, to get into the boat to hand the women and children in. Then the order was passed to pass the women and children along. After the women and children were all passed in we filled her up with as many as the boat would possibly hold, and Mr. Murdoch, looking over the top, said,  
"You have got enough there."
13201. All this time were you keeping your line of stewards? - No; at that time I was standing with one foot on the rail and one foot on the bulwarks. We were passing women and children into the boat.
13202. You say you arranged your stewards to keep order with two lines; was that order kept after that? - Yes.
13203. And were people kept back? - Yes.

13204. Except the women and children? - Women and children only were allowed inside the line.
13205. That, I think, was No. 11? - Yes.
13206. Is No. 11 the boat in which you went away? - Yes.
13207. Who ordered you in? - Mr. Murdoch.
13208. We have already had some evidence about it from a witness named Mackay, so that one only wants it very shortly. When your boat was lowered, you say Mr. Murdoch gave the order. Was she full? - Yes, quite full she could not hold another soul.
13209. What were the proportions of women and children? - I counted them at daylight as best I could. There were fifty-one women, nine children, seven stewards, two sailors, one fireman, and myself.
13210. Then there were no men passengers in that boat at all? - Yes, there were three male passengers.
13211. I do not think you mentioned them? - No, I did not.
13212. How did the three male passengers come to be there? - I cannot say that. 13213. Was there good order kept in getting them into this boat, No. 11? - Yes, very good order.
13214. Then No. 11 in due course was picked up? - Yes.

**Examined by Mr. SCANLAN.**

13215. Your proper boat station was, I understand, No. 9? - No. 11.
13216. This boat No. 11 in which you went off, I understand, had not a lamp? - No, not to my knowledge.
13217. Nor a compass? - No.
13218. Had it provisions? - Well, I cannot say if there were any in the provision locker, because we did not look there.
13219. Had it water? - Yes.

**Examined by Mr. HARBINSON.**

13220. Could you tell me if on the "Titanic" there was any general system of organisation amongst the stewards as to what their duties would be in case of emergency or danger? - In regard to what?
13221. In case of danger - where their posts of duty would be in case of danger from fire or wreck? - Emergency doors, do you mean?
13222. No. Was there any system of organisation among the stewards? - No, only among the heads of the departments; it was left to them.
13223. There was no general system which had been established, was there, and positions allotted to the stewards in case of danger? - Yes, all the stewards were allotted to boats; every man had his boat.
13224. Do I understand that they were allotted to the boats in case of wreck? - Yes.
13225. Then there is no general system or instruction given to them as to taking

- charge of the different classes and the different sections of the passengers? - No, that is understood with regard to the first, second, and third; they are each in charge of their own departments.
13226. Is it after they have discharged the duty of looking after their own departments that they are supposed to start at the boats? - Yes.
13227. Not before? - No.
13228. Do you say that it was after the stewards had warned the different departments or classes that on this occasion they went up to the boat deck? - Yes, they did not get their orders until everybody had a lifebelt on to the best of their knowledge, and the people were all taken up to the boat deck.
13229. Did you hear instructions given to the stewards to see that all the people were taken up to the deck? - Yes, I heard that instruction given by Mr. McElroy about a quarter-past twelve, or round about that time; he sent us down to Mr. Harding to get lifebelts on the passengers and get them on deck.

**Page 298**

**Examined by Mr. CLEMENT EDWARDS.**

13230. Whose duty was it to close the watertight doors on deck F? - They belonged to the Turkish bath man.
13231. You, in fact, closed them? - Yes.
13232. Did you get any orders to do that? - No.
13233. Had he had any orders, do you know? - Not that I know of. He may have had orders; I did not see him around until afterwards.
13234. You closed them entirely at your own discretion? - Yes.

**Examined by Mr. HOLMES.**

13235. Was your boat lowered empty from the boat deck to the A deck? - Yes, there was nobody in it.
13236. And it was filled from A deck? - Yes.
13237. The deck was quite open? - Yes; just as it is *there* (*Pointing on the plan.*).
13238. Further forward there are windows? - Yes, just as on the plans here.
13239. Did Mr. Murdoch come down on to A deck to give his orders? - No.
13240. He gave them from the boat deck? - Yes.
13241. Over the side? - Yes, we could hear him shouting over the side; he looked over the side when the boat was full and told us to lower her away.

**Examined by Mr. COTTER.**

13242. Did you go down to the gloryhole? - Yes, I went down twice.
13243. Did you see any water at all on A deck? - No.

13244. Did you see any water in the lower gloryhole? - Yes, but our men were not down there, and I had nothing to do with that.
13245. Is it not the rule to provide that there should be boat drills on the ship in each department so that the men may be mustered at the boats and know the stations allotted to them? - Yes.
13246. And they receive their orders as to what to do in case of emergency? - Yes.
13247. So many men on the boat and the rest as stand by men? - Yes.
13248. They receive their orders from the Chief Steward, the Second Steward, or yourself, and you receive your orders from the Captain? - Yes.
13249. If there had been proper boat drill in Southampton and the men had been properly organised do you not think that they could have saved a lot more people than they did? - That is a very hard thing to say; I do not think so under the circumstances.
13250. My reason for putting the question is that some of the boats went away not properly manned and with not a proper complement of passengers? - Yes.
13251. My suggestion to you is that if everybody had known their station and known their duty they could have manned those boats properly and got the proper number of passengers in them? - With regard to the boats on the starboard side Nos. 3, 5, 7 and 9, I have the idea that those men were away, provisioning the boats, because there were none of our men taken away in them.
13252. Is it not the fact that there are only two provision men to each boat and others to man the boat? - Yes.
13253. What system had they got there? - That the boats crews of 3, 5, 7 and 9 should provision the lifeboats.
13254. And not get into the boat? - They will get into the boats afterwards.
13255. If you were having boat drill and the order came from the bridge that you were all to get into your stations at the boats, how many of the stewards' department would get into the boat? - I suppose they would all do so if they all belonged to the boat's crew.
13256. Have you taken part in boat drill? - Yes.
13257. Is it not the fact that there are so many men for all the boats? - No, I have never seen it that way; I have seen the whole boat's crew get in if it was a case of taking the boat.
13258. What constitutes a boat's crew? - I should think about 25 of our men are allotted to a boat.
13259. How many sailors? - I do not know.
13260. How many firemen? - I never saw the firemen muster at the boats.
13261. Have you taken part in a drill when everybody has taken their share of the work with regard to the manning of the boats? - Not in this ship, I think.
13262. Have you done it anywhere else? - No, I cannot say I have - not manning the boat.
13263. That is why I asked you the question - that if there had been properly organised boat drill and the men knew their stations I suggest more people would have been saved?
- The men did know their stations.
13264. Did you have any bulkhead door drill? - Yes.

13265. On what day? - On the Saturday morning we had fire drill and bulkhead door drill.
13266. Were all the bulkhead doors closed? - They were all closed.
13267. How do you account for the fact that when the ship came into collision with the iceberg they did not go and close the doors? - They would have to go by the orders. 13268. Is it not the fact that this drill is for the purpose, in case of emergency, of making them go to their stations? - They may have been at their stations; they may not have had the order, or they may have had the order.
13269. You did not hear the order given? - No.
13270. Surely the proper thing is to close the bulkhead doors first? - Yes, but that is just according to what the collision was - if they thought it was serious.
13271. I suggest to you that if they had closed the bulkhead doors the ship might have been afloat yet? - I do not think so.

*(The Witness withdrew.)*

**Mrs. ANNIE ROBINSON, Sworn.**

**Examined by Mr. RAYMOND ASQUITH.**

13272. You were a First Class Stewardess on the "Titanic," were you not? - Yes.
13273. And at the time the ship struck the iceberg I think you were in bed? - I was.
13274. Did you get up and dress? - I did.
13275. And did you afterwards go in the direction of the mail room? - Yes.
13276. What deck were you on? - E deck.
13277. When you got to the top of the stairs which lead down to the mail room what did you see? - I saw two mail-bags and a man's Gladstone bag, and on looking down the staircase I saw water within six steps of coming on to E deck.
13278. That would mean that it had gone up to the top of the mail room and into the compartment above that? - Certainly.
13279. Are the stairs you are speaking of the ones by the side of the squash racquets court? - Yes.

*The Commissioner:* I would like to follow this. I see the mail room on the plan. *Mr. Raymond Asquith:* I think I can point it out to you, my Lord.

**Page 299**

*The Solicitor-General:* Your Lordship will see that this confirms the theory of Wheat about the water rising to the top of E deck.

*Mr. Raymond Asquith:* That is the mail room; above that is the post office, and above that is the squash rackets court. It was at the stairs there that the water was seen; the witness says that the water came to within six steps of the top of those stairs (*Pointing on the cartoon*).

13280. (*The Commissioner - To the Witness.*) About what time was this? - About half an hour after she struck.

13281. After the collision? - After the collision about half an hour.

13282. (*Mr. Raymond Asquith.*) Did you see the Captain and Mr. Andrews about this time? - The mail man passed along first and he returned with Mr. McElroy and the Captain and they went in the direction of the mail room, but that was before.

13283. It was seeing the Captain and Mr. Andrews going to the mail room that made you go there? - I followed after they had come back.

*The Commissioner:* Are we to understand that at this time the mail room was covered with water?

13284. (*Mr. Raymond Asquith.*) Yes, and not only the mail room but the storey immediately above it, too. (*To the Witness.*) When you saw the water there I suppose you realised that things were rather serious? - I did. 13285. Did you go and look after your ladies? - I did.

13286. How many ladies were under your charge? - Seven ladies and one maid and a governess.

13287. Did you see other stewardesses doing the same thing, looking after their passengers? - The stewardess on my deck was doing exactly the same thing.

13288. Did you then go upstairs on to A deck? - I had to call a stewardess I had met on the boat on A deck.

13289. Were you told by a steward there to put on your coat and lifebelt? - Mr. Andrews told me first.

13290. Did Mr. Andrews tell you anything else? - Yes. Mr. Andrews told me to put my lifebelt on after I had been on E deck.

13291. Did he say something to you about blankets? - We had already got the blankets and the lifebelts out of the rooms which were unoccupied at the foot of the staircase. Mr.

Andrews said to me, "put your lifebelt on and walk about and let the passengers see you." I said to him, "It looks rather mean," and he said, "No, put it on," and then after that he said to me, "Well, if you value your life put your belt on."

13292. Did you put your belt on and walk about in it? - I did.

13293. Did he say anything to you about Mr. Ismay? - No, Mr. Ismay's name was never mentioned in my hearing.

13294. So far as you know were all the ladies on E deck warned by the stewardesses whose business it was to look after them? - Yes, and they were all saved, too.

13295. You told us you were responsible for seven or eight ladies; were they all saved? - They were.

13296. Eventually you were put into boat number 11? - Yes.

*The Solicitor-General:* That is the one the last witness Wheat referred to. 13297. (*Mr. Raymond Asquith - To the Witness.*) I will not ask you about what happened in the boat, but there is one thing I should have asked you about what happened before; did you see the carpenter? - I did; he was the first man I saw. He came along when I was looking down at the water, and he had the lead line in his hand.

13298. Had he taken a sounding do you know? - I could not tell you that. 13299. Did he say anything to you? - No, the man looked absolutely bewildered, distracted. He did not speak.
13300. You think he looked alarmed? - He certainly was.
13301. When your boat left the ship was the band still playing? - It was.
13302. Can you remember at all what time it was when your boat left? - Well, I looked at my watch when the ship went down and it was twenty minutes to two. That was by altered time when we were in the boat, and I do not think we were in the boat more than three-quarters of an hour.
13303. You left about three-quarters of an hour before the ship went down? - Yes.

**Examined by Mr. SCANLAN.**

13304. Can you state at what time it was when Mr. Andrews said to you, "if you value your life put your lifebelt on"? - It was about half an hour when I saw the water on the deck, and I should say it would be about a quarter of an hour after that.
13305. About three-quarters of an hour after the collision you mean? - Yes.

**Examined by Mr. COTTER.**

13306. Have you ever been in a collision before? - Yes.
13307. What ship was that? The "Lake Champlain"? - Yes. 13308. Also an iceberg? - Yes.
13309. So that you knew exactly what to do on this occasion? - Yes. 13310. And you did it? - Yes.

**Examined by Sir ROBERT FINLAY.**

13311. When was it you were told to put on the lifebelt? You said that it was threequarters of an hour after something? - I said it was three-quarters of an hour after I felt the shock of the collision.
13312. Did the people get into the boat in an orderly way? - Yes.
13313. Did you hear the band playing? - Yes.
13314. Was it still playing when you left the ship? - Yes it was. It was playing when I went up to A deck to call the other stewardess, and when I left the ship it was still playing.

*(The Witness withdrew.)*

**WALTER WYNN, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

13315. Were you serving as Quartermaster on the "Titanic" at the time of this accident? - I was.
13316. And I believe you were saved in boat 9, were you not? - Yes.
13317. Were you off watch at the time of the striking? - Yes.
13318. I think you were asleep and you were awakened? - Yes.
13319. I believe you got up, dressed, and did you go to the boat deck after a time? - No.
13320. I do not want to take you through the whole story, I presume it is quite unnecessary; after a time did you hear this, the Captain giving an order to you and another quartermaster, to go and get the two accident boats ready? - Yes.

### Page 300

13321. I want to omit the earlier part, you see. Did you obey that order? - Yes.
13322. After that did you go and help to clear away at various lifeboats? - Yes. 13323. After that did you meet the Sixth Officer Mr. Moody, who told you to go to your own boat? - Yes.
13324. Did you know your own boat? - No.
13325. Did you ascertain what was your own boat then? - No, not then.
13326. Did you go to a boat? - Mr. Moody told me to go to number nine boat and take charge of number nine.
13327. Whether that was your right boat or not, you do not know? - It was all ready swinging out on the davits and he told me to take charge of No. 9, as I did not know my own boat.
13328. Did you take charge of No. 9? - I got in and assisted the ladies in; and when we started to lower away the boatswain's mate got into the boat, and I handed charge over to him, and took an oar.
13329. That boat was lowered down to the water? - Yes.
13330. How many people were there in that boat? - Forty-two women, and I think about fourteen men.
13331. Were the men all passengers? - No.
13332. How were the men divided up? - There were about four stewards sitting in the bow and there were three seamen, and afterwards I heard one other man was a seaman that I did not know, and that made four.
13333. What were the rest? - They were men passengers.
13334. (*The Commissioner.*) That would be six passengers? - Yes.
13335. (*Mr. Butler Aspinall.*) Later on, were you saved and taken to the "Carpathia"? - I was. 13336. Before I get you on to the "Carpathia" I just want to ask you this one matter: While you were in the boat did you see any light or lights? - I did.
13337. What light or lights did you see? - I saw a red light first, and then the red light disappeared, and I saw a white one.
13338. What did you think the red light was? - I could not say; I put it down to a steamer.
13339. You thought it was the port light of a steamer? - Yes.
13340. How far away did you judge it to be? - About seven or eight miles.

13341. When you saw the white light did you ever see the white light at the same time as you were seeing the red light? Did you see them at the same time? - Yes, at first I did. 13342. (*The Commissioner.*) Then I do not understand it. I thought you first saw a red light, and then it disappeared, and then you saw a white light? - I saw the red and white, and then the red and white disappeared, and then I saw the white light remain.
13343. You saw both the red and the white light at the same time? - Yes.
13344. And then they both disappeared? - Yes; they both disappeared and left the white light.
13345. (*Mr. Butler Aspinall.*) That does not do, you see. You saw a red light? - Yes.
13346. And you saw a white light? - Yes.
13347. Did you think at that time that these were the two lights of a steamer? - I did.
13348. (*The Commissioner.*) About 7 or 8 miles away? - Yes.
13349. (*Mr. Butler Aspinall.*) After some little interval of time both those lights disappeared according to you? - Yes.
13350. After they disappeared, when next did you see any lights? - It went away, and then I saw the white light about 10 or 15 minutes afterwards again in the same direction. 13351. I think you mean this, do you not, that you assumed that the white light you saw on the later occasion was the white light you had been seeing before? - Or it might have been a stern light.

**Examined by Mr. SCANLAN.**

13352. What are the duties of a Quartermaster? - To take the wheel and attend to the officers as a stand-by man, and when you have got the last trick of the wheel to go aft on the poop and stand by there during the whole watch, and in case of an accident, if a passenger falls overboard or attempts to commit suicide, to throw a lifebelt or a lifebuoy, and warn them on the bridge at once.
13353. With regard to this lifeboat number 9, had it its proper equipment? - We had no lamp and we had no compass.
13354. Had you oil? - No, we had no oil.
13355. Had you a sea anchor? - We had a sea anchor.
13356. And balers? - We had two balers.
13357. Of those two things you are certain that she had neither a compass nor a lamp? - No. I made sure in the morning at daylight.
13358. You have had a good deal of experience of the clearing of boats before starting on a voyage? - Yes.
13359. I want to ask you this; is it the usual practice to have those accessories in the lifeboat before you commence the voyage? - In some ships.
13360. Does the Superintendent of the Board of Trade usually examine the lifeboats? - Yes.
13361. Does he see whether or not the necessary equipment is in the lifeboat or available for it? - Sometimes you are told off to go with him, and if he asks for a certain thing you have to lift it out and show it to him.

13362. Have you had experience of a shipwreck before? - Yes. 13363. Was that in 1898? - Yes.

13364. What was the ship that was wrecked - The "Viendam," belonging to the Holland-America Line.

13365. You were at that time an A.B. on the "St. Louis"? - Yes.

13366. Did you from the "St. Louis" rescue the passengers on the "Viendam"? - Yes.

13367. I want you to tell my Lord what kind of sea you had at the time. - It had been a hard blow and we had a very heavy swell; first we were down underneath the bilge of the ship and then up, catching hold of the children and putting them into the boat.

13368. Will you explain to his Lordship how your lifeboats behaved in that sea? - They behaved splendidly.

*The Commissioner:* I cannot sit here to inquire into the circumstances of another wreck which happened twelve or fourteen years ago.

*Mr. Scanlan:* I have been contending that lifeboats can be successfully manned even in a heavy sea if there is a proper crew.

*The Commissioner:* Well ask him that question.

13369. (*Mr. Scanlan.*) Yes, my Lord. (*To the Witness.*) In your experience can a lifeboat be kept afloat in a heavy sea if she is properly manned and provisioned? - Yes, as long as she is not overloaded with too many passengers.

What would you consider a sufficient crew for a lifeboat?

*The Commissioner:* Would not that depend on the size of the lifeboat?

13370. (*Mr. Scanlan - To the Witness.*) For a lifeboat of the size of the boats you had on the "Titanic"? - To go away to rescue any people from another ship in distress you want between eight and ten men in the lifeboat.

13371. (*The Commissioner.*) I suppose if you put eight or ten men in the lifeboat to man it you could take fewer passengers? - You could take from 30 to 40.

13372. But I suppose if you only took a crew of three or four you could then take more passengers? - Oh, yes.

13373. (*Mr. Scanlan.*) Could three or four by any possibility manage a lifeboat in a heavy sea? - No.

13374. Do you know about the practice in regard to providing glasses for look-out men. Is it usual

## Page 301

on other ships? - No. I do not think it is.

13375. For the man in the crow's-nest? - No.

13376. Were you on the "Oceanic"? - Yes.

13377. Were glasses provided there? - Yes.

13378. Is it usual to station look-out men in the ships you have experience of in the bows? - Yes.

13379. As well as in the crow's-nest? - Yes.

13380. (*The Commissioner.*) Always in foggy weather or hazy weather. 13381. (*Mr. Scanlan.*) Is it usual when there is ice about? - No.

**Examined by Mr. ROCHE.**

13382. The occasions you are speaking of when you like to have eight or ten men are when you are going away on an accident boat for some special service? - Yes, to the rescue.

13383. On this occasion, when the ship is being emptied as far as possible of passengers and other people, you had stewards on board your boat? - Yes.

13384. And firemen? - No.

13385. If you take eight or ten able seamen you will have, as my Lord has pointed out, so much less room for passengers and, of course, other persons, such as stewards or firemen? - Yes.

13386. For ordinary purposes, that is to say, for rowing a boat and so forth, the stewards and firemen take their turn at the oars with the other men? - Yes. 13387. And you find them quite competent for that purpose? - Yes, some of them.

**Examined by Mr. LEWIS.**

13388. How do you account for not knowing the number of your boat? - I had to go on duty on the morning of the 18th, and I went off to my station on the poop and we did not have any boat muster, and I did not take any notice on the list of the number of my boat. I did not go to the fore-castle to find out. The list was in the fore-castle. 13389. It is rather an important position for a quartermaster, is it not? - Yes. 13390. And you would be expected to know your number even more than an A.B., would you not? - No, not more. 13391. Is it customary for you to look at your boat list? - Yes.

13392. Do the other men ask your advice at all? You are of a higher rank than an A.B.? - Yes, but they do not ask any advice about anything.

13393. And you should make yourself acquainted with your boat number? - Yes, had I known.

13394. Did you immediately go on deck when you were wakened? - I went up on the fore-well deck and asked what was the matter. I saw a lot of men passengers there, and I

saw the ice on the deck, and they pointed it out to me: "Look at that" they said. "We have just struck an iceberg." Then I went down below and woke my two mates up, and then I dressed and walked on the bridge to await orders from the Captain.

13395. Did you have time to get your kit bag? - No, I took that up when I went down to get my knife.

13396. Did you place your kit bag in the boat? - I had two sets of underwear in my bag which I had never unpacked. I threw it into the first boat I came to when I was told to get into the boat.

13397. That was the boat you left in? - Yes.

13398. What happened to your kit bag?

*The Commissioner:* Does it matter what happened to the kit bag?

*The Witness:* I never saw it.

13399. (*Mr. Lewis.*) It would be a good size, would it not - a good long bag? - Not for the two sets of underwear I had.

13400. Is it not the fact that it was pitched off the "Carpathia" when the boat reached there? - That is right.

**Examined by Sir ROBERT FINLAY.**

13401. You have spoken about having eight or ten men for a lifeboat of a certain size, but I think you said that was for rescuing people from another ship? - Yes.

13402. That is a very different job from what it was this time? - Yes.

13403. There was no sea on? - No.

13404. Just one other question. You were asked whether a lifeboat properly manned could keep afloat all right even in a heavy sea? - Yes.

13405. The real difficulty in a heavy sea is getting the lifeboat down, is it not? - That is the real difficulty.

13406. And it is a nasty job if there is a heavy sea? - Yes.

13407. (*The Commissioner.*) Can you tell me - do not tell me unless you are able to tell me, but if you can tell me let me know - what was the carrying capacity of No. 9 lifeboat? - I really do not know.

*(The Witness withdrew.)*

*(After a short adjournment.)*

**CHARLES HERBERT LIGHTOLLER, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

13408. You are Mr. Charles Herbert Lightoller, I think? - Yes.

13409. Were you Second Officer on the "Titanic"? - I was.

13410. I think you hold a Master's certificate? - Yes.

13411. You passed for Master in 1899? - About that - yes. 13412. And do you also hold an extra-Master's certificate? - Yes. 13413. Which you passed for in 1902? - Yes.

13414. How long have you been in the White Star Company's employ? - Nearly 12 1/2 years.

13415. That would be since about 1900? - January, 1900.

13416. Sailing with that Company across the Atlantic many times, is most of your experience in the North Atlantic? - Most, yes.

13417. We will just get from you first the names of the officers, because you will have occasion to refer to them from time to time. Of course, Captain Smith we know of; he was the Commander? - Yes.

13418. Then next in order comes the Chief Officer? - Yes.  
13419. Who was that? - Mr. Wilde.  
13420. Then the First Officer? - Mr. Murdoch.  
13421. All those three I think were lost? - They were.

**Page 302**

13422. Then you come next as Second Officer? - Yes.  
13423. Who was the Third Officer? - Mr. Pitman.  
13424. And the Fourth Officer? - Mr. Boxhall.  
13425. And the fifth? - Mr. Lowe.  
13426. And the sixth? - Mr. Moody.  
13427. And I think there are a number of petty officers who come next - four of them? - Yes.  
13428. Mr. Moody I think was not saved? - He was not.  
13429. So it is Mr. Pitman, Mr. Boxhall, Mr. Lowe and yourself who were saved? - They are all the officers saved.  
13430. One other thing I should have asked you about your position; I think you do hold the position of First Officer with the White Star? - Yes.  
13431. But on this voyage you were Second Officer of the ship? - Yes.  
13432. I will ask you the details later on, but I will ask you this now: Were you present at the trial trip of the "Titanic" at Belfast? - Yes.  
13433. And I think, with the exception of Mr. Wilde, all the officers whose names you have mentioned were present on that trial trip? - Yes, they were.  
13434. And Mr. Wilde joined the ship a little later? - Yes.  
13435. Up to the time this vessel started her voyage from Southampton what was the greatest speed she had attained in practice? - That is from Belfast round to Southampton we averaged about 18 knots.  
13436. That is the average. Do you know what was the greatest she had got to? - Perhaps 18 ½' I do not think she got much higher than that.  
13437. You left Southampton, as we know, on 10th April, and you went across to Cherbourg? - Yes.  
13438. You got there on the evening of the same day? - Yes.  
13439. And, I think, left Cherbourg about 9 o'clock on the 10th? - About that.  
13440. And went to Queenstown? - Yes.  
13441. When was it you left Queenstown? - About 2 p.m., as near as I can remember, on the following day. 13442. On the 11th? - Yes.  
13443. Just give me, if you will, the arrangement about the watches between the Chief Officer, the First Officer, and yourself. I suppose you would count as the three Senior Officers? - Yes, exactly.  
13444. How was that? - The Chief Officer had from 2 until 6 a.m. and p.m.; the Second Officer -

13445. That is you? - Yes, myself. The Second Officer relieved the Chief at 6 o'clock and was on deck until 10 - 6 to 10 a.m., and p.m.. The First Officer was on deck from 10 to 2 a.m. and p.m.
13446. Then the junior officers would be divided into watches, I suppose, and would serve with one or other of the seniors? - They are divided into watches - 3 to 5 and 4 to 6, 4 hours on and 4 hours off, with a dog watch, that is, the watch from 4 to 8 p.m., is divided into what we call the dog watches, 4 to 6 and 6 to 8.
13447. We will go to Sunday, April 14th. Your first watch, the morning watch, would be from 6 to 10, as I follow you? - Yes.
13448. Then, having completed that watch, did you come to the bridge again about luncheon time? - Yes.
13449. Just tell us about it? - Lunch is at half-past 12. I relieve the First Officer, who has his lunch at half-past 12, and he comes on deck again about 1 o'clock or five minutes past; then I have mine.
13450. It really means that there is half an hour out of the First Officer's watch? - Yes.
13451. Now, on this day, the 14th of April, did you follow that course? - Yes.
13452. And relieved Mr. Murdoch from 12.30 to about 1? - Yes.
13453. Do you remember Captain Smith showing you something during that time? - Yes.
13454. Just tell us what it was? - Captain Smith came on the bridge during the time that I was relieving Mr. Murdoch. In his hands he had a wireless message, a Marconigram. He came across the bridge, and holding it in his hands told me to read it.
13455. He showed it to you, I suppose? - Yes, exactly; he held it out in his hand and showed it to me. The actual wording of the message I do not remember. 13456. Did you see whether it was about ice? - It had reference to ice.
13457. Do you remember between what meridians? - Yes, I particularly made a mental note of the meridians - 49 to 51.
13458. That would be 49 to 51 W.? - Exactly.
13459. We have the message. I will just find it and read it to you, and perhaps you will be able to tell me if that is right. Do you know from what ship the message came? - No, I cannot remember the ship.
- The Solicitor-General:* It is better to have it now.
- Sir Robert Finlay:* Yes, I think we had better have it, and the ship it came from.
- The Solicitor-General:* My recollection is that the Attorney-General read it in opening.
- The Commissioner:* What time was it?
13460. (*The Solicitor-General.*) So far, my Lord, he has said it was between 12.30 and one in the middle of the day. (*To the Witness.*) Can you fix at all as between those times?
- About 12.45 as near as I can remember.
13461. Very well; about a quarter to 1? - Yes.
- Mr. Laing:* I have the wording of it.
- The Solicitor-General:* Will you hand it to me?
- Mr. Laing:* Yes.

13462. (*The Solicitor-General.*) I think this is the message, and perhaps I can read it to the gentleman and he will tell us if it sounds like it. (*To the Witness.*) We have independent evidence of a message being sent from the "Caronia." "West-bound steamers report bergs, growlers and field ice in 42 N. from 49 to 51 W.?" - I think that is the message that I referred to as near as I can remember.

*The Solicitor-General:* This witness says he was shown that about a quarter to 1, my Lord. Your Lordship will find the evidence of Captain Barr, the captain of the "Caronia," who was interposed on Friday, on page 273 of the print. The question is 12307. The Attorney-General asked Captain Barr, "On the morning of the 14th of April, that is, on the Sunday morning, do you remember sending this Marconigram to the 'Titanic': 'Westbound steamers report bergs, growlers, and field ice in 42 N., from 49 to 51 W.?' - (A.) Yes, I remember sending it. (Q.) That is sent, I see from your note, at 9 o'clock in the morning." That is the time when the message was sent from the "Caronia." *The Commissioner:* Does it go on to say that that message was acknowledged?

13463. (*The Solicitor-General.*) Yes, my Lord. Then the next question and answer is, "And did you receive a reply at 9.44 a.m. your ship's time? - (A.) Yes, as per that statement." (Q.) The reply is, "Thanks for message and information. Have had variable weather throughout - *Smith*?" (*To the Witness.*) Now the "Caronia" as we know was coming from New York to Europe and as you see there is the message. The acknowledgment is 9.44 a.m. "Caronia's" time. You had not heard anything about that before you went off your watch at 10 o'clock? - No.

13464. Can you help us: Would 9.44 a.m. Caronia's" time coming from New York be likely to be later than your 10 o'clock watch coming to an end? You see you went off duty at ten. - Yes.

13465. (*The Commissioner.*) Did Captain Smith tell you when he had received the Marconigram? - No, my Lord.

13466. (*The Solicitor-General.*) And the first you knew of it was when Captain Smith showed it you at about a quarter to one? - Yes.

13467. So far as your knowledge goes is that the first information as to ice which you had heard of as being received by the "Titanic"? - That is the first I have any recollection of.

## **Page 303**

13468. What time of day would it be that your ship's course would be set? - At noon.

13469. Would that be done by the Commander? - [No Answer.]

13470. Add anything if there is anything we ought to know. Is that the incident as it occurred then? - That is the whole of the incident, when the Commander came out and showed me the wireless, yes.

13471. And you told us you were relieving Mr. Murdoch while he was away at lunch. Did he come back? - Yes, when he came back I mentioned the ice to him.

13472. When you mentioned this message about the ice to Mr. Murdoch when he came back at 1 o'clock did you gather from Mr. Murdoch that it was news to him or did you gather from him that he had heard of it before? - That I really could not say,

- whether it was fresh news to him or not; I should judge that it would have been, but I really could not say from his expression - not from what I remember.
13473. Your impression is that it was news to him? - Probably.
13474. Then did you leave the bridge at that time? - Yes.
13475. And your watch of course would not return until six in the evening? - Exactly.
13476. (*The Commissioner.*) Can you tell me what the ships course was at that time? - The compass course?
13477. Yes. - No, I cannot remember what it was.
13478. (*The Solicitor-General.*) You are able to tell us a little later in the day what it was? - The true course.
13479. Can you tell us the true course of the ship at this time? - No, I am afraid I cannot.
13480. Here was a message shown you which referred to ice in latitude 42 N? - Yes.
13481. Do you recollect, or can you help us at all, did that indication 42 N. indicate to you that it was near where you were likely to go? - It would, had I taken particular notice of the latitude, though as a matter of fact, latitude with regard to ice conveys so very little.
13482. Is that because it tends to set north or south? - North and south, yes. 13483. (*The Commissioner.*) I do not follow that? - We take very little notice of the latitude because it conveys very little. You cannot rely on latitude. 13484. (*The Solicitor-General.*) For ice? - Yes.
13485. (*The Solicitor-General.*) He answered that "because the ice tends to set north and south." (*To the Witness.*) Then do you attach more importance to the longitude? - Far more.
13486. I notice your recollection of the message is you recollect 49 and 51 W.? - Distinctly.
13487. That is longitude. Did you form any sort of impression at that time as to what time of day or night you were likely to reach the area indicated? - Not at that time.
13488. I know you worked it out, or helped to work it out later? - It was worked out.
13489. But you did not form any opinion at that time? - Not at that time.
13490. As far as you are concerned is there anything you deem important to tell us as between one o'clock and 6 o'clock when you came on duty? - No, I cannot remember anything of importance.
13491. (*The Commissioner.*) At the time this message was given to you by Captain Smith, how many hours steaming would you be away from the ice-field? - I did not calculate it at that time; later I told one of the junior officers to work out about what time we should reach the ice region, and he told me about 11 o'clock.
13492. At night? - This was after I came on deck again though, at 6 o'clock. I knew that we should not be in the vicinity of the ice before I came on deck again. I roughly ran that off in my mind.
13493. (*The Solicitor-General.*) That is what I meant? - Yes. I ran that roughly off in my mind - the matter of degrees.

13494. When you saw this message at a quarter to one you saw it was important but you thought the position could not be reached until your watch came round again? - I was sure of that.
13495. You came on duty again at 6 o'clock? - At 6 o'clock.
13496. In the afternoon. That would be to relieve Chief Officer Mr. Wilde, as I follow you? - Yes.
13497. Did he hand the ship over to you at 6 o'clock? - At 6 o'clock, yes.
13498. Can you tell us what was the course of the ship when she was handed over to you at 6? - I cannot remember the compass course. I know from calculations made afterwards that we were making S. 86 true.
13499. S. 86 W.? - Yes.
13500. That is within four degrees of due W true? - Yes.  
*The Commissioner:* Give me that again.  
*The Solicitor-General:* S. 86 W. true. That is only four degrees from due west.  
*The Commissioner:* It is what I should call making a westerly course.
13501. (*The Solicitor-General.*) Yes, my Lord. I think I am right, and Sir Robert confirms me. The Quartermaster at the wheel who gave evidence, who was at the wheel at the time of the disaster, said he was steering by compass a course of N. 71 W., so presumably N. 71 W. is the same thing as what this gentleman speaks of as S. 86 W. true. *The Witness:* Pretty nearly. The compass course is not the compass we go by. I believe by standard we were steering N. 73. 86 true I know it was, and I think that works out as 73 by compass, and 71 was the steering compass.
13502. Did you learn whether while you had been off duty during the afternoon any further information had reached the "Titanic" about ice? - Not that I remember.
13503. Of course, in the ordinary course, Mr. Wilde would pass on to you any information that was necessary to help you during your watch? - Yes.
13504. And you have told us what happened? - Yes.
13505. Now what did you notice about the speed of your vessel? - As far as I could tell, her speed was normal.
13506. Were they telegraphed at full speed ahead? - At full speed.
13507. (*The Commissioner.*) What do you mean by normal? - Full speed.
13508. What is full speed; can you give me how many knots? - We were steaming, as near as I can tell from what I remember of the revolutions - I believe they were 75 - and I think that works out at about 21 1/2 knots the ship was steaming.
13509. (*The Solicitor-General.*) Is it the regular course for a message to be sent to the engine room from time to time, and a report to be got as to how many revolutions she is making? - As a rule, at the end of the watch, the junior officer rings up the engine room and obtains the average revolutions for the preceding watch.
13510. And is that one of the matters that would be brought before your notice when you go on duty? - No, not necessarily. It is entered up in the logbook, and anyone who wishes to know can merely ask and the information is given him.

13511. When you say your recollection is that it was 75 revolutions, just help us. What is it you have in your mind? - I could not say where I got that from, but it is in my mind that it was about 75 revolutions.
13512. In the course of the voyage across the Atlantic, had the engines, as far as you know, exceeded 75 at any time? - On one occasion I have a recollection of one side turning 76, not necessarily both sides though.
13513. That would be one or other of the sets of reciprocating engines? - Port or starboard reciprocating, yes.
13514. Subject to that as far as you know, did she ever attain a greater number of revolutions than 75? - Not to my knowledge, and I think I should have heard of it if she had.
13515. And during your watch which extended from 6 till 10, did she maintain the same speed, as far as you know? - As far as I know.
13516. Then who would be on the bridge - is it one or two of the junior officers would be on the bridge with you? - Two junior officers on watch at all times.

#### **Page 304**

13517. There would be a Quartermaster at the wheel? - And a stand-by Quartermaster.
13518. Another Quartermaster standing by? - Exactly.
13519. And there would be two look-out men in the crow's-nest? - At all times.
13520. What was the practice in the "Titanic" as far as this voyage is concerned about having a look-out man anywhere else? - In anything but clear weather we carry extra look-outs.
13521. But where do you put them? - If the weather is fine, that is to say if the sea allows it, we place them near the stem head; when the weather does not allow us placing them at the stem head, then probably on the bridge.
13522. And as far as your watch was concerned, 6 to 10 on the evening of April 14th, was there any look-out except the two men in the crow's-nest? - No.
13523. What was the weather? - Perfectly clear and fine.
13524. Had there been, as far as you remember, any occasion since she left Southampton to have extra look-out men? - Yes, and we had had them.
13525. And you had had them? - Yes.
13526. But at this time it was clear and fine? - Yes.
13527. Of course the sea was calm? - Comparatively smooth.
13528. Could you see the stars? - Perfectly clear. There was not a cloud in the sky.
13529. There was no moon, I think? - No moon.
13530. During your watch was any change made in the course? - Not to my recollection.
13531. Then when you had taken the ship over from Mr. Wilde and gathered this information, I think you gave some directions to one of the junior officers? - I directed the Sixth Officer to let me know at what time we should reach the vicinity of the ice. The junior officer reported to me, "About 11 o'clock."
13532. Do you recollect which of the junior officers it was? - Yes, Mr. Moody, the sixth.
13533. That would involve his making some calculations, of course? - Yes.

13534. Had this Marconigram about the ice with the meridians on it been put up; was it on any notice board, or anything of the sort? - That I could not say with any degree of certainty. Most probably, in fact very probably, almost certainly, it would be placed on the notice board for that purpose in the chart room.

13535. At any rate when you gave Mr. Moody those directions he had the material to work on? - Exactly.

13536. And he calculated and told you about 11 o'clock, you would be near the ice? - Yes.

13537. That is to say an hour after your watch finished? - Yes. I might say as a matter of fact I have come to the conclusion that Mr. Moody did not take the same Marconigram which Captain Smith had shown me on the bridge because on running it up just mentally,

I came to the conclusion that we should be to the ice before 11 o'clock, by the Marconigram that I saw.

13538. (*The Commissioner.*) In your opinion when in point of fact would you have reached the vicinity of the ice? - I roughly figured out about half-past nine. 13539. Then had Moody made a mistake? - I should not say a mistake, only he probably had not noticed the 49° wireless; there may have been others, and he may have made his calculations from one of the other Marconigrams.

13540. Do you know which other Marconigrams he would have to work from? - No, my Lord. I have no distinct recollection of any other Marconigrams.

13541. Because it is suggested to me that there was no Marconigram which would indicate arrival at the ice-field at 11 o'clock? - Well, my Lord, as far as my recollection carries me, Mr. Moody told me 11, and I came to that conclusion that he had probably used some other Marconigram.

13542. It did not agree with your conclusion? - No.

13543. (*The Solicitor-General.*) Your Lordship will find in the print, at pages 12 and 13, when the Attorney-General was opening another Marconigram from the "Baltic." I would like to follow this a little. I think my Lord will agree. (*To the Witness.*) You have just said you came to the conclusion that Mr. Moody had been working on some message other than the one Captain Smith had shown you? - Exactly.

13544. When he came to you on your watch - of course, you are responsible up to 10 o'clock? - Yes.

13545. When he came to you on your watch and said you would get to the ice, as he calculated about 11, did you, as far as you remember, say anything to him about it? - No. 13546. It was important to you? - I quite see your point, and I had reasons for not doing so. As far as I remember he was busy - what on I cannot recollect, and I thought I would not bother him just at that time. He was busy with some calculations, probably stellar calculations or bearings, and I had run it up in my mind, and I was quite assured that we should be up to 49 degrees somewhere about half-past 9.

13547. Then you mean at that time when he said 11 o'clock you had already formed a very rough judgment that you would get to meridian 49 deg. by about half-past nine? - No, not till afterwards.

13548. Was it after he reported to you about his calculation, about 11 o'clock, that you checked it in your head? - Yes.

13549. (*The Commissioner.*) I have taken it down differently. I had understood from you that when Moody told you that you would reach this ice-field about 11 o'clock, you had already calculated in your own mind that you would get there about 9.30? - No, my Lord, I am sorry I conveyed a wrong impression.

13550. I have no doubt you are right, and I am wrong about it, but when did you come to the conclusion that you would get there as soon as 9.30? - I really could not tell you the exact time. It was some time about 7 or 8 o'clock, probably. I really cannot remember, but I know it was after Mr. Moody had given me this time of his.

13551. I do not know what time it was that Moody told you you would reach the ice at 11? - It was some time shortly after that I came on deck. I cannot remember the exact time.

13552. (*The Solicitor-General.*) When you got this time suggested to you, 11 o'clock, as I follow you, you made the calculation in your head? - Exactly. 13553. You did not make a calculation on paper? - None whatever.

13554. I daresay you can make the calculation back for us now. - When the "Titanic" did strike the iceberg it was in longitude 50° 14' W.

13555. So she had passed the 49th meridian and passed the 50th? - Exactly. 13556. If she struck the iceberg at 50° 14' W. at 11.40, 20 minutes to 12, given her speed, it is not difficult to say approximately when she passed the 49th meridian? - It works out somewhere about half-past 9.

13557. That is what I thought. Then, of course, that was very important for you, as you were on the bridge and in charge until 10 o'clock? - Yes.

13558. And being on the bridge, and in charge, would it be your responsibility to determine any question about reduction of speed? - If I thought it necessary I should advise the Commander.

13559. But you thought the weather was clear enough and you could see? - Perfectly clear.

13560. (*The Commissioner.*) What is a growler? - A growler is really the worst form of ice. It is a larger berg melted down, or I might say a solid body of ice which is lower down to the water and more difficult to see than field ice, pack ice, floe ice, or icebergs.

13561. You did not know but what there might be growlers there. They are not nearly so visible as an iceberg, are they? - No, naturally they will not be - that is, to distinguish them from icebergs with regard to size.

13562. A growler, I understand, is an iceberg which is very much submerged in the water and shows very little on the surface. Is that so? -

## Page 305

Their relative amounts above water and below are naturally the same.

13563. Yes, they are; but an iceberg is a mountain of ice standing up out of the water? - Exactly.

13564. A growler is the same thing, but instead of standing high out of the water it stands a very little way out of the water; is that so? - Yes, that is so, my Lord. 13565. Now can you see a growler ahead of you nearly so well as you could see an iceberg? - No, my Lord.

13566. Now when you were in the vicinity of the ice, as you believed you were at 9.30 entering the dangerous field, did not it occur to you that you might run foul of a growler? - No, my Lord, I judged I should see it with sufficient distinctness to define it - any ice that was large enough to damage the ship.

13567. (*The Solicitor-General.*) 21 knots is about 700 yards a minute. Is your view that you could see a growler at a safe distance at nighttime going at that pace? - I judged that I could see a growler at a mile and a half, more probably two miles.

13568. (*The Commissioner.*) Is this leading to the suggestion that the look-out men are to blame? - Not at all, my Lord. I must explain this if you will allow me.

*The Commissioner:* Perhaps I interrupted.

13569. (*The Solicitor-General.*) I am glad he should add it. (*To the Witness.*) Tell us what you were going to say? - In the event of meeting ice there are many things we look for. In the first place a slight breeze. Of course, the stronger the breeze the more visible will the ice be, or rather the breakers on the ice. Therefore at any time when there is a slight breeze you will always see at nighttime a phosphorescent line round a berg, growler, or whatever it may be; the slight swell which we invariably look for in the North Atlantic causes the same effect, the break on the base of the berg, so showing a phosphorescent glow. All bergs - all ice more or less have a crystallised side.

13570. It is white? - Yes; it has been crystallised through exposure and that in all cases will reflect a certain amount of light, what is termed ice-blink, and that ice-blink from a fairly large berg you will frequently see before the berg comes above the horizon. 13571. Now let me follow. Was there any breeze on this night? - When I left the deck at 10 o'clock there was a slight breeze - Oh, pardon me, no. I take that back. No it was calm, perfectly calm.

13572. And there was no breeze. Was there any? - As far as we could see from the bridge the sea was comparatively smooth. Not that we expected it to be smooth, because looking from the ship's bridge very frequently with quite a swell on the sea will appear just as smooth as a billiard table, perfectly smooth; you cannot detect the swell. The higher you are the more difficult it is to detect a slight swell.

13573. That means, then, does it not, that if you are on the bridge and you are relying on the fact that there may be a slight swell you really cannot tell from the bridge whether there is a swell or not - a slight swell? - We look at it rather the other way - that, though the sea may appear smooth, we pretty well know that there is a swell, though it may not be visible to the eye, nor yet have any effect on the ship. It is a most rare occurrence -

13574. You mean there nearly always is a swell in the North Atlantic? - This is the first time in my experience in the Atlantic in 24 years, and I have been going across the Atlantic nearly all the time, of seeing an absolutely flat sea.

13575. Do you agree from that experience that this was an occasion when it was an absolutely flat sea? - Absolutely flat.

13576. (*The Commissioner.*) Not in fact, but to all appearance? - In fact, my Lord.

*The Solicitor-General:* He means in fact, my Lord.

13577. (*The Commissioner.*) Do you mean there was no swell at all? - I mean to say that the sea was so absolutely flat that when we lowered the boats down we had to actually overhaul the tackles to unhook them, because there was not the slightest lift on the boat to allow for slacking, unhooked.
13578. (*The Solicitor-General.*) You have told me about the speed and about the direction. Now, there is a third thing. What about the temperature? - The temperature had fallen considerably. As a matter of fact I happen to know exactly how much because when I relieved Mr. Murdoch after dinner he made the remark to me that the temperature had dropped 4 degrees whilst I was away at dinner.
13579. This is when you are at dinner in the middle of your watch? - In the middle of my watch.
13580. He came and took your place? - Yes.
13581. Your watch is from 6 to 10? - Yes.
13582. What you have described hitherto, noticing the course and speed and giving directions to the junior officer and getting his calculations, did that happen before you went off to dinner? - As far as I remember I asked for these calculations immediately after coming on deck. Yes, I think I am right in saying that I asked for these calculations immediately after coming on deck.
13583. That would be just after six o'clock? - Yes, I have got it, I think. I asked for the calculations immediately after coming on deck and they were given to me about half an hour or three-quarters of an hour afterwards. It is very difficult to remember. *The Solicitor-General:* I quite follow, and you are helping us considerably. 13584. (*The Commissioner.*) Would that be about seven o'clock? - No, I do not think that fits in with the time I went to dinner.
13585. When did you go to dinner? - Dinner is at half-past six.
13586. Then it would be more like a quarter to eight? - No I did not go to dinner at halfpast six my Lord. Mr. Murdoch goes to dinner at half-past six and relieves me, I think, at five past seven, and I relieved him, I think, at 7.35.
13587. (*The Solicitor-General.*) That means that Mr. Murdoch, the First Officer, would be taking your place for half an hour between seven and half-past? - Exactly.
13588. And after that you were in continuous charge, in fact, until ten o'clock? - Exactly.
13589. (*The Commissioner.*) And from 7 to half-past seven there was a fall of four degrees in the temperature? - Yes, my Lord.
13590. (*The Solicitor-General.*) Did you observe that at the time as something pretty sharp? - Yes, a pretty sharp drop. It had been going down previously to that before I left the deck.
13591. When did you notice the fall in the temperature beginning seriously? - Probably about half-past six.
13592. Very well; the fall in the temperature began at half-past six and a drop of four degrees between seven and half-past? - Yes.
13593. Did you notice what the actual temperature was a little later by the thermometer? - Yes, later on in the watch I think the Quartermaster two or three times told me what the temperature was in order that I might know when it got near to freezing point to send word to the engine room and the carpenter with regard to fresh water. 13594. Can you

- tell me what was the temperature which you were given and at what time? - When Mr. Murdoch mentioned it to me as far as I recollect it had fallen from 43 degrees to 39.
13595. This is Fahrenheit I suppose, is it not? - Yes; and then I sent word down to the carpenter about nine o'clock; it was then 33 degrees, and I sent word to the carpenter and to the engine room - for the carpenter to look after his fresh water; that is to say, he has to drain it off to prevent the pipes freezing - and to the engine room for them to take the necessary precautions for the winches.
13596. It is 33 degrees at nine o'clock. That is only one degree above freezing? - One degree, exactly.
13597. What did that circumstance, the serious drop in temperature, indicate to you as regards the probable presence of ice? - Nothing.
13598. You do not think it indicates anything? - Nothing whatever; you may have it any time in

### Page 306

- the year, summer and winter, going across the Atlantic. It is not quite so noticeable in winter because the air generally is cold.
13599. (*The Commissioner.*) That may be, but is it not the fact that when you are approaching large bodies of ice the temperature falls? - Never in my experience, my Lord.
13600. It does not go up I suppose? - Well, though it may seem strange, it is quite possible for it to go up if the ice happens to be floating in slightly warmer water, or if the wind were to come round from the southward. You will frequently be passing through a cold stream, and if the wind comes from the southward you will almost invariably look out for a fog, owing to the warm wind striking the cold water. The atmosphere may be comparatively warm. The moment the wind comes back again to the northward you expect the weather to clear, and it will get very much colder, of course.
13601. (*The Solicitor-General.*) I have put together the facts you have given me. Have I got them right - that there is a drop of 10 degrees Fahrenheit in the course of two hours? You say it was 43 degrees when you went to dinner? - That is 7 o'clock.
13602. And it was 33 degrees when you sent the message to the carpenter? - About 9 o'clock; that is right.
13603. That is a drop of 10 degrees Fahrenheit in two hours? - Yes.
13604. And a continuous drop? - Yes.
13605. Does not that indicate anything at all as regards the probable presence of ice? - Absolutely no indication whatever.
13606. Then I may take it that that fact of the temperature did not in itself make you any more cautious? - Oh not the slightest.
13607. Well, it was now nine o'clock, and you had worked out in your head that you would probably get the 49 degrees meridian by half-past nine? - Just let me correct that. It must have been a few minutes before nine, because I remember the Commander came on the bridge at five minutes to nine, and I told him then that I

- had already sent word round, so it was perhaps ten minutes or a quarter to nine, as a matter of minutes.
13608. Then that is a drop of ten degrees in less than two hours? - Slightly less.
13609. (*The Commissioner.*) Did you draw his attention to the drop in the temperature? - Yes, my Lord.
13610. Was anything said between you and him about it? - Yes, my Lord.
13611. What was said? - The Commander when he came on the bridge remarked that it was cold, and naturally I agreed with him, and also I mentioned in the course of conversation that I had sent round - I think I told him the temperature, and I told him I had sent to the engine room and the carpenter, merely to indicate that the necessary duty had been done.
13612. Is that all that took place? - No, my Lord. We had a conversation with regard to the weather.
13613. But had you no conversation with regard to ice? - Well, I was coming to that, my Lord.
13614. (*The Solicitor-General.*) Had not you better tell us as accurately as you can what passed between him and you when he came on the bridge at five minutes to nine? - I will. 13615. If you please. - At five minutes to nine, when the Commander came on the bridge (*I will give it to you as near as I remember*) he remarked that it was cold, and as far as I remember I said, "Yes, it is very cold, Sir. In fact," I said, "it is only one degree above freezing. I have sent word down to the carpenter and rung up the engine room and told them that it is freezing or will be during the night." We then commenced to speak about the weather. He said, "There is not much wind." I said, "No, it is a flat calm as a matter of fact." He repeated it; he said, "A flat calm." I said, "Yes, quite flat, there is no wind." I said something about it was rather a pity the breeze had not kept up whilst we were going through the ice region. Of course, my reason was obvious; he knew I meant the water ripples breaking on the base of the berg.
13616. You said it was a pity there was not a breeze? - Yes, I said, "It is a pity there is not a breeze," and we went on to discuss the weather. He was then getting his eyesight, you know, and he said, "Yes, it seems quite clear," and I said, "Yes, it is perfectly clear." It was a beautiful night, there was not a cloud in the sky. The sea was apparently smooth, and there was no wind, but at that time you could see the stars rising and setting with absolute distinctness.
13617. On the horizon? - On the horizon. We then discussed the indications of ice. I remember saying, "In any case there will be a certain amount of reflected lights from the bergs." He said, "Oh, yes, there will be a certain amount of reflected light." I said, or he said; blue was said between us - that even though the blue side of the berg was towards us, probably the outline, the white outline would give us sufficient warning, that we should be able to see it at a good distance, and, as far as we could see, we should be able to see it. Of course it was just with regard to that possibility of the blue side being towards us, and that if it did happen to be turned with the purely blue side towards us, there would still be the white outline.

13618. (*The Commissioner.*) Then you had both made up your minds at that time that you were about to encounter icebergs? - No, my Lord, not necessarily. 13619. It sounds very like it, you know? - No, not necessarily, my Lord.

13620. You were both talking about what those icebergs would show to you? - As a natural precaution. We knew we were in the vicinity of ice, and though you cross the Atlantic for years and have ice reported and never see it, and at other times it is not reported and you do see it, you nevertheless do take necessary precautions, all you can, to make perfectly sure that the weather is clear and that the officers understand the indications of ice and all that sort of thing. That is a necessary precaution that is always taken.

13621. (*The Solicitor-General.*) There are one or two things about that I should like to be clear about. I caught you saying that you or the Captain said it was a pity there was not a little breeze because it would have shown an iceberg? - Yes, it would have assisted.

13622. Then you both realised at the time, did you, that since it was a flat calm it would be more difficult to see the ice? - As far as the case of the berg was concerned, yes, it would be more difficult; naturally you would not see the water breaking on it if there were no wind; and so you would not have that to look for.

13623. Do you remember when the Captain was on the bridge with you, did you tell him that as you made it out you would get to the danger zone, to the ice region about half-past nine? - No.

13624. Was anything said about the time when you would get to it? - Not that I remember.

13625. Mr. Moody had made a calculation which he had reported to you and you thought his calculation gave the position too much west? - Yes.

13626. Did not you say anything about that to the Captain? - Oh, no.

13627. Had you had any further calculation made at all? - No.

13628. What was the basis upon which you were proceeding? Were you proceeding on the basis that you would expect to reach this region by half-past nine, or that you would not expect to reach it until 11 o'clock? - I was working on the half-past nine. I probably thought that Mr. Moody had based his calculation on the actual position of some berg or number of bergs.

13629. How long was the Captain on the bridge with you? You say he came on the bridge with you about five minutes to nine? - About 25 minutes or half an hour.

13630. If it was half an hour that would carry you to within five minutes of half-past nine? - Yes.

13631. And during that time whilst he was with

**Page 307**

you was there any discussion between you at all as to speed? - None.

13632. You were going full speed ahead at this time? - Yes.

13633. About 21 1/2 knots as you think? - Yes.

13634. And no question was raised between you as to speed at all? - No question at all.

13635. The Captain left you about 20 or 25 past 9, you say. Did he say where he was going to, or where he had been, and so on? - Yes. The Captain said, "If it

- becomes at all doubtful” - I think those are his words - “If it becomes at all doubtful let me know at once; I will be just inside.”
13636. (*The Commissioner.*) If what becomes doubtful? - The general conditions, my Lord, I suppose he would mean - if it were at all doubtful about the distance I could see, principally.
13637. You were relying at this time exclusively upon the look-out; you were not taking any measures to reduce the speed? - None, my Lord.
13638. And therefore you were relying for safety entirely on the look-out? - Yes. 13639. Now tell me again what this observation of the Captain meant, because I do not understand it. - With regard to the word “doubtful”?
13640. Yes; what did he mean? - It is rather difficult to define. It means to say if I had any doubt at all in my mind.
13641. What about? - About the weather, about the distance I could see - principally those two conditions it would refer to. If there were the slightest degree of haze to arise, the slightest haze whatever, if that were to any degree noticeable, to immediately notify him.
13642. (*The Solicitor-General.*) I will take what you have just said. You said if the slightest degree of haze was to arise - that would be what was meant - you were to notify him? - Immediately; yes.
13643. And then did you understand, and do you represent, that if the slightest degree of haze arose it would at once become dangerous? - Well, it would render it more difficult to see the ice, though not necessarily dangerous. If we were coming on a large berg there might be a haze, as there frequently is in that position, where warm and cold streams are intermixing. You will very frequently get a little low-lying haze, smoke we call it, lying on the water perhaps a couple of feet.
13644. Do not misunderstand me. I am not suggesting that it would be necessarily dangerous in the sense that there would necessarily be an accident, but there would be a risk of danger, would not there? - If there was any haze?
13645. Yes? - Undoubtedly.
13646. The slightest haze? - The slightest haze would render the situation far more difficult.
13647. Far more dangerous? - Far more dangerous if there were ice.
13648. You told me that with those conditions of the weather you think that a growler might have been seen a mile and a half? - Yes.
13649. If you could see a low-lying growler in those conditions a mile and a half, how far off do you think you could see an iceberg? - A good sized iceberg?
13650. Yes. An iceberg big enough to throw ice upon your fore deck? - Well a matter of 50 feet.
13651. 50 feet? You mean an iceberg 50 feet out of the water? - Yes.
13652. How far off would you have seen an iceberg as big as that? - At least a mile and a half or two miles - that is more or less the minimum. You could very probably see it a far greater distance than that. If it were a very white berg, flat topped or the flat side towards you, under normal conditions you would probably see that berg 3 or 4 miles away.

13653. I think I must press you a little about this. The Captain leaves you and says, "If it becomes at all doubtful let me know at once"? - Yes.
13654. Surely that had reference to the risk of ice had it not? - Yes, undoubtedly; undoubtedly that was referring to ice.
13655. Just taxing your memory now, do not you think there was any further conversation between you and the Captain during that half hour, about the risk of ice and the presence of ice? - I have no doubt there was more conversation, most probably we were conversing the whole time the Commander was on the bridge, but the actual words I really cannot recall to my mind except what I have given you.
13656. What was the very first thing you did after the Captain went in about half-past nine? Did not you send a message to the crow's-nest? - Yes, I did.
13657. What was it? - To keep a sharp look out for ice, particularly small ice and growlers.
13658. That was half-past nine? - And I think I told them to pass that word on until daylight - to keep a sharp look out till daylight.
13659. Now did you send that message to the crow's-nest immediately after the conversation with the Captain? - Shortly afterwards I think it was.
13660. (*The Commissioner.*) It was only five minutes you know between the Captain leaving the bridge and your sending that message, if you have given the right times? - Yes, it was probably about that, my Lord, as near as I can remember.
13661. Now did you send that message in consequence of your conversation with the Captain? - No, I thought it was a necessary precaution. That is a message I always send along when approaching the vicinity of ice or a derelict, as the case may be. If I know we are approaching the vicinity of a derelict, I send the word along to let them know what to look out for. It is just the same with regard to a Lightship, say the Nantucket Lightship; I tell them to keep a sharp look out for the Nantucket Lightship to give them an idea what they are looking for.
13662. What time was it dark on this night? - I think about half-past six, between halfpast six and seven.
13663. (*The Solicitor-General.*) Was this the first time during this watch, six to ten, when you had sent any message to the crow's-nest about any ice? - The first; yes.
13664. And was it the only time as far as you are concerned? - The only time.
13665. But as you have explained to us, it was a message you said they were to pass on to the men who relieved them? - Yes.
13666. Cannot you tell us at all whether that message was in any way caused by or suggested by the conversation you had with the Captain? - No, in no way whatever. It was not. I see your point, that having been talking with the Commander I should naturally take this precaution, but I may say that it was in no way suggested by the conversation with the Commander.
13667. Very well, I think you caused that message to be sent to the crow's-nest by one of the junior officers who was with you on the bridge? - Yes, Mr. Moody. 13668. Did you hear him send the message? - I did. I told him to repeat it.
13669. You heard him send it, and when he first sent it did he send it quite accurately? - No, not quite.

13670. And did you then make him repeat it accurately? - Yes.
13671. Now just tell the Court what was the difference, what was it you wanted to be right? - Well, I told Mr. Moody to ring up the crow's-nest and tell the look-outs to keep a sharp look out for ice, particularly small ice and growlers. Mr. Moody rang them up and I could hear quite distinctly what he was saying. He said, "Keep a sharp look out for ice, particularly small ice," or something like that, and I told him, I think, to ring up again and tell them to keep a sharp look out for ice particularly small ice and growlers. And he rang up the second time and gave the message correctly.
13672. Of course if there was no swell so that you could not at all rely on the breaking of the water against the edge of an iceberg or growler, it would be particularly hard to see would it not? - It would be more difficult if it was not of any size.
13673. Whereas an iceberg that is more out of the water, on a fine night you thought would probably

### **Page 308**

- show you some white side or white edge? - Yes.
13674. And on a fine night you would be able to see the whiteness? - Yes.
13675. Was that the reason you repeated the message about growlers? - Yes. 13676. Now we come to the last half-hour of your watch, from 9.30 to 10, I think. Just tell us what you were doing as regards ice, looking for ice during that time? - At 9.30 or about 9.30 I took up a position on the bridge where I could see distinctly - a view which cleared the back stays and stays and so on - right ahead, and there I remained during the remainder of my watch.
13677. Were you looking out? - Keeping a sharp look-out, as sharp as was possible.
13678. Looking out for ice? - Looking out for ice and watching the weather; watching the conditions generally to see there was no haze which would rise that I should not notice, and, of course, keeping a sharp look out for ice as well.
13679. Were the conditions of the weather such that a haze might arise locally in one particular part of the field in front of you? - Then I should have seen it.
13680. You thought that might be so and you were looking out? - It could possibly have been so.
13681. Did that happen so during the rest of your watch? - No, it was perfectly clear.
13682. Were you using glasses? - Part of the time, yes.
13683. Do you in practice at night use glasses for the purpose of scanning the track you have to follow. Do you mean it was exceptional to use them? - I mean to say that on this occasion, knowing there were no lights round the icebergs, you would naturally have a pair of glasses in your hand, but where there are lights about you do not use glasses; you pick them up with your eyes first.
13684. Supposing anybody's duty is to look out for ice at night what is your view as to the usefulness of glasses? - With regard to picking up ice?
13685. Yes? - It is rather difficult to say. I never have picked up ice at nighttime with glasses, so it is really difficult for me to say.

13686. (*The Commissioner.*) What were you using them for on the bridge? - To assist me in keeping a look-out.

13687. Then you were using them; you were looking out for ice? - I was looking out for ice.

13688. And you were using the glasses? - Occasionally I would raise the glasses to my eyes and look ahead to see if I could see anything, using both glasses and my eyes. 13689. The question I understand is this: Do the glasses help you to detect ice? - Well I should naturally think so, my Lord.

*The Solicitor-General:* I am not quite certain whether you heard what the witness said.

*The Commissioner:* He says "I should think so."

*The Solicitor-General:* I meant before that; his previous answer.

*The Commissioner:* I understood him to say that he does not use glasses as a rule when he is on the bridge at night, but he did on this occasion.

*The Solicitor-General:* I am anxious we should have it quite fair to him of course. I understand the witness to say that as a matter of fact he never has picked up ice with the help of glasses; it has never been his experience to see ice through glasses; but I gather he was both using his eyes and using glasses.

*The Witness:* Exactly.

*The Commissioner:* Put it to him in your own way, because the impression on my mind at present is this, that in his opinion glasses are useful for the purpose of seeing ice. That is the impression on my mind.

13690. (*The Solicitor-General.*) You see, Mr. Lightoller, I want to get your own view.

You will tell us candidly and fairly, I am sure. First of all, in your own experience, when you have used glasses, have you in fact found ice with the help of glasses? - Never. I have never seen ice through glasses first, never in my experience. Always whenever I have seen a berg I have seen it first with my eyes and then examined it through glasses.

*The Solicitor-General:* I think that is what he said.

13691. (*The Commissioner.*) You are quite right, and do you say the same thing of ships' lights? - There is no doubt about ships' lights. Personally I do not bother about glasses at all. I prefer to rely on my own eyes.

13692. (*The Commissioner.*) I am told that is right, and then if you want any detail you take the glasses up to examine the lights that you have already seen with the naked eye? - Exactly, my Lord.

13693. (*The Solicitor-General.*) As I understand you, if it was a question of a light, you have no doubt at all that you would pick it up in the ordinary course with your eyes if you have good eyes before you would get your glasses on to it? - Yes.

13694. But in regard to icebergs, you do not feel so sure? - No.

13695. And on this occasion, during this half hour, you were, in fact, using sometimes your eyes and sometimes your glasses? - Yes, exactly. 13696. That brought you up to the end of your watch at 10 o'clock. Was the speed of the ship maintained up to that time? - As far as I know. 13697. I mean you gave no orders to stop it? - None whatever.

13698. Did the night continue clear and calm? - Perfectly calm, up to 10 o'clock, and clear.

13699. And so far as those conditions are concerned, was there any change up to the time you handed over the ship? - None whatever. If I might say one fact I have just remembered?

13700. Do? - Speaking about the Commander, with reference to ice, of course, there was a footnote on the night order book with regard to ice. The actual wording I cannot remember, but it is always customary. Naturally, every commander, in the night order book, issues his orders for the night, and the footnote had reference to keeping a sharp look out for ice. That is initialed by every officer.

13701. Who was it that took the ship over from you at 10 o'clock? - Mr. Murdoch.

13702. Mr. Murdoch, the First Officer: Just one further thing - You have spoken about the change in the temperature, and you have brought the change in the temperature down to 33 degrees at about 9 o'clock. Then you had another hour. Did you notice whether it went colder? - I did; 1 degree.

13703. That would be getting down to freezing point? - That was exactly freezing.

13704. 32 degrees. Do you remember what time you noticed it had got down to 32 degrees? - No, I could not say. Most probably it was about 10 minutes to 10, when the quartermaster took the temperature of the air and the water by thermometer. 13705.

Is that the duty, in the ordinary course, of the Quartermaster at 10 minutes to 10? - Yes, every hour it is registered.

13706. At 10 minutes to the hour? - Yes - every two hours I should say.

13707. When you handed over the ship at the end of your watch to Mr. Murdoch, just tell us, as carefully and fully as you can, what was the report you made to Mr.

Murdoch? What was it you passed along to him? - I should give him the course the ship was steering by standard compass. I mentioned the temperature - I think he mentioned the temperature first; he came on deck in his overcoat, and said, "It is pretty cold." I said, "Yes it is freezing." I said something about we might be up around the ice any time now, as far as I remember. I cannot remember the exact words, but suggested that we should be naturally round the ice. I passed the word on to him. Of course, I knew we were up to the 49 degrees by, roughly, half-past 9; that ice had been reported. He would know what I meant by that, you know - the Marconigram.

13708. I will tell you what I want to know. Did you say anything to him at 10 o'clock about a calculation having been made by the junior officer or anything of that sort? - I may have done; I really cannot recollect it now, I may have told him that Moody worked it out 11, or I may have told him half-past 9.

## **Page 309**

*The Commissioner:* You yourself knew the boat was already in the ice region at this time? - Yes.

13709. Did you tell Murdoch so? - Yes, my Lord, as I say when he came on deck.

13710. What did you say to him? - That we were up around the ice, or something

- to that effect; that we were within the region of where the ice had been reported. The actual words I cannot remember; but I gave him to understand that we were within the region where ice had been reported.
13711. (*The Solicitor-General.*) During your watch and while Mr. Murdoch had been off duty you had caused this calculation to be made and Mr. Moody had given you 11 o'clock? - Yes.
13712. You thought half-past nine? - Yes.
13713. And here you had sent a message up to the crow's-nest asking them to keep a sharp look-out for ice, especially small ice and growlers? - Yes.
13714. You are handing the ship over at 10 o'clock to Mr. Murdoch who was on the bridge at the time of the accident. Now what I want to know is what was it you told him, as fully as you can, about ice? - I am very sorry, but my memory will not help; I cannot recollect word for word, merely that I gave Mr. Murdoch to understand that we were in the ice region; as to the actual words I said to him, I may have put it many ways - I cannot remember how I did.
13715. I follow you cannot give us the actual words, and your memory does not serve you to say whether you told him anything about your view that you had passed the meridian or Mr. Moody's view that you would not reach the position until 11 o'clock? - No, I really could not say.
13716. Did you say anything to him about your conversation with the Captain and the order the Captain had given? - Oh! Undoubtedly.
13717. You did? - Oh, undoubtedly.
13718. You would report to him that the Captain had been on the bridge? - Yes. 13719. As far as you remember did you report anything about orders as to speed? - No orders. No orders were passed on about speed.
13720. (*The Commissioner.*) Did you tell him what message you had sent to the crow'snest? - Yes, I did.
13721. You told Mr. Murdoch that? - Yes, I told Mr. Murdoch I had already sent to the crow's-nest, the carpenter, and the engine room as to the temperature, and such things as that - naturally, in the ordinary course in handing over the ship everything I could think of.
13722. (*The Solicitor-General.*) We have to get at what is Mr. Murdoch's state of mind, with your help, because he is not here? - I quite see.
13723. The captain had said to you only half an hour or 35 minutes before that if it got at all doubtful you were to send for him, and that he would be close by? - Yes. 13724. Did you tell Mr. Murdoch of that message? - Oh, undoubtedly.
13725. The captain's room, I think, is just at the side of the bridge there? - On the side of the bridge, and the window facing right on to the bridge. The bridge is in clear view from his chart room.
13726. You have had great experience of the North Atlantic at all times of the year. Just tell me, when a liner is known to be approaching ice is it, or is it not in your experience usual to reduce speed? - I have never known speed to be reduced in any ship I have ever been in in the north Atlantic in clear weather, not on account of ice.

13727. Assuming that the weather is clear? - Clear.
13728. I think that is all you can tell us as far as your duties on the bridge are concerned. You had some duties to discharge before you turned in, had not you? - Yes, I have to go round the decks and see everything is all right; what we call "going round."
13729. There is nothing material there? - Nothing in reference to the case, no.
13730. Did you go to your room and turn in? - Yes.
13731. And had you turned in at the time of the impact, the collision? - Yes.
13732. I mean your light was out? - Yes, my light was out but I was still awake.
13733. You were still awake? - Yes.
13734. If you were awake you felt something, I suppose? Just describe to us what it was you felt? - It is best described as a jar and a grinding sound. There was a slight jar followed by this grinding sound. It struck me we had struck something and then thinking it over it was a feeling as if she may have hit something with her propellers, and on second thoughts I thought perhaps she had struck some obstruction with her propeller and stripped the blades off. There was a slight jar followed by the grinding - a slight bumping. 13735. (*The Commissioner.*) You could not tell from what direction the sound came? - No, my Lord. Naturally I thought it was from forward.
13736. I understand you to say you thought it was the propellers? - On second thoughts it flashed through my mind that possibly it was a piece of wreckage, or something - a piece of ice had been struck by a propeller blade, which might have given a similar feeling to the ship.
13737. (*The Solicitor-General.*) As to this grinding noise which you speak of which followed the slight shock, can you give us any help at all how long the grinding sound or sensation continued? - Well, I should say a matter of a couple of seconds, perhaps - a few seconds, very few.
13738. I understand it was not violent at all? - Oh, no, not at all.
13739. (*The Commissioner.*) You were lying down at the time? - Yes, my Lord. I had just switched the light out. I was going to sleep. I had switched the light out and turned over to go to sleep.
13740. (*The Solicitor-General.*) But you were awake? - I was awake.
13741. When this occurred your mind naturally searched for a probable cause? - Yes.
13742. Did you think of ice? - I did.
13743. Just tell us what you did, in order? - I lay there for a few moments, it might have been a few minutes, and then feeling the engines had stopped I got up.
13744. From where you were lying could you hear the ring of the telegraph? - No.
13745. So that you did not know of the order given to stop the engines? - No.
13746. But you felt that they had stopped? - I did.
13747. And you got up? - Yes.
13748. Did you go to the bridge? - Not exactly the bridge; I went out on deck. The bridge, you know, is on the same level.
13749. On to the boat deck? - On to the boat deck on the port side.
13750. Is your room on the port side? - My room is on the port side.

13751. What did you find was the condition of things? - Everything seemed normal.
13752. Was the ship going full speed ahead? - Oh, no, but I mean the conditions on the bridge.
13753. It was my fault. What did you find was the position of the ship? - I, first of all, looked forward to the bridge and everything seemed quiet there. I could see the First Officer standing on the footbridge keeping the look out. I then walked across to the side, and I saw the ship had slowed down, that is to say, was proceeding slowly through the water.
13754. This is all on the port side? - All on the port side.
13755. Did you see any iceberg? - No.
13756. Of course, if the iceberg passed the starboard side of the vessel, you were on the opposite side? - Yes.
13757. When you came out on deck was the ship already stopped or slowing down through the water? - She was proceeding slowly, a matter of perhaps six knots or something like that.
13758. Were the engines still stopped? - I could not exactly say what the engines were doing after once I got up. It was when I was lying still in my bunk I could feel the engines were stopped.

**Page 310**

13759. Can you help us as to whether the engines were put full speed astern? - No, I cannot say I remember feeling the engines going full speed astern.
13760. When you looked over the side you thought she was going through the water about six knots? - Yes, four to six knots. I did not stay there long.
13761. Just tell us what you did. - After looking over the side and seeing the bridge I went back to the quarters and crossed over to the starboard side. I looked out of the starboard door and I could see the Commander standing on the bridge in just the same manner as I had seen Mr. Murdoch, just the outline; I could not see which was which in the dark. I did not go out on the deck again on the starboard side. It was pretty cold and I went back to my bunk and turned in.
13762. At that time you thought nothing was the matter? - I did not think it was anything serious.
13763. (*The Commissioner.*) Well, you did think, as I understand, that she had fouled something with her propeller blades? - Either bumped something or fouled something.
13764. Was not that serious? - No.
13765. I should have thought it was? - Well, it is in a way, my Lord. If it was sufficiently serious I knew I should be called. But what I mean to convey is, I had been on deck and looked both sides and had not seen anybody about, that is to say, everything was clear; there was nobody coming towards the quarters to call us or anything. The Quartermaster had not left the bridge. I knew that if they wanted us it was a moments work for the Quartermaster to come along and tell us. Judging the conditions were normal, I went back and turned in.

13766. You thought it was safe enough to turn in? - Oh, quite.
13767. (*The Solicitor-General.*) You say the First Officer and the Captain were both on the bridge? - As I should judge from their figures.
13768. That was your impression? - Yes.
13769. Is it usual to find the First Officer and the Captain both on the bridge in the ordinary course? - Oh, yes; there is nothing uncommon about it, nothing whatever.
13770. Of course the First Officer is the officer of the watch? - Yes.
13771. You have told us how the Captain came to you while you were on your watch and I suppose you thought he had come to the First Officer in the same way? - Well, of course I knew the bump had brought him out.
13772. (*The Commissioner.*) Was the Captain dressed? - That I could not say. I do not think there was any doubt about his being dressed, because in the ordinary conditions, as the Captain said, he would be just inside, he would not turn in under those conditions. He would just remain in his navigating room where his navigating instruments are: chart books, etc., where he would be handy to pop out on the bridge.
13773. (*The Solicitor-General.*) Nobody blames you for turning in, you understand. - No. *The Commissioner:* Oh, no.
13774. (*The Solicitor-General.*) But it is to get your point of view. You had noticed the ship had stopped, or at least the engines had stopped? - Yes.
13775. And that she was going only six knots through the water? - Yes.
13776. In mid-Atlantic? - Yes.
13777. No other ship near? - No.
13778. Did not that strike you at all? - Oh, yes. I knew perfectly well that some extraordinary circumstance had occurred; that is to say we had struck something or our propeller had been struck.
13779. (*The Commissioner.*) Your curiosity was not sufficient to remain in the cold?
13780. To go on to the bridge? - No, it was not a case of curiosity; it was not my duty to go on to the bridge when it was not my watch.
13781. (*The Solicitor-General.*) How long were you in your room after that before you did turn out? - It is very difficult to say. I should say roughly about half an hour perhaps; it might have been longer, it might have been less.
13782. Did you go to sleep? - Oh, no.
13783. (*The Commissioner.*) What on earth were you doing? Were you lying down in your bunk listening to the noises outside? - There were no noises. I turned in my bunk, covered myself up and waited for somebody to come along and tell me if they wanted me.
13784. (*The Solicitor-General.*) Time is very difficult to calculate, especially when you are trying to go to sleep, but seriously do you think it was half an hour? - That I was in my bunk after that?
13785. Yes? - Well I did not think it was half an hour, but we have been talking this matter over a very great deal, and I judge it is half an hour, because it was Mr. Boxhall who came to inform me afterwards we had struck ice, and previous to

- him coming to inform me, as you will find out in his evidence, he had been a considerable way round the ship on various duties which must have taken him a good while. It might be less, it might be a quarter-of-an-hour. You will be able to form your judgment. 13786. He is the Fourth Officer? - Yes.
13787. How would his time of duty run? - He was on duty till 12 o'clock.
13788. Ten to 12? - Eight to 12.
13789. It was Mr. Boxhall who came to your room and gave you the information? - Yes.
13790. What was it he told you? - He just came in and quietly remarked "You know we have struck an iceberg." I said "I know we have struck something." He then said "The water is up to F Deck in the mail room."
13791. (*The Commissioner.*) Well, that was rather alarming, was it not? - He had no need to say anything further then, Sir.
13792. (*The Solicitor-General.*) "The water is up to F deck in the mail room." It is quite fair of you to have told us why you thought it was longer, but I want to see we get it right from your point of view. I see when you gave your statement about this matter at that time your impression was it was a shorter time than half an hour? - Did I?
13793. Yes, I have got down here six minutes? - Oh, there must be some mistake, I think, in that.
13794. When you got that news it did not take you very long to turn out the second time? - No, it did not.
13795. Did you go on deck? - After dressing.
13796. Now just tell us what you saw, and what you found was the condition of things there? - At this time the steam was roaring off.
- The Commissioner:* You will be some little time yet, Mr. Solicitor?
- The Solicitor-General:* Yes, my Lord.
- The Commissioner:* Very well. You have him on deck, and I think this is the time to rise.

**(*The Witness withdrew.*)**

*The Solicitor-General:* I do not know whether your Lordship would wish the date of the adjournment to be settled now.

*The Commissioner:* I thought that it would be convenient to rise next Friday evening about this time, and then to adjourn until the following Tuesday week. I mean adjourn over the Whit. week. We shall have plenty to do, I at all events shall have plenty to do in the meantime. I shall have all these notes to read, and post myself up in the evidence. I do not know whether that is convenient to you, Sir Robert?

*Sir Robert Finlay:* Yes, my Lord. I have communicated with the Attorney-General about this.

*The Solicitor-General:* The Attorney-General told me so, and I thought it would be convenient if your Lordship made the announcement now, as it helps people to make their arrangements.

*The Commissioner:* Very well.

*(Adjourned to tomorrow at 10.30 o'clock.)*

## **Wreck Commissioners' Court.**

SCOTTISH HALL,

BUCKINGHAM GATE,

*Tuesday, 21st May, 1912.*

### PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## **LOSS OF THE S. S. "TITANIC."**

### TWELFTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.)

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the thirdclass passengers. (Admitted on application.)

MR. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian." (Leyland Line). (Admitted on Application.)

MR. H. E. DUKE, K. C., M. P., and MR. VAUGHAN WILIAMS (instructed by Messrs. A. F. and R. W. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff-Gordon. (Admitted on Application.)

**Page 312**

**CHARLES HERBERT LIGHTOLLER - Recalled.**

**Further examined by the SOLICITOR-GENERAL.**

13797. You were just telling us what you found when you came up on deck after you had heard of what had happened, and I think you just told us that the steam was roaring off - blowing out of the boilers, I suppose? - Yes.

13798. Was it making a great noise? - Yes.

13799. So great as to be difficult to hear what was said? - Very difficult.

13800. Did you ascertain whether all hands had been called on deck? - Yes; I met the Chief Officer almost immediately after, coming out of the door of the quarters. First of all the Chief Officer told me to commence to get the covers off the boats. I asked him then if all hands had been called, and he said, "Yes."

13801. I should like to understand whether there was a division of duties here. In an emergency of this sort, have you a special responsibility for one side of the ship as against the other? - No.

13802. Then there is an order from the Chief Officer that you should see to the stripping of the covers off the boats? - Yes.

13803. Did you do that? - Yes.
13804. At that time had any of the boats had their covers stripped, or had you to begin it?  
- None, with the exception of the emergency boats.
13805. Those were the two which we have heard of which were kept swung out? - Yes.
13806. And did you get hands to help you in that work? - Yes, I commenced myself, and then as the hands turned up, I told them off to the boats.
13807. Which side did you begin, and what was the order? - I began on the port side with the port forward boat. That would be No. 4.
13808. That would be the one immediately abaft of the emergency boat? - Yes. 13809. Just tell us the order of things, will you? - I commenced stripping off No. 4; then two or three turned up; I told them off to No. 4 boat and stood off then myself and directed the men as they came up on deck, passing around the boat deck, round the various boats, and seeing that the men were evenly distributed around both the port and starboard.
13810. Do you mean evenly distributed as between the different boats? - Exactly.
13811. Had you any means of knowing what boat a particular seaman would be attached to if he did not know; have you any means of telling him? - Well, I did not think it advisable, taking into consideration the row going on with the steam to make any inquiries. I could only direct them by motions of the hand. They could not hear what I said.
13812. So that you parcelled them out as best you could? - Exactly.
13813. Did you go to boats in the afterend as well? - Yes.
13814. On the port side? - Both sides.
13815. Then you went the whole circuit of the boat deck? - Yes.
13816. Carrying out this order? - Yes.
13817. And was each of the boat covers stripped in order all the way round? - All the boats, as far as I can remember, were under way. I remember directing one of the junior officers to look after the after section of boats.
13818. What length of time would this operation of uncovering all these boats take? - You mean, given the crew?
13819. You were engaged on this work. I want to realise how long you were engaged on it? - Well, I really could not say what time the after boats were finished uncovering. Knowing that the Third Officer was there in charge I did not bother so much about that as the forward ones, and about the time I had finished seeing the men distributed round the deck, and the boat covers well under way and everything going smoothly, I then enquired of the Chief Officer whether we should carry on and swing out.
13820. And what did Mr. Wilde say about that - what were the orders? - I am under the impression that Mr. Wilde said "No," or "Wait," something to that effect, and meeting the Commander, I asked him, and he said, "Yes, swing out."
13821. And did you get that done? - Yes, on the port side. I did not go to the starboard side again.
13822. Up to the time of swinging out the boats which had been stripped, at any rate, on the port side, what about the passengers? - I had met a few passengers on deck, not many.

13823. Had you heard any general orders given about getting them? - No, I could not hear any.
13824. Was the steam still blowing off all this time? - Still blowing off, yes. 13825. Up to this time had you noticed whether the ship had got any list? - Not to my knowledge; no list whatever so far as I know.
13826. Up to this time had you noticed whether she showed a tendency to drop by the head? - No.
13827. She was on an even keel so far as you know? - Yes.
- The Commissioner:* Now, you say "at this time." I do not quite know what time.
- The Solicitor-General:* I was stopping; I had meant to stop at the time he ceased to swing out boats on the port side, which is, as I understand, after stripping all the boat covers.
- The Commissioner.* I understand about the course of events at this time; I want to know by the clock.
13828. (*The Solicitor-General.*) I did, too, my Lord. (*To the Witness.*) Could you help us and give us some estimate as to how long this would have taken from the time that you came out. You see, you have said you think half an hour elapsed after the collision before you came out and realised the seriousness of it, and then, of course, you undertook those duties, and you have described them. Could you give us an estimate how long would have elapsed from the time you came out on deck and started this work to the time the boats were swung out on the port side? - I should like you to understand quite clearly about the boat covers. I had not seen all the boat covers actually off. We were taking the boats in rotation, but from the time we commenced to strip No. 4 boat cover until the time when we swung them out I should judge would be probably at most 15 or 20 minutes.
13829. So far you are confining yourself to No. 4? - Exactly.
13830. And during that time had the stripping of the covers of the other boats been going on? - That was being continued at the same time. Of course, there were the falls to coil down.
13831. You took No. 4. Was the swinging out of No. 4 earlier than the swinging out of the other boats on the port side? - Yes, as it happened. You see the men coming up the staircase on the forepart would naturally come to No. 4, and No. 4 was got under way first and would be completed first.
13832. Did you go on your way down the port side getting it done? - Yes.
13833. Taking the swinging out of the last boat that you saw to on the port side, how much later would that be? - That was very late on.
13834. (*The Commissioner.*) That is what I want to know? - Well, you see, if I may give it to you in the order that I was working, I swung out No. 4 with the intention of loading all the boats from A deck, the next deck below the boat deck. I lowered No. 4 down to A deck, and gave orders for the women and children to go down to A deck to be loaded through the windows. My reason for loading the boats through the windows from A deck was that there was a coaling wire, a very strong wire running along A deck, and I thought it would be very useful to trice the boat to in case the ship got a slight list or anything; but as I was going down the ladder after giving the order, someone sung out and said the windows were up. I countermanded the order and told

the people to come back on the boat deck and instructed two or three, I think they were stewards, to find the handles and lower the windows. That left No. 4 boat hanging at A deck, so then I went on to No. 6.

13835. And was No. 6 still on the boat deck? - Yes. Then I proceeded to put out No. 6 and lower away. Previous to this, I may say I had had orders from the Commander to fill the boats with women and children, put women and children into the boats and lower away.

13836. Of course, the model we have there shows the starboard side, but the arrangement is the same for this purpose, I think, and one sees that if one took the boat immediately abaft the emergency boat, and lowered it to A deck, it would in that model come against the closed-in side? - Yes. 13837. With the windows in it? - Yes.

13838. And your idea was that those windows should be opened and the people should get from the windows into the boat from A deck? - Exactly.

13839. Then that plan was not, in fact, carried out? - No, not on the port side.

13840. For the reason you have explained? - Yes.

*The Commissioner:* I am still without the information I want.

13841. (*The Solicitor-General.*) I realise that, and I will come back to it. (*To the Witness.*) No. 4 would take some time. Then what was the next boat, so far as you are concerned, which was filled with women and children? - No. 6.

13842. And the next one? - As far as I remember, No. 8.

13843. That exhausts the boats, which are forward, on the port side? - Yes.

13844. Then did you see to the loading of any others on the port side? - I went forward - the last lifeboat for me to load on the port side was No. 4 from A deck.

13845. It got as far as that? - Yes, and it remained there.

13846. Now what I want to know is this - making the best estimate you can, can you give us some help as regards the time - either the time which had elapsed, or the time by the clock when the lowering away of No. 4 actually took place, putting it into the water? - Would it be of any assistance, if I gave you the time that the collapsible boat, the actual last boat, got away on the port side?

*The Commissioner:* Well, it might.

(A.) I can remember that distinctly - lowering it only about 10 feet.

13847. I will tell you what I want, and then perhaps you will be able to answer. You said that after the boats on the port side had been lowered the ship had no list, either to port or starboard, and that she was not down by the head. Now, I want to know at what time you observed that?

*The Solicitor-General:* What I understand him to say was that the boats were swung out before he had noticed it. I did not understand him to say that they were lowered.

*The Commissioner:* I understand him to say that it was quite a long time.

*The Solicitor-General:* Quite.

*The Commissioner:* I do not care whether they were lowered. At what time was it you noticed this ship had no list, and that it was not down by the head? - When I came on deck and commenced uncovering the boats.

*The Commissioner:* I understood you were speaking of a much later period. 13848. (*The Solicitor-General - To the Witness.*) I was asking about a later period? - I am sorry.

13849. When you came out on deck, having been aroused, the ship was on an even keel? - Yes.

13850. You had heard that the water was out up to F deck? - Yes.

13851. But you did not notice any list? - No.
