13852. How long did that state of things continue? When was it you did first notice either a list or that she was down by the head? - Very shortly, afterwards I noticed she was down by the head, when I was by No. 6 boat. When I left No. 4 and went to No. 6 she was distinctly down by the head, and I think it was while working at that boat it was noticed that she had a pretty heavy list to port.

13853. (*The Commissioner.*) This must have been within a quarter of an hour from your coming on the boat deck? - No, my Lord, it would take us a quarter of an hour or 20 minutes to get No. 4 uncovered and the falls out.

13854. But when you did get No. 4 out you noticed this list, I understand? - No, my Lord, I think I said at No. 6.

13855. Then how long would it take you to get No. 4 and No. 6 uncovered? - Well, it would take us from 15 minutes to 20 minutes to uncover No. 4; then to coil the falls down, then to swing out and lower it down to A deck would take another six or seven minutes at least. Then I gave an order to go down to the lower deck which I countermanded; perhaps two or three minutes might have elapsed there. Then I went to No. 6 about that time.

13856. How long were you working at No. 6? - I really could not say, my Lord. I went to No. 6 then, as far as I remember.

13857. At what point of these events did you notice that the ship had begun to be down by the head or to have a list? - It was when I was at No. 6 boat, my Lord.

13858. As I understand, that would be about half an hour after you had come on deck? - I think it is longer than that.

13859. Well, let us say three quarters of an hour? - Yes, perhaps three quarters of an hour.

13860. You had been half an hour in your bunk before you came on deck at all? - I said approximately half an hour.

13861. So this would be an hour or an hour and a quarter after the collision. And was it then for the first time you noticed the vessel had a list? - At whatever time that was, my Lord. However, it works out it was about when I was at boat No. 6.

13862. (*The Solicitor-General.*) What you had been doing in the interval was, you had been getting No. 4 unstripped; you had been getting her swung out, her falls cleared and let down as far as the A deck, and there you had ascertained that it was not possible to open the windows and get the people through? - Not immediately, and therefore rather than delay I did not go on with it. 13863. That is what happened? - Yes.

13864. Then turning your attention to No. 6 you then noticed the ship had got a list? - Yes, I think it was No. 6.
13865. (*The Commissioner.*) And it was a list to port? - Yes.
13866. Did you ever notice a list to starboard? - No.
13867. Was there a list to starboard? - Not that I am aware of, and I think I should have noticed it in lowering the boat. I may say that my notice was called to this list - I perhaps might not have noticed it; it was not very great - by Mr. Wilde calling out "All passengers over to the starboard side." That was an endeavour to give her a righting movement, and it was then I noticed that the ship had a list. It would have been far more noticeable on the starboard side than on the port.
13868. (*The Solicitor-General.*) Did you hear that order given when you were dealing with boat No. 6? - Yes.
13869. Now by that time you were dealing with boat No. 6, were there a number of passengers, men, women and children, on the boat deck? - Yes.
13870. And at that time when you were dealing with No. 6 had any order been given about their getting into the boats? - Yes.
13871. Who gave it, and when was it given? - The Captain gave it to me.
13872. What was the order? - After I had swung out No. 4 boat I asked the Chief Officer should we put the women and children in, and he said "No." I left the men to go ahead with their work and found the Commander, or I met him and I asked him should we put the women and children in, and the Commander said "Yes, put

#### **Page 314**

the women and children in and lower away." That was the last order I received on the ship.

13873. Was that, as you understood it, a general order for the boats? - Yes, a general order.
13874. Again, I should like to have the time fixed. Is that after these events you have described about boat No. 4? - No; previous to any swinging out, when No. 4 was almost uncovered; in fact, the canvas cover was off. They were taking the falls out and I think they were in the act of taking the strong back out, and the next movement to be executed would be swinging the boat out. So before any delay had occurred I asked the Commander, as I say, should we lower away.
13875. That means, should you put people into the boat, I suppose? - Yes. We had had orders to swing out, so the boat was in the process of being swung out.
13876. Now, we can take No. 6. You say you went to that? - Yes.
13877. You saw that boat filled, did you? - Yes.
13878. It was filled under your supervision? - Yes.
13879. Now, tell us about the way in which it was done and the orders given as to who should get into it? - As a matter of fact, I put them in myself. There were no orders. I stood with one foot on the seat just inside the gunwale of the boat, and the other foot on the ship's deck, and the women merely held out their wrist, their hand, and I took them by the wrist and hooked their arm underneath my arm.

13880. You have not told us anything yet about the preference being given to women? -  
The order had been received from the Commander.

*The Commissioner:* He has told us about the order given by the Captain. 13881.  
*(The Solicitor-General.)* I see. *(To the Witness.)* And that is the order you carried  
out? - Yes.

13882. And then was No. 6 lowered away? - No. 6 was lowered away.

13883. Was boat No. 6 filled? - It was filled with a reasonable regard to safety. I did not  
count the people going in.

13884. But you exercised your judgment about it? - Yes.

13885. It was filled as much as you thought was safe in the circumstances? - Yes. 13886.  
In your judgment is it possible to fill these lifeboats when they are hanging as full  
as you might fill them when they are water borne? - Most certainly not.

13887. *(The Commissioner.)* Is that due to the weak construction of the lifeboats or to the  
insufficiency of the falls? - A brand new fall, I daresay, would have lowered the boats  
down and carried the weight, but it would hardly be considered a seamanlike proceeding  
as far as the sailor side of it goes, but I certainly should not think that the lifeboats would  
carry it without some structural damage being done - buckling, or something like that.

13888. And had you those considerations in mind in deciding how many people should  
go in the boat? - Yes.

13888a. *(The Solicitor-General.)* The convenient thing, my Lord, is just to refer your  
Lordship to the evidence of Poingdestre. It is at page 83. It fits together here. Perhaps I  
may read a few questions, and Mr. Lightoller will hear them. It is Question 2958. He is  
asked, "Do you know how it comes that there were not more than 42 put into this boat?"  
That is boat No. 6? - Yes.

13889. And he says, "Well, the reason is that the falls would not carry any more. (Q.)  
You mean somebody was frightened of the falls? - (A.) Yes, the Second Officer,  
Mr. Lightoller." Did you say anything aloud about it? - No.

13890. It is merely a conclusion the man came to? - Yes, I daresay, a seamanlike  
conclusion.

13891. You agree as many people were put into it as, in your judgment, was safe when it  
was in that position? - Yes.

13892. We are told about 40 or 42? - Yes, about that.

13893. Then did you give the order to lower away? - Yes.

13894. Did you give any further order to that boat, No. 6, as to what it was to do or where  
it was to go? - Not that I remember. I knew there was, if I may mention it, this  
light on the port bow about two points; I had already been calling many of the  
passengers' attention to it, pointing it out to them and saying there was a ship over  
there, that probably it was a sailing ship as she did not appear to come any closer,  
and that at daylight very likely a breeze would spring up and she would come in  
and pick us up out of the boats, and generally reassuring them by pointing out the  
light; but whether I told them to pull towards the light I really could not say. I  
might have done and I might not. 13895. Here is a boat with only 42 people in it,  
and when it is water-borne everybody agrees it would safely carry more than? -  
Yes.

13896. Did you give any orders with the object of getting more people into it when it was in the water? - Yes, I see what you are alluding to now, the gangway doors. I had already sent the boatswain and 6 men or told the boatswain to go down below and take some men with him and open the gangway doors with the intention of sending the boats to the gangway doors to be filled up. So with those considerations in mind I certainly should not have sent the boats away.

13897. That is what I meant. Did you give any order or direction to the man in charge of boat No. 6 that he was to keep near or was to go to the gangway doors? - Not that I remember. The boats would naturally remain within hail.

13898. You do not recollect whether you gave any actual order to the man in charge? - No.

13899. It is just as well to read this question and answer. This man Poingdestre was asked, "Did Mr. Lightoller give you any orders as to what to do with the boat?"; and the answer was, "He gave me orders before the boat was lowered what to do. (Q.) What orders did he give you? - (A.) To lay off and stand by close to the ship"? - Perhaps I did; I daresay.

13900. Now let us pursue the two things you have mentioned. You say you gave those orders to the boatswain to go down with some men and open the gangway doors? - Yes.

13901. Will you point out on the starboard side where they are? - There are gangway doors one on each side *there* (*Pointing on the model*).

13902. About where you are pointing now? - Yes, there are two doors one above and one below on the starboard side, but there is only one on E deck on the port side. The other gangway doors are *here*.

13903. In the afterpart? - Yes.

13903a. What deck do those gangway doors open from? - E deck.

13904. Were your orders general, or did they refer to one set of gangway doors in particular? - General.

13905. Did the boatswain go off after receiving the orders? - As far as I know, he went down.

*The Commissioner:* Have we heard anything up to this time of these gangway doors.

*The Solicitor-General:* I am not aware of having heard it, my Lord. There has been a suggestion made by a witness, I think, that it was so, but I do not think there has been any evidence about it. There was a suggestion, I know.

*The Commissioner:* To open those doors?

13906. (*The Solicitor-General.*) Yes. (*To the Witness.*) Can you help us when it was that you gave this order to the boatswain? I mean, can you give it us by reference to boats. Was it before you had lowered No. 4 to the A deck or after? - I think it was after and whilst I was working at No. 6 boat.

13907. If the boat was down by the head, the opening of those doors on E deck in the forward part of the ship would open her very close to the water, would it not? -

Yes. 13908. When you gave the order, had you got in mind that the ship was

tending to go down by the head, or had not you yet noticed it? - I cannot say that I had noticed it particularly.

13909. Of course, you know now the water was rising up to E deck? - Yes, of course it was.

13910. Did the boatswain execute those orders? -

**Page 315**

That I could not say. He merely said "Aye, aye, sir," and went off.

13911. Did not you see him again? - Never.

13912. And did not you ever have any report as to whether he had executed the order? - No.

13913. I had better just put it. As far as you know, were any of those gangway doors open at any time? - That I could not say. I do not think it likely, because it is most probable the boats lying off the ship would have noticed the gangway doors, had they succeeded in opening them.

13914. You say you gave that order, as far as you recollect, when you were dealing with that boat No. 6? - Yes, boat No. 6.

*The Commissioner:* I have the reference now. It is in the evidence of Jewell on page 18, Questions 131 and 132.

*The Solicitor-General:* Yes, my Lord: "What were the orders about - what was she to do?" He speaks of Mr. Murdoch giving orders. "He" - that is, Mr. Murdoch - "told us to stand by the gangway."

*The Commissioner:* He says this door is open continually. He goes on to say this. The question is put to him - I do not know who was examining him.

*The Solicitor-General:* I was I think, my Lord.

*The Commissioner:* "Amidships, and the answer is yes. (Q.) Where the gangway would be if she were in port, I suppose? - (A.) Yes, that is right." If this witness is right, he does not seem to know where the gangway was.

*Sir Robert Finlay:* In the next question he points it out.

*The Solicitor-General:* Your Lordship asked him to go to the model.

*The Commissioner:* "Just go to the model again and show me where about on that model the waterline was, and where the gangway was, so that I may know where the boat was," and then he indicates. "There is one door *there*, and *there* is the waterline right along *here*. There are several gangway doors in the side; there is one about *there* somewhere, and one about *there*." That, of course, tells me nothing, and I do not remember where he pointed. I am told that he pointed further abaft the point indicated by Mr. Lightoller.

*The Solicitor-General:* I see Mr. Wilding here; no doubt he will tell us where, in fact, they are, if your Lordship would like it now.

13915. (*The Commissioner.*) It occurred to me that Mr. Lightoller was right, because I see the rows of portholes? - (*The Witness.*) There are the gangway doors *here* (*Pointing on the model*).

*The Commissioner:* If you look you will see the row of portholes is interrupted.

*The Solicitor-General:* Yes. Is that the place where you are pointing now, Mr. Wilding?

*Mr. Wilding:* Yes, there is a door marked there.

*The Commissioner:* Is it marked there on the model? - (*Mr. Wilding.*) Yes, my Lord, *here* (*Pointing on the model*).

13916. (*The Solicitor-General.*) As a matter of accuracy, is that open on to the floor of E deck or D deck? - E deck.

13917. (*Sir Robert Finlay.*) I am told there is also a gangway on D deck forward? - On the starboard side.

*The Commissioner:* On D deck.

*Sir Robert Finlay:* Yes.

*The Solicitor-General:* One above and one below.

*Sir Robert Finlay:* That is on the starboard side forward.

13918. (*The Commissioner.*) It appears to me that you would be very unlikely to order the forward gangway door to be opened. You might get the head so deep in the water that she might ship water through that gangway door? - Of course, my Lord, I did not take that into consideration at that time; there was not time to take all these particulars into mind. In the first place, at this time I did not think the ship was going down.

13919. I remember what you said yesterday as to what you were told when you were in your bunk that the water was up to F deck; you knew that it was a very serious state of things? - Yes, I knew it was serious.

13920. And I suppose you realised - I do not know whether you did - but I suppose you realised that the ship was taking in more and more water as you were attending to these boats? - Yes, my Lord, and yet I did not think at that time that the ship was going down.

13921. (*The Solicitor-General.*) Just to get boat No. 6 right. The Quartermaster, whose name was Hichens, was in that No. 6 boat. Your Lordship will find a reference to him at page 43; he confirms exactly, of course, what Mr. Lightoller is saying. It is Question 1089, "Who ordered you to another boat? - (A.) Mr. Lightoller. (Q.) And to what boat?" - (A.) No. 6 boat. (Q.) Is that a lifeboat on the port side? - (A.) Yes. (Q.) It would be the third on the port side from forward, would it not?" and he says it was the second or third boat to be lowered on the port side. (*To the Witness.*) I understand from you it was the second because you had lowered boat No. 4 to A deck? - Yes.

*The Commissioner:* What question is it?

13922. (*The Solicitor-General.*) I was looking at Question 1089. He says it was the second or third boat, and it appears it was really the second. "(1096) She had only been swung out ready? - (A.) That is all. (Q.) And then what happened - who was giving orders then? - (A.) Mr. Lightoller was in charge of the port side. (Q.) Did you hear any order given? - (A.) Yes, I heard the captain say 'Women and children first.'" "(Q.) 1106. How many people did you take on board? - (A.) 42, all told." (*To the Witness.*) I think a gentleman named Major Peuchen was one of them? - Yes.

13923. Did you order him into the boat? - I did.

13924. Very well. Now that is No. 6. I think that fairly gives us what you know about No. 6. There is nothing you want to add to it? - No, I do not think there is anything further to add.

13925. What is the next one that you dealt with? - Well, it was a boat further aft on the port side; its actual number I really could not say with accuracy. I am under the impression it was No. 8.

13926. Up to now, as I follow you, No. 4 has been lowered down to A deck? - Yes.

13927. That is all that has happened to it? - Yes.
13928. Just tell us in order what boat you dealt with next. It was No. 8 you think? - I think it was No. 8.
13929. (*The Solicitor-General.*) This is a boat, my Lord, about which we have not really as yet called any evidence. We have one man coming, if need be. (*To the Witness.*) Was the same course followed about No. 8? - Yes. I think, if I remember rightly, at No. 8 I left the lowering to the chief. He came along and, of course, being Senior Officer, took charge, and so I went then, I think, to No. 4 to complete the launching of No. 4. 13930. And I think you have told us it was the Chief Officer who gave this order to the passengers to go over to the starboard side? - Yes.
13931. As far as you recollect, was it you or was it he who determined how many people should go into this next boat, No. 8? - If it was No. 8 that the Chief Officer came to, I left it to him. I am afraid I cannot say with any degree of accuracy. If I was there I would decide who was to go in, and if he was there superintending he would naturally. I think it was No. 8 the Chief came to.
13932. Were there still women on the boat deck? - Yes.
13933. And was this general order that women and children should be dealt with first still observed? - Yes.
13934. Was the discipline good? - Excellent.
13935. The men passengers behaving themselves well? - Splendidly.
13936. Will you just take us to the next point after this boat No. 8. It was No. 8? - Yes. From there I went to No. 4.
13937. That is, returning? - Returning forward, down on to A deck. The windows were down. I placed some chairs against the window and formed a step, and standing outside myself, the same order was proceeded with, except that the boat was triced right close into the wire.
13938. You were able to pull it in? - Yes, and make it fast right into the wire.

## Page 316

13939. You were dealing with the boat hanging on the port side. Did you notice whether the list was serious? - It could not have been serious.
13940. Not even then? - No; because I was able to stand with one foot on the ship and one foot on the boat. Had the list been serious, the boat hanging on the davits from the boat deck down to A deck, it would have been too far away for me to stride the distance. 13941. (*The Commissioner.*) You could stride from the "Titanic" to the hanging boat? - Yes.
13942. There could have been scarcely any list at all? - Very little.
13943. No perceptible list? - Very little. I think the ship righted. When the order was given to the passengers to go to the starboard side I am under the impression that a great many went over and the ship got a righting movement and maintained it, and then the passengers came back again in great numbers.

13944. You mean to say the shifting of the passengers on the deck would affect the list?  
- Yes, my Lord. At that height, and with that number of passengers, I think it would. Mr. Wilding would be able to decide that.

13945. It would have a very small effect, would it not? - I am under the impression the fact of her being low down in the water and the stern higher out of the water it would have more effect than if she were on an even keel under ordinary circumstances. 13946. Surely it would have more effect if she were high up out of the water? - I may be wrong, my Lord, but I think it would have more effect with her head down in the water and her stern out - suspended amidships.

13947. It was so slight that you could stretch with your legs from the deck of the "Titanic" to the hanging out boat? - Yes.

13948. (*The Solicitor-General.*) Were you able to do that before the boat was drawn in and triced to the wire? - I was.

13949. Were women and children helped into No. 4? - Yes, through the windows. *The Solicitor-General:* From A deck. Boat No. 4, my Lord, is the boat in which a man named Scott and a man named Ranger ultimately got. It is the boat, if your Lordship remembers, which came back and those two men at the last moment slipped down the falls from the davits on the afterend and got into this boat, and their evidence is that there were 40 people in the boat.

*The Commissioner:* Yes, I have taken it down as 42, I think.

13950. (*The Solicitor-General.*) No, my Lord, I have finished with No. 6, which was 42, and I am now speaking of No. 4. It may be that there were 40 women and two seamen, but I am speaking of No. 4 now.

*The Witness:* May I ask when these men say they got into the boat.

13951. Yes. You did not order them in. There are two witnesses who say that at the last moment (they were two greasers) they climbed down the falls from the davits at the afterend? - The afterend of the boat deck?

13952. Yes? - Not on the falls from which the boat was hanging?

13953. No, and No. 4 had come round and picked them up. What I want to call your attention to is that there were 40 people, there or thereabouts in boat No. 4 which is a full size lifeboat. Did you decide when the boat was full enough to be lowered down? - Yes.

13954. In your judgment had you filled it as full as you safely could? - Yes. 13955. So that it was not lowered down until you gave directions that it should be? - No.

13956. (*The Solicitor-General.*) If your Lordship cares to have the reference, Scott will be found at page 130, and Ranger deals with the number on page 104. (*To the Witness.*) Now we have got rid of No. 6 and what you think was No. 8 and No. 4. What was the next one to which you directed your attention? - The collapsible boat. 13957. (*The Commissioner.*) You had ordered the gangway to be lower, as I understand? - What gangway, my Lord?

13958. The gangway in the forward part of the ship? - I had ordered the doors to be opened.

13959. Well, that is what I mean. You had ordered the gangway doors to be opened? - Yes.

13960. And the gangway to be lowered from that point? - If there were sufficient time. We had a companion ladder.
13961. I do not see what is the use of the door if you do not lower the gangway? - We should probably lower the rope ladder; that was our idea.
13962. That is the same thing as a gangway. You would provide some sort of communication between the opening of the door and the boat in the water below? - Exactly.
13963. Whether it was a gangway or a rope ladder, it does not matter. You had ordered this door to be opened? - Yes.
13964. There was no use having that open unless there was some sort of gangway? - No.
13965. Now, was that for the purpose of putting more people into the boats as soon as they become water-borne? - Yes.
13966. Was that the object? - That was the object.
13967. Now I want to ask you this question. I think you have been asked it already. Did you give any directions (I think you said you did not remember) to the boats to remain about the gangway door? - No, my Lord.
13968. You did not? - Not that I remember.
13969. You do not remember? - Not that I remember.
13970. Would they then know that those gangway doors would be open - would the men in the boat know that those gangway doors would be open? - Hanging about the ship they could not very well fail to see if the gangway doors were open - the light shining through, the blaze of lights; and they would very soon be hailed by people at the gangway doors. The boatswain was down there. He has to use a little common sense as well, and when he has opened the gangway door he would naturally hail a boat, and tell them "starboard gangway door open," "the port gangway door open," and so let them know. On a calm night like that your Lordship will know the voice will carry a long way.
13971. You put as many into No. 4 boat as you thought safe? - Yes.
13972. That was about 40. We know some of the boats carried considerably more than 40? - 65.
13973. Would the men in the boat to whom you had said, "That boat is full; lower her," know that she was capable of taking more when she became water borne? - Yes, my Lord.
13974. They would know? - They would know.
13975. (*The Solicitor-General.*) Had you given orders for these boats to remain within hail? - Not that I remember. If a man asked me going away it is quite likely that I should, but I cannot say with distinctness that I did give the order.
13976. You were calling attention to this light on your port bow? - Yes.
13977. At any rate you were calling the passengers' attention to it? - Yes.
13978. Cannot you help us. Did you or did you not give any directions to these boats which might be taken to mean that they were to row to the light? - No.
13979. Were they to go away or were they to stay by the ship? - No, I cannot remember giving the boats any directions at all.

13980. You were saying that after No. 6 and No. 8 and No. 4 you then went to one of the collapsible boats? - Yes.
13981. Which one was it? - The port collapsible boat underneath the emergency davits.
13982. That is not the one which was on the deck of the officers' house? - No. 13983. But it is the one immediately behind the emergency boat, on the port side? - Yes.
13984. Now tell us in order what you did about this collapsible boat? - The tackles were already rounded up when I got on the boat deck; we lifted the gunwale of the boat, which opens it up, hooked on the tackles, put it over the side; Mr. Wilde was there too at this time.
13985. And you were helping as well? - Yes.

### **Page 317**

13986. Did you use the rope falls that were on the davits? - Yes.
13987. At this time was the emergency boat, which was swung out on the port side, No. 2, gone? - That had gone.
13988. Had you had nothing to do with that No. 2 boat going? - Nothing.
13989. And you know nothing about that boat? - I know nothing about that boat.
13990. There would be the davits, and this collapsible boat a little way behind? - Yes.
13991. And you used the same falls, did you? - Yes.
13992. Did you get the collapsible boat swung out? - Yes, swung out and loaded up.
13993. Was it a piece of work that was easily done? - Nothing very difficult about it, except you just work your davits in. It is not difficult. It takes a little time to swing your davits in and hook on.
13994. And so you got her swung out? - Yes.
13995. And ready, I suppose, to take people into her? - Yes.
13996. Was she filled? What happened? - We had very great difficulty in filling her with women. As far as I remember she was eventually filled, but we experienced considerable difficulty. Two or three times we had to wait, and call out for women - in fact, I think on one - perhaps two - occasions, someone standing close to the boat said, "Oh, there are no more women," and with that several men commenced to climb in. Just then, or a moment afterwards, whilst they were still climbing in, someone sang out on the deck, "Here are a couple more." Naturally, I judged they were women.
13997. That meant a couple more women? - Yes, and the men got out of the boat again and put the women in. If I am quite right, I think this happened on two occasions?
13998. You say the men got out of the boat. Do you mean men passengers? - I really could not say.
13999. They gave up their places? - Yes.
14000. When that boat was filled she contained some men and some women, of course? - No men that I know of.
14001. Ultimately she was filled with women, the collapsible boat? - Yes, I believe it was a new boat, where a couple of Phillipinos or Chinese got in; they stowed away

- under the thwarts or something. But for that there were no men except crew - except the men I ordered in.
14002. Do you know how many people got into that collapsible boat? - I could not say.
14003. Did you fill her? - Yes, I filled her as full as I could.
14004. When that boat was filled ready to go away, as far as you could ascertain were there any other women thereabouts? - None whatever. I am under the impression that I could have put more in that boat and could have put some men in, but I did not feel justified in giving an order for men to get into the boat, as it was the last boat as far as I knew leaving the ship, and I thought it better to get her into the water safely with the number she had in; or, in other words, I did not want the boat to be rushed. 14005. Were there men passengers about? - There were plenty of people about, no doubt men passengers.
14006. Was good order being maintained then? - Splendid.
14007. And was there any attempt to rush that boat at all? - None whatever, but the men commenced to climb in when they heard there were no more women.
14008. You have described that, and you say they got out again? - Yes; without that there was nothing.
14009. You used an expression just now that as far as you knew it was the last boat to leave the ship. Can you tell us, had you been able to observe during all this time what was happening to the boats on the starboard side? - No, no sign of the starboard side. You cannot see across.
14010. That means you cannot tell? - No, I know nothing about the starboard side.
14011. (*The Commissioner.*) Do you mean she was the last boat to leave the ship from the port side? - The last boat launched from the port side. There was still one on the top of the quarters, but she was not launched, as a matter of fact.
14012. That was another collapsible boat on the top of the officers' quarters? - Yes.
14013. That is what you mean, that she was the last boat to leave from the port side? - Yes.
14014. (*The Solicitor-General.*) Let us exhaust that to be sure. You have spoken of four lifeboats that were in the forward part of the port side. What about the four other lifeboats which were on the afterpart of the port side - Nos. 10, 12, 14 and 16? - When I went forward to No. 4 boat all the lifeboats were away on the port side with the exception of that one. Whether the last boat that I went to was No. 8 or No. 10 I cannot say. But it is sufficient there was no further need for me on the afterend of that deck; I went forward to No. 4 and that was the last lifeboat.
14015. That means that Nos. 10, 12, 14 and 16 had gone? - Yes.
14016. Can you give us any help as to the order that the boats on the afterpart of the starboard side had gone in? - No, I know nothing whatever about it.
14017. Then your evidence as to the order of the boats is limited to the port side? - Only to the port side.
14018. You did order this collapsible boat on the port side to be lowered down from the davits? - Yes.
14019. Did you notice how far she had to drop to get to the water? - Yes.
14020. Now how far had she to drop? - Ten feet.

14021. Is that ten feet from the rail of the boat deck? - Ten feet from where that emergency boat is hanging now (pointing on the model).
14022. And there she met the water? - Yes.
14023. (*The Commissioner.*) The fore part of the ship must have been under water? - A deck was under water.
14024. And the bridge must have been under water? - Almost immediately afterwards the water came from the stairway. There is a little stairway goes down here just abaft the bridge, which goes right down *here* and comes out on *this* deck for the use of the crew only and it was almost immediately after that the water came up that stairway on to the boat deck.
14025. (*The Solicitor-General.*) When you were filling that collapsible boat and preparing it to go, had you noticed that the water was over the bows of the ship? - I could not say the bows of the ship but I could see it coming up the stairway.
14026. You noticed that? - Yes.
14027. And the other people on the boat deck could see that too? - If they looked down the stairway, yes.
14028. There was good order you say up to the last? - Splendid.
14029. (*The Solicitor-General.*) My Lord, there is a little evidence about this boat. It is a man named Lucas. Your Lordship will find Lucas begins on page 49, and the facts about it are given on page 51. Lucas says that No. 16, which was the aftermost boat on the port side, had gone, and was, of the lifeboats on that side, the last to go. Then he says at Question 1518: "(Q.) What did you do then? - (A.) I went over to the starboard side to see if there was any more boats there. There were no more boats there, so I came back, and the boat was riding off the deck then. The water was up under the bridge then. The ladies sung out there was no sailor in the boat and no plugs, so I was a sailor, and I jumped into the boat." He points to the place where it is, and says it is "a surf boat; they call them collapsible boats." Your Lordship will see in the next column, at Question 1538: "(Q.) Who got into her? - (A.) About 40 women;"

## Page 318

and then he says: "I found three men in the boat afterwards." Apparently they were the two.

*The Witness:* Hardy was one I ordered in, I remember - a steward. 14030. He says two foreign passengers? - Those were the ones I heard about afterwards.

14031. You did not know they had got in? - No, I did not.

14032. They apparently were hiding. Then as far as you knew was there no man except the sailors in any of the boats which you saw lowered? - None, with the one exception of the passenger I ordered in, Major Peuchen.

14033. You ordered him in? - Yes.

14034. That applies to Nos. 4, 6 and 8? - Whatever boats I worked at.

14035. Had you time to do anything more after you got that collapsible boat afloat? - I called for men to go up on the deck of the quarters for the collapsible boat up

- there. The afterend of the boat was underneath the funnel guy. I told them to swing the afterend up. There was no time to open her up and cut the lashings adrift. Hemming was the man with me there, and they then swung her round over the edge of the coamings to the upper deck, and then let her down on to the boat deck. That is the last I saw of her for a little while.
14036. There was no time to open her up at all? - No, the water was then on the boat deck.
14037. Can you tell us, this last one you speak of, whether there was time to open her; was she ever really cast clear of the ship? She would be lashed, of course, to something or other. Were her lashings cut away? - Her lashings would be cut away before we could get her off the side of the house and put her on the deck.
14039. That shows she was free of the ship? - Free of the ship.
- 14039a. We have to piece it out. We have some evidence about one collapsible boat, that the after-fall was cut, and it was doubtful whether the other one was cut. This boat, I understand, was never put on the falls at all? - The one I am speaking of?
14040. Yes? - No, it was not put on the falls at all.
14041. Then there would be no occasion to cut that away? - None whatever. 14042. Could you see which of the two this was, because there are two on the deck house, are not there? - One on each side, yes.
14043. Which of the two was it - which side? - The port side.
14044. That is the one you are speaking of? - Yes.
14045. You say it was pushed on to the boat deck, and the boat deck was awash? - Yes.
14046. Could you see by that time whether there was any time to get her to the falls or not? - Oh, no, no time.
14047. Then tell us your last minute or two on the ship. What did you do? - I went across to the starboard side of the officers' quarters, on the top of the officers' quarters, to see if I could do anything on the starboard side. Well, I could not.
14048. And coming over to the starboard side on the roof of the officers' quarters, could you see any other officers? - I saw the First Officer working at the falls of the starboard emergency boat, obviously with the intention of overhauling them and hooking on to the collapsible boat on their side.
14049. The other collapsible boat? - Yes.
14050. That would be Mr. Murdoch? - Yes.
14051. Were there others with him helping? - There were a number round there helping.
14052. Then what happened? - Well, she seemed to take a bit of a dive, and I just walked into the water.
14053. Had you got a lifebelt? - I had.
14054. You had better just tell us what your own experiences were. What happened to you? - Well, I was swimming out towards the head of the ship, the crow's-nest. I could see the crow's-nest. The water was intensely cold, and one's natural instinct was to try to get out of the water. I do not know whether I swam to the foremast with that idea, but of course I soon realised it was rather foolish, so I turned to swim across clear of the ship to starboard. The next thing I knew I was up against that blower on the fore part of the funnel. There is a grating.

14055. Just show us what it is? - (*The Witness pointed on the model.*) The fore part of the funnel, the same as the one on the afterpart *here*.
14056. Was it the platform? - The platform goes right down the stokehold; the one coming along shoots right down into the stokehold.
14057. You found yourself against that? - Yes, the water rushing down held me there a little while. The water was rushing down *this* blower.
14058. Did it drag you against it? - It held me against the blower.
14059. Against the mouth of it? - Yes. After a while there seemed to be a rush of air from down below, and I was blown away from it.
14060. Air coming out of the ship, as it were? - Yes.
14061. Had you been dragged below the surface? - Yes.
14062. Have you any idea, were you dragged a long way down? - It seemed a good long while; I do not suppose it was many moments, though.
14063. Then you came up to the surface? - Yes.
14064. (*The Commissioner.*) Can you swim with these lifebelts on? - There is no necessity to swim; you can paddle, they hold you high in the water.
14065. You cannot sink, I understand; but can you swim? - You can paddle along; you cannot swim because you cannot get your breast deep down in the water.
14066. You cannot swim as well with a lifebelt on as you can without? - Not nearly. I may say that I have heard since that the gymnasium instructor refused to put one on for that reason. He could swim far better and get clear of people and things without it. 14067. The man who can swim well is far better off without the lifebelt? - As far as the swimming goes, except that if you are taken below the surface it brings you up much quicker.
14068. (*The Solicitor-General.*) When you came up where did you find yourself? - I found myself alongside of the collapsible boat, which I had previously launched on the port side, the one I had thrown on to the boat deck.
14069. The one still shut up? - Yes, still shut up, bottom up.
14070. Were you able to make use of it to clamber on to it? - Not at that time. I just held on to something, a piece of rope or something, and was there for a little while, and then the forward funnel fell down. It fell within 3 or 4 inches of the boat. It lifted the boat bodily and threw her about 20 feet clear of the ship as near as I could judge.
14071. Did you notice when you came up to the surface and found this collapsible boat near you whether the whole of the ship had disappeared? - Oh, no.
14072. She had not? - No. The forward funnel was still there - all the funnels were above water.
14073. (*The Commissioner.*) When you first came up? - When I first came up. 14074. (*The Solicitor-General.*) I do not know whether you can help us at all in describing what happened to the ship. You were engaged and had other things to think about; but what did happen to the ship? Can you tell us at all? - Are you referring to the reports of the ship breaking in two?
14075. Yes? - It is utterly untrue. The ship did not and could not have broken in two.

14076. (*The Commissioner.*) If you saw it - if you saw what happened, tell us what it was? - After the funnel fell there was some little time elapsed. I do not know exactly what came or went, but the next thing I remember I was alongside this collapsible boat again, and there were about half a dozen standing on it. I climbed on it, and then turned my attention to the ship. The third if not the second funnel was still visible, certainly the third funnel was still visible. The stern was then clear of the water.

**Page 319**

14077. Which do you call the second and third? - Numbering them from forward, my Lord.

14078. The second was visible? - The third was visible - I am not sure if the second was visible, but I am certain the third was visible, and she was gradually raising her stern out of the water. Even at that time I think the propellers were clear of the water. That I will not be certain of.

14079. Had the funnel broken away? - Only the forward one.

14080. But you are not sure about the second one? - I am not sure whether that was below water or not, that I cannot say.

14081. That is what I mean. I want to know from you. Was it below water in the sense that the ship had sunk so as to immerse it in the water, or had it broken adrift? - No, the second funnel was immersed.

14082. It appears to me, looking at that model, that if that was so the stern must have been very well up in the air? - Well, I daresay it was, my Lord; it would be.

14083. And the propellers all visible? - Yes, clear of the water. That is my impression.

14084. (*The Solicitor-General.*) When you say the third funnel was visible I understand you to mean part of it? - Yes, some part of the funnel. As a matter of fact, I am rather under the impression that the whole of the third funnel was visible.

*The Commissioner:* Is it possible to turn that model so that we could see what the position of the ship would be?

*The Solicitor-General:* I understand it cannot be tipped in that way.

14084a. (*The Commissioner.*) It seems to me the ship would be almost perpendicular? - She did eventually attain the absolutely perpendicular.

*The Solicitor-General:* Perhaps this profile will help you. (*Handing the same to the Witness.*)

14085. (*The Commissioner.*) Just take that, and turn that little wooden model into the position. Now the book you have here represents the waterline? - Yes. (*The Witness indicated the position with the small profile model.*)

14086. And that is the position? - Yes, somewhere about that. I cannot say exactly whether the third funnel was clear of the water or not. I am under the impression that was the position. I noticed the ship was quite at *that* angle. (*Describing.*)

14087. (*The Solicitor-General.*) Would you indicate with your other hand whereabouts you are when you are looking at it? - Here. (*Pointing.*)

14088. You are somewhat about *there*? - Somewhere about *here*.

14089. (*The Commissioner.*) You are, in fact, on a level with the top of No. 2 funnel? - About that, my Lord.

14090. (*The Solicitor-General.*) As you looked at it then, could you tell us whether there were any lights burning on the part that was not submerged? - I do not think so.

14090a. Your recollection is that there were not? - Yes.

14091. (*The Commissioner.*) When the ship reached that point that you have just described, were many people thrown into the water? - That I could not say, my Lord. 14092. (*The Solicitor-General.*) Did you continue watching the afterpart sufficiently to be able to tell us whether the afterpart settled on the water at all? - It did not settle on the water.

14093. You are confident it did not? - Perfectly certain.

*The Solicitor-General:* Your Lordship knows a lot of witnesses have said their impression was the afterpart settled on the water.

14094. (*The Commissioner.*) I have heard that over and over again. (*To the Witness.*) That you say is not true? - That is not true, my Lord. I was watching her keenly the whole time.

*The Commissioner:* I had a difficulty in realising how it could possibly be that the afterpart of the ship righted itself for a moment.

*The Solicitor-General:* Your Lordship may remember, perhaps, that the baker, who was on the ship at this moment we are now dealing with, and was climbing aft, said he heard the rending of metal - of metal breaking.

*The Commissioner:* Yes, he was the man who got to the poop.

14095. (*The Solicitor-General.*) Yes, he climbed right aft; at this moment he would be on the poop. (*To the Witness.*) Your evidence is that the ship remained stiff? - Yes.

14096. Now just carry it on, did you continue watching her until she disappeared? - I did.

14097. Just tell us what happened, as you saw it? - After she reached an angle of 50 or 60 degrees, or something about that, there was this rumbling sound, which I attributed to the boilers leaving their beds and crushing down on or through the bulkheads. The ship at that time was becoming more perpendicular, until finally she attained the absolute perpendicular - somewhere about *that* position (*describing*), and then went slowly down. She went down very slowly until the end, and then, after she got so far (*describing*), the afterpart of the second cabin deck, she, of course, went down much quicker.

14098. You have spoken of these rumblings which you heard, which you attributed to the boilers losing their places. Did you hear anything which you would call an explosion? - No. The only thing that I should attribute to explosions - which might have been attributed to explosions - was when I was, in the first place, sucked to the blower, and, in the second place, just shortly before the forward funnel falling, there was an up-rush of certainly warm water, but whether it was caused by an explosion or what, I could not say.

14099. Of course, if you were under water at that time you were not in a very good position to hear it? - No.

*The Commissioner:* I do not know what the explanation of this supposed explosion is. What was it that exploded?

14100. (*The Solicitor-General.*) What would you say, Mr. Lightoller? - It was either the cold water reaching the boilers, if boilers do not explode under those circumstances, which is quite an open question. Some say they do and a great many capable men certainly say they do not explode. If her boilers did not explode it was not from that, and must have been the rush of imprisoned air; and the heat would be caused merely through its coming from the stokehold.
14101. (*The Solicitor-General.*) One of the other officers has some information to give your Lordship. (*To the Witness.*) That was how it struck you and how you saw it at the time? - Yes.
14102. You say you saw some six people who had got to this collapsible boat. Were they men? - Yes.
14103. I think you said they were standing on it? - As far as I remember yes, standing or kneeling.
14104. What happened to you? - I climbed on to it.
14105. Then just tell us what was the course of events after that from your point of view? - There were several people in the water round about us who struggled towards the boat and swarmed towards the boat and got on to it during the night occasionally. Of course we could not paddle that boat about; it was absolutely water-logged.
14106. I suppose it was shut up in the sort of sense that that little profile which is in your hand is shut up? - Yes, just upside down like *that* bottom up (*describing*). Do you mean she was shut up like that?
14107. Yes? - No, she is a flat boat like *that*. She consists of the shape of the boat and two bottoms divided into compartments which contain air. When the boat is turned over it is quite flat on the surface of the water.
14108. Like a raft? - Exactly.
14109. There are six and you yourself were there and others got to it? - Yes, as far as I know during the night. I did not count them. It was merely an estimate from other people.
- There were nearly 28 or 30 people on this raft in the morning.
14110. (*The Commissioner.*) Do not you know how many were taken off to the "Carpathia"? - No, my Lord, I do not. We were taken into a lifeboat before we went on board the "Carpathia."

## Page 320

14111. (*The Solicitor-General.*) That is between the going down of the "Titanic" and dawn? - Yes.
14112. (*The Commissioner.*) When were you taken off this collapsible boat? - Just at daybreak.
14113. By what boat? - I do not know the number.
14114. Were you all taken by one boat? - Yes.
14115. And how many were in the boat that took you off when you got on board? - I counted those myself; standing in the stern I counted 65 heads.

14116. That included those that had been taken from the collapsible? - Including those taken off that boat, 65 heads. I could not myself see anyone who sat in the bottom of the boat. I judge there were at least 75 in the boat.

14117. Which boat are you talking of? - The lifeboat; I do not know the number.

14118. (*The Solicitor-General.*) I have the evidence of the chief baker, a man named Joughin, who kept afloat in the water till dawn and he had told us at dawn he saw an upturned boat and made his way to it, and I think someone gave him a hand and kept him up in the water for some time. Is that the collapsible boat you are speaking of? - I do not remember his being there.

14119. (*The Commissioner.*) How many were on this collapsible boat when you were transferred to the lifeboat? - I did not count them, my Lord, but I have been given to understand since from the men who saw it and the men on the raft, that there were 28 or 30 on there.

14120. And then when you got into the lifeboat, the total number then on the lifeboat when you were added to those that were already there was 75? - 75.

14121. So there would have been about 45 on this lifeboat when you approached her or when she approached you - that is right? - Yes. I may say there were two lifeboats approached us.

14122. Did not you all get into one? - We all got into one. This being the lighter one of the two, I chose it.

14123. You all got into her? - Yes.

14124. (*The Solicitor-General.*) According to your figures about 45 people were on that lifeboat when you were taken off and put on board her? - If the figures that there were 28 or 30 on the raft were correct. I do not vouch for those.

*The Solicitor-General:* May I give your Lordship the reference. Joughin, on page 142 tells you what his view is of this boat.

*The Commissioner:* That is the baker.

*The Solicitor-General:* Yes. At Question 6085 he says, "Just as it was breaking daylight I saw what I thought was some wreckage, and I started to swim towards it slowly. When I got near enough I found it was a collapsible not properly upturned, but on its side, with an officer and I should say about 20 or 25 men standing on the top of it. (*The Commissioner.*) With an officer and what? - (A.) I should say roughly about 25 men standing on the top - well on the side, not on the top. (*The Solicitor-General.*) Do you know which officer it was? - (A.) Yes, Mr. Lightoller. (Q.) Mr. Lightoller and you think about 20 or 25 people? - (A.) Yes. (*The Commissioner.*) Men, he said. (*The Solicitor-General.*) Yes, men, my Lord? - (A.) Yes, all men."

14125. I daresay you will remember he said there was not room for him, and somebody recognised him. I think one of the cooks was on it, and held out his hand and helped to keep him afloat for a bit, and later on there was a lifeboat which approached and according to Joughin called out that there was room for 10 people. Do you remember that? - No.

14126. (*The Solicitor-General.*) Your Lordship sees Question 6106, "They got within about 50 yards and they sung out that they could only take 10. So I said this to Maynard,

‘Let go my hand,’ and I swam to meet it, so that I would be one of the 10” - The only reference to numbers was this; when I saw the boats I could faintly distinguish them. I had my whistle in my pocket. I whistled by way of showing it was an officer that was calling, and I asked them if they could take some of us on board, and I said if they could manage to take half-a-dozen - because we were sinking then - it would lighten us up so that we could continue afloat. That was the only reference to numbers I heard.

14127. I understand you cannot actually give us the number of the boat which this was? - No, I never inquired.

14128. Were you transferred to her, and did you take command of her? - I did.

14129. I think I can identify it, my Lord. It must have been boat No. 14, because your Lordship will find that a man named Scarrott has given evidence on page 26. I am not quite sure. (*To the Witness.*) On this upturned collapsible boat, when the morning came and the lifeboat appeared, had any women got on to it at all? - None.

14130. You are sure about that? - Quite.

14131. Then I am afraid I am wrong about it. It must have been the other one.

*The Commissioner:* The reference to page 26 is not right?

14132. (*The Solicitor-General.*) No, my Lord, I am sorry. (*To the Witness.*) Could not you give us the name of anybody who was on board the lifeboat that you were transferred to and took charge of. You see, we want to trace it out? - Oh, yes, Bride was on board, the Marconi operator, of course; that is the boat that Phillips was on. There were two or three died during the night.

14133. (*The Solicitor-General.*) I think I can get at it, my Lord. (*To the Witness.*) Did you ascertain that the lifeboat that helped you had already got some people from another collapsible? - No, I do not think that was the boat; it was one of the later boats to be taken on board the “Carpathia,” and therefore would be one of those that was turned adrift. It was the last boat to get to the “Carpathia,” as a matter of fact, I think.

14134. Sooner than occupy more time about it now I will have it looked at, and we will try to work it out. If I may say so, the distribution of people in boats and what they did after the calamity does not appear to be very important.

*The Commissioner:* No.

14135. (*The Solicitor-General.*) It is important what happened to the boats before the calamity. We will leave it, Mr. Lightoller, and try to work it out. There are just one or two general things we want to know. Can you help us at all about this. There were third class passengers who, in the ordinary course of things would not use that boat deck at all. Now, as far as you saw, was anything done to help those third class people to get a fair chance. What happened? - I am not in a position to say what was done, because I never went to a place that would justify me in saying whether anything was or was not done. There is merely the fact that I know there were plenty of third class passengers on the deck, and third class women that I helped in.

14136. You are sure of that? - Oh, I am quite sure - great numbers of them. I naturally noticed - I could pretty well distinguish.

*The Commissioner:* I suppose, Sir John, there are actual records of the numbers saved, about which there can be no doubt?

*The Solicitor-General:* Yes, my Lord; the Attorney-General gave the figures.

*The Commissioner:* I know in his opening he did, and I suppose they will be proved.

*The Solicitor-General:* They can be proved.

*The Commissioner:* The observation is that the percentage of third class passengers saved is much smaller than the percentage of first class passengers?

*The Solicitor-General:* Yes.

*The Commissioner:* There is no doubt about that, apparently, if the Attorney-General's figures were right.

14137. (*The Solicitor-General.*) That is the position, yes. (*To the Witness.*) There are two or three things one wants to ask about - those lights which you saw. You have told me about seeing a light and calling the passengers' attention to it? - Yes.

14138. Now how did it bear? - A white light about two points on the port bow; whether it was one or two lights I could not say. As to whether it was a masthead light or a stern light, I could

## Page 321

not say. I was perfectly sure it was a light attached to a vessel, whether a steamship or a sailing ship I could not say. I could not distinguish any other coloured lights, but merely it was a white light, distinct and plain.

14139. Do you know whether your ship was swinging? - I do not know.

14140. (*The Commissioner.*) Can you form any estimate of the distance of the light from the "Titanic"? - Yes, my Lord; certainly not over 5 miles away.

14141. Was there any field ice or pack ice about the "Titanic" about this time, anything that could be seen anywhere? - No, my Lord.

14142. Then there was nothing to prevent a vessel, as far as you could see, coming to the "Titanic"? - Not as far as I could see. You are speaking of the nighttime? 14143.

I am speaking of the time when you saw this light? - Yes, my Lord. 14144. (*The Solicitor-General.*) How soon did you observe the light? - I think it was when I was working at No. 6 or 8 boat - No. 6 boat, I should say, when I was helping the people into No. 6 boat.

14145. Did you observe it yourself, or was your attention called to it? - No, I noticed it.

14146. And, as you said, you called attention to it? - Yes.

14147. Other people saw it, too, I suppose. Did you continue to see it when you looked from that time forward until the ship went down, or did it disappear? - I cannot say how long I noticed it. I saw it perhaps half an hour, probably about half an hour. I can recollect seeing it for about half an hour.

14148. Have you any recollection of thinking that it had disappeared? - No.

*The Commissioner:* Are you going to ask him about the rockets.

14149. (*The Solicitor-General.*) Yes, my Lord, I am going to ask him about that now. (*To the Witness.*) Throughout the time that you saw this light, as far as you can judge, did it remain stationary, or did it move at all? - Perfectly stationary as far as I can

- recollect. 14150. Now, then, about signals from your boat. You have rockets on board, have you not? Were they fired? - You quite understand they are termed rockets, but they are actually distress signals; they do not leave a trail of fire.
14151. Distress signals? - Yes. I just mention that, not to confuse them with the old rockets, which leave a trail of fire.
14152. Those are distress signals? - Actual distress signals.
14153. What sort of light do they show? - A shell bursts at a great height in the air, throwing out a great number of stars.
14154. What is the colour? - Principally white, almost white.
14155. How are they discharged; are they discharged from a socket? - In the first place, the charge is no more and no less than what you would use in a 12-pounder or something like that. In the rail is a gunmetal socket. In the base of this cartridge, you may call it, is a black powder charge. The hole down through the centre of the remainder is blocked up with a peg. You insert the cartridge in this socket; a brass detonator, which reaches from the top of the signal into the charge at the base, is then inserted in this hole. There is a wire running through this detonator, and the pulling of this wire fires that, and that, in turn, fires the charge at the base of the cartridge. That, exploding, throws the shell to a height of several hundred feet, which is nothing more or less than a time shell and explodes by time in the air.
14156. Had you yourself anything to do with sending up these distress signals? - No, my Lord.
14157. Did you hear any order given about them? - No.
14158. You merely saw they were being sent up? - Yes.
14159. I think it was Mr. Boxhall, who is here, who had something to do with sending them up? - I believe so.
14160. Did you notice at all how many were sent up or at what intervals? - I should roughly estimate somewhere about eight at intervals of a few minutes - five or six minutes, or something like that.
14161. One at a time? - Yes, all fired from the starboard side, as far as I know.
14162. You had a Morse apparatus on your ship? - One on each side.
14163. For sending signals by flash? - Exactly.
14164. Was that made use of? - It was on the port side.
14165. The side you were on? - Yes.
14166. Who did that? You did not do that? - No.
14167. Was the Morse signalling at the same time as the rockets or earlier or later? - I really could not say whether it was during the signalling or after.
14168. Have you been in a ship where distress signals have been used before? Do you know their use? - Yes.
14169. Are there signals of a definite kind and appearance that are known as distress signals? - Yes, there is no ship allowed on the high seas to fire a rocket or anything resembling a rocket unless she requires assistance.
14170. If you had seen signals like those sent up from another ship would you have known for certain what they were? - I have seen them and known immediately.

14171. We have heard something about companies' signals. Do they resemble these at all? - In no way, to my knowledge.
14172. Would you have any difficulty in distinguishing one from the other? - I never have had.
14173. I think you told my Lord as far as you could see there was no ice at this time within range of sight? - No.
14174. When the dawn broke in the morning was there ice about then? - There were several icebergs scattered about.
14175. (*The Commissioner.*) But anything in the nature of pack ice? - Not that we saw then.
14176. (*The Solicitor-General.*) Did you see anything of the sort you call "growlers"? - No.
14177. What you saw were bergs then? - Bergs.
14178. What sort of distance did you see them off? - I should say the nearest must have been at least 10 miles away. That is a pretty rough estimate. I cannot say with any degree of accuracy now what the nearest was, it may have been less.
14179. What sort of height would you judge? - They ranged from a matter of 50 or 60 feet to perhaps 200 or 300 feet.
14180. There is one other matter. The Commander uses a megaphone, of course - a speaking trumpet? - Yes.
14181. After these boats had been launched and left the side [of the] ship, did you hear any orders or call given to any of them? - Yes.
14182. By whom? - By the Commander.
14183. Through the megaphone? - Yes.
14184. Did that happen more than once? - More than once, yes.
14185. What was the order? - To come back.
14186. Was he hailing any particular boats? - No. I heard the Commander two or three times hail through the megaphone to bring the boats alongside, and I presumed he was alluding to the gangway doors, giving orders to the boats to go to the gangway doors. 14187. (*The Commissioner.*) When was this? - During the time I was launching the boats on the port side, I could not give you any definite time.
14188. (*The Solicitor-General.*) You heard the orders given and you heard the orders repeated; could you gather at the time whether they were being obeyed or not? - No.
14189. You did not know one way or the other? - I did not know anything at all about it.
14190. I think that exhausts what I want about the actual incident? - May I say one thing, Sir, which I forgot yesterday?
14191. Do? - You were questioning me with regard to speed and asking had the Commander mentioned anything about speed. I have since recollected one particular instance if it does bear on the case at all. The Commander mentioned

**Page 322**

the fact and said: "If it does come on in the slightest degree hazy we shall have to go very slow." That was when he came on the bridge from 9 to half-past, when we were talking.

You were particularly asking if there was any reference to speed. That was the only one. 14192. You have told us already that as far as your watch is concerned, it remained perfectly clear? - Yes.

14193. Mr. Murdoch unfortunately has lost his life and some of the others, and you had better just tell us - did you hear after the accident in the course of that hour and a half or two hours from any of your superiors any information at all about how they did come to run into this iceberg? - None whatever.

14194. No reference to what the weather had been after 10 o'clock? - No. The weather was perfectly clear when I came on deck after the accident, and the slightest degree of haze on the surface of the water would have been very noticeable, or, rather, I might put it the other way; it is proved that there was no haze by some of the boats noticing from the waterline this vessel's lights. I think that has been mentioned, and if there had been the slightest degree of haze they would not have seen them.

14195. As far as you saw, did you see any change in the weather conditions at all while you were working, helping to get these boats out? - Absolutely none.

14196. Right up to the time the ship went down is it your view that the conditions were the same as they were between 6 and 10? - Precisely.

14197. Can you suggest at all how it can have come about that this iceberg should not have been seen at a greater distance? - It is very difficult indeed to come to any conclusion. Of course, we know now the extraordinary combination of circumstances that existed at that time which you would not meet again once in 100 years; that they should all have existed just on that particular night shows, of course, that everything was against us.

14198. (*The Commissioner.*) When you make a general statement of that kind I want you to particularise: What were the circumstances? - I was going to give them, my Lord. In the first place, there was no moon.

14199. That is frequently the case? - Very - I daresay it had been the last quarter or the first quarter. Then there was no wind, not the slightest breath of air. And most particular of all in my estimation is the fact, a most extraordinary circumstance, that there was not any swell. Had there been the slightest degree of swell I have no doubt that berg would have been seen in plenty of time to clear it.

14200. Wait a minute: No moon, no wind, no swell? - The moon we knew of, the wind we knew of, but the absence of swell we did not know of. You naturally conclude that you do not meet with a sea like it was, like a table top or a floor, a most extraordinary circumstance, and I guarantee that 99 men out of 100 could never call to mind actual proof of there having been such an absolutely smooth sea.

14201. But the swell got up later on? - Yes, almost immediately; after I was in the water I had not been on the raft, the upturned boat, more than half an hour or so before a slight swell was distinctly noticeable.

14202. We hear of one lady having been very sea-sick? - In the morning there was quite a breeze and we maintained our equilibrium with the greatest difficulty when the rough sea came towards us, and before we got the lifeboat alongside the "Carpathia" - I am pretty familiar with boats.

14203. Do not let me interrupt you; you were going to particularise the circumstances which you say combined to bring about this calamity. There was no moon, no wind, and

no swell; is there anything else? - The berg into which we must have run in my estimation must have been a berg which had very shortly before capsized, and that would leave most of it above the water practically black ice.

14204. You think so? - I think so, or it must have been a berg broken from a glacier with the blue side towards us, but even in that case, had it been a glacier there would still have been the white outline that Captain Smith spoke about, with a white outline against, no matter how dark a sky, providing the stars are out and distinctly visible, you ought to pick it out in quite sufficient time to clear it at any time. That is to say, providing the stars are out and providing it is not cloudy. You must remember that all the stars were out and there was not a cloud in the sky, so that at any rate there was bound to be a certain amount of reflected light. Had it been field ice, had we been approaching field ice, of more or less extent, looking down upon it it would have been very visible. You would have been able to see that field ice five miles away, I should think. Had it been a normal iceberg with three sides and the top white with just a glimpse of any of the white sides they would have shown sufficient reflected light to have been noticeable a mile and a half or two miles distant. The only way in which I can account for it is that this was probably a berg which had overturned as they most frequently do, which had split and broken adrift; a berg will split into different divisions, into halves perhaps, and then it becomes top-heavy, and at the same time as it splits you have what are often spoken of as explosions and the berg will topple over. That brings most of the part that has been in the water above the water.

14205. Is there any other circumstance you wish to point out? - No, I think that is all.

14206. Just let us put that together. It is dark, in the sense that there is no moon, with a bright, starlight sky perfectly clear, but there is no wind or swell, and if there had been there would have been some motion of the water against the bottom iceberg, which would have been noticeable? - Yes.

14207. The iceberg, in your opinion, had probably quite recently turned turtle? - Yes.

14208. And was displaying black ice with nothing white about it - that is it, is it not? - That is about it.

14209. Does that, in your opinion, account for the man on the look-out not seeing the iceberg? - Yes.

14210. Can you suggest what steps ought to be taken, or can be taken, to avoid the recurrence of such a calamity? - I believe there are several.

14211. Let me put my question in another way? - I understand your Lordship. 14212.

But I will put it in another way - could you suggest any means that can be taken to enable the look-out man to see an iceberg of such a kind under such circumstances? - It has been proposed to put searchlights on, but until we have practical experience with searchlights, I should be very loth to pass an opinion upon that.

14213. Is there anything else you can suggest? - No, I do not think so, my Lord. 14214.

(*The Solicitor-General.*) Supposing a ship, in these circumstances, did not go so fast through the water, would that make it less likely that these conditions would produce so serious an accident? - Of course, if the ship was going slowly, the impact would be less.

14215. (*The Commissioner.*) If the ship had been doing what the "Californian" was doing, dead stopped, no calamity would have happened? - No; had we seen the ice pack

before we got into contact with the berg, or if we had seen one of the bigger bergs, or anything except just happening to find that one particular berg.

14216. (*The Solicitor-General.*) We have had the evidence of the look-out man, you know, and the look-out man says that "it was a dark mass that came through the haze, and there was no white appearing until it was close alongside the ship, and that was just a fringe at the top." If an iceberg such as you have described has a black side and a white side, it is just as likely that the black side is towards the ship as the other side? - No; you see three sides and the top will be white and there is only one side black. If you take the end of a glacier which is protruding out of a valley, or whatever it is, there are the two sides at the front and the top that are crystallised, and

### **Page 323**

when it comes over the edge and breaks off short there is only this part at the back where it is broken away from the parent glacier which is black.

14217. Do you mean that from whatever point you approached such an iceberg you ought to be able to see something white about it at a distance? - Yes.

14218. (*The Commissioner.*) There is another question I want to ask you. The crow's nest man said that the berg appeared to come, as it were, out of the haze. Is it possible that in the circumstances you have mentioned an iceberg might produce on the eyesight of these men the effect of a haze? - It ought not to.

*The Solicitor-General:* I think I have asked what I wanted. It will save confusion perhaps if I tell your Lordship and tell the witness now that Mr. Boxhall, who roused him, sent me a note to say that although no doubt the witness is quite right in saying that he (*Mr. Boxhall.*) had said that water was up to the F deck, what Mr. Boxhall meant to convey whatever he said was that it was up to the G deck. When Mr. Boxhall comes he will tell us, but it will save confusion if we have that in mind.

*The Commissioner:* Very well; that is quite sufficient.

### **Examined by Mr. SCANLAN.**

14219. You are the senior officer of all the officers who have survived the "Titanic" disaster? - Yes.

14220. I want to ask you one question about the construction of the boat from the point of view of filling the lifeboats. Your Lordship asked if this had been referred to in the evidence before, and I may point out that it is referred to at page 208 in the evidence of James Henry Moore, who was the captain of the "Mount Temple," at the foot of the second column of page 208, Question 9303 onwards to the end of that column.

*The Commissioner:* Yes, I have read that.

14221. (*Mr. Scanlan - To the Witness.*) Did you know that it was intended, if the lifeboats were required to be used, that the boats might be filled with the crew, might take their crew, on the A deck and be lowered into the water and then filled from those gangway doors on E deck? - I do not quite follow you.

14222. Let me put this to you: You said that you ordered the gangway doors on E deck to be opened? - Yes.

14223. For what purpose? - Naturally for putting the passengers into the boat. 14224. I want you to explain to my Lord how you would put the passengers into the boat from the gangway doors? - Most probably by what we term a pilot ladder - a rope ladder. The men would be able to climb down the rope ladder.

14225. Had you such a rope ladder in readiness? - Oh, yes, plenty in the ship.

14226. For that purpose? - Yes.

14227. I think, just towards the end of your evidence, you stated to my learned friend that the Captain had ordered the boats through the megaphone to "Come to," that is, to come along the ship's side, and you said that his object was no doubt to get them near these gangway doors? - I think I said if I remember rightly that probably that may have been his object with reference to the gangway doors. He did not know about my order about the gangway doors.

14228. Had you understood between you and the Captain, that this was one way of filling the lifeboats in the event of the lifeboats being required? - I had not discussed the matter with the Captain.

14229. How was it that it occurred to you and to the Captain at the same time? - I do not know that it occurred at the same time.

14230. But it did occur to both of you? - It came to both our minds and naturally anyone familiar with the ship, any seaman, any one attached to the ship, would know at once that was the best means of putting the people into the boat - by the gangway doors. 14231. Is that a better means of putting people into a lifeboat - a safer means I mean - than having the boat filled on the boat deck 70 feet above the water and then lowered down? - Do you mean filled to her utmost capacity?

14232. Yes. - Yes, it is far better to get the boat water borne.

14233. If a boat is filled to its utmost capacity on the boat deck there is a possibility of two dangers, either the falls may prove insufficient or the boat may buckle and break. I think that is the effect of your evidence? - That is right.

14234. Is it a practicable way of filling a lifeboat in any kind of sea and weather conditions to lower her into the water practically empty and then fill her from those gangway doors? - Oh yes.

14235. You do not see any greater difficulty in filling her from those gangways doors in rough weather than in lowering her from the boat deck? - In rough weather I am afraid that boating altogether is a pretty big problem, more than we could discuss here. There are so many things before that to be taken into consideration.

14236. I know, but it is just because of your vast experience - you hold a master's certificate and an extra master's certificate, and I recognise your knowledge and experience - that I want you to give us the benefit of your experience. In rough weather would it be safer to fill the boats from the lower part of the ship than from the boat deck? - You have put a very difficult question before me, you know, and it has nothing to do with this.

*The Commissioner:* It would depend very much on the particular circumstances, Mr. Scanlan. For instance, the first question is the size of the vessel and that would make a very great difference.

*The Witness:* It depends upon the size of the vessel and many thousand things. *Mr.*

*Scanlan:* On that, my Lord, may I suggest that if a boat is lowered into the water then, supposing it is inconvenient to fill in your passengers from one side, you might take your boat round to the other side, having a sufficient crew.

*The Commissioner:* All I mean is this: It occurs to me that to discuss a problematical case when we have not, and cannot have, the particular circumstances that apply to it is not of very much use. *Mr. Scanlan:* Yes, my Lord.

*The Commissioner:* Unless you see a good reason for it I would very much rather listen to your examination upon the circumstances of this particular case. I think it would be of more use to the Court.

*Mr. Scanlan:* Yes, my Lord; as I have been instructed on this point I think it only right that I should bring it under your Lordship's notice.

*The Commissioner:* If you think differently, I do not want to interfere with you, but I am telling you that, to my mind, it is not of much value to discuss a problematical case when we cannot have the circumstances that would affect it.

*The Witness:* I would willingly give you an answer only I must say that it is a very big question you are opening up.

*Mr. Scanlan:* If I may say so, my Lord, I submit this question is involved in the questions submitted to the Court by the Board of Trade.

*The Commissioner:* I think very likely it is; I can tell you how it appears to me that it might be of importance. The question must arise at some time as to the value of lifeboats, and lifeboats are worked, or intended to be worked, in rough weather as well as in smooth weather, and we may have to consider it; but, at the same time, I do not think that examining this gentleman about the conduct of lifeboats under particular circumstances, which are problematical, would help us very much. You might ask him generally whether lifeboats are of value in a rough sea, and I should be obliged if you would ask him that question because I think it would be of use.

14237. (*Mr. Scanlan - To the Witness.*) Of course, on the night of this unfortunate disaster, you had ideal conditions for filling and manning and getting off the lifeboats? - Yes.

## **Page 324**

14238. But take your mind to another possible set of circumstances, a rough sea and rough weather, you would still, I assume, make an attempt to utilise your lifeboats in the event of a disaster happening? - Yes.

14239. What complement of a crew would be necessary to man your lifeboats in rough weather? - There, you see, you compel me to put a question to you: You would have to define rough weather, and there is the Beaufort scale nought to twelve with breezes alone, so that we would have to come to some definite understanding as to what is meant by rough weather.

14240. I will give you anything you wish; there is no use your asking me a question, but assume that the weather was rough? - Do you mean the worst conditions for a lifeboat?

14241. Yes. - When it is possible to launch it from the davits?

14242. Yes. - Would it be better to load from the doors or from the davits?

14243. No, just what you would do with your lifeboats in the roughest weather.

*The Commissioner:* The roughest weather? I doubt if you could do it.

*The Witness:* We could not get them out at all then.

14244. (*Mr. Scanlan.*) Perhaps that is so, my Lord? - You mean the roughest weather that a lifeboat would live in?

14245. Yes. - In the roughest weather a lifeboat would live in, it is extremely doubtful whether you would get them away from the ship, because you must remember there is the motion of the ship and there again you bring up another question, the size of the ship; the motion of the ship would be totally different in a larger or a smaller ship. Then you bring up the question of the height. I am sorry but you are bound to take all these things into consideration.

14246. Quite so. Would you answer this question. In rough weather, as rough as a lifeboat could live in, how would you proceed in lowering and manning and filling your boat? - With passengers?

Yes - say a ship like the "Titanic."

14247. (*The Commissioner.*) This question raises another difficulty in my mind. You say "In the roughest weather in which a lifeboat could live." (*To the Witness.*) Now can a lifeboat be launched in such weather? - No, my Lord.

*The Commissioner:* When she once gets to the water it may be very rough indeed and yet she will be able to live, but she might not be able to be launched. Launching and living are very different things.

14248. (*Mr. Scanlan.*) Perhaps, my Lord, we will be able to get down to a state of comparative roughness, when it is not only possible for a lifeboat to live, but also to be launched. I think I have made myself plain at last.

*The Witness:* Yes.

14249. Thank you. What would you do under these circumstances?

*The Commissioner:* That is quite intelligible.

*The Witness:* Do you wish me to take the ship into consideration?

14250. (*The Commissioner.*) The question as I follow it is this - assuming such weather bad but still such weather that you can launch a boat and such weather that the boat when launched will live, where would you load her? - The "Titanic," or any ship?

14251. (*Mr. Scanlan.*) Any ship - take the "Titanic" for example? - Again I am sorry, but I must ask do you mean men and women or men alone?

14252. Men and women? - Of course it would be better to get the women in from the decks undoubtedly if you could. The men, of course, are handier to jump; you might be able to launch the boat alongside the gangway doors, but it would need pretty smart seamanship to hold her there in this rough weather you speak of. It is quite possible, and is frequently done, not under these circumstances, but, for instance, the pilot leaving; you know how very frequent it is for the pilot to leave and board in rough weather. He is a seaman, and watches his chance and jumps. There is a right time to jump. There are seamen there who know the right time to

- jump. They must be there to see that the passengers jump at that moment. Is that what you wish me to say?
14253. You have gone a little in that direction, but you say that you would get in the women passengers on the boat deck and you would get the male passengers in from the gangways on the lower deck? - I must say yes; I cannot tie myself of course. *The Commissioner:* Now, Mr. Scanlan, I want to know whether he would get them from the gangway to the boat by means of a ladder or by means of jumping?
14254. (*Mr. Scanlan - To the Witness.*) Tell my Lord how you would get them into the boat from the gangway doors? - Depending on the height, if the boat rose with the sea, if the sea was so rough bringing the gunwale of the boat fairly close to the level of the gangway doors let them jump; keep a clear space in the stern sheets and let them jump into the stern sheets with a couple of men there to catch and steady them as they come into the boat. If the sea is not high enough then I would use a rope-ladder and let them come down the rope-ladder. You could have a couple of ladders hanging over the side and tell the men when to jump. Have a rope round them, and let the seamen be hanging on to them so that they cannot let go until you think it desirable for them to jump into the boat. You would have to be guided absolutely by circumstances.
14255. Under such circumstances what complement of a crew would you desire to have in any of these lifeboats? - To handle her alongside the ship; is that what you mean? 14256. To handle her alongside the ship and at sea afterwards if necessary? - There is very little handling to be done in a rough sea; you would ride with a sea anchor. 14257. The question I ask is, how many of a crew would you desire to have? - Say four. 14258. There would be four able seamen? - Four men generally useful in a boat, with a fair knowledge of boating.
14259. You think four would be sufficient? - I would handle any of these lifeboats with four men.
14260. Would you require four experienced men? - Not necessarily experienced men - men who have a fair knowledge of boats, who know one end of the oar from another, and know which end of the sail goes up.
14261. You would not expect to get such men from amongst the stokers, would you? - Why not?
14262. Would you? - Yes.
14263. You would not require to have these four men ordinary seamen, deckhands? - No, not at all.
14264. But they would require to be skilled in the management of lifeboats or boats? - Not necessarily skilled; they want to be skilled in doing what they are told, and be able to do it.
14265. But in a sudden emergency you would not have time to tell them what to do, just as you had not time to tell the crews you sent from the "Titanic"? - But you are speaking of riding out at sea now, working a boat in a sea way.
14266. I am speaking of doing anything a boat's crew would have to do, from the launching of the boat from the boat deck until they get to safety, if they ever get

- there. I do not wish to detain your Lordship with this. *The Commissioner:* You have indicated your point.
14267. (*Mr. Scanlan - To the Witness.*) It has been suggested in evidence which has been given in this case to my Lord that a crew of nine is desirable and necessary? - Then that would mean five less passengers, would it not?
14268. It would, of course, and, on the other hand, Mr. Lightoller, it would mean more boats. Do you agree with that? - The necessity of nine men to a boat?
14269. Yes? - Emphatically no.
14270. I understand your point of view. When you were leaving the bridge after your second watch, I understand it to be your evidence to my Lord yesterday that you explained to Mr. Murdoch what conclusion you had arrived at as to the proximity

### Page 325

- of ice; is that so? - I have not quite got that yet. Do you mean that I told Mr. Murdoch?
14271. When your watch finished at 10 o'clock on the night of the disaster, is it the case that you stated to Mr. Murdoch the conclusion you had arrived at as to the proximity of ice? - Yes.
14272. You were examined with regard to this in America; do you remember that? - No, I do not remember what I said there.
14273. I am reading from what purports to be the official note of the evidence in America, my Lord. It is the first day, and the first time you were in the witness-box, and it is on page 68 of the copy I have. You were asked, "Do you know where you were at the hour you turned over the watch to Mr. Murdoch? (*Mr. Lightoller.*) Not now, Sir. (*Senator Smith.*) Did you know at the time? (*Mr. Lightoller.*) Yes, Sir. (*Senator Smith.*) Can you give us any idea? (*Mr. Lightoller.*) When I ended the watch I roughly judged we should be getting towards the vicinity of the ice, as reported by that Marconigram I saw somewhere about 11 o'clock." Do you follow this? - Yes. 14274. "(*Senator Smith.*) That you would be in that latitude? (*Mr. Lightoller.*) Longitude. (*Senator Smith.*) At 11 o'clock? (*Mr. Lightoller.*) Somewhere about eleven, yes. (*Senator Smith.*) Did you talk with Mr. Murdoch about that phase of it when you left the watch? (*Mr. Lightoller.*) About what? (*Senator Smith.*) I said, did you talk with Mr. Murdoch about the iceberg's situation when you left the watch? (*Mr. Lightoller.*) No, Sir. (*Senator Smith.*) Did he ask you anything about it? (*Mr. Lightoller.*) No, Sir. (*Senator Smith.*) What was said between you? (*Mr. Lightoller.*) We remarked on the weather, about its being calm, clear. We remarked the distance we could see. We seemed to be able to see a long distance. Everything was clear. We could see the stars setting down on the horizon." From this it appears that when you gave your evidence you were under the impression that you had not told Mr. Murdoch about the icebergs and the conclusion you arrived at as to approaching them? - I may say by the questions that were put to me that those answers you might agree were correct as far as I understood the questions at that time.
14275. Is it your explanation then that this is incorrect or incomplete? - Incomplete, I say, yes.

14276. And that notwithstanding this evidence, you did tell Mr. Murdoch about the icebergs? - Undoubtedly, yes.

14277. You will admit, I suppose, that this is misleading, and, I suppose, you would like to correct it? - Yes, I should.

*The Solicitor-General:* I think if you look a little earlier, Mr. Scanlan, you will find that this gentleman was asked, "Did you communicate to Mr. Murdoch this information that the Captain had given you on the bridge?" And he speaks of having communicated to him about the ice then, I think. "So that the officer in charge, Mr. Murdoch, was fully advised by you that you were in proximity to these icebergs," and he says: "I would not call it proximity," but I think the answers show that he did say that then. I know you want to be fair.

14278. (*Mr. Scanlan.*) I do, and I hope you will understand that, Mr. Lightoller?

*The Witness:* Quite right.

14279. Apart from your telling Mr. Murdoch, was there any record which he could look up for himself in order to be assured that you were getting on towards the ice-field? - The custom, as I think I explained previously, is that we have a notice board in the chart room for the purpose of putting up anything referring to navigation, wireless reports on matters navigational, and it is open for anyone to look at.

14280. Are you quite clear that there was not a haze on this night? - Yes.

14281. Are you aware that while you were on watch from 6 to 10, George Symons, a witness who was examined yesterday was one of the men stationed in the crow's-nest? - Yes.

14282. In answer to Mr. Laing, when he was asked, "While you were on the look-out up to 10 o'clock what sort of a night was it?" He replies, "Pretty clear, Sir, a fine night, rather hazy, if anything a little hazy on the horizon, but nothing to speak of." Do you agree with that? - No.

14283. You did not observe any haze. Is it possible that the man in the crow's-nest would have a better opportunity than you had of observing whether or not there was a haze? - No.

14284. You say you would have as good an opportunity where you were stationed on the bridge? - Better.

14285. I suppose you know that we have it from other evidence as well, from the lookout man, Lee (this is on page 72, my Lord), that it was hazy that night. He is asked, "What sort of a night was it?" and his answer was: "A clear starry night overhead, but at the time of the accident there was a haze right ahead." Then he is asked, I think by the Attorney-General: "Did you notice this haze which you say had extended on the horizon when you first came on the look-out, or did it come later on? - (A.) It was not so distinct then, not to be noticed." Can you explain if these men are truthfully giving their evidence how it is that they could have observed a haze while you on the bridge would not have observed it? - No, I could not.

14286. If an iceberg loomed up ahead of you, would the person on the bridge have as good an opportunity of observing it as the man in the crow's-nest? - Quite.

14287. Does it strike you in any way as a singular circumstance that when the iceberg did appear and was sighted, the observation of it was by the man in the crow's-nest, and not by the men on the bridge? - Have we any conclusive evidence to that effect? *The Commissioner:* The evidence is that attention was drawn to it by the three bells. As far as I know, the first indication of it was the ringing of the three bells from the crow's-nest when the man in the crow's-nest sighted it.

14288. (*Mr. Scanlan.*) Yes, my Lord, and all the evidence we have had up to the present goes to establish that view of the matter. (*To the Witness.*) Now, you did state yesterday that you yourself had used binoculars for the purpose of detecting ice. Do you not think it would have been -

*The Commissioner:* I do not think he said that. What he did say, to my recollection, was that he would much prefer his eyesight for the purpose of detecting an iceberg.

*The Witness:* That is right, my Lord.

*The Commissioner:* But that having seen the iceberg with his eyes, he then would probably take the binoculars for the purpose of examining it more particularly.

*Mr. Scanlan:* Yes.

14289. (*The Commissioner - To the Witness.*) Were you using your glasses up to 10 o'clock, when you were on the bridge? - I had them in my hand. Will I explain to your Lordship?

14290. Were you raising them to your eyes from time to time? - Occasionally. 14291. (*Mr. Scanlan.*) I think this is the utility of binoculars - you see something with the naked eye, and then applying the glasses you determine what it is? - Exactly.

14292. Do you not think that before the look-out man stationed in the crow's-nest ventured to report an iceberg he would require to satisfy himself what he saw was really an iceberg?

*The Commissioner:* Forgive me, he did not report an iceberg; what he reported by the three bells was something ahead.

*Mr. Scanlan:* I think your Lordship will find in the evidence - *The Commissioner:* Do three bells mean iceberg?

*Mr. Scanlan:* No, my Lord, but at the same time he went to the telephone, and he stated at the moment on the telephone: "Iceberg ahead, Sir."

*The Commissioner:* That is true, but the three bells indicated nothing more than that there was something ahead.

14293. (*Mr. Scanlan.*) Something right ahead, my Lord, and then the telephone message conveyed

## Page 326

it. (*To the Witness.*) If one of those men on the look-out had seen something and applied the glasses is it not possible that he might have been able to identify it as an iceberg sooner than with the naked eye? - He might be able to identify it, but we do not wish him to identify it. All we want him to do is to strike the bells.

14294. I will put this to you: Supposing a man on the look-out fancies he sees something and strikes the bell, and it turns out not to be anything, I should think he would be reprimanded? - He is in every case commended.

14295. (*The Commissioner.*) I do not understand that. Is he commended when he signals that there is something ahead when there is nothing ahead? - Yes, your Lordship.

14296. (*Mr. Scanlan.*) If he did it frequently in a journey would not the commendation take the form at the end of the voyage of paying him off and dispensing with his services? - Not at all. The man is not an absolute fool; he knows that if he is trying to keep a good look-out, particularly amongst ice, and he suspects he sees anything, he will strike the bell; if it turns out to be nothing he may come on the bridge and say, "I am sorry that I struck the bell when there was nothing;" but he is invariably told, "Never you mind; if you suspect that you see anything strike the bell, no matter how often." 14297. Let me read this to you from the evidence of the look-out man Fleet, when he was examined in America. He is asked by Senator Smith: "Suppose you had had glasses such as you had on the 'Oceanic', or such as you had between Belfast and Southampton, could you have seen the black object a greater distance? - (*Mr. Fleet.*) We could have seen it a bit sooner. (*Senator Smith.*) How much sooner? - (*Mr. Fleet.*) Well, enough to get out of the way." Do you agree with that?

*The Commissioner:* I see it is referred to there as a black object.

*Mr. Scanlan:* Yes, my Lord; that is the language of Senator Smith in the question. *The*

*Commissioner:* But I should think - I do not know - that Senator Smith had heard the word "black" previously.

*Mr. Scanlan:* Yes, my Lord; I am taking this as detached and putting it as being in the witness' evidence.

*The Solicitor-General:* Lee called it "a dark mass."

14298. (*Mr. Scanlan - To the Witness.*) From the evidence you gave to the Court yesterday at what distance ahead do you think you yourself in the peculiar conditions which prevailed on this Sunday night could have picked out an iceberg? - About a mile and a half to two miles.

14299. Do you mean by the naked eye? - Yes.

14300. And with glasses could you discern it at a greater distance? - Most probably.

14301. (*The Commissioner.*) I do not follow the answer? - I meant to convey (it is rather a difficult question to answer) that we do not have the glasses to our eyes all the time, and naturally I should see it with my eyes first. If I happened to be looking directly ahead at the moment an iceberg came in view and I had the glasses to my eyes at that particular moment it is possible I should see it, whereas I should not have seen it quite as soon with my eyes. 14302. Apparently binoculars are placed in a bag or a box in the crow's-nest at times. At the time of the accident it is said there were no binoculars on the "Titanic" in the crow's-nest; is that true? - That there were none?

14303. No, is it true that there is a place for them in the crow's-nest? - I believe so.

14304. Then, presumably, it is intended that they should be there? - Yes.

14305. We are told you know they were not there this night? - Yes. 14306.

And they are there to be used, I suppose? - Yes.

14307. When they are being used in the crow's-nest are they used in the sense of being always held up by the look-out man to his eyes, or are they merely had recourse to as occasion seems to suggest? - That is it, your Lordship.

14308. The man on the look-out is not always standing with the binoculars up to his eyes? - No, certainly not.

14309. They are there for use when he thinks it desirable to use them? - Precisely. You see, if I may point out, binoculars, with regard to lights, are extremely useful; that is to say, there is no doubt you will distinguish a light quicker. If you set a man to look out for a certain light, and he reports a light it is quite a matter for us to ring him up on the telephone and ask, "What character is that light?" The man may, on a clear night, see the reflection of the light before it comes above the horizon. It may be the loom of the light and you see it sometimes sixty miles away. He may just make sure of it with the glasses, because there is any amount of time - hours; there is no hurry about them on a clear night at all. You make absolutely certain then about the light, and so as to be in that position we ring him up to say exactly what it is; but when it comes to derelict wrecks or icebergs, the man must not hesitate a moment, and on the first suspicion, before he has time to put his hand to the glasses or anything, one, two, or three bells must be immediately struck, and then he can go ahead with his glasses and do what he likes, but he must report first on suspicion.

*The Commissioner:* I took you off your line.

*Mr. Scanlan:* Yes, my Lord.

*The Commissioner:* You were asking him about the mile and a-half to two miles, and I want you to follow it.

14310. (*Mr. Scanlan - To the Witness.*) What you said was that you could see an iceberg with the naked eye for from a mile and a-half to two miles, and I put it to you that with the glasses you could probably see it at a greater distance, and you agreed? - I agree.

14311. Of course the same thing would apply to the look-out man as to you? - Yes.

14312. At the rate of speed at which the "Titanic" was travelling, how long would it take you to cover the distance of a mile and a half? - It works out at about five minutes - something about that.

14313. So that it is a matter of great consequence, do you agree, to have binoculars for look-out men? - Do you want me to pass an opinion as to whether look-out glasses ought to have been in that crow's-nest? Is that it?

14314. (*The Commissioner.*) I do not think so; I will put it in the same form to you. He wants to know whether the look-out man ought to have the binoculars glued to his eyes? - Oh, no, your Lordship, certainly not.

*The Commissioner:* I do not know how you are to get those binoculars used advantageously unless they are fixed on to the man's eyes.

*Mr. Scanlan:* I sincerely hope I did not put a question which raised that view as to my meaning, my Lord.

*The Commissioner:* Let us understand, Mr. Scanlan. This witness, as I understand, says this: "Binoculars are put into the crow's-nest to be used, but not to be all the time at the eyes of the man who is on the look-out," and that is what I call being glued to his eyes.

*Mr. Scanlan:* Yes, my Lord.

*The Commissioner:* And the binoculars are only had recourse to when by the naked eye something has already been discerned; that is what I understand.

*Mr. Scanlan:* Yes, my Lord, but which cannot be described or which the man cannot understand.

*The Commissioner:* He wants to know more particularly what it is.

14315. (*Mr. Scanlan - To the Witness.*) For the purpose which my Lord has been explaining to you is it not very desirable to have glasses provided for look-out men so that they can use them when necessary? - It is a matter of opinion for the officer on watch. Some officers may prefer the man to have glasses and another may not; it is not the general opinion.

14316. I am not talking about the opinion of officers in general, but the particular opinion which you entertain as to the usefulness of glasses? - Yes - now I can answer you decidedly - certainly I uphold glasses.

### **Page 327**

14317. For look-out men? I am glad you do. Do you know now that a complaint was made at Southampton by the look-out man that glasses were not provided in the crow's-nest? - I know of no complaint.

14318. Do you know there were not glasses in the crow's-nest? - I do.

14319. You say there was no complaint made. You mean -

*The Commissioner:* No, he does not; he says he knows of no complaint.

*The Witness:* I meant to convey that impression, that there was no complaint - there was no right to make a complaint.

14320. Do you mean to tell me that if the look-out man goes into the crow's-nest and finds that here are no binoculars in the pocket or box or whatever it is, he has no right to come and say so? - Yes, he has the right to come and report, and there the matter ends.

*The Commissioner:* I call that complaining.

14321. (*Mr. Scanlan - To the Witness.*) So far as you know it was not reported that there were not glasses? - It was reported.

*The Commissioner:* It is only a question of words.

*Mr. Scanlan:* That is so.

*The Commissioner:* He does not think a report is a complaint.

*Mr. Scanlan:* I meant it in the sense of a report taken.

*The Witness:* There was a report; I am sorry I misunderstood you.

14322. Can you explain to my Lord why, when such a report was made, glasses were not provided for the look-out man on the "Titanic"? - No, I cannot offer you any explanation.

14323. If it had been a matter in your discretion, would you have provided glasses then? - Had they been on the ship I might have done.

14324. Were there glasses on the ship available for the use of the look-out man? - That I cannot say.

14325. Had you glasses on the bridge? - We had.

14326. How many pairs? - A pair for each senior officer.

14327. How many pairs altogether; you have five or six officers? - A pair for each senior officer and the Commander, and one pair for the bridge, commonly termed pilot glasses.

14328. So that there would be from time to time during the whole course of the voyage a pair of glasses available? - On the bridge.

14329. On the bridge that could have been handed up or given to the look-out man. *The Commissioner:* Mr. Scanlan, I want you to know what is passing in my mind. It appears to me that whether those glasses were there or not made very little, if any, difference, because the man would not have them to his eyes, and when he did sight this thing it was too late to use glasses.

*Mr. Scanlan:* My instructions are, my Lord, up to the present that the utility of glasses consists in this: you sight something, and do not know what it is; then you apply the glasses, and you are able to say whether it is an iceberg or a derelict.

*The Commissioner:* That is quite right.

*Mr. Scanlan:* That seems to be a most important thing, my Lord.

*The Commissioner:* What I am pointing out to you is this: Here the thing was sighted at a time when lifting up glasses and looking to see what it was would have been of no use whatever; they were right on it.

*Mr. Scanlan:* Except this; we do not know but that before the man discerned this object as an iceberg he may have seen some object, a speck, or a mast, or something. *The Commissioner:* That is not my view of the evidence; I think the look-out man rang out three bells the moment he saw something ahead.

*Mr. Scanlan:* We are in this position yet, that we have not had here the identical man who rang the bells and who shouted, "An iceberg ahead, sir." So that it must be a surmise. I think I have indicated my point.

*The Commissioner:* You are quite right.

*The Witness:* I should like to point out that when I speak favourably of glasses it is in the case of a man on whom I can rely, but if I have a man in a case like this which Mr. Scanlan speaks of, a derelict or an iceberg, who is to put the glasses to his eyes before he reports, I most utterly condemn glasses. The man must report first and do what he likes afterwards.

*The Commissioner:* I believe Mr. Scanlan that is right, it would be quite improper for a man who sees something ahead with his eyes, to wait until he has used glasses before he reports.

*Mr. Scanlan:* Surely, my Lord, that would depend on the distance at which the object was seen; if it were seen 10 miles ahead with the ship going as slowly as some of those ships go.

*The Commissioner:* We need not contemplate a case of that kind, it was not this case. Here the iceberg was right close to the ship.

*Mr. Scanlan:* I shall be prepared at a later stage in the case to offer your Lordship evidence on this point, and it is in that view that I have pressed the matter so far.

*The Commissioner:* Quite right.

14330. (*Mr. Scanlan - To the Witness.*) This night you have described as being a particularly bad night for seeing icebergs. Is not that so? - I do not think I mentioned that word "bad," did I?

14331. You did not mention that word, but I wish you not to misunderstand me. I am not purporting to give your exact words. You said it was realised at the time that it would be more difficult on account of there being no wind, and the sea being a level calm? - Yes, that is right.

14332. Added to that you had the condition of there being no moon? - Yes. 14333. And the other conditions which you described to my Lord. Were not these circumstances which would indicate to any experienced officer that it was necessary to take extra precautions for safety? - As a matter of fact we were unaware of the sea being flat. All the precautions were taken which we thought necessary. 14334. Do you say you were not aware then that the sea was flat? - No.

14335. At all events, it was more difficult then than under normal circumstances to see an iceberg. You observed that yourself from six to ten? - Yes.

14336. Although there were abnormal difficulties you took no extra precautions whatever. - Have I said so?

14337. I suggest to you that you took no extra precautions whatever? - But I did. 14338. Tell me what? - I took the precaution, as I think I mentioned in my evidence, of taking up a position on the bridge in which everything ahead was clearly in view and maintaining that position for the remainder of the watch.

14339. That is so far as you were concerned for the remainder of your watch? - Yes.

14340. And you think you would have seen an iceberg before the man in the crow's nest? - I do not know whether I should have seen it before them or not; I should have seen it in sufficient time to clear it quite sufficient.

14341. Can you give any explanation of the man who succeeded you not seeing it in sufficient time to clear it? - I am afraid I cannot.

14342. If the weather conditions were as clear as you said they were while you were there? - I am afraid I cannot give you any explanation.

14343. In addition to those conditions which you describe as abnormal you had a certainty that you were rushing into icebergs - into an ice-field? - Oh, no.

*The Commissioner:* That is your picturesque way of putting it.

14344. (*Mr. Scanlan.*) I will put it in less picturesque language, my Lord. (*To the Witness.*) When you got the first warning that there were icebergs ahead your course was set in a particular direction; that is to say, the course of the ship? - At noon, yes.

14345. Did you follow practically that course all through that day? - Oh, no. 14346. Did the course which you followed lead you into the region from which the presence of ice was reported to you? - The course set at noon?

## Page 328

14347. Yes? - No.

14348. Did the course you were following up to the time you left your watch at 10 o'clock lead necessarily to a place where you expected ice? - Where there was a possibility of seeing ice.
14349. Not only a possibility of seeing it, but a possibility and almost a certainty of running into it? - Oh, no.
14350. (*The Commissioner.*) I do not think he could say that. (*To the Witness.*) Before you left the bridge did you know you were making for a locality in which ice was to be expected? - Quite so.
14351. (*Mr. Scanlan.*) Because you so stated to Mr. Murdoch when you were leaving the watch according to your evidence here yesterday? - Yes. Let me explain my point and we will get it far clearer. You see we were making for a vicinity where ice had been reported as you say year after year, and time and again, and I do not think for the last two or three years I have seen an iceberg although ships ahead of us have reported ice time and time again. There was no absolute certainty that we were running into an ice-field or running amongst icebergs or anything else, and it might have been as it has been in years before ice reported inside a certain longitude.
14352. (*The Commissioner.*) I can understand that; it does not follow that because ice is reported you are going to have a collision with an iceberg? - That is what I wish to convey.
14353. You need not trouble about that at all as far as I am concerned. The point which I understand is being put to you at present is this, that you knew you were steering into what I may call an ice-field, a district in which there were icebergs and growlers and field ice. That is what you want to put, Mr. Scanlan?
14354. (*Mr. Scanlan.*) Yes, it is, my Lord. (*To the Witness.*) You knew you were heading there when you left the watch? - Yes.
14355. Do you not think, then, it would have been desirable, especially as you say the conditions were abnormal, to have slackened speed? - It has never been done in my experience.
14356. We have heard it from the officer -
14357. (*The Commissioner.*) You do not answer the question? - I answer from experience, no.
14358. (*Mr. Scanlan.*) We had evidence a few days ago from an officer on another company's steamers that they have a regulation about taking extra precautions when they get into an ice-field, or when ice is reported ahead of them. Does your company, the White Star, issue any regulations to their Captains and Sailing Officers as to what they ought to do when they come into an ice region? - No.
- The Commissioner:* I should like to know this, Mr. Scanlan, if you can tell me. Do the German boats issue any such regulations?
- Mr. Scanlan:* My knowledge does not extend to that, I regret, my Lord.
- The Commissioner:* I doubt whether you will find any such regulations issued to regular liners. There was one witness who was here from the "Mount Temple," the Canadian Pacific line, a steamer which belongs, I suppose to the railway company.
- Mr. Scanlan:* Yes, but a big carrying passenger steamer.

*The Commissioner:* Are there such instructions issued to any regular British lines or German lines crossing the Atlantic?

*Mr. Scanlan:* I do not know as to any German line, my Lord, but I have been informed that it is a customary thing to give instructions for British lines.

*(After a short adjournment.)*

14359. (*Mr. Scanlan.*) Can you tell us at what speed the "Titanic" was going when you left the bridge at 10 o'clock? - About 21 1/2 knots.

14360. What was the indication from which you make that calculation? - I judge from what I remember of the revolutions. I think, as far as I remember, the revolutions were 75, and I think that will give an average of about 21 1/2.

14361. The speed was taken down, I understand, in the log? - Yes, that would be kept in the scrap log.

14362. I do not suggest that you wanted to make a record passage on this occasion, but had not you all in mind the desirability of making a very good first trip, from the speed point of view? - No, I am afraid not, because we know that in the White Star, particularly the first voyages - in fact you may say pretty well for the first 12 months - the ship never attains her full speed.

14363. Were not you on this occasion taking as much speed as you could get out of the "Titanic"? - Oh, no, not at all; I am under the impression she was under a very reduced speed compared with what she was capable of doing.

14364. What maximum speed do you think you could have attained? - Well, just as a matter of hearsay, or rather, what we estimated roughly, for instance myself, I judged that the ship would eventually do about 24 knots.

14365. Did you say yesterday that you were going at as high a speed as you could in view of the coal you had on board? - Did I say so yesterday?

14366. Yes? - I was not on the stand yesterday.

*The Solicitor-General:* Yes, you were.

14367. (*Mr. Scanlan.*) You were being examined yesterday? - Oh, yes; I beg your pardon. Not only with regard to shortage of coal, but I understand several boilers were off.

14368. Do you know any reason for those boilers being off? - Merely that there was no wish for the ship to travel at any great speed.

14369. There was no reason, I take it, why you should not go fast; but, in view of the abnormal conditions and of the fact that you were nearing ice at ten o'clock, was there not a very obvious reason for going slower? - Well, I can only quote you my experience throughout the last 24 years, that I have been crossing the Atlantic most of the time, that I have never seen the speed reduced.

14370. You were asked by my Lord this forenoon how an unfortunate accident like this could have been prevented in what you describe as abnormal circumstances? - Yes.

14371. Is it not quite clear that the most obvious way to avoid it is by slackening speed? - Not necessarily the most obvious.

14372. Well, is it one way? - It is one way. Naturally, if you stop the ship you will not collide with anything.
14373. There was no reason why you might not slacken speed on this voyage, you were not running to any scheduled time? - No.
14374. If you happened to be on the bridge in command yourself could you take it on your own responsibility to slacken speed, or would you require to communicate with the Captain? - Communicate with the Captain.
14375. And the speed, therefore, could only be diminished by the Captain's orders? - No, I would not go so far to say that the speed could only be diminished by that. Let me give you an instance. Suppose I had seen the smallest scrap of ice, supposing we had passed a little bit of the field ice that was knocking about on the other side of this pack ice, had I seen any indication of the vicinity; proof positive of the vicinity of ice, I should very probably have telegraphed myself at the same time that I sent word to the Commander.
14376. At the same time, as a matter of propriety and etiquette between officers and master; the proper thing, I take it, is to go to the master and make your suggestion to him and then let him decide? - Well, I want you to fully understand me. In the ordinary course of events, hazy weather, weather coming in hazy - I am not speaking particularly of ice now - or nearing land, or anything for which you think it is desirable to slacken speed, or will be shortly desirable to slacken speed, you would communicate that to the Commander; but our instructions from the White Star do away with

### **Page 329**

- the necessity of notifying the Commander in any immediate danger; we immediately act, as I believe Mr. Murdoch did.
14377. Just tell me what your instructions are from the White Star? - Well, I cannot quote you them word for word. They are in the Regulation Book, which I have no doubt you will be able to get.
14378. Is there anything mentioned in those instructions about what you should do when you are in a region in which ice has been reported? - There is nothing that refers particularly to ice.
14379. Are you quite sure of that? - I think I may say I am sure of that.
14380. Nothing at all in the regulations? - But there is a regulation that covers ice and everything else.
14381. I take you to the regulation that covers ice. What is prescribed for you to do then? - You do not quite understand me. There is no regulation that particularly alludes to ice; but in all instances everything must be sacrificed to the safety of the ship, and no thought of making a passage - that is to say a fast passage - must be at any time entertained.
14382. Is there no specification of certain dangers with instructions to the commanding officer as to what he is to do then - I mean, like haze, fog, and ice? - Oh yes; there are fog regulations.

14383. Under what head do the ice regulations come?

*The Commissioner:* There are none, I understand.

*Mr. Scanlan:* What I gathered from him, my Lord, was that the ice regulations would be found in a certain category of regulations for certain circumstances of danger.

14384. (*The Commissioner.*) Are there any such regulations? - Not referring to ice, my Lord.

14385. (*Mr. Scanlan.*) None at all. Now, in your evidence in America, you narrate a conversation which took place between yourself and the Captain when he was on the bridge with you. Senator Smith asks you, "Was anything else said?" and you say "Yes; we spoke about the weather, the calmness of the sea, the clearness - about the time we should be getting up towards the vicinity of the ice, and how we should recognise it if we should see it, freshening up our minds as to the indications that ice gives of its proximity. We just conferred together generally for 25 minutes"? - That is right.

14386. The principal thing you had been talking about was ice? - Naturally.

14387. Did you decide, then, when you first saw ice you would stop or slacken speed? - No.

14388. Do you mean to say that the policy of the Captain and you was to go right ahead at 21 1/2 knots? - No, I do not mean to infer that.

14389. Unless there was a haze? - No, not necessarily unless there was a haze. Had we come across ice, as I just said, in any degree, whether the Commander had been on the bridge or not I should have acted on my own initiative.

14390. You freshened your minds up as to the indications? - Quite so.

14391. You had a purpose in doing that. Would it not have been desirable then to have communicated the points of knowledge that you had evolved to the look-out men? - Oh! no.

14392. You did not think it was necessary to communicate with them? - No.

14393. Although from a look-out point of view they were of greater consequence than the men on the bridge? - Pardon me, not at all.

14394. Well, they ultimately discovered the ice you know, and the men on the bridge did not? - You say the men on the bridge did not. I may say I discussed that immediately on the "Carpathia" with the look-out men - not necessarily discussed it, but asked them questions whilst their minds were perfectly fresh, and the look-out man told me that practically at the same moment he struck the bell he noticed that the ship's head commenced to swing showing that the helm had been altered probably a few moments before he struck the bell, because the ship's head could not have commenced to swing at practically the same time he struck the bell unless the ice had been seen at the same moment or a few moments before he saw it.

14395. I take it then that your position is to justify the conduct of the Captain and those who were navigating the "Titanic" from 11 o'clock till the collision? - Yes.

14396. In going ahead at 21 1/2 knots, although you all knew that you were in the presence of ice? - Well, you hardly state it correctly when you say we knew we were in the presence of ice. We did not, we only had reports to go on.

14397. You had no reason to disbelieve those reports? - On the contrary we had, having so many years gone across and never seen ice though it is repeatedly reported. 14398. I suggest to you it would have been a much safer thing to have believed the reports which you had from a number of sources as to the presence of ice, than to have acted in disregard of the warnings you had received from other ships, and gone ahead at the rate of 21 1/2 knots an hour until the collision occurred? - In the view of after events, of course, we form a totally different opinion. It would naturally have been safer, we can see now, not to have gone ahead at all.

14399. And that is what, at all events, in the light of your present knowledge, good seamanship would have dictated? - Not necessarily good seamanship.

14400. Extra good seamanship? - No, not seamanship at all.

14401. In the light of the experience you have had, it is what you would do now? - In the view of our reports we have had in other voyages, if I say in the light of good seamanship or extra good seamanship, we should have stopped, the thousands of ships that have crossed the Atlantic would likewise have stopped, and then you come to the end of your tether.

14402. I do not say they would have stopped? - Well, or slowed down.

14403. The warning you had had at half-past one led you to understand that you would be right up against the ice, so to speak, from 10 to 11? - The position where it had been reported.

14404. I could understand your going ahead at 21 1/2 knots up to 10 or half-past 10: What I fail to understand is why from half-past 10, when you knew you were about the place where you were led to believe ice was to be found, you still proceeded at 21 1/2 knots? - That I cannot answer for after 10 o'clock. 14405. After half-past 10? - Between half-past 9 and 10.

14406. You can answer for going ahead then? - As far as I understand the same speed was maintained.

14407. You said something a moment ago, "As you know now" or "in view of what has happened." May I take it with the knowledge that you have now, and in view of this accident, what you would do now would be to slacken speed, or stop? - In view of what has occurred naturally we shall take every precaution that suggests itself to our minds in the future to avoid a repetition of such an accident.

14408. Would not one of the precautions be what Captain Smith said to you on the bridge between nine and ten, "we should have to go very slowly"? - He was speaking about haze.

14409. I know he was speaking about haze, but is not that what you should have done in adopting precautions? - No, I do not see it. It would have cleared the accident, I quite agree with you, had we been going very slowly, but we have to take in view the experience of years, what we have always done.

14410. You are not quite following me. I am sure you intend to? - I do; I wish to help you all I can.

14411. I do know that. But you said that since the accident with the knowledge that you now have, you would have adopted extra precautions, I mean, at all events, from half-past nine onwards. Would not one of those precautions be going very slowly - diminishing speed? - I am afraid I cannot give you any definite answer to that.

14412. Am I to understand, even with the knowledge you have had through coming through this "Titanic" disaster, at the present moment, if you

**Page 330**

were placed in the same circumstances, you would still bang on at 21 ½ knots an hour? - I do not say I should bang on at all; I do not approve of the term banging on.

14413. I mean drive ahead? - That looks like carelessness you know; it looks as if we would recklessly bang on and slap her into it regardless of anything. Undoubtedly we should not do that.

14414. What I want to suggest to you is that it was recklessness, utter recklessness, in view of the conditions which you have described as abnormal, and in view of the knowledge you had from various sources that ice was in your immediate vicinity, to proceed at 21 ½ knots? - Then all I can say is that recklessness applies to practically every commander and every ship crossing the Atlantic Ocean.

14415. I am not disputing that with you, but can you describe it yourself as other than recklessness? - Yes.

14416. Is it careful navigation in your view? - It is ordinary navigation, which embodies careful navigation.

14417. Is this your position, then: that even with the experience of the "Titanic" disaster, if you were coming within the near vicinity of a place which was reported to you to be abounding in ice, you would proceed with a ship like the "Titanic" at 21 ½ knots? - I do not say I should.

14418. At nighttime, and at a time when the conditions were what you have described as very abnormal, surely you would not go on at 21 ½ knots? - The conditions were not apparent to us in the first place; the conditions of an absolutely flat sea were not apparent to us till afterwards. Naturally I should take precautions against such an occurrence.

14419. And what precautions would you take if you would not slow up or slow down? - I did not say I would not slow up.

14420. Cannot you say whether you would or not? - No, I am afraid I could not say right here what I should do. I should take every precaution whatever appealed to me. 14421. I suggest to you if you acted carefully and prudently you would slow up, and that if you did not slow up you would be acting recklessly. You know you have described the conditions of abnormality as having been apparent at the time while you were on your watch. You have told my Lord that at great length; and in your conversations with the Captain did not you discuss that? You have said that you did not recognise that the sea was flat. I want to recall this to your mind. It is at page 306, my Lord, at question 13615, you give this evidence. "At 5 minutes to 9, when the Commander came on the bridge (I will give it to you as near as I remember) he remarked that it was cold, and, as far as I remember, I said, 'Yes, it is very cold, Sir. In fact,' I said, 'it is only one degree above freezing. I have sent word down to the Carpenter and rung up the engine room and told them that it is freezing, or will be during the night.' We then commenced to speak about the weather. He said, 'There is not much wind.' I said, 'No, it is a flat calm, as a matter of fact.' He repeated it; he said, 'A flat calm.' I said, 'Yes, quite flat, there is no wind.' I

said something about it was rather a pity the breeze had not kept up whilst we were going through the ice region. Of course, my reason was obvious; he knew I meant the water ripples breaking on the base of the berg"? - Yes.

14422. Was not all that amply sufficient to let you and the Captain know that you were in circumstances of extreme danger? - No.

14423. I do not think anything would convince you that it was dangerous that night? - I have been very much convinced that it was dangerous.

14424. I mean that the conditions you have described were dangerous? - They proved to be.

14425. What I want to suggest is that the conditions having been so dangerous, those in charge of the vessel were negligent in proceeding at that rate of speed? - No.

14426. I will pass from that point. Amongst the precautions which it would be proper to adopt, would it not be desirable to station more look-outs, more look-out men in the bows or the stem head? - Anything which would be conducive to avoiding danger.

14427. Would that be conducive to avoiding danger? - It might be.

14428. I am speaking to you as a man of great practical experience? - I could not exactly say whether look-outs in the stem head would be. We do not place very much reliance on them; we hope they will keep a very good look-out, but those men in the first place are not regular look-out men, and you have not the same control over them as you have over the look-out men. They have nothing to sacrifice in the way of a good berth, which the look-out man's is.

14429. I think the difference between a regular look-out man and an irregular look-out man - that is, an ordinary A.B. - is 5s a month? - Five shillings a month in pay and a difference in watches and a difference in work on board the ship.

14430. But there is no passing of an examination to go from one grade to the other? - Yes.

14431. (*The Solicitor-General.*) Is there? - Yes. I should explain to you, it is customary when a ship is in running for all look-out men to have an eye test as well as the Quartermaster's. That does not apply necessarily to A.B.'s.

14432. (*Mr. Scanlan.*) I was going to ask you about the eye test. Is there an eye test of each look-out man in the White Star Line? - Well, as far as possible we maintain the condition of having look-out men who have passed the eye test.

14433. I want to understand. We have had evidence on this point already. We have had the evidence of a man who told us that his sight was not tested, and this was his first voyage in a White Star vessel, the "Titanic"? - Yes.

14434. How do you explain that? - By her being a new ship, and the difficulty of obtaining a perfectly satisfactory crew at such short notice. You see, you have to have men with you some little time; on the other hand, I can tell you of look-out men who have been on the look-out of the White Star for some considerable time, and who have had eye tests.

14435. But surely if you wanted to get an eye test as to the men you engaged for the Titanic," you could easily have got a doctor to test their eyesight at Southampton? - Well, it is not exactly a doctor who tests it. It is a Board of Trade examination - the customary examination. It applies to the officers as well.

14436. I should like to know that; do you say it is the practice of the Board of Trade to test the eyesight of the look-out men before the ship is cleared? - No, you do not quite understand me. If I am First Officer of a ship, a First Officer has the signing on of the crew. Very well, then, as far as possible and practicable, I see that these look-out men, at stated periods, have an eye test.
14437. Do they sign on in any special way? - They sign on as look-out men. 14438. Do not they sign on as A.B.'s? - No, I think they sign on as quartermasters and look-out men and A.B.'s.
14439. I understand - you will correct me if I am wrong - that look-out men sign on as A.B.'s? - I think I am right in saying they sign on as look-out men. They used to sign on as A.B.'s.
14440. Did the six look-out men on the "Titanic" sign on in any special way? - I believe they signed on as look-out men.
14441. But you do not know of your own knowledge? - No, I could not say for certain.
14442. Was the sight of a single one of those men tested before starting on that voyage? - As I said there were some of those men I knew to have had eye-tests, that is to say they were look-out men - Fleet and Symons who had been with me in the "Oceanic." 14443. I will take Fleet. By whom was Fleet tested for his eyesight? - I could not tell you; it is the customary test by the Board of Trade. They go up there and obtain their certificate.

*The Solicitor-General:* I have the articles here, Mr. Scanlan, and these six men are entered as engaged in the capacity of look-outs.

### **Page 331**

14444. (*Mr. Scanlan.*) Quite, I thank you. (*To the Witness.*) You do not know when Fleet was tested? - I could not tell you the date now.
14445. The other man with him, Lee, you do not know whether he was tested at all? - No.
14446. You do not know who tested the sight of Fleet? - No, I do not know what man tested him, what official.
14447. You do not know whether it was a doctor? - No, it is not a doctor. I do not think you quite understand. Just let me explain. I see the man and I say, "What is the date of your eye certificate?" and he tells me. If it is time for him to have another certificate I tell him. "Now the first opportunity you have go up and get your eye certificate." That means to say, that man goes up to the Board of Trade offices in Southampton, pays 1s., and applies for his eye test.
14448. To the Board of Trade? - To the Board of Trade, and he then goes into a room and he goes through a form of examination. If that is satisfactory he has his certificate to that effect.
14449. Did anyone examine the certificates of those men to see if they had been recently tested or not? - I could not say.
14450. Will you admit, in view of the importance of the duties which look-out men have to perform, that there should be a proper eye test? - Oh, yes. I think it is quite a

- reasonable precaution, and is maintained in the White Star, and I may say only the White Star.
14451. Had you in the White Star any system of drilling and training seamen for manning lifeboats? - Oh, yes.
14452. Did you train them on the "Titanic"? - No, except in Belfast. We put some boats in the water there. I think that was done by the builders though.
14453. So far as the officers were concerned there was no testing of the men in lifeboat practice? - Oh, yes, in Southampton as well we put boats in the water and the men were put in.
14454. How many? - Probably 8 and a quartermaster in each boat.
14455. How many boats? - Two boats.
14456. Do not you think it would be a proper thing to have all the boats lowered before the commencement of a voyage and to give the men who would ultimately be the crews of those boats some practice in the manning and navigation of them? - I am afraid that is hardly practicable. You can send a seaman to any boat; if he is a sailor he is perfectly at home in a boat or wherever he is sent. But you see with regard to firemen it seems hardly practicable to have all the firemen up on deck at that particular time, and the stewards. 14457. If the capacity of a fireman for handling a lifeboat is of any account it is necessary to give him some training, is it not? - Oh, yes.
14458. Can you suggest any other way for giving this training than giving it at the port before the commencement of a voyage, or at its conclusion? - Yes, either before the commencement or after the conclusion of a voyage.
14459. So you agree that would be a desirable thing to do apart from the question of convenience? - Anything that would tend to the safety of a ship would be desirable.
14460. You agree with that, I take it? - Well, I do not altogether agree with you as a matter of fact, because, as events proved, it was not necessary to have the firemen there.
14461. In order to ensure the efficiency of the crews for the manning of lifeboats, do you agree it would be desirable to give them practice in the manning of the boats? - If a man is to be made proficient in the working of a lifeboat naturally he must have practice.
14462. I suggest the suitable time is in port either before the commencement or at the termination of the trip? - That can be done in any boat; not necessarily in the ship's boats. You could have a system of training of firemen. They might be trained on shore to be accustomed to boats. The lowering of a boat, of course, is a different matter.
14463. And similarly for stewards? - Yes.
14464. Do you think it would be desirable to give certificates for proficiency? - I am afraid that is hardly for me to answer. It is rather a big question.
14465. I quite realise that. Now, as to the provisioning of lifeboats we have heard a good deal of that, and I want to ask you is it the usual practice to put into lifeboats at the commencement of the voyage the equipment prescribed by the Board of Trade? - The Board of Trade takes particular care that you have got the equipment.
14466. Are those articles of equipment put into the boat before the commencement of the voyage? - I may say they are there all the time.
14467. They are in the boat all the time? - Yes, that is it, they are kept in the boats.

14468. In the lifeboats? - Yes.

14469. That is, a compass is kept in the lifeboats? - No, I do not think the equipment calls for a compass being actually in the boats.

14470. A lantern; is that part of the equipment? - That is part of the equipment. 14471. Is that put in the boats? - I do not think it is necessary for that to be kept in the boats.

14472. Tell me, what is your experience. Is it usual for these things to be put into each boat before the commencement of a voyage. I am not talking about what happened on the "Titanic"? - No, it is not.

14473. It is not the usual thing? - No. I am speaking of the lamp and the compass. 14474. Even taking the present Board of Trade regulations - whether they are sufficient or not, I am not going to make any suggestions to you - I take it that you must have an efficient compass and a lantern trimmed in four of the boats on a ship like the "Titanic"? - I think it is four.

14475. With regard to those four is it not the case that the compass and the lamp as well as the other accessories are put in and kept in the boats from the beginning of the voyage? - Not the compasses; I do not think it applies to the compasses. The compass is rather a delicate thing, and also the lamp. It will not keep indefinitely, it is better to keep it in a dry place so that when you do want it there is no trouble about lighting it. 14476.

Do you of your own knowledge know where the compasses for the lifeboats on the "Titanic" were kept during this voyage? - Of my own knowledge I know there was a locker fitted up for them; I think it was on the afterend of the boat deck; somewhere handy any way, a shelf put in where all the compasses would be right handy to the boats.

14477. Do you know whether there was any compass in any boat? - No, I do not believe there was a compass in any boat.

14478. Do you know whether there was a compass put into the boats after the collision and before the boats were lowered? - No, I do not think there was.

14479. How do you explain that so few of the boats, as they were lowered, had lanterns? - I do not think I have conveyed the idea that so few had lamp. It will not keep indefinitely, it is better to -

14480. Had any of the boats that you assisted in lowering? I take it you assisted in lowering four - 4, 6, 8 and the collapsible - had any of those lanterns? - Well, I did not look for lanterns, and I cannot say; you can get that evidence as to the lamps, I may tell you, from Hemming, the lamp trimmer, who took the lamps and lighted them and went round and distributed them to the boats.

14481. In the meantime, I am trying to get it from you? - I am afraid I cannot give you the information.

14482. At all events, none of them had a compass? - Not to my knowledge. 14483. With regard to the glasses, you stated that a report was made at Southampton that glasses for the crow's-nest were wanting. Can you tell my Lord to whom that report was made? - To me.

14484. What record was kept of it? - None.

*The Commissioner:* What are you speaking of now, Mr. Scanlan?

14485. (*Mr. Scanlan.*) Of the report from the crow's-nest that there were no glasses in the crow's-nest. (*To the Witness.*) You said the report was made to you - by whom? - Will you just let me explain the circumstances, and you will have it clearly then? I was in my room, and I heard a voice in the quarters speaking. I recognised it as Symons, the look-out man, so I stepped out of my door, saw him, and said, "What is it, Symons?" He said, "We have no look-out glasses in the crow's-nest." I said, "All right." I went into the Chief's room, and I repeated it to him. I said, "There are no look-out glasses for the crow's-nest." His actual reply I do not remember, but it was to the effect that he knew of it and had the matter in hand. He said that there were no glasses then for the look-out man, so I told Symons "There are no glasses for you." With that he left.

14486. Do you think you had a sufficient number of competent seamen, including officers, for the launching of the lifeboats? - Yes, as it proved we had.

14487. Now, can you explain this? I take it that you were over two hours assisting in the clearing and launching of four lifeboats with a number of men to assist you. The boats you assisted in clearing and lowering were four, six, eight, and the collapsible?

*The Solicitor-General:* It is not four lifeboats; it is three lifeboats and a collapsible.

14488. (*Mr. Scanlan.*) Yes, three lifeboats and a collapsible.

*The Witness:* Yes.

14489. How many men were assisting you in lowering those? - I can hardly give you the number.

14490. Eight or ten? - I do not remember.

*The Commissioner:* I do not see how these points are of great materiality. Nothing went wrong; no misfortune can be attributed, for instance, to the fact that there was not a compass on board; no misfortune can be attributed to the fact that there may not have been a lamp on board some of them. I daresay the things ought to have been there, but the fact that they were not there does not appear to have made any difference. I daresay there are many things that ought to have been in this ship that were not there, but I would rather you would confine yourself to the absence of things that were material.

*Mr. Scanlan:* What has occurred to me if I may respectfully mention it to your Lordship at this stage is this, that the remit in this Inquiry to the Commissioner takes cognisance of the rules of the Board of Trade and the provision of lifeboats, and the efficiency and sufficiency of the crew, and the evidence I am trying to elicit from this witness is all directed to those points.

*The Commissioner:* We have a great deal of evidence that there were no compasses in some of the boats; that there were no lamps. In some I think it is said there were no biscuits, and other things of that kind. I know all that, and it may be at the right time one will have to consider whether these are matters which ought to be more closely attended to than they are; but, in point of fact, in connection with this calamity they made no difference. All the people in the lifeboats got to the "Carpathia."

*Mr. Scanlan:* Yes. So far as the greater number of those points are concerned, it may be that no difference resulted between compliance and noncompliance; but there is this one

thing I would like to indicate to your Lordship. Surely there was one boat which was not launched at all; that is one of the collapsible boats?

*The Commissioner:* Yes, there was. I do not know whether these rules that I see here apply to the collapsible boats.

*Mr. Scanlan:* They do, my Lord.

*The Commissioner:* Do these rules as to water apply to the collapsible boats. I do not know where you would put a cask of water in a collapsible boat. Where would you put it?

*Mr. Scanlan:* I have a drawing of the Englehardt collapsible boat.

*The Commissioner:* And does it show a cask of water?

*Mr. Scanlan:* Yes, my Lord. If your Lordship will look at Rule 5, page 15. *The*

*Commissioner:* I have it, yes.

*Mr. Scanlan:* Sub-section (d) of the General Rules says: "Equipments for collapsible or other boats and for life-rafts."

*The Commissioner:* "A vessel to be kept filled with fresh water shall be provided for each boat." Does that mean it is to be wrapped up in the collapsible boat somewhere, or does it mean there is to be a vessel, as it is called, handy. I thought you had a picture of a collapsible; if so, I should like to see where the vessel was?

*Mr. Scanlan:* I do not think it shows specially the place, my Lord; it shows those boats.

*The Commissioner:* I do not think at present you need spend very much time on this.

*Mr. Scanlan:* I agree, my Lord.

14491. (*The Commissioner.*) There are two or three matters about the boats I should like to ask a question on. (*To the Witness.*) I want to know whether you knew that those boats were not intended to be lowered full of people. Did you know that? - We have no instructions to that effect, my Lord, but I knew that it was not practicable to lower them full of people.

14492. Had you any reason to suppose that they were weaker than they should have been? - No. I have not had much experience with these Englehardt collapsible boats.

14493. I am not talking about collapsible boats merely, but the lifeboats? - I should not think they were capable of being lowered full of people. They may be. I have never seen them full of people, but if they are only supposed to carry 65 people afloat, it hardly seems feasible that they would carry 65 people when suspended at each end. It does not seem seamanlike to fill a boat chock full of people when it is only suspended at each end. It is to guard principally against accidents in lowering. That must be taken into consideration a very great deal - the fact that you have to lower a boat from a great height and get her safely into the water. It is of more importance to get the boat into the water than it is to actually fill her at the boat deck, because it is no use filling her if you are going to lose those people before you get her down; it is far better to save a few and safely.

14494. (*Mr. Scanlan.*) Do you think you could have filled the boat still more in the water? - Undoubtedly.

14495. If your organisation had been complete? - I do not see the organisation would have prevented the ship sinking.

14496. I know it would not? - It was that that prevented us putting the people in. 14497. A better organisation might have allowed you to instruct the men who were in the boats

to come alongside so that you could fill up with passengers from the gangway if you could have done it.

*The Commissioner:* What occurs to me about that Mr. Scanlan is this, that the order was, and I suppose quite a proper order, that women and children were to go first. Now it appears to me that you might have great difficulty indeed in putting the women and children down a rope ladder hanging from these gangway doors. That might be a very difficult thing to do.

*Mr. Scanlan:* In the hope that some improvement might result from this Inquiry, I have been instructed to bring those suggestions up.

*The Commissioner:* You are quite right; in fact, I am much indebted to you for what you are doing.

14498. (*Mr. Scanlan.*) Thank you, my Lord. (*To the Witness.*) I suggest to you that it was a long time, the two hours and ten minutes, I think that is the time you were engaged in lowering Nos. 4, 6 and 8, and the collapsible boat - it was a long time, I suggest to take for the lowering of that number of boats? - No, I do not think half an hour can be considered a very great length of time. Of course, you will understand that the times I have given you are very approximate. And if you take half an hour to uncover a boat and get the falls out and of absolute necessity get them coiled down clear, then get your strong backs out, then get

### **Page 333**

your boat hove out, pass the mast and sails as I did out of some of the boats in order to get more people in, and then lowering these boats carefully down to the water, when you were conducting that operation practically on board the ship you would find that would occupy a good part of half an hour - put it at twenty minutes, say - to do it carefully.

14499. I suggest to you that if you had had better equipment you might have got them down simultaneously - better equipment and more men? - As far as I understand, we had the best equipment of any vessel afloat. I do not know of any better equipment. 14500.

Some question arises as to the number of your lifeboats. It took all of your officers and efficient seamen the whole time from the time that you recognised the vessel was in imminent danger until she sank to lower the number of boats you had, and even then you were left with one boat still on deck, which you had not been able to bring in use? - Yes.

14501. If you had had a sufficient number of lifeboats to have taken away every soul on board, I suggest you would need a much greater number of efficient and competent seamen and officers? - Well, if you are including among the seamen firemen - you must always remember you have the firemen to call on - you have a great number of crew to call on to put the boats out.

14502. What I suggest to you is that with all the crew you had, and all the men you had, all the seamen, and all the officers, it took you all this time to lower your 19 boats? - Yes.

14503. If you had instead of 20, 40, or 50 to lower, I suggest you would have needed a larger number of officers and efficient seamen? - We should have had to have had more men working at the boats.

*The Commissioner:* I should think that is obvious? - Very obvious.

14504. If you have more boats to work you require more men to work them; but I should like you to tell us this if you can: How is the proper number of a crew for a vessel ascertained; is it according to the tonnage of the vessel, or how? - The seamen are you speaking of?

14505. The crew generally; the whole crew. - I am afraid I cannot give you the necessary information.

*The Commissioner:* Can anyone answer me that. Do you know, Mr. Laing, if there is any rules by which it is ascertained how many of a crew a particular ship ought to take? *Mr.*

*Laing:* My Lord, there is a manning scale issued by the Board of Trade, I understand. I have the rules here. It is published in a little book which has on the back of it, "Memorandum on Part II. of the Shipping Act" - "Manning Ships." The scale says this: - "As regards steamships, the following scale has been prepared on the basis of the minimum cubic contents of boats and rafts which are required to be carried by such vessel under the provisions of the rules relating to life-saving appliances," and then it gives the scale. "In the case of vessels," etc. (*reading to the words*) "3,900 cubic feet of boat capacity." Then it goes on and deals with engineers and firemen. It seems a little complicated. Perhaps I had better hand the book up, that your Lordship may look at it.

*Mr. Scanlan:* May I direct your Lordship's attention to the agreement?

*The Commissioner:* Your suggestion is that a great many more seamen and firemen ought to have been employed?

*Mr. Scanlan:* No, my Lord.

*The Commissioner:* Is it not?

*Mr. Scanlan:* Well, I do not know that I would say that for the number of lifeboats they had.

*The Commissioner:* No, no; but in order to save the people on board this ship, there ought to have been a great many more lifeboats, which is possibly true, and there ought to have been a great many more men belonging to the Seamen and Firemen's Union on board. That is what you are driving at?

*Mr. Scanlan:* I hope I will not be thought unfaithful to my clients if I say I shall be satisfied with more members of the British Seafarers Union.

*Mr. Clement Edwards:* That would not quite satisfy me, my Lord. That there should have been a sufficient to protect other interests would not quite satisfy me. *Mr. Scanlan:* I have made an abstract from those somewhat voluminous articles in which the ratings and engagements of the different members of the crew are set out, and I find that the deck department, which includes the able seamen, consists of 66, and this includes the Master and officers, surgeons, carpenters, and all kinds of seamen, as well as mess stewards. The number of the deck department is 66; the number of the stewards' department, stewards and pursers, is 501, and the engine room department is 327. I think they carried quite a sufficient number of stewards, my Lord. *The Commissioner:* Well, somebody may think they do not.

*Mr. Scanlan:* The men who would be useful, at all events, for launching and lowering boats, I take it, would be found primarily in the deck department, and would include, of course, the officers and the qualified seamen.

*The Commissioner:* As far as I can ascertain there are no rules laid down by the Board of Trade by which you can determine how many of a crew a ship of a particular size is to carry.

*Mr. Scanlan:* I think from those Articles the ship could have been cleared.

*The Commissioner:* Sir John, can you tell me whether there is any rule published by the Board of Trade to the effect that a ship 500 feet long and 10,000 tons register or over must have a master, two mates, and ten efficient sailors? It appears to be an extraordinary rule, but it is suggested to me that there is such a rule.

*The Solicitor-General:* I will have inquiries made about it at once.

*Mr. Scanlan:* From the agreement and account of the crew which is signed by the Board of Trade, and made at the port of departure, I find there is incorporated in this agreement, and as a term of it, a regulation for preserving discipline issued by the Board of Trade. There is an account of the number of the crew that would be sufficient, and this is far less than the number that was actually carried. I can submit it to your Lordship. *The*

*Commissioner:* That is what I meant. This steamer (whether it had enough or not is another question) was manned far away in excess of any requirements of the law. *Mr.*

*Scanlan:* Yes, my Lord, of the Board of Trade; but, of course, my submission is the Board of Trade regulations and rules are themselves utterly deficient.

*The Commissioner:* I quite understand that.

14506. (*Mr. Scanlan - To the Witness.*) There are just two other points I want to ask you.

With regard to the route, what route were you pursuing in the "Titanic" on this voyage? - What is known as the outward southern route.

14507. Do you know that since the disaster to the "Titanic" this route has been voluntarily altered by agreement amongst shipowners, and that a more southerly course is being taken? - I believe so.

14508. (*Mr. Scanlan.*) I understand that is a fact, my Lord. (*To the Witness.*) One other obvious way for avoiding collisions with ice is to keep a more southerly course? - Yes.

14509. Were you with the ship during her trials? - I was.

14510. And the trials took place in Belfast Lough? - Exactly.

14511. And on the way to Southampton. Have you any way of changing the course of a ship than by the rudder, by the helm? - By the engines.

14512. Taking the ship going at full speed, or at a speed of 21 1/2 knots, in what distance could you turn her, if you put one propeller at full speed ahead and the other propeller at full speed or three-quarter speed astern? - No actual trials have been made to my knowledge with a ship travelling at that speed.

14513. Was any trial made as to what you could do with the ship by putting the two propellers in opposition to one another? - Yes, I believe so.

14514. Did you as an officer responsible from time

to time for the navigation of this great ship know what could be done by reversing one propeller and sending the other ahead? - Do you mean the actual distance she would turn a circle in?

14515. Yes? - With the helm hard over I think she could turn in about three times her length.

14516. Does that mean with the helm hard over and one propeller directed full speed ahead and the other propeller astern? - No, I think that is with the ship going ahead and both engines going ahead.

14517. Was it not important to find out how her course could be changed by reversing one propeller? - Quite so; it was done.

14518. It was done? - Yes.

14519. And, apart from the action of the helm, in what distance, by changing the propeller and putting one astern, could her course be changed?

*The Commissioner:* Course be changed?

*Mr. Scanlan:* I mean could she be changed in a circle.

*The Commissioner:* You mean turned right round?

*Mr. Scanlan:* Yes.

*The Commissioner:* Do you mean turning half round or wholly round. Do you know which you mean.

14520. (*Mr. Scanlan.*) I do my Lord; I mean both. (*To the Witness.*) To turn her completely round on her axis so to speak, in her length, could she be turned on her axis by reversing one propeller? - You mean completing the circle?

14521. No, a half circle. - Sixteen points?

14522. Well, take it at 16 points.

*The Commissioner:* I think I would drop this at present.

*The Witness:* I do not quite understand.

*The Commissioner:* Drop it at present. You will have somebody else who will be able to tell us far better.

14523. (*Mr. Scanlan.*) There is one other point. (*To the Witness.*) You have a master's certificate and an extra master's certificate? - Yes.

14524. Do you know whether or not a Captain of a first class ship like the "Titanic" has a great many duties to perform of a social nature apart from his duties on the bridge; I mean looking after the passengers? - Oh, no. Of course the purser is responsible to him, as everyone in the ship is responsible to him.

14525. Has not the Captain as a matter of fact to be a great deal away from the bridge?

- Oh, dear no, not at all. He does not need to be away from the bridge at all. 14526. In practice is not the Captain a good deal away? - No. Do not misunderstand me. Say it is hazy weather or anything like that, he would never be away from the bridge. You might go from New York to Southampton and the Captain never away down amongst the passengers as far as that goes.

**Examined by Mr. ROCHE.**

14527. You were the only watch-keeping officer who was saved? - Yes.

14528. So I want you to answer me a few questions about the equipment and system on the bridge before we come to what happened. Supposing you are in charge of the ship, and a collision happens, and it strikes another vessel or an iceberg, is it in your province to close the watertight bulkheads? - Yes.
14529. Without sending for the master? - Yes.
14530. By doing what, moving a lever? - Moving a lever over.
14531. And without any communication with the engine room; they have to do nothing to assist you? - You communicate by the bell push, just an alarm bell, previously, and then put the handle over.
14532. The alarm tells them it is going to be done? - Exactly.
14533. But it does not require that they should do anything to assist your operations? - Nothing whatever.
14534. Therefore in all probability these watertight doors were closed immediately the accident happened? - Yes. I may say I saw the watertight doors myself tested in Belfast; they were all in perfect working order.
14535. And the warning is or ought to be given to the engine room that it is being done? - Yes.
14536. That is in order that they may not be in the way of the doors as they descend? - Exactly.
14537. We have had some evidence or suggestion that the watertight doors were opened again. I do not know whether you know that was done or not? - No. 14538. But tell me, if you will, how that could be done. It was suggested it could be done from the engine room. Do you know is that so? - Yes.
14539. With or without communication with the bridge? - Let me explain that. You put the lever over to "on."
14540. Who does, the officer on the bridge? - You put the lever over to "on" on the bridge. That forms a contact alongside the watertight doors and releases a friction clutch which allows the door to descend. As long as the lever is over to "on" I understand the doors cannot be lifted; but if you put the lever to "off" the doors have then to be raised by hand and can be raised by hand.
14541. What we get, therefore, is this, that when the bridge has put the lever to "on" the engineers cannot in any way alter or reverse that order without communication with the bridge? - Without us actually altering the handle.
14542. Which of course does require that somebody should be communicated with and should sanction it by doing something, namely, moving a lever? - Quite so. 14543. Can you tell us whether you have heard about one other matter which seems involved in some considerable obscurity. We have been told a length of piping was fetched from right aft in the tunnel and was carried further forward, where we do not know. Do you know or have you heard anything about the purpose of that? - Nothing, except what I have read in the evidence. I cannot explain it. I could not say how they got it through or why.
- The Commissioner:* What was the significance of this piping.
14544. (*Mr. Roche.*) The point is to know what was going to be done with it in the first place, and secondly it was suggested that its being moved involved the opening of some of these watertight doors. Therefore one wanted to know what the conditions were that

made it desirable to bring this pipe into use and where it was taken to in order to see what watertight doors were open. But you cannot help us at all about that? - I am afraid not.

*The Solicitor-General:* There was a suggestion made to us - I do not know whether it was made to your Lordship - when you went over the "Olympic"; when we went over we were shown the piping my friend refers to and it was lying in one of the after compartments.

*The Commissioner:* What is it for?

*The Solicitor-General:* We were informed that it might be used as a supplementary piping to attach to the pumps further forward, and there were pointed out to us the pumps in the different pump rooms, in the different compartments, with a flange to which this piping might have been attached to form an extra suction pipe. That was the suggestion made to us when we went over the ship.

*Mr. Roche:* I am much obliged for my friend's explanation. If we can get from some witness where it was taken to, it would help; but you cannot help us?

*The Witness:* No.

*The Commissioner:* Assuming that the watertight doors were closed automatically from the bridge, as soon as the collision took place, there is at present no reason to suppose, except possibly the evidence about this pipe, that they were ever opened again.

*Mr. Roche:* I forget who it was, but the witness who says the pipe was fetched said that, in fact,

## **Page 335**

the doors were opened. That was his view and recollection.

*Sir Robert Finlay:* Only in the forward part. The doors it was suggested were opened were only those forward.

*Mr. Roche:* I thought it was exactly the contrary - the pipe was fetched from the aftertunnel.

*The Solicitor-General:* That is right.

*Mr. Roche:* And the witness - I think his name was Scott - suggested that those were the doors that were opened to allow this piping to be carried. He could not carry the matter any further; he did not know where it went to forward, or what, if any, other doors were opened for the purpose of its being so carried. It is fairly obvious that if you got a heavy length of pipe in this way, if it can be avoided, it will not be carried up ladders and over a sort of series of high obstacles running up to E deck.

*The Commissioner:* If they were opened they must have been opened by some operation on the bridge.

*Mr. Roche:* That is what I wanted to get; the engineers of their own motion could not open these doors. My friend, Mr. Raeburn, refers me to page 131, Question 5600.

*The Solicitor-General:* That is right.

*Mr. Roche:* The witness was Scott, as I thought; he was in the turbine department, and he says this in answer to your Lordship. Your Lordship asks: "Then all the watertight doors aft of the main engine room were opened? (*The Attorney-General.*) Yes. (*To the Witness.*) And, as far as you know, as I understand it, they never were closed? - (A.) No.

Why they opened them was they had to go down the last tunnel but one - ” *The Commissioner*: This is referring to watertight doors that are worked from the bridge.

*Mr. Roche*: Yes, my Lord. They are all, without exception, worked from the bridge.

*The Witness*: All tank top doors are worked from the bridge.

14545. That is to say, not the doors above E deck? - No.

14545a. But the doors which extend from the floor of the ship up to E deck? - Exactly.

*The Commissioner*: That is to say those that are in the bulkheads.

*Mr. Roche*: Yes, they are really bulkheads.

*The Witness*: Yes, bulkhead doors.

14546. (*The Commissioner*.) They are all worked from the bridge? - Yes, my Lord.

14547. The others have to be worked by hand? - By hand on the deck they are on, or from the deck above.

*Mr. Roche*: And this witness says at Q. 5584 that the engineer of the watch in the engine room gave them orders: “(Q.) 5585. What did he tell you to do? - (A.) He told us to heave all the watertight doors up. (Q.) Did you go right aft again to the aftermost tunnel? - (A.) Yes, we went right through. We opened one up in the afterside of the turbine room, and then went right through them till we got to the after one, which we had opened up about two feet.” Then he described that he got to the aftermost tunnel, and he described the reason at Question 5600: “So far as you know, as I understand it, they never were closed? - (A.) No. Why they opened them was they had to go down the last tunnel but one and get a big suction pipe out, which they used for drawing the water up out of the bilges. (Q.) That tunnel is the one before you get to the last watertight door, where they went to get a big suction pipe? - (A.) Yes, it takes four men to carry it. I think I saw four men coming through with it. They took it to the stokehold. What they did with it I do not know.” So he sees it as far forward as the stokehold. Perhaps he means No. 1 boiler room, and he did not see further.

*The Solicitor-General*: Mr. Roche, one has to combine with that the evidence of Dillon, which is on page 99, who says he was instructed to go forward of the boiler room, and he opened four doors, and in answer to Question 3800, “What did you open them for?” he says, “To allow the engineers to get forward to their duties, the valves and the pumps.”

*The Commissioner*: It looks like the same thing.

*The Solicitor-General*: One is forward and the other is aft; one is to get the thing and the other is to carry it forward.

*Mr. Roche*: It looks as if at some time - I do not know that these witnesses are very definite about the time they were all opened again. He answers you, my Lord at Question 3793. “They were not closed again? - (A.) No, my Lord.”

*The Commissioner*: If this evidence is to be taken as accurate, there was a time after the watertight doors in the bulkheads were closed, when they were opened again.

*Mr. Roche*: That is how I read it.

*The Commissioner*: From that time forward it would appear that they were never closed.

*Sir Robert Finlay*: Only some of them. If your Lordship will look at page 99, Question 3789, 3790 and 3791, it is in answer to your Lordship. Your Lordship says, “Then you opened three watertight doors in the watertight bulkheads. The Attorney-General: Four, that is the evidence; from the engine room first.

*The Commissioner:* Oh, from the engine room first. Then you opened four, did you? - (A.) Yes, my Lord.”

*The Commissioner:* I remember this, Sir Robert. That meant that what perhaps might have been considered necessary doors for keeping out the water which had come in through the hole that had been made in the side, were left closed.

*Sir Robert Finlay:* They were left closed.

*The Solicitor-General:* That is right.

*The Commissioner:* I suppose it was thought at that time that the hole in the ship did not let in any water aft of the point where this last door was left undisturbed. *Sir Robert*

*Finlay:* Yes, my Lord, to enable the engineers to get on and do their pumping.

*The Commissioner:* There was something said, and I have heard nothing more about it since that I remember, about some of these doors closing some other way automatically.

*Sir Robert Finlay:* They can close on the bridge automatically those lower doors?

*The Commissioner:* I mean some other apparatus altogether.

*Sir Robert Finlay:* Oh, yes, where water rises and gets in there is a float which automatically closes the door. It was worked, I think?

*The Solicitor-General:* Yes, I saw it worked.

*Mr. Clement Edwards:* I was asking a question, and I was stopped by the learned Solicitor-General, who said he was calling evidence, and thereupon Mr. Laing got up and explained to your Lordship what from his point of view was the method by which this automatic float operated.

*The Commissioner:* Certainly, I remember it. Up to this time I cannot say I have understood what this operation is.

14548. (*Mr. Roche - To the Witness.*) I do not know whether you could help us with regard to that. Supposing you do not want your float to close the doors, you want to keep them open for any purpose. Can you put it out of operation? - I do not think so. 14549. That is all you can tell us about that matter. Now I want to ask you the sequence of events when you came on deck. You come out first from your quarters, when you feel the shock of the collision? - Yes.

14550. And you see steam escaping? - Yes.

14551. That means, of course, that the engines have been stopped? - Yes.

14552. That the engines are not taking the steam and therefore they are blowing off. Were they ever put ahead again? - That I could not say.

14553. You could not feel it? - No.

14554. They never moved to your knowledge? - That I could not say; I could not say whether they were moved or not.

14555. Then you go back to your berth and are there for about half an hour? - Somewhere about that.

14556. Were the pumps running when you came out again? - That I could not say.

14557. Could not you feel or see that? - Oh, no, I should not feel the pumps from the deck.

14558. Or know whether there was water going over the side? - No, we know from the evidence that water was going over the side.

14559. You were working on the hurricane deck not very far from the bridge. Did you hear the order given to bring up the women and children? - No.

14560. You only know that was in operation - that that was being done? - Yes. 14561. We have been told that later there was an order that at that time everybody should look out for themselves? - I heard nothing about it. 14562. You heard nothing about it at all? - Nothing whatever.

14563. Did you hear any general order for the people who were below to come up from below? - No. Any order of that description would have to be passed to the head of the department and would not concern me.

14564. I quite know it did not come through you, but I did not know whether you had gleaned or gathered from the people coming up that such an order had been given? - No, I knew of the order; it came to my knowledge afterwards that an order had gone for the passengers to put on lifebelts.

14565. Did you ever know at all whether any order had gone that the engineers should come up on deck? - No.

14566. You knew nothing of that? - No, I knew nothing.

14567. On the several boats which you were attending to - 4, 6, and 8, and the collapsible - did you see any of the engine room officers on the deck at all? - No, I did not see any of the engineers at any time.

14568. So far as you know they were down below to the end? - Yes.

14569. If you communicate with the engine room on this large ship you communicate by telephone? - Yes.

14570. From the bridge? - Yes.

14571. And that is the means that would be adopted and available for any orders? - Yes.

14572. With regard to the manning of the boats there was a very valuable suggestion that my friend Mr. Scanlan made and I understand you to approve of, and I want to know your view of it. The suggestion as to the firemen - there are a very large number of firemen of course on board these ships - that in case of calamity it is desirable both that the firemen should be saved and that they should be useful in manning the boats? - Yes. 14573. I understand your suggestion to be, that since boat practice before one of these voyages begins or during the course of it, is difficult if not impossible, there should be some preliminary training? - It would be advisable.

14574. And if that were done with the sanction of the Board of Trade, if not by law, of course it would tend to become universal? - No doubt.

14575. Just in the same way that the fact that the Board of Trade test for sight and colour makes that the practice? - Exactly.

14576. There are two look-out men in the crow's-nest? - At all times.

14577. And they are on duty for how long? - Two hours on and four off.

14578. Are they looking out during these two hours alternately, relieving one another or are they looking out concurrently? - One stands on one side of the crow's-nest and the other on the other, and they are supposed to be keeping a sharp look-out all the time. 14579. You are an experienced officer. Does not that tend rather to

- two things, dividing the responsibility, and, where a very sharp look-out is needed, as in the case of ice, to a very great strain on the men's eyes? - Two hours?
14580. Two hours. - I do not think that is much strain, two hours.
14581. Not looking intently at the horizon for two hours? - No.
14582. Do not you find it on the bridge? - No.
14583. Do not you think for those men to look out alternately would be better than concurrently? - No, it would be worse.
14584. That is your opinion? - Yes.
14585. As to the speed which you are speaking of, 21 ½ knots, you use as an argument or illustration why she was not being pressed, that there were boilers not in use? - I am given to understand so.
14586. On these large vessels there are always reserve boilers which are not in fact put in commission - I mean which are not always going all at once, to allow for a margin for repairs, and so forth?
14587. I think that is more for an engineer to answer; but what we call the donkey boilers which are used in port, I believe, are the only ones that are out of use ordinarily.
14588. I did not mean they were out of use during the whole voyage, but in practice at any one time you never do in fact have all the boilers going? - I think they are all going.
14589. I have to ask this question because unfortunately not one of the engineers has survived? - I shall be glad to answer what I can.

**Examined by Mr. HARBINSON.**

14590. Would you consider it would tend to a more efficient look-out if at times when you are in the vicinity of ice a junior officer were put in the crow's-nest together with the two look-out men? - No.
14591. You would not consider that was necessary? - No.
14592. I understood you to say yesterday that you had calculated you would be in the vicinity of ice about half-past nine? - About that, yes.
14593. And that the Sixth Officer, Mr. Moody, had made a calculation that you might reach ice somewhere about 11 o'clock? - Yes.
14594. That was rather a considerable discrepancy? - Yes.
14595. When you were leaving the bridge at 10 o'clock did you mention to Mr. Murdoch who succeeded you that your calculation was different from the calculation made by Moody? - I do not think I mentioned any individual calculations.
14596. You would not have considered it desirable, considering the conditions were such as you have told us, that you should have drawn Mr. Murdoch's attention to this disparity in calculation? - No.
14597. Did you attach much importance to it yourself? - None.
14598. But you thought you would be in the neighbourhood of ice at half-past nine? - I knew we should not be there before half-past nine.
14599. You reported to Mr. Murdoch what took place while you had been on the bridge. You gave him a general report? - A general report.

14600. And did you discuss with him in detail the question of the vicinity of ice? - Nothing more than I have already given in my evidence with regard to ice.
14601. You have told us that the falls in the boats you were connected with, the lifeboats, worked satisfactory? - Quite.
14602. Is it customary on the boats that you have been attached to to lower the collapsibles from the falls that let down the lifeboats? - I have never seen collapsibles lowered before.
14603. Did you on this night, this Sunday the 14th April, experience any difficulty or see if any difficulty were experienced in the lowering of the collapsibles by these falls after the lifeboats had been lowered? - After they had been lowered?
14604. Perhaps I should put it in this way. After the lifeboats had been lowered, when the falls are empty, is there any difficulty ever experienced in getting the falls up again? - The falls were already rounded up, as I said in my evidence, when I got there, so I had not experience of rounding them up myself.
14605. You do not know whether or not there is at times a difficulty in getting the falls rounded up as you say? - In all tackles there is more or less a difficulty in both overhauling them and rounding them up again unless there is any weight on them. It has to be carefully managed.

**Page 337**

14606. So that unless in the case of emergency the falls are very carefully managed, it would be impossible through their agency to lower these collapsible boats? - Oh, no, I would not say impossible at all. It proved very probable and capable, and we did lower the collapsible boats with them.
14607. Did you have any difficulty owing to the falls rounding up, in lowering the collapsible boats? - In rounding them up or lowering them?
14608. In rounding them up after the lifeboats had been lowered? - All the tackles need careful handling as I say in overhauling or rounding up.
14609. In order to avoid such a thing would you think it desirable that there should be second falls provided for the collapsibles? - It is not practicable.
14610. Did you see much of Mr. Ismay on the journey across? - No.
14611. Was he often on the boat deck? - No.
14612. Do you know on this Sunday afternoon whether or not the Captain had shown him the Marconigram with reference to the ice? - I do not know.
14613. Did you see Mr. Ismay much with the Captain? - No, I never saw him at all with the Captain.
14614. In fact, you saw little of Mr. Ismay from the time you left Southampton? - As far as my knowledge goes, Mr. Ismay was never within the vicinity of either the quarters or the bridge during the voyage.

**Examined by Mr. CLEMENT EDWARDS.**

14615. You came over with the "Titanic" from Belfast? - Yes.

14616. Do you know anything about the survey by the Board of Trade? - In Belfast or Southampton?
14617. At any time? - Both.
14618. Was the "Titanic" surveyed by the Board of Trade representative in your presence in Belfast? - Part of the time in my presence. 14619. Who was the representative? - I forget his name.
14620. Was it the same representative of the Board of Trade in Belfast as you saw in Southampton? - Oh, no; a different representative in Southampton.
14621. I will come to Southampton in a moment. Did you accompany the Surveyor of the Board of Trade while he was making his survey in Belfast? - Part of the time. 14622. Was there a Surveyor on behalf of anybody else except the Board of Trade in your presence? - There were several gentlemen there; who they represented I really could not say.
14623. The "Titanic" was not classed at Lloyd's or any other registration society? - That I could not answer.
14624. You do not know whether there was a Surveyor from any registration society surveying in Belfast? - No, I do not know.
14625. And you do not know the name of the Board of Trade representative? - No, I forget his name.
14626. (*The Solicitor-General.*) Mr. Carruthers, I think? - Yes, that is right. 14627. (*Mr. Clement Edwards.*) Did you accompany Mr. Carruthers throughout his survey? - No; as I say part of the time.
14628. Can you say what part of the survey he did in your presence? - Yes; he examined the lifeboats, swung them out, lowered them down, hauled them up, and examined the equipment.
14629. That is the lifeboat equipment? - The lifeboat equipment - and tested the big anchor forward, swung that out and back again. I think that is all the time I had with him. I was with him most of the time he was with the lifeboats really, of any consequence.
14630. You were not present with him when he surveyed the bulkheads or apparatus for operating the doors? - Yes, I was through all the watertight bulkheads with him too. Pardon me, when I say with Mr. Carruthers, it was really for my own satisfaction. Whether Mr. Carruthers was there at the time I really could not say. Probably he was.
14631. Well, unless you know? - Well, I am not quite certain.
14632. When he tested the equipment of the lifeboats, did he check the list of things required by the Board of Trade rules to be put in the lifeboats? - I could not say that for certain. Previously we had already taken a check of the full complement of the boats by the officers; the officers themselves had been through all the boats, and got a list. 14633. It has been given in evidence here that some of the things in the Board of Trade list were not to be found on the boats when the accident happened? - That is right. 14634. Can you suggest why that was? - Yes, the things which you are alluding to I believe are compasses and lamps. As far as I understand those are not required to be carried in the boats.
14635. (*The Commissioner.*) Can you tell us where on board a steamer the lamps for the lifeboats are usually kept? - In the lamp room I believe, my Lord.

14636. And they are carried on the "Olympic" in the lamp room? - I presume so; I really could not say, my Lord.

*The Commissioner:* I believe they are, Mr. Edwards.

14637. (*Mr. Clement Edwards.*) Anyhow, at Belfast you say that the Board of Trade Surveyor went through these things, and do you say that he found all that was required by the rules? - His report would be made to the Chief Officer, so I cannot answer for that.

14638. In your presence did he point out that anything was missing? - Nothing. 14639. From Belfast you came to Southampton. On the journey did you hear anything about a fire in the bulkhead between Section 5 and 6? - I did not.

14640. Have you at any time heard anything about a fire? - In a coal bunker?

14641. Yes. - No.

14642. In the ordinary course of things would a matter of that sort be reported to you as an officer? - No, not if it was slight, or I may say unless it became serious.

14643. Would it be reported to the Captain? - Very probably.

14644. Whose particular duty would it be to see that any fire occurring there was put out? - The Engineer's.

14645. When you came to Southampton you said there was another representative of the Board of Trade. Who was that representative? - Captain Clark.

14646. Did you accompany him in his survey? - Part of the time.

14647. For how long? - I really could not say. I was with him part of the time. 14648. Who was with him the other part of the time? Could you say? - Yes, the Chief Officer that was then, Mr. Murdoch.

14649. While you were with the representative of the Board of Trade, Captain Clark, what part of the survey was done? - I really cannot remember what we went through with Captain Clark, unless it were the boats. Of course, on sailing day - well, that has nothing to do with the survey.

14650. What day did you arrive at Southampton - Saturday or Sunday, do you remember? - Sunday.

14651. And which day did the survey take place? - I cannot remember.

14652. Cannot you remember any part of the survey which was done by Captain Clark in your presence? - No, I cannot remember any of the incidents of it.

14653. Did he make a detailed inspection of the boats? - That I could not say.

### **Page 338**

14654. Do you remember your evidence before the American Senate? - No; some part of it I daresay I recollect.

14655. You remember you gave evidence there as to the survey that Captain Clark made in your presence? - Yes.

14656. You have had a hard day, and I can quite understand you are getting a little fatigued? - Oh, no, that is all right.

14657. On the day after you sailed did you make a test of the boats and the apparatus? - Yes.

14658. In the presence of Captain Clark? - Yes.

14659. It was intended as a formal inspection by the Board of Trade? - Yes.
14660. Now, do you remember the extent to which you carried out the test? - Yes, with regard to the boats.
14661. What did you do? - We lowered two boats, that is swung out, carried on with the crew, swung out the boats, lowering away, placing the crew in the boats, the crews with their lifebelts on, lowered the boats, released them, sent them out, brought them back to the ship, and hoisted them inboard again and secured them.
14662. How many? - Two.
14663. Now you have said that this was a perfectly clear night? - Yes.
14664. Is it a fact, well within your experience, that when ice has got down into a fairly warm latitude that there is a constant haze given off from the ice due to the disparity in the temperature of the ice and the surrounding atmosphere? - Not to my knowledge. 14665. And is it not the fact that that haze is very frequently removed when a wind springs up and you are then able to see the edge of the ice quite clearly as you have suggested in your evidence? - Never, to my knowledge, have I seen any haze hanging round a berg. I have come across icebergs in a thick fog, but never noticed any individual haze round any ice.
14666. Is not a fog constantly created by this contact of ice at a very low temperature with the atmosphere of a much higher temperature? - Oh, no; you get fog when there is no ice at all.
14667. I know that. Sometimes we get it with heat, but what I am putting to you is that this disparity between the temperature of an iceberg and the surrounding atmosphere is one of the causes which go to create fogs in the Atlantic? - Would you mind repeating that?
14668. (*The Commissioner.*) Do you think it is worth repeating it; I do not think he knows these matters. The suggestion is that many fogs in the Atlantic are manufactured or made by icebergs? - No, my Lord.
14669. (*Mr. Clement Edwards.*) Icebergs in contact with the warm atmosphere? - Never to my knowledge.
- The Commissioner:* I do not think he knows anything about it.
14670. (*Mr. Clement Edwards.*) You did in your evidence yesterday attempt to explain one of the reasons for the creation of fog. At Question 13600 you said "Well, though it may seem strange, it is quite possible for it to go up if the ice happens to be floating in slightly warmer water, or if the wind were to come round from the southward. You will frequently be passing through a cold stream, and if the wind comes from the southward you will almost invariably look out for a fog owing to the warm wind striking the cold water"? - Quite right. I was explaining to his Lordship at that time that though the temperature was very low, it was no indication of ice, because you might be approaching ice and the fact of the wind coming round from the southward would give you a warmer temperature, not necessarily fog, and therefore you would have a warmer temperature and still be approaching ice.
14671. Now, if the look-out men, in fact, saw a haze, what do you suggest it may have been produced by? - If they saw a haze it might have been produced by a warm and cold current meeting.

14672. And that might have concealed the ice? - If a haze had arisen it might have concealed the ice.

14673. And that condition of things might have been sufficiently local for you not to have seen anything of it when you went off duty at 10, and not to have seen any trace of it at the time when you again came up on deck after the collision? - It is just possible.

14674. Had you at any time any information as to the extent to which water had come in the "Titanic"? - Yes.

14675. When? - When the Fourth Officer reported to me in my room, and also when I asked the Carpenter whether No. 6 stokehold were dry. On the first occasion the Fourth Officer informed me the water was up to F deck. He has explained since he meant G deck - and the Carpenter informed me that No. 6 stokehold was dry.

14676. Did you understand at the time that he meant F deck? - I understood him to mean F deck.

14677. And are the gangways in E deck, the next deck? - Yes.

14678. Were you at all in a state of panic when you gave instructions that the gangway doors were to be opened? - Not the slightest.

14679. Did you have any consultation at all with the Captain when you gave those instructions? - None whatever.

14680. At the time you gave those instructions to the Boatswain did you notice whether there was any list at all on the ship? - No, I did not notice.

14681. How soon after you gave those instructions did you notice there was a list to port? - I think I have explained that in my evidence, that it was at No. 6 boat, I think, where I first noticed the list.

14682. At which boat were you when you gave instructions to the Boatswain to open the gangway doors? - I think I have also explained that - at No. 6.

14683. Now you have explained that it took you some 20 minutes to half an hour to get No. 6 boat uncovered and lowered; at what stage of that process did you give instructions to the Boatswain? - I could not say.

14684. At what stage did you notice the list to port? - I could not say.

14685. Can you say whether you noticed a list to port before or after you had given instructions to the boatswain? - That I could not say with certainty either.

14686. Has it occurred to you that if the ship struck on the starboard side it was a very extraordinary thing that there should have been a list to port? - No.

14687. Why not? - Why not extraordinary?

14688. Yes? - Because she fills up both sides equally.

14689. Does she, if there is an aperture on one side, does not she usually list to the side from which the water is pouring in? - Not necessarily.

14690. I did not say necessarily? - No.

14691. You would expect there would be a list to that side in which the water comes in, would you not? - No.

14692. Why not? - Why should I?

14693. Well, I am asking you? - I am sorry I cannot explain.

14694. You must have some ground for taking a certain view. You say that you would not expect a list to that side at which the water came in.

*The Commissioner:* No, he did not say that. He said, not necessarily. I understand him to mean that the fact that there was a hole on one side would not necessarily mean that there would be a list on that side. That is all I understand him.

*The Witness:* That is right, my Lord.

*The Commissioner:* And I am advised that that is right, Mr. Edwards.

14695. (*Mr. Clement Edwards.*) Has it occurred to you since that possibly the gangway doors were opened and were first opened on the port side and she took a lot of water through those doors? - No.

**Page 339**

**Examined by Mr. LEWIS.**

14696. I understand you to say that the eyesight test had been maintained by the White Star Company? - As far as practicable.

14697. Is that from general knowledge or your own experience? - Personal experience.

14698. Would it surprise you to know that as a matter of fact the eyesight test has been discontinued for some considerable time at Southampton? - I might on the other hand say would it be of any use to you to know that I insist on it.

14699. Then I want to get it. Have you any experience outside your own ship, for instance, as to the general practice in the White Star Company? - No, I am speaking from personal knowledge.

14700. You could not say whether it is maintained except by yourself? - I am speaking purely from personal knowledge.

14701. Do you know that one of the look-out men had never done that duty before and was only qualified as an A.B. last year? - Quite possibly.

14702. Whose duty is it to see that the equipment of the lifeboats is maintained? - The Board of Trade's.

14703. Is that carried out effectively? - It is, very effectively.

14704. As effectively on the White Star Line as in some of the other companies? - Speaking from my own experience at Southampton, it is particularly well carried out. 14705. I take it you mean that it would be the duty of the Board of Trade to see they are equipped, but it is the duty of the company to do the actual work of equipping them? - Undoubtedly.

14706. Whose duty is it from the company's point of view to see they are equipped? - It rests primarily with the officers concerned, secondly with the Chief Officer, and, thirdly, with the Marine Superintendent.

14707. Do you know whether it is the duty of the shore staff to see these lifeboats are equipped? - I do know it is the duty of two men, who are told off to do nothing else while the ship is in port but go round and examine the lifeboats thoroughly, equipment, bread, water and everything else.

14708. How do you account for the fact that your boats were not equipped thoroughly? - I do not account for it.

14709. I mean with water and bread and all those things that are necessary? - May I ask how it comes to your knowledge?

*The Commissioner:* I have already said those are very small matters; there is not much importance to be connected with any one of them.

*Mr. Lewis:* They are important from our standpoint, the question of the equipment of the boats.

*The Commissioner:* That may be, I know already in some respects those boats were not fully equipped, but I know also they had nothing to do with this calamity.

*Mr. Lewis:* But my point is with respect that if the company were lax in regard to one particular point, there is the possibility of their being lax in other directions. *The*

*Commissioner:* You can make that as a point, but it is nothing to examine this witness about.

14710. (*Mr. Lewis.*) I want to know the general methods adopted by the company as far as this witness knows. (*To the Witness.*) With regard to particular lifeboats, I understood you to say in your evidence that it took about an hour and a half to two hours to prepare and lower the boats upon which you were engaged, is that so? *The Commissioner:* Yes, he has said it, and I know it, you know.

14711. (*Mr. Lewis.*) Do you consider that under the circumstances of the case, when the ship was sinking rapidly, that that was a reasonable time to take? - Yes.

14712. What is the object of a boat list and boat drill? - It is rather obvious; it is to teach the men to know their stations.

14713. In the event of danger is not the object to be prepared to lower the boats simultaneously? - Not necessarily.

14714. If, for instance, the accident was even worse, if it is possible to conceive, and you had knowledge that the ship was to sink in an hour, obviously it would be desirable to get the boats down speedily, would it not? - Yes.

14715. Is not the object of having boat stations in order that you may station men at the different boats to lower them at once if necessary? - No.

14716. What is the object of having firemen and stewards on the boat list? - To know their stations.

14717. Is it not a fact that you ran a risk by proceeding from boat to boat to lower those boats of having several boats left? - They were not left.

14718. Is it not the fact that you did have boats left, collapsible boats or rafts that you could not get off in time? - No.

*The Commissioner:* Now what is the real object of your questions. They are not helping me at all. Is your real object that you think more men belonging to your Union ought to be employed? These questions do not assist me one bit.

*Mr. Lewis:* My point is this - and I think it is proved by the fact that there was a difficulty in getting the collapsible boat off - that more men that were on the ship should have been used to get off the boats.

*The Commissioner:* With the exception of one boat all the boats were got down to the sea.

*Mr. Lewis:* Surely one boat is important upon an occasion of this kind.

*The Commissioner:* Yes, but there are particular circumstances applying to that boat. It was not the want of men.

14719. (*Mr. Lewis.*) But the boat could not be got off because the water was up and could not be got ready in time. (*To the Witness.*) You considered that everything was done that was reasonable with regard to the launching of the boats? - Yes.
14720. Now with regard to the look-out men. Did I understand that if the look-out men had had glasses and had been using them at the time, they would have seen the iceberg much quicker? - I could not say what you understood.
14721. Supposing when the iceberg region was approached they had been using their glasses would they in your opinion have seen the iceberg much quicker? - If they had had a glass glued to their eyes?
14722. If they had been looking at the time they saw the iceberg and rang the bridge? - Yes.
14723. If, prior to that, they had had a glass, could they have seen it some time before? - I really could not say.
14724. It is extremely probable, I suppose? - Not necessarily.
14725. I think you admitted you could see a greater distance with glasses? - Under certain conditions, yes.
14726. And on this night it was clear, was it not? - Yes.
14727. Would that be a night on which a glass would have been of service? - I have never seen icebergs through glasses so I really cannot say.
14728. If there had been glasses there it would have been extremely probable, one man would be using his eyes and the other his glasses? - Most improbable.
- The Commissioner:* Do you really suggest that in a look-out like the crow's-nest there is always one man with glasses and another man without glasses.
14729. (*Mr. Lewis.*) I suggest it is possible that one man would be using glasses and the other not. Do not you think it would have been advisable when approaching an ice-field, seeing you knew glasses had not been supplied to the look-out men, to have seen that they were supplied with a pair? - No.
14730. I understood you to say that you could yourself have seen the iceberg in time for the disaster to have been averted if you had been on

**Page 340**

the bridge? - I am afraid you have totally misunderstood me. I do not pretend to have been able to see it any further than my brother officer, Mr. Murdoch.

14731. I understood you in reply to a question that you thought you could have seen it in time to have averted the accident? - I am afraid you have understood wrongly then.

14732. Can you tell me whether there were any orders with regard to firemen, whether they were stationed at all, those off watch? - No. I had no orders with regard to firemen.

14733. They seem not to have been used very much, and I want to know if you knew they had been stationed on any part of the deck; you could not say that? - No. 14734. Can you tell me whether sliding chocks for the collapsible boats would have been of any material assistance to you? - I could not.

14735. I understand that there is a patent chock which will enable collapsible boats to be put out. You have never seen them, perhaps? - No.

14736. With regard to speed, did I understand you aright this time, that you said you had never known speed reduced? - No, you are not correct.
14737. I understood the question was put, and you said you never understood speed was reduced? - No, that is wrong; you had misunderstood me totally.
14738. May I take it speed is frequently reduced crossing the Atlantic? - Under certain conditions.
14739. Is it not the fact the boats are nearly always in to time? - No.
14740. Have you been late frequently? - Yes, I have known a first class mail, a 21-knot boat, 36 hours late.
14741. You have known that on the White Star? - Yes, and been on her.

**Examined by Mr. HOLMES.**

14742. You told us that all the officers had been on the "Titanic" on the trial trip except Mr. Wilde? - Yes.
14743. You know he had had considerable experience on the "Olympic," the sister ship? - I believe so.
14744. Were the boats on the "Titanic" in the forward and the after compartments carried in the same way? - Practically the same, with the exception of that small bulwark there.
14745. Are not they carried inboard? - I see what you mean. At sea they are carried with their keel on the rail of the ship. Those boats were inboard on their chocks. That is right.
14746. You have told us of the conversation with the Captain, in which he gave you instructions to call him if you were at all doubtful? - Yes.
14747. Had you, in fact, any kind of doubt during the rest of your watch? - None whatever.
14748. Was there any reason whatever why you should have any such doubt? - None.
14749. Had you had any ice or fog or haze reported to you? - About the ice track, do you mean?
14750. No, I mean from the look-out? - Oh, dear, no; none whatever.
14751. All you knew was that earlier in the day ice had been reported in a particular region? - Yes.
14752. And your previous experience had taught you that it did not mean by any means that you were necessarily going to meet it? - That is so.
14753. Would the effect of slowing your engines before you had seen any ice at all have simply been to keep you longer in the danger zone? - Yes.
14754. I take it your own eyesight is perfectly good? - I believe so.
14755. You and all the other officers have to pass a very stringent Board of Trade examination before you get your certificate? - Yes, they have, and subsequently.
14756. You have told us that you allotted men to each boat when you came on deck to get them uncovered. Did you intend those men to go into the boats as their crews? - Not necessarily.

14757. Simply to go round the decks and uncover the boats? - They were told off to their boat, and they would naturally remain at that boat until she was in the water, unless they got further orders.

14758. How many boats, in fact, did you superintend being lowered into the water? - It is rather difficult to say. I was working the whole time at the boats. How many I put in I really do not know - four, six, perhaps eight - three lifeboats at least, and a collapsible.

14759. Can you tell me what other duties the officers were to perform after that collision? - Speaking for myself, I had no other duties.

14760. No, generally; what were their duties generally. I take it that one officer would have to look after the rockets? - There was an officer looking after the rockets, an officer down below a couple of times to judge the amount of water and attending to the Morse signals and attending also to the boats.

14761. There were seven officers besides the Captain? - Yes.

14762. Do you consider you could have done with any less than that on board the "Titanic"? - Oh, yes.

14763. Can you tell me how many are required?

*The Commissioner:* Is that the answer that you wanted?

*Mr. Holmes:* It satisfies me, my Lord.

*The Witness:* I mean to convey this, that, as proved, we could have managed the boats in the water with the weather in that condition without officers. It would not have mattered if there were only women in the boats. It was flat calm.

14764. Do you know of your own knowledge how many officers a ship like that can go to sea with and still comply with the law? - No, I have heard, but I have not taken much notice of it.

14765. Is it the fact they only require two certificated officers? - I believe it is something like that.

*The Commissioner:* You must remember this witness is one of your own clients.

*Mr. Holmes:* I know, my Lord.

*The Commissioner:* Do not you think you can leave him alone?

*Mr. Holmes:* If your Lordship will allow me to ask him a few more questions tomorrow morning?

*The Commissioner:* No.

14766. (*Mr. Holmes - To the Witness.*) Can you tell me the last that you saw of Mr. Wilde before the ship went down? - The last I remember seeing of Mr. Wilde was quite a long time before the ship went down.

14767. And Mr. Murdoch? - Mr. Murdoch I saw practically at the actual moment that I went under water.

14768. Can you tell me where he was? - He was then working at the forward fall on the starboard side forward; that is the fall to connect to the collapsible boat.

14769. What was the last you saw of Mr. Moody? - I do not remember seeing Mr. Moody that night at all, though I am given to understand, from what I have gathered since, that Mr. Moody must have been standing quite close to me at the same time. He was on top of the quarters clearing away the collapsible boat on the starboard side, whilst

Mr. Murdoch was working at the falls. If that is so, we were all practically in the water together.

14770. You stated that you asked the Carpenter to take soundings at No. 6? - No, I did not.

14771. Did you ask the Carpenter to take soundings anywhere? - No.

14772. Did you hear the Captain ask the Carpenter? - No.

14773. You mentioned in your evidence that the Carpenter had taken soundings and said that No. 6 was dry? - I did not say that exactly. I asked the Carpenter if No. 6 stokehold had any water in.

**Page 341**

**Examined by Mr. COTTER.**

14774. That is what I am trying to get at. What time was that when you asked him that? - I could not tell you.

14775. Can you give us any idea? - No. I met him somewhere on the boat deck.

14776. Was that after you had been to No. 6? - I really could not say.

14777. What time would it be after you had been got out of your bunk when you sent the Boatswain down to open these gangway doors? - I have already given the times as near as I possibly can, and the time I sent the Boatswain down; I think you will find that in the evidence.

14778. Can you tell us how the doors are made fast? - No, I cannot give you a detailed explanation.

14779. You do not know how? - They are secured by bolts.

14780. Is there a large iron boom across fastened by bolts? - I could not say.

14781. Are they very difficult to open? - The Carpenter opens those.

14782. Are they difficult? - I could not tell you; it is not my work.

14783. Have you seen one opened? - No.

14784. Have you any idea of the weight of one of those doors? - Yes, I have an idea.

14785. Will you give us some idea? - Yes, you get down to the forward steerage and then you will be at the door.

14786. I want the weight of it? - I beg your pardon, I thought you said way. I could not give you any idea.

14787. If it were once opened and lost its balance and swung against the ship's side, the Carpenter and a crowd of men would have a job to get that back again? - Not necessarily.

14788. If I suggested to you that it would take at least four men to open one of those doors, would that be right? - Probably about that. 14789. And it would take more to close them? - Quite.

14790. Once she had swung against the ship's side you would have to pull it back again, and you would have an awkward angle? - That all depends. I do not say it is necessarily a very hard job, it would depend principally on the list of the ship, or whether she had any list at all.

14791. If he was sent down to open them and the water reached up to the deck, when he found out his mistake, he would have a job to close them? - I did not say he had opened them.

14792. Supposing he had opened them? - Yes.

14793. Now I will take you to the collapsible boat. Is it not the fact when you unship one of those collapsible boats you have blocks and tackle fastened on the stays from the funnel? - No.

14794. Did you see no block and tackle on that stay from the funnel for the purpose of unshipping the collapsible boat? - Which are you speaking of?

14795. I am talking about the forward funnel on the port side; are not there small blocks and tackle on it? - No.

14796. How do you unship one of those Englehardt boats? - We never have unshipped one, but I see what you are getting at. There is a link in the funnel guy for the purpose of hooking on tackle and so getting the Englehardt from the top of the quarters down to the deck.

14797. I am right that you could put the block and tackle on to that link? - Yes, that is right.

14798. Was there any there that night? - Not that I am aware of.

14799. If you had had a block and tackle there you would have found it rather easy to unship it? - No, I should not have used it.

14800. It would have been of no use? - No.

*The Commissioner:* You represent the interests of the stewards do you not?

*Mr. Cotter:* I do.

*The Commissioner:* These questions may have some general bearing, but they do not affect particularly the stewards, do they?

*Mr. Cotter:* I think we are here to get as much information about the wreck as possible, and although I am representing the stewards I might get some information which may be useful to this Inquiry.

*The Commissioner:* I said this information may be of use generally, but it does not affect particularly your clients, the stewards. I think when you have heard a witness examined generally by five or six different people it is becoming time to end it. *Mr.*

*Cotter:* There has not been a question raised about these doors, which is a very important point. I am speaking as a practical man.

*The Commissioner:* At present you were asking about some tackle, and suggesting that the gentleman should have used it if it was there, and he answers you that it was not there, and if it had been he would not have used it. Now that does not seem to me to advance the Inquiry one bit.

*Mr. Cotter:* My contention is that if that tackle had been there, at least some of our men might have been saved as well as some of the passengers.

*The Commissioner:* His answer is that he would not have used them.

14801. (*Mr. Cotter.*) It is rather peculiar to have tackle of that description for the purpose of unshipping boats and not to use it. I put it, as a practical seaman, it should be used when it is there to use, and is the only means of getting those boats safely on

- to the deck. Can you tell us who draws up the boat list, or who drew up the boat list on the
- “Titanic”? - It is the first officer’s duty on the White Star ships.
14802. Did you see a boat list drawn up on the “Titanic”? - Yes.
14803. Did every member of the crew get a boat station? - I did not examine it in absolute detail and check it by the list.
14804. Is it general to have every member of the crew assigned to a boat station? - Yes.
14805. Also hand bulkhead door stations? - No.
14806. Who gives those out? - I could not tell you.
14807. Do you know where the hand bulkhead doors are stationed on the “Titanic”? - On the various decks.
14808. Did you ever see any door drill on the “Titanic”? - I have seen them all closed and opened.
14809. Where was that? - In Belfast.
14810. Did you see them on the voyage at all? - No.
14811. What is the general rule on board a ship - I am speaking to you now as an officer of many years’ standing - in case of collision. If everybody knew their stations, what kind of alarm is given to the crew to bring them to their stations? - We try to avoid all alarm.
14812. Is it not a rule at boat drill that a bugle goes? - Yes.
14813. If it is good for boat drill why is it not good to bring the men to the station? - I could not tell you.
14814. What alarm do you give for the closing of the bulkhead doors? - We do not sound any alarm; we do things as quietly as possible.
14815. What order do you give on board a ship at sea? - To close them.
14816. What is the order? - To close them.
14817. But there is a signal given? - No.
14818. What is the signal? - No signal.
14819. How is the order sent round? - Various means, telephone, telegraph.
14820. Have you no general bulkhead door drill? - No, we have not.
14821. At a specified time every morning, the same as other companies?  
*The Commissioner:* You must not say, “The same as other companies.” *Mr. Cotter:* It is a fact, my Lord.  
*The Commissioner:* It may be, but you must not give evidence.
14822. (*Mr. Cotter - To the Witness.*) There is no general bulkhead door drill on board your ship? - Are you speaking of seamen? You say you are

**Page 342**

- speaking from the point of view of a practical seaman. Are you speaking of seamen’s bulkhead door drill; I take it you are.
14823. Generally, throughout the ship? - No.
14824. There is none? - Not with regard to seamen.

**Examined by Mr. LAING.**

14825. Do you belong to the Royal Naval Reserve? - Yes.
14826. What rank do you hold? - Sub-lieutenant.
14827. With regard to the equipments of lifeboats were these gone through by the two junior officers? - Yes.
14828. In Belfast? - Yes.
14829. And all checked through, I think? - Four officers, as a matter of fact.
14830. Two on each side? - Yes.
14831. On the 14th, during your evening watch, did you take any stellar observations? - I did.
14832. Were they worked out by the junior officer? - They were.
14833. Can you take those observations if it is not clear? - No, you cannot.
14834. You were asked if you told Mr. Murdoch about the position of this ice. Was it in the night order book, do you know? - It was.
14835. And would Mr. Murdoch necessarily have the night order book? - He would necessarily initial it; yes.
14836. You were asked if you thought the vessel was going down when you first got news of the water, and you said, No. Did you know at that time how many compartments had been pierced? - No, I did not.
14837. With regard to this gangway door on the after side of the vessel, do you know how high above the water that would be? - Do you mean when the ship is on an even keel? - I really could not say.
14838. I have had it measured; it is 15 feet above water in the afterend of the ship. You were asked again whether you would act under your own authority in a case of emergency? - Yes.
14839. And you said there were rules? - The White Star rules.
14840. Are the White Star rules contained in this red book? - Yes.
14841. I will hand up a copy to my Lord (handing the same). The particular one about the Officer of the Watch your Lordship will see on page 32. That is the rule you were referring to? - Yes.
14842. "*Station.* - At sea the station of the Officer of the Watch is on the bridge, which he must on no account leave either night or day without being relieved. When the Watch is changed the officer who is being relieved will remain on the bridge and in charge during the change. He will see that the seamen placed as look-outs do not quit their posts until relieved, and he must deliver to the officer relieving him all orders which have still to be executed. He is the responsible officer until he leaves the bridge, and must not leave the bridge until the officer relieving him has had time to familiarise himself with his surroundings. *Duties:* (A.) He must remember that his first duty is to keep a good lookout and avoid running into danger, and although it is desirable to obtain the position of the ship as often as possible, he must on no account neglect his look-out to do so. He must also preserve order in the ship. (b) He must not alter the course without consulting the Commander, unless to avoid some sudden danger, risk of collision, etc. (c) When

- he believes the ship to be running into danger it is his duty to act at once upon his own responsibility, at the same time he will immediately pass the word to call the Commander.” That is what you referred to? - Yes.
14843. “When it is his duty to alter the course for some approaching or crossing vessel, he must do so in plenty of time, signify by sound signals such alteration, and give such vessel a wide berth. (e) He must call the Commander at once if it becomes foggy, hazy, if he does not think he can see a safe distance, or if in doubt about anything. (f) He is expected to make himself thoroughly conversant with the usual channel courses, and to be thoroughly posted in the run of the ship. Any doubt he may have as to safety of the position of the ship, or of the course steered, he will immediately express to the Commander in a respectful manner.” That is the rule you had in your mind? - Yes. 14844. One matter I want to clear up which occurs in the evidence of some other witness. Had you any difficulty about finding the plug of one of these collapsible boats? - Yes.
14845. Just tell us about that? - When we were at work at the port collapsible boat, the first collapsible, it was suggested that there was a plug in the boat, and not being very familiar with these boats and having a box of matches, I searched round and came to the conclusion there was no plug.
14846. As a matter of fact they do not have plugs? - They do not. 14847. So your search was in vain? - Yes.
14848. Do you remember the “Carpathia” picking you up? - Yes. 14849. Did she throw up any rockets? - She did.
14850. How many? - I think I saw two.
14851. How many hours would that be about before you were picked up? - That was whilst it was still dark. It seemed fully an hour before we were picked up.
14852. What I wanted to get at was what sort of interval would there be between the last rocket from the “Titanic” and the two that you saw from the “Carpathia”? - I suppose about five hours.
14853. I think you said two? - Two I think I remember seeing. There may have been more.
14854. Do you know what sort? - The ordinary distress signals, the same as we were using.
14855. With stars? - Yes.
14856. (*The Commissioner.*) Were you near enough to hear them? - Oh, no. 14857. (*Mr. Laing.*) Can you help us at all about any dead bodies that were left in one of the boats? - I understand that there were three dead bodies left in one of the collapsible boats when the remainder were taken out.
14858. You say you understand? - It was not in my boat.
14859. Did you see them? - No.
14860. Did you have some report? - I have heard so since.
14861. After you were taken on the “Carpathia,” did you yourself go round the boats belonging to the “Titanic”? - I did.
14862. What object had you? - Because there was a report that there was not bread and water in some of the boats. In all the boats on the “Carpathia,” with the exception

- of the emergency boats, in which neither bread nor water is carried, there was bread and water in every lifeboat.
14863. Did they save all the "Titanic's" lifeboats on the "Carpathia"? - No, there were some turned adrift. There were 13 saved - 11 lifeboats and two emergency boats.
14864. Were those you are talking about taken to America? - Yes.
14865. With regard to the lamps which those lifeboats carry, did you yourself see any lights while you were afloat in the boat? - I did, several.
14866. From other boats in the sea, I mean? - Yes.
14867. In which the people were? - Yes. I also found several lamps hanging in the thwarts when we were on board the "Carpathia" which evidently had not been used.
14868. (*The Commissioner.*) Lamps belonging to the "Titanic"? - Lamps belonging to the "Titanic's" lifeboats.
14869. (*Mr. Laing.*) They had not been used? - They had evidently been hidden under the thwarts by some people in the boats.

**Page 343**

14870. With regard to the question you asked the carpenter, and the information he gave you that No. 6 stokehold was dry -
- The Commissioner:* Was that No. 6 stokehold or No. 6 section?
14871. (*Mr. Laing.*) I was going to clear that up, my Lord. (*To the Witness.*) Do you know where No. 6 stokehold is? - Yes; it is the forward stokehold immediately adjoining No. 3.
- Mr. Laing:* The sixth stokehold, as we number them, is the after stokehold in No. 4 Section.
- The Solicitor-General:* That is what I thought.
- The Witness:* No. I think it is understood aboard the ship that No. 6 stokehold is forward. Because I made a particular point of asking the engineers why it was - I was rather confused when we were loading 5 and 6 stokeholds when going through the bunkers - and they told me No. 6 was forward. They numbered from aft, forward. It is rather confusing, but nevertheless the stokehold known on board the ship as No. 6 is the stokehold adjoining No. 3.
- The Commissioner:* That is not according to the plan.
14872. (*Mr. Laing.*) No, my Lord, it is not. (*To the Witness.*) Are you thinking of boiler sections or stokeholds? How many stokeholds do you think there are on the ship altogether? - Six, I believe.
14873. Then I think you must be thinking of boiler sections? - Oh, I see what you mean, yes. I was really alluding to the boiler sections of course.
14874. No. 6 is the forward end, as you say? - Yes.
14875. When you called it No. 6 stokehold? - I meant No. 6 boiler section.
14876. No. 6 boiler section is the one which we know was full? - Yes, that explains it. I am glad you explained that, because of what the carpenter told me. No. 6 stokehold was a mistake; I ought to have said No. 6 boiler room.

14877. He may have misunderstood your question? - He probably misunderstood me.  
14878. If he meant No. 6 stokehold I think I am right in saying that that is the after stokehold of No. 4 section? - Yes.
14879. However, the question you asked the carpenter was with regard to No. 6 stokehold? - Yes.
14880. And that is the answer you got, that it was dry? - Yes.
14881. Approximately, how long before you left the ship was that, quite roughly? - I should think that was fully an hour before I left the ship.
14882. Did you ever hear of any water being in the engine room? - No.
14883. Up to the time you left the ship? - No.
14884. Did you have any talk with Fleet, the look-out man? - On the "Carpathia"?
14885. Yes? - Yes.
14886. He has not been called yet, but you might tell us what he said. - I asked him what he knew about the accident and induced him to explain the circumstances. He went on to say that he had seen the iceberg so far ahead. I particularly wanted to know how long after he struck the bell the ship's head moved, and he informed me that practically at the same time that he struck the bell he noticed the ship's head moving under the helm. 14887. That is what you told us before. - Yes.
14888. Did he tell you anything else? - With regard to distance?
14889. No, with regard to weather or conditions? - Oh, yes. He said it was clear.
14890. That is really what I wanted to know. - Oh yes.
14891. Did he say anything about haze? - No, he never said anything about haze. 14892. He never complained about haze, or anything of that sort? - No.

**Re-examined by the SOLICITOR-GENERAL.**

14893. There are only two matters which I have to ask you about. First of all, this last thing which you have been asked. You say you had some conversation with Fleet, the look-out man, when you got to the "Carpathia," and you have told us what he said. You gathered from him, apparently, the impression that the helm was probably put over before and not after the report from the look-out? - Distinctly before the report.
14894. That was the inference you drew? - Yes.
14895. I should call your attention to this. We have had the evidence of the Quartermaster, who was steering at the time - a man named Hichens. Has your attention been called to the fact that he distinctly says that the order "Hard a starboard" was given after this report, and not before? - I was not aware of that.
- The Solicitor-General:* It is at page 41.
- The Commissioner:* I remember that quite well.
- The Solicitor-General:* He distinctly says so.
- The Witness:* I am only giving what Fleet told me, you understand.
14896. What he says is they heard three bells, that there was a telegraph, and the answer "Thank you" from Mr. Moody, that he reported an iceberg right ahead to Mr.

- Murdoch, and that Mr. Murdoch rushed to the telegraph to stop the engines, and at the same time ordered "Hard-a-starboard"? - Exactly.
14897. If that is right, your impression gathered from Fleet must be wrong? - If Hichens is right, then Fleet must be wrong.
14898. The other thing is this: there were two look-out men at that time; the other was Lee? - Yes.
14899. He was also saved? - Yes.
14900. Did you have any conversation with him? - No.
14901. We have had Lee's evidence, and Lee says there was some haze. But you had no conversation? - No, I had no conversation with him at all.
14902. The other matter I want to put to you is this. You said today in answer to one of my learned Friends that you thought 24 knots could have been got out of this vessel, that that was the view you had formed? - That in a year or so's time she might have eventually reached 24 knots.
14903. She tends to improve in speed, I suppose? - Yes.
14904. You remember giving evidence in America, and I see a question was put to you. You said something about speed, and you were asked what you would call real good speed - that is for this ship - and your answer, as reported, is "When the ship was built we only expected her to go 21 knots." Is that right? - When I say "we," that is as far as we heard generally we expected a 21 knot ship.
14905. You go on, "Therefore, all over 21 we thought very good"? - Yes. 14906. That was the view of yourself and your brother officers at the time of this voyage.
14907. (*The Commissioner.*) Before you go, I want to ask you with reference to the sinking of the "Titanic." You know we have heard from several witnesses that the afterpart of the ship which, shortly before the foundering was in the air, more or less righted itself. That has been stated. Now supposing *this* to be the ship (*demonstrating*) and she turned up in this way, what I want to know is, from your observations, is it possible that having turned up in that way and being, one may say, half submerged, she broke in two, her afterpart coming down, and that then she went down and the afterpart came up in the air? Do you understand? - I follow you quite clearly. I should not in any circumstances think that was so. I should think it was quite impossible.
14908. It is suggested that perhaps you, being in the water, would not see that righting of the afterpart of the ship at all, and that you possibly only saw her after she had got in that position and was going down? - I should not think so, my Lord. I should not think, after once she had shown a tendency to break, and was weakened, she would ever have the strength to right again.
14909. That is your view? - That is my view.
14910. You do not give credit to those witnesses who say that the afterpart of the ship, having once been up in the air, righted itself? - No, my Lord, I do not.

**(The Witness withdrew.)**

*(Adjourned to tomorrow at 10.30 o'clock.)*

## **Wreck Commissioners' Court.**

SCOTTISH HALL,

BUCKINGHAM GATE,

*Wednesday, 22nd May, 1912.*

### **PROCEEDINGS**

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## **LOSS OF THE S. S. "TITANIC."**

### **THIRTEENTH DAY.**

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third-class passengers. (Admitted on application.)

MR. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian." (Leyland Line). (Admitted on Application.)

MR. H. E. DUKE, K. C., M. P., and MR. VAUGHAN WILIAMS (instructed by Messrs. A. F. and R. W. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff-Gordon. (Admitted on Application.)

**Page 346**

**HERBERT JOHN PITMAN, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

14911. Were you serving as Third Officer on the "Titanic" at the time of this accident? - Yes.

14912. What certificate do you hold? - Ordinary Master.

14913. How long have you been in the service of the "White Star" Line? - Five and a half years.

14914. And during those 5 1/2 years have you been travelling backwards and forwards across the Atlantic? - A twelve-month only.

14915. And have you had considerable experience on the sea in other parts of the world besides the Atlantic? - Sixteen years.

14916. Twelve months experience in the Atlantic? - Of the North Atlantic.

14917. I will get this fact from you now, it comes a little later in your story. You were saved in boat No. 5, were you not? - Yes.

14918. (*Mr. Butler Aspinall.*) We have had some evidence with regard to boat No. 5, my Lord, but not of a very satisfactory character. It is the evidence of Shiers, the fireman, at page 113. He was not able to give us very useful evidence with regard to the matter. It is Question 4653: - "(Q.) Then you got into No. 5? Was No. 5 lowered? - (A.) Yes. (Q.) Who were in No. 5? You were, who else? - (A.) One other fireman, a steward, and a quartermaster. (Q.) And were there some women and children in No. 5? - (A.) Women, no children. (Q.) Do you know how many women? - (A.) No. (Q.) Was the boat full or not? - (A.) It was not full - as many as it would take off the davits was what the officer said - as many as he thought the boat would take off the davits." (*To the Witness.*) To come to the Sunday, the

- 14th, at the time of the accident you were off watch and asleep in your cabin, were you not? - That is right.
14919. When before, on that day, had you last been on duty? - 6 to 8 p.m. 14920. And before in the course of that day, had you been on duty? - 12 to 4 in the afternoon.
14921. Was it within your knowledge that the ship would probably meet with ice that evening? - We knew that we should be in the longitude of ice.
14922. Who told you that? - I saw it in a Marconigram.
14923. Do you know from which ship that Marconigram had come? - I have no idea.
14924. Did you particularly concern yourself with that matter? - No, I simply looked at them and saw that there was no ice reported on the track.
14925. Did you see one Marconigram or two Marconigrams? - Two, I think.
14926. Were these posted in some part of the ship? - Yes, in the chart room.
14927. And you read them, did you? - Yes.
14928. Was there any discussion between you and any other of the officers about the fact that you would probably meet ice that night? - I do not think so. 14929. Do you mean you do not remember? - I do not remember it.
14930. As you have said, you were turned in at the time the vessel struck the iceberg, and, I believe, asleep? - Yes.
14931. You were aroused and at first did you think much had happened? - No, I did not.
14932. What was it aroused you; was it a noise, or a jar, or what? - A noise; I thought the ship was coming to anchor.
14933. Did you lie on in your bunk for some few minutes? - I did.
14934. At the end of those few minutes did you do anything? - Yes. I went on deck.
14935. Was that curiosity; or what took you there? - Yes, I suppose it was.
14936. Getting on deck, what did you see or hear? - I saw nothing and heard nothing.
14937. Did you go to the forward part of the navigation bridge? - No, I only just went outside the quarters.
14938. The officers' quarters? - That is all.
14939. As it were, put your head out and saw nothing? - No, I went on deck.
14940. Seeing and hearing nothing, what did you do then? - I went back inside again.
14941. And turned in again? - No, I met Mr. Lightoller first of all, and I asked him what had happened, if we had hit something, and he said, "Yes, evidently."
14942. He said "Evidently"? - Yes, evidently something had happened.
14943. After you had received that information what did you do? - I went to bed.
14944. How long did you remain in bed? - It may have been five minutes.
14945. And at the end of five minutes what did you do? - I thought I might as well get up, as it was no use trying to go to sleep again, as I was due on watch in a few minutes.
14946. Your watch was the middle watch, from 12 to 4? - That night, yes.
14947. Did you get up and proceed to dress? - Yes.
14948. While you were dressing did you receive any information? - Mr. Boxhall came to my room and said the mail-room was afloat.
14949. How long do you think had elapsed between the time you were aroused and Mr.

- Boxhall coming and telling you this? - I should think it must be 20 minutes. 14950. Did he give you any information as to what had caused the mail-room to be afloat? - Yes; I asked him what we had struck, and he said an iceberg.
14951. After that did you quickly proceed with your dressing? - Yes, I put my coat on and went on deck.
14952. When you got on deck, did you see anything being done? - The men were uncovering the boats.
14953. On which side was that? - That was on the port side.
14954. Did you meet the Sixth Officer when you went on deck, Mr. Moody? - Yes; I met him on the afterpart of the deck.
14955. Did he give you any information? - No, I asked him if he had seen the iceberg; he answered, No, but there was ice on the forward well deck.
14956. I believe you at that time did not think anything serious had happened, did you? - I did not.
14957. Then, I think, you went and looked at some ice, and, after having looked at the ice, did you then go under the forecandle head to see if any structural damage had been done to the bow of the ship? - Exactly.
14958. I believe you saw none. As you were coming from the forecandle, did you see any firemen? - Yes, I saw a whole crowd of them coming up from below.
14959. Did you ask them what was causing them to come up? - Yes.
14960. What was their answer? - That the water was coming into their quarters.
14961. Which side were the firemen coming, the port or starboard side? - The starboard side.
14962. In consequence of what they told you, did you go and do anything? - No, I simply looked down No. 1 hatch and saw water rushing up No. 1 hatch, or at least round it.
14963. Is that the hatch which has the coamings which I think we were told was on G deck? - Yes, the same one that Symons was speaking of the other day.
14964. Was the water coming in fast or slow, or how? - Quite a little stream, both sides of the hatch.
14965. Did you notice what direction it was flowing from; was it flowing from forward to aft, or how, or did not you notice? - Well, I think it was running mostly from the starboard side.
14966. Running from the starboard side? - Yes.

**Page 347**

*The Commissioner:* I do not understand that.

14967. (*Mr. Butler Aspinall - To the Witness.*) What do you mean by from the starboard side? - Coming in from the starboard side of the ship.

*The Commissioner:* That I understand.

14968. (*Mr. Butler Aspinall.*) Seeing that, did you then go back to the boat deck? - Yes.

14969. Were the boats still being uncovered, or had they finished the uncovering

- of the boats then? - I could not say what had happened on the port side. I then returned to the starboard side and they were still uncovering the boats.
14970. You are now on the starboard side, and I think you remained on the starboard side, did you not? - Yes.
14971. Did you see the First Officer taking part in getting the boats ready? - No, I did not see him.
14972. Did you hear any orders being given? - No more than getting the boats filled with women and children, that is all I heard.
14973. Did you go to anyone of these boats? - Yes, I went to No. 5.
14974. Did you go to No. 7 first? - No, Mr. Murdoch was there. I did not see him.
14975. Which was your boat? - No. 1 is my boat usually in case of emergency. 14976. If there was an emergency you would take charge of No. 1, is that so? - Yes, that is in case of a man overboard, and things like that.
14977. Was your name on the boat list, as being the officer to look after that boat? - Yes, as an emergency.
14978. We have been told that there are boat lists put up about the ship; that is so, is it not? - That is so.
14979. (*The Commissioner.*) Did you ever read your name on any list? - I did not, as it is an understood thing the Third Officer looks after No. 1 boat.
14980. You did not see your name on any list? - No.
14981. (*Mr. Butler Aspinall.*) Would it be your duty to inform yourself as to what your boat was according to the list? - No, it is quite an understood thing in the Company for the Third and Fourth Officers to have No. 1 and No. 2 boat.
14982. Apart from understandings, would it be your duty at the beginning of the voyage to go and ascertain what boat was your boat? - No.
14983. It is not your duty?
- The Commissioner:* If, Mr. Aspinall, it was the invariable practice for him to attend to No. 1 emergency boat, there was no occasion for him to look at the list.
14984. (*Mr. Butler Aspinall.*) No, my Lord. (*To the Witness.*) Now you went in fact to No. 5. Why was that? - Mr. Murdoch ordered me there.
14985. Was there any other officer there? - I did not see anyone.
14986. Of course, you know all the officers? - Oh, yes.
14987. If there had been one there you would have known? - Mr. Murdoch was there before the boat was lowered.
14988. Had you seen Murdoch there at No. 5, or merely heard his voice? - Oh, no, I saw him.
14989. At No. 5? - At No. 5, after the boat was out and practically filled with passengers.
14990. When you got to No. 5, in what state was No. 5? - Well, the cover was still on.
14991. How long do you think had elapsed from the time of striking the berg up to the time you got to No. 5? It is difficult, I know, to be certain about time. Was it half an hour or 45 minutes? Let me help you. You gave me one space of time - about 20 minutes? - Yes, I remember that.

14992. Will that help you to approximate what you think was the time between the striking of the iceberg and your getting to boat No. 5? Was it an hour, do you think? - No, I should think it would be about 12.20.
14993. You say the cover was still on. Was the cover being stripped at the time you got there? - It was being uncovered then - Yes.
14994. Did you see Mr. Ismay close to this boat? - I did.
14995. Was he taking any part, saying anything, or doing anything? - He remarked to me as we were uncovering the boat, "There is no time to lose." Of course, I did not know who he was then, and therefore did not take any notice.
14996. You have since learned that that gentleman was Mr. Ismay, have you? - Yes.
14997. How many men had you helping at this boat? - I think four.
14998. Were they sailor men, or could you tell in the darkness of the night? - Well, I knew that two were.
14999. And was the boat uncovered and swung out? - Yes.
15000. What was done with it? Was it then lowered to the level of the boat deck? - It was lowered level.
15001. And after you had got out to the level of the boat deck, what did you do with regard to passengers? - Mr. Ismay remarked to me to get it filled with women and children, to which I replied, "I will await the Commander's orders." I then went to the bridge, and I saw Captain Smith, and I told him what Mr. Ismay had said. He said, "Carry on."
15002. (*The Commissioner.*) What does that mean? - Go ahead.
15003. (*Mr. Butler Aspinall.*) At this time, did you realise that this gentleman was Mr. Ismay, or did you still think he was one of the passengers? - Oh, I knew then that it was Mr. Ismay - Yes, judging by the descriptions I had had given me of him.
15004. The Captain told you to "carry on." Did you then return to the boat deck? - I was already there; I returned to No. 5.
15005. Yes, you were on it. You returned to your boat No. 5? - Yes.
15006. When you got back, were any people being put into it? - None at all.
15007. What happened then? - I simply stood in the boat and said, "Come along, ladies," and helped them in - Mr. Ismay helped to get them there.
15008. How many ladies did you get in? - I do not know; between 30 and 40, I should imagine.
15009. Were there any children? - Yes, we had two.
15010. Could you tell whether these women were first, second or third class passengers that were getting into the boat? - Most, I should say, would be first class.
15011. In addition to those women that you got into the boat, did you take any male passengers in? - Yes, I should say about half-a-dozen or more.
15012. Why did you let the male passengers in? - Simply because there were no more women around - at least, there were two there, but they would not come.
15013. Did they give you any reason for refusing to come? - No.
15014. You say there were no other women around? Could you see whether there were other women in other parts of the boat deck? Did you notice at that time? - There were none in sight at that time - at least, not on the starboard deck.

15015. In view of the number that you had got into the boat at this time, did you think that that was as many as this boat would safely carry before she was lowered to the water? - No, I did not decide how many she should take.
15016. Who decided that? - Mr. Murdoch, he came along just then.
15017. What did he say? - Well, I jumped out of the boat then, ready to lower away, and he said, "You go in charge of this boat, and also look after the others, and stand by to come along the after gangway when hailed." 15018. Did you go in charge of this boat? - I did.
15019. There were 30 to 40 women you have told us, two children, about half-a-dozen male passengers, yourself, and how many of the crew? - Four.
15020. (*The Commissioner.*) Did the four include yourself? - No, my Lord. 15021. (*Mr. Butler Aspinall.*) Did you say something about Mr. Murdoch saying he would hail you when he wanted you alongside the gangway? - Yes.

### Page 348

He said, "Keep handy to come to the after gangway." Therefore, I understood he would hail us.

15022. You understood it? - Yes.
15023. Was the boat properly lowered away? - It was.
15024. And you got put down to the waters edge? - Yes.
15025. On reaching the water what was done with that boat? - We pulled away about 100 yards from the side of the ship.
15026. And then? - Lay on our oars.
15027. Did you take her in the direction of the gangway, in case Mr. Murdoch might hail you and order you back? - Well, we dropped astern a little.
15028. That would be somewhere in the direction towards the gangway? - Yes.
15029. (*The Commissioner.*) Just put your finger on the gangway you are talking about. (*The Witness pointed it out on the model.*) That is right aft? - Yes, he said the after gangway.
15030. (*Mr. Butler Aspinall.*) Before you left the ship had you heard any order given about lowering the gangway or opening the gangway door? - No, that was the first I knew of it.
15031. After you were in the boat and had rowed out this 100 yards somewhat astern did you notice whether the gangway door was open or not? - I do not think it was.
15032. You probably were looking in that direction? - Well, I was watching the ship the whole time.
15033. And you do not think it was opened? - I do not.
- The Commissioner:* How many gangways are there that side of the ship?
- Mr. Butler Aspinall:* I think two, my Lord, but I speak subject to correction.
- The Commissioner:* The gangway we have heard of yesterday was forward.
- Mr. Butler Aspinall:* Yes.
- The Solicitor-General:* Yesterday we did hear of them at both ends.
- Mr. Butler Aspinall:* 12 or 13 the builders tell me.

*The Commissioner:* On each side?

*Mr. Butler Aspinall:* No. I am told there are eight passenger gangways.

*The Commissioner:* Does that mean four on each side?

*Mr. Butler Aspinall:* Yes.

*The Commissioner:* But they are not on the same level.

15034. (*Mr. Butler Aspinall.*) Two on D deck amidships - one on E deck forward and aft; that would make four on the one side and four on the other. If I might go back for one moment - I do not know whether it is important or not, but it might become important - did Mr. Murdoch, in addition to telling you to keep handy to come back to the gangway, say anything more to you? - No; he only shook hands and said, "Good-bye, good luck"; that was all.

15035. When he said "Good-bye" to you in that way, did you think the situation was serious; did you think the ship was doomed then? - I did not, but I thought he must have thought so.

15036. Again, with regard to the time, how long do you think it was between the time of striking the berg and your boat reaching the water. You have given me two estimates of time, 20 minutes, and 12.20. Could you help me on this matter? - Well, I should think it would be about 12.30 when No. 5 boat reached the water.

15037. I do not know whether this will help you to see whether that is right. Was your boat in the water about an hour before the "Titanic" went down? - I think it was longer than that.

15038. Much longer or a little longer? - It is hard to say.

15039. Now, I have got you in the boat somewhere about 100 yards from the ship, you watching the ship. Whilst you were watching the ship did you then begin to think she was in a condition in which it was probable she might be lost? - No, I did not give up hopes until I saw the last line of lights on the fore-castle head disappear.

15040. When you reached the water and were in the boat, did you see then that her head was getting deeper and deeper in the water? - Oh, yes, I watched the different lines of lights disappear.

15041. Did you see any other boat on the water anywhere near you after your boat had reached the water? - Are you alluding to one of our boats?

15042. Yes, I mean one of the "Titanic" boats? - Yes, No. 7 was quite close to me.

15043. Was No. 7, as far as you know, in the water before yours or after? - No. 7 was before; it was the first boat launched on the starboard side.

15044. No. 7? - No. 7.

15045. And the second boat was? - No 5, and No. 3 next.

15046. How do you know No. 3 came next? Did you see it? - I saw it coming down; I saw it being lowered.

15047. Did you notice any other boats on that side being lowered? - I did not.

15048. You speak of 7, 5, and 3? - 7, 5, and 3, yes.

15049. In that order? The Solicitor-General points out that Jewell refers to this that No. 7 was the first boat on the starboard side.

*The Solicitor-General:* At page 19, Question 147, Jewell says he was in the boat, and it was the first to go on the starboard side.

*The Witness:* That is right.

15050. (*Mr. Butler Aspinall.*) Tell me with regard to the equipment of the boat you were in, do you know whether it had a lamp or not? - Mine had not.

15051. Did you look for it? - I did.

15052. And would you, as an officer, know what was the right place to look for the lamp? - Exactly.

15053. Was there any compass in your boat? - No.

15054. Did you look for it? - Well, I did not at the time, because it would be absolutely useless to me.

15055. But how do you know there was no compass? You say you did not look at the time. Did you look at some later time? - Yes, after the boats were on the "Carpathia." 15056. Was there any water in your boat? - Yes.

15057. In what? Breakers? - In two breakers.

15058. Two breakers? - Yes.

15059. Were there any biscuits? - Yes.

15060. In what? - A tank in the stern of the boat.

15061. Whilst you were in the boat and before the ship sank, did you see any light or lights which you took to be the light or lights of another steamer? - I saw a white light which I took to be the stern light of a sailing ship.

15062. How far away did you judge it to be? - I thought it was about five miles. 15063. That would be a good distance to see a stern light, would it not? - Yes, it may have been less.

15064. Was it a good night for seeing a light; for seeing a good stern light? - An excellent night.

15065. They would be visible at a long distance? - Yes.

15066. Whilst you were in the boat did you notice the "Titanic" sending up rockets? - Yes, she did.

15067. We have heard this in detail. Was there good discipline and order maintained in your boat? - Well, that is not for me to say; it is for other people to say that.

15068. (*The Commissioner.*) No, but you are asked your opinion? - As regards the passengers, yes, and the crew.

15069. (*Mr. Butler Aspinall.*) I am not suggesting you did not behave well; I am only asking the question for the information of the Court. It is a general question asked with regard to all the boats. I am not suggesting for one moment that there was anything wrong. You behaved well, I have no doubt? - I do not know about myself; it is not for me to say that.

15070. You say the passengers and the crew behaved well? - They did.

15071. Well, that exhausts it. Now you saw the vessel go down? - Yes.

15072. What did she do when she went down;

## **Page 349**

you were an officer, perhaps you can tell us. Inquires have been made of others. How did she sink? She sank by the head, we know that? - Yes.

*The Commissioner:* Just describe it in your own way.

*Mr. Butler Aspinall:* May I hand him the profile.

15073. (*The Commissioner.*) Yes. (*To the Witness.*) - Describe it in your own way. (*The profile was handed to the Witness.*) - That is the position I saw her in when we left. She gradually disappeared like *that*; she went right on end like *that* and went down *that* way (*demonstrating*).

15074. Did her afterpart ever right itself? - I should not think so; I did not see it.

15075. Before she finally disappeared? - No.

15076. Could you have seen it if it had happened? - I think so; I was only barely 100 yards away.

15077. Were you keeping your eyes upon her? - I was.

15078. You know this is suggested - supposing *that* is the head of the ship and going down in *this* way with the afterpart coming up in *that* way; a number of witnesses have said that before she finally foundered, plunged into the sea, the afterpart righted itself like *that* and then she went down. The question is whether you think that is true that she broke in two in that way bringing her afterpart level with the water again and then went down in *that* way. Did she crack in the middle? - I do not think so. If the afterpart had broken off it would have remained afloat.

15079. Not broken off, but cracked in *that* way? - No.

15080. At all events, the point is this: Did you see the afterend of the ship - you saw it up in the air - right itself and come flush with the water again? - It did not. 15081.

And you say you looked, and if it had happened you would have seen it? - Certainly.

15081a. (*Mr. Butler Aspinall.*) While you were in the water, before the "Titanic" sank, did you hear any hail either from Mr. Murdoch or the Captain or from anybody else to come back near the gangway? - No.

15082. Did you hear anybody on the "Titanic" using a megaphone? - I did not.

15083. Did you transfer any of your passengers to any other boat? - Yes, I transferred four, I think it was.

15084. Into what boat? - I am not quite certain of the number, but I think it was No. 7.

15085. Why did you transfer those passengers? - Because they had a less number of passengers in that boat than I had.

15086. As the "Titanic" sank and immediately after did you hear any screams? - Immediately after she sank?

15087. Yes? - Yes.

15088. Were you able to go in the direction of the screams and render any assistance? - I did not go.

15089. But do you think you could have gone? I am not suggesting anything; I only want to get the facts from you. Do you think it would have been safe or reasonable to go?

- I do not.

15090. What is your reason? - Well, there was such a mass of people in the water we should have been swamped.

15091. In your view you had a sufficient number of people on your boat. Is that so? - No, but I had too many in the boat to go back to the wreck.
15092. And I think you remained on, the men more or less lying on their oars till daylight, and then you were picked up by the "Carpathia"? - Yes; we lay at rest the remainder of the night.
15093. (*The Commissioner.*) Before you go into that there are two questions I want to put. (*To the Witness.*) Whereabouts were you when the "Titanic" sank? - About 200 yards away.
15094. On what side? - On the starboard quarter.
15095. Would that be about abreast of the mainmast? - About that, my Lord.
15096. (*Mr. Butler Aspinall.*) When you gave evidence in America you said this: I want to know if you say it is accurate. You were asked: "Can you fix the exact moment of time when the "Titanic" disappeared? - Two-twenty exactly, ship's time. I took my watch out at the time she disappeared, and I said, 'It is 2.20,' and the passengers around me heard it."
15097. Do you remember giving that evidence? - That is true, yes.
15098. That is correct? - Yes.
15099. I want you to give me the benefit of your views on this matter. One of the questions which will probably be asked is this: "Had the 'Titanic' the means of throwing searchlights around her. If so, did she make use of them to discover ice? Should searchlights have been provided and used?" In view of your experience of these waters and also as an officer and a sailor, what is your view as to the utility of searchlights when you are in the ice region? - They might be of some assistance.
15100. (*The Commissioner.*) Have you ever seen them used? - No, my Lord. 15101. (*Mr. Butler Aspinall.*) Have you ever considered the matter before I asked you the question? - No, I have never considered it before.
15102. (*The Commissioner.*) Do you know whether searchlights are used upon any Atlantic liners for the purpose of ascertaining whether there is ice? - I never heard of it, my Lord.

**Examined by Mr. SCANLAN.**

15103. During your watches from 6 to 8 and previously from 12 till 4 were you in charge of the bridge? - No.
15104. Who was the officer with you? - The Chief, 2 to 6 in the afternoon.
15105. From 12 to 4? - The First and Chief.
15106. And from 6 to 8? - The Second.
15107. Was the whole of the knowledge that you had of icebergs obtained from the chart?
- The Commissioner:* From the chart room.
15108. (*Mr. Scanlan.*) From the chart in the chart room? - No, from the Marconigrams.
15109. Were any Marconigrams handed to you from 12 to 4? - Not to me.
15110. Had you seen any Marconigram that reached the ship with reference to ice from 12 to 4 on Sunday? - I saw two that reached the ship that day. I have no idea what time they arrived.

15111. You saw two that day? - Yes.
15112. Do you know whether they were Marconigrams that had come the previous day, on the Saturday? - No, they came on the Sunday.
15113. Are you quite sure of that? - Yes.
15114. Did you read them? - Yes, I read one - yes.
15115. You read one, but you did not read the other? - No, not to remember what was on it.
15116. With respect to the one that you did read, can you tell us what was on it? - No, no more than it stated, "Ice in longitude 49 to 51 W." 15117. Where did it come from? - I have no idea.
15118. Had it come on the Sunday? - It must have done. Had it come on the Saturday I should have seen it before.
15119. When ice is reported to you, is it the duty of someone on the bridge or in the chart room to indicate on the chart kept in the chart room the location of the ice? - I do not know about its being duty; we often do it; in fact, we usually do it.
15120. I see you gave evidence on this matter in America. You said in answer to Senator Smith: "You stated a few minutes ago that the Second Officer, I believe, reported ice on the Saturday night? (*Mr. Pitman.*) No, I said the Fourth Officer. (*Senator Smith.*)
- Mr. Lowe? (*Mr. Pitman.*) Mr. Boxhall." Did you give this evidence: "(*Senator Smith.*) You said Mr. Boxhall reported ice Saturday night, and that it was marked on the

**Page 350**

- chart with a cross"? - That is a mistake. It is Sunday night.
15121. It is a mistake? - Yes, it was Sunday night.
15122. Where was it marked? - On the North Atlantic Track Chart.
15123. I know it was marked on the Chart, but where was it marked with reference to the course you were steering? - Some miles north of it.
15124. It was marked some miles north of the course you were steering. You were also questioned as to whether you had been made aware on the Sunday of any message which the "Titanic" had received from the "Californian" about ice. You were asked: "Did you learn from Mr. Lightoller that the 'Californian' had warned the 'Titanic' that she was in the vicinity of icebergs? (*Mr. Pitman.*) I did not, Sir. . . . We had no conversation whatever. (*Senator Smith.*) Did you hear anything about a wireless from the 'Californian' on the direction of icebergs? (*Mr. Pitman.*) I did not, Sir." Is that the true state of the facts? - That is so, yes; I did not know anything about the "Californian" till the Monday morning.
15125. That is, although you were an officer on the bridge from 6 to 8 you know nothing of any wireless having come from the "Californian"? - None came from 6 to 8 p.m.
15126. Or from any other ship?
- The Solicitor-General:* Do you mean the "Californian," Mr. Scanlan?

15127. (*Mr. Scanlan.*) Yes. (*To the Witness.*) I think they did get a message about 6? - No messages arrived between those hours.

15127a. Had any message arrived that day that you knew of? - The two Marconigrams I mentioned before arrived that day. That is all I know of.

*The Commissioner:* You are talking about the Sunday?

*Mr. Scanlan:* Yes.

*The Commissioner:* He has told us he saw two Marconigrams on the Sunday which had not arrived on the Saturday, but that he does not know what ships they came from.

15128. (*Mr. Scanlan - To the Witness.*) Was any mark put on the chart on the Sunday with reference to any messages you received on the Sunday? - Yes, as far as I can remember, one was put on the chart between 4 and 6.

15129. Who put it on? - Well, it was either Mr. Boxhall or Mr. Moody. Mr. Boxhall does not seem to have any recollection of it, so it must have been Mr. Moody.

15130. You saw it put on? - I saw it there when I came on deck at 6 p.m.

15131. During your watches did the Captain come on the bridge, from 6 to 8 or from 12 to 4? - Well, he frequently comes on the bridge. I cannot recollect - yes he was on the bridge from 6 to 8.

15132. Had you any conversation with him about icebergs or messages in relation to them? - None whatever.

15133. Were you spoken to by any of your brother officers with reference to the position of icebergs? - I cannot recollect.

15134. In America you were asked this: "Did you personally direct your attention to the question of icebergs," and your answer was, "No, Sir"? - That is right. 15135. Whether or not warnings had been received on the Sunday you had no impression up till you left the bridge at 8 o'clock that the course of the ship was tending in the direction of icebergs? - No, it was not.

15136. (*The Commissioner.*) I do not understand that question, nor do I understand the answer. (*To the Witness.*) You had a chart before you, "seven miles north," I think you said? - I said "several," I think.

15137. The chart that you saw was marked? - Yes.

15138. You did not know who marked it? - No; it was either the Fourth or Sixth Officer.

15139. It was marked for the purpose of showing the locality in which, according to the Marconigrams, ice had been seen? - Yes, my Lord.

15140. And was that locality as marked on the chart several miles north of the course that you were making? - Yes, my Lord.

15141. (*Mr. Scanlan.*) If I may return for a moment to this question of the message from the "Californian" about ice. It is your evidence, both in America and here, that you received no intimation from the Captain or anyone else that between 6 and 8 on the Sunday night the "Californian" had told you about ice? - I had heard nothing about it, no. *Mr. Scanlan:* One of my friends has pointed out to me, my Lord, that in the evidence of Cyril Evans, the operator, at page 202, Question 8967, he is asked about the S.G.

message, and he says he was prepared to offer information. "And what was the information that you were prepared to offer the 'Titanic'?" - (A.) I told him 'S.G. ice

report.’ (Q.) That means that you were in a position to give him some news about ice? - (A.) Yes. (Q.) Is this shortly after half-past seven? - (A.) Yes. (Q.) What did the ‘Titanic’ say to you when you offered your ice report? - (A.) He said, ‘It is all right. I heard you sending it to the ‘Antillian,’ and I have got it.’” If such a message was received between 6 and 8, say at half-past 7, which is the time mentioned here on the “Titanic,” would it be in the course of duty for someone to bring that message immediately to the bridge?  
*The Commissioner:* Well, Mr. Scanlan, what occurs to me is this. That message had already been received earlier.

*Mr. Scanlan:* At 6.30.

*The Commissioner:* Well, whatever the time was it had been received earlier. The answer is, “We have already had that message.”

*Mr. Scanlan:* The answer is, “I have heard you sending it to the ‘Antillian.’”  
*The Commissioner:* They had picked up the message to the “Antillian,” so that they knew it already.

*Mr. Scanlan:* It is on the same watch. There is evidence on the previous page from this officer.

*The Solicitor-General:* Question 8943.

*Mr. Scanlan:* Yes. Question 8943, page 201. “What was the message which you sent the ‘Antillian’ at that time? - (A.) It was a message reporting ice: ‘To Captain, Antillian, 6.30 p.m., apparent time.’”

*The Commissioner:* What does “apparent time” mean?

*Mr. Scanlan:* Ship’s time, my Lord.

*The Commissioner:* What time would that be on the “Titanic”?

*The Solicitor-General:* Two questions further up show it, I think, my Lord. *Mr. Scanlan:* 8939, “Can you tell us what time it was that you were communicating with the ‘Antillian,’ and then tell us what the message was you sent? - (A.) Five thirty five p.m., on the 14th. (Q.) That is New York time? - (A.) Yes. (Q.) In ship’s time then, that would mean 7.30, would it not? - (A.) Yes.” *The Commissioner:* What ship’s time?

*Mr. Scanlan:* It would mean the time on the “Californian.” This operator would be speaking of the time on his own ship, I presume.

*The Solicitor-General:* I remember putting the question, and it follows on Question 8935. I had asked the witness: “What is the difference between New York time and ship’s time at the place where you stopped? - (A.) One hour and 55 minutes. (Q.) That means one would have to add one hour 55 minutes to New York time to get at your ship’s time at the place where you stopped? - (A.) Yes.” That is where the “Californian” stopped. He says one hour and 55 minutes, and it was on that answer that I put the following question: “Can you tell us what time it was that you were communicating with the ‘Antillian,’ and then tell us what the message was you sent? - (A.) Five-thirty-five p.m. on the 14th. (Q.) That is New York time? - (A.) Yes. (Q.) In ship’s time, then, that would mean 7.30, would it not? - (A.) Yes.”

15142. (*Mr. Scanlan.*) If a message was sent by the “Californian” at ship’s time, at your ship’s time, 7.30, could you expect that this message, indicating

ice in a certain latitude and longitude would be reported to you on the bridge? - Yes, the Marconigram would have been brought to the chart room.

15143. It should have been brought to the chart room? - It would have been. 15144.

And if it had been, this is the message that is reported to have been sent: "To Captain,

'Antillian,' 6.30 p.m., apparent time; ship, latitude, 42.3 north; longitude, 49.9 west.

Three large bergs five miles to southward of us. Regards - Lord." Would that have been indicated on your chart? - We never received that.

15145. You had no intimation that that had been received? - None.

15146. That would not have corresponded, I take it, with the position which had been marked on your chart already. You say the ice position was marked on the chart some time either on the Saturday or Sunday? - Sunday night.

*The Commissioner:* Not on Saturday; Sunday.

15147. (*Mr. Scanlan.*) On Sunday. Was that position marked on Sunday northward of the position indicated by this message? - I do not know.

15148. It is "42 deg. 3 mm. N., 49 deg. 9 min. W.; three large bergs five miles to southward of us"? - I cannot say; I cannot remember the position of the other that was put on the chart.

*Mr. Laing:* My Lord, it is within two miles of the "Caronia's" position; I worked it out.

15149. (*Mr. Scanlan.*) At what hour did you see the chart being marked - in the afternoon or evening? - I did not see the chart actually marked; I saw the mark there when I came on deck at 6 p.m.

15150. The mark that you saw was the mark which was there at all events at 6 p.m.? - Yes, it was put on there between 4 and 6.

### **Examined by Mr. HARBINSON.**

15151. Did you know that your wireless operator, Phillips I think his name was, had been sending out a C.Q.D. message? - No, I had no idea.

15152. And did you know prior to the time you went to lower the boats, whether or not any replies had been received or any information received as to vessels coming to your assistance? - No, I did not know any had been sent or any received. I took it for granted that they had been.

15153. You did not know then that the "Carpathia" was coming? - I had no idea. 15154. After the collision do you know if any general alarm was sounded on the "Titanic" to give notice to the passengers - to rouse the passengers? - No; no general alarm.

15155. Is there any provision made on steamships of the "Titanic" class for giving a general alarm in times of emergency or danger? - No more than sending people round to rouse the others; that is all.

15156. Do you not think it would be a very desirable and efficient way of giving information to the passengers generally to sound a general alarm rather than by sending individual messages round? - No, I do not.

15157. I think you said that when your boat put off, that is No. 5 boat, you took some male passengers? - Yes.

15158. And at that time there were no women around? - Well, I saw two standing by, but they would not leave.
15159. Do you know as a matter of fact of your own knowledge that a large number of women were drowned in the "Titanic" disaster? - I have no idea how many were drowned.
15160. I did not ask you if you knew how many? - I have no idea.
15161. You do not know whether there was a large number drowned or not? - I have no idea.
15162. You have not heard? - No, I only know that there were 1,600 people.
15163. And you do not know whether many of them were women or not? - No. 15164. There is no question that on this Sunday afternoon you knew that the "Titanic" was entering into a neighbourhood in which ice had been reported? - No, we were not. 15165. You knew that ice had been reported from the "Baltic" and some of the other steamers which have been mentioned? - Yes, but all the ice was reported north of us. 15166. Do you agree that there is a tendency for ice to drift from north to south? - Yes. 15167. As a matter of fact, would it not be possible to mark with absolute accuracy on a chart the exact location in which you would expect to find ice? - We could not stick it down to a few feet.
15168. Or a few miles? - Yes, you could.
15169. A few miles? - Yes.
15170. You think so? - I do.
15171. You knew, at any rate, that at some time or other of the passage you might be in the vicinity of ice? - Yes, we might be.
15172. In view of what has occurred, do you not think now it amounted to culpable recklessness to drive the "Titanic" at a speed of over 21 ½ knots?
- The Commissioner:* I am afraid you cannot ask him that question. He is not the person to find the people in charge of this ship guilty or not guilty of culpable negligence.
- Mr. Harbinson:* I submit respectfully to your Lordship's ruling. I was putting it to him more or less in the capacity of an expert witness.
- The Commissioner:* You must leave me, I am afraid, for that.
15173. (*Mr. Harbinson.*) I will observe your ruling. (*To the Witness.*) Do you know at what time the course that the steamer was to take was mapped out that day? - Yes, noon. 15174. And, so far as you know, was the steamer's course deflected at all from the course that had been marked out at noon; did it vary to the south, or in any way from the course which had been marked out at noon? - Yes, I considered we went at least 10 miles further south than was necessary.
15175. Do I understand you rightly that in marking the course at noon, the course was marked 10 miles further south than you considered necessary? - No. We had a certain distance to run to a corner, from noon to certain time, and we did not alter the course so early as I anticipated. Therefore we must have gone much further south.
15176. When did you alter the course? - 5.50.
15177. Who was responsible for the alteration? - The Commander.
15178. To whom did he give the order? - The officers of the watch.

15179. Do you know their names? - Mr. Wilde.
15180. Were you there? - No.
15181. Do you know what conversation took place? - No.
15182. But you say he gave instructions to alter the course of the ship? - The course was altered at 5.50. They were the Commander's orders.
15183. Ten miles further south. Was any record made of that at the time? - No, and I thought that the course should have been altered at 5 p.m..
15184. Why did you think so? - Judging from the distance run from noon.
15185. What time did you think you were going to be in the neighbourhood of ice? - I was not thinking about the ice at all.
15186. Had you made any calculation? - No, I had not.
15187. It had not occurred to you although those Marconigrams had been received? - No, I saw that certain bergs were marked on the chart and that was quite sufficient.
15188. That is to say, you took matters as they were and made no enquiries. You accepted the position on the chart and you did not calculate or enquire? - No, I had other work to attend to.

## Page 352

*The Commissioner:* Whom do you suggest that he should enquire from?

*Mr. Harbinson:* From the First Officer.

*The Commissioner:* And what were his enquiries to be?

*Mr. Harbinson:* As to what time and in what locality they should expect ice.

15189. (*The Commissioner.*) Do you take charge of the bridge? - No.
15190. (*Mr. Harbinson.*) Who was in charge while you were on watch? - Mr. Lightoller, from 6 to 8.
15191. It would not be your duty to bring this matter to the notice of Mr. Lightoller as an officer or to mention the matter to him? - About ice?
15192. Yes, or about the bearings of your ship? - He could see the Marconigrams as well as I.
15193. At any rate you do not consider that course within the scope of your duties. About the lowering of this boat No. 5. did you see any of the collapsibles lowered? - I did not.
15194. And you did not know whether any of the three were lowered from the falls that lowered No. 5? - No.
15195. Did you think there were a sufficient number of trained seamen, I mean deckhands, on the boat deck to secure the expeditious launching of the lifeboats? - Quite.
15196. Did you see or have you read the report that was made from passengers on the "Titanic" who were rescued by the "Carpathia," on their arrival in America, to the effect that there were not enough trained seamen on the boat deck to secure the safe and expeditious launching of the boats? - I do not think they are in a position to judge.
15197. (*The Commissioner.*) That is not the question: the question is, Did you read that report? - I did not.

15198. (*Mr. Harbinson.*) Have you ever been in a shipwreck before? - Yes, some minor affair.
15199. Do you consider that the system of launching boats from davits so high above the water, as the davits necessarily must have been on a vessel of the size of the "Titanic," is a safe operation? - Apparently so; it was that night.
15200. But supposing the weather conditions had not been so favourable, would your answer be that it would not be? - I do not know; I would not make any suggestion.
15201. You will not make any suggestions? - No, I am not making any suggestions.
15202. Do you not think the system of lowering the boats to one of the lower decks and filling them either through the gangway doors or from the third deck would be less hazardous? - It is too long a job.
15203. And less calculated to inspire passengers with terror? - Oh, no, it is too long a job to lower them from there.
15204. To lower the boats empty and fill them from one of the lower decks? - Yes, provided they had to get on a ladder it is too long.
15205. Apart from the rope ladders, were there companion ladders for this boat, the "Titanic"? - Yes, one.
15206. Would it not have been possible to have lowered the boats half-filled and then filled them down the companion ladders? - No, not if there had been the slightest bit of swell.
15207. But under the conditions that actually took place it would have been possible? - Yes, but we did not know it was so calm until we got into the water.
15208. I suppose you knew that there was not a heavy swell on, did you not? - We did not; you could not tell from that ship.
15209. (*The Commissioner.*) How often is the course laid down on the chart in the chart room, do you know? - No.
15210. Perhaps I am not putting an intelligent question. You told me as I understood that this vessel was, in your opinion, several miles south of the customary course? - Yes, my Lord.
15211. Now I do not understand that. She made for some time on the Sunday a southwesterly course, did she not? - Yes, my Lord.
15212. And at a point on the Sunday, I think you said about 5 o'clock, her course was altered? - 5.50.
15213. And it became an almost due westerly course? - Yes, my Lord.
15214. In your opinion did she change her course sooner or later than she ordinarily would have done. She changed it, you know, at 5.50? - That was later.
15215. Then, in your opinion, had she gone in a south-westerly direction longer than she ordinarily would have gone? - I thought she had gone for three-quarters of an hour longer on that course than she should have done.
15216. That would take her several miles to the southward of the ordinary track, would it not? - Yes.
15217. And in that connection would take her away from the ice-field? - Yes, my Lord.
15218. Or from the proximity of these bergs? - Yes.

15218a. But that apparently does not fit in with the position of the “Titanic” at the time that she sank as reported by her.

*Mr. Laing:* I think it does. My friends and I have worked this out very carefully. The evidence is not complete about it, of course, yet, but I think it takes her just to the place. Will your Lordship look at my marked chart? It is marked in red.

*The Commissioner:* If you will hand it up. (*The same was handed to the Commissioner.*) But whenever they altered their course, at the time of the accident this vessel was practically on her regular course.

*Mr. Laing:* No she was some seven or eight miles to the south.

*The Commissioner:* Is it your suggestion that that was done purposely.

*Mr. Laing:* As far as we can see, my Lord, we think it was.

*The Commissioner:* It was done for the purpose of avoiding the ice.

*Mr. Laing:* That is our idea, as far as we can judge. Of course, we have not got the Commander here.

15219. (*The Commissioner.*) Have you followed what I was saying, Mr. Pitman? - Yes, my Lord.

15220. Can you help us at all? - No.

15221. You see, what I want to know is this, whether there was any deviation by the “Titanic” after the receipt of these advices about ice, made for the purpose of putting the ship to the southward of the points where the bergs might be expected to be? - Captain Smith did not mention it at all.

15222. And you cannot give me any information from what you saw in the chart room? - No, my Lord. Captain Smith gives the orders to alter the course at the time he thinks fit.

*The Commissioner:* Where do you get your red lines from, Mr. Laing?

*Mr. Laing:* We have had to work it out from a witness who has not yet been called.

15223. (*The Commissioner.*) Oh, very well. (*To the Witness.*) How often when you are on watch do you mark the position of the ship on the chart? - Only at noon.

15224. Do not you mark it again? - No, not when we are well at sea.

15225. You do not mark it when you go off watch for the purpose of letting the man who succeeds you see at once on the chart where the ship is? - No, only when we are making the land.

15226. Do you do it when you get a stellar observation? - No, my Lord, unless we are making the land.

*The Commissioner:* Yes, I understand that.

**Page 353**

**Examined by Mr. HOLMES.**

15227. Can you tell us whether the “Titanic’s” head was going round at all under her helm when you left the ship, or after the collision? - She remained stationary from the time I left the ship till she disappeared.

15228. No altering her heading? - No.

15229. At the time your boat was lowered was she very much down by the head? - It was noticeable.
15230. Would it make very much difference in the amount of drop that you had to the water? - Slightly, yes.
15231. Not very much? - No.
15232. And you lowered your boat without any difficulty? - Oh, yes.
15233. Can you, therefore, say whether at the time the ship had much of a list on? - None whatever.
15234. None at all when you were launched? - No.
15235. Did you watch the list change after you were in the water? - She had no list when I left the ship.
15236. But afterwards, before she went down, did the list increase? - I could not see that she had a list at all at any time.
15237. (*The Commissioner.*) He said she had no list at the time his boat was lowered into the water. (*To the Witness.*) Did you see a list to starboard, ever? - I saw no list at all, my Lord.
15238. Do you mean to say that before the ship went down you did not notice a list? - No.
15239. You only noticed her down by the head? - That is all.
15240. (*Mr. Holmes.*) Did you hear anything in the nature of explosions before she went down? - Yes, I heard four reports.
15241. What do you estimate they were? - Boilers leaving the bedplates and crashing through the bulkheads.
15242. When the ship actually went down, did you experience any suction in your boat? - Oh, none at all.
15243. Although you had no lamp in your boat, did you see other of the ship's boats in the water with lamps in them? - Several.
15244. Was the boat into which you transferred some of your passengers one that had a lamp in it? - I cannot recollect.
15245. Did you tie up your boat eventually to that boat in order to keep together during the night? - Yes, we did for some time.
15246. And did you arrive at the "Carpathia" in that way? - No.
15247. You cast loose again before that? - Yes, they cast off some time before the "Carpathia" came in sight.

**Examined by Mr. COTTER.**

15248. Have you been in any other White Star boat? - Yes, I have been in five of them.
15249. Were you in the "Olympic"? - No.
15250. Have you been in a White Star ship with these iron gangway doors? - I really forget - the "Oceanic" may have them. I forget.
15251. Yes, she has them. Is it not part of the duty of an officer to take charge of these gangway doors on the arrival of a ship in port? - Yes, we go and attend to them.
15252. Have you ever carried out that duty? - Yes, I have been there.

15253. Can you give us any idea of the size and weight of the forward iron doors on the "Titanic"? - No, I cannot give you any size or weight. Probably the builders can.
15254. Will you tell us how many men it would take to open one of those doors? - Four.
15255. Four men? - Yes.
15256. And are not they very awkward to close again once they are opened - once when they are pushed back against the ship's side? - No.
15257. What is the method of closing them again? - Simply attach a rope to them and pull and they come up themselves.
15258. I suggest to you if you put a rope against an iron door flush against the ship's side, it would be very awkward to pull round unless you had some leverage to fetch it away from the ship's side. Is not that the fact? - Of course if the thing had not been opened for years, yes.
15259. Did you hear Mr. Lightoller's evidence yesterday? - Yes. I heard part of it.
15260. He states he sent the boatswain down to open these doors. Now I am suggesting if those doors were opened and he found out he had made a mistake, he would have a hard job to get them closed again; is not that a fact? - No, they could be closed easily enough.
15261. Did you ever see them opened? - Yes, the carpenter usually does that with about two hands.
15262. And he could close them with two hands? - Yes.
15263. How many people do you say you took away in your boat? - Between 40 and 50.
15264. How many would the boat hold? - I do not know - 60, I think, according to the Board of Trade Regulations, or something like that.
15265. Were there people on the deck when you left the ship? - Oh, yes, there were a few there.
15266. Why did not you take in 60 then? - Simply because the people did not want to go - they thought they were safer on the ship.
15267. We have heard it stated by Mr. Lightoller that he lowered the boats because he thought there were enough people in them to lower with safety. Will you tell us what you consider is the weakest part of the tackle for lowering a boat? Is it the block or the falls or the shackles or what. We want to find out, because Mr. Lightoller said he was afraid of something giving way? - I do not know.
- The Commissioner:* I do not know that he said he thought the tackle might give way, but he thought the boat might break.
- Mr. Cotter:* Yes, the boat might break; the boat might buckle.
- The Commissioner:* Yes.
15268. (*Mr. Cotter.*) Is that your idea, that the boat might buckle or the shackles might give way? - I do not know whether they would or not.
15269. Do you think it would be safe to lower 60 people in one of those boats from a height of 70 feet? - I do not know what I might do if I was placed in that position.
15270. I say now supposing you had to go through the operation again do you think it would be safe to put 70 people in or 68 people? - I would do now, yes, because I have found out since you could lower 80 in them.

15271. When you were in the "Oceanic" did you ever see bulkhead door drill take place?  
- I did not witness it, no.
15272. Is it not the duty of the officer, either the Chief Officer or First Officer, to go round at 11 o'clock each day and see the bulkhead doors closed? - The Commander does, yes.
15273. Was it done on the "Titanic"? - That I cannot say.
15274. You do not know. Do you know where the hand bulkhead doors are situated there? - Yes, I know where some of them are.
15275. Did you see any closed that night? - I did not go below that night.
15276. You said you took two men off in the boat. Do you know who they were? - I took two men?
15277. Yes? - What do you mean, members of the crew?  
*The Commissioner:* Six men passengers.
15278. (*Mr. Cotter - To the Witness.*) Six men passengers you took. Who was in the boat with you? Do you know any of the crew that were in the boat with you? - Yes, a steward by the name of Guy was one.
15279. Were the rest seamen or firemen? - One seaman, one fireman and two stewards.  
*The Commissioner:* Do you want to ask anything, Mr. Laing?  
*Mr. Laing:* Yes, my Lord, one or two questions.

**Page 354**

**Examined by Mr. LAING.**

15280. Was it any part of your duty to attend to the navigation of the ship, or does the Commander do that - the setting of the courses, and so on? - The Commander always sets the courses.
15281. And as junior officer have you got specified duties in the chart room? - Yes.
15282. To work up observations, and so on? - Yes.
15283. And make rounds, I think, later on in the watch? - Yes.
15284. You have nothing to do with setting the course, or anything of that sort? - The Commander is the only man who does that.
15285. A question was asked you about bulkhead doors. Whose duty is that - is it the stewards or the deck, to look after the doors? - The stewards; the bulkheads come into their department.
15286. Does the Commander make rounds every day? - Yes, weather permitting. 15287. At Belfast did you yourself, with Mr. Boxhall, go round the boats with a view of taking an inventory of their equipment? - Yes, the starboard side.
15288. You took the starboard side, or was it the port side? - No, port side, that is right.
15289. Did you go through the whole of the equipment of each of these boats? - Yes.  
15290. Did you find all the regulation equipment there? - Not all in the boats, but it was on board the ship.
15291. That is what I want. Did you find, for example, on board the ship everything that the boats ought to have? - Everything.

15292. Although they may not have been exactly in the boat at the moment? - I found everything that was required.
15293. Do you know where they keep the lamps in these boats? - In the lamp room.
15294. Do you know where they keep the compasses? - Yes, in a locker on the afterpart of the boat deck.
15295. Are the boat axes, and those things, kept in the locker too, or in the boat? - They are usually kept in the lamp room.
15296. Did you go through the lifebelts and check them? - I did.
15297. How many were there? - I think about 3,600.
- The Commissioner:* I have not heard it suggested that there were not sufficient lifebelts.
15298. (*Mr. Laing.*) I thought it was, my Lord. I thought I had better get it.
- The Witness:* I checked them all.
15299. Can you tell us if your clock is put back at noon? - No, the clocks are always put forward or back as the case may be at midnight.
15300. Not at noon at all? - No.
15301. The Englehardt boats which were called the collapsibles here, are they fitted with rudders or with a steering oar? - Steering oar. 15302. Did you find all their equipment? - All intact, yes.

**Re-examined by Mr. BUTLER ASPINALL.**

15303. I ought to have asked you this before. Would a fall in the temperature indicate the proximity of icebergs to you? - No.
15304. It does not fit with your experience? - No.

*(The Witness withdrew.)*

**JOSEPH GROVES BOXHALL, Sworn.**

**Examined by Mr. RAYMOND ASQUITH.**

15305. Were you the Fourth Officer of the "Titanic" at the time of this accident? - I was.
15306. What certificate do you hold? - Extra master.
15307. You have held that, I think, for about 4 or 5 years? - September, 1907. 15308. Have you been employed for five years by the White Star Company? - Five years next November.
15309. And has most of your experience been in the Atlantic? - Most of it, yes. 15310. On Sunday the 14th April, were you on watch from 4 to 6 in the evening? - I was.
15311. Who else was on the bridge at that time? - Mr. Wilde, the Chief Officer, and Mr. Moody, the Sixth Officer.
15312. Can you say what the course of the ship was when you came on watch at 4 o'clock? - No; I have forgotten the course.
15313. The course would be marked, I suppose, on a course board? - Oh, yes, the course was there.

15314. You cannot say what it was? - No, I cannot remember.
15315. Between 4 and 6, while you were on watch do you remember the course being altered? - The course was altered at 5.50.
15316. Do you remember what it was altered to? - I do not remember the compass course, but I remember the true course was S. 86 W.
15317. I think you worked that out yourself? - Yes, I had stellar observations afterwards.
15318. At the time when you came on watch at 4 o'clock had you heard anything about ice being in the neighbourhood? - Yes, I had seen reports of ice and put them on the chart.
15319. Reports which had been received earlier on the same day, do you mean? - No, I cannot say from my own recollection that they were received on Sunday, but subsequently I have heard that some of them, or one of them that I put on the chart, was received on the Sunday, and that I put it on between 4 and 6. All the ice marked on the Captain's chart I put down myself.
15320. Do you remember what these messages indicated with regard to ice? - Yes, it indicated the region of the ice.
15321. Do you remember what region it indicated; did it convey to your mind that you at 4 o'clock were somewhere in the neighbourhood of ice or not? - It conveyed to my mind that the ship would shortly be in the region of the ice.
15322. Did you make up your mind about what time that would happen? - No, I did not.
15323. Was the position of the ice marked upon the chart when you came up at 4 o'clock, I mean the position in which it might be expected? - Some of the positions were on the chart that I had put on previously.
15324. (*The Commissioner.*) But I do not know when it was that you marked the chart? - I do not remember myself, my Lord.
15325. But it was on the Sunday? - Well, subsequently I have heard it was on the Sunday, between 4 and 6, that I put some of the positions on.
- The Solicitor-General:* I fancy Mr. Boxhall has not been very well. I know your Lordship will allow him to sit down.
15326. (*The Commissioner.*) Certainly, sit down, if you wish? - I am quite right, my Lord, thank you.
15327. (*Mr. Raymond Asquith.*) You cannot recollect when it was you marked the position of the ice on the chart? - No. Some of the positions were from the "La Touraine." Well, that must have been a couple of days previously, I think.
15328. (*The Commissioner.*) And had they reference to ice? - Yes, ice and derelicts.

## Page 355

15329. (*Mr. Raymond Asquith.*) I understand your recollection is that during the period between 4 and 6 you did not make any additional mark on the chart? - To my recollection, I did not, but others say that I did.
15330. Do you remember whether, when you went off watch at 6 you noticed any marks on the chart with regard to ice which you had not noticed before? - No, I cannot say I noticed any.

15331. Then you went off watch at 6 o'clock, and came on again, I think, at 8 o'clock the same evening? - Yes.
15332. When you came up at 8 o'clock, was Mr. Lightoller on the bridge in charge? - Mr. Lightoller was there.
15333. Did you look at the chart then. Do you remember whether there was anything new about the ice marked on the chart at 8 o'clock? - I did not look at the chart when I came on at 8 o'clock.
15334. Your watch was from 8 to 12, was it not? - Yes.
15335. Do you remember during that period whether any messages were received with regard to ice, upon the bridge? - No, I do not recollect any.
15336. You have no recollection of a message from the "Californian" or the "Antillian" being brought to the bridge? - No.
15337. Were you on the bridge, looking out, most of that time, or were you somewhere else making calculations? - I was inside the chart room working up stellar observations from 8 o'clock.
15338. We have heard it was a fine, clear cold night. Is that your recollection? - Yes, it was perfectly clear.
15339. Did you see anything in the nature of haze? - No, none whatever.
15340. Neither at 8 o'clock nor at any time during the night? - Whenever I was on the deck or at the compass I never saw any haze whatever.
15341. And did you think, when you came up at 8 that the ship was nearing the neighbourhood of ice? - It did not enter my mind.
15342. Was the first intimation that there was ice about the striking of the three bells, so far as you were concerned? - No, when we struck the berg; that was the first.
15343. Do you mean you felt the shock before you heard the bells? - No, I heard the bells first.
15344. Where were you at that time? - Just coming out of the officers quarters. 15345. How soon after you heard the bells did you feel the shock? - Only a moment or two after that.
15346. Did you hear an order given by the First Officer? - I heard the First Officer give the order, "Hard-a-starboard," and I heard the engine room telegraph bells ringing.
15347. Was that before you felt the shock, or afterwards? - Just a moment before.
15348. (*The Commissioner.*) Let us be clear about that. The order, "Hard-a-starboard," came between the sound of the bells and the collision? - The impact, yes.
15349. (*Mr. Raymond Asquith.*) Did you go on to the bridge immediately after the impact? - I was almost on the bridge when she struck.
15350. Did you notice what the telegraphs indicated with regard to the engines? - "Full speed astern," both.
15351. Was that immediately after the impact? - Yes.
15352. Did you see anything done with regard to the watertight doors? - I saw Mr. Murdoch closing them then, pulling the lever.
15353. And did the Captain then come out on to the bridge? - The Captain was alongside of me when I turned round.

15354. Did you hear him say something to the First Officer? - Yes, he asked him what we had struck.

15355. What conversation took place between them? - The First Officer said, "An iceberg, Sir. I hard-a-starboarded and reversed the engines, and I was going to hard-a-port round it but she was too close. I could not do any more. I have closed the watertight doors." The Commander asked him if he had rung the warning bell, and he said "Yes." 15356. Did the Captain and the First Officer go to the starboard side of the bridge to see if they could see the iceberg? - Yes.

15357. Did you see it yourself? - I was not too sure of seeing it. I had just come out of the light, and my eyes were not accustomed to the darkness.

15358. What did you do next - did you leave the deck? - Yes, I went down forward, down into the third class accommodation, right forward on to the lowest deck of all with passenger accommodation, and walked along these looking for damage.

15359. That would be F deck, would it not? - Yes, F deck. I walked along there for a little distance just about where I thought she had struck.

15360. Did you find any signs of damage? - No, I did not.

*The Commissioner:* What deck is it?

*Mr. Raymond Asquith:* F deck, he says.

15361. (*The Commissioner.*) You say it is F deck?

*The Witness:* I am not quite sure, my Lord, but it was the lowest deck I could get to without going into the cargo space.

*Mr. Raymond Asquith:* The lowest deck on which there is passenger accommodation, he said.

*The Commissioner:* Is not that G?

*Mr. Raymond Asquith:* Yes, my Lord, I think it must be G.

*The Commissioner:* It is pointed out that he could not get along G deck, because there is no door in the bulkhead, and therefore it cannot have been G deck.

15362. (*Mr. Raymond Asquith - To the Witness.*) How did you get down to the lowest of these decks which you went to? - Through a staircase under the port side of the forecabin head which takes me down into D deck, and then walked along aft along D deck to just underneath the bridge, and down the staircase there on the port side, and then I am down on E deck near E deck doors, the working alleyway; and then you cross over to the starboard side of E deck and go down another accommodation staircase on to F deck. I am not sure whether I went lower. Anyhow, I went as low as I could possibly get.

15363. (*The Commissioner - To the Witness.*) Just come round here? - Yes, my Lord. (*The Witness explained plan to the Commissioner.*)

*The Commissioner:* He appears to have got to F deck. His first statement was right.

15364. (*Mr. Raymond Asquith - To the Witness.*) Did you then go up again through the other decks as far as C deck? - I came up the same way as I went down. 15365. Without noticing any damage? - I did not see any damage whatever.

15366. When you got to C deck did you see some ice there on the deck? - Yes, I took a piece of ice out of a man's hand, a small piece about as large as a small basin, I suppose; very small, anyhow; about *that* size (*Describing.*) He was going down again to the

passenger accommodation, and I took it from him and walked across the deck to see where he got it. I found just a little ice in the well deck covering a space of about three or four feet from the bulwarks right along the well deck, small stuff.

15367. Did you then go and report to the Captain? - I went on to the bridge and reported to the Captain and First Officer that I had seen no damage whatever.

15368. Did the Captain then tell you to find the carpenter? - Yes, I think we stayed on the bridge just for a moment or two, probably a couple of minutes, and then he told me to find the carpenter and tell him to sound the ship forward.

15369. Did you find the carpenter? - I met the carpenter. I think it would be on the ladder leading from the bridge down to A deck, and he wanted to know where the Captain was. I told him he was on the bridge.

15370. Did the carpenter tell you anything about there being water? - Yes, he did; he said the ship was making water fast, and he passed it on to the bridge.

### **Page 356**

15371. What did you do? - I continued with the intention of finding out where the water was coming in, and I met one of the mail clerks, a man of the name of Smith. 15372. Did he say something? - He also asked for the Captain, and said the mail hold was filling. I told him where he could find the Captain and I went down to the mail-room. I went down the same way as I did when I visited the third class accommodation previously. I went down as far as E deck and went to the starboard alleyway on E deck and the watertight door stopped me getting through.

15373. The watertight door on E deck was closed? - Yes. Then I crossed over and went into the working alleyway and so into the mail-room.

15374. What did you find in the mail-room? - I went down in the mail-room and found the water was within a couple of feet of G deck, the deck I was standing on. 15375. The mail-room is between the Orlop deck and G deck? - Yes, that is the mail hold.

15376. Was the water rising or stationary? - It was rising rapidly up the ladder and I could hear it rushing in.

15377. Did you go back and report that to the Captain on the bridge? - I stayed there just for a minute or two and had a look. I saw mail-bags floating around on deck. I saw it was no use trying to get them out so I went back again to the bridge. I met the Second Steward, Mr. Dodd, on my way to the bridge - as a matter of fact in the saloon companion way - and he asked me about sending men down below for those mails. I said "You had better wait till I go to the bridge and find what we can do." I went to the bridge and reported to the Captain.

15378. We have been told that at some time you called the other officers; both Mr. Lightoller and Mr. Pitman said you called them? - I did. That was after I reported to the Captain about the mail-room.

15379. Could you form any opinion as to how long that was after the impact? - No, but as near as I could judge; I have tried to place the time for it, and the nearest I can get to it is approximately 20 minutes to half an hour.

15380. I think those are the times which are given by Mr. Pitman and Mr. Lightoller. After calling those officers did you go on to the bridge again? - Yes, I think I went towards the bridge, I am not sure whether it was then that I heard the order given to clear the boats or unlace the covers. I might have been on the bridge for a few minutes and then heard this order given.

15381. Had you a boat station of your own; did you know what it was? - I did not know what it was.

15382. We have been told it is customary for the Third and Fourth Officers to be assigned to the emergency boats? - Yes, it is for emergency purposes.

15383. The Third Officer was assigned to No. 1. Were you assigned to No. 2? - For emergency purposes I was assigned to No. 1 as a matter of fact, the starboard boat.

15384. When the order was given to clear the boats what did you do; did you go to any particular boat? - No, I went right along the line of boats and I saw the men starting, the watch on deck, our watch.

15385. Which side of the ship? - The port side, I went along the port side, and afterwards I was down the starboard side as well but for how long I cannot remember. I was unlacing covers on the port side myself and I saw a lot of men come along - the watch I presume. They started to screw some out on the afterpart of the port side; I was just going along there and seeing all the men were well established with their work, well under way with it, and I heard someone report a light, a light ahead. I went on the bridge and had a look to see what the light was.

15386. Someone reported a light ahead? - Yes; I do not know who reported it. There were quite a lot of men on the bridge at the time. 15387. Did you see the light? - Yes, I saw a light.

15388. What sort of light was it? - It was two masthead lights of a steamer. But before I saw this light I went to the chart room and worked out the ship's position.

15389. Is that the position we have been given already - 41 deg. 46 min. N., 50 deg. 14 min. W? - That is right, but after seeing the men continuing with their work I saw all the officers were out, and I went into the chart room to work out its position.

15390. Was it after that you saw this light? - It was after that, yes, because I must have been to the Marconi office with the position after I saw the light.

15391. You took it to the Marconi office in order that it might be sent by the wireless operator? - I submitted the position to the Captain first, and he told me to take it to the Marconi room.

15392. And then you saw this light which you say looked like a masthead light? - Yes, it was two masthead lights of a steamer.

15393. Could you see it distinctly with the naked eye? - No, I could see the light with the naked eye, but I could not define what it was, but by the aid of a pair of glasses I found it was the two masthead lights of a vessel, probably about half a point on the port bow, and in the position she would be showing her red if it were visible, but she was too far off then.

15394. Could you see how far off she was? - No, I could not see, but I had sent in the meantime for some rockets, and told the Captain I had sent for some rockets, and told him I would send them off, and told him when I saw this light. He said, "Yes, carry on with it." I was sending rockets off and watching this steamer. Between

- the time of sending the rockets off and watching the steamer approach us I was making myself generally useful round the port side of the deck.
15395. How many rockets did you send up about? - I could not say, between half a dozen and a dozen, I should say, as near as I could tell.
15396. What sort of rockets were they? - The socket distress signal.
15397. Can you describe what the effect of those rockets is in the sky; what do they do? - You see a luminous tail behind them and then they explode in the air and burst into stars.
15398. Did you send them up at intervals one at a time? - One at a time, yes. 15399. At about what kind of intervals? - Well, probably five minutes; I did not take any times.
15400. Did you watch the lights of this steamer while you were sending the rockets up? - Yes.
15401. Did they seem to be stationary? - I was paying most of my attention to this steamer then, and she was approaching us; and then I saw her sidelights. I saw her green light and the red. She was end-on to us. Later I saw her red light. This is all with the aid of a pair of glasses up to now. Afterwards I saw the ship's red light with my naked eye, and the two masthead lights. The only description of the ship that I could give is that she was, or I judged her to be, a four-masted steamer.
15402. Why did you judge that? - By the position of her masthead lights; they were close together.
15403. Did the ship make any sort of answer, as far as you could see, to your rockets? - I did not see it. Some people say she did, and others say she did not. There were a lot of men on the bridge. I had a Quartermaster with me, and the Captain was standing by, at different times, watching this steamer.
15404. Do you mean you heard someone say she was answering your signals? - Yes, I did, and then she got close enough, and I Morsed to her - used our Morse lamp.
15405. You began Morsing to her? - Yes.
15406. When people said to you that your signals were being answered, did they say how they were being answered? - I think I heard somebody say that she showed a light. 15407. Do you mean that she would be using a Morse lamp? - Quite probably.

### **Page 357**

15408. Then you thought she was near enough to Morse her from the "Titanic"? - Yes, I do think so; I think so yet.
15409. (*The Commissioner.*) What distance did you suppose her to be away? - I judged her to be between 5 and 6 miles when I Morsed to her, and then she turned round - she was turning very, very slowly - until at last I only saw her stern light, and that was just before I went away in the boat.
15410. (*Mr. Raymond Asquith.*) Did she make any sort of answer to your Morse signals? - I did not see any answer whatever.

15411. Did anyone else, so far as you know, see an answer? - Some people say they saw lights, but I did not.
15412. Did they think they saw them Morsing in answer to your Morse signals; did anyone say that? - They did not say she Morsed, but they said she showed a light. Then I got the Quartermaster who was with me to call her up with our lamps, so that I could use the glasses to see if I could see signs of any answer; but I could not see any.
15413. You could not see any with the glasses? - No; and Captain Smith also looked, and he could not see any answer.
15414. He also looked at her through the glasses? - Yes.
15415. After a time you saw what you took to be the stern light of a ship? - It was the stern light of the ship.
15416. Did you infer from that that the ship was turned round, and was going in the opposite direction? - Yes.
15417. When you first saw her, I understand you to say she was approaching you? - She was approaching us, yes.
15418. For about how long did you signal before it seemed to you that she turned round? - I cannot say; I cannot judge any of the times at all.
15419. Do you know at all whether the "Titanic" was swinging at this time? - No, I do not see how it was possible for the "Titanic" to be swinging after the engines were stopped. I forget when it was I noticed the engines were stopped, but I did notice it; and there was absolutely nothing to cause the "Titanic" to swing.
15420. After sending up those signals for some time did you turn your attention to the boats? - I was sending the rockets up right to the very last minute when I was sent away in the boat.
15421. When you say right up to the last minute, can you give me any idea of what you mean by that? - Yes, right up to the time I was sent away in the boat.
15422. How long before the vessel sank were you sent away in the boat? - I cannot give the time, but I have approximated it nearly half an hour, as near as I could tell.
15423. What boat was it you were sent away in? - In the emergency boat No. 2.  
*The Commissioner:* It would be about a quarter to 2.
15424. (*Mr. Raymond Asquith.*) Yes, my Lord. (*To the Witness.*) Who was superintending the filling of that boat? - Mr. Wilde, or, I presume, Mr. Wilde was superintending the filling. The order was given to lower away when I was told to go in it and the boat was full; they had started the tackles when I got in. 15425. (*The Commissioner.*) What number was it? - Port No. 2.
15426. Did you notice what other boats there were on the port side at the time? - There was only one boat hanging there in the davits, No. 4.
15427. (*Mr. Raymond Asquith.*) That was the boat next to yours? - Yes.
15428. Can you say how many people were in that boat No. 2? - I endeavoured to count them, but I did not succeed very well. I judge between 25 and 30 were in her.
15429. Were they mostly women, or were they mixed men and women? - The majority were women. I know there were 3 crew, 1 male passenger, and myself.

15430. And you think the rest were women? - They were. There were several children in the boat.

We have had evidence about this boat from Johnson, the Steward, at page 91, and his evidence exactly corresponds with this. It is from Question 3468 to about Question 3478. He says he thinks there were 23 or 25 people in the boat, and he afterwards says, "There was one male passenger and I think four members of the crew."

*The Commissioner:* This was an emergency boat.

15431. (*Mr. Raymond Asquith.*) Yes, my Lord. (*To the Witness.*) Did you notice when the people were being put in that boat No. 2 whether there were many passengers on deck at the time, round about? - I did not notice the passengers being put into the boat. I was not taking any notice of the boat at all, until I was sent to her.

15432. Did you notice whether there were passengers on the deck at the time the boat was lowered? - Yes, there were passengers round the deck, but I noticed as I was being lowered that they were filling No. 4 boat.

15433. Were there any women about? - I did not see any women.

15434. I do not know whether you can say with regard to the starboard boats at all whether there were any starboard boats on the "Titanic" at this time, or whether they had all gone? - No, I cannot say. I know the starboard emergency boat had gone some time, and that they were working on the collapsible boats when I went, because I fired the distress signals from the socket in the rail just close to the bows of the emergency boat on the starboard side. Every time I fired a signal I had to clear everybody away from the vicinity of this socket, and then I remember the last one or two distress signals I sent off the boat had gone, and they were then working on the collapsible boat which was on the deck.

15435. Had you any lamp in your boat No. 2? - Yes.

15436. Had you put that in yourself or did you find it there? - There is always a lamp in the emergency boats.

15437. Lamps are always kept there? - They are lighted every night at 6 o'clock. 15438. Do you mean they are not kept in the other boats usually? - They were not kept in the other boats, no.

15439. Did you see any put in the other boats? - Yes.

15440. Was that by your orders? - Well, it was through my speaking to the Chief Officer about it. I mentioned to him that there were no lamps. That was earlier on, when they started to clear the boats. I mentioned to him the fact that there were no lamps in any of the boats, or compasses, and he told me to get hold of the lamp trimmer.

15441. (*The Commissioner.*) When did you notice this? - Oh, shortly after the orders were given to clear the boats.

15442. You said "in any of the boats." Did you examine all the boats? - Did I examine the boats after the accident? 15443. Yes? - No, I did not.

15444. Then you cannot speak from your knowledge? - I examined the boats on purpose. The lamps were in the lamp-room then.

15445. The lamps are in the lamp-room; the compasses are apparently kept in some locker; that is right, is it? - Yes.

15446. (*Mr. Raymond Asquith.*) Did you have the lamps taken up? - Yes. The Chief Officer told me to find the lamp trimmer. I did find him after a little trouble. I really forget where I found him. He was on the boat deck working amongst the men. I told him to take a couple of men down with him and fetch the lamps, and he was afterwards seen to bring the lamps along the deck and put them in the boats.

15447. Do you know how many lamps were put into how many boats? - No, I do not know.

15448. In your boat did you also put in some green lights? - Yes, there were some green lights lying in the wheelhouse. I told the Quartermaster or someone who was around there to put them in the boat.

15449. Was any order given to you when you were lowered with regard to what you should do

### **Page 358**

when you got into the water? - No, I do not remember any.

15450. What did you do when you got into the water? - I pulled a little way from the ship, probably 100 feet away from the ship, and remained there for a while.

15451. How long did you remain there; did you remain there until the ship sank? - Oh, no, I did not. I did not remain there very long. I got the crew squared up and the oars out properly and the boat squared when I heard somebody singing out from the ship, I do not know who it was, with a megaphone, for some of the boats to come back again, and to the best of my recollection they said "Come round the starboard side," so I pulled round the starboard side to the stern and had a little difficulty in getting round there. 15452.

Why was that, because you had not enough people to row? - I had not enough people; my boat was rather deep. I had only one man who seemed to understand boat orders. I was pulling the stroke oar and trying to steer the boat at the same time myself.

15453. There was only one seaman in your boat? - That is all.

15454. Do you know whether there was a man named Osman? - Yes, Osman or Osram, or something like that. [Frank Osman.]

15455. Who else rowed besides you and the seaman? You were rowing and steering at the same time? - Everybody was rowing with the exception of a male passenger. He did not seem to do much.

15456. You have told us there were two stewards or a steward and a sculleryman. They were both rowing? - Oh, yes, they were rowing.

15457. With some difficulty you rowed round to the starboard side of the ship? - Yes, round the stern.

15458. What did you do when you got round to the starboard side? - Well, I stayed round on the starboard side, probably about 200 feet away from the ship. I found there was a little suction and I decided that it was very unwise to have gone back to the ship so I pulled away.

15459. A little suction? - Yes, there was a little suction.

15460. Why was there suction at this time? - The ship settling down badly, I suppose.
15461. Was it settling down rapidly. Could you see it settling down at this time? - Yes, I could see her settling down; I was watching the lines of lights.
15462. (*The Commissioner.*) She was settling down by the head? - She was settling down by the head, my Lord.
15463. Where were you at this time? - Just a little, probably 200 feet, on the starboard beam of the ship, or probably a little abaft the starboard beam of the ship.
15464. Would there be any suction there? - Well, I felt it; I saw it by the work we had pulling it round the ship's stern; seeing she was only a small boat, I judged there was quite a lot of suction.
15465. (*Mr. Raymond Asquith.*) Did you remain in that position, about 200 feet away from the ship, until she sank? - No, I did not; I turned the boat away and pulled in a north-easterly direction.
15466. You mean, you pulled further away from the ship? - Yes.
15467. How far were you from the ship when she did sink? - Approximately, half-amile.
15468. That means that you could not see what happened? - No, I could not.
15469. After she sank, did you hear cries? - Yes, I heard cries. I did not know when the lights went out that the ship had sunk. I saw the lights go out, but I did not know whether she had sunk or not, and then I heard the cries. I was showing green lights in the boat then, to try and get the other boats together, trying to keep us all together.
15470. Were there other boats round about near yours? - I could not see any boats, not when I had got so far away as that. Some of them had gone in a more northerly direction than I had gone.
15471. Did you go back at all towards the ship, when you heard those cries? - No, I did not.
15472. Was any suggestion made of going back? - There was a suggestion made. I spoke about going back to the sailor-man that was in the boat - that was whilst I was pulling round the stern - about going back to the ship, and then I decided that it was very unwise to have attempted it. So we pulled away, and then we did not pull back at all.
15473. (*The Commissioner.*) What did you intend to go back to the ship for? - I intended to go back to try and obey orders that I heard given through the megaphone.
15474. Was that to stand by the gangway door or what? - I do not know whether it was to stand by the gangway door; I do not remember any gangway doors being open.
15475. What were the orders? - Just simply to come round to the starboard side.
15476. Why was it dangerous to try to do that; was it the suction? - The suction and the chance of the boat, by not being properly manned, being rushed and losing everybody in the boat. I did not think it was possible to get any more than three people in the boat.
15477. Three more people? - Yes, I thought I could get about three more in, and that is all. I gave the men orders I intended to put the boat bow-on to the ship, and I gave orders to back water as soon as I told them.
15478. (*Mr. Raymond Asquith.*) So you did not go back? - No.
15479. Did not you see anyone in the water at all? - No, there was no one in the water at all.

15480. Did you see people in the water later? - No, I did not see anyone in the water at all.
15481. You never picked anyone up? - No, I did not.
15482. Did you meet with any of the other boats later on? - I did not see any boat near us, although I was showing these green lights occasionally, with the intention of getting all the boats together. There was not a boat anywhere near us. I did not see any. I was the first boat picked up on board the "Carpathia."
15483. You were the first picked up? - Yes; he saw our green lights and steamed down for them.
15484. Did you watch all the other boats being picked up after you got on board the "Carpathia"? - I was down in the other boats. I suppose a good half an hour had elapsed before any of the other boats were there.
15485. Can you tell us how many boats were picked up by the "Carpathia"? - No, I did not count them. They counted them, but all our boats were picked up with the exception of the one collapsible boat, where the crew were taken out of her in a sinking condition.
15486. One collapsible boat and two lifeboats, did you say? - Yes.
15487. When I say picked up I do not mean taken on board. We know 13 were taken on board, but I mean how many were accounted for? - I really forget now how many were accounted for. I remember we turned some of them adrift.
15488. Did you see any ice when the day broke? - Yes, I saw quite a lot of ice at daybreak.
15489. Large bergs, did you see? - The first ice I saw, I saw it probably about half a mile on the port bow of the "Carpathia" just as I was approaching it, when I got about two ships' lengths away from her. Day was breaking then.

**Page 359**

**Examined by Mr. SCANLAN.**

15490. I think after the disaster it was you who worked out the calculation as to the position of the "Titanic"? - That is so.
15491. I understand that there is some dispute about the position, but had the position you worked out been checked in any way by any other officer? - Oh, no.
15492. You reckoned the position and you brought it to the notice of the captain? - Yes.
15493. He asked you to go down to the wireless operators' room and give it to him? - Yes.
15494. It was that statement of the position that went out from the wireless to give intimation of the collision? - Yes.
15495. And you say the position was accurate? - Yes, I am quite certain of that. I am quite confident the position was quite correct.
15496. After the collision I understand that you and some other officers went on the bridge to look at the iceberg. Is that so? - That is so. Yes.

15497. And you saw the iceberg? - Well, I was not quite sure of seeing it. 15498. What length of time was this after the collision? - Only a couple of minutes afterwards.
15499. What distance from you did the iceberg appear to be then? - I do not think it would be a couple of minutes afterwards. It appeared to me, what I fancy I saw, about a ship's length away from the ship's bridge.
15500. Now, you were examined in America in regard to the appearance which the iceberg presented at that distance? - Yes.
15501. Would you give your impression of it to my Lord? - Yes, I said I fancied I saw a black mass, a low-lying black mass on the quarter.
15502. Was it difficult to discern what the object was even at that short distance, a ship's length? - That is only an approximate distance you understand; it might have been more.
15503. It might have been three ship's lengths? - It might have been three ship's lengths.
15504. Would that be the outside - three ship's lengths? - No, I am not sure. You must understand I had just come out of the light into the darkness and my eyes were not accustomed to it.
15505. I also recollect that we have been told in the evidence that after the collision you went astern? - The engines were going full speed astern for quite a little time.
15506. Did you go forward after that? - Not that I know of.
15507. So that from the place where the collision occurred you had not moved much up to the time you went on the bridge to look for this iceberg? - No, I do not think the ship could have gone so very far.
15508. So that you were within a few ships' lengths of her probably? - Yes. 15509. Is it your evidence that even at that distance it was very difficult to make out that this was an iceberg - to make out what it was? - To make out what it was, yes. 15510. Was that on account of the weather conditions or the condition of the atmosphere? - I think it was due to the conditions that were then prevailing at the time, a calm oily sea.
- The Commissioner:* It appears to me to be more due to the fact that he had come out of the light room.
15511. (*Mr. Scanlan.*) Yes, my Lord. (*To the Witness.*) Besides you who else were on the bridge? - Mr. Murdoch and Captain Smith.
15512. They had not been in the lighted chart room up to that time? - Not that I know of. Mr. Murdoch and Captain Smith were on the bridge as far as I know when I went there.
15513. Was Mr. Murdoch standing with you while you were observing the iceberg? - Yes, he pointed at it - like *that*.
15514. How long were you watching it? - That I cannot say. It was not very long because I went down below into the passengers' accommodation.
15515. A couple of minutes? - I am not going to stick to minutes; I do not know what it was.
- From the impression you got as to the difficulty of seeing objects that night, did it occur to you -

*The Commissioner:* You must not put it in that way; the difficulty was a personal one, it was not due to the night; it was because his eyes were not accustomed to the darkness, coming from the light.

15516. (*Mr. Scanlan - To the Witness.*) Before you took your eyes off this iceberg had you been there a sufficient length of time to accustom your eyes to the difference in light from the chart room to the bridge? - No, I do not say so; I do not think so.

15517. You have had experience of ships with searchlights, I understand? - Yes; I have been on board of ships with them, but, as a matter of fact, I have not seen them used.

15518. (*The Commissioner.*) Is that the only experience you have had with them, that you have been on board with them, but never seen them used? - That is all, my Lord.

15519. That does not seem to me to be very valuable? - It does not.

15520. (*Mr. Scanlan.*) You have been in the Navy for some time? - Yes.

15521. Were you an officer? - Yes.

15522. Do all of those ships carry searchlights? - Yes, to the best of my recollection most of them do, or all of them that I have noticed.

15523. Are they used at night for the purpose of discovering any object ahead of you? - I do not know; I have never seen them used. I have never been on board when they have been used.

15524. Have you formed any opinion as to whether or not a searchlight, if you had had one, on this Sunday night of the disaster, would have helped to discover the iceberg sooner? - No, I have not formed that opinion at all; I have not formed any opinion about it.

15525. Were you asked about this in America before the American Court, and did you say on that occasion that searchlight might have called attention sooner to the iceberg, I mean as an opinion. Did you express that as an opinion to Senator Smith? - I do not know whether I did or not.

*The Commissioner:* You need not go into that with this witness.

*Mr. Scanlan:* This was on the special question before your Lordship as to the use of searchlights.

*The Commissioner:* I know. I do not mean to say it is not a proper subject for Enquiry, but the evidence of a man who has so little experience of searchlights as this gentleman appears to have is to my mind of little value.

15526. (*Mr. Scanlan - To the Witness.*) I understood you to state to my friend that all the ice that was marked on the Captain's chart had been put down by you? - That is so - yes.

15527. On the Sunday, was that the state of the chart on the Sunday night? - Yes, as far as I know.

15528. Your watches were in the morning from 8 till noon and again from 4 till 6 and then from 8 o'clock until the time of the disaster? - Yes.

15529. When you were asked if you had marked down ice on the Sunday, I understood you to say - I may be wrong - that you were not speaking from your own recollection, but from what other people had told you since the accident. Is that so? - Yes, that is so. I distinctly remember putting down some positions from the

“La Touraine,” but that must have been a couple of days previously, to the best of my recollection.

15530. You do not recollect having put down any positions for ice on the Captain’s chart on the Sunday? - I do not remember that.

You were asked at the American Enquiry [April 22nd, page 223] with regard to this: - “(Senator Smith.) Did you know you were in the vicinity of icebergs that night? - (Mr. Boxhall.) I did not know we were in the vicinity of icebergs. (Senator Smith.) Did not the Second or First Officer apprise you of the fact that they had information that they were in the vicinity of icebergs? (Mr. Boxhall.) I knew we had had information. They did not apprise me that evening of it. (Senator Smith.) When did they apprise you? (Mr. Boxhall.) As a matter of fact they did not mention it to me. (Senator Smith.) Has it never been mentioned to

### Page 360

you? - (Mr. Boxhall.) Oh, yes, the Captain mentioned it. (Senator Smith.) The Captain mentioned it to you? (Mr. Boxhall.) Yes. (Senator Smith.) When? (Mr. Boxhall.) I do not know whether it was the day before or two days before. He gave me some positions of icebergs, which I put on the chart. (Senator Smith.) Which you put on the chart? (Mr. Boxhall.) On his chart. (Senator Smith.) Did the Captain tell you that the ‘Californian’ had wired the “Titanic” that they were in the vicinity of icebergs? (Mr. Boxhall.) No. The Captain gave me some wireless messages from Southampton, I think that we had had before we had sailed, and asked me to put these positions on the chart. (Senator Smith.) Did you know whether a wireless had been received from the ‘Amerika’ that the ‘Titanic’ was in the vicinity of icebergs?”

*The Commissioner:* From the “Amerika”?

*Mr. Scanlan:* Yes, my Lord. I think the information is that it was sent from the “Amerika.”

*The Solicitor-General:* I am putting it together; I am going into that question. 15531. (Mr. Scanlan.) “(Mr. Boxhall.) No, I could not say. (Senator Smith.) Do you want us to understand that you had no knowledge of the proximity of this ship to icebergs immediately preceding the - (Mr. Boxhall.) I had no knowledge. (Senator Smith.) One moment (continuing). Immediately preceding the collision, or during the hours of your watch from eight o’clock until the collision occurred. (Mr. Boxhall.) I did not realise the ship was so near the ice-field.” When you refer to the ice-field, you just mean the general ice-field marked down on all charts? - No, the region covering these wireless messages.

15532. Now about the region; you were examined twice before the American Commission. I have been quoting your evidence from the evidence you gave on the 22nd of April. Then you were examined a week later on this same point. I suppose this is a correct note of your evidence? - I suppose so. It should be.

15533. I mean you have heard what I have read? - Yes; to the best of my recollection it is quite correct.

15534. A week later, on the 29th April, you were examined by Senator Burton. He said [29th April, p. 930]: “I understand you have testified before the full Committee

about the radiograms relating to ice? (*Mr. Boxhall.*) Yes, Sir. I have stated upstairs, or in Senator Smith's presence, this afternoon that I did not hear of any ice reports the day of the accident. (*Senator Burton.*) None were reported to you? (*Mr. Boxhall.*) I did not hear any. There were none reported to me. I do not think any were reported during my watch on deck, or I should have heard it. (*Senator Burton.*) When was your watch on deck? (*Mr.*

*Boxhall.*) I was on deck on Sunday morning from eight o'clock until noon, and I was on again from four o'clock until six, and then I was on again from eight until the time of the accident. (*Senator Burton.*) You made an entry on the chart as to ice of which you had received information, did you not? (*Mr. Boxhall.*) Yes. (*Senator Burton.*) When was that? (*Mr. Boxhall.*) I cannot get the day, but it was probably a couple of days before, when we had a radiogram from the Captain of 'La Touraine,' giving his position at 7 o'clock Greenwich time, and I worked out our position at 7 o'clock Greenwich time, and wrote out the time for Captain Smith." So you made it quite clear to the American Commission that no ice had been reported to you on the Sunday, and that you had marked no ice positions on the chart that day? - Yes, but now I wish to add this that since that American Inquiry I have had some one read to me the wireless message sent. I remember we had one from the "Caronia," and since then that message has been read over to me which I recognise and I know now that the message was sent on Sunday morning.

15535. You are satisfied you received a message on Sunday morning. Did you receive any message on Sunday later? - No. Not that I know of.

15536. I daresay you would remember if you had? - Well, the messages do not come to me first, but I think if there had been any wireless messages come during my watch on deck I should have seen or heard something of them.

15537. If any message had come from 8 to 12 you would have heard of it? - Yes, I think so; that is the usual thing.

15538. Would it be in the ordinary course of the working of the "Titanic" that if a message were received, say, at 7.30 giving the latitude and longitude in which ice was - of a ship reporting ice, its position would be marked down in the chart? - Yes, I think so; that is the usual thing.

15539. At all events, from 8 to 12 you were engaged practically constantly all the time in the chart room? - Yes.

15540. And you were the officer who would have to work out the position? - Well, the Sixth Officer might have worked out that position, but the Captain generally gave the messages to me to put in the positions he had to put on the charts. He seemed to give them to me when I was on deck.

15541. Can you tell me if the Sixth Officer or any other officer put any ice position on the Captain's chart from 8 to 12? - Not that I know of.

15542. And you certainly did not yourself? - No, I did do them from 8 to 12. 15543. Was there any indication to you on the chart that any ice positions had been marked in the intermediate watch, that is from 6 to 8? - I do not remember.

15544. It is a thing that would have struck you, is it not, if it had been marked there? - I do not remember even looking at the chart at 8 o'clock.

15545. Did you have occasion to look at the chart at all from 8 o'clock to 12? - Well, as near as I can remember I went to the chart room with the Captain, but the Captain put down the star position when I gave it him, somewhere about 10 o'clock. He put the position on, and I was standing close to him, but I did not take that much notice whether any other positions were put on or not.

15546. Was that for the course? - That was our star position, putting down the ship's position at 7.30. But this was about 10 o'clock.

15547. (*The Solicitor-General.*) I cannot hear what you say happened at 10 o'clock? - The Captain plotted the star position of the ship at 7.30; he put that down on his chart at about 10 o'clock.

15548. (*Mr. Scanlan.*) Do you know what that position was? - No, I do not, but the position you have in the Court is worked from that position.

15549. The position in which the collision occurred was worked by you? - Yes. 15550. From the position indicated by the Captain at 10, I mean the Captain worked out his position at 10. At 10 o'clock he worked out the position he had been in at 7.30. Is that so? - No, he put down the ship's position at 7.30.

15551. (*The Commissioner.*) I understood that the Captain at 10 o'clock marked the chart with the position which the witness ascertained at 7.30. Is that right? - He put down the ship's 7.30 position on his chart. 15552. At 10 o'clock? - Approximately 10 o'clock.

15553. I understand at 10 o'clock the Captain put down on the chart the position of the ship as you had ascertained it at 7.30? - Yes.

15554. Had you both latitude and longitude? - Yes, we had three stars for latitude, and I think three or four for longitude.

15555. (*Mr. Scanlan.*) Who was on watch from 8 to 12, till the collision happened. There was Mr. Murdoch, I know? - The junior officers were the Fourth and Sixth. Mr. Lightoller was on till 10 o'clock.

15556. From 10 till 11.40 who were on? - The Fourth and Sixth Officers and Mr. Murdoch.

15557. Mr. Lowe is one of those officers? - No; Mr. Moody, who is the Sixth Officer.

15558. Who is the Fourth? - I am the Fourth.

15559. Then you had some duty for watching from 8 till 11.40. It was part of your duty as well as making out calculations in the chart room to take the watch on the bridge. Is that so? - My duty was to do what I was told by the senior officer on the watch. 15560. Is it part of the duty you were told to do? - No, I was not told to do it.

## **Page 361**

15561. Were you told to watch at all that night? - No, I was not.

15562. In point of fact, you were not on watch that night? - I was on watch. I was on duty, but I was not on the bridge. I was not on the look out, if that is what you mean. 15563. That is exactly what I want to know. At no time that night were you keeping the look-out on the bridge? - No.

15564. Who besides Mr. Murdoch was keeping the look-out on the bridge? - Nobody.

Mr. Murdoch was keeping the look-out himself.

15565. And there were no extra look-outs? - Not that I know of. I did not hear of any.

**Examined by Mr. ROCHE.**

15566. Just tell me about a few matters, if you can. When you came from where you had been making those observations, you heard the order "Hard-a-starboard," and you felt the shock of the collision? - Yes; there was not much of a shock to feel.

15567. But you felt the collision? - Yes.

15568. And you knew the engines were reversed, full speed astern? - I heard the bells ring, but I did not know what the movement was until I got to the bridge.

15569. And then you knew that the collision bulkheads were closed because you heard the bell ring? - No, I did not hear the bell ring; I saw Mr. Murdoch pulling the lever.

15570. I thought you told my Lord that you heard the warning bell ring? - No.

15571. You heard the Captain ask? - I heard the Captain ask.

15572. Whether the warning bell had been rung? - Yes.

15573. You had already got that knowledge. Now you left the bridge to go down below to see what damage was done? - To see if I could find any damage.

15574. When you left do you know if the engines were still reversing or had they stopped? - I cannot say.

15575. Perhaps you can tell us in this way. Was steam blowing off then? - No, I cannot tell you that either.

15576. When you came back was steam blowing off? - Yes, it was when I came back.

15577. How long were you away, do you think? - I could not say.

15578. A quarter of an hour or 20 minutes? - Oh, no.

15579. Less? You can give us an idea - ten minutes? - I do not think I should be ten minutes.

15580. Something less than ten minutes; five minutes? - Somewhere between five and ten minutes.

15581. Now, having come back, then you were on the bridge obeying orders and letting off rockets? - I went down to the mail-room after that.

15582. Yes, you went down again? - Yes.

15583. How long before you went down to the mail-room again, 5 or 10 minutes? - Almost immediately.

15584. And then you came up again on to the bridge? - Yes.

15585. Not having been away very long, I suppose? - No, I had not been down in the mail-room very long. I spent a little more time there than when I went down the first time.

15586. And then you came up and reported to the Commander? - Yes.

15587. What did he say? - He walked away and left me. He went off the bridge, as far as I remember.

15588. He did not say anything to you that was fixed in your memory? - No. 15589. Now do you know if anything was done in regard to the collision bulkheads after that? - No, the last movement that I saw was the First Officer closing them.

15590. And you know nothing more about them after that? - Nothing further. 15591. Now I want to ask you one or two other matters. Certain orders were given with regard to getting up women and children, and so forth, between that time and the sinking of the vessel? - Yes.

15592. Did you know those orders were being given? - I cannot say that I heard them. I never heard an order for any boat to be lowered, or even for women to be put in. The only order I heard was clearing the boats, and then I was employed the greater part of my time with these rockets on the bridge. I know very little about it.

15593. Except the order for clearing the boats, which came very early in the proceedings? - Yes. I knew one of the boats had gone away, because I happened to be putting the firing lanyard inside the wheel-house after sending off a rocket, and the telephone bell rang. Somebody telephoned to say that one of the starboard boats had left the ship, and I was rather surprised.

15594. At their doing it so quickly? - No; I was rather surprised. I did not know the order had been given even to fill the boats. I reported it to the Commander.

15595. You had only heard the order, "Clear away," and the next thing was a telephone message that the starboard boat had left the ship? - Yes; the starboard after boat. 15596. Do you know anything about any other general order that was given except the order, "Clear away"? - No. *The Commissioner:* What is this?

*Mr. Roche:* It is to find out what information we can, or whether any orders were given to the engine room. Some evidence has been given by one witness - I think it was the baker - that at some stage an order was given that all hands were to look after themselves.

15597. (*The Commissioner.*) Did you ever hear that order? - No, I did not.

15598. (*Mr. Roche.*) I do not think you heard any general order after the one you heard for clearing the boats? - No.

15599. It was directed to finding out whether the engineers were doing their duty at the time of the sinking or not. Did you see any of the engineers on deck at all when you were attending to your boat? - No.

15600. Not one? - No.

**Examined by Mr. HARBINSON.**

15601. Did you see Mr. Ismay about that night? - Yes.

15602. Where was he? - Quite close to the bridge.

15603. At what time? - I did not look at my watch.

15604. About what time? - I do not know what time it was at all. Time was flying.

15605. Was it after the collision? - Certainly it was after the collision. It was before I left the ship.

15606. Did you see him earlier that day on the bridge? - No; that is the first time I saw Mr. Ismay since we left Southampton.

15607. Did you see Mr. Andrews that night at all? - I did.

15608. That was after the collision? - Yes.

15609. Did you hear him say anything to the Captain? - No, I did not hear him say anything.

15610. Did you hear the Captain say anything to anybody about the ship being doomed? - The Captain did remark something to me in the earlier part of the evening after the order had been given to clear the boats. I encountered him when reporting something to him, or something, and he was inquiring about the men going on with the work, and I said, "Yes, they are carrying on all right." I said, "Is it really serious?" He said, "Mr. Andrews tells me he gives her from an hour to an hour and a half." That must have

### **Page 362**

been some little time afterwards. Evidently Mr. Andrews had been down.

15611. Can you tell us how long it was after the collision that the Captain said that? - No, I have not the slightest idea.

15612. Did you say as a matter of fact in America that it was about 20 minutes after the collision? - No, I do not think so.

15613. You could not fix the time? - I cannot fix the time; I have tried, but I cannot.

### **Examined by Mr. HOLMES.**

15614. In addition to the difficulties you had to contend with which you have spoken of, the lack of proper crew and the suction, had you also a number of foreigners in your boat? - Yes, there was a foreign family.

*The Commissioner:* Do you regard them necessarily as difficulties?

*Mr. Holmes:* The foreigners, my Lord?

*The Commissioner:* Do you?

*Mr. Holmes:* I have not completed my question.

*The Commissioner:* I thought you said in addition to the difficulties had he that further difficulty?

15615. (*Mr. Holmes.*) I said as to foreigners, and I am going to put a further question. (*To the Witness.*) Had you a number of foreigners in your boat? - Yes, there was a foreign family I knew of, that were close to the afterpart of the boat, where I was standing.

15616. (*The Commissioner.*) Were they a foreign family that could understand English? - No, they did not seem to be able to speak English or understand English.

15617. (*Mr. Holmes.*) Did you find they were people totally incapable of understanding any orders you might give to them? - They were.

15618. And if you had had to manoeuvre the boat to get more people in, it would have added to your difficulties? - Yes, I think so.

### **Examined by Mr. COTTER.**

15619. You stated that lamps were put into the emergency boat and lit at 6 o'clock every night? - Yes.

15620. Do you remember if they were lit that night and put into the emergency boat? - Yes, they were.

15621. So that there would be a light in the emergency boat No. 1? - I am not going to be driven to say that. I do not think they were exactly in the boat. They were hanging in the wheelhouse or in the bridge, covered over with a canvas cover - not exactly in the boat.

15622. You do not know whether they were in the boat that night? - No, I do not remember.

**Examined by Mr. LEWIS.**

15623. Did you hear any order given for the firemen off duty to muster? - No, I did not.

15624. Did you see them mustered anywhere? - I saw several firemen round the bridge.

15625. Did you see any considerable number of them mustered together? - Well, I saw quite sufficient to enable me to know that the firemen had been called out.

**Examined by Mr. LAING.**

15626. As to the stellar observations that were worked up for the 7.30 position, did you work them up? - Yes.

15627. Did you get them from Mr. Lightoller? - Mr. Lightoller took the observations at half-past 7, before I went on deck.

15628. That is what he told us; he took the observations and gave them to you, and you worked them out? - Yes.

15629. And the Captain put the position at 7.30 on the chart at about 10? - Yes. 15630. If you can recollect, can you test your memory at all as to the position of the ice that was reported by the "La Touraine"? - Yes; I cannot give you the exact position, but, judging by the position he gave us shortly after he left New York, when he encountered a derelict, and then from the ice positions he gave us, when I put them down on the chart, I found out he had crossed the Banks, and it was too far north to be of any use to us. They were absolutely out of the way.

15631. It was away far north of your position? - Oh, yes, miles north.

15632. You told us you thought you recalled the "Caronia" Marconigram? - Yes. 15633.

Do you remember whether you marked that on the chart or not? - Well, they say I did mark that.

15634. You do not remember it? - The "Caronia" Marconigram, I think, I must have marked, and probably that is the one that has been put down between 4 and 6, which they say was put down. I was on watch between 4 and 6 and it is quite likely I did it. *The Solicitor-General:* I want to put one or two questions about these messages, in view of what is now being asked.

*The Commissioner:* There are one or two questions I want to ask, but I will wait till you have finished.

(After a short adjournment.)

**Re-examined by the SOLICITOR-GENERAL.**

15635. You have been giving some answers which make it necessary to ask you about the plotting of ice on the Captain's chart. Just tell me this first of all. When the "Titanic" struck of course it was necessary to ascertain her position in order that the distress messages might be sent out? - Just so.
15636. Who was it who did ascertain her position after she struck? - I did.
15637. And in order to do that you would have to calculate from some ascertained position at an earlier time? - Yes, that is right.
15638. And as I understand, the position had been ascertained and marked on the Captain's chart at 7.30? - At 7.30 the position, yes.
15639. So that what you had to do after the disaster had occurred would be to take the position on the chart at 7.30, take your course, take your speed and calculate where you would be? - Yes, from the 7.30 position I allowed a course and distance which gave the position. I worked it out for 11.46 as a matter of fact.
15640. You worked out what the position ought to have been at 11.46? - That is right.
15641. And it was that position that was sent out with the C.Q.D. messages, which we know about? - Yes.
15642. And that is the position, 41° 46' N., 50° 14' W.? - Yes.
15643. Can you tell me what speed you assumed as between the 7.30 position and the time you struck? - Twenty-two knots.
15644. Twenty-two knots? - Yes.
- The Commissioner:* Is that right?
15645. (*The Solicitor-General.*) I will ask him, my Lord. (*To the Witness.*) Why did you take 22 knots? - I thought the ship was doing 22 knots.
15646. Was it an estimate you formed on any materials as to revolutions or as to the patent log? - No, I never depend on the patent log at all. It was an estimate that I had arrived at from the revolutions, although I had had no revolutions that watch; but, taking into consideration that it was

**Page 363**

- smooth water and that there ought to have been a minimum of slip, I allowed 22 knots.
15647. As far as you remember, was there any discussion as to whether 22 knots would be right, or did you do it on your own? - I did it on my own; there was no discussion at all.
15648. And do you think now that you formed a proper estimate?
15649. (*The Commissioner.*) Did you ask the Captain as to the speed? - No, I did not.
15650. (*The Solicitor-General.*) I follow you had been on duty with the Senior Officer from 8 to 12? - Yes.
15651. So you were on duty at that time? - Yes.

15652. And had been on duty for 3 1/2 hours when the accident happened? - Yes. 15653. You thought 22 knots was the proper average speed during that time? - Yes, I allowed 22 knots, and I thought that was about correct.
15654. (*The Commissioner.*) Do you know what the speed was in the log? - No, I do not.
15655. (*The Solicitor-General.*) We have been told that reports are sent up from the engine room from time to time as to the number of revolutions being made? - That is true; every four hours.
15656. Have you any recollection of any report of that during this watch from 8 till 12? - No, I have no immediate recollections of what the revolutions were at 8 o'clock. I do not remember them. As a matter of fact, I never received them. The Sixth Officer, when we went on watch, generally took them from the telephone.
15657. Is that Mr. Moody? - Yes.
15658. As far as you know now, as far as you see now from the information you have, and had, is 22 knots about right? - Yes, I feel pretty easy on that.
15659. You would have to take the speed and of course you would have to take the course? - Yes.
15660. Which you have told us was S. 86 W.? - Yes.
15661. Am I right in thinking that the course as marked on the chart is S. 85 W. when you take your turn. I believe it is about S. 85 W.? - Yes.
15662. So that as I follow, the "Titanic" had run on, you say for 50 minutes longer than she otherwise would? - Did I say that?
15663. I thought you said 5.50? - I have not said that so far, but I wish to say it now. I wish to explain it. The night order book was written out and there was an order for the course to be altered at 5.50.
15664. You saw that in the order book? - Yes, I saw it and I remarked to the Chief Officer between 4 o'clock and 6 o'clock that I considered the course ought to have been altered some considerable time before 5.50 - that is, if it was meant to be altered at the corner, 42 N., 47 W. Whether we spoke to the Captain about it or not I do not know. I just remarked that to the Chief Officer, and the course was altered at 5.50. I consider that the ship was away to the southward and to the westward of that 42 N. 47 W. position when the course was altered.
15665. Perhaps you will take the chart in your hand. I want to ask you a question or two about it? - Yes.
- (*The chart was handed to the Witness.*)
15666. We have all noticed there is a point on the course, as marked on the chart, where a westbound ship turns, what you call the corner, is that what you refer to as 42 N. 47 W.? - That is so.
15667. And then your view is that the ship, when she turned on her new course at 5.50 had run beyond that corner? - Yes.
15668. And, therefore, was to the south of it? - Yes, to the south and to the westward of it.
15669. Then when she is put on her new course, her new course you tell me was S. 86 W.? - S. 86. W.

15670. Though your impression is that as it is marked on the chart the course there marked is S. 86 W.? - I think it is about S. 84 3/4 W. as a matter of fact.

15671. The effect would be she would have run a little bit further on the old course and then on the new course she is gradually making back to the line? - That is my impression of the idea which Captain Smith had in altering that course and setting it to that time. 15672. If she was going 22 knots and ran past the corner for 50 minutes that means she? - I did not say 50 minutes.

15673. No, I know you did not? - I do not remember what time it was but it was some considerable time; the difference I make between my time and the time that was given in the book - well there was such a big difference that I considered it worth mentioning to the Senior Officer of the watch.

15674. That is all right. Now we come back to the ice chart. When you looked at the 7.30 position as marked on the Captain's chart, would you say whether there was any mark of ice on the chart? - I do not remember looking at the Captain's position on the chart. I was standing by the door when he put it on. I could see my work on the chart in the distance, but I do not remember examining the thing closely. 15675. He put it on himself as representing his 7.30 position? - Yes.

15676. Then for the purpose of working out what your position was when the collision occurred did you actually have recourse to the chart? - None whatever. I had the 7.30 position in my work book.

15677. You had a note of it? - Yes.

15678. You would not have to return to look at the chart after the accident? - No, I had used that same position two or three times after giving it to the Captain, and that same course I used two or three times after giving it to the Captain as well, between 10 o'clock and the time of the collision, for the purpose of working up stellar deviations. 15679. That is to say checking where you were? - No, checking the compass error. 15680. Did I understand you to tell one of my friends that it was you who had marked upon the Captain's chart the position of ice as reported? - Yes.

15681. I am going to ask the Court to allow me to read to them in order of time some messages which we can prove got to your ship, and I will ask you if you remember them. First of all, you remember the "La Touraine" message? - Yes.

15682. Which was two days before I think, on the 12th? - I do not remember the date exactly, but I think it was about a couple of days previous.

15683. Then do you remember the "Caronia" message? - I remember the "Caronia" message; I remember having that, and I pinned that on the board.

15684. Do you remember any other message about ice or whether there was any ice? - There were others, but I cannot remember, and I cannot fix the place.

15685. Let us be careful about this. Did you say there were others? - Yes, there were others.

15686. Do you mean there were more than three; I mean there was the "La Touraine," and the "Caronia"? - There were some positions we had and I fancy we got them leaving Queenstown or got them leaving Southampton.

15687. I mean after "La Touraine"? - Yes, there was another one, but I cannot remember what it was after "La Touraine."

15688. That is the extent of your recollection. And as far as the messages were brought to your attention did you plot them out on the chart and mark them? - Yes.

15689. (*The Solicitor-General.*) Now, my Lord, I think the thing which is clearest for your Lordship to follow is to read the messages in order of date while this witness is here. The first one we have got a check of is the 12<sup>th</sup> of April. That is the Friday in the evening, sent from "La Touraine" to the "Titanic." May I just read the message as I have it before me? "From 'Touraine' to Captain 'Titanic.' My position, 7 p.m., G.M.T., lat. 49.28, long.

26.28 W. Dense fog since this night. Crossed thick ice-field lat. 44.58, long. 50.40' Paris'; saw another ice-field and two icebergs lat. 45.20, long. 45.09 'Paris'; saw a derelict 40.56 long. 68.38, 'Paris.' Please give me your position. Best regards

### Page 364

and *bon voyage*." That is signed "Caussin." I suppose that is the Captain. And that is acknowledged? - There is one thing I want to ask about that message. You allude to "Paris." Does that "Paris" mean the ship "Paris," or does it mean the longitude given as from the meridian of Paris?

15690. I think, inasmuch as it follows two longitudes, it must mean the longitude of Paris? - That is what I think.

15691. It is evidently the longitude of Paris? - Yes, and that is what we allowed. We had some discussion on board the ship - the Captain, Mr. Wilde, and myself. I forget the difference in longitude between Paris and the British meridian, but we allowed for that.

15692. Do you know what the allowance is? - I do not remember. I believe it is something like 54 minutes, but I am not sure. You can soon find out from the tables.

15693. That calls it to your mind that that message was received, and you had to make that correction? - Yes.

15694. The only one of those messages which would seem to be material, as I make it out, is the first one which says, "Crossed thick ice-field, latitude 44° 58, longitude 50° 40, Paris? - Yes, if you look at your chart you will find that position is on the outward bound tracks ships follow between August and January which is right directly across the banks.

15695. I agree. It is just underneath the words "Great Bank of Newfoundland," is it not? - No, it is above that word. All these positions were away to the northward and by dotting them down from the derelict which was the first to be reported, the westernmost report, and dotting all the positions he gave - he gave some icebergs beside field ice I believe - it showed he had taken the northerly track, and it was not worth considering, although I put it on the chart.

15696. You worked it out and found those right to the northward? - Yes.

15697. I am going to take the next one as I have it in order of time. The next one is the "Caronia," and that is to be found in the evidence of Captain Barr at page 273. It is question 12307. Will you listen to the message and see if that is what you recollect.

“Westbound steamers report bergs, growlers, and field ice in 42 N. from 49 to 51 W.”  
The Captain of the “Caronia” says that message was sent to the “Titanic” on the Sunday morning? - Westbound steamers report that?

15698. Yes? - Yes, I seem to recollect that message.

15699. Now you have the chart before you? - Yes.

15700. Let us take the latitude first - latitude 42 N. That is the same latitude as your turning-point, is it not? - Just the same latitude.

15701. What I mean is that the turning-point marked on the chart, not the place where you turned, but the turning-point on the chart is 42 N.? - Yes. I understood you to mean that. It is 42 N.

15701a. I do not know whether your Lordship has marked on your chart the 49 to 51 W.  
*The Commissioner:* Yes.

15702. (*The Solicitor-General.*) Of course, it is in exactly the same line as regards latitude as the latitude of the turning-point. Is it your recollection that you marked the chart in accordance with the message? - Yes, I fancy so. I am not perfectly sure, but I seem to recognise the “Caronia’s” message. 15703. You seem to recognise it? - Yes.

15704. And if you got the message you are sure you marked it? - Yes, I think that I should put that on the chart.

15705. That is the second one. I am taking them in order of time. That you notice is sent at 9 o’clock in the morning, and there is a reply at 9.44 a.m., the “Caronia’s” ship time; so that at any rate it is in the morning sometime? - Yes.

15706. I am going to take the next one in order of time, as far as I have a record of it. The next one I have a record of - we are going to call the Marconi gentleman about it - is a message from a ship called the “Amerika.” May I just read it? “Amerika Office. 14th April, 1912. Time sent 11.45 a.m.” That is, of course, New York time. It is actually sent to the Hydrographic Office, Washington, and this is the message: ““Amerika’ passed two large icebergs in 41° 27’ N., 50° 8’ W., on the 14th of April.” Our information is - a gentleman from the Marconi Company will come and prove what they know about it - that that message would go through the “Titanic” to the Hydrographic Office. That message, sent from the “Amerika” to the Hydrographic Office would be sent through the “Titanic.” Of course, this gentleman does not remember that? - I do not remember that message at all.

15707. The latitude and longitude is 41° 27’ N. by 50° 8’ W. I do not know whether your Lordship’s calculation is the same as mine. As I make it out on the chart before me, that point lies just above the first “u” in the word “August” on that dotted line, “icebergs had been seen within this line in July and August.” It is south of the place of the disaster. (*To the Witness.*) Would you like to have a pair of dividers? - Yes, please. (*The same were handed to the Witness.*)

*The Commissioner:* I am informed that it would be slightly north of the top of the first U.

15708. (*The Solicitor-General.*) That is just what I mean, slightly north of the top of the first “u” in the word “August”? - Yes. 15709. That is right, is it not? - Yes.

15710. As far as your memory serves you. I understand that message was not brought to your notice? - I never heard anything about it.

15711. I have not proved that it got to the "Titanic"; I am only telling the Court what I am informed. That, your Lordship sees, is 11.45. Now I will take the next one that comes from the "Baltic." The "Baltic" says that the message was sent and acknowledged by the "Titanic" at 1 p.m., to this effect, that a number of steamships have passed ice and bergs in positions varying from 49° 9' W. longitude to 50° 20' W. longitude on the outward southern track. You have the outward southern track before you as marked on the chart? - Yes.

15712. That is to say, after the corner as it were. Will you mark on that approximately 49° 9' W. longitude to 50° 20' W. longitude? - Yes.

15713. Now, just observe. Take the second of those longitudes. You know the longitude of the "Titanic" when she struck was, according to your calculation, 50° 14' W.? - Yes.

15714. That is within six minutes of the same longitude? - Yes.

15715. Now, have you any recollection of that message from the "Baltic" at one o'clock on the Sunday? - No, I have not.

15716. Or of plotting out any icebergs on the southern track? - No; all the ice I remember plotting out was to the northward of the track. If it had been on the track or to the southward I should have seen fit then to call the Captain's special attention to it at the time I put it on. But I just merely remarked to him that I had put down the ice we had had reported; whenever I did put it on the chart, I remarked to him that I had done so. But if it had been so close to the track as that I should have thought it an immediate danger to the ship. I should have pointed it out specially to him, and I never had reason to do that. 15717. Supposing that message from the "Baltic" was received and it had reference to icebergs on the southern track, your ship was only just a little to the south of that? - Yes. 15718. And are you clear that, as far as you are concerned, your attention was not called to any messages about icebergs on the southern track in that neighbourhood? - No, I do not remember anything about any ice on the track. I do not recognise that message either.

15719. You said if it had been so you would have called the Captain's special attention to it. I want to follow what the method is. Would the Captain get the message and ask you to plot it out, or would you get the message and tell the Captain when you had plotted it out? - On one or two occasions, as to anything to be plotted on the chart, he has just left it there with a note for me, or left it in the hands of

## Page 365

some one else to give to me to put down on the chart. I have never seen fit to go and find the Captain and tell him I had done it. I took the first opportunity I had of seeing him to tell him I had carried out his instructions. 15720. You are the Fourth Officer? - Yes.

15721. Was it your duty in particular to plot on the chart things of that sort? - No, I do not think so, but I just seemed to be the one that he told to do it each time.

15722. That who told you to do it? - The Captain.

15723. But the Captain could not tell you unless he knew the message was there? - Oh, no, certainly not.
15724. To whom did the message go; how did you get your orders? - On one occasion I remember he gave something - I do not know whether it was a derelict - there was a message about a tank steamer drifting around on the track, that was it. And he mentioned it to one of the officers and told him to tell me to put its position on the chart.
15725. Suppose that a message came at 1 o'clock in the afternoon of that Sunday to say that icebergs were on the southern track which you were close to, would the news come to you or would it go to the Captain first? - To the Captain.
15726. And then what would he do about it? - I should think he would take it to the Senior Officer, or probably the Captain would put it on the chart himself.
15727. At any rate, you know nothing about this message at 1 o'clock? - No, and I was not on deck at 1 o'clock either.
15728. The next one in order of time is from the "Californian," and your Lordship will find that at page 201 of the shorthand notes the questions running from 8939 down to 8947. The actual message is 8943, and the "Titanic" when it was offered the message said that it had overheard it. (*To the Witness.*) Perhaps you will kindly plot it for me? - Yes.
15729. The message was, they said they were in latitude 42° 3' N. and in longitude 49° 9' W., and there were three large bergs five miles to the southward of them. What change will you have to make in 42° 3' N. to get five miles to the south? - I should think 42° N. would be near enough.
15730. Let us take it? - It is near enough for this small scale chart.
15731. Take it, if you will, latitude 42° N. and longitude 49° 9' W. I am going to ask the Court to look at your calculation to see if it is what they understand. You have been good enough to mark on that chart the place of ice as indicated by the "Caronia," the "Amerika," the "Baltic," and the "Californian"? - I have got the "Amerika," the "Californian" and the "Baltic." I did not put down the "Caronia."
15732. The "Caronia," as we know, is 49° to 51°? - Yes, and 42° N.
15733. Now have you any recollection of the "Californian" message reaching you or being plotted? - No, I have not.
15734. That message, as we see from the evidence, was sent at 7.30 "Californian" ship's time, and the "Californian" on any view was not very far from you. You were on duty from eight till twelve. As far as you know until I called your attention to it, had you ever plotted that message on any chart? - No.
15735. Now that is not the last. I came to another which the Court has not heard of yet. It is a message that was sent from the "Mesaba" to the "Titanic" and all east-bound ships.
- The Commissioner:* East-bound ships?
- The Solicitor-General:* It was sent to the "Titanic," and it was sent to east-bound ships, and according to the information we have from the Marconi people it was acknowledged by the "Titanic." Of course, that I shall have to prove. This is the message: "Ice report. In lat. 42 N. to 41.25 N. long. 49 W. to long. 50.30 W. Saw much heavy pack ice, and great

number large icebergs, also field ice. Weather good, clear.”

*The Commissioner:* When is that?

*The Solicitor-General:* That is sent at 7.50 p.m., New York time, and if one allows for the difference of two hours - one hour and fifty-five minutes, we were told - that would bring it practically to a quarter to ten that night, about two hours before the accident.

15736. Would you like to have some parallels? - Yes.

*(The same are handed to the Witness.)*

15737. The message gives you an oblong, a parallelogram, does it not? I want you to make the parallelogram? - From 42 north and 49 west to 41.25 and 50.30.

*The Commissioner:* Am I right in supposing - I have not heard of this message at all - that she was running to a place which was bounded by icebergs on the north and the south. Is that so?

15738. *(The Solicitor-General.)* According to this message it is. I do not know if I might show you and ask your Lordship's Assessors to see it, but I have marked the oblong on that plan and hatched it in pencil. *(Showing to his Lordship.) (To the Witness.)* Have you got the mark there? - I have only the two positions from the "Mesaba," the one position 42 north and 49 west, and the other position, "Mesaba," 41.27 north and 50.30 west.

15739. Let me read it again. The message really gives you, as I understand, an oblong, a parallelogram: "In latitude 42 north to 41.25 north" - in two lines like that *(showing.)*; "and longitude 49 west to 50.30 west." The message mentions ice there. That means that you want to make an oblong on your chart, does it not? May I show you mine for a moment, because I am anxious to be sure that you do it right. *(Showing chart to Witness.)* I have given you my chart, and I want you to check it. You notice I have made an oblong on the chart, and I have sketched it in with pencil? - Yes.

15740. Just check it and see if I am not right, that that oblong is latitude 42 N. to 41.25 N., and longitude 49 W. to 50.3 W.? - Yes; that is about right.

15741. In that space the message is "Saw much heavy pack ice and great number large icebergs, also field ice"? - Yes.

15742. Is the space that was referred to by the "Baltic" within that oblong - the southern track between the two longitudes? - What are the two longitudes again? 15743. 49.9 to 50.20? - Yes, that is inside. 15744. The "Baltic's" position is inside that oblong? - Yes.

15745. Is the position that is indicated by the "Caronia," a position that is inside that oblong? - Yes.

15746. Is the position that is indicated by the "Amerika" inside that oblong? - Yes, it is.

15747. Is the position that is indicated by the "Californian" inside that oblong? - Yes.

15748. And is the space where the disaster happened inside that oblong? - Yes.

15749. *(The Commissioner.)* Then to sum it up, if these messages were received and were in the terms that have been stated by the Solicitor-General, this steamer was steaming a course through an oblong space, having received warning that there were icebergs on the north of her and icebergs on the south of her? - Yes,

you are quite right in saying that the steamer sunk in that position. She sunk in that position.

15750. But she steamed through it did not she for some time, until she met with her doom? - Yes, she must have done.

15751. Of course, the whole thing is assumption at present, because we have not had some of these messages proved, but can you give me any explanation of why such navigation should exist? - I do not think for a moment that we had those messages, my Lord.

15752. I am asking you to assume that you did. I said that they have not been proved yet, but we are told they are going to be proved. Assuming that they are proved can you explain how the "Titanic" was allowed to find her way into such a region? - No, Sir, I cannot.

*The Commissioner:* There are one or two other questions I want to ask you. I do not think, Sir John, the witness had better leave, because we may want him again after you have proved the messages to which you have referred.

### **Page 366**

*The Solicitor-General:* Yes, my Lord. As regards two of them Mr. Boxhall has a recollection.

15753. (*The Commissioner.*) They are proved sufficiently already, but there are others about which he knows something. (*To the Witness.*) There are two or three questions I wanted to ask you, not on this point at all but on another point. You remember telling us that you first went down after the collision to F deck? - Yes.

15754. Did you when you went down to F deck get to bulkheads C and D - you had better look at the plan. You see the bulkheads marked there do not you? - Yes, I see them marked. Yes, I think I did, Sir.

15755. And when you got there you saw no damage? - No, Sir.

15756. There are doors in those bulkheads C and D? - Yes, Sir, on the port side.

15757. Can you tell us whether those doors were closed? - Not then, my Lord.

15758. Not when you were there? - No, that is shortly after the collision.

15759. They were not closed? - No.

15760. You say they were not closed then? Were they closed later on? - That I cannot say. I was not down below later on.

15761. Then you have told us all about that. Is there a door at the forward end of the starboard alleyway? - Yes, on E deck.

15762. Is that a watertight door? - I did not stop to look, but the thing was closed against me. I think it is a watertight door myself. I presume so.

15763. But you do not know? - No.

*The Commissioner:* I daresay, Sir Robert, someone can tell us whether that door is a watertight door. Can you tell us what it is? It is a door at the forward end of the starboard alleyway on E deck.

*Sir Robert Finlay:* No, my Lord, it is an iron door, not watertight. Perhaps your Lordship would show Mr. Wordingham the particular door referred to on the plan so that there may be no mistake about it.

15764. (*The Commissioner.*) Certainly. (*Mr. Wordingham looked at the plan.*) We are told it is not a watertight door. (*To the Witness.*) Did you go into the space between bulkheads C and D on F deck? - I am not certain about that, my Lord.

15765. At all events, you saw no water between D and C? - I saw no damage whatever, and no water either.

15766. Are we to understand from that that when you went on to F deck on this occasion you saw no damage of any kind? - No damage whatever, and I went right to the ship's side - to the thwartship alleyways leading out to the ship's side.

*(The Witness withdrew.)*

**HAROLD GODFREY LOWE, Sworn.**

**Examined by Mr. ROWLATT.**

15767. Harold Godfrey Lowe, is that your name? - Yes.

15768. Were you the Fifth Officer on the "Titanic"? - I had that honour.

15769. You have a Master's certificate of competency? - I have. 15770. I think you joined at Belfast, did you not? - I did.

15771. Was it your duty to look at the boats at Belfast and see that they were all there, and so on? - I was instructed by Mr. Murdoch, the then Chief Officer of the ship, to do so.

15772. Did you do it? - I did.

15773. You went through the boats and their equipment at Belfast? - Yes, I, in company with Mr. Moody went.

15774. He was lost? - We went through the starboard boats.

15775. Not the port side boats? - Not the port side boats.

15776. Did anybody go through the port side boats? - Mr. Boxhall and Mr. Pitman went through the port boats.

15777. I will not ask you in detail about that, but you sailed on the voyage. What was your watch on the Sunday of the accident? - My watch was the afternoon watch from 12 to 4 and from 6 to 8 in the evening.

15778. When did you go on again after that? - At midnight.

15779. You were on duty from 6 to 8? - I was.

15780. Did you hear anything about any messages about ice? - There was a chit on the chart room table with the word "ice" on.

15781. You mean a little piece of paper with "ice" written on it? - A square chit of paper about 3 x 3.

15782. On the chart room table? - On our chart room table.

15783. What is that - "Our chart room table"? - The officers chart room table, and the word "ice" was written on top and then a position underneath.

15784. Can you remember what the position was? - I cannot.

15785. Is that all that was brought to your attention about ice that day? - That is all.
15786. Did you hear of Marconigrams coming about ice? - That was the only information I saw regarding ice.
15787. That is all you have to say about your knowledge of ice on board the ship on that day? - Yes, that is all I know about it. 15788. You went off watch at 8 o'clock? - Yes. 15789. Did you turn in? - I went to bed.
15790. Were you asleep at the time of the collision? - I was.
15791. Just tell us what woke you up? - I was half awakened by hearing voices in our quarters, because it is an unusual thing, and it woke me up. I suppose I lay down there for a little while until I fully realised, and then I jumped out of bed and opened my door a bit and looked out, and I saw ladies in our quarters with lifebelts on.
15792. When you first looked out people had got their lifebelts on? - They had. 15793. Do you know the time? - I do not. I have not the remotest idea of the time right throughout.
15794. Were the boats being attended to? - As soon as I looked out through the door I jumped back and got dressed and went out on deck, and the boats were being cleared.
15795. (*The Commissioner.*) The boats had been cleared did you say? - The boats were being cleared.
15796. (*Mr. Rowlatt.*) Did you go to the starboard side first? - I had to go round the port side first, that is on my way to the starboard.
15797. As you were round the port side, the boats there were being cleared, were they? - Yes.
15798. Did you take any part in clearing the boats there or have anything to do in connection with them on the port side? - No.
15799. You got to the starboard side? - I got to the starboard side.
15800. What boat did you get to? - The first boat I went to was No. 7.
15801. That would be the aftermost one upon the starboard side? - No; that would be the after boat of the forward section.
15802. You came round behind the deck-house? - No, I came round abaft the second funnel.
15803. Was that the boat to which you belonged? - No.
15804. What was the boat to which you belonged? - I do not know.
15805. (*The Commissioner.*) Why do not you know? - I do not know why, but I do not.
15806. Was it your business to find out? - I suppose it was.

## Page 367

15807. And you did not do it? - No, Sir.
15808. (*Mr. Rowlatt.*) Why did you go round to No. 7? - Because the people were there.
15809. What was being done at No. 7? - Loading it with women and children.
15810. Did you assist there? - I did.
15811. Did you see that boat lowered? - I did; I assisted in lowering it.
15812. Then did you go to No. 5? - I went to No. 5.

15813. Did you see that lowered? - I did.

15814. Did you assist? - I did.

15815. When you say you assisted, did you take charge of the operations? - I assisted; that is to say, Mr. Murdoch was superintending.

15816. Mr. Murdoch was there? - Yes.

15817. Then was No. 5 lowered after No. 7? - No. 5 was lowered after No. 7.

15818. Did you then go to No. 3? - I then went to No. 3.

15819. Was that lowered? - That was lowered.

15820. And did you then go to the emergency boat? - I went to No. 1, the emergency boat.

15821. Was that lowered? - Yes.

15822. When your boat was lowered that lot of boats were finished with. Did you notice any list? - No.

15823. Was the vessel down by the head? - Yes.

15824. You noticed that? - Yes, of course I did. I noticed that as soon as I got up. 15825. Did you look for any lights at this time at all? - As I was getting the emergency boat ready, No. 1, Mr. Boxhall was firing the detonators, the distress signals, and somebody mentioned something about a ship on the port bow, and I glanced over in that direction casually and I saw a steamer there.

15826. What did you see of her? - I saw her two masthead and her red sidelights.

15827. That accounts for all these four boats? - Yes, the forward section.

15828. Where did you go then? - I then went to No. 14.

15829. That is right aft on the other side, is it not? - That would be the second forward boat of the after section, and the second boat from aft of the after section.

15830. Why did you go to her in particular? - Because they seemed to be busy there.

15831. Did you go to assist there? - I did.

15832. Who was in charge there? - I do not know who was in charge there. I finished up loading No. 14, and Mr. Moody was finishing up loading No. 16? - Yes.

15833. You were loading No. 14 and he was loading No. 16? - Yes.

15834. Did you see anything about No. 12? - No. 12 would be the forward boat - the boat next to me forward? - Yes.

15835. Yes? - Numbers 12, 14 and 16 went down pretty much at the same time. 15836. You went in No. 14, did not you? - Yes.

15837. Did you go by anybody's orders? - I did not. I saw five boats go away without an officer, and I told Mr. Moody on my own that I had seen five boats go away, and an officer ought to go in one of these boats. I asked him who it was to be - him or I - and he told me, "You go; I will get in another boat."

15838. I forget where he comes in order of seniority; is he senior to you or junior to you? - No, he was junior.

15839. Were you lowered in that boat? - I was lowered in No. 14.

15840. I want to ask you a little about that. Was there any difficulty in lowering when you got near the water? - Yes, I slipped her.

15841. Did the falls go wrong? - Something got wrong and I slipped her.

15842. That means to say, you threw off the lever when you were some way from the water? - I should say I dropped her about 5 feet.
15843. Your Lordship remembers that Scarrott told us about that. Was that because the falls -? - That was because I was not going to wait and chance being dipped down by the stern by anybody on top, so I thought it was best for me to drop, and know what I was doing.
15844. No doubt you dealt with the situation quite rightly, but I want to know what caused the situation. Was it because the rope would not run any further? - I do not know, because, you must understand that the lowering away was being carried out on deck, and I must have been about 64 feet below that deck, and I could not see it.
15845. Did you look up? - Yes.
15846. Could you tell me why you were not being lowered further? - No.
15847. You could not? - No.
15848. One of the men in your boat has given evidence, and he says he looked up and saw the rope of the falls twisted? - No; I looked up and I could not see anything.
15849. Just let me ask you this, because it is fair to ask you it. Could they twist? - I suppose they could.
15850. Can the blocks revolve at the top? - Oh, yes, the blocks are movable in the davits; they are swivelled; both are swivelled, the top and bottom blocks.
15851. Then you got to the water and you slipped her, as you say? - Yes.
15852. Did you take command of the boat? - Yes.
15853. What did you do with her? - I took, I think it was, No. 12 to a distance of about 150 yards from the ship, and told him to stay there until I gave him orders to go away or any other orders. I then came back to the ship and escorted another boat, and so on, until I had five boats there.
15854. You gathered five boats together? - Yes.
15855. There is just another thing I want to ask you. Did you use a revolver at all? - I did.
15856. How was that? - It was because while I was on the boat deck just as they had started to lower, two men jumped into my boat. I chased one out and to avoid another occurrence of that sort I fired my revolver as I was going down each deck, because the boat would not stand a sudden jerk. She was loaded already I suppose with about 64 people on her, and she would not stand any more.
15857. You were afraid of the effect of any person jumping in the boat through the air? - Certainly, I was.
15858. In your judgment had she enough in her to lower safely? - She had too many in her as far as that goes. I was taking risks.
15859. You say you collected these four boats together at a distance of about 150 yards? - Yes.
15860. Can you judge how long that was before the ship went down? - I have not the remotest idea of time from the time she went down until we boarded the "Carpathia." All I know is that when we boarded the "Carpathia" in the morning it was six o'clock, and that is the only time I know of.

15861. You could not give me any idea? - I could not; it is no good my trying. 15862. What did you do after you got the four boats out there? - I tied them together in a string, and made them step their masts.

15863. What was that for? - In case it came on to blow, and then they would be ready.

15864. Did you transfer any of your passengers? - Yes, I transferred all of them.

15865. Among the other boats? - Into the other four boats.

15866. Why did you do that? - So as to have an empty boat to go back. 15867. (*The Commissioner.*) To do what? - To go back to the wreck.

15868. (*Mr. Rowlatt.*) Was that before the "Titanic" foundered or after? - No, that was after she went down.

15869. Having got an empty boat, did you go back to the wreckage? - I did.

15870. Was there much wreckage? - No, very little.

15871. (*The Commissioner.*) Am I to understand that you were alone in the boat? - No.

15872. (*Mr. Rowlatt.*) You were there with your crew? - Yes.

*The Commissioner:* How many men had you an the boat? - I do not know; I should say seven.

15873. Including yourself? - Yes, I should say six and myself.

## **Page 368**

15874. (*Mr. Rowlatt.*) Did you row six oars back to the wreck? - No, five oars, I think, and I had a man on the look-out.

15875. I understand what you say is that you got rid of the passengers. You got rid of the people who could not do anything, and went back with a working crew to look for people who were drowning; that is what you mean? - Yes; it would be no good me going back with a load of people.

15876. Certainly; I am not complaining; I am only trying to bring it out in your favour, if I may say so. You rescued some people, did not you? - I picked up four.

15877. I think one died in the boat, did he not? - One died, a Mr. Hoyte, of New York.

[*Mr. William F. Hoyt.*]

15878. Were they men? - Four men.

15879. Did you see any other people alive? - Not one, or else I should have picked them up.

15880. Did you see bodies? - Yes.

15881. After that did you come across the submerged collapsible of which we have heard? - Yes.

15882. It was you who took the people off that, was it? - I did.

15883. Was it the one with Mr. Lightoller on board? - No, it was not.

15884. Another one? - Another one.

15885. Were there two submerged collapsibles? - I do not know - I did not know at the time, but, of course, I know now. The one that I picked up, I reckon, had been pierced, but I do not know. She was right side up and all that.

15886. Was she extended, or whatever you call it, opened out; were the collapsible sides pulled up? - No, the sides had dropped somehow or other.
15887. She was flat? - She was right side up.
15888. Can you give us any idea of who were on board of her - you do not know? - No. I can only give you one, and that was the lady that was on board there.
15889. The lady? - Yes.
15890. Can you tell me how many collapsibles got to the "Carpathia," because we cannot account for the collapsibles? - I abandoned one, and then I towed [Original shows "told."] another one while I was under sail to the "Carpathia"; that is two; then the one that Mr. Lightoller was on, that is three. I do not know where the fourth is.
15891. So far as you know there were only three ever got away from the wreck in any shape? - As far as I know.

**Examined by Mr. SCANLAN.**

15892. You stated in giving evidence in America that a crowd went down to the gangway doors to get them open, and that you were going to load the boats and take passengers in from these gangway doors? - I did.
15893. It has come out in the evidence that a number of women and children perished on the "Titanic." I believe that is a fact. May it be that in the expectation of this method being carried out, a number of the women and children were directed down to these gangways? - No, it is not.
15894. Were you giving directions as to the filling of boat No. 1? - I was.
15895. And the lowering of her? - And the lowering of her.
15896. She was loaded with a very small number of passengers - five? - I do not know how many there were. I took everybody that was there; that is all I know. 15897. (*The Commissioner.*) You took what? - I cleared the deck, my Lord.
15898. You mean to say that when you took the people into No. 1 there were no people left on the deck? - There were no people left on the starboard deck.
15899. (*Mr. Scanlan.*) At that time what search did you have made for people - for passengers? - I did not make any search.
15900. You did not, for instance, send over to the port side to find if there were any women or children? - No, because I wanted to get the boats away. I did not have any time to waste.
15901. And you did not send down to any of the lower decks? - There was nobody on the next deck. I stopped the boat there and asked them to look.
15902. Or on any of the lower decks? - I do not know about that. I stopped the lowering of the boat at A deck, and told the men to have a look there, and they saw nobody.
15903. There was no particular reason why that boat should have been lowered with only five passengers? - No particular reason why the boat should be lowered with only five people.
- The Commissioner:* You are following a bad example, Mr. Scanlan. Instead of asking questions, you are making a statement, and I do not think your statement is in accordance with his evidence.

15904. (*Mr. Scanlan.*) I appreciate the mistake, my Lord. (*To the Witness.*) At the time that boat No. 1 was lowered there were still other boats on the starboard side? - That I am not prepared to answer; I do not know.

15905. I mean boats were lowered after No. 1? - I say I do not know.

**Examined by Mr. HARBINSON.**

15906. Is it not the function of lifeboats on a steamer, as far as possible, to take away the full complement of passengers? - Yes; but I was working on the idea that the gangway doors were going to be opened and take people from there.

15907. And that was why you lowered the boats from the boat deck when they were not altogether full? - Certainly; we were not going to load the boat with its floating capacity from the davits.

15908. What grounds or evidence had you for the opinion you formed that there were going to be additional people put in the lifeboats from the gangways? - I really forget now. I must have overheard it.

15909. Do you remember whom you overheard saying it? - I do not.

15910. Did you hear any instructions given for these gangways to be opened? - Had I any instructions?

15911. Did you hear any instructions given? - No; but as I say, I overheard a conversation somewhere referring to the gangway doors being opened, and that the boatswain and a crowd of men had been sent down there.

15912. With reference to these boats that were lowered on your side at which you assisted, did you, after they had been lowered, take any means of communicating with those on board in order to have them filled up through the gangways? - Yes. I told them to haul off from the ship's side, but to remain within hail. That is what I told each of them with the exception of the boat that Mr. Pitman went in.

15913. What I want to get at is this: You having formed the impression that the boats were going to be filled to their full complement from the gangways, did you take any steps to have the gangway doors opened or in any way to have passengers brought to the gangways? - Haven't I told you that the order had been given to open the gangway doors by somebody else?

15914. Were there people collected, do you know, at the gangway doors that had been opened? - I do not, because that was in the hands of the Senior Officers, and I was a junior.

15915. Beyond lowering these boats and forming that impression, you did nothing to open up communication with the gangways and have the people brought there and lowered into these boats? - No, I did not.

15916. You just mentioned one fact that I would like to put to you. You say you saw five boats go away without an officer? - I did.

15917. Were there any officers there to take control of the boats? - How do you mean, were there any officers there?

15918. Why did these five boats go away without an officer? - Because I suppose the officers were busy working elsewhere.
15919. In your opinion would it have been better organisation if on this occasion there had been more officers on board to look after the boats? - No.
15920. Do you think that more officers on the "Titanic" would have been necessary? - No.
15921. Why not? - For the simple reason that men, as long as there is somebody to look after a bunch of them, are all right.
15922. Do you think it was a proper system of organisation that would allow five boats to be lowered without any officer in control? - Certainly.
15923. You do? - Yes.
15924. Who was in control of each of those five boats? - I do not know who was in control of them.
15925. Do you know if anybody was in control? - Certainly; there were men in charge of them.
15926. But did not you tell the Court that it was because you saw five boats go away without an officer that you and Mr. Moody got into two of them? - Mr. Moody got into a boat?
- Mr. Laing:* Moody was drowned.
15927. (*Mr. Harbinson.*) You got into one and somebody else got into the other? - I got into No. 14.
15928. Did not you say that it was because these five boats went without an officer that you got in? - Yes.
15929. Therefore you thought it desirable that an officer should be in them? - Not an officer in each boat.
15930. But that an officer should be there in control. So far as you saw did it take a fairly considerable time to launch these boats? - No.
- Mr. Harbinson:* How long did it take?
- The Commissioner:* That question is of no use as far as I am concerned, because I do not know what you mean.
- Mr. Harbinson:* The position I wish to lead up to is if he considers there were sufficient seamen there to secure the efficient launching and manning of the boats.
- The Commissioner:* He has told us he can say nothing about the time, and then you put a question to him which contains the expression "a considerable time." I do not understand that. I do not know whether it is an hour or five minutes or twenty minutes or five minutes. I do not know what you mean by "a considerable time."
- Mr. Harbinson:* Yes, my Lord, I understand.
- The Commissioner:* You can put it right by stating a time, and then I shall understand it.
15931. (*Mr. Harbinson.*) Did it take half an hour to launch these boats? - I do not know. It was not the launching of the boats that took the time. We got the whole boat out and in the water in less than ten minutes. It was getting the people together that took the time.
15932. Did you hear any orders given to the people brought up to the boat deck? - Yes. I

forget now who I heard, but I heard the order given anyhow; "Everybody on the boat deck."

15933. Do you think there were sufficient seamen on board the "Titanic" adequately to carry out the operation of launching the boats? - Certainly, they did so.

15934. Did they do it? - Yes.

15935. Did they take what you consider a normal time or an abnormal time to do it? - It depends upon what you mean by "an abnormal time," less time or more time?

15936. Do you think it would have been done quicker if there had been more men? - No. The thing was done as I do not suppose any other ship could do it.

15937. In the same time? - No ship could have done it in better time, and better in all respects - in every respect.

15938. How do you account for it that when you went back you were only able to pick up four people? - I do not know.

15939. What distance were you from the place where the "Titanic" had sunk when you returned? - What is that?

15940. When you began to return with your empty boat how far had you to row to the place? - About 150 yards.

15941. Only 150 yards? - Yes; I stated before 150 yards.

15942. And there were five of you rowing? - Yes, five I think, and there was one on the look-out, and myself steering.

15943. Did you return to the wreckage immediately after the "Titanic" had disappeared? - I did not.

15944. Had you any reason for not doing so? - I had.

15945. Would you mind telling me what it was? - Because it would have been suicide to go back there until the people had thinned out.

15946. Your boat at that time was empty except for the crew? - It was. 15947. And it was one of the ordinary lifeboats, with the gunwale a considerable distance above the water? - Yes.

15948. I put it to you, as an experienced seaman, would not it be impossible for people who were struggling in the water to get into the boat without the assistance of those who were in the boat? - No, it would not.

15949. They could not get in without help? - Yes.

15950. Therefore if you had gone back to where the "Titanic" had sunk, it would have been impossible for these people who were floating about to have swamped your boat, because you could have detached them? Is not that so? - How could you detach them? 15951. How could they get into the boat without you helped them in? - Could not a man hold his weight on the side like that (*showing*) without help from me?

15952. Is not the gunwale three or four feet above the level of the water? - No, the boat only stands up like that (*showing*).

15953. About what height would the gunwale of the boat be above the water? - There are lifelines round the lifeboat too and they could get hold of those and hang on the rail.

15954. Do not you think it would have been possible for the crew of your boat to have

got a considerable number of people out of the water? - No, it would have been useless to try it, because a drowning man clings at anything.

**Examined by Mr. HOLMES.**

15955. Is it a fact that the same falls that lower No. 1 boat are also required to lower the collapsible boat underneath it? - Yes.
15956. And that would be an additional reason for wanting to get No. 1 into the water as quickly as possible? - Yes, it would be.
15957. Did you know Sir Cosmo and Lady Duff-Gordon by sight? - I did not. I did not know a soul on board.
15958. Did you ever say to Lady Duff-Gordon, "Come along, Lady Duff-Gordon"? - I said nothing to her. I simply bundled her into the boat.
15959. I think after you had got rid of your passengers and went back with the crew you spent a considerable time in rescuing one man from some wreckage? - Yes, it was rather awkward to get in amongst it, because you could not row, because of the bodies.
- You had to push your way through.
15960. And that would account, perhaps, for the time you took to take one man off? - Certainly it would.
15961. Did the wind get up after that? - Yes, a breeze sprang up then.
15962. Did you put up your sail? - Yes.
15963. Did you keep your sail up and tow the other boat while you were sailing? - I kept the sail up from then until I got alongside the "Carpathia," and towed the collapsible and picked up the other collapsible - the sinking one.
15964. Have you any suggestion to make as to the sail that you had in the boat? Was it a suitable

**Page 370**

sail for the occasion? - The sail might be improved.

*The Commissioner:* What is the meaning of that? Was there ever a time when you used the sail?

*Mr. Holmes:* He did, in fact, use the sail.

15965. (*The Commissioner.*) When did you use the sail? - I used the sail from the time I got to the wreck until I got on board the "Carpathia."
15966. Then you were using it for several hours? - I do not know about several hours. I suppose it was about 2 1/2 hours.
15967. (*Mr. Holmes.*) What is your suggestion? - That they be made without a dipping tack - that the tack be lashed abaft the mast, the same as ordinary lugsails.
15968. Did you find it difficult to manoeuvre it with passengers in your boat? - Besides that you want a man that knows something about dipping tack. You have to lower the sail and slacken the sheet before you can dip it.

15969. Can you tell us the last you saw of Mr. Moody on the "Titanic"? - When I had that conversation with him. That is the last I saw of him.

15970. Did you see whether he actually got into any other boat? - No, I did not. 15971. You are one of the junior officers to whom the two-watch system applies? - Yes.

15972. Does that mean that you never have more than a period of four hours on a stretch off watch? - Yes.

15973. Do you consider that is satisfactory, or do you think that the three-watch system should be applied to the junior officers as well as to the senior officers? - Of course, three watches would be far better.

15974. Do you think you would be better able to perform your duties? - Oh, no, I do not know about performing your duties, but we would have more time to ourselves, naturally.

**Examined by Mr. COTTER.**

15975. Do you remember being at No. 5 boat with Mr. Murdoch? - Yes. 15976. Do you remember meeting a gentleman there who was interfering with the work? - Yes.

15977. Who was it? - I afterwards learned it was Mr. Bruce Ismay.

15978. What did he say to you or say to anybody; was he giving orders? - No, he was trying all in his power to help the work, and he was getting a little bit excited.

15979. What was he doing to help the work? - He was going like this, "Lower away, lower away" (*showing*).

*Mr. Cotter:* Do you consider any passenger on board a ship has a right to go to the officers and give orders of that description to "lower away"?

*The Commissioner:* You must not ask him that question. What he considers a passenger has a right to do has nothing to do with it.

15980. (*Mr. Cotter.*) What did you say to Mr. Ismay? - I think you know.

15981. Did you see Mr. Ismay go into any boat? - No. I told him what I said, and I told the men to go ahead clearing No. 3 boat, and Mr. Ismay went there and helped them. 15982. You did not see him go into a boat afterwards? - No.

**Examined by Sir ROBERT FINLAY.**

15983. Did Mr. Ismay do all he could to help? - He did everything in his power to help.

15984. You saw this chit, the note about the ice on the table? - Yes.

15985. Did you work it out? - I worked it out roughly.

15986. You were on watch 6 to 8? - Yes. I ran this position through my mind, and worked it out mentally, and found that the ship would not be within the ice region during my watch, that is, from six to eight.

15987. You do not recollect what the figures were? - I do not.

15988. But that was the result you arrived at? - That was the result I arrived at. 15989. You have told us about your firing a revolver in consequence of two men trying to jump in? - Yes.

15990. Who were they? - One was - I do not know whether he was an Italian or what, but he was of the Latin races anyhow?
15991. And who was the other? - I do not know who the other was. He managed to get out of the road.
15992. What was he like; was he fair or dark? - I do not know. If I had I should have chased him out.
15993. You have told us how you tied the boats under your command together and went back with your boat with only the crew to help? - Yes.
15994. Did you approach as soon as you thought you could do so with reasonable safety? - I did. I had to wait until I could be of some use. It was no good going back there to be swamped.
15995. And you saved some. Then coming back you were under sail, if I rightly understand? - I was.
15996. And you took your own collapsible in tow? - That was the collapsible that I had in the string of boats, yes.
15997. And then you met another collapsible? - I did not meet her. It was a good way off and I sailed down to her.
15998. I want you to tell me a little particularly about that collapsible. How many people were on her? - I do not know. I do not want to appear sarcastic, or anything like that, but you do not count people in a case like this. I should say, roughly, about twenty men and one woman.
15999. And you took them off her? - Yes.
16000. She was in a bad way rather? - Yes.
16001. Did you leave anyone on that collapsible? - I did. I left three bodies. 16002. Are you certain that the three bodies that you left were the bodies of dead people? - Absolutely certain.
16003. Did you satisfy yourself about that? - I made the men on that collapsible turn those bodies over before I took them into my boat. I said, "Before you come on board here you turn those bodies over and make sure they are dead," and they did so. 16004. Is there the slightest doubt in your own mind that they were dead? - Not the slightest doubt.
16005. When you were on the "Titanic" did you get the revolutions? - I did.
16006. What was the highest? - The highest I remember was 75 revolutions per minute.
16007. That was on the 14th April, was it? - I do not know that it was on the 14th; it may have been at any time as far as I know; but that is as far as I remember. Seventy-five was the highest revolutions. 16008. On the voyage? - Yes.
16009. (*The Commissioner.*) Do you see any reason why the lifeboats should not have been lowered full of people? - Yes, I do.
16010. Did you see any one of them lowered full of people - I mean with about 60 in the boat? - No, sir, I could not say that I did.
16011. What in your opinion is the reason why the boat should not be lowered full of people? - The reason, my Lord, is that the boat is suspended from both ends, and all the weight is in the middle, and that being so the boat is apt to buckle, that is,

break in the middle, and both ends buckle up like that (*Showing.*) and shoot the whole lot out of her.

16012. At all events you would not think it safe to do it? - No.

16013. How many were in your boat when it was lowered? - I mustered them when I got away from the ship and there were 58 passengers - that would be 65 altogether.

**Page 371**

16014. That was lowered without buckling? - Yes, but I said I was taking on risks, Sir.

16015. Did you see the "Titanic" sink? - I did.

16016. Can you tell me anything about this righting of the afterend of the vessel; did you see that? - No, I did not see her right at all - you mean to say that she evened up on her keel?

16017. Yes, the afterpart of her? - No, my Lord, I did not.

16018. Did you see her actually go down? - I did.

16019. If she had righted herself in that way would you have seen it? - Yes, because I was within 150 yards of her. (Q.) And you did not see that? - (A.) I did not.

*(The Witness withdrew.)*

*The Commissioner:* Have you finished the officers now?

*The Solicitor-General:* Yes, my Lord. What we want to do next is to give the evidence about the wireless messages, which will involve the calling of the gentleman from the Marconi Company, who has got the *proces verbal*, and will also, of course, involve the calling of Bride, the assistant operator on the "Titanic," who was saved; and I shall be able, as I am informed, to prove those messages which I put to the last witness but one.

*The Commissioner:* I should think, Sir John, that that need not take very long; I mean to say, it is evidence about which you can lead the witnesses, and they are witnesses that probably will not require any, what I call, cross-examination. There will be no dispute about their evidence.

*The Solicitor-General:* What I am proposing to do now - and I think it will probably help Sir Robert Finlay if it was done promptly - is to put in the box the gentleman from the Marconi Company, and show how I prove these messages that I put to the officer; and then, if there is any challenge about it, probably during the adjournment any further checking that is necessary can be done.

*The Commissioner:* Do you mean to say you want to call him now?

*The Solicitor-General:* If your Lordship wishes it I am prepared to do it at once. *The Commissioner:* What do you say, Sir Robert?

*Sir Robert Finlay:* I have no objection if it will save time. I understand my friend's examination will only take a short time.

*The Commissioner:* It might be convenient that you should examine the witness tonight, and that any cross-examination should stand over until tomorrow.

*The Solicitor-General:* Of course, my learned friend's clients would wish to satisfy themselves that this series of messages got to their ship, and I want them to know why it is I suggest that they did get to the ship.

*The Commissioner:* You had better, perhaps, call him now, and it is possible, after Sir Robert Finlay has heard all they say, he will not consider it necessary to cross-examine. It may be.

*Sir Robert Finlay:* We will consider that, and if there is any cross-examination it will be deferred until tomorrow morning.

*The Solicitor-General:* Yes, it may be there are one or two further things that I cannot conveniently get from the witness until tomorrow.

**GEORGE ELLIOTT TURNBULL, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

16020. What is your position in The Marconi International Marine Communication Company? - I am the Deputy-Manager, Sir.
16021. I think that Company has its Head Office here in London? - Yes.
16022. In the Adelphi? - No, in the Strand.
16023. I thought it was Watergate House, York Buildings, Adelphi? - It has just been changed, last week, Sir.
16024. You being the Deputy-Manager, are you the head official in England? - No, Sir. The head official in England is the Managing Director, Mr. Godfrey Isaacs, and the Manager is in America at present. His name is Mr. Bradfield.
16025. Was the wireless installation on the "Titanic" an installation of yours and worked by servants of your Company? - Yes.
16026. Can you tell me, or had I better ask Mr. Bride, what was the radius within which communication could be made by the "Titanic"? - The guaranteed range of the "Titanic" was 350 miles. That range is considerably exceeded in many cases, especially at nighttime, but we always guarantee a very low figure, so that we can cope with work in every circumstance.
16027. 350 miles was the minimum which you had undertaken to provide? - Yes.
16028. Was it new apparatus? - Absolutely new.
16029. And of the latest pattern? - Yes.
16030. As a matter of fact, I am not speaking of the guarantee now, but can you help us as to what its effective radius would be? - We are always very cautious about figures, but I feel certain that the "Titanic" would do 500 miles, and she could receive up to 1,500 miles from high power stations.
16031. When you speak of high-power stations, are those fixed stations on the mainland? - Yes, those are fixed stations.
16032. And you call those high-power stations? - Yes.
16033. Are they able to send a message a greater distance? - Yes.
16034. Does the distance, the range, which can be covered by a message, depend on the strength of the apparatus that sends it, or on the strength of the apparatus that

- receives it, or both? - It depends on both, but considerably more on the apparatus which sends it. 16035. I think you mentioned - and we have heard it from another witness - that at nighttime apparently the range is greater from a ship like the "Titanic" than in the day? - Yes, considerably greater, anything from two to three times as much.
16036. When you say a 500 miles range do you mean 500 miles in the daytime? - Our guaranteed range of 350 miles is in the daytime, yes.
16037. And you say it is two or three times as great on occasions at night? - Yes, on many occasions.
16038. On the "Titanic," as we know, you had two operators? - Yes.
16039. Mr. Phillips, who lost his life, and Mr. Bride, who was saved and who is here? - Yes.
16040. Mr. Bride being the assistant of Mr. Phillips? - Yes.
16041. Are they servants of your company? - Yes.
16042. Then of course there must be some arrangement between your company and the White Star Line? - Yes, a very clear arrangement.
16043. We need not, I think, go into that. Is it the practice with ships which have your installation that from time to time the records they have of messages sent and received come back to your office? - It is not only the practice, but it is the absolute rule. 16044. I think you call them *procès-verbal*, do not you? - The operator transcribes everything he does from the beginning of the voyage until the end of a voyage on a *procès-verbal*, and in addition to that he transcribes all messages sent and received upon special sent and received forms which are drawn up for the purpose; so that we have the *procès-verbal*, which is a log of the work done during the voyage, and we have the official records of the telegrams on special forms. These are all returned to the head office when the ship returns to port.
- 16045-6. That is the regular course of business? - That is the regular course of business.
16047. Had you got in your office, and I think you have brought here, the *procès-verbal* of the "La Touraine" of the 12<sup>th</sup> April? - Yes, we have an extract from the *procès-verbal*.

**Page 372**

16048. The "Caronia" of the 14th? - Yes.
16049. The "Amerika" of the 14th? - Yes, we have; those arrived this morning.
16050. The "Baltic" of the 14th? - Yes.
16051. The "Californian" of the 14th? - Yes.
16052. And the "Mesaba" of the 14th? - Yes, we have. I am not absolutely certain whether we have the "La Touraine" *procès-verbal*.
16053. It does not matter about that because it has been admitted practically? - But we have the official messages, Sir.
16054. Of course the records that were being made on the "Titanic" have all been lost, I presume; you have not any actual record? - No, but we have endeavoured to

- reconstitute the record of the “Titanic’s” communications just as the “Titanic” would have done it herself.
16055. Of course you can do that because there must always be two ends to every message? - Yes, that is so, and several ships have overheard the communications. *The Solicitor-General*: I think I will first take the messages from the ships I have mentioned. The first one, the “La Touraine,” I do not think there is any dispute about. *The Commissioner*: Just read it out. (*To the Witness.*) Are you able to check it when it is read out to you.
- The Commissioner*: Then read it out and ask him if it is correct.
16056. (*The Solicitor-General.*) Yes. I have it in print before me, and I will read it out to you. “Office sent to M.G.Y. Time sent 7.10 p.m.” Is that the one? - Yes.
16057. What does “M.G.Y.” mean? - That is the call letters for the “Titanic.” 16058. That shows it was sent to the “Titanic”? - Yes.
16059. “No. 1. ‘La Touraine’ Office. 12 April, 1912. Prefix M.S.G.” What does “M.S.G.” mean? - That means “Master Service Message,” a message which is transmitted on the subject of the navigation of the ship.
16060. A message passing between one master and another? - Yes.
16061. The last letter is “G.” “Words 57. From ‘Touraine.’ To Capt. ‘Titanic.’ My position 7 p.m. G.M.T.” - Greenwich Mean Time - “lat. 49.28 long. 26.28 W. dense fog since this night crossed thick ice-field lat. 44.58 long. 50.40 ‘Paris’ saw another ice-field and two icebergs lat. 45.20 long. 45.09 ‘Paris’ saw a derelict lat. 40.56 long. 68.38 ‘Paris’ please give me your position best regards and *bon voyage*. Caussin”? - Quite correct. 16062. Do I understand rightly that the reference there to “Paris” which follows the longitude means that it is longitude from the meridian of Paris? - Yes.
16063. So a correction would have to be made to get Greenwich? - Yes, of course.
16064. That is the message from the “Touraine” to the “Titanic.” Can you find me the message which shows whether or not that was acknowledged by the “Titanic”? - Yes, I have it here.
16065. I am going to read that to you. “Office received from M.G.Y.” You told me that means received from the “Titanic.” “Time received 7.45 p.m.,” on April, 12<sup>th</sup>. “No. 1 ‘La Touraine’ Office, 12 April, 1912. Prefix M.S.G. Words 26. from ‘Titanic.’ To Capt. ‘La Touraine,’ Thanks for your message and information my position. 7 p.m. G. M. T. Lat. 49.45; long. 23.38. W. Greenwich; had fine weather; compliments. - Smith”? - Quite right.
16066. Before we pass from those two there is a reference here to the time, 7.10 p.m. and 7.45 p.m. When the time of the clock is entered on a Marconi message what time does it refer to? - When the ships are west of 40° New York time is kept; when they are east of 40° Greenwich time is kept.
16067. If you take the first of those, the message from the “Touraine,” he was not west of 40°, because he was in longitude 26; he was on the European side? - Yes.
16068. When he says “7.10 p.m.,” I understand if he is to the east of the 40<sup>th</sup> meridian that means Greenwich time, does it? - It ought to.

16069. It says so? - I have not checked those differences in time.

16070. It is quite right. He says so. "My position 7 p.m. Greenwich meantime," and in the same way the answer is from the "Titanic" when she is a good deal more easterly, so that that is also Greenwich meantime? - Yes.

16071. Now take the next one, the 'Amerika.'" Can you find me a message sent out by the "Amerika" on the morning of the 14th April? It begins: "West-bound steamers report bergs, growlers, and field ice"? - (*After looking.*) No, I have not got that.

16072. I will come back to that, although we have really had this one proved by Captain Barr. But it is convenient to have it on record? - Have you got the time there?

16073. Yes, nine o'clock in the morning of the 14th April. I am taking them in the order of time? - We have not got it here.

*The Solicitor-General:* The gentleman who is giving his evidence so clearly did not know he was going to be asked this particular question, so that it is not his fault, my Lord. That one has been proved independently, and we can pass from it for the moment, I think. Let me see if I can help you about the next one. The next one in the order of time is the "Amerika."

*The Commissioner:* That is the German steamer.

16074. (*The Solicitor-General.*) Yes. (*To the Witness.*) Have you the one from the "Amerika"? - Yes, but the "Amerika" did not send this direct to the "Titanic." 16075. I am going to get you to tell me about that. First of all, you have got the message from the "Amerika." To whom is the message addressed? - It is addressed to the Hydrographic Office, Washington, and it is sent through the "Titanic."

*The Commissioner:* It is sent from the "Titanic," did you say?

16076. (*The Solicitor-General.*) No, my Lord, through the "Titanic." We will show why he says so. (*To the Witness.*) What is the date of it? - 14th April.

16077. And you say it is sent from the "Amerika"? - It is sent from the "Amerika."

16078. I will just read it, and then I am going to ask you why you say it is sent through the "Titanic": "No. 110, 'Amerika' Office, 14th April, 1912. - Prefix M.S.G." That is master navigation message. "Service instructions: Via Cape Race. Office sent to M.G.V."\* What does that mean? - Those are the call letters for one of our ship stations.

16079. "Time sent, 11.45 a.m." Is that right? - Yes, 11.45 a.m.

16080. "To Hydrographic Office, Washington D. C. 'Amerika' passed two large icebergs in 41.27 N., 50.8 W. on the 14th of April. - Knuth." Just explain, will you, why you say that went through the "Titanic"? - The "Amerika" was on her homeward route on that date, and was just about 40° West. The "Titanic" was a little further towards America.

16081. Further west? - Further west, and much nearer the coast stations, the "Amerika" being out of the range of the coast stations and the "Titanic" being within range of the coast stations within a few hours and that was a much more rapid route of transmitting the message.

16082. Could the "Amerika," from its then position have sent that message straight to Cape Race? - Evidently not, otherwise she would not have re-transmitted it. 16083. How do you know she re-transmitted it; what is there to show it? - We have nothing to show.

We must await the returns from Cape Race.

16084. We want to be very careful about this. - It was sent to the "Titanic" for re-transmission.

16085. How do you know it was? - Because we have the acknowledgment of the receipt.

16086. That is the answer. Will you read the acknowledgment of the receipt then? - I am sorry; I am unprepared as to that. You will have to give me a little more time. *The Solicitor-General*: Then, my Lord, I think it will be more satisfactory to adjourn now.

16087. (*The Commissioner.*) Yes. (*To the Witness.*) And between now and tomorrow morning you will be able, perhaps, to get the papers for us? - Yes, my Lord.

***(Adjourned to tomorrow at 10.30 o'clock.)***

BUCKINGHAM GATE,  
*Thursday, 23rd May, 1912.*

## PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC."

### FOURTEENTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third-class passengers. (Admitted on application.)

MR. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian." (Leyland Line). (Admitted on Application.)

MR. H. E. DUKE, K. C., M. P., and MR. VAUGHAN WILIAMS (instructed by Messrs. A. F. and R. W. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff-Gordon. (Admitted on Application.)

## Page 374

*Sir Robert Finlay:* My Lord, I will not interrupt this witness (Turnbull) of course, but by-and-bye I desire permission to recall both Mr. Lightoller and Mr. Boxhall with regard to the question whether these messages were ever transmitted to the Captain or any of the officers on board the "Titanic"?

*The Commissioner:* Very well, quite right..

*Sir Robert Finlay:* As far as I recollect, no questions were put to Mr. Lightoller on the subject at all or to Mr. Boxhall, except in re-examination.

*The Solicitor-General:* I think Sir Robert is right, and I realise, whatever we prove or do not prove with the help of the witness, we do not in any case by this evidence do more than carry messages to the Marconi office on the "Titanic." What happened to them when they got into that office is not a matter which the present witness can tell at all.

*The Commissioner:* Nor does it matter.

*The Solicitor-General:* Well, of course, it matters from the point of view of liability, because, of course, the Marconi operator may be regarded as not in the service of the White Star Company; he may not be their servant, your Lordship sees.

*The Commissioner:* Well, in a sense, he is not.

*Sir Robert Finlay:* I think, my Lord, in no sense is he in the service of the ship. Of course he is under discipline as everyone on board the ship must be, but he is not in their service; he is the servant of the Marconi Company.

*The Commissioner:* Still he is there, I suppose, for the very purpose, as a servant of the Marconi Company of communicating to the people in charge of the ship the messages which he gets which would affect the navigation.

*Sir Robert Finlay:* Yes. I think we should be able without going into detail at the present moment to satisfy your Lordship beyond all doubt that these messages, the "Mesaba" message and the "Amerika" message, were not communicated either to the Commander or to any of the officers on board the "Titanic."

*The Commissioner:* We need not say anything about it at present; we had better hear the evidence.

**GEORGE ELLIOTT TURNBULL, Recalled.**

**Further examined by the SOLICITOR-GENERAL.**

16088. We were asking you about these different messages in order of time, and I think you had given us evidence about the message from the "La Touraine"? - Yes. We need not go back on that. The next one I wanted some information about was the message from the "Caronia." Your Lordship will remember this is only by way of confirmation, because on page 273 of the Shorthand Notes Captain Barr has already given evidence about it.

*Sir Robert Finlay:* I do not think there is any dispute as to the "Caronia" message, my Lord.

*The Commissioner:* No. I thought you could assist me by indicating the messages as we go along with this gentleman the receipt of which you dispute; that is the receipt of which you dispute so far as the officers were concerned.

*Sir Robert Finlay:* Exactly, my Lord.

16089. (*The Solicitor-General.*) The only importance, if I may say so, of the "Caronia" message is this, that it gives us an illustration of the system, and therefore enables you to judge whether the evidence in the case of the "Mesaba" proves the point or not. That is the reason I want to call attention to it. I think Sir Robert will see it has a bearing in that way. (*To the Witness.*) Let us see what you know with regard to the "Caronia," supposing we had to rely upon you for evidence. Have you the *procès-verbal* of the "Caronia"? - Yes.

16090. You have told us what that is. Now can you find in the *procès-verbal* of the "Caronia" any entry showing that the "Caronia" sent a message to the "Titanic" on the morning of the 14th April, and the time of it. 7.10 a.m. I think it was? - There was no entry in the *procès-verbal* of the ice message.

16091. But please listen to me for a moment. I am asking you a question. It is quite clear. Have you got in the *procès-verbal* of the "Caronia" any indication of a message being sent to the "Titanic" at 7.10 a.m.? - No, I have not.

16092. (*The Commissioner.*) I should like to see that *procès-verbal* so that I may understand it? - I have it here. I was looking at p.m. "7.10 a.m. sent one to M.G.Y."

16093. (*The Solicitor-General.*) What does "M.G.Y." mean? - The "Titanic."

16094. And 7.10 a.m. is 7.10 a.m. by what time. It is New York time, is it not? - Yes.

16095. So there is a record in the *procès-verbal* of the "Caronia" sending a message to the "Titanic" at that time? - Yes.

16096. Have you a copy of the message? - Yes.

16097. What is the time of it? - 7.10 a.m.

16098. New York time? - New York time.

16099. Just read it out? - "Captain, 'Titanic.' West-bound steamers report bergs, growlers, and field ice in 42 degrees N., from 49 to 51 W. April 12. Compliments.

Barr.” *The Solicitor-General*: Now, my Lord would like to see the *procès-verbal*.

*The Commissioner*: The date of the message is the 14th.

*The Solicitor-General*: Yes.

*The Commissioner*: But the ice has been reported on April 12<sup>th</sup>.

*The Solicitor-General*: That is quite right.

*The Commissioner*: Let me see this *procès-verbal*. It is what I should call a diary.

*The Solicitor-General*: That is exactly what it is, my Lord.

*The Commissioner*: A diary kept by the Marconi operator on board the ship.

*The Solicitor-General*: It is a log really kept in order of time.

(*The procès-verbal was handed to the Commissioner.*)

*The Commissioner*: I cannot read it very well? - “Sent one to M.G.Y.”

16100. Yes. “About 50 words ZZ received.” What does that mean? - That is a reference to another piece of work which he had been doing.

16101. (*The Solicitor-General.*) The entry which refers to this is “7.10 a.m., sent one to M.G.Y.”? - Yes, and there it concludes.

16102. (*The Commissioner.*) What follows about “50 words ZZ received” has nothing to do with this? - No, nothing.

*The Solicitor-General*: Your Lordship will see the only message he is there making a note of.

*Sir Robert Finlay*: May I see it, my Lord?

*The Commissioner*: Yes.

(*The procès-verbal was handed to the Learned Counsel.*)

16103. (*The Solicitor-General - To the Witness.*) Will you hand the message up to my Lord? - Yes. (*Handing same.*)

16104. And is that piece of paper which is now in the hands of Lord Mersey the document that you get in the ordinary course from the “Caronia,” a copy of what was sent at 7.10? - Yes, or rather that is the original. 16105. That is the original? - Yes.

16106. (*The Commissioner.*) Can you tell me this. Does the Captain of the “Caronia” fill up this form himself and hand it to the Marconi Officer on board his ship? - It is the practice; either the Captain or one of his responsible officers.

*The Solicitor-General*: Your Lordship will see it is written on a form really like the sort of telegraph forms we are familiar with in Post Offices.

*The Commissioner*: Yes, of course it is.

16107. (*The Solicitor-General.*) Now have you also got the acknowledgment of the “Titanic” sent back to the “Caronia” of that message? - Yes.

16108. You are holding that in your hand now? - Yes.

16109. Is that also supplied in the ordinary course to your office from the “Caronia”? - Yes.

*Sir Robert Finlay*: Your Lordship will observe

that on this telegram “12<sup>th</sup> April” appears at the end, that does not appear in the version of the message, I think, given in Captain Barr’s evidence.

*The Solicitor-General:* No, I am very glad we have the original. It is agreed, I think, Sir Robert, that 12th April means that he had seen the ice on 12<sup>th</sup> April.

*Sir Robert Finlay:* I think that is what it must mean.

*The Solicitor-General:* The message is sent on 14th April.

*Sir Robert Finlay:* Yes.

16110. (*The Solicitor-General.*) Now, will you just read the answer that you have got from the “Caronia” - “Time received 1.26 p.m. Date, April 14th, Captain ‘Caronia.’ Thanks for message and information. Have had variable weather throughout - Smith.”

*The Commissioner:* Now about that message there is no dispute.

*The Solicitor-General:* No, my Lord.

*The Commissioner:* I do not want you to make admissions, Sir Robert, but as far as I know that is so.

*Sir Robert Finlay:* As far as I am aware, there is no dispute at all about the “Caronia.” The only thing is that Captain Barr does not say in the version he gives of the message anything about April 12<sup>th</sup>.

*The Solicitor-General:* That only shows it is worthwhile looking at the original.

*Sir Robert Finlay:* It does. That may be so, but that is the only point in which anything is added to what had, and is not in dispute.

*The Commissioner:* That may be a point of importance.

16111. (*The Solicitor-General.*) That is the second one your Lordship sees. I went through it in a little detail to show your Lordship the system, because it is by means of that that one judges of the value of the evidence that is coming, as your Lordship will see. (*To the Witness.*) Now may we go to the third one. The third one that I wanted to ask you about is the message from the “Amerika.” Is the “Amerika” a German steamer of the Hamburg-Amerika Line? - It is.

*Sir Robert Finlay:* Your Lordship asked me to say which we admitted being given to the officers. We do not admit this.

16112. (*The Solicitor-General.*) I want to show, my Lord, what the facts are here as far as we know them. We will deal with them in the same order. (*To the Witness.*) First of all have you got the *procès-verbal* of the “Amerika”? - I have. 16113. It is a German ship and the entry is in German? - It is.

16114. Just mark it in the margin and we will hand it up. “Sunday, 14th April, 1912.” I think it is at 11.47? - That is it.

16115. Is that a.m.? - A.m..

16116. New York time? - New York time.

16117. What is the entry in the *procès-verbal*? - The entry is in German “Nr. 5 und 6 zu M.G.Y.”

16118. It means No. 5 and 6 to the “Titanic”? - Yes.

16119. And does the number 5 and the No. 6 refer to the numeral on the message? - It does.

16120. And I think No. 5 is the one you are going to call attention to? - Yes.

16121. That in the same way your Lordship sees is the log. (*To the Witness.*) Now have you got the message which is referred to there as No. 5? - We have.
16122. I am going to ask you later how that is, but first of all let us have the message as it is before you. What is the time? - 11.45 in the morning. "To the steamer 'Titanic' M.S.G. via Cape Race to the Hydrographic Office, Washington. "D. S. 'Amerika' passed two large icebergs in 41 deg. 27 min. N., 50 deg. 8 min. W., on the 14th April." Signed, "Knuth."
16123. He is the Captain of the vessel? - Yes.
16124. (*The Commissioner.*) Now read it to me again? - "To the steamer 'Titanic' M.S.G. via Cape Race to the Hydrographic Office, Washington. D S 'Amerika' passed two large icebergs 41 deg. 27 min. N., 50 deg. 8 min. W., on the 14th April." Signed, "Knuth."
16125. It does not say what time? - It does not say what time.  
*The Commissioner:* But it must have been early in the day.
16126. (*The Solicitor-General.*) Yes, my Lord. (*To the Witness.*) Now I want to see what the material is for judging whether that goes through the "Titanic." First of all, is there any number on that to tell you what its number is - the number of the message? - Yes, there is No. 5.
16127. (*The Commissioner.*) What does No. 5 mean? Does it mean the fifth message sent out on that day? - It means the fifth message sent out on that day, yes.
16128. (*The Solicitor-General.*) That corresponds to No. 5 in the *procès-verbal*? - Yes.
16129. The time of the message you say is 11.45? - 11.45 a.m.
16130. And in the *procès-verbal* No. 5 is entered at 11.47? - Yes. 16131. Within two minutes? - Yes.
16132. And it is stated in the *procès-verbal* that No. 5 is sent to the "Titanic"? - Yes.
16133. Is it a common practice in sending messages to a land station or to such a place as this hydrographic office to relay them through another ship? - Very common.  
*The Commissioner:* Explain what you mean.
16134. (*The Solicitor-General - To the Witness.*) Will you explain yourself? - The position of the "Amerika" was such that she was not at that moment within range of a coast station, but she was in communication with another ship which would very shortly be within range of that coast station.
16135. (*The Commissioner.*) It is passed on? - Yes, it is passed on.
16136. The message came to the "Amerika" from Cape Race, but originated in Washington? - No, it originated on the "Amerika," intended for the Hydrographic Office, Washington, via Cape Race; but the "Amerika" was unable to send it.
16137. This was a telegram from the "Amerika" to Washington? - Yes.
16138. Now, how do you say it reaches the "Titanic"? - The "Amerika" desire this message to get by the quickest route to Washington, and the quickest route was via the first coast station which is Cape Race; but the "Amerika" was not at that moment in communication with Cape Race; she was, however, in communication with another ship which happened to be the "Titanic," which would very shortly be within range of Cape Race.

16139. The "Titanic" was in communication or could put herself in communication with Cape Race? - That is it. Therefore she asked the "Titanic" to relay the message. Then all this comes to if you have finished with this, is this, that the "Titanic" was used by the Marconi man on board the "Amerika" as a conduit pipe for sending a message to the hydrographic station in Washington.

*The Solicitor-General:* Your Lordship sees the office wants such message for the sake of steamers.

*The Commissioner:* Yes.

*The Solicitor-General:* It is the centre of information, and this is an ice message, sent by a ship which has seen ice in the Atlantic to the American office which distributes news in the Atlantic. That is the point. I am going to ask the witness what the practice is as to this message being taken advantage of by the ships through which it passes.

*The Commissioner:* I should like to hear it.

*The Solicitor-General:* I am not going to press it, Sir Robert.

*Sir Robert Finlay:* I do not know what his means of knowledge are, of course, but we are not before a jury.

16140. (*The Solicitor-General - To the Witness.*) Let me get one further fact of confirmation in order to make sure whether this message was, in fact, sent through the "Titanic." Have you communicated with Cape Race and found out where they got the message from? - I have, I have a cable from them this morning.

16141. In your pocket? - Yes.

## **Page 376**

16142. What do you find from that? - This is what they say in reply to my question of yesterday.

16143. (*The Commissioner.*) Read your question first? - "Wireless station, Cape Race, Newfoundland. Cable immediately if you received telegram dated 14th April, addressed Hydrographic Office, Washington, from s.s. 'Amerika,' via 'Titanic,' and say whether direct from 'Titanic,' or through other ship. -Expands."

16144. What is the answer? - Then I sent another one a few minutes afterwards. "Re previous telegram, cable verbatim service entries and text message originating steamship

'Amerika,' via 'Titanic.' Cape Race addressed Hydrographic, Washington." 16145.

(*The Solicitor-General.*) Now, what is the answer? Both your telegrams are answered in one document, are they? - Yes, they are.

16146. Let me hear what it is"? - Expands, London, from Cape Race. Received direct from 'Titanic,' 14th April, steamship 'Amerika,' via 'Titanic' 'Amerika' passed two large icebergs in 41 deg. 27 min. N., and 5 deg. 8 min. W. on the 14th April." *The Commissioner:* Very well; that at present satisfies me that this message did reach the Marconi operator on the "Titanic," and was read by him and was transmitted to America, and there it stops.

*The Solicitor-General:* There it stops, as your Lordship says.

16147. (*Sir Robert Finlay.*) Can you give us the time when that reached Cape Race? - No, they do not state the time.

16148. (*The Commissioner.*) They do state the day? - They do state the day, the 14th of April, and that they received it direct from the "Titanic"; so it may be assumed that it was received immediately.

16149. (*The Solicitor-General.*) Now, let us get from you what is involved in passing the thing through the "Titanic." The message as sent from the "Amerika," as the *procès-verbal* of the "Amerika" shows to the "Titanic." Has it to be read there and written down?

- That message is a private message from the Commander of the "Amerika" to the Hydrographic Office, in Washington. It concerns nobody else.

16150. Would you mind answering my question, if it is an intelligible one. I understand from you that it is a message that is sent from the "Amerika" through the "Titanic"? - Yes.

16151. Does that involve its being read by the operator on the "Titanic," and written down? - Oh, yes, of course.

*The Commissioner:* You say, "Of course." Are you sure about it? - It must be so, my Lord.

16152. I do not see how there is any "must be" about writing it down? - The operator, in sending a message for retransmission must take it down in the same way that he receives a message for delivery to a passenger on board his ship.

16153. I suppose when the message comes, he knows what has been telegraphed? - Certainly.

16154. And if he knows it he can re-telegraph it without writing it down? - Oh, no, he cannot.

16155. Why not? - Because he does not receive and send at the same time. 16156. But what interval elapses? - He must wait until he has finished receiving the message.

16157. Yes, but the message is only a message of a dozen words? - He would receive that in about a minute.

16158. At the end of the minute he will know what he has received? - Oh, he will not be certain. He must write it down as it goes along.

16159. It would be wiser to write it down, but I do not see the absolute necessity for writing it down if he can remember what has come through, I was going to say the wire, but through the apparatus; if he can remember that, then he has no difficulty, without writing anything down, in telegraphing it on? - We do not allow them to trust to memory. We insist upon them writing it down.

16160. I daresay it is the practice, and is a very wise practice, to write it down. You say it would be the practice for him to write it down, and having written it down then to send it on? - Yes.

16161. (*The Solicitor-General.*) I do not want to press it either one way or the other, but only to understand it. If the man on the "Titanic" is receiving a message from the "Amerika," can he at the same time be sending a message to Cape Race? - On the "Titanic" he could not.

16162. We will ask Mr. Bride when he comes, but I think I ought to ask you. With regard to a message of this sort, dealing with ice, passing through the "Titanic," what is the practice of your operators; what are their instructions; how do they treat it; do they treat it as a message which concerns an intermediate ship?

*Sir Robert Finlay:* I should like to have the instructions themselves.

*The Solicitor-General:* Certainly. I only want to know how it stands.

*The Commissioner:* Never mind, Sir Robert. I have in my mind something which was said just now - I do not know whether you caught it - about this being a private message from the "Amerika."

16163. (*The Solicitor-General.*) In ordinary practice - we will ask Mr. Bride about it afterwards - how would it be treated? - In ordinary practice it would be treated as a private message, but the operator, seeing the contents of it, and knowing how important it was to navigation in general and to his ship, would, without any doubt whatever, it is the general practice, communicate its contents to the Commander or to his responsible officer.

16164. (*The Commissioner.*) When you say "would," you mean you think he ought to do it? - It is the general practice.

16165. Have you ever been on one of these steamers in the Marconi room? - I have.

16166. How long were you there? - I made a trip to America in 1904.

16167. One trip? - One trip.

16168. Have you been on any other occasion in the room? - Several times between Continental ports and Cherbourg.

16169. I mean as a paid official of the Marconi Company? - Very, very often. 16170. Can you recall any case where you received a private message which you thought would be of interest to the Captain of the ship that you were upon and that you disclosed to the Captain of that ship? - No, Sir, I cannot, not any particular incident.

*The Solicitor-General:* Very well, that is how it stands. Now that is the "Amerika" one. Now have you any records from the "Baltic"?

*The Commissioner:* You do not dispute this, do you, Sir Robert?

*Sir Robert Finlay:* No, my Lord.

*The Solicitor-General:* I am anxious to be perfectly candid about it of course, because these things are important to my friend. The message which this gentleman I understand has proved, which he is able to trace, is not quite the same message as the one which we have hitherto referred to. It may be that there were two messages but in fact the one he has tracked is not exactly the one which the Attorney-General opened from instructions.

*The Commissioner:* Very well. We had better hear it.

*The Solicitor-General:* It is fair for me to tell my learned friend that.

*Sir Robert Finlay:* I am much obliged.

16171. (*The Solicitor-General - To the Witness.*) Just tell us what you have from the "Baltic" please? - Do you want the *procès-verbal* first?

*The Solicitor-General:* Yes, I think it is a good plan to take the *procès-verbal* first. *Sir*

*Robert Finlay:* Can you tell me on which page of the notes is the statement of what this message was.

16172. (*The Solicitor-General.*) Yes. It is opened in general terms by the Attorney-General at the very bottom of page 12 and at the top of page 13. *That* is the Affidavit on which we opened. You will see that is what the Attorney-General said. (*Handing the same to Sir Robert Finlay.*) (*To the Witness.*) What is the *procès-verbal* you have from the “Baltic”? - “Sunday, April 14th, 11.55 a.m.,

**Page 377**

sent two to M.G.Y.” That means two messages to the “Titanic.”

16173. That is 11.55 a.m.? - Yes, New York time.

16174. Have you a record in the *procès-verbal* an hour later, 12.55, of a message being received from the “Titanic”? - Yes, I have. “12.55 p.m., one from M.G.Y.” 16175. Now are you able to trace the message that is sent by the “Baltic” to the “Titanic”? - Yes.

16176. I think you have it there? - I have it here. “From s.s. ‘Baltic,’ April 14th, to Captain Smith, ‘Titanic,’ sent 11.52 a.m.” You will notice there are three minutes difference. That is unimportant. “Captain Smith, ‘Titanic.’ Have had moderate variable winds and clear fine weather since leaving. Greek steamer ‘Athenai’ reports passing icebergs and large quantities of field ice today in lat. 41° 51’ N., long. 49° 52’ W. Last night we spoke German oil-tank steamer ‘Deutschland,’ Stettin to Philadelphia, not under control, short of coal, lat. 40° 42’ N. long. 55° 11’ W. Wishes to be reported to New York and other steamers. Wish you and ‘Titanic’ all success. - Commander.”

16177. (*The Solicitor-General.*) Your Lordship will notice there that that is a new icemessage. It gives the position, 41° 51’ N., by 49° 52’ W. I will have it plotted. (*To the Witness.*) Have you a copy of the reply from the Captain of the “Titanic”? - I have.

16178. Have you the reply there? - Yes: “14th April. ‘Baltic’ Office. Received from ‘Titanic’ 12.55 p.m. To Commander ‘Baltic.’ Thanks for your message and good wishes; had fine weather since leaving. - Smith.”

16179. (*The Commissioner.*) What is the time of that? - 12.55 p.m.

16180. (*The Solicitor-General.*) Are those both New York times? - Both New York times.

*The Solicitor-General:* My Lord, I will have it exactly marked. Your Lordship will find, I think, that that is the closest of all.

16181. (*Sir Robert Finlay - To the Witness.*) Will you let me see that message? - Which? the received or sent?

16182. The sent. - Yes. (*Handing the same to the learned Counsel.*) *The Commissioner:* This is not disputed?

*Sir Robert Finlay:* Yes; this is the first we have heard of this message.

*The Commissioner:* Of this particular one, yes; but do you dispute the receipt of it. *Sir*

*Robert Finlay:* I do not know anything about it; I have not heard of it till this moment.

*The Commissioner:* You see how it stands. A record from the “Baltic’s” *procès-verbal* of the despatch of a message, and then the production, as I understand, of the message sent an hour afterwards from the “Titanic” acknowledging the receipt. *Sir Robert*

*Finlay:* Yes.

16183. (*The Commissioner - To the Witness.*) Have you the telegram from the "Titanic" acknowledging the receipt of it? - I have.

*The Commissioner:* Let me see it. (*The Witness handed the telegram to the Commissioner.*) You had better look at this, Sir Robert.

*Sir Robert Finlay:* Yes, my Lord. (*The Witness handed the telegram to the learned Counsel.*)

*The Commissioner:* Just tell me if you are satisfied that that telegram refers to the telegram of 11.55 a.m.?

*Sir Robert Finlay:* I see it purports to be sent off at 12.55 p.m.

*The Commissioner:* No, a.m., surely.

*Sir Robert Finlay:* 12.55 p.m., my Lord.

*The Solicitor-General:* After midday it would be p.m.

*The Commissioner:* Of course.

16184. (*Sir Robert Finlay - To the Witness.*) What time would that be? - New York time.

16185. By the ship's time that would be two hours later? - Something like that. *The Solicitor-General:* I have marked the place now, my Lord, as best I can.

*The Commissioner:* The Admiral has been good enough to mark it for me here. *The Solicitor-General:* As I make it out, it is practically on the southern track very

slightly, of course, to the east of the 50<sup>th</sup> meridian.

*The Commissioner:* Yes, and, if anything, slightly to the north.

*Sir Robert Finlay:* Yes.

*The Solicitor-General:* A shade to the northward, perhaps.

*Sir Robert Finlay:* We had better have the other.

*The Commissioner:* It appears to me to be all in order.

*Sir Robert Finlay:* That also appears to me, I may say at once.

*The Solicitor-General:* Our information about the other message is in an affidavit that has been sworn by the Captain of the "Baltic," and I am not sure that this gentleman has been able to trace it. Perhaps I had better show your Lordship what the information is. It is in paragraphs 2 and 3 of that document. (*Handing the same to the Commissioner.*) It does not profess to be quoting textually, your Lordship sees.

*The Commissioner:* Have you seen this, Sir Robert?

*Sir Robert Finlay:* Yes; my friend has just shown it to me. That is the affidavit?

*The Commissioner:* Yes. "The 'Baltic' sailed from New York on Thursday, 11<sup>th</sup> April, for Liverpool, and on Sunday, the 14<sup>th</sup> April, reports were received by wireless from a number of steamships of having passed ice and bergs in positions varying from 49° 9' W. longitude, to 50° 20' W. on the outward southern track."

That is nothing so far because it is not connected with the "Titanic." "These ice reports were in the ordinary course sent out by the operator to all other ships with wireless, including the 'Titanic.' The messages were sent off shortly before noon, New York time, on 14<sup>th</sup> April. Our operator received an acknowledgment from the 'Titanic' about 1 p.m. on the same day." That would be this telegram.

*The Solicitor-General:* It looks like it, my Lord, certainly.

*The Commissioner:* This telegram of 12.55 p.m.?

*The Solicitor-General:* Yes.

*The Commissioner:* I should think it probably refers to the telegram of 11.55 a.m. to the "Titanic," but it only connects the "Titanic" with one telegram, not with several.

*The Solicitor-General:* Your Lordship sees the affidavit there does not profess to be quoting textually the message.

*The Commissioner:* No, it does not.

*The Solicitor-General:* It is stating it indirectly, and it is possible therefore that he is referring to this message which is now produced.

*Sir Robert Finlay:* I thought there was another message, my Lord, because if your Lordship looks at page 13 the passage my friend was good enough to refer me to, the Attorney-General in answer to your Lordship gives this. Perhaps I had better begin the second column on page 12. It is all connected together.

*The Solicitor-General:* I think you will find he is relying on the affidavit. *Sir Robert Finlay:* "(The Commissioner.) Yes, it is more than 12 hours before the casualty. (The Attorney-General.) Yes, it would make a difference. The 'Baltic' (I have given you the 'Caronia,' and I am dealing now with documents, so that I can be precise) passed on reports of ice by wireless telegraphy to the 'Titanic' from 49° 9' W. to 50° 20' W."

*The Commissioner:* That is taken from the affidavit.

*Sir Robert Finlay:* Yes. "(The Commissioner.) When did she pass on those reports? (The Attorney-General.) They were passed on and acknowledged by the 'Titanic' at 1 p.m., New York time, on the same day. (The Commissioner.) At 1 p.m.? (The Attorney-General.) Yes, quite roughly, I think it would work out to about 3 p.m. by the 'Titanic.'"

That is the difference between New York time and the ship's time. "(The Commissioner.) About 3 p.m. by the 'Titanic's' time? (The Attorney-General.) Yes, that is it; and, my Lord, while I am upon that, having given your Lordship 49° 9' W. longitude to 50° 20' W., I ought to have added on the outward southern track.' That was the message.

## **Page 378**

That is the track to which I called your attention. (The Commissioner.) I want to see if I have got the 'Baltic's' figures right - 49° 9' W., 50° 20' W? (The Attorney-General.) Yes.

(The Commissioner.) I notice that the ice was between those points? (The Attorney-General.) Yes, on the outward southern track. Now if your Lordship would look just below the blue cross marked there, you will see the outward southern track is that line which you see immediately underneath."

*The Solicitor-General:* I think it is clear the Attorney-General was referring to this very affidavit.

*The Commissioner:* No doubt.

*The Attorney-General:* That is all I had.

*The Commissioner:* If the information sent to the "Titanic" and received by the "Titanic" by the Captain consisted of nothing but this one "Baltic" telegram we have heard read, it would indicate that ice had been seen at a particular spot slightly to the north of the outward southern track.

*The Solicitor-General:* It is "icebergs and a large quantity of field ice today" at that place.

*The Commissioner:* At that spot, yes, whereas, as I understood it previously, the telegrams, in the plural, which were supposed to have been sent on, indicated ice along a considerable line.

*The Solicitor-General:* That is right.

*The Commissioner:* That line being ascertained by reference to a number of telegrams which were supposed to have been sent to the "Titanic," but which may not have been sent to the "Titanic."

16186. (*The Solicitor-General.*) I agree, that seems to be how it stands. (*To the Witness.*) As I follow, Mr. Turnbull, looking at the *procès-verbal* of the "Baltic," you do not find about this time any other messages about ice sent by the "Baltic" to the "Titanic"? - No.

*The Solicitor-General:* Now we go on to the "Californian."

*Sir Robert Finlay:* I think what my friend the Solicitor-General says is probably perfectly accurate, but this affidavit, with which the Attorney-General was dealing in opening, is a sort of free translation of that message, which we have not got *in extenso*. There is nothing in the message about the outward southern track. The message gives the latitude.

*The Commissioner:* Yes, but the affidavit says "reports" - in the plural - "were received from a number of steamships of having passed ice." That is paragraph 2, and these ice reports were sent out to the "Titanic." *Sir Robert Finlay:* Yes.

*The Commissioner:* Now that does not seem accurate.

*Sir Robert Finlay:* It is not accurate, my Lord; it is a very free translation.

*The Solicitor-General:* The American evidence shows that the Captain of the "Baltic" is right in saying that he received more messages than one.

*The Commissioner:* That is no doubt right. I do not doubt that at all. That is his affidavit, but that they were sent on to the "Titanic" in the sense of being received by the "Titanic," does not seem to be accurate.

*Sir Robert Finlay:* I think the inaccuracy is in the second paragraph as to what reports were sent to the "Titanic"; we now know what the message to the "Titanic" was it gives the particular latitude.

*The Commissioner:* It is only that one message indicating ice at a particular spot.

*Sir Robert Finlay:* Exactly.

*The Solicitor-General:* That is right. I think we shall find when Mr. Bride gives evidence that he will say he heard another message being sent to the "Baltic", he overheard it. I have his evidence in America before me.

*The Commissioner:* From the "Titanic"?

*The Solicitor-General:* Yes.

*The Commissioner:* I will wait for that.

16187. (*The Solicitor-General.*) I think you will find that is what he will say, a message was being sent from another ship to the "Baltic" and he overheard it. (*To the Witness.*) Now we will go on to the next one, the "Californian." Here again we have evidence in the shorthand note, the evidence is the evidence of the operator Evans, and it is to be found at page 201. He says that he was sending to the "Antillian," and that he was told by the "Titanic" operator that the "Titanic" operator had overheard it. (*To the Witness.*) Have

you got the *procès-verbal* there showing he was sending to the “Antillian” ? - Yes.

16188. What is the entry? - The entry is under the 14th April, “5.35 p.m. in New York time, sent M.S.G. to M.J.L.,” M.J.L. is the “Antillian.”

16189. What is the time? - 5.35 p.m. in New York time.

16190. That would be about 7.30 ship’s time? - I should say so.

16191. That is what he says. You have the *procès-verbal* before you? - Yes. 16192. Can you tell me whether you have an entry in the *procès-verbal* immediately before at 5.20 showing that the “Californian” was in communication with the “Titanic”? - Yes. “5.20 p.m. New York time, exchanged Trs M.G.Y. nil.”

16193. What is “Tr”? - “Tr” is the telegram which is exchanged between two ships when they first enter into contact to announce to each other what telegraphic traffic they have for each other.

16194. (*The Commissioner.*) What does that mean? - What telegrams they have. 16195. (*The Solicitor-General.*) Nowadays they send messages like they do from two offices. When you find in the *procès-verbal* the entry that you exchanged Trs. with a ship, does that indicate that the ship and your own ship are in communication? - Certainly.

16196. Now have the message that was sent to the “Antillian” at 5.35? - I have it here.

16197. Just read it out? - “‘Californian’ Office. Sent 5.35 p.m., 14th April. by C. F. Evans” - that is the operator - “addressed to Captain ‘Antillian,’ 6.30 p.m. apparent ship’s time; lat. 42° 3’ N., long. 49° 9’ W. Three large bergs five miles to southward of us.

Regards. - Signed Lord”

16198. My Lord, that corresponds with the answer given at Question 8943, on page 201. *Sir Robert Finlay*: Not textually. He read it out, “Apparent ship’s time.” *The Solicitor-General*: My strong recollection is that that is what the witness said. *Sir Robert Finlay*: I am only reading from the print of the evidence.

16199. (*The Attorney-General.*) It is “A.T.S.,” which is “Apparent time ship.” *The Witness*: I should have read it. “A.T.S.”

16200. That is “apparent time ship”? - Yes. *The Solicitor-General*: Your Lordship will see that is the ordinary abbreviation, A.T.S. *Sir Robert Finlay*: Be it so. There is a semi-colon put in the print, which obscures the meaning. *The Commissioner*: The semi-colon ought to come after “ship.” *Sir Robert Finlay*: Yes, if it comes at all.

16201. (*The Solicitor-General.*) I daresay your Lordship will remember, when Mr. Evans was in the box, he explained that when he said 6.30 apparent ship’s time, that did not indicate that the message was being sent at that time, but it indicated that icebergs had been seen at that time. That is the “Antillian.” Now let us turn to the “Mesaba”; that is the Atlantic Transport Line? - Yes. *Sir Robert Finlay*: This, we say, we did not receive. *The Commissioner*: The “Californian” you did receive? *Sir Robert Finlay*: Yes.

16202. (*The Solicitor-General.*) Was she east-bound or west-bound? - Bound to Europe.

16203. (*The Commissioner.*) With reference to what was said, the Marconi operator overheard the "Californian"; whether they received it upon the bridge, I do not know. 16204. (*The Solicitor-General.*) Yes. Do not answer until you are sure. You have your records there? - Yes.

16205. She was in advance of the "Titanic"; she was nearer America than the "Titanic"? - Yes.

*The Commissioner:* Are you disputing the receipt by the Captain of the "Titanic" of the "Californian's" message?

## Page 379

*Sir Robert Finlay:* Of the "Californian's" message to the "Antillian"? *The Commissioner:* Yes, and your becoming acquainted with it?

*Sir Robert Finlay:* I think Mr. Bride will say that he did take that to the bridge.

*The Commissioner:* There is nothing as far as I know in writing to show that this message, the "Californian's" message, was received by Captain Smith. *Sir Robert Finlay:* No.

*The Commissioner:* There is nothing in writing.

*Sir Robert Finlay:* No, my Lord.

*The Commissioner:* If Mr. Bride says so, it will be his statement.

*Sir Robert Finlay:* I understand my friends are going to call him presently, and I understand he will say that, but I am not able to say at the present moment.

16206. (*The Solicitor-General.*) You say the "Mesaba" was west-bound and in advance of the "Titanic"? - Yes.

16207. Now have you got your *procès-verbal*, and will you do the thing in the same way? - Under date of "Sunday, April 14th, 7.50 p.m. New York time, exchanged Trs. s.s.

'Titanic bound West. Sent ice report, condition of communication good.'

16208. (*The Solicitor-General.*) I should like your Lordship to see that entry, because that is the critical one. (*To the Witness.*) Have you marked it? - Yes, there is a red cross opposite it. (*Passing up the document.*)

16209. I think you told me the entry "Exchanged Trs." means "Exchanged time rushes." It means the two ships have got into communication? - Yes, they have just got into communication.

16210. (*The Commissioner.*) What does "G" mean, "Condition G"? - Good.

16211. What was good? - Communication.

16212. At 7.50. Does this word, which is contracted, mean examined or what? - "Exchanged."

16213. And then there is something which I cannot read? - "Trs."

16214. What are those? - Those are what we call "Time rushes."

16215. And what are time rushes? - They are the messages which each ship exchanges with another as soon as it enters into communication with that ship to inform each other of the telegrams which one has for the other, and to check their times.

16216. "Time rushes, s.s. 'Titanic,' bound west, sent ice reports. - M.G.Y." Those are the letters? - Those are the call letters.

16217. For the "Titanic"? - Yes.

16218. "Sent ice report." Now is there anything in this *procès-verbal* to show what ice report was sent?

16219. (*The Solicitor-General.*) My Lord, I am going to do that now; I am dealing with it in exactly the same order as the others. (*To the Witness.*) Now have you got the message at 7.50 p.m., which is recorded as being sent from the "Mesaba" to the "Titanic"? - I have.

16220. Just read out what you have got on that piece of paper, and then you must hand it up. Sir Robert will want to see it? - "'Mesaba' office, 14th April, 1912. Office sent to, M.G.Y."

16221. Does that mean to the "Titanic"? - That means "Titanic." "Time sent, 7.50 p.m. By whom sent, S.H.A." Those are the initials of the operator. "From 'Mesaba' to 'Titanic' and all east-bound ships. Ice report in latitude 42 N. to 41° 25' N., longitude 49

W. to longitude 50° 30' W. Saw much heavy pack ice, and great number large icebergs. Also field ice. Weather good, clear."

16222. Have you any record on that same piece of paper as to whether there was any reply? - At the bottom of the form there appears this entry by the operator.

*Sir Robert Finlay:* Have you got the reply?

16223. (*The Solicitor-General.*) It is on the same piece of paper I want you to see? - This reply was not from the Captain; this reply was from the operator of the "Titanic." "Reply received, thanks."

16224. Is there anything added? - There is another remark added, yes.

16225. That is what I want? - "Reply received. Thanks. Sent this to about ten other ships as well; names in P.V."

16226. What does "P.V." stand for? - It means his *procès-verbal*. 16227. Is that initialled? - It is initialled.

16228. What are the initials? - "S.H.A."

16229. That is the same initials as those you had before? - Yes.

16230. Who is the gentleman? - His name is Adams, the operator of the "Mesaba."

16231. Now will you hand that up to my Lord? - Yes (*Handing up the same.*).

*The Commissioner:* Where did you get this information. You had not it when the case was opened, I suppose?

*The Solicitor-General:* I can show your Lordship exactly the moment when we got it.

*The Commissioner:* It does not matter.

*The Solicitor-General:* I have that exactly here.

*The Commissioner:* This message was not referred to in the opening at all.

*The Solicitor-General:* If your Lordship will look, this is a print of the letter we received from the Marconi Company on the 7th May (*Handing same.*) If your Lordship will look at that letter the bottom paragraph but one - *The Commissioner:* I see it.

*The Solicitor-General:* You will see it is referred to there.

*The Attorney-General:* Your Lordship will remember I opened only two - the

“Caronia” and the “Baltic” - and I said those were the only ones I was then going to refer to.

*The Solicitor-General:* They were all we had. These gentlemen have been looking at their records since.

*Sir Robert Finlay:* This is the 7th of May. I think my friend opened on the 2nd or the 3rd.

*The Solicitor-General:* That is right.

*The Attorney-General:* I got the information afterwards.

*Sir Robert Finlay:* The letter is dated in London the 7th of May.

*The Solicitor-General:* I am anxious your Lordship should have before you the observation that it seems might fairly be made on that document. Your Lordship sees unlike the others, the record of the reply is on the same piece of paper as the record of the message sent. It is all in one handwriting, and I understand that to be the handwriting of the operator on the “Mesaba.” *The Commissioner:* Yes.

16232. (*The Solicitor-General.*) And it has the air of having been written all at one time - that is so, is it not, Mr. Turnbull?

*The Witness:* Yes.

16233. (*The Commissioner.*) Have you got there the *procès-verbal*?

*The Witness:* I have (*Handing up the same.*).

*Sir Robert Finlay:* May I see the document containing the message?

*The Commissioner:* Yes (*The same was handed to the learned Counsel.*).

16234. Does the operator record the answers that he gets in his *procès-verbal*? - Not always.

16235. He has not done it in this case? - No, he has not done it in many cases. It is very seldom it is recorded unless it is not regarded as sent - unless it is received.

16236. Unless it is acknowledged? - Unless it is acknowledged, yes.

*The Attorney-General:* Of course, we will take steps to get Mr. Adams.

*The Commissioner:* I am very anxious to know exactly what knowledge can be traced to Captain Smith.

*The Attorney-General:* Yes.

*The Commissioner:* That is my anxiety.

*The Attorney-General:* Although at one time it did not look necessary, it is now, and so far as Mr. Adams can throw any light upon it we will take care to have him here. That is the operator “S. H. A.”

*The Solicitor-General:* I was anxious to point out - it is fair to do so - what is odd about this, because there is something odd about it. The thing that is odd about it is that it speaks of being sent

## **Page 380**

to the “Titanic” and to all east-bound ships. Of course, the “Titanic” is west-bound.

*The Commissioner:* Yes.

*The Solicitor-General:* And the reply which is noted at the bottom is not in terms noted as received from the “Titanic,” as distinguished from being received from any other of the ships. That is what your Lordship ought to have before you.

*The Commissioner:* Yes.

*The Solicitor-General:* You see what I mean.

*The Commissioner:* Oh, quite. There is nothing to identify the reply with the "Titanic."

*The Solicitor-General:* There is something, but there is not anything on the face of that entry. I just wanted to call attention to what it is. On the other hand, your Lordship will see on this piece of paper, "Office sent to," and the space at the time is entered "M.G.Y."

*The Commissioner:* That is the "Titanic."

16237. (*The Solicitor-General.*) That is the "Titanic," and the time sent is 7.50. The *procès-verbal* shows it was the "Titanic" he was in communication with at 7.50, and that he had exchanged what he calls Trs. with the "Titanic." (*To the Witness.*) Now have you also got another document which shows a record of the "Mesaba" sending messages to the east-bound ships? - Yes, I have here.

16238. (*The Solicitor-General.*) That can be contrasted with it, your Lordship sees. Just hand it up to my Lord and he will see the difference. (*The document was handed to the Commissioner.*) Is it in the same form as far as paper goes? - Yes, but it is not in red ink. No, it is not in red ink; and if your Lordship will contrast the entry of "time by the clock" and the entry of "office sent to," you will see that the red ink one which contains the record, "Reply received thanks," is the "Titanic," and the other one is for different times and different addresses. That is how the document stands.

*The Commissioner:* The person who wrote these intended this "Reply received, thanks" to apply to the "Titanic."

*The Solicitor-General:* I submit that that is the fair inference from the document.

*The Commissioner:* Oh, yes.

*The Solicitor-General:* Now would your Lordship be kind enough to let me see that. *The Commissioner:* Yes (*The same was handed to the Solicitor-General.*)

16239. (*The Solicitor-General.*) This second document, the last one, in the space for "Office sent to," gives a series of initials in pencil? - Yes.

16240. Are those the ships that were then east-bound? - Yes.

16241. I think you have checked some of them to see? - Yes; we have not found 10; he mentions 10. He says about 10 in the footnote.

16242. I think if you listen you will see that I am not asking about the document which says about 10, I am talking about the last document you handed up, which contains in the space "Office sent to" some initials. Are those the initials of east-bound ships? - Those are.

16243. (*The Commissioner.*) Five of them? - Yes.

16244. (*The Solicitor-General.*) And opposite each is there in the next column an entry of the time? - Yes.

*The Solicitor-General:* Ranging from something like 2 o'clock to later in the afternoon, I think, my Lord.

*The Commissioner:* 2.32 to 9.35.

16245. (*The Solicitor-General - To the Witness.*) Now the 7.50, which is the time he has entered for the "Titanic," is in between those times, you see? - Yes.

16246. I think you have checked by the *procès-verbal* of the “Mesaba,” and found in different places in the *procès-verbal* messages sent to east-bound ships recorded?  
- Yes.

*The Solicitor-General:* That is as it stands on the documents, my Lord.

*Sir Robert Finlay:* May I see that?

16247. (*The Commissioner.*) Yes (*The same is handed.*) I am not sure how this operation takes place. When you send a message to a ship, by what process do you secure the delivery of the message to the ship you are delivering the message to? You do not know where the ship is? - You exchange time rushes. Each station knows what the other has for it, and you cannot practically exchange a time rush until you are within speakingrange of each other.

16248. I see opposite to each one of those five ships that were eastward bound the time recorded? - Yes.

16249. Is that the time when the time rushes were exchanged between the “Mesaba” and that particular ship? - The time rushes are always the first, so that the ice report must have been subsequent.

16250. But it would be very soon? - Very soon almost immediately after. 16251. Now I understand it. You get into communication or you find that you are in communication by these time rushes? - Yes.

16252. And then having found that out you can send any message you desire to send? - Yes, provided, of course, that the range does not increase; there is a certain amount of time in which you can exchange messages.

16253. If it does not increase, but the two ships remain in range, then you can send a message? - Yes.

16254. If time rushes have been exchanged with a ship, say with the “Titanic,” does that show that communication is established? - Yes.

16255. I understand following on the exchange of time rushes messages may be sent from one to the other? - Yes.

*The Commissioner:* Sir Robert, this appears to me to be a very important telegram, the “Mesaba,” because it seems to me to justify the allegations made by the Solicitor-General yesterday that the “Titanic” must have known the presence of the ice in what was called the parallelogram. Is not that so?

*The Solicitor-General:* Yes, I call it the oblong.

*Sir Robert Finlay:* It goes to this, of course, that the operator on board the “Titanic” who received this message would know of that?

*The Commissioner:* Yes.

*The Solicitor-General:* One or other of them.

*Sir Robert Finlay:* I think it must have been Phillips, and Phillips is unfortunately lost.

*The Solicitor-General:* Yes.

*The Commissioner:* Phillips is not here.

*Sir Robert Finlay:* No, he was lost, but of course it does not carry it a step further towards showing that the Captain or any of the officers knew.

*The Commissioner:* It would be a very extraordinary thing, although of course it is possible, if the man in the Marconi room did not communicate a telegram of this kind to the Captain.

*Sir Robert Finlay:* Your Lordship will recollect the answer that man in the Marconi room sent to the Marconi operator on board the "Californian" at that very time. When the message was sent by the "Californian" about ice, he sent back a message saying that he was busy with Cape Race and did not want to be bothered, in effect.

*The Solicitor-General:* I do not think quite so. The message he sent back was that he had already heard about the ice.

*Sir Robert Finlay:* No, no; that is another message altogether.

*The Solicitor-General:* Let us see.

*Sir Robert Finlay:* I am going to show that to you presently.

*The Attorney-General:* There is nothing like doing it at once.

*Sir Robert Finlay:* I will read the passage. Your Lordship will find it on page 202, the second column.

*The Solicitor-General:* The question I am referring to is question 8972 - "What did the 'Titanic' say to you when you offered your ice report? - (A.) He said "It is all right, I heard you sending it to the 'Antillian,' and I have got it." I think I am quite accurate.

*Sir Robert Finlay:* That is one answer.

*The Solicitor-General:* That is the important answer.

*Sir Robert Finlay:* That is another part altogether. What I am referring to is in the second

## **Page 381**

column of page 202, Question 8986. If your Lordship will allow me, I will read a few questions and answers to make it clear: "(*The Commissioner.*) What time was this - about what time? - (A.) Five minutes to eleven. (*The Solicitor-General.*) Ship's time? - (A.) Yes (Q.) What did the Captain say when you said that? - (A.) He said, 'You had better advise the 'Titanic' we are stopped, and surrounded by ice.' (Q.) Did you call up the 'Titanic'? - (A.) Yes. (Q.) Can you give me the time? - (A.) It was 9.5 p.m. (Q.) New York time? - (A.) Yes, 11 o'clock ship's time. (Q.) What did you say? - (A.) I said, 'We are stopped, and surrounded by ice.' (Q.) Did you get an answer from the 'Titanic'? - (A.) They said,

'Keep out.' (Q.) Just explain to us, will you, what that means? - (A.) Well, Sir, he was working to Cape Race at the time. Cape Race was sending messages to him, and when I started to send he could not hear what Cape Race was sending. (Q.) Does that mean that you would send louder than Cape Race to him? - (A.) Yes; and he did not want me to interfere. (Q.) That would interrupt his conversation with Cape Race? - (A.) Yes. (Q.) So that he asked you to 'Keep out'? - (A.) Yes. (Q.) In ordinary Marconi practice is that a common thing to be asked? - (A.) Yes. And you do not take it as an insult or anything like that. (*The Commissioner.*) What did you say? (*The Solicitor-General.*) 'You do not take it as an insult or anything like that.' (*To the Witness.*) Do I understand rightly then that a Marconi operator, like other people, can only clearly hear one thing at a time? - (A.) Yes. (Q.) Have you any means of knowing - do you judge that he had heard your

message about ice? When you say you sent this message and he said 'Keep out,' did he say that after he had got your message? - (A.) The very minute I stopped sending. (*The Commissioner.*) You cannot tell, I suppose, whether he heard what you said? - (A.) He must have heard it, my Lord, but I do not know whether he took it down."

*The Commissioner:* That is, whether the Marconi man took it down?

*Sir Robert Finlay:* Yes. "9003 (Q.) Would he hear what you said, or would he merely hear that you were speaking? You see, as I understand, he was getting messages from two points - from Cape Race and from you. He could not hear both, I suppose, at the same time? - (A.) No, my Lord. (Q.) And he may not have heard what you said, though he may have known that you were trying to speak to him. I do not know, you know; I am only asking? - (A.) Well, my Lord, my signal would be much stronger than Cape Race's."

Then there are a few questions and answers which I will read if desired. I was going on to Question 9014: "(Q.) And then you gave him this message, spelt it out, that you were stopped in ice; and then he replies to you, 'Keep out.' How do you know he was talking to Cape Race? - (A.) I heard him beforehand. (Q.) You could hear him? - (A.)

Beforehand, and directly after that. (*The Commissioner.*) What was it you heard? - (A.) Before that, my Lord? (Q.) No. What was it that you heard which conveyed to you that he was in communication with Cape Race? - (A.) Directly afterwards he called upon Cape

Race - a few seconds after. (Q.) After he had said to you, 'Keep out'? - (A.) Yes, my Lord. (*The Solicitor-General.*) Could you overhear what he was saying to Cape Race? - (A.) Yes. (Q.) What was it he said? - (A.) He said, 'Sorry, please repeat, jammed.' (Q.) That means that somebody else had interrupted? - (A.) Yes. (Q.) After that did you hear him continuing to send messages? - (A.) Right up till I turned in" - that was 11.30 "(Q.) It was not your business, and I have no doubt you did not listen in detail to what they were, but could you tell, as a matter of fact, whether they were private messages? - (A.) Yes, all private messages. You can tell by the prefix. (*The Commissioner.*) That means messages for the passengers. (*The Solicitor-General.*) Yes, business and private messages for the passengers. (*To the Witness.*) You can tell that by what you call the prefix, the sound that is sent first of all? - (A.) Yes. (Q.) And that continued, you say, till you turned in? - (A.) Yes. (Q.) When was it that you turned in? - (A.) Eleven-thirty p.m., ship's time. (Q.) You had been at work since 7 o'clock in the morning, except intervals for meals? - (A.) Yes. (Q.) Was it your regular course to turn in about that time? - (A.) As a rule. It all depends where we are." I do not think I need read further.

16256. (*The Solicitor-General.*) That is quite right. Just that we may see the bearing of that, that message that Sir Robert Finlay has been referring to is a message sent at 9.5 p.m., New York time. That is what we have been told? - Yes.

16257. What is the time of the "Mesaba's" message, New York time, on the "Titanic," 7.50? - Yes.

*Sir Robert Finlay:* I am told it is 2 hours and 10 minutes.

*The Solicitor-General:* I have taken the corresponding times. I want to compare like with like - 9.5 p.m., New York time, I am comparing with 7.50 p.m., New York time. *Sir Robert Finlay:* Oh, yes, I beg your pardon. I thought you were giving the equivalent of ship's time.

*The Solicitor-General:* The “Mesaba” message is sent at 7.50, New York time. The message you were referring to, which was interrupted, is 9.5. *Sir Robert Finlay:* I beg your pardon.

16258. (*The Solicitor-General - To the Witness.*) This request to “stand out” or “keep out,” just explain that to us? - That is given by an operator on a ship who is working with another ship, or another coast station, and is jammed by someone else, he is simply told to stop it, that is all, just in the same way as if anyone interrupts you when you telephone, you ask him to “ring off” or “keep off.”

*The Solicitor-General:* There might be some general matters at a later stage we should want from this gentleman, but it appeared to us that it would be well to ask Mr. Bride now to come and give evidence, that we may follow this matter up.

*The Commissioner:* I think that is convenient, Sir Robert?

*Sir Robert Finlay:* Certainly, my Lord. Then the cross-examination of this witness will be postponed.

*The Solicitor-General:* That is as you please. On this point I should have thought you would deal with him now.

*The Attorney-General:* We ought to have it now.

*Sir Robert Finlay:* Very well.

#### **Examined by Sir ROBERT FINLAY.**

16259. With regard to the “Amerika,” I will take them in the order in which you have dealt with them - I understood you to tell us this yesterday. You see the letters which are printed M.G.V. on the message from the “Amerika”? - Yes.

16260. I understood you to say that that was a coast station of yours? - The “Amerika”?

16261. No, the M.G.V. I will refer you to your answer, if you like. It is 16078 on the very last page of the proceedings. This is the Solicitor-General speaking to you. “I will just read it, and then I am going to ask you why you say it is sent through the ‘Titanic.’ ‘No. 110, ‘Amerika’ Office, 14th April, 1912. Prefix M.S.G.’ That is Master Navigation Message. ‘Service instructions: via Cape Race. Office sent to M.G.V.’ What does that mean”? - That should have been “M.G.Y.”

16262. Now I am going to read your answer. “Those are the call letters for one of our ship stations”? - Yes.

16263. You mean M.G.V. meant one of your ship stations? - No; I do not understand how that mistake has arisen - M.G.Y..

16264. You said distinctly - it agrees with the recollection of those who heard you - “Office sent to, M.G.V.” What does that mean? And you say, “Those are the call letters for one of our

#### **Page 382**

ship stations”? - M.G.V. are the call letters of one of our ship stations, the “Monmouth”; but it should not have been “M.G.V.,” it should have been “M.G.Y.”

16265. “M.G.Y.”? - Yes, “Titanic.” That is a mistake in the print.

16266. And "M.G.V." was the name of another ship altogether? - Yes.

16267. Very good. You have shown us the original, and it is "M.G.Y."? - "M.G.Y." *Sir Robert Finlay*: Very good.

16268. (*The Solicitor-General.*) That means the "Titanic"? - That is the "Titanic."

16269. (*Sir Robert Finlay.*) "M.G.Y." is the "Titanic"? - Yes.

16270. (*The Commissioner.*) When you were asked "What does that mean?" your answer ought to have been "The letters mean the 'Titanic.'" Is that so? - That is so. 16271. (*Sir Robert Finlay.*) This message is sent out at 11.45 a.m.? - Yes.

16272. What time would that be? - That is New York time.

16273. To the "Titanic" there would be I am told two hours and ten minutes difference where she was? - I am not certain about that.

16274. Two hours or something over? - About that I should say.

16275. That would make it nearly 2 p.m.? - Ship's time, yes.

16276. Roughly - I am not tying you to a minute or two, but it would be roughly 2 p.m. ship's time when this reached the "Titanic"? - I should say so.

16277. This was sent to the "Titanic," I think your expression was - I will read what I took down at the time - "This message was a private message from the Commander of the 'Amerika' to the Hydrographic Office. It concerned no one else." That is right? - That is right.

16278. And the "Titanic" was being used simply for transmission on to Cape Race? - Yes.

16279. Being nearer to Cape Race than the "Amerika"? - Yes. 16280. The "Amerika" not being as you infer within range of Cape Race? - That is it. 16281. Whether that message was shown to any of the officers of the "Titanic" depends entirely upon the action of the Marconi operator? - It does.

16282. The Marconi operator, I think you have told us, is your servant? - He is.

16283. Paid by you, I think? - Yes.

16284. And under your orders? - Yes.

*The Commissioner*: Are there any means of ascertaining what Marconi operator was on duty at the time when this message would be received by the "Titanic."

*Sir Robert Finlay*: I think Mr. Bride may be able to tell us that, my Lord. I am not at the moment able to say whether it was Bride or Phillips. There were only the two.

*The Commissioner*: Is Bride here?

*The Attorney-General*: Yes, he is going to be called.

*The Commissioner*: I should like to know because I could follow it so much more easily. I should like to hear from him now if he can tell us which of the two would be on duty at that time.

*Sir Robert Finlay*: Is Bride here?

*Mr. Bride*: Yes.

*(The Witness withdrew.)*

**HAROLD BRIDE, Sworn.**

**Examined by Sir ROBERT FINLAY.**

16285. Only one question at this time. About 2 p.m. on Sunday, the 14th April, who was on duty at the Marconi office on board the "Titanic"? - Mr. Phillips. *The*

*Commissioner:* That is enough.

16286. (*Sir Robert Finlay - To the Witness.*) 2 p.m. ship's time, you understand that? - Yes, ship's time.

*(The Witness withdrew.)*

**GEORGE ELLIOTT TURNBULL, Recalled.**

**Further examined by Sir ROBERT FINLAY.**

16287. Now with regard to the "Mesaba," can you give us the ship's time when that message, 7.50 New York time, would reach the "Titanic" in the ordinary course?

*The Commissioner:* Now we are on the "Mesaba."

16288. (*Sir Robert Finlay.*) Yes, my Lord. (*To the Witness.*) It would be about 10 o'clock would it not, ship's time? - I should say so, about 10 o'clock.

16289. About 10 o'clock? - Yes; I have not made all those calculations.

16290. Not exact. I am told it is somewhere about that? - Yes.

*Sir Robert Finlay:* Your Lordship will remember there is one change of watch at 10 o'clock.

*The Commissioner:* Yes.

16291. (*Sir Robert Finlay.*) Now, have you got here, or can you get for us, the messages which passed - have you got from Cape Race the messages which passed between the "Titanic" and Cape Race between 8.30, say when the "Titanic" got into touch with Cape Race, and the time the collision took place? - I have called for all those messages and they are on their way to England, but they have not arrived yet.

16292. When will they arrive? - I expect them in three or four days.

16293. We are speaking of ship's time, you understand. I mean all the messages that passed between the "Titanic" and Cape Race by your apparatus between 8.30 ship's time when the "Titanic" got into communication with Cape Race, and the happening of the collision? - Yes, I have asked for the whole lot.

16294. We want them all, if you please. - Yes, I have asked for them all.

16295. Have you ascertained whether there were many? - I do not know exactly how many there were. I have only ascertained from ships that heard the "Titanic" speak to Cape Race that there was a great deal of traffic.

*The Commissioner:* You do not speak loud enough for me to hear you at all well. *Sir*

*Robert Finlay:* He said he had only ascertained from ships that overheard what was

passing, that there was a great deal of traffic between the "Titanic" and Cape Race. *The*

*Commissioner:* Very well.

16296. (*Sir Robert Finlay.*) That is between the hours I have mentioned? - Yes. 16297. Would those be trade messages or private messages, or both? - They would be service messages and private messages. One of them will be the message that the "Amerika" sent, which is a service message.
16298. (*The Solicitor-General.*) You call it a service message? - Yes.
16299. (*Sir Robert Finlay.*) That, of course, could not be sent on to Cape Race until after 8.30 p.m., when the "Titanic" had got in touch with Cape Race - the "Amerika" message? - No, that would not be sent until she got in touch.
16300. It could not be sent? - No.

### Page 383

16301. Your Company is paid for all these trade and private messages, I suppose? - Yes.
16302. And the operator was properly attending to them? - Yes.
16303. And as soon as he got in touch with Cape Race he was continuously engaged, according to what I read just now in communication with Cape Race? - Yes.
16304. On those trade and private messages? - Yes.
16305. Which, of course, are paid for? - Yes.
16306. Now, you have not got the reply that is said to have been received from the "Titanic"; I mean you have only got a note by Mr. Adams? - Yes.
16307. Mr. Adams, I suppose, we can see afterwards? - Oh, yes.
16308. He is available as a witness? - Well, he is on the "Mesaba" now.
- The Attorney-General:* We will take steps. I have said already - I do not know whether you caught it - after the point was made and explained by my friend, the Solicitor-General, that we would take immediate steps to get Mr. Adams here as soon as he returns. He is on the voyage.
16309. (*Sir Robert Finlay.*) Very good. (*To the Witness.*) In some cases I see your roll of documents shows the terms of the reply received. For instance, take the "La Touraine" message? - Yes.
16310. There is the reply of Captain Smith: "Thanks for your message and information. My position 7 p.m.," - so-and-so. "Had fine weather. Compliments. - Smith"? - Yes.
16311. You have not got any reply of that kind from the operator on board the "Titanic" with regard to this "Mesaba" message? - No, we would simply send "O.K.R.D.," which means, Had he got the message?
16312. What does "R.D." mean? - It is short for "Received."
16313. The note Mr. Adams has made is "Received, thanks"? - Yes, he would send "R.D.T.K.S.," which is the usual abbreviation for "Received, thanks." 16314. That would be a message simply from the operator? - Yes, simply his acknowledgment.
16315. One other question with regard to the "Titanic's" communications with Cape Race: Was the "Titanic" likely to be receiving a number of messages from other ships for transmission to Cape Race? - That is quite possible. 16316. Is it probable? - It is also probable.

16317. The "Titanic" by 8.30 p.m. ship's time would be in communication with Cape Race? - Yes.

16318. And there would be a great many other ships not in communication with Cape Race that might want to transmit? - That is it.

16319. And they would do it through the "Titanic"? - Yes, if the "Titanic" had the time to do it.

16320. That would keep the Marconi operators on the "Titanic" pretty busy? - Yes.

16321. (*The Solicitor-General.*) I handed up to your Lordship a print of the letter of 7th May. Would your Lordship kindly look at the last page - the outside page. The bottom communication on the last page is, or professes to be, a copy of a Marconi message. Now just above that your Lordship will see in the print "This sent on to M.G.V." (*To the Witness.*) Is that a misprint? - It is a misprint.

16322. It ought, I understand, to be "M.G.Y."? - That is so.  
*The Solicitor-General:* That is where the mistake came from, my Lord; it is a mistake in printing, and your Lordship might turn the "V." into a "Y." (*To the Witness.*) You have told us that "M.G.Y." means the "Titanic"? - Yes.  
*Sir Robert Finlay:* I daresay the Board of Trade will let us have copies of all these documents.  
*The Attorney-General:* Certainly.  
*Sir Robert Finlay:* And the *procès-verbal*, of course.  
*The Attorney-General:* Whatever we have I shall not part with those yet; perhaps Mr. Bride may want them. That is all your Lordship wants to put to this witness at present.  
*The Commissioner:* There are no other questions I want to put to him. *The Attorney-General:* We shall recall Mr. Turnbull later, to go into some other matters.

*(The Witness withdrew.)*

### **HAROLD BRIDE, Recalled.**

#### **Further examined by the ATTORNEY-GENERAL.**

16323. You have been sworn. In June, 1911, you had obtained your certificate of proficiency in radio-telegraphy from the Postmaster-General? - Yes.

16324. And later on you were appointed by the Marconi Company to serve as assistant wireless operator on the "Titanic"? - Yes.

16325. When did you go on board the "Titanic"? - I joined the "Titanic" in Belfast.

16326. When? Was that in the beginning of April? - In the beginning of April.

16327. Was Mr. Phillips the senior operator? - Yes.

16328. Did you find him there when you went there? - Yes.

16329. Did he and you go through tests with several wireless stations? - Yes.

16330. That was while the "Titanic" was on her trial test? - Yes.

16331. For wireless? During the voyage from Belfast to Southampton? - During the voyage from Belfast to Southampton, yes.

16332. Only one general question: Did you find the apparatus was in good working order? - Perfect.
16333. First of all, will you tell us how were your duties arranged as regards time with Mr. Phillips? When did you go on watch? How long did you remain on duty? What were your hours? - Mr. Phillips started the watch at eight o'clock at night, and he remained on watch until 2 o'clock in the morning.
16334. Was that your regular practice? - That was Mr. Phillips's watch of a nighttime. I kept the watch from 2 o'clock to 8 o'clock in the morning. 16335. That is six hours each on duty? - Yes.
16336. You divided up the time from 8 o'clock at night until 8 o'clock in the morning in that way? - Yes.
16337. What did you do with regard to day duty - the same? - During the day we relieved each other to suit each other's convenience.
16338. No regular time at all? - No, but a constant watch was kept.
16339. (*The Commissioner.*) You mean that there was always one of you there? - Yes.
16340. (*The Attorney-General.*) Will you just tell us - for the present I am only going to ask you this simply - Is there a Marconi room on board the vessel on which you have to operate? - Yes.
16341. And there was on the "Titanic"? - Yes.
16342. (*The Attorney-General.*) No doubt your Lordship saw the room on the "Olympic." (*To the Witness.*) That is quite close to the bridge, is it not? - Quite close to the bridge.
16343. (*The Commissioner.*) I suppose it is in the same position as the Marconi room on the "Olympic"? - I believe there is a difference.
16344. In the position? - In the exact position of the cabin.
16345. Is it in practically the same place? - It is in practically the same place.
16346. (*The Attorney-General.*) Has your Lordship the plan of the "Titanic" - do you see where it is? It is just forward of what is marked as the elevator gear. (*To the Witness.*) I want to know a little about this. There are, I see, three rooms; there is what is called the silent room, which is, I suppose, the room in which you work where you

## Page 384

- receive and transmit? - No, the silent room is the one we use for transmitting.
16347. Then there is another room called the Marconi room. What is that? - That is the room where we sit to receive and send our messages.
16348. Then bedroom? - That is the bedroom.
16349. Is that for both or one of you? - For both.
16350. I am not sure that I understand what you said about the difference between the silent room and the Marconi room. Do you transmit in a different room to the one in which you receive? - The silent room contains the alternator and the motor and the spark gap, and it is made silent so that the noise from the sparks shall not

- disturb anybody round about there. You can close the sound entirely out, and it is connected through to the operating room, and the key is in the operating room.
16351. What I want to know about this for the moment is, when you speak of the silent room do you mean you only transmit in that room? Your answer to me was that "it is the room in which we transmit messages." Do you understand? - Yes.
16352. Do you mean that it is the room in which you only transmit messages? - It is the room which contains the transmitting gear.
16353. Do you mean you do only transmit from there? - Yes.
16354. Is the Marconi room then the room in which you would only receive messages? - No.
16355. That is why I want you to tell us. What is that? - The transmitting gear is inside the silent room, and it is connected through by means of wires to the key in the Marconi room which we operate. The receiving apparatus is in the Marconi room.
16356. That is what I wanted. You, I suppose, were in the habit of recording messages, were you, in the ordinary way? - Yes.
16357. While you were on the "Titanic"? - Yes.
16358. I must ask you as a matter of form. There are no records at all that have been preserved of the messages to the "Titanic," none of the "Titanic" records? - No.
16359. Would you tell us so far as you are able what was the first message you recollect with regard to ice reports? - The first message I recollect on the 14th April was from the "Californian."
16360. That is the first you recollect? - Yes, and the last.
16361. Is it the only one? - It is the only one I recollect.
16362. That is on the 14th? - Yes.
16363. Just before I ask you about that - that is speaking of the 14th, but had you had any messages before the 14th that you recollect? - No.
16364. Would you tell me what was the message that you recollect receiving on the 14th. Do you recollect the time when you received it? - The time was between five and half-past in the afternoon, ship's time. It stated that the "Californian" was passing close to large icebergs and gave the latitude and longitude.
16365. (*The Attorney-General.*) Your Lordship will recollect that is very much what Mr. Evans said at page 201. He says 5.35, and the witness says about 5.30. (*To the Witness.*) Was that a message to you, or was it merely a message which you overheard? - It was a message intended for me in the first place, but which I overheard afterwards.
16366. I am not quite sure that I understand what you mean by that. Was it a message which was directed to you? - It was not directed.
16367. Were you called up? - It was not directed to me, but I took it down for delivery.
16368. (*The Commissioner.*) Do you mean by taking it down writing it down? - Yes.
16369. (*The Attorney-General.*) Do you always write the messages down which you receive? - Yes.
16370. Is that the invariable practice? - Invariable.
16371. Do you also write the messages which you send? - They are generally written for us.
16372. And put before you for the purpose of your transmitting them? - Yes.

16373. What ship was sending the message? - The "Californian."

16374. For whom was the message intended? - To the best of my recollection it was the "Baltic."

16375. How would you know that? - By the call letters.

16376. Which would indicate the "Baltic"? - Yes.

16377. Was that the message which you first overheard? - Yes.

16378. What did you do? What I want to know is could you tell whether the "Baltic" was receiving the message? - The "Baltic" did eventually receive the message. 16379. How do you know that? - Because she acknowledged it to the "Californian."

16380. Did you hear the message from the "Baltic" to the "Californian"? - Yes. 16381. Did you realise from that that it was an ice report? - Yes.

16382. Then during this time did you know that there was any message that the "Californian" had for you? - I knew it was the same message that the "Californian" had for me.

16383. You mean that your letters were called: is that it?  
*Sir Robert Finlay:* No.

16384. (*The Attorney-General - To the Witness.*) Just let us see what you mean by that. I understood you to tell us that you heard the message between the "Californian" and the "Baltic." Is that what you have said? - Yes.

16385. How do you know the message was for you? - Because the "Californian" had called me previously and said she had an ice report for me.

16386. Then you heard what was taking place, and you knew what the report was? - Yes.  
*Sir Robert Finlay:* I think that the message was sent to the "Titanic," but, as I understand the witness, he was busy and did not attend to it at the time. That was a message to the "Titanic." Then afterwards he heard the same message repeated to the "Baltic."

*The Attorney-General:* I do not think that is what he said.  
*The Solicitor-General:* That is neither his evidence nor is it the fact.  
*The Attorney-General:* I have not heard the witness say a word about that, but we will see. It may be right. All I mean is that it is not as I understood what was the witness's evidence, because he has not said that.  
*Sir Robert Finlay:* I understood him to say he did not acknowledge the message when it was sent to the "Titanic," and he afterwards heard the same message being sent by the "Californian" to the "Baltic."

16387. (*The Attorney-General.*) It may be so; we will get it quite clear. It is quite possible that is right. (*To the Witness.*) Was that right? Did you hear what my learned friend Sir Robert Finlay said just now? - Perfectly correct.

16388. So that although you knew you were called, you had something else to do; you were busy at the time? - Yes.

16389. Then you eventually overheard it? - Yes.

16390. (*The Commissioner.*) I do not want you to skip over that. What business had you that you were attending to at the moment? - I was attending to another branch of my work.

16391. What branch? - I was writing up the accounts.  
16392. Pounds, shillings and pence, you mean? - Yes.  
16393. The account book? - Yes.  
16394. That is what you were attending to at that particular time? - Yes.  
16395. (*The Attorney-General.*) Did you send any message yourself in answer? - Yes, I acknowledged the receipt of the report.  
16396. To whom? - To the "Californian."  
16397. Do you remember what it was you said? - Not the exact words, but it was to the effect that I had overheard him send it and that I had taken it down.  
*The Attorney-General:* Your Lordship will remember, if you want the passage where this is dealt with by Evans, it is at page 202, Question 8972: "(Q.) What did the 'Titanic' say to you when you offered your ice report? - (A.) He said: 'It is all

### Page 385

right; I heard you sending it to the 'Antillian,' and I have got it."  
16398. (*The Commissioner - To the Witness.*) Do you remember sending such a message?  
- It was a message to that effect, but there was no mention made of a ship's name.  
16399. That is what I wanted to know. Do you remember ever having referred to the "Antillian"? - In a case like that you would refer to the ship's call letters; you would not mention the ship by name.  
16400. I suppose the man on the "Californian" would have the corresponding letters? - Yes.  
16401. Do you remember referring to the call-letters of a ship called the "Antillian"? - I remember referring to the call-letters of a ship which I understood to be the "Baltic."  
16402. (*The Attorney-General.*) Whatever it is, whether you recollect the letters or the name of the ship or not, it was a ship with which the "Californian" was in communication - is that right? - Yes.  
16403. And whose message you overheard? - Yes.  
16404. So far, your recollection is clear? - Yes. I see in America - I am going to read a passage from the evidence you gave in America with regard to the message, which is on April 20<sup>th</sup>, 1912.  
*The Commissioner:* I have not got the American evidence.  
*The Attorney-General:* I thought I handed it up. Your Lordship need not be troubled with it; we will get the effect of the evidence from this witness.  
*The Commissioner:* That is what I mean. I do not ask for it, but I presume that whenever it is referred to the reference to it will be on the shorthand notes.  
*The Attorney-General:* Yes.  
*The Commissioner:* For instance, what you are to say at present will be taken down on the shorthand notes.  
16405. (*The Attorney-General.*) Yes. (*To the Witness.*) I would like you to tell the exact language of that message. If you will follow what I am putting to you, this is your answer: "(Q.) It stated that the 'Californian' had passed three large icebergs, and gave their latitude and longitude? - (A.) That they passed three large icebergs,

yes.” And then you are asked, “And gave their latitude and longitude. (A.) Yes, she passed very close to them.” And then you were asked whether you recollected the latitude and longitude, and you said you did not. That is the evidence you gave in America? - Yes.

16406. I take it that evidence is right? - That is correct.

*The Attorney-General:* The message which has already been read, which I will just refer to again, which was actually sent, your Lordship will remember, “Three large bergs five miles to southward of us. Regards.”

*The Commissioner:* There is the latitude and longitude.

*The Attorney-General:* Yes, I am going to refer to that; I wanted to get first the actual facts to bring them to his recollection: “Three large bergs five miles to southwards of us. Regards”; but you see how it begins, “6.30 p.m., A.T.S.” which is we know the ship’s time. Then there is the latitude 42.3° N., and the longitude 49.9° W. 16407. (*The Commissioner.*) The message begins “To Captain, Antillian.” *The Witness:* Yes.

*The Attorney-General:* It is sent off at 5.35.

*The Commissioner:* At 6.30 p.m. those three large bergs were noticed. *The Attorney-General:* Your Lordship will recollect that the time which is there mentioned is the time at which they are seen and the latitude and longitude are there given. I think it is unnecessary to go further into that. We could show, if it had been necessary, from the *procès-verbal* that the “Californian” message was not to the “Baltic,” that they were not in communication with the “Baltic” at that time at all, and that the message we have got is the message from the Captain of the “Californian” to the “Antillian,” and no doubt is the message which is before you.

*The Commissioner:* Is he mistaken when he says that he thinks the message was to the “Baltic.”

16408. (*The Attorney-General.*) I think so, according to what we have got. (*To the Witness.*) You said you thought it was to the “Baltic.” I have called your attention to the only message which we have got, at least of which we know so far, which is a message from the “Californian” to the “Antillian,” sent at about 5.30 and giving this information about the “three large icebergs, five miles to the southward of us.” Is there any reason you have to recollect that it was to the “Baltic”? - May it have been this message to the “Antillian”? - There is no special reason why I should recollect the “Baltic” beyond the fact that it was on my mind from the time I landed in New York, and that was the evidence I gave on the Saturday.

16409. I think I understand what you mean? - At the same time we had many communications and on the Sunday the traffic was very heavy.

16410. (*The Commissioner.*) You were very busy on the Sunday? - Very busy. 16411. (*The Attorney-General.*) According to your recollection when you gave the evidence in America you thought it was a communication from the “Californian” intended for the “Baltic”? - Yes.

16412. What did you do when you got that message? - I delivered it to the officer on the bridge.

16413. Do you remember who the officer on the bridge was? - No, I was not acquainted with the officers.

16414. But whatever it was, I understand it was the ice report which you have told us of, and you delivered that at once to the officer on the bridge? - Yes.

16415. Was that what you always did when you got a message - well, what is your objection, Sir Robert?

*Sir Robert Finlay:* My objection is that we know what he did when he heard the message to the "Titanic." However -

16416. (*The Attorney-General - To the Witness.*) What was your practice when you got a message? - If it was for the navigating staff or the Captain we delivered it personally.

*The Commissioner:* You scarcely had a practice on board the "Titanic," because it was her first voyage. You may have had a practice on some of the other ships.

*The Attorney-General:* He was there for some days, of course.

16417. (*The Commissioner.*) Yes, he was there for some days. (*To the Witness.*) This is the only ice message, as far as I have gathered, that you can tell us anything about? - It was our practice if a message -

16418. Never mind about your practice at present. I am asking you, was this the only ice message that you remember being received on board the "Titanic"? - It was the only ice message, but it was not the only message for Captain Smith.

*The Attorney-General:* I did not ask him about a practice as to an ice message, my Lord.

16419. (*The Commissioner.*) No, but I am thinking about ice messages. (*To the Witness.*) Did you receive any other message that you can remember that concerned in any way the navigation of the ship? - None that I can recollect.

16420. Then this is the only message you received during the whole of this voyage that could in any way affect the navigation of the ship? - Yes.

16421. And you say you delivered it? - Yes.

16422. Then I do not know what practice you could have about such messages on that ship; you may have had a practice on other ships? - There were messages coming through for Captain Smith all the time, but they did not affect the navigation of the ship. 16423. (*The Attorney-General.*) I did not think he had said that, nor was he asked, my

Lord. I did not think he had said anything to the contrary of that nor had he been asked. I asked what the practice was when he got a message. I agree that the important thing is to know what

## **Page 386**

happened with regard to an ice message as to which there could not be a practice. (*To the Witness.*) What I wanted to ask you was this. You told us there were a number of messages which came through for Captain Smith; by name, do you mean? - Yes.

16424. Of course, those would be delivered to him personally? - Personally.

16425. (*The Commissioner.*) Would they be delivered to an officer of the ship, or to the Captain to whom they were addressed? - They were invariably delivered to the Captain.

16426. This was not addressed to the Captain? - No.

16427. And you simply delivered it to an officer on the bridge? - Yes.

16428. (*The Attorney-General.*) Could you tell us how long it was after you got the message that you delivered it on the bridge? - About two minutes.

16429. Did it strike you as an important message? - Well, those sort of messages are looked upon as important.

16430. So that you would deliver it as soon as you could? - Yes.

16431. All that you would have to do is to take down the message and go from your room on to the bridge to deliver it to the officer? - Yes. 16432. And that is your recollection of what you did? - Yes.

*The Commissioner:* Sir Robert, is there any doubt that this message did come to the knowledge of the officers.

*Sir Robert Finlay:* I think there is no doubt at all, my Lord.

*The Attorney-General:* We need not pursue it.

*Sir Robert Finlay:* No; the point is when.

16433. (*The Attorney-General.*) One moment. When it came to the notice of the officers of the ship? - This witness says that he gave it two minutes after it was received. (*To the Witness.*) Were you at this time, that is at the time you received the message, receiving messages from a number of ships? - Yes.

16434. Were those messages which you had to relay to Cape Race? - The majority.

16435. (*The Attorney-General.*) It is suggested by my learned friend, Sir Robert, your Lordship will recollect, that they were busy on the 14th, and I am to show that he was on the 13<sup>th</sup> as well receiving messages in this way. (*To the Witness.*) You would get a number of messages which would come to you which you would then have to relay and transmit to Cape Race? - Yes.

16436. As I understand you, from the time you received that message until the "Titanic" sank, so far as you are concerned, there was no other ice report? - No.

16437. That is right, is it not? - Yes.

16438. That is to say, you received none. Did you have any conversation at all with Mr. Phillips about ice messages? - No.

16439. Nothing passed between you? - Nothing at all.

16440. How long did you continue to receive messages before going away on this day - before going down to your dinner? - To the best of my recollection -

*The Commissioner:* What was the time?

16441. (*The Attorney-General.*) I know, but I want him to tell us; it was some time in the evening.

*The Witness:* To the best of my recollection I went off watch between 6 and 7.

16442. At what time did you dine as a rule? - Seven o'clock.

16443. Then did you go to your dinner that evening do you remember? - Yes.

16444. About that time? - Yes.

16445. You can recollect that? - Yes.

When did you come up again?

*The Commissioner:* You say he can.

*The Attorney-General:* I said he could because he had a pleasant smile about it. *The Commissioner:* I doubt very much whether he can remember going to his dinner that evening. He knows he had it.

16446. (*The Attorney-General - To the Witness.*) I rather gathered from your pleasant recollections that you do remember it? - I do remember it.

16447. (*The Commissioner.*) Do you remember every dinner you ever had? - Well, not quite.

16448. (*The Attorney-General.*) But you went down and had your dinner; when was it you came up again? - I could not give you any correct idea of the time.

Of course it is very difficult we know; you have not got your records, and we also know what has happened since. What I want you to do is to give us to the best of your ability what you recollect about it.

*The Commissioner:* I do not want any answer unless he does recollect it.

*The Attorney-General:* I agree; but we must try to find out from him.

*The Commissioner:* Do try, but as to the events of this morning, I want to be as sure as I possibly can.

*The Attorney-General:* Your Lordship must know how he recollects it before you can tell what value to attribute to the evidence.

*The Commissioner:* That is why I want to know whether he does recollect at all. *The*

*Attorney-General:* I quite agree. (*To the Witness.*) Do you recollect coming up again from your dinner?

*The Commissioner:* He cannot recollect; there is no use his saying to me he can recollect. He may know he did come up.

*The Attorney-General:* Your Lordship will hear what happened afterwards, and you will find that he does recollect.

*The Commissioner:* I can quite imagine that if he met some particular person, he might possibly recollect it; otherwise it is impossible.

16449. (*The Attorney-General - To the Witness.*) We may be quite sure about this - that you did not stop down at dinner all that night? - No.

16450. After you had had your dinner, did you have any conversation at all with Mr. Phillips? - Yes, we chatted for a long while.

16451. Where was it you had this chat? - In the Marconi room.

16452. So that you had come up from your dinner to the Marconi room? - Yes. 16453.

Do you remember how long it was after you went down to dinner that you had this chat with him in the Marconi room? - Somewhere about 20 minutes to half an hour. 16454. (*The Commissioner.*) What is this 20 minutes that you remember? - For my dinner - about 20 minutes to half an hour I have for my dinner.

16455. I understand now from you that you recollect not only coming up from your dinner (that you did come up, of course we know), but you recollect 20 minutes' conversation with Mr. Phillips. Is that what you mean to say? - No, I was asked how long was it after I went down for my dinner before I returned, and I say it was between 20 minutes and half an hour.

*The Attorney-General:* He did not say that he had 20 minutes' conversation with Mr. Phillips. The question I put to him was that he had some conversation with Mr. Phillips in

the Marconi room, and I asked him how long that was after he had gone down to his dinner, so as to get some idea of the time.

*The Commissioner:* You asked him how long the conversation was.

16456. (*The Attorney-General - To the Witness.*) It was in answer to that you said 20 minutes to half an hour? - Yes.

16457. In talking to him, was communication established, can you tell me, with Cape Race? - No.

16458. Was it established during that evening? - Yes.

16459. Do you remember about what time? - Just before I turned in.

16460. What time would that be? - Between half-past 8 and 9 o'clock. 16461. Who established that communication? - Mr. Phillips.

### Page 387

16462. When did you relieve Mr. Phillips? - I was due to relieve him at 12 o'clock.

16463. At 12 o'clock that night? - Yes.

16464. Why was that? - He had had a very busy night the night before.

16465. If I understood aright, what you said to my Lord at the beginning your duty would be from 2 o'clock in the morning to 8 o'clock in the morning? - Yes. 16466.

But on this particular occasion you relieved him at 12 at night? - At 12. 16467. (*The Commissioner.*) You came on duty then or intended to come on duty two hours before your ordinary time? - Yes.

16468. (*The Attorney-General.*) That was, as I understand from what you said just now, because he had had a very busy time; was that it? - Yes.

*The Commissioner:* You said, Mr. Attorney, that he knew that Phillips had got into communication with Cape Race. I want to know how he knew that.

16469. (*The Attorney-General - To the Witness.*) How did you know that Phillips had got into communication with Cape Race? - I heard him sending the preliminaries as I was turning in.

16470. What do you call the "preliminaries"? - He was sending to Cape Race when I turned in the time that -

16471. (*The Commissioner.*) Tell me what he was saying; let me hear it, and how do you know he was sending it. He did not speak it? - I was reading what Mr. Phillips was sending, Sir, from his apparatus.

16472. I want to understand it. Phillips was sending a message by means of the machine? - Yes.

16473. Were you looking at him while he was doing it, or looking at the machine? - No.

16474. How do you know what it was that he was sending? - I could hear the make and break of his key.

16475. Do you mean to say that you listened, and by that means knew what the message was? - Yes.

16476. Why were you listening to the message? - You know, I tell you at once, Mr. Bride, your memory is of such an extraordinarily accurate kind that I wonder whether you are really giving us - I do not mean for a moment to say you are not

telling us the truth, but I doubt whether you can remember such things with accuracy; I could not, but my memory is not nearly as good as yours. Do you mean to tell me that at this distance of time or from the Sunday when you landed at New York you recall having listened to a message which did not concern you, and remember what it was? - It was not a message which concerned you? - The message did concern me indirectly.

16477. In what way? - Because I had refused it in the first place when it was offered to me; I did not answer it.

16478. You have not told us that: What was that? - It was the message of the "Californian" - the ice report of the "Californian" which he had offered to me, and which was explained a minute or two ago.

16479. I thought you were talking about Cape Race? - We are talking about Cape Race now. I remember these things, because they constitute my work, and they are big things, as far as I am concerned. It was one of the biggest -

16480. If I were to ask you to give me particulars of all the messages that you had taken on the 13<sup>th</sup>, could you recollect them now? - No. *The Attorney-General*: Nor has he been asked.

*The Commissioner*: I asked if he could remember them.

*The Witness*: I am not offering to give you particulars of the messages which were sent on the 14<sup>th</sup>.

16482. I am talking about this one particular message to Cape Race? - I was to tell you that Mr. Phillips was transmitting the time we had on board our ship, also his distance and bearing from Cape Race, and the number of messages he had for Cape Race, which is the usual thing when establishing communication with a land station.

16483. (*The Attorney-General*.) See if you can tell us in your own way, without my suggesting it to you, why should you particularly remember getting into communication with Cape Race? - It was just before I went to bed; I was not asleep, and I had nothing else to do but to lie and listen.

16484. Is it important to you to get into communication with Cape Race? - It was that night.

16485. Had you been in communication with Cape Race before on that voyage? - No.

16486. Is it of importance for you when you can get into communication with it that you should at once send messages? - It is.

16487. (*The Commissioner*.) Do I understand that messages collect together before you get into communication with Cape Race which have to be transmitted when you get into communication with Cape Race? - Yes, they do.

*The Commissioner*: That explains it.

16488. (*The Attorney-General*.) One thing more your Lordship will follow. (*To the Witness*.) Is that your first means of communication with America on your voyage? -

Yes. 16489. So that, of course, you would be anxious whatever messages you have got to send to America to get into communication with Cape Race and then transmit them? - Yes.

16490. (*The Attorney-General*.) Your Lordship sees why he would remember that. (*To the Witness*.) So that on this particular occasion you have told us now and

- explained to my Lord why you recollect that. Now will you tell me, when you came up at 12 o'clock and relieved Mr. Phillips did you find any telegrams still to relay to Cape Race? - As far as I can recollect Mr. Phillips told me he had cleared all the traffic to Cape Race.
16491. He had got a considerable accumulation? - Yes.
16492. Now, the only other thing I want you to tell me is, did he tell you - can you recollect, whether he said when it was that he had finished relaying the telegrams to Cape Race? - He did not say.
16493. Was this conversation that you have told me of directly you came up? - Yes.
16494. That is 12 o'clock? - Yes.
- The Commissioner:* After the collision.
16495. (*The Attorney-General.*) I am just going to ask about that. (*To the Witness.*) Tell us in your own way; how did you know first of all there had been a collision? - Mr. Phillips intimated that he thought we had struck something from the fact of feeling the shock.
16496. You yourself had not felt it? - No. 16497. Had you been asleep? - Yes.
16498. Did you remain in the room with Mr. Phillips at 12 o'clock? - Yes. 16499. At that time were you sending any messages? - No.
16500. Did the Captain come in to you? - He did shortly afterwards.
16501. Between the time of your coming up and the Captain coming in to you had you sent any messages? - No.
16502. Or received any? - No.
16503. Then what did the Captain say? - The Captain told us he wanted assistance.
16504. I am not quite sure that I understand what you mean by that: assistance where? - He gave us to understand he wanted us to call C.Q.D.
16505. That is to say that what the Captain wanted you to do was to call for assistance from other vessels? - Yes.
16506. And you were to send out this signal C.Q.D.? - Yes.
16507. Did you hear any conversation between Mr. Phillips and the Captain about this? - Yes.
16508. Beyond what you have just told us that you were to call for assistance? - The Captain gave him the latitude and longitude of the "Titanic," and told him to be quick about it or words to that effect.
16509. Then what did Mr. Phillips do? - He started to call C.Q.D.
16510. After the Captain had come in, the first message was sent out, C.Q.D. was by Mr. Phillips; is that right? - Yes.
16511. I do not know whether you can help us at all with regard to the time a little more than you have. You have told us you came up at 12 o'clock,

**Page 388**

and that then you heard this conversation between the Captain and Mr. Phillips. Could you give us any idea of the time - how long had elapsed after your coming up at 12 o'clock, or coming into the room with Mr. Phillips? - Not with any accuracy.

16512. Give us the best estimate you can? - I do not think I could.
16513. Do you remember what was the first vessel to answer your C.Q.D. call? - The "Frankfurt."
16514. Do you remember what the "Frankfurt's" answer was? - "O.K. Stand by." 16515. "O.K." - is that "All right"? - Yes.
16516. What was the next? - The "Carpathia."
16517. What was the message from the "Carpathia," so far as you can recollect it? - She transmitted her position and told us she had turned round and was coming along as fast as she could.
16518. To your assistance? - Yes.
- The Commissioner:* Did the "Frankfurt" transmit her position? - No.
16519. (*The Attorney-General.*) So as far as I follow from what you have told us, the "Frankfurt's" message was "O.K. Stand by"? - Yes.
16520. What did you understand that to mean? - That he had got my message and would let me hear from him in a minute or so.
16521. It meant to say "All right," that he had got your message. "Stand by" - that is. "Wait and I will communicate with you later"? - Yes.
16522. He would have to communicate with the Commanding Officer? - Yes. 16523. You received those two messages, the one from the "Frankfurt" and the other from the "Carpathia;" what did you do then? - I went to report to the Captain.
16524. And Mr. Phillips remained in the room? - Yes.
16525. Did you report to the Captain? - Yes.
16526. Where was he when you reported to him? - He was on the boat deck, the starboard side, if I remember.
16527. What was he doing? - He was superintending the loading of the lifeboats. 16528. Do you recollect any other message? - Yes.
16529. What was the next you recollect? - The next one was the "Olympic."
16530. What did you do about that? - We received several messages from the "Olympic" from time to time, but to the best of my recollection they were not delivered because Captain Smith was busy and we presumed he would be worried, and we let them go.
16531. (*The Commissioner.*) What was the effect of the messages? - They merely said - one message I remember was that the Commander of the "Olympic" told Captain Smith to have his lifeboats ready.
16532. (*The Attorney-General.*) We know what the "Olympic's" messages are. I wanted to get from him what was done. (*To the Witness.*) Do you remember the Captain coming in and telling you about the vessel? - The Captain kept in communication with us; we either went to him or he came to us.
16533. What about? - He came in and told us at one time she would not last very long, and he informed us when the engine room was flooded.
16534. Was that before or after you had had the message from the "Carpathia;" do you recollect? - After.

16535. If I follow you correctly, you have got the message from the ‘Frankfurt,’ and you have got the message from the ‘Carpathia’ that she was coming to your assistance, and then you got the message or messages from the ‘Olympic’? - Yes.
16536. And other vessels? - The messages from the ‘Olympic,’ spread over to the time when we left the cabin; from the time we first established communication, Captain Haddock was sending us communications until the time we left the cabin for good.
16537. He was communicating with you, sending you messages throughout? - Yes.
16538. Now, I want you to tell me after that, and before you left for good, as you have told us, did you have any discussion or conversation with Mr. Phillips about the relative strength of the signals of the ‘Frankfurt,’ and the ‘Carpathia’? - Yes.
16539. What did he say? - Mr. Phillips was of the opinion that the ‘Frankfurt’ was the nearer of the two vessels as the strength of the ‘Frankfurt’s’ signals was greater than those of the ‘Carpathia.’
16540. Did you establish communication with the ‘Baltic’ at all? - Yes.
16541. Did you send her a message? - I myself informed the ‘Baltic’ of the condition of things.
16542. When you say the condition of things, would you tell us as well as you can to the best of your recollection - I know it is rather hard for you at this moment, but so far as you can? - I explained to the ‘Baltic’ that we had had a collision, and we were sinking fast.
16543. When you sent that message was Mr. Phillips there? - No.
16544. Where had he gone? - He had gone outside to have a look round.
16545. When he came back did you tell him? - Yes.
16546. Did you tell him - I mean of the communication you had established with the ‘Baltic’? - Yes.
16547. And the message you had sent? - Yes.
16548. Did he tell you what he had found out? - Yes.
16549. What did he say? - He told me the forward well deck was awash.
16550. Did he tell you anything else? - He told me, as far as I remember, that they were putting the women and children in the boats and clearing off.
16551. Was anything said about a list, do you remember? - There was a heavy list to port.
16552. Did you notice that? - Yes.
16553. (*The Commissioner.*) You noticed that yourself? - Yes.
16554. (*The Attorney-General.*) Of course, your Lordship recollects we have got a good many of these messages, and they can be referred to at the proper time; I do not want to take him through them all, and we do not depend on memory at all for them, as your Lordship remembers. I wanted him to tell today the story so as to bring him to the point of leaving the Marconi room. (*To the Witness.*) After he came back and told you that, do you remember the Captain coming in? - Yes.
16555. What did he tell you? - He told us to clear out.
16556. (*The Commissioner.*) To clear out of the room? - Yes.
16557. (*The Attorney-General.*) To clear out - why? - It was very evident the ship was sinking.

16558. That you were to shift for yourselves - to do the best you could? - Yes; words to that effect.
16559. Do you remember whether at that time you were called up? - Yes; Mr. Phillips took the 'phones when the Captain had gone away and he started in to work again. 16560. That was after the Captain had come in and told you to shift for yourselves? - Yes.
16561. When did he get to work again? - Of course I could not read what Mr. Phillips was receiving, but I could read what he was sending, and I judged that the "Carpathia" and the "Frankfurt" had both called up together, and the "Frankfurt" had persisted in calling and was interfering with Mr. Phillips in reading the "Carpathia's" message. *The Commissioner*: The one message was blurring the other.
16562. (*The Attorney-General*.) I did not know whether your Lordship heard it. (*To the Witness*.) Did Phillips say anything to you about it? - Yes; he expressed his opinion of the "Frankfurt" and then told him to keep out of it, to stand by.
16563. He told the "Frankfurt" to keep out of it and stand by? - Yes.
16564. Did he then communicate with the "Carpathia"? - Yes.
16565. To the best of your recollection, what was it he said? - To the best of my recollection he told the "Carpathia" the way we were abandoning the ship, or words to that effect.

### **Page 389**

16566. After that did you do anything further? Did you try to call any further ships? - Mr. Phillips called once or twice more, but the power was failing us and I do not think we were getting a spark, as there were no replies. 16567. Why was that? - The power was failing us.
16568. (*The Commissioner*.) Where did you get your power from? - From the engine room.
16569. From the main engines? - Yes.
16570. (*The Attorney-General*.) The power was decreasing from there, and you could not get sufficient power to generate your spark? - That is so. 16571. Did you and Phillips leave? - Yes, we left the cabin.
16572. What did you do? - We climbed up on top of the Marconi cabin and the officers' quarters.
16573. That was right on the boat deck? - Yes.
16574. Do you recollect at all whether at that time there were persons on the deck? - Yes, there were.
16575. Many? You could not tell? - I could not tell.
16576. After you got on to the roof, what did you do? - They were trying to fix up a collapsible boat that was up there, and I went to help them.
16577. That was on the top of the officers' quarters? - Yes. 16578. You went to help them? - Yes.

16579. Did you get it down from the top deck to the boat deck? - Yes.
16580. With all the men who were assisting? - Yes.
16581. What happened to it then? - It got swept off.
16582. That was the collapsible? - Yes.
16583. When it got swept off, did it float? - Yes.
16584. Do you remember at all whether this was on the port or starboard side? - On the port side.
16585. It was on the port side you got the collapsible? - It was at the side of the forward funnel on the top of the officers' quarters.
16586. What happened to you - did you get into the collapsible? - Yes.
16587. Was it floating all right when you got into it? - It was upside down. 16588. Had it capsized? - Yes.
16589. When you say you got into it, was that after the "Titanic" had sunk? - No, it was before the "Titanic" had sunk.
16590. How did you come from off the boat deck? - I was swept off with the boat.
16591. Was the water then rising all the time? - Yes.
16592. And eventually you were swept off and the water was rising? - Yes. 16593. And as the collapsible boat was swept off into the water you also were swept off; is that correct? - Yes, we went over together.
16594. (*The Commissioner.*) Just let me understand exactly where that collapsible boat was; was it in front of the forward funnel? - It was on the port side of it, right alongside of it.
- The Attorney-General:* Your Lordship will recollect there are the two emergency boats on each side.
16595. (*The Commissioner.*) Which is the collapsible boat?
- The Witness:* This one (*Pointing on the model.*)
16596. Am I to understand that at this time the water was flush with that deck? - Yes - no, it was flush was A deck; we pushed it over from that deck on to A deck.
- The Attorney-General:* That is exactly what Mr. Lightoller explained.
16597. (*The Commissioner - To the Witness.*) Then the water was flush with the boat deck? - Yes.
16598. And swept this boat off into the sea and you with it? - Yes.
16599. (*The Attorney-General.*) Let us be quite clear about it. Do you know which is the A deck? - I have always been given to understand the boat deck was the A deck.
16600. That is what I thought was your impression. The collapsible boat you are speaking of was the one which was on the port side on the deck house. Is that right? - On the deck house, yes.
16601. (*The Attorney-General.*) Your Lordship will remember there is an emergency boat, then a collapsible, then one on the top and the same on the starboard side, and that makes the four Englehardt collapsibles. (*To the Witness.*) That one which was on the port side you got down from the deck-house on to the boat deck, as we call it, and then the water washed it off? - Yes.
16602. And washed you off? - Yes. The last I saw of Mr. Phillips he was standing on the deck-house.

16603. (*The Attorney-General.*) My learned friend reminds me, my Lord, that this is dealt with by Mr. Lightoller, at page 318, Question 14035, and this is what he said about it: "I called for men to go up on the deck of the quarters for the collapsible boat up there. The afterend of the boat was underneath the funnel guy. I told them to swing the afterend up. There was no time to open her up and cut the lashings adrift. Hemming was the man with me there" - (we are to call Hemming) - "and they then swung her round over the edge of the coamings to the upper deck, and let her down on to the boat deck. That is the last I saw of her for a little while." (*To the Witness.*) You do not recollect in such detail, I understand? - No.
16604. You told us the collapsible boat capsized. Did you get on to the collapsible boat? - I swam away from it.
16605. Why? - I do not know.
16606. Then what happened to you? - I joined it again later on, three-quarters of an hour to an hour I should estimate, and I climbed on top of it.
16607. You got back again, or, at any rate, you got to the same collapsible boat you say three-quarters of an hour to an hour afterwards? - I should estimate the time to be that. 16608. (*The Commissioner.*) Had you a lifebelt on? - Yes.

*(After a short adjournment.)*

*The Solicitor-General:* My Lord, the Attorney-General has been called away. Perhaps your Lordship will allow me to finish the witness?

*The Commissioner:* Yes.

16609. (*The Solicitor-General - To the Witness.*) I think you had just got to the point when you found yourself in the water? - Yes.
16610. Tell us what it was that happened to you? - I swam away from the "Titanic," saw the "Titanic" go down, and climbed on top of the collapsible boat for the second time, was picked up from there by the "Titanic's" lifeboat, and taken on board the "Carpathia."
16611. I want to imitate your own brevity about it as far as I can; but did you get on to the collapsible boat at once, or were you in the water for some little time? - I was in the water for some little time.
16612. Do you mind telling us about it? - I was in the water, I should estimate, nearly three-quarters of an hour. It may have been more. It was some time after the "Titanic" sank.
16613. I only want you to tell us about it. I have looked up your evidence in America. Did you find yourself at the under-side of the collapsible boat? - I was on the under-side of the boat, yes.
16614. I want you to tell us about it? - I was on the underside of the boat. After I had been there two or three seconds I cleared myself and swam away from it.
16615. The collapsible boat is a flat kind of thing like a raft? - Yes.
16616. You mean, you found yourself on the underside of that? - Yes.
16617. (*The Commissioner.*) In the water? - Yes.

16618. Knocking your head against the bottom of it? - I was upside down myself. I was lying on my back.

**Page 390**

16619. (*The Solicitor-General.*) You were lying on your back, and found yourself on the underside of this raft? - Yes.

16620. Was there an air space between the underside of that and the top of the water? - I could not find it.

16621. Then you were in the water? - Yes.

16622. (*The Commissioner.*) You cannot have been very long there? - Oh, no.

16623. You must have got out of that position? - Yes, I did.

*The Commissioner:* What is this material to?

16624. (*The Solicitor-General.*) It is not very material except that one likes to be satisfied we have got hold of the same gentleman who gave evidence in America. I read here: "You remained under the boat how long?" and you are recorded as giving an answer: "I should say about three-quarters of an hour or half" Is that right? - No. Senator Smith pressed that question, and I could not give him any idea, he said: "How long did it seem?" and I said: "It seemed a life time."

16625. The next question is "Was there a breathing space under the boat when it was turned over in that way?" and you are recorded as having answered "Yes, Sir." Did you mean, no? - No, I do not think I said anything like that.

16626. "So that you got away from it as quickly as you could? - (A.) Yes, Sir. (Q.) Then you got out of it and got on it. At any rate, there seems to be some confusion. Now, going back a minute or two to the practice - supposing a message comes to the Marconi room for the Captain, and it is heard, taken down, I suppose, by either you or Phillips. Do you see? - Yes.

16627. Just tell us what happens; what would you do in a case like that? - In a case like that I should take it along myself to the Captain. 16628. What is it you would take along? - The message.

16629. Well, I suppose it is a piece of paper? - Yes, a piece of paper. It would be enclosed in an envelope.

16630. Would it be enclosed in an envelope? - Yes. 16631. Then there is not any ship's messenger or boy who does this; you do it yourself? - Well, you can have one, but by the time you have rung for him to come up, and he has come up, you could have taken it yourself and be back again.

16632. (*The Commissioner.*) You are close to him? - We are close to the Captain on the "Titanic."

16633. (*The Solicitor-General.*) And would it be part of the duty of you or Phillips, as the case may be, to get such messages delivered? - Yes.

16634. If the message is addressed to the Captain, is it your duty to give it to him personally, or where do you put it, or what do you do with it? - It is our duty to ascertain somehow or other, that the message is delivered to the Captain to give it to a responsible man - the Captain's steward - or take it ourselves.

16635. I think you told the Attorney-General that there had been a number of messages during the voyage, of different sorts, for the Captain? Is that so? - Yes.
16636. As far as you know, were those messages delivered? - Yes.
16637. As far as they came, when you were on duty, did you deliver them? - I delivered them myself. I delivered several that came when Phillips was on duty.
16638. Are these messages that came to the ship for the Captain paid for message by message, or are they included in some rate? - Some of them may be paid for; they may be messages from passengers on other ships; they may be Master's service messages, or they may be franked messages from the office, or from the Captain of another ship to our Captain.
16639. Let us take the Master's service messages - we have heard of them? - They deal with the navigation of the ship, and anything relating to the shipping company.
16640. Are those paid for message by message? - No, they are free between ship and ship.
16641. And supposing it was the other way about - supposing Captain Smith was sending a message which was a Master's service message to another ship, would that be paid for, or does that go free? - That is likewise free.
16642. Now let us take the messages for passengers? - If Captain Smith was sending a message to passenger it would go free of charge, because the Marconi Company allow the Captain and the officers of the ship a grant of so many words free of charge. 16643. It is my fault; I did not quite mean that. You had passengers on board, I suppose who wanted to send messages? - Yes.
16644. Now, when they want to send a message what is done? Is it written down, or how does it happen? - The passenger goes to the purser's office, is handed a form, and writes down his telegram, and the purser charges him for it, and, incidentally, it works back to the Marconi Company.
16645. (*The Commissioner.*) And the money is paid how? - To the purser on the majority of ships.
16646. And does the purser account to the Marconi Company for the amount of money at the end of the voyage? - Yes. In the case of the "Titanic" the message was sent up by a pneumatic tube to our office.
16647. (*The Solicitor-General.*) Sent up by pneumatic tube from the purser's office to you? - Yes. Here was a ship going to America with a number of people on board, some of them Americans; can you tell us by the time you got into touch with the mainland, with Cape Race, had you got an accumulation of messages waiting to be sent to America?
16648. (*The Commissioner.*) He told us that, you know?  
*The Witness:* I had a very large accumulation.
16649. (*The Commissioner - To the Witness.*) Phillips worked them off. How are you paid? - I am paid by the Marconi Company.
16650. Yes. I did not mean that, but are you paid a fixed salary or according to the number of messages? - We are paid a fixed salary.
16651. Your pay does not depend upon the number of messages sent? - No.
16652. Do you know how you are on the articles of the ship? - Yes.

16653. What does the ship pay you? - Is a month in some ships; in the White Star Line I received a fixed salary.

16654. How much did you receive from the White Star Company? - I have not received anything.

16655. But how much were you to receive? - I could not say; I think it was £ 2 5s. a month.

*The Solicitor-General:* I have it here. As you said, you are on the articles of the ship's company. What I have here is the office copy, which is forwarded to the Registrar-General of Seamen, and I see here, "H. S. Bride." That is you, is it not? - [No Answer.] 16656. "Aged" - I cannot read it. What is your age? - 22.

16657. "London," and then there is an address given.

16658. (*The Commissioner.*) While you are on the question of age, will you tell me what age Phillips was? - He was somewhere between 24 and 25, I believe.

16659. (*The Solicitor-General.*) Phillips is entered here as 24. (*To the Witness.*) Now, "Bride, London," I cannot read what it says about the name and official number and the port she belonged to - that is your last ship, I suppose - what was it? - The "Anselm."

16660. Yes, that is it, and you are written down as "Telegraphist"? - Yes.

16661. £2 2s. 6d. a month. I suppose you are paid a salary by the Marconi Company? - Yes.

16662. (*The Commissioner.*) What salary do you get from the Marconi Company? - £4 a month.

*The Solicitor-General:* We deliberately refrained from asking Mr. Turnbull, the Marconi gentleman, the details about the agreement with the White Star because he was not prepared with the documents, and we thought it would be better to recall him on that part of the case so that we will not pursue it.

## Page 391

16663. I think you stated it was about 3 o'clock in the afternoon on this Sunday when you heard the "Californian" message? - I said 5. 16664. Five, you said? - Yes.

16665. I thought you said 3, but you say it was 5 o'clock by ship's time? - Yes, between 5 and half-past.

16666. You knew it was an ice message? - Yes.

16667. I think you stated to the Attorney-General that you were engaged in adding up your accounts? - Yes.

16668. And then you went on adding up your accounts, and paid no attention to this message? - No.

16669. Then some time afterwards, I forget whether you gave us the time, you happened to hear it repeated? - Yes, that is correct.

16670. Then you had not written it down when you heard it the first time? - No.

16671. You knew it was a message to the "Titanic"? - Yes. 16672. Reporting ice? - Yes.

16673. You did not write it down? - No.

16674. You took no notice of it at all, but went on adding up your accounts? - Yes.
16675. Then, if you had not happened to hear that message repeated to another ship nothing would ever have been heard of that message? - Yes, it would.
16676. Well, forgive me. It gave the latitude and longitude. You had written nothing down when the message first came? - No.
16677. Do you suggest that without writing anything down, and being busy with accounts, you can trust yourself to carry in your head the latitude and longitude which had been given in the message? - No, I had read the text of the message, which mentioned three large bergs. I had not got the latitude and longitude, and I should have called the "Californian" if she had not transmitted it at a very short period afterwards, and asked her for the latitude and longitude.
16678. The latitude and longitude you could not have carried in your head? - No. 16679. The only way of getting that message would have been to call the "Californian" afterwards to get the latitude and longitude? - Yes.
16680. You happened to hear it repeated, did you say, a quarter of an hour or twenty minutes afterwards? - Yes.
16681. Are you sure about the time? - Yes.
16682. Had you finished your accounts by that time? - No.
16683. Were you still on your accounts? - Yes.
- The Commissioner:* What are those accounts?
16684. (*Sir Robert Finlay.*) What were you doing? - I was writing up an abstract of all the telegrams sent the day before.
- The Solicitor-General:* That is the *procès-verbal*.
16685. (*Sir Robert Finlay - To the Witness.*) Is that what has been called the *procès-verbal*? - No, the telegrams; it gives the place where the telegram originated from and where it is going to, the station it is sent to; and the cost of the telegram, and the costs of the coast station, our charge, and everybody else's charge, one by one.
16686. Then when you heard it repeated you recognised it as being the message which had been sent to your ship? - Yes.
16687. And wrote it down and took it on to the bridge? - Yes.
16688. Now with regard to the payment of service messages, that, I understand you to say, is covered by the arrangement between the steamship company and the Marconi Company? - We are told to make no charge for that.
16689. No charge is made for that. Then all such messages as were sent on to Cape Race, trade and private messages, would be an extra payment to the Marconi Company - to your company? - Messages that were sent on to Cape Race at the request of passengers would be paid messages; messages sent to Cape Race on behalf of the company would be free messages.
16690. What I said was, trade and private messages sent on to Cape Race would be paid for extra? - Yes.
16691. They would not be included in the service messages? - No.
16692. I think you used the expression - I am not sure whether his Lordship caught it - that there was a very large accumulation of those messages? - Yes.

*The Commissioner:* That is the accumulation Phillips cleared off while the witness was asleep?

16693. (*Sir Robert Finlay.*) How long was Phillips occupied in clearing off those arrears of messages for Cape Race? He began at 8.30? - Yes.

16694. When did he finish? - I should estimate he could not have finished before nine anyhow from the batch he had, but I could not give you any idea as to when he did actually finish.

16695. I think you saw Phillips about 10 minutes before the collision, did you not? - No; after the collision.

16696. I want to ask you about what you said in America before the Committee of the Senate on this point. Were you asked this question, and did you give this answer: "Were you working with Cape Race, or was Phillips, to your knowledge, just before the collision with the iceberg? - (A.) As far as I recollect, Phillips had finished working with Cape Race 10 minutes before the collision with the iceberg. He made mention of the fact when I turned out." Did you say that, and is that true? - I said that, but I could not remember what he said now.

16697. But did you say that? - I said that to Senator Smith, but I could not recollect now what Phillips told me after I had turned out.

16698. Was what you said to Senator Smith true? - Well, I was on oath at the time.

16699. I presume what you said was true? - Yes.

16700. (*The Commissioner.*) Then what you stated just now must be a mistake? - What was that?

16701. That this man had finished his work about 9 o'clock. - I said he could not have finished sending the batch of telegrams before 9. At the same time Cape Race would have a number of telegrams to transmit to him as was proved by the "Californian" The "Californian" said she heard Cape Race sending him telegrams.

16702. (*Sir Robert Finlay.*) You know Phillips was engaged in communicating with Cape Race right on from half-past 8 to 10 minutes before the collision? - Apparently so, yes.

16703. Well, have you any doubt about it? - No. I do not think so. I am judging by the amount of work that was got through.

16704. He was engaged during these hours from half-past 8 to 10 minutes before the collision in communicating with Cape Race these trade and private messages? - Yes. 16705. We shall be able to get all those messages, I suppose, from the Marconi Company? - Yes.

16706. There is one other point. You told us that the ship to which you overheard the message repeated from the "Californian" was the "Baltic"? - Yes.

16707. Have you any reason to doubt the correctness of what you said? - I have since; but at the time I was sure of it, as far as my memory served me.

16708. Still, as far as your memory serves you, it was the "Baltic"? - Yes.

*The Commissioner:* Do you want to ask anything more, Mr. Solicitor?

*The Solicitor-General:* There is one thing I am not quite clear about. I understand my friend is going to recall these two officers. It does not arise in any way out of

cross-examination. It is the message which he does know of from the "Californian." I do not myself quite follow at present what it was that he did with it, according to his own recollection, and it might be important.

**Page 392**

*The Commissioner:* He took it to the bridge and gave it to an officer.

16709. (*The Solicitor-General.*) That means he wrote it down on a piece of paper?

*The Witness:* Yes.

16710. (*The Commissioner.*) And put it in an envelope? - No, that particular message was not put in an envelope.

*The Solicitor-General:* May I ask about it?

*The Commissioner:* Yes.

**Re-examined by the SOLICITOR-GENERAL.**

16711. This is the message from the "Californian"? - Yes.

16712. And it refers to the three icebergs, and gave the latitude and longitude? - Yes.

16713. Did you personally hear the message? - Yes.

16714. Did you write it down? - Yes.

*The Commissioner:* Which message are you now talking of?

*The Solicitor-General:* The only one that he says he remembers - the one from the "Californian," which says they had passed three icebergs and gave the latitude and longitude.

16715. (*The Commissioner.*) I understood he got that twice. (*To the Witness.*) Is not that so? - No, the first time I did not take it down.

16716. Yes, I know, but you received it. It came to your ears? - It came to my ears, yes.

16717. That is what I call receiving it? - I took no notice of it.

16718. And because you were busy you took no notice of it? - Yes.

16719. And that message contained, or there was comprised in it, the latitude and longitude where the ice was supposed to have been seen? - Yes.

16720. You took no notice of that message, but went on with your accounts? - Yes.

16721. For something like an hour and a half? - No.

16722. How long? - Between a quarter of an hour and 20 minutes.

16723. I thought it was an hour and 20 minutes? - No.

16724. And then you got it again? - Yes.

16725. And then you took it down and did not put it in an envelope? - No.

16726. But took it to the bridge and gave it to an officer on the bridge? - Yes. 16727.

The only difference is that I thought there was an interval of more than an hour between getting the first message and getting the second message? - No.

16728. (*The Solicitor-General.*) I am going to ask your Lordship to allow me to test it, because it is important to get the time. (*To the Witness.*) Take this in your hand. You will see it is a "Californian" *procès-verbal*. You are familiar with that sort of

document (*Handing same to the Witness.*) Do you see the page before you is the page for the 14th April? - Yes.

16729. And is it the "Californian" *procès-verbal*? - Yes.

16730. Did you see an entry about exchanging Trs. with the "Titanic"? - Yes. 16731. What is the time? - Five-twenty.

16732. Is that New York time? - Yes.

16733. If it is 5.20 New York time, it would be later according to your ship's time, would it not? - Yes, ship's time.

*The Commissioner:* It would be about 7.20.

16734. (*The Solicitor-General.*) Yes. (*To the Witness.*) Do you know Mr. Evans? - Yes.

16735. That is the operator on the "Californian"? - Yes.

16736. He has given evidence, you know, and he says at half-past 7, ship's time, there or thereabouts, the "Titanic" stated that they had got a message about the ice, about the three icebergs; he puts that at half-past 7, you see. Now, Mr. Bride, does not that correspond with his entry 5.20 New York time? - [*No answer.*]

*The Commissioner:* Put it to him again.

*The Solicitor-General:* I do not wish to seem to be pressing him.

*The Commissioner:* No. It is because I do not want him to be bothered that I want you to put it to him again.

16737. (*The Solicitor-General.*) I put before you just now, and you have before you now, the *procès-verbal* of the "Californian"? - Yes, 5.20 Trs. with M.G.Y.

16738. Is not "M.G.Y." the "Titanic"? - "M.G.Y." is the "Titanic." It says on the top "New York time."

16739. And do you agree that 5.20 New York time would mean on your ship something like half-past 7? - Yes.

16740. And are not all those entries on that *procès-verbal* made in order of time line after line? - Yes.

16741. Just give us the time immediately in front of the one I called your attention to? - 5.5.

16742. That is 15 minutes before; what is the time immediately following the one I called your attention to? - 5.35.

16743. You have no doubt those entries were made at the time when each thing occurred? - I have no doubt at all.

16744. Does not that show that there were messages being exchanged between the "Titanic" and the "Californian" at 5.20? - Yes.

Perhaps you had better look at the message which at that time was being sent by the "Californian" about 7. Is not that better, my Lord? (*To the Witness.*) Just see if you can help us now about it (*Handing message to the Witness.*)

*The Commissioner:* There is no record in the *procès-verbal* of the "Californian" of two messages having been despatched.

*The Solicitor-General:* That is right, my Lord. I will have it looked at.

*The Commissioner:* There is no record of two messages having been sent.

16745. (*The Solicitor-General.*) No, my Lord, I am told not. (*To the Witness.*) Have you before you now the “Californian’s” record of the message about ice? - Yes.

16746. Just look at it, because I only want to get it clear. That message that you have before you now, what time, New York time, is it sent off? - Five-thirty-five.

16747. That corresponds exactly. And is that a message about “latitude, 42 deg. 3 min. N., longitude, 49 deg. 9 min. W. Three large bergs five miles southward of us. Regards. - Lord”? - Yes.

16748. That actual message is being sent to the “Antillian,” I think? - Yes. 16749. So far as regards the language of that message, the latitude and longitude and the three bergs, does it resemble the one which you heard? - Yes.

16750. Now just think? - With the exception that I cannot recollect the “regards” or the signature or any name or address.

16751. You probably would not remember the address or the signature? - No. 16752. But as regards latitude and longitude and three bergs, that is the same sort of thing? - Yes.

16753. Now that is sent off between five and six, New York time. Do not you think that the message you heard must have been heard by you between five and six, New York time? - No. To the best of my recollection it was between five and six, ship’s time.

16754. If there was a message sent from the “Californian” to the “Titanic” between five and six, ship’s time, that would be about three o’clock, New York time? - Yes. 16755. Now will you look in the *procès-verbal* of the “Californian,” and see whether there is any reference to any message sent between three and four, New York time, to the “Titanic”? - No, because the first signals he has down with the “Titanic” are at 5.20, when he exchanges Trs.

16756. That is the one I called your attention to.

### Page 393

Does not exchanging Tr.’s mean that he has then got into communication with the “Titanic” for the first time? - Yes.

That is what it means. It starts the communication?

*The Commissioner:* Does it all come to this, that his own memory is quite defective about it?

16757. (*The Solicitor-General.*) Assuming those records are right, you must be making a mistake about the time, must you not? - I do not think I am making any mistake about the time.

16758. But assuming those records are right? - Assuming those records are right, yes.

16759. Assuming they are right, you are making a mistake? - Yes.

*Sir Robert Finlay:* It is a matter of argument. Then, my Lord, I desire to recall Mr. Lightoller and Mr. Boxhall.

16760. (*The Commissioner.*) I want to ask this witness another question. (*To the Witness.*) The only ice message that you heard anything at all about was the ice message from the “Californian”? - That was the only one.

16761. Now, be very careful. Is it the only one that you heard anything at all about while you were on the "Titanic"? - The only one.
16762. Had you any conversation with Phillips about ice messages? - I cannot recall any.
16763. Can you recall any conversation with Phillips in which he mentioned an ice message having been received by him? - No.
16764. Then, so far as you know from your own knowledge, or from conversation which you had with anybody on board the ship, there was no ice message received, except the "Californian's"? - As far as I am concerned, that was the only one.
16765. The only one you either know of or heard of? - Yes.
16766. Do you remember the Captain coming to tell you and Phillips to clear out? - Yes.
16767. Can you tell us what time of night that was? - No.
16768. You have a clock in your room, have you not? - We have two.
16769. You have a clock with the ship's time? - Yes.
16770. Have you any recollection of having seen or looked at the clock when you were told to clear out? - I had been looking at the clock whilst I was getting my P.V. entered up, my *procès-verbal*, but cannot recall any of the times now.
16771. You cannot tell us when it was that the Captain came in and told you to clear out? - No.

*Mr. Lewis:* May I ask a question, my Lord?

*The Commissioner:* Yes.

16772. (*Sir Robert Finlay.*) May I ask the witness one question? (*To the Witness.*) When you are entering up the *procès-verbal* was there any reference to any other ice? - I am talking of the time when we were calling for assistance.

### **Examined by Mr. LEWIS.**

16773. When you returned to the Marconi room on the last occasion did anything unusual occur? - We had a lady inside there who was in a fainting condition, sitting down in a chair.
16774. Have you made a statement at any time that you found Mr. Phillips being attacked or his lifebelt being removed? - Someone was taking the lifebelt off Phillips when I left the cabin.
16775. Do I understand you to state that you thought it was a stoker who was taking this lifebelt off Mr. Phillips? - I presumed from the appearance of the man that he was someone in that line of business.
16776. This would have been a few minutes before you left the room? - Yes.
16777. Was he dressed in stoker's gear? - Yes.
16778. Do I understand that you hit him, or what? - Well, we stopped him from taking the lifebelt off.
16779. "We," you say? - Yes.
16780. I understood the report was that Mr. Phillips was engaged at this time with his work? - Yes.
16781. Sending messages; and that you forced this man away? - Well, I forced the man away and it attracted Mr. Phillips's attention, and he came and assisted me.

16782. Is your recollection of this matter very clear? - It is fairly clear.
16783. Would you know the man again if you saw him? - I am not likely to see him.
16784. You are supposed to have hit him? - Well, I held him and Mr. Phillips hit him.
16785. Mr. Phillips hit him? - Yes.
16786. That is the difference between what you say and what I read. You are absolutely positive on this question? - I am positive on it, yes.
16787. Now, with regard to the installation, did you have any spare transmitters on board? - We had a standard 5 kilowatt set, as supplied by the Marconi Company, and we had emergency gear also.
16788. Was that out of gear at any time? - We had had some trouble with it the night before.
16789. For how long was it out of gear? - For five and a half to six hours. 16790. That would have been on the Saturday? - Yes.
16791. Late on Saturday? - From 11 o'clock Friday night till half-past four or five Saturday morning.
16792. Nothing occurred to it while you were on watch; I know you were off and did not go on watch again till 12. But during your watch was there any defect? - What time was this? When are you talking about?
16793. On the Sunday? - There was nothing the matter with the apparatus on the Sunday.
16794. When you reported at 12, you did not hear from Mr. Phillips whether there had been any defect? - Apparently there had not been considering the traffic he had got through.

**Examined by Mr. HARBINSON.**

16795. (*Mr. Harbinson.*) I should like to ask two questions, if I may. (*To the Witness.*) Do you remember how long it was after the collision when you learned that the "Carpathia" was coming to your assistance? - The "Carpathia" was the second boat to answer our call.
16796. Can you remember how long that was after the collision? - No, I could not tell you; it was within a very short space of time after we sent out our first distress signal.
16797. And you took that message to the Captain, you told us? - Yes.
16798. Now, do you know if the Captain communicated the substance of your message to any of the officers or to the crew? - I passed the word myself, as I went to find the Captain.
16799. To whom did you pass it? - To anybody whom I happened to go close by.
16800. Did you pass it to any of the officers? - Not to my knowledge.
16801. But you gave it out that the "Carpathia" was coming to your assistance? - Yes.

**(*The Witness withdrew.*)**

*Sir Robert Finlay:* Now I want to recall Mr. Lightoller.

**CHARLES HERBERT LIGHTOLLER, Recalled.**

**Further examined by Sir ROBERT FINLAY.**

16802. You have heard that a message was sent, according to the evidence, to the "Titanic," for transmission to Cape Race, from the "Amerika"? - Yes.
16803. Which would reach the "Titanic" about 2 p.m.? - Yes.
16804. You know the nature of that message? - I heard it, yes.
16805. And that a message is said to have been sent from the "Mesaba" which could not reach the "Titanic" before about 10 p.m.? - Yes.
16806. You have heard that? - Yes, I have heard of that also.
16807. Did you ever hear of any such messages? - Nothing whatever. 16808. What was the course of business with regard to messages which are communicated by the Marconi operators to the Captain or officers? - It is customary for the message to be sent direct to the bridge. If addressed "The Captain," or "Captain Smith," it is delivered to Captain Smith personally, if he was in the quarters or about the bridge. If Captain Smith is not immediately get-at-able, if not in his room or on the bridge, it is then delivered to the senior officer of the watch. Captain Smith's instructions were to open all telegrams and act on your own discretion.
16809. And are you positive that you never heard anything of either of those telegrams? - Absolutely positive.
16810. What were you doing during the day; just recapitulate in this connection what you were doing. In the afternoon, about 2 o'clock, where would you be? - I was below.
16811. When did you come up? - At 6 o'clock.
16812. And from 6? - From 6 till 10, with the exception of half an hour for dinner.
16813. You were on the bridge? - I was.
16814. And nothing was said by anyone about such telegrams? - There was no telegram received by me nor did I hear of any telegram.
16815. Were you in communication with the Captain and with other officers during that time? - Between six and ten?
16816. Yes? - I was in communication with the Chief Officer when I relieved him, and with the First Officer when I was relieved by him for dinner, and with the Commander when he was on the bridge, as well as junior officers.
16817. How often, and for how long, did you see the Commander on the bridge? - He came on the bridge about five minutes to 9, and remained with me till about twenty or twenty-five past nine.
16818. A message such as that from the "Mesaba" would be one, of course, of great importance? - I have no doubt it would have been immediately communicated to me if it referred to pack ice, as I believe it does.

*The Solicitor-General:* May I ask him a question or two about it?

**Examined by the SOLICITOR-GENERAL.**

16819. How many messages about ice on the 14th have you any knowledge of? - I have a distinct recollection of the message that the Commander brought on the bridge to me, and which I mentioned as having read while he held it in his hands.

16820. You told us that was about a quarter to one? - Yes.

*The Solicitor-General:* I will give your Lordship the reference, if I may. That will be found in this witness's evidence at page 302, Question 13466. Perhaps I may read two or three before that. Your Lordship had asked: "What time was it?" and I had said: "So far, my Lord, he has said it was between 12.30 and 1 in the middle of the day"; and then I said to Mr. Lightoller: "(13460.) Can you fix at all as between those times? - (A.) About 12.45 as near as I can remember. (Q.) Very well; about a quarter to 1? - (A.) Yes. (*Mr. Laing.*) I have the wording of it," and he handed to me the wording of the "Caronia" message. I read that to the witness. Then I said at Question 13463: "You had not heard anything about that before you went off your watch at 10 o'clock? - (A.) No. (Q.) Can you help us? Would 9.44 a.m. "Caronia's" time coming from New York be likely to be later than your 10 o'clock watch coming to an end? You see, you went off duty at 10? - (A.) Yes. (*The Commissioner.*) Did Captain Smith tell you when he had received the Marconigram? - (A.) No, my Lord. (*The Solicitor-General.*) And the first you knew of it was when Captain Smith showed it to you at about a quarter to one? - (A.) Yes. (Q.) So far as your knowledge goes, is that the first information as to ice which you had heard of as being received by the "Titanic"? - (A.) That is the first I have any recollection of." That is that one.

*The Commissioner:* Where is that last question?

16821. (*The Solicitor-General.*) The very bottom question on page 302. (*To the Witness.*) That is the "Caronia's" message, so that we may fairly treat that as identified and brought to your notice in that way? - Yes.

16822. Now apart from that message, were not other messages, in your belief, received to the knowledge of the officers about ice on the 14th? - To my belief there were perhaps some messages, but I can give no information and I cannot recollect with any degree of distinctness having seen them.

16823. I will tell you why I put the question, and I think my Lord will remember it. I put it to you for this reason. I asked you if you recollected when you were here the other day, whether Mr. Moody, when he calculated that you would reach the ice at 11 p.m., had, you thought, used the "Caronia" message, and you told me your impression was he had used another message; is not that so? - Precisely.

16824. That is in the middle of page 304, Question 13531. You will see the answer: "I directed the Sixth Officer to let me know at what time we should reach the vicinity of the ice. The junior officer reported to me, "About 11 o'clock." (Q.) Do you recollect which of the junior officers it was? - (A.) Yes, Mr. Moody, the Sixth. (Q.) That would involve his making some calculations, of course? - (A.) Yes. (Q.) Had this Marconigram about the ice, with the meridians on it, been put up; was it on any notice board, or anything of the sort? - (A.) That I could not say with any degree of certainty. Most probably, in fact very probably, almost

certainly, it would be placed on the notice board for that purpose in the chart room. (Q.) At any rate, when you gave Mr. Moody those directions he had the material to work on? - (A.) Exactly. (Q.) And he calculated and told you about 11 o'clock you would be near the ice? - (A.) Yes." Then the next question and answer: "That is to say an hour after your watch finished? - (A.) Yes. I might say, as a matter of fact, I have come to the conclusion that Mr. Moody did not take the same Marconigram which Captain Smith had shown me on the bridge, because, on running it up just mentally, I came to the conclusion that we should be to the ice before 11 o'clock by the Marconigram that I saw." Then your Lordship says: "In your opinion, when, in point of fact, would you have reached the vicinity of the ice? - (A.) I roughly figured out about half-past 9. (Q.) Then had Moody made a mistake? - (A.) I should not say a mistake, only he probably had not noticed the 49° wireless" - that is the "Caronia" one you had seen? - Yes.

### Page 395

16825. "There may have been others, and he may have made his calculations from one of the other Marconigrams. (Q.) Do you know which other Marconigram he would have to work from? - (A.) No, my Lord, I have no distinct recollection of any other Marconigrams. (Q.) Because it is suggested to me that there was no Marconigram which would indicate arrival at the ice-field at 11 o'clock? - (A.) Well, my Lord, as far as my recollection carries me, Mr. Moody told me 11, and I came to that conclusion that he had probably used some other Marconigram"? - Exactly.

16826. As a matter of fact, if one takes the Marconigram, for instance, from the "Baltic," which we proved today, it would give a later time than 9.30, and it would bring you to something like 11 o'clock. Have you noticed that? - No, I have not. I think it will be found so.

*Sir Robert Finlay:* Which message?

16827. (*The Solicitor-General.*) I am calling his attention to the circumstances. The "Caronia" message mentioned your getting to ice as soon as you got to the 49th meridian? - Exactly.

16828. I do not like to make a suggestion unless the Admiral thinks it is correct, but I think that is substantially so. (*To the Witness.*) You see what I mean? - Yes.

16829. And your impression at the time was not that Mr. Moody had made a mistake in his calculations, but that he had used another Marconigram? - Exactly. You will quite understand that all I am quoting is purely from memory. I am trying as much as I possibly can, of course, to assist, and it is just these mere facts as I recollect them with regard to 11 o'clock. There is nothing to identify 11 o'clock in my mind, merely what I recollect, and also with regard to the Marconigrams. I put that down as the most feasible explanation of the 11 o'clock, but I cannot say, of course, that Mr. Moody actually had seen other Marconigrams.

16830. Oh, no; you have been perfectly fair and candid about it, as far as I am concerned, if I may say so. You did not ask Mr. Moody to make the calculation again or check it? - No.

16831. You accepted his statement that his calculation showed 11 o'clock? - Yes.

16832. I think one also ought to put it from this point of view. Let me take these telegrams in order and see which of them would come in your watch, as far as one can judge. Your watch was from 6 to 10 a.m. and 6 to 10 p.m.? - Exactly.

16833. You also, I think, relieved Mr. Murdoch, you told us, between half-past 12 and 1, at lunchtime? - Yes.

16834. And during your evening watch, from six to ten you were off for a certain time to dinner? - Exactly.

16835. Now those are the times for which you are responsible. The "Caronia" message by your ship's time would get to your ship about 11 o'clock.

*The Commissioner:* Ship's time?

16836. (*The Solicitor-General.*) Yes. (*To the Witness.*) Or something of the sort? - Yes.

16837. It was acknowledged at 9.44, New York time, and, adding two hours, will make it between 11 and 12? - Yes.

16838. You would have finished your morning watch by then? - I should. 16839. And you would be off duty? - Yes. I may incidentally mention the fact that I should be on the bridge between a quarter to 12 and a minute or two past 12 taking the noon position; I should be there with the Commander and the Chief and First Officers. 16840. But at any rate you did not hear anything of the "Caronia" message at that time?

- Nothing.

16841. You did hear of the "Caronia" message at about a quarter to one, when you were relieving Mr. Murdoch while he had lunch? - About that time, yes.

16842. The next message in order of time that is suggested is the "Amerika" message, which merely goes through the "Titanic"? - Yes.

*The Solicitor-General:* And that would go through apparently about 2 o'clock? *Sir*

*Robert Finlay:* No; it ought to have been received about 2, but it could not go on till 8.30.

It would be put up with other messages and transmitted after 8.30 to Cape Race. *The Solicitor-General:* You are quite right. It would be in the custody of the Marconi room at some time about 2, and presumably would be kept until they got into communication with Cape Race.

*Sir Robert Finlay:* Yes.

16843. (*The Solicitor-General.*) When it arrived you were off duty. Assuming this evidence is right it would be in the Marconi room at 6 o'clock when you came on duty again? - Yes.

16844. You heard nothing of that? - Nothing.

16845. The next one is the message from the "Baltic" which, as I pointed out just now, would give the position of the ice at about 11 p.m.? - Yes.

16846. That message from the "Baltic" would get to your ship at about 1 o'clock? - I think so, 1 p.m.

16847. You would be off duty? - Yes.

16848. Do you observe that if you told Mr. Moody when you came on duty at 6 p.m. to calculate when he would meet ice, the "Baltic" message would be a later message in point of time than the "Caronia" message? - I see.
16849. Then the "Californian" message? - If I may interrupt you to make it a little clearer; when I gave Mr. Moody instructions (I think if I did not say it in my evidence, I ought to have done) I used words to the effect that would guide him to look for the earliest ice, to let me know at what time we should be up at the ice. He would naturally look at the easternmost.
16850. When you gave him instructions, as far as you knew there was only one ice message? - Yes.
16851. You did not know of two? - No.
16852. Then if I take the "Californian" message, it appears that that message passed at about half-past 7, ship's time. That is right, Sir Robert, I think.
- Sir Robert Finlay:* Yes. Of course, there is a conflict between the *procès-verbal* and the other witness.
16853. (*The Solicitor-General - To the Witness.*) You were on duty between 6 and 10? - Yes.
16854. So that that message, if it arrived at 7.30, would arrive during your evening watch? - Yes.
16855. But you are off duty at some time between 6 and 10, in order to get dinner? - Yes.
16856. What is the sort of time you are off duty? - Half-an-hour. I think that is 7.5 to 7.35, as near as I remember.
16857. And who took your place when you were off duty? - Mr. Murdoch, the First Officer. 16858. You knew nothing of the "Californian" message at all? - Nothing whatever. 16859. Then the last one, the "Mesaba" message, according to the evidence given, would reach your ship about 10 o'clock? - Yes.
16860. That is when you would be changing watch, and Mr. Murdoch would be taking your place? - Yes.
16861. (*The Commissioner.*) You told Mr. Moody you wanted him to ascertain the time when you would meet the most easterly of the ice. Was that so? - That is the impression I wished to convey, whether I actually used the word easterly I do not recollect, but he would naturally conclude that, I should judge.
16862. The information in the "Caronia's" telegram would indicate that the ice there referred to was considerably to the north of the track? - I believe so.
16863. Is it possible that Mr. Moody may have calculated the position of the ice given by the "Baltic's" telegram? - It is possible, but it is most probable that he would pay the greatest attention to the longitude regardless of the latitude.
16864. But if he did calculate according to the "Baltic's" telegram, he would ascertain the time at which the ice would be arrived at as 11 o'clock? - Quite so.
16865. And the "Baltic's" information was to the effect that ice was on the track? - A little to the north.
16866. (*The Solicitor-General.*) If your Lordship will turn to page 366, Mr. Lowe's evidence, you

will see why I think it well to put it to this gentleman. (*To the Witness.*) Let me tell you how the matter stands. You are on duty from 6 to 10 in the evening and about half-past seven according to the "Californian" witnesses, there was a message sent from the "Californian," of which you know nothing? - That is right.

16867. You, as a matter of fact, were off for dinner for half an hour from seven to halfpast? - Yes.

16868. I am referring to the questions beginning 15778. Did you see anything at all of a piece of paper, not in an envelope - a small piece of paper - a square chit of paper about 3 by 3 with the word "ice" on it any time between 6 and 8? - No.

16869. What would be meant by seeing a small piece of paper on the chart room table? Which room is it? - Leading out of the wheelhouse on the afterpart of the port side.

16870. It is the thing which is marked on my plan as the chart-house then? - Yes.

16871. Is there a table there? - There is.

16872. And supposing there is a message about ice and it cannot be given personally to the Captain, where would such a message be put? - It would not be put anywhere; it would be brought out on the bridge to the senior officer of the watch.

16873. Whoever he was? - Whoever he was.

16874. This little room, the chart-house, is immediately aft of the wheelhouse? - On the port side, yes.

16875. You heard nothing of that? - Nothing.

16876. And you were off for dinner for half an hour? - Yes.

16877. (*The Commissioner.*) Why would the piece of paper with the word "ice" upon it be placed there? - I may say I do not quite follow what you mean by the word "ice" unless you are alluding to a message written on a chit of paper.

16878. This is the evidence. He is asked on page 366, Question 15779: "You were on duty from 6 to 8? - (A.) I was. (Q.) Did you hear anything about any messages about ice?

- (A.) There was a chit on the chart room table with the word 'ice' on" - meaning "ice" on the piece of paper.

*The Solicitor-General:* Will your Lordship read the next two or three questions.

16879. (*The Commissioner.*) Yes. "You mean a little piece of paper with 'ice' written on it? - (A.) A square chit of paper about 3 by 3. (Q.) On the chart room table? - (A.) On our chart room table. (Q.) What is that, 'Our chart room table'? - (A.) The officers' chart room table, and the word 'ice' was written on top and then a position underneath. (Q.) Can you remember what the position was? - (A.) I cannot." What is this chart room table?

- It consists of the top of a chest of drawers. In those drawers are all the charts, necessarily big drawers, to contain the charts fully laid out, and also drawers for navigational books, instruction books, and so on.

16880. Would that chit of paper be placed there by somebody with the position marked upon it so that a chart might be consulted for the purpose of finding out where that ice was? - A track chart is always lying on that chart room table. I quite

understand what a chit of paper is. There are little pads, position pads, and deviation pads, and it is customary to tear off one of these chits and write on the back; and it would have been left on the chart room table, lying on the top of the chart.

16881. (*The Solicitor-General.*) Were you in Court here this morning when Mr. Bride gave evidence? - I was.
16882. Did you hear him say that the message heard from the "Californian" he wrote down on a bit of paper, but he did not put it in an envelope? - Yes.
16883. And if the message from the "Californian" came at half-past 7, then it would be on that watch of Mr. Lowe's that he is referring to here, 6 to 8? - Yes.
16884. (*The Commissioner.*) You knew nothing of that. Are these messages which come from the Marconi room written on chits of paper? - No, my Lord.
16885. They are on forms? - On proper telegraph forms. My explanation of that chit of paper would be that an officer has copied from some wireless telegram; he has noticed that there has been an ice-position on, and he has just scribbled down on a piece of paper "ice," and the position, and then has probably gone to the chart room, found the position, and marked it on the chart, and left the paper there, instead of crumpling it up and throwing it away; but I do not think that chit was of any importance, and I do not think it came from the Marconi room - except, I mean, as a copy of the wireless.
16886. (*The Solicitor-General.*) Do not say it is not of importance. When you say it had a position, you mean it stated probably the latitude and longitude? - Yes.
- Do you know what Mr. Lowe says he did about it. Just look at page 370. There is a question asked by Sir Robert Finlay: "(Q. 15984.) You saw this chit, the note about the ice on the table? - (A.) Yes. (Q.) Did you work it out? - (A.) I worked it out roughly. (Q.) You were on watch 6 to 8? - (A.) Yes. I ran this position through my mind, and worked it out mentally and found that the ship would not be within the ice region during my watch, that is from 6 to 8. (Q.) You do not recollect what the figures were? - (A.) I do not. (Q.) But that was the result you arrived at? - (A.) That was the result I arrived at."
- Sir Robert Finlay:* May I ask one question on that?

#### **Examined by Sir ROBERT FINLAY.**

16887. You have been asked about the instructions you gave as to working out the time when you would get to the ice? - Yes.
16888. About what time was it you gave those instructions? - Soon after I came on deck. That is, soon after 6 o'clock.
16889. And when did you get the report? - It was some time later, because they were working stars; probably shortly before 7 o'clock.
16890. That, of course, was long before any "Mesaba" message could, by any possibility, have reached the "Titanic"? - Yes, I believe so.
16891. You have heard the "Mesaba" message, of course? - Yes.
16892. Is that a message which, if the Captain or any officer had got, he could have failed to communicate to his colleagues? - I think had that message been delivered, even

- to the Captain, he would immediately have brought the message out personally to the bridge; he would not even have sent it out, and he would have seen it was communicated to all the senior officers, as well as distinctly marked on the chart. It was of the utmost importance.
16893. And of a somewhat startling character? - Extremely so.
16894. The Captain, I think you said, had been on the bridge at 9.30? - From 5 minutes to 9 till 20 or 25 minutes past.
16895. (*The Commissioner.*) Will you tell me what messages, to begin with, about ice you saw on the 14th? - The one that the Commander brought on to the bridge in his own hands to me shortly after midday.
16896. Is that the "Caronia"? - I believe that is the "Caronia's" message. 16897. Now, did you see any other message about ice? - I cannot give any distinct recollection of having seen any other. You will quite understand we are in and out of the chart room, and I may have seen notices on the board. If they were there I should read them.
16898. I am talking about messages from the Marconi room. Would they be pinned up on a board? - Yes.
16899. You do not remember seeing any other than the "Caronia's"? - That is what I am explaining. If they were pinned up on this board and I

**Page 397**

- was in the chart room - which we are frequently - I should notice them, make a mental note of the position of the ice, take the most easterly position, and then disregard the rest.
16900. That is to enable you to ascertain how soon you may expect to reach the ice? - Exactly.
16901. Can you tell me what other ice message besides the "Caronia's" you heard of? - I heard of none that I remember.
16902. Did you hear any conversation about any other ice message? - None.
16903. You did not hear anything about the "Californian's" ice message? - Of no message except that one I spoke of from 49 deg., to 51 deg.
16904. I daresay you have in your mind the messages which have been referred to? - Yes.
16905. The ice mentioned in the "Caronia's" message was the easternmost ice of all, was it not? - I believe so.
16906. Now, it is suggested that as you would want to know the most easterly ice you may have disregarded the other messages which indicated ice further west, and may only have bent your mind upon the most easterly ice. Do you think that is so? - Exactly, my Lord, with this reservation that had there been any mention of pack ice there is no doubt I should have fixed that telegram in my mind.

*(The Witness withdrew.)*

**JOSEPH GROVE BOXALL, Recalled.**

**Further examined by Sir ROBERT FINLAY.**

16907. You gave evidence the other day. Were you present when Mr. Lowe gave his evidence after you had been called? - Not all the time.
16908. Did you hear him speak about this chit on the chart room table? - No, I have not heard it till just now.
16909. You have heard of it today? - Yes, just this moment.
16910. Had you read his evidence? - No.
16911. Is it only today, just now, that you have got to know about the chit, with "ice" and the position marked? - That is all that I have heard of it, just this moment. 16912. Can you tell us anything about that chit? - Yes. The mentioning of it has refreshed my memory, and I remember writing it out.
16913. (*The Commissioner.*) You wrote it? - Yes, and it is the position of the "Caronia's" ice. I copied it off the notice board to save taking the telegram itself down. I copied it on a chit and took it into the Captain's chart room, and put it on the chart, and that is the ice that I must have put down between 4 and 6 in the evening.
16914. (*Sir Robert Finlay.*) You have heard, I daresay, of the message sent from the "Amerika" to the "Titanic" for transmission to Cape Race? - Only since I have read the evidence - that is all I had not heard of it before.
16915. Did you ever hear anything of any such message? - Not on board the ship. 16916. It is only in the evidence, since that you have heard of it? - Yes, I think reading over some of the Washington evidence or some of the telegrams that were read over in Washington was the first I heard of it.
16917. The evidence in America? - Yes.
16918. Now, with regard to the "Mesaba" message, you were on the 8 to 12 watch, I think? - Yes.
16919. Did any message from the "Mesaba" ever come to your knowledge, or did you ever hear anything about it? - I never heard anything of the "Mesaba's" message until the night we arrived in New York on the "Carpathia," and someone who had been talking to the Captain of the "Mesaba" had heard him say, or he told them that his ship had warned us that night; that was the first of the "Mesaba's" message that I heard.
16920. The "Mesaba's" message would have reached you about 10 o'clock, if it was transmitted to the "Titanic"? - Yes.
16921. You were on duty then? - Yes.
16922. You never heard about it? - No, I never heard a word about the ship. 16923. Was there any message during the time you were on duty, from 8 to 12, received by any of the officers on the bridge? - Not to my knowledge.
16924. You know of none. Was Captain Smith on and off the bridge during your watch? - Frequently.
16925. At what intervals did he come on the bridge? - The first that I remember seeing of Captain Smith was somewhere in the vicinity of 9 o'clock, but from 9 o'clock to the time of the collision, Captain Smith was around there the whole of the time; I was talking to him on one or two occasions.

16926. Were you talking to him on the bridge? - Sometimes in the officers' chart room and sometimes at his chart room door.
16927. What were you talking about? - I was discussing some stellar bearings I had had. I was also standing at his chart room door while he pricked off the 7.30 stellar position of the ship.
16928. Was anything ever said by the Captain about any such message as that that the "Mesaba" sent? - No, none whatever.
16929. You know what the message was? - Yes, I have read it this morning.
16930. It is a message of a somewhat startling character? - Yes, it is.
16931. It is a message that would have been mentioned in conversation if it had been received? - Undoubtedly.
16932. Was the position of the vessel pricked off? - Yes, the Captain pricked the position.
16933. At what time? - It would be pretty nearly 10 o'clock, I should think. *The Solicitor-General*: He did it then, but it was the position found at 7.30.
16934. (*Sir Robert Finlay*.) Yes, he pricked it off at 10 o'clock, but it was the position the ship was in at 7.30? - Yes, the stellar position at 7.30. 16935. The observations having been taken at 7.30? - Yes.
16936. In the absence of the Commander, would it have been your duty to open any message sent to the bridge? - I would have taken it to the senior officer of the watch, and let him open it. Very often on dark nights they tell us to take them inside, and we open them inside and tell them the contents of the message.
16937. But you have never heard of any such message from the "Mesaba"? - No, nothing at all.

**Examined by the SOLICITOR-GENERAL.**

16938. You were one of the junior officers? - Yes.
16939. You are called the Fourth Officer. Do the Chief and First and Second Officers count as senior officers? - Yes.
16940. And one or other of those three, as I understand, is always responsible on the bridge? - Yes.
16941. So that you or any other junior officers would merely be there as subordinate to them? - That is true.
16942. You would never be in charge, I mean? - No, not at any time.
16943. Now I put to you the same question as I put to Mr. Lightoller. Can you tell us whether you know of more than one ice message? - Yes, the messages that I can recall are the "Caronia's," the

**Page 398**

"La Touraine," and there was another ice message which came shortly after the "La Touraine." I pricked the two of them off at the same time, but I cannot think where it was from.

16944. (*The Commissioner.*) "I recall the 'La Touraine' and another shortly after the 'La Touraine'?" - Yes.

16945. "And the 'Caronia'?" - And the "Caronia." They are the only three messages that I can remember.

16946. Now can you remember anything about the message shortly after the "La Touraine"? - No, only this, that the ice positions which it gave were to the north of the track; they were in all three cases.

*The Commissioner:* I am told the "La Touraine" was far away north.

16947. (*The Solicitor-General.*) I asked this witness the question before. Yes, it was a long way off. (*To the Witness.*) But you do not suggest that the "Caronia" message was so far away from your track as to be unimportant? - No, but it was to the north of the track. 16948. You say it was latitude 42, and latitude 42 is your turning point? - Yes, but that is longitude 47; that is two degrees east.

*The Commissioner:* That would be 10 miles, would it not, north of the track? 16949. (*The Solicitor-General.*) As I make out, about that. (*To the Witness.*) But we have been told, Mr. Boxhall, that this ice tends to set from north to south? - Yes, with the Labrador current.

16950. So that it is coming down from the north in a southerly direction, and this is a message of ice in latitude 42? - Latitude 42, yes.

16951. About 10 miles north of the track you were going? - Yes.

16952. And a message is sent in respect of ice in that position two days before?

*The Commissioner:* Is there to be any evidence as to the speed at which these bergs go south?

*The Solicitor-General:* I do not know, my Lord. I daresay Mr. Boxhall can help us about it a little.

16953. (*The Commissioner - To the Witness.*) Have you any notion how quickly these bergs travel when there is no wind? - No, I have not. I cannot remember any details of the set of the current just at present.

16954. (*The Solicitor-General.*) We will see if we can get any information, my Lord. (*To the Witness.*) Is it a question of wind or a question of current? - It is a question of current.

16955. (*The Solicitor-General.*) It is not wind, your Lordship sees. (*To the Witness.*) Whether there is a wind or no wind, the current will flow? - Yes, but invariably we find a strong easterly set there; very often we find that the Gulf Stream -

16956. (*The Commissioner.*) The current changes? - Yes.

16957. It is not constant? - No, it is not; we can tell that by the temperature of the water.

16958. (*The Solicitor-General.*) No doubt we can get the current chart and show you, but I should like to put to you this. You say you saw the "Caronia" message? - Yes. 16959. The "Caronia" message was a message that said there was this ice in latitude 42 on 12<sup>th</sup> April. Do you realise that? - I do not remember the date of it.

16960. But it is important, is it not? - Yes.

16961. And you were going to pass about 10 miles south of that spot two days later? - Yes.

*The Commissioner:* That does not convey much to me, unless I know how the ice would have moved in the meantime.

16962. (*The Solicitor-General.*) I cannot prove all that at once, of course (*To the Witness.*) But as you understood the matter and understand it now, does that ice tend to be moved by the current southerly? - No, it did not strike me that it would be moving southerly. I have never heard of ice so far south as that before, and I have invariably found that the Gulf Stream is much stronger there than the Labrador Stream is, as far south as that.

16963. Have you ever heard of ice as far south as 42 degrees before? - No, I cannot say that I recollect ice being down as far south as 42 degrees.

16964. (*The Solicitor-General.*) I want to put two or three questions to you, in order because I want you to follow what I am suggesting. You say you know of some reports of ice, and that you examined them. Is that right? - Yes, that is true.

16965. Now, did you or did you not gather from any of those reports that the ship would soon be in the region of the ice? - No, I cannot say that I had paid particular attention to the ship's position that night; I had been too busy working it out, and I did not look it out on the chart; I did not realise the ship was so near the region of the ice. 16966. Up to the time of the accident had you seen several reports about ice? - I have seen the reports I have told you about.

16967. Had any of those reports that you had seen conveyed to your mind that your ship would soon be in the region of the ice? - Yes, they did convey that to my mind. 16968. Now, which of them? - The whole lot of them.

16969. Do you mean the message from "La Touraine" showing ice on the Bank of Newfoundland? - No, with the exception of "La Touraine." She was too far north, of course. 16970. Then it was not the "La Touraine" message? - No.

16971. Then if it was not the "La Touraine" message that conveyed to your mind that the ship would soon be in the region of the ice, what was it? - It must have been the "Caronia's" message.

*The Commissioner:* It was the only one that I know of that he had which would indicate ice in that neighbourhood, because I do not know what this middle message was, the one that came after the "La Touraine."

16972. (*The Solicitor-General.*) Then it was your view that the "Caronia" message did not show that there would be ice to the north of you, but that you would get to the region of that ice? - The positions from the "Caronia" message when I plotted them on the chart were all to the north of the track.

*The Commissioner:* They were, but that is not the question.

16973. (*The Solicitor-General.*) Let me put it to you again. I do not want to treat you in any way but quite fairly. We will leave the "La Touraine" out? - Yes.

16974. Did any of the messages that you saw about ice convey to your mind that your ship would shortly be in the region of the ice? - Yes.

16975. Which one? - This "Caronia" message.

*The Commissioner:* According to his evidence, the "Caronia" message was the only one which was of any significance. There was "La Touraine" and then another one after the

“La Touraine,” about which we know nothing - I know nothing.

*The Solicitor-General:* I cannot trace that at all.

*The Commissioner:* And then comes the “Caronia” and that is all.

16976. (*The Solicitor-General.*) Are messages about ice, so far as they are material to the ship, put up on a notice board? - Yes, as a rule.

16977. Was that done on this occasion? - Yes, I particularly remember now seeing the “Caronia’s” message on the notice board.

16978. Do you remember seeing any other message except the “Caronia’s” message on the notice board? - No, none that I remember - no other ice reports or other messages that I remember. I must add that there was a message which has come from somewhere or other about a tank steamer. I think we had two or three reports of a German tank steamer that was drifting about on the track without coal. 16979. (*The Commissioner.*) But not about ice? - No.

16980. (*The Solicitor-General.*) Listen to this message. I am going to read it to you and see if it reminds you of anything. “A German oil tank steamer ‘Deutschland,’ Stettin to Philadelphia, not under control”? - Yes, I had that in my mind.

16981. Do you know that is part of the message from the “Baltic” about ice? - Yes, I have seen that message today, or heard it read out.

## Page 399

16982. Does your recollection serve you now to show that the message I am referring to is a message that was on the notice board? - No, it does not.

16983. (*The Commissioner.*) You said you remembered seeing a message about a tank steamer on the notice board? - Yes, but this message on the notice board about the tank steamer had been there two or three days, and this “Baltic’s” message I find today was only received on the Sunday.

*Sir Robert Finlay:* There were other messages about the tank steamer, my Lord.

16984. (*The Solicitor-General.*) Perhaps Sir Robert will prove that. (*To the Witness.*) The “Baltic” message - which, of course, was a message to you about ice in this very neighbourhood? - Yes.

16985. Does also happen to contain a reference to a tank steamer? - Yes.

16986. Now I am not speaking about tank steamers, but messages about ice. Just give us your recollection. In your recollection was there one message or more than one message about ice on the notice board? - There is only one message I can recall and that is the “Caronia’s” message.

16987. Do you mean that, so far as you remember, there was no other message, or that you cannot remember the terms of more than one? - I cannot remember any more than the one.

16988. The one message? - That is all.

16989. I must call your attention to the answer which you gave on the 22nd May, on page 354, Question 15318. You are asked by Mr. Asquith this question, “At the time when you came on watch at 4 o’clock” - that is 4 o’clock in the afternoon of Sunday? - Yes.

16989a. “. . . had you heard anything about ice being in the neighbourhood? - (A.) Yes, I had seen reports of ice, and put them on the chart.” Is that right?

*Sir Robert Finlay:* I think if you read the next question and answer - 16990.

*(The Solicitor-General.)* I am going on. Is that right?

*The Witness:* Yes.

16991. Had you received more reports than one and put more than one report on the chart? - Yes.

16992. About ice? - Yes.

16993. Then the next question was, “Reports which had been received earlier on the same day, do you mean? - (A.) No, I cannot say from my own recollection that they were received on Sunday, but subsequently I have heard that some of them, or one of them, that I put on the chart was received on the Sunday, and that I put it on between 4 and 6. All the ice marked on the Captain’s chart I put down myself.” What I want to know is, your recollection serving you candidly, do you remember whether there were on the notice board more than one report about ice? - There must have been more reports on there, because I spoke about reports yesterday that we had had on leaving Southampton or leaving Queenstown about the ice, and those undoubtedly would be on the notice board.

16994. *(The Commissioner.)* Are these reports not taken down from time to time; do they remain on the notice board? - The reports received for the ensuing voyage are kept there all the voyage.

16995. *(The Solicitor-General.)* That is the best you can tell us about it? - That is the best I can tell you.

*The Commissioner:* This passage you have read does not appear to be perfectly clear, because it may refer, reading the whole of it, to reports about ice on an earlier date.

16996. *(The Solicitor-General.)* Of course it may be. As I gather from the witness, whatever be the period to which they refer, it does show there was more than one report about ice on the notice board. That is how it stands, does it not? - Yes.

16997. Now there is another matter. You say that it was you who wrote out this chit of paper? - Yes.

16998. Now, do not hurry about it. Just think a minute, because I have a reason for asking. What was the message from which you got that position? - Something about west-bound steamers reporting ice from latitude 42° to longitude 49° to 51°.

16999. That is the “Caronia” message? - That is the “Caronia” message. 17000. Are you sure? - Yes, I feel pretty sure of that.

17001. Then just follow this. We will just test it. If that is the case, then you would already reach the eastern boundary of the danger zone some time before the collision? - Yes.

17002. Do you know that another of your officers looked at that chit, and made a calculation in respect of it? - No, I did not know.

17003. *(The Solicitor-General.)* It is so, my Lord; there is a reference to it.

*The Witness:* Yes, I have heard that just now. That is what reminded me of this chit. I have heard that only a moment or two ago.

17004. Now what I am referring to. Mr. Lowe says he saw this chit, which you speak of, and he says he made calculations. 'I ran this position through in my mind, and worked it out mentally, and found that the ship would not be within the ice region during my watch, that is from 6 to 8.' Do you still think it was the "Caronia" message? - Oh, yes, I feel perfectly confident that it was the "Caronia" message.
17005. Because you mean the "Caronia" message would show reaching the place at some time like half-past 9? - I did not calculate it out; I had not the slightest idea when she would reach the region of the ice or of the "Caronia's" position rather.
17006. How could that be; I thought you told us the other day that it was you who had worked out these positions and marked them on the chart? - There is no need to work them out at all; you just prick them off on the chart.
17007. Did you do that? - Yes, I pricked them off.
17008. This particular message? - Yes.
17009. Then that would mean you would mark the line on the chart? - No, that is not necessary to mark a line, just mark the positions, the two longitudes, the boundaries of the ice.
17010. Do you remember what time it was you wrote this chit? - No, I cannot recall that, but I have been told I did it between 4 and 6 in my watch on deck.
17011. Who told you that? - Some of the other officers - I do not remember who. They said the ice was marked down there in the 4 to 6 watch. I know there was no one else did it on my watch on deck but me, from 4 to 6.
17012. Then, as I understand it, after that, as far as you are concerned, your attention was not called to any other message about ice? - No, none whatever.
17013. Not to the "Californian" message at half-past 7? - No.
17014. Were you on duty then? - No, I was not on duty until 8 o'clock. 17015. You came on at 8? - Yes.
17016. You did not hear about that? - No.
17017. And not the "Mesaba" message, which, if it came, came later? - No, I never heard anything at all about the "Mesaba" message.

*(The Witness withdrew.)*

*Sir Robert Finlay:* I will recall Mr. Pitman. This will be very short, my Lord.

**Page 400**

**HERBERT JOHN PITMAN, Recalled.**

**Further examined by Sir ROBERT FINLAY.**

17018. You were Third Officer, as we know? - Yes.
17019. You were on duty, we have heard, from 12 to 4 in the afternoon, and then from 6 to 8 on this Sunday? - That is correct.

17020. Did you ever hear anything about the message from the "Amerika" stated to have been received about 2 p.m. for transmission to Cape Race, or about the "Mesaba" message? - Nothing whatever.

**Examined by the SOLICITOR-GENERAL.**

17021. I will put the same question to you. How many messages about ice on this 14th you know of? - I can only recollect one.

17022. We have been told that messages are posted in the chart room. Did you see any message posted in the chart room? - Yes, only one; that is the "Caronia" message.

17023. You are quite clear about that? - Well, there were a few other messages posted there, but they related to the time we left Southampton.

17024. We are talking about ice? - Yes, there was ice on those reports. 17025. I refer to what you said on page 346. I am going to read you five or six questions and answers beginning at 14921. Mr. Asquith asked you: "Was it within your knowledge that the ship would probably meet with ice that evening? - (A.) We knew that we should be in the longitude of ice. (Q.) Who told you that? - (A.) I saw it in a Marconigram. (Q.) Do you know from which ship that Marconigram had come? - (A.) I have no idea. (Q.) Did you particularly concern yourself with that matter? - (A.) No. I simply looked at them, and saw that there was no ice reported on the track." Now listen to this: "Did you see one Marconigram or two Marconigrams? - (A.) Two, I think" Is that right? - (A.) No, I am not absolutely certain about that.

17026. But you were absolutely certain three minutes ago that there was only one, were not you? - Yes, I can only recall one.

17027. Just get your memory, now, to serve you as well as it can. I am sure you will. Just tell us frankly. Do you remember posted in the chart room one, or more than one, Marconigram? - I am not certain.

17027a. I do not want to treat you other than fairly, but just listen to the next answer. You were asked, "Were these posted" - those are the two you have just spoken of - "in some part of the ship? - (A.) Yes, in the chart room. (Q.) And you read them, did you? - (A.) Yes." Is it not clear to you that when you gave evidence on the 22nd May your then impression was that there were two separate messages about ice posted in the chart room.

17028. (*Sir Robert Finlay.*) It is quite clear he says, yes. I think.

*The Witness:* It may be, but I am not clear on that.

17029. (*The Solicitor-General.*) When did you cease to be clear? - I have forgotten that I said there were two there.

*The Commissioner:* I think the right question would be, when was he first clear, if ever.

*The Solicitor-General:* You will see it was not the learned Counsel that suggested two to you; he suggested that you had seen one, and you corrected him and said, "No, two."

*Sir Robert Finlay:* Forgive me; what the learned Counsel said was: "Did you see one Marconigram or two Marconigrams?" and the witness says: "Two, I think."

17030. (*The Solicitor-General.*) I think I am quite right. Two questions further up he was asked: "Do you know from which ship that Marconigram had come?" and his answer was: "I have no idea. (Q.) Did you particularly concern yourself with that

- matter?" Up to that time Mr. Aspinall has not known anything of more than that one. The witness says "No, I simply looked at them." And then he is asked: "Did you see one Marconigram or two Marconigrams?" and he says: "Two, I think"? - I think it quite possible there were two there, but one related to the oil tank steamer.

17031. Let us keep to the same point. Did not you understand me just now to be asking about messages about ice? - Yes.

17032. And did not your answers refer to messages about ice? - No, I think you asked me about Marconigrams on the notice board.

17033. Is that the explanation? - Yes.

17034. Now I will put it beyond the possibility of doubt. As far as your knowledge goes, Mr. Pitman, had you ever seen or heard of more than one Marconigram about ice on the 14th April? - One only.

17035. (*The Solicitor-General.*) Now, my Lord, may I refer you to page 349. (*To the Witness.*) I want you to hear your answers and just consider. You were asked by Mr.

Scanlan at Question 15107: "Was the whole of the knowledge that you had of icebergs obtained from the chart? (*The Commissioner.*) From the chart room. (*Mr. Scanlan.*) From the chart in the chart room? - (A.) No, from the Marconigrams." That is more than one, is it not?- Then the next question is: "Were any Marconigrams handed to you from 12 to 4? - (A.) Not to me. (Q.) Had you seen any Marconigram that reached the ship with reference to ice from 12 to 4 on Sunday? - (A.) I saw two that reached the ship that day." Now, is that right? - That is correct. They did not relate to ice.

17036. I will read the question again. The question was: "Had you seen any Marconigram that reached the ship with reference to ice from 12 to 4 on Sunday?" That was the question. Did you hear it? - Yes.

17037. That is with reference to ice, do you see? - They did not relate to ice.

17038. But your answer is: "I saw two that reached the ship that day. I have no idea what time they arrived." Then I ought to read on, I think: "You saw two that day? - (A.) Yes. (Q.) Do you know whether they were Marconigrams that had come the previous day, on the Saturday? - (A.) No, they came on the Sunday. (Q.) Are you quite sure of that? - (A.) Yes. (Q.) Did you read them? - (A.) Yes, I read one - yes. (Q.) You read one, but you did not read the other? - (A.) No, not to remember what was on it." Now, do you mean to represent that when you were asked those questions you thought Mr. Scanlan was asking about the tank steamer? - No, I do not know what he was relating to. 17039. The next question was: "With respect to the one that you did read, can you tell us what was on it? - (A.) No, no more than it stated. "Ice in longitude 40 to 51 W." (Q.) Where did it come from? - (A.) I have no idea." Is that the best you can tell us about that matter? - That is it.

*The Commissioner:* That looks as if he had only read one telegram.

*The Solicitor-General:* Yes, but that is a plain question.

17040. (*Sir Robert Finlay - To the Witness.*) You went off duty at 8? - Yes.

*(The Witness withdrew.)*

**Page 401**

**HAROLD GODFREY LOWE, Recalled.**

**Further examined by Sir ROBERT FINLAY.**

17041. You were on duty from 6 to 8? - I was.

17042. Did you ever hear anything about a message from the "Amerika" to be sent on to Cape Race about ice? - No.

17043. Or about a message from the "Mesaba"? - No.

**Examined by the SOLICITOR-GENERAL.**

17044. You have told us before about the chit that you saw, the little piece of paper on the chart room table. Can you tell us when you saw it? - I suppose it must have been shortly after 6.

17045. Shortly after 6? - Yes.

17046. What had it on it actually? - It had the word "ice," and then a position underneath the word "ice."

17047. What do you mean by a "position"? - That means to say a latitude and a longitude.

17048. *(The Commissioner.)* Where the ice was? - Where the ice was, my Lord, yes.

17049. *(The Solicitor-General.)* Did you recognise the writing? - I did not. I suppose I only looked at it casually.

17050. I think you told us before that when you saw it, you reckoned on the chart when you would get to it? - I did not say when we would meet it; I said that I worked it out mentally, and that I found that we should not come to that position during my watch from 6 to 8. That is what I meant to imply.

17051. I think that is exactly what you said. You are quite right. You cannot tell us more about it than that? - I cannot.

17052. I will put the same question to you, and that is the only other thing I want to know. How many reports about ice - I am not talking about tank steamers - did you hear of? - I do not remember having heard of any, and that is the only one that I saw. They may have been on the notice board, and I may not have looked at the notice board. I do not remember looking at the notice board, and that is the only paper or note that I saw referring to ice, as I have stated.

*(The Witness withdrew.)*

*(Adjourned to tomorrow at 10.30 o'clock.)*

SCOTTISH HALL,  
BUCKINGHAM GATE,  
*Friday, 24th May, 1912.*

## PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC."

### FIFTEENTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland.

(Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third-class passengers.

(Admitted on application.)

MR. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian." (Leyland Line). (Admitted on Application.)

MR. H. E. DUKE, K. C., M. P., and MR. VAUGHAN WILIAMS (instructed by Messrs. A. F. and R. W. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff-Gordon. (Admitted on Application.)

## Page 404

### HAROLD THOMAS COTTAM, Sworn.

#### Examined by the SOLICITOR-GENERAL.

*The Commissioner:* Is this still upon the messages?

*The Solicitor-General:* This is the Marconi operator on the "Carpathia." *The*

*Commissioner:* Oh, yes.

17053. (*The Solicitor-General - To the Witness.*) Were you the Marconi operator on board the s.s. "Carpathia"? - I was.

17054. Is that a steamer of the Cunard Line? - Yes.

17055. And on the "Carpathia" were you the only operator or had you someone with you? - I was the only one.

17056. I think you had taken up your duties on the "Carpathia" last February had you not? - Yes, about February 10<sup>th</sup> or 11<sup>th</sup>, I cannot remember when.

17057. And had been doing the work as a Marconi operator on it from that time up to April the 14<sup>th</sup> or 15<sup>th</sup>? - Yes.

17058. Which way was she bound at the time you heard of the accident? - She was bound east from New York to Gibraltar.

*The Solicitor-General:* We have been supplied by the Marconi Company with a print showing the *procès-verbal* of this gentleman's communications with the "Titanic." They are arranged in order of time and it is convenient to have them in that form. It is the same document that I handed up yesterday, the letter of the 7<sup>th</sup> May.

*The Commissioner:* I have it.

17059. (*The Solicitor-General.*) I have some other copies and I will hand them up to your Lordship's assessors. (*Handing copies to the Court and to Witness.*) (*To the Witness.*) Have you before you now the *procès-verbal* for the material time? - Yes. 17060. I see that *procès-verbal* of yours contains the entries in order of time up to the time when you heard of the disaster and then, I think, your *procès-verbal* breaks off? - Yes.

17061. I suppose, owing to the emergency you could not keep a regular record? - No.

17062. (*The Solicitor-General.*) Your Lordship appreciates that everything in this printed document which is after the time that the disaster is known to the "Carpathia" has been reconstituted since. It is not an actual copy of the document. (*To the Witness.*) Will you tell us when it was that your ship first got into touch with the "Titanic" on the 14th April. Will you look at page 3 of the print? - 5.10 p.m. 17063. That is New York time? - Yes.

*The Commissioner:* One hour and 50 minutes later, ship's time?

*The Solicitor-General:* It varies from hour to hour, but substantially it is that. *The*

*Commissioner:* It is about two hours.

*The Solicitor-General:* Yes, one gets it substantially if one says 7 o'clock. (*To the Witness.*) Your entry is "Trs. with steamship 'Titanic' bound west." We were told yesterday about the Trs, are they time rushes? - Yes.

17064. And does that show that you were then first getting into communication with the "Titanic"? - Exactly, the first communication.

17065. What is the meaning of your entry following that "one S message received." What is an S message? - An S is an ordinary public message from the public on the "Titanic" - from a passenger on the "Titanic."

17066. You mean a member of the public? - Yes, from a passenger on the "Titanic" to one on ours.

*The Solicitor-General:* I have it here; it is merely a private message from one passenger to another.

*The Commissioner:* You need not trouble about that.

17067. (*The Solicitor-General.*) Your next entry is "5.30 p.m. signals exchanged with the 'Titanic' at frequent intervals until 9.45 p.m." Would those signals be merely to keep in touch or would they involve the sending of private messages? - Merely to keep in touch.

17068. I see you record at 10 "Good night" to the "Mount Temple" and then at 11.20 p.m. you got your first entry about the disaster? - Yes, that is what I stated in New York, but I found since it was 10.35 I got the first signals.

17069. It was earlier than that, was it? - Yes.

*The Commissioner:* Just have that explained.

17070. (*The Solicitor-General.*) I will. (*To the Witness.*) Will you tell us how you know that? - By a chit of paper which I scribbled out at the time.

*Sir Robert Finlay:* I understood this was a copy of the *procès-verbal*?

*The Commissioner:* Yes.

*The Solicitor-General:* I do not think Sir Robert perhaps heard what I did interpose to explain, and what the witness said that as soon as the disaster happened, and from that

time forward he did not keep his *procès-verbal* and therefore it had been reconstituted by the Marconi Company from that point.

*The Commissioner:* Oh, but I understood that up to and inclusive of this message which you are reading it was part of the *procès-verbal*, but after they first heard of the disaster then the *procès-verbal* stops.

17071. (*The Solicitor-General - To the Witness.*) How is it? - Right up to the time of the disaster, right up to the time I heard the first signal from them the *procès-verbal* was never touched.

17072. (*The Commissioner.*) Did you enter in that *procès-verbal* the important telegram telling you of the calamity? - No, my Lord, I did not.

17073. You did not? - No.

17074. (*The Solicitor-General.*) You have the document before you? - Yes.

*The Solicitor-General:* Let me see it. (*The same was handed.*)

*The Commissioner:* Then the *procès-verbal* is of no value.

*Sir Robert Finlay:* This is merely from recollection afterwards.

17075. (*The Commissioner - To the Witness.*) Your *procès-verbal* does not relate at all to the disaster? - No.

*The Solicitor-General:* If you will look, you will see the last two entries in ordinary writing are the entries of 5.30 p.m. and 10 p.m.; the very last entry is 10 p.m. and then in a different writing and with a different pencil there has been something added “‘Titanic’ disaster; apparently too busy to keep entries,” or something of that sort. *The Commissioner:* What does P.V. mean?

*The Solicitor-General:* P.V. is *procès-verbal*.

*The Commissioner:* “Apparently too busy to keep *procès-verbal* going.” Will you allow me to ask him a question, or would you rather put it yourself? *The Solicitor-General:* I would very much sooner you did, my Lord.

17076. (*The Commissioner - To the Witness.*) Just look at this document and tell me whether the last entry with the hour opposite to it, 10 p.m., is in your writing (*Handing document to the Witness.*)? - It is, my Lord.

17077. Now, that is subsequent to the disaster, is it not? - Yes.

17078. And, therefore, you did write something on your *procès-verbal* which happened subsequent to the disaster? - Yes.

17079. Now will you read what it is? - Subsequent to the disaster?

17080. Yes, after the disaster. - No, I did not write anything after the entry at 10 p.m.

*The Commissioner:* The entry at 10 p.m. would probably be after the disaster. 17081.

(*The Solicitor-General.*) Yes, my Lord; but not after he had heard of it. That is the point. (*To the Witness.*) At the time when you wrote down that entry, 10 p.m., had you on your ship heard of the disaster? - I had not.

*The Commissioner:* I do not understand that; 10 p.m. means midnight.

*The Solicitor-General:* It does not follow the “Carpathia” picked up the first message sent out into the air. She picked up the first message calling for help later than her hour of 10 p.m.

*The Commissioner:* When did she pick it up?

*The Solicitor-General:* That is it.

*The Witness:* 10.35 p.m., New York time.

17082. (*The Commissioner.*) Then will you read to me what 10 p.m. says? - 10 p.m. is "Good night to the 'Mount Temple'; his signals very weak."

17083. The "Mount Temple" was getting out of range, I suppose? - Yes.

*The Commissioner:* I do not understand this, Sir John. The "Titanic" was well within range at this time; in fact, she had been within range for quite a long time.

*The Solicitor-General:* Yes.

17084. (*The Commissioner - To the Witness.*) If she was well within range and did dispatch a Marconigram to you immediately after the collision - I do not know whether she did or not - you would have heard it at once I suppose? - Yes.

*The Commissioner:* So that if you did not hear it, as you say, until 10.35, which would be about half-past 12 ship's time, it must have been because the "Titanic" did not dispatch a message to you?

*The Solicitor-General:* May I suggest your Lordship should look at one piece of evidence to check it. If your Lordship will look at page 211 you will find there the evidence of a witness named Durrant. Just to remind your Lordship, you will remember he was Marconi operator on the "Mount Temple," and we called him because he had kept the receiver to his ear and had noted down what he had overheard through this critical period, this ship having turned and going to the rescue. If your lordship will remember what we did with him was, we took his *procès-verbal*, and asked him to read out the entries in order of time, correcting the time all the way through by adding one hour 55 minutes to the New York time. Now if your Lordship will look at Question 9451 I asked him: "Tell us the ship's time when you first got a message as to the 'Titanic' being in distress? - (A.) 12.11 a.m." Your Lordship appreciates this is one hour 55 minutes on from New York time. Then if you read down five or six answers, the bottom question on the page first brings in the name of the "Carpathia." It is Question 9458. "That would be 21 minutes after midnight? - (A.) Yes. (Q.) What was it you heard then? - (A.) I have got down here 'Titanic' still calling C.Q.D.; is answered by the 'Carpathia'" that is this operator. And that your Lordship sees is recorded by the "Mount Temple" operator Durrant as having occurred 21 minutes after midnight, ship's time, which would be the same thing.

*The Commissioner:* Yes, about the same thing.

17085. (*The Solicitor-General.*) Yes, about the same thing as we are speaking of now.

(*To the Witness.*) You had no one to help you on board the "Carpathia"? You cannot work all the 24 hours. What were you doing or preparing to do about 11 o'clock that night? - Well just previous to having received the signal I was taking the long-distance news from Cape Cod.

17086. That is news that is being sent to the ship from the mainland? - Yes.

17087. Were you going on working, or were you going to bed? - I was going to turn in directly afterwards.

17088. (*The Commissioner.*) What happens to the instrument when you turn in? Is there any one there to gather up messages that may come? - No, my Lord, nobody at all. 17089. And I suppose you sleep eight hours, or something like that out of the 24? - About eight, yes.

17090. That is supposed to be the regulation. So that for one-third of the time there is, so to speak, no operator on the ship? - No, my Lord.

17090a. (*The Solicitor-General.*) This was between 11 and 12. I think you said you were preparing to turn in? - I was.

17091. I want you to tell us two or three things about it. You gave evidence in America about it. Had you begun to take your clothes off? - I had taken my coat off.

17092. And you were in course of going to bed? - Yes. I should have been turning in in about 10 minutes or a quarter of an hour.

17093. And had you still got the receiver in your hand or by your side? - No, it was on my head.

17094. Were you waiting for something? - Well, I was waiting for a confirmation of a previous communication I had had with the "Parisian."

17095. (*The Commissioner.*) You always have the receiver on your head, have not you? - Not always.

17096. Do not you sit with it on your head? - The greater part of the time we do, yes.

17097. (*The Solicitor-General.*) You do not go to bed with it, I presume? - No. 17098. You were waiting for a confirmation of some message you had sent? - Yes, I was.

17099. Where were you expecting it to come from? - From the "Parisian." 17100. As soon as you got that confirmation, had you intended to turn in? - Yes. 17101. And while you were waiting with your coat off, preparing to go to bed and expecting this confirmation, did you hear a message from the "Titanic"? - Well, no, not just then.

17102. Explain it? - After I had waited a long enough time to get this confirmation, I wrote out the chit of the previous communications during the day and reported them to the bridge. After reporting them I returned to the cabin, and I sat down, and I asked the "Titanic" if he was aware there was a batch of messages coming through from Cape Cod for him, and his only answer was, "Struck a berg; come at once."

17103. Now tell us, as nearly as you can, it is only a recollection, I understand - what it was which the "Titanic" said to you? - She said, "Come at once; we have struck a berg," and sent his position, and then he sent C.Q.D.

*The Solicitor-General:* Your Lordship sees that just corresponds to what was overheard: "Struck iceberg, come to our assistance. Sends the position." *The Commissioner:* Yes.

17104. (*The Solicitor-General - To the Witness.*) You heard that, and what did you do? What was your reply; what did you do? - I confirmed it before reporting it to the bridge.

17105. Does that mean you got it repeated? - No, I did not get it repeated. I asked him if he intended me to go straight away to the bridge and get the ship turned round immediately, and he said, "Yes, quick."

17106. Did you go to the bridge? - Straight away, yes.

17107. You reported it to your Captain? - To the officer on watch first, and, from him, to the Captain.

17108. Then what was done about the “Carpathia”? - She was turned round immediately.  
17109. And made for the position? - And headed for the position, yes.  
17110. Then you, I suppose, would go back to the Marconi room, to your instrument? -  
Yes, I did; I went right away.  
17111. Up to this time had you sent the “Titanic” any news of where you were? - No, not  
up to then. I went straight away back to the cabin and sent our position.  
17112. Who gave you your position? - The Captain gave me our position.  
17113. Then you were in a position to tell the “Titanic” where you were? - Yes. 17114.  
And did you tell her that you were coming to her assistance? - I did.  
17115. Just look at this print we have before us. We understand it is not an actual copy of  
your *procès-verbal*. We have: “11.30 p.m. Course altered, proceeding to the scene of the  
disaster.” Is that an estimate? - Yes, that is a rough estimate, because I made no P.V. of  
that at all.  
17116. Just let us follow what you did after that. Your ship is turned round and making  
for her. Did you endeavour to keep in touch with the “Titanic”? - I did the whole time.  
17117. The whole time? - Yes.  
17118. Could you overhear what the “Titanic” was trying to say to other ships? - I was  
helping the “Titanic” to communicate.  
17119. Would you explain that? - Well, the “Titanic” told me when I had sent the  
position, he said he could not read signals because of the escape of steam and the  
air through the expansion

## Page 406

joint, so I helped him with the communications.

17120. Will you repeat that? - He could not read the incoming signals on account of the  
escape of steam and the air from the expansion joint; the water rushing into the  
hollow of the ship was driving the air through the expansion joint.  
17121. The expansion joint is a joint that runs across the deck? - Yes, right across the  
deck just outside the cabin.  
17122. Outside where he would be? - Yes.  
17123. You would very likely know; would you expect, then, that a great escape of  
steam, blowing off steam, or a great rush of air, would interfere, in your  
experience, with messages? - Certainly; it would not be the noise only; it would  
be the trembling of the ship.  
17123a. (*The Commissioner.*) But mainly the noise? - Mainly the noise, yes, my Lord.  
17124. (*The Solicitor-General.*) And he told you he could not read the messages coming  
to him clearly? - He said he could not read them well.  
17125. What did you do? - I simply stood by. First of all, when I got back he was in  
communication with the “Frankfurt”; when I came back from the bridge and sent my  
position he was in communication with the “Frankfurt.” 17126. You heard that? -  
Yes, I heard that.  
17127. (*The Solicitor-General.*) Now, my Lord, I will just put the thing I have on page  
212. I have a record here of something he said to the “Frankfurt.” (*To the*

- Witness.*) Tell me if this is what you remember. It is at Question 9470: “‘Titanic’ gives position and asks, ‘Are you coming to our assistance?’ ‘Frankfurt’ replies, ‘What is the matter with you?’ ‘Titanic’ says, ‘We have struck an iceberg and sinking. Please tell Captain to come;’ and the ‘Frankfurt’ replied, ‘O.K. Will tell the bridge right away.’ Then the ‘Titanic’ said, ‘O.K., yes, quick.’” That is a record taken down by your colleague on the “Mount Temple”? - Yes.
17128. Does that bring to your mind what you heard? - It does to a certain extent, but it was some 20 minutes afterwards.
17129. It was later than that, was it? - When the “Titanic” first sent her position the “Frankfurt” operator got up apparently and he came back in twenty minutes and asked what was the matter.
17130. You mean there was an interval of time? - Yes, there was.
17131. Could you hear what passed between the “Titanic” and the “Frankfurt” then? - I did not hear it all because I was running backwards and forwards from the bridge reporting the whole time.
17132. Tell us what you did hear? - After that the communications ceased from what I could hear.
17133. (*The Commissioner.*) What time would that be? That would be close on the foundering? - Oh, no, my Lord.
17134. What time would it be? - I should say about 10.45 New York time. I could not be certain about times at all.
17135. That would be half an hour before the foundering.
17136. (*The Solicitor-General.*) About that. (*To the Witness.*) You have told us what you know about the “Frankfurt.” Now tell us this. Do you remember assisting in communications with the “Olympic”? - I did.
17137. Was that before or after the “Frankfurt” incident? - After; some time after.
17138. Tell us what you recollect about the communications with the “Olympic”? - First of all I heard the “Olympic” calling the “Titanic” - a master’s service message, and as the “Titanic” did not reply I came to the conclusion that he was not reading the signals at all, so I asked the “Titanic” if he was aware that the “Olympic” was calling him with a message, and he said he was not, so I said: “Go ahead and call.” He called and afterwards got in communication with the “Olympic.”
17139. So you really got the “Titanic” to get into communication with the “Olympic”? - Yes.
- The Solicitor-General:* There is a reference to that, my Lord, in Durrant’s evidence. *The Commissioner:* I see it - “‘Titanic’ says weather clear and calm, engine room getting flooded.”
17140. (*The Solicitor-General .*) That is it. (*To the Witness.*) Did you hear the message about the engine room that the “Titanic” sent to the “Olympic”? - He sent it to me. 17141. He sent it to you, too. What was the message he sent to you? - He said: “Come as quickly as possible, old man, the engine room is filling up to the boilers.” 17142. (*The Commissioner.*) “Engine room is filling up to the boilers”? - Yes. 17143. (*The Solicitor-*

*General.*) In order to fix the time one has to have reference to Durrant's evidence that he was noting the time by the clock. At Question 9508 I say: "Then six minutes after that, at 1.27 - what was it you heard at 1.27? - (A.) - 'Titanic' calling C.Q.D., says engine room flooded." That does apparently give ship's time for it. Did you hear any message from the "Titanic" about people being put into the boats? - No, there was none to that effect at all.

17144. Did you hear any message from the "Titanic" asking that other people should get their boats ready? - No, there was none.

17145. And after the message to the "Olympic," which you heard, and the message to you about the engine room getting flooded, did communications continue between you and the "Titanic"? - That was the last I heard of the "Titanic," that message. At 11.55 New York time, that was.

17146. You can fix that time? - Yes, 11.55 New York time.

*The Commissioner:* What is the meaning of: "Twelve-twenty a.m. . . Signals very broken" and "12.28 a.m. - 'Titanic' calls C.Q.D. His signals blurred and end abruptly."

17147. (*The Solicitor-General.*) Can you help us about this? - I think that is false. The signals were good right away to the end.

*The Commissioner:* Then where does this information come from which has been made up somewhere?

*The Solicitor-General:* I am just inquiring from Mr. Turnbull about it. One wants to understand. Mr. Turnbull tells me that this *procès-verbal*, the second part of it, when times come, is accurate as regards times, but it is built up from the records of various ships. As your Lordship was told yesterday, the *procès-verbals* all go into the office, and they have pieced together the entries of different ships, so as to give us a chronological statement.

*The Commissioner:* This paper is incorrectly headed "*Procès-verbal* of the s.s. 'Carpathia.'"

*The Solicitor-General:* It is, my Lord.

*The Commissioner:* It is a mixture.

*The Solicitor-General:* Yes; it is none the worse for that, only it is not accurately described as the "*procès-verbal* of the 'Carpathia.'" I will take one instance which strikes one. Take: "12.28 am. - 'Titanic' calls 'C.Q.D.' His signals blurred and end abruptly." I have in my hand the *procès-verbal* of the "Virginian," and the "Virginian" gentleman apparently kept it right through this time. He did not break off like Mr. Cottam. Here, I see, "12.27" -

*The Commissioner:* The "Virginian," I suppose, was out of reach.

*The Solicitor-General:* She did not, of course, get to her, but she could hear, and it reads, "12.27 M.G.Y." (that, I think, means the "Titanic") "calls C.Q." - it says "C.Q." here - "unable to make out his signal; ended very abruptly, as if power suddenly switched off. His spark rather blurred or ragged. Called M.G.Y. and suggested he should try emergency set, but heard no response."

*The Commissioner:* Very well. This document is evidently a shortened account of the messages received by different ships.

*The Solicitor-General:* That is it.

*The Commissioner:* After the time when this gentleman stopped recording in the *procès-verbal* of the “Carpathia.”

*The Solicitor-General:* That is right. I think your Lordship may take it that where times of the clock

**Page 407**

are printed on the document they are actually copied from an entry.

*The Commissioner:* From some information from some ship.

*The Solicitor-General:* Yes, from one or other of the ships.

*Sir Robert Finlay:* It is a document of very little value.

*The Commissioner:* Well, that may be. At present, Sir Robert, I do not see, except as part of the story, that it is of any significance. It is after the accident. It is part of the story, but it is really of very little assistance in this Inquiry.

17148. (*The Solicitor-General - To the Witness.*) After that time did you continue to try to call up the “Titanic” from time to time? - I did, at frequent intervals.

17149. And, as we know, you did not get any further communication? - No. 17150. I do not think we need go through what follows. You had a number of messages, I see, to a number of ships finding that they also were going to the same spot? - Yes.

17151. And when was it you heard that the disaster had occurred? I suppose you did not know till you actually came there and saw the boats? - No, I did not know that the “Titanic” had gone down.

17152. (*The Commissioner.*) There is this signal or extract, I do not know where it comes from: “Daybreak. ‘Carpathia’ arrives on the scene of the disaster.” What time is daybreak, New York time? - I cannot remember, I am sure.

17153. (*The Solicitor-General.*) You must have taken enough interest to see the boats when they came in sight? - Yes.

17154. Had day broken? - No, it was not daybreak; it was pretty dark when the boats were picked up. Day broke just after that, just after we had picked the first boat up.

*The Commissioner:* It does not matter.

17155. (*The Solicitor-General.*) I do not think it matters at all. (*To the Witness.*) And the boats were picked up, as we know? - Yes.

17156. No doubt you had a great many messages to send after you had got these poor people on board? - Yes, I did.

17157. As far as I have been able to check it at present, the only other matter I want is this one thing. Will you take this message in your hand and tell me whether it is a message which you sent, after rescuing these people, from the “Carpathia.” Do you recognise it (*Handing document to the Witness.*)? - Yes I do.

17158. Just read the message out, will you? - “To Captain ‘Olympic.’ Mr. Ismay orders ‘Olympic’ not to be seen by ‘Carpathia’; no transfer to take place. (Signed) Rostron, Captain of ‘Carpathia.’” [No Answer.]

17159. Is that the Captain of the “Carpathia”? - Yes.

17160. (*The Commissioner.*) Let me see it. Is this what you call a chit? - Yes; that is a chit of paper.
17161. Pinned or stuck on to an ordinary form? - Yes, pasted on an ordinary form.
17162. There is nothing written on the form? - Only the number of words you will see there in red ink.
17163. "To Captain 'Olympic.'" Now, where was the "Olympic" at this time?
17164. (*The Attorney-General.*) A long way? - The "Olympic" was heading towards the scene of the catastrophe at that time.
17165. "Mr. Ismay's orders, 'Olympic' not to be seen by 'Carpathia.'" What is the meaning of that? Do you know what it means? - I presume it was not advisable for the survivors of the "Titanic" to see the "Olympic," the sister ship to the "Titanic." 17166. Why not? I do not understand it at all.
- The Solicitor-General:* It would appear, I suggest, though Mr. Ismay will no doubt explain it to you, that Mr. Ismay was giving a direction as to the course, or the respective courses to be taken by the two ships, that they were not to come within range of one another.
- The Commissioner:* The "Olympic" and what?
- The Solicitor-General:* And the "Carpathia." Of course, the "Olympic" is a White Star ship.
- Sir Robert Finlay:* I understand it was merely this: The "Olympic" is so very like the "Titanic" that if the survivors on the "Carpathia" had seen the "Olympic" it might have been supposed, "Here is the 'Titanic,' not lost after all." I mean it was some idea of that kind, sparing the feelings of people on board the "Carpathia." *The Attorney-General:* We only want the message.
- The Commissioner:* The only thing is, it was unintelligible to me.
- The Attorney-General:* It is something which Mr. Ismay will, no doubt, explain when he comes, but it was desirable to have it now.
- Sir Robert Finlay:* May I see it, my Lord. (*The same was handed to the learned Counsel.*)

**Examined by Sir ROBERT FINLAY.**

17167. No one hears a message coming on the Marconi system unless he has the apparatus to his ear? - No, he does not.
17168. There is no signal, no sound to call attention? - There is no detector to show.
17169. Of course, you were the only operator on board the "Carpathia"? - I was. 17170. You are asleep for, say, eight hours, and you do not keep on the apparatus at meal times? - No, not exactly.
17171. Nor all the time otherwise? - Oh, no, there is no necessity; in some parts of the ocean, of course.
17172. And while you do not happen to have it on, whatever number of hours out of the 24 that may be, no message would be taken up? - No, no message would be registered at all.
17173. Now with regard to this document, which is headed: "*Procès-verbal* of the s.s

'Carpathia'" - was this prepared by you? - No, this was not.

17174. Who prepared it? - It was prepared by our company from the *procès-verbals* of the various ships that were in the vicinity of the catastrophe at the time.

*Sir Robert Finlay*: Will your Lordship look at the second paragraph of the covering letter of the 7th May, 1912? *The Commissioner*: Yes.

*Sir Robert Finlay*: "We annex hereto a copy of the *procès-verbal* of the 'Carpathia' station, dating from the time at which this vessel first entered into communication with the 'Titanic,' which was some five hours previous to the collision, until the 'Carpathia' arrived in New York with the survivors some four days later." This is not the *procès-verbal* of the "Carpathia" at all.

*The Witness*: Well, it is in a sense; it is a reconstituted *procès-verbal*.

*The Commissioner*: It is not anything of the kind. The first three entries on page 3 are, as I understand, taken verbatim from the *procès-verbal* of the "Carpathia"? - Exactly. *The Commissioner*: And none of the others are taken from the *procès-verbal* at all because

there is no *procès-verbal* of the "Carpathia."

17175. (*Sir Robert Finlay - To the Witness*.) That is so, is it not? - That is so.

17176. You had nothing to do with this letter saying that a copy of the *procès-verbal* of the "Carpathia" was annexed? - Nothing at all.

*The Commissioner*: It is, as I understand, a compilation?

*The Attorney-General*: That is what it is.

*The Commissioner*: Of a number of messages recorded by a number of ships.

*The Attorney-General*: We have had it put together. It is only right to say this. Your Lordship will understand this document of the 7th May was prepared in answer to a request made by us. As your Lordship knows, we have been working at very great pressure, and we asked the company to let us have, as soon as they could, some information with regard to the messages of the "Carpathia." They prepared this, and in their office they call it a *procès-verbal*. It is stated later on that it is a log of further communications effected. There is no doubt

## **Page 408**

about it. It is a compilation, as your Lordship says, from documents in their possession, every one of which can be produced and will be produced.

*The Commissioner*: They can be; I hope they will not be.

*The Attorney-General*: It may not be necessary.

*The Commissioner*: It is immaterial.

*The Attorney-General*: Except up to a certain point.

*Sir Robert Finlay*: I understand you do not regard some of the times put there as right?

*The Witness*: Not so much the times; it is the entries opposite the times I do not agree with.

17177. You said in regard to one entry it was false. Which entry was that? - It may not have been the time.

17178. Something about it was false. Which entry was that? - The one at 12.28. 17179. What is false about that "12.28 a.m. 'Titanic' calls 'C.Q.D.' His signals blurred and end

abruptly.” What is false about that? - Well, he did not do that at all. His last message was, “Come as quickly as possible; our engine room is filling up to the boilers,” and his signals were perfectly right to the end of the message.

17180. Then this is purely imaginary?

*The Solicitor-General:* Sir Robert, I do not think you could have been following.

*Sir Robert Finlay:* I have been following only too well.

*The Solicitor-General:* I do not know whether you were following too well, but if you were following you would have heard me read from the *procès-verbal* of the “Virginian” and explain to my Lord that this entry, 12.28 a.m., was copied from the “Virginian” *procès-verbal*, and was there in their records.

*Sir Robert Finlay:* Be it so.

*The Solicitor-General:* Do not call it imaginary.

*Sir Robert Finlay:* It is purely imaginary, so far as the “Carpathia” is concerned. *The Commissioner:* Yes, that we understand, but apparently it was information which has been gathered from another ship.

*Sir Robert Finlay:* Oh. yes.

*The Commissioner:* And which the Marconi Company have placed at the service of the Board of Trade.

*The Attorney-General:* Yes, that is it, information to us.

*Sir Robert Finlay:* So be it. In that sense there is no objection whatever.

*The Commissioner:* And any way, Sir Robert, it appears to me immaterial.

*Sir Robert Finlay:* I will not spend time upon it.

*The Commissioner:* What happened after the event does not matter much.

17181. (*Sir Robert Finlay.*) With regard to hours, can you help me about hours - with regard to the first message, here it is put in “11.20 p.m. Heard ‘Titanic’ calling ‘S.O.S.’ and ‘C.Q.D. Answered him immediately” and so on. I understand you to say that time should be, you think, 10.35? - 10.35 exactly.

*The Attorney-General:* I think the witness explained. I do not know whether you caught it, that he had said in America 11.20. That appears here.

17181a. (*Sir Robert Finlay.*) I had. (*To the Witness.*) How do you get at the 10.35? - I had another chit of paper with that on. I got it directly after Cape Cod had finished the first round of press. I know he finishes at half-past 10 so that I know it must have been at 10.35.

17182. This is New York time you are speaking of? - Yes, New York time right throughout.

17183. Where did you have this chit of paper? - It was on the desk in the “Carpathia” when I left her.

17184. When you left her? - Yes.

17185. Had you that in New York? - I had not the chit of paper, no; it was in my bag; I have found it since.

17186. You have found it since? - Yes.

17187. In America in giving evidence you said 11.20; is that so? - Yes.

*The Attorney-General:* About 11.20 New York time.

17188. (*Sir Robert Finlay - To the Witness.*) Since that you have found a bit of paper which shows it was 10.35? - Yes, not only that; the mere fact of my standing by directly after the first round of press proves that it was somewhere near 10.35.

17189. I am not finding fault with you in the slightest degree. When did you write down this chit? - It must have been when I was working at the time of the catastrophe. I cannot remember when I wrote it down, or I should have had it all the time.

17190. Have you got it? - It is somewhere in my bag, I think.

17191. Is your bag here? - No.

17192. Where is your bag? - It is at the office, the Marconi office.

*The Commissioner:* Well, I do not know that it is of much importance, but you might get it for us at some time.

*The Attorney-General:* What is it that is wanted?

*The Commissioner:* The piece of paper upon which he made the right record of the time?

*The Attorney-General:* Yes, 10.35.

*Sir Robert Finlay:* You can get that for us.

*The Witness:* I think I can - I will try.

17193. The only other question I have to ask you is about the last message. In New York I think you said "It was 11.55 New York time when I received the last message from the 'Titanic'"? - It was exactly.

17194. How do you fix that time; did you make a note of that? - By the clock.

17195. Did you make a note of that? - Oh, yes.

17196. (*The Commissioner.*) Where? - I memorised it. There is no written note or record of details of the catastrophe at all.

17197. (*Sir Robert Finlay.*) You did not make a chit of that? - I did not.

17198. You remember it? - I do, distinctly

17199. That would be New York time? - New York time.

17200. Was your clock New York time? - Yes. 17201. It was? - Yes.

*Mr. Cotter:* With your Lordship's permission can I ask the witness a few questions. *The Commissioner:* Not on this part of the case. If you want to ask him about some other part, yes. You will not help me at all by interfering in this.

*Mr. Cotter:* It is affecting the crew.

*The Commissioner:* Oh, yes; anything of that kind you can ask.

### **Examined by Mr. COTTER.**

17202. Do you remember the survivors being taken on the "Carpathia"? - I do, some of them.

17203. How long after they had been taken on board was it when you sent the list of names of the passengers saved to New York? - I cannot remember, I am sure. 17204. Do you remember ever sending a list of the crew saved to New York? - I do, yes.

17205. When was that? Do you remember? - I cannot remember times at all. I have no records, and I could not tell you.

17206. Was it the same day, or the day after, or when you got to New York? - I should say it would be on the Tuesday, I could not say for certain.

17207. Did you send a list of the crew at the same time as you sent a list of the passengers; I mean the details, the names? - No; the first and second class passengers

went to the "Olympic"; the crew went to the "Minnewaska."

17208. How long after? - I do not know; I cannot remember.

17209. Was it 24 hours? - I could not say, I am sure; I have no record of it.

*The Attorney-General:* Does your Lordship wish to ask this witness any questions?

*The Commissioner:* No.

*The Attorney-General:* What I propose to do is this. What I have asked the Marconi Company to do is

## **Page 409**

to prepare in form a document with a copy of the messages - not a translation of them, but a copy of the messages which were received by the "Titanic" or sent by the "Titanic" from the 12th to the 14th up to shortly after the striking. That, I think, is the important matter which your Lordship asked for.

*The Commissioner:* Yes.

*The Attorney-General:* We will have the messages on one document so that you will see with what ships the communication was being made, from what ships ice reports were being sent, and at what time.

*The Commissioner:* You will let me have a copy of that?

*The Attorney-General:* Yes, we will have it printed so that my friends can also have it.

*The Commissioner:* I wish to direct Sir Robert Finlay's attention to this. I should like, opposite each one of those messages, a reference to the evidence showing whether the message was communicated to the bridge or not - the evidence that bears on that point.

*The Attorney-General:* So far as it is before the Court?

*The Commissioner:* So far as it before the Court; because my anxiety is to know, as I said yesterday, what was the state of Captain Smith's and the officers' knowledge of these messages at the time of the disaster.

*The Attorney-General:* Yes, I quite appreciate that.

*Sir Robert Finlay:* I will see that is put in, my Lord. As I understand it, your Lordship would like to have a reference, opposite each message, to the evidence bearing on the point whether it was communicated to Captain Smith or the other officers.

*The Commissioner:* I prefer the expression "to the bridge." *Sir*

*Robert Finlay:* I said, "To Captain Smith or the other officers." *The Commissioner:* Very well.

*The Attorney-General:* That must be checked.

*Sir Robert Finlay:* Oh, certainly.

17210. (*The Commissioner - To the Witness.*) Can you explain to me why, if the "Virginian" heard the message from the "Titanic" at 12.28, New York time, you did not hear it? Would it be perhaps that you had not the cap, or whatever you call it, on your head? - Well, I had the telephone on my head the whole time, because I was waiting for a message -

*The Commissioner:* Can you explain to me, Mr. Attorney, why that message of 12.28, which as I understand is obtained from the *procès-verbal* of the “Virginian,” was not heard by the “Carpathia”?

*The Attorney-General:* We have to work out what 12.28 “Virginian” means. 17211. (*The Commissioner.*) Of course you have, because it does not mean exactly the difference of one hour 55 minutes; it depends upon the position. (*To the Witness.*) But what I cannot understand is why, if the “Virginian” was hearing these signals from the “Titanic,” you were not hearing them. I can understand it, you know, if you had not got the instrument over your ears at the time. When you run from the office to the bridge are you able to keep this instrument on your head? - Oh, no, my Lord.

17212. Then if you were running to the bridge you might put it off your head and you would not hear? - Well, yes, if I put it off my head to go to the bridge I would not hear.

17213. And you were running to the bridge at this time, were you not? - No, I did not run to the bridge then.

17214. I thought you were going to the bridge to communicate the messages? - I did most of them.

17215. Then if messages came while you were on your way to the bridge or on your way back from the bridge you would not hear them? - No, I would not; but I was waiting to give the “Titanic” a message at the same time that he sent me this one.

*The Commissioner:* I am afraid you do not quite follow, but I do not think it matters.

*The Attorney-General:* While your Lordship’s mind is upon it, you had better just look at this: We have here the *procès-verbal* of the “Virginian,” which I will hand up to you and you will see there written out, “12.27 M.G.Y. calls C.Q.; unable make out his signal; ended very abruptly, as if power suddenly switched off - his spark rather blurred or ragged. Called M.G.Y., and suggested he should try emergency set, but heard no response.” (*The same was handed to the Commissioner.*)

*The Commissioner:* That is enough. It justifies the extract that is put in here.

*The Attorney-General:* It is obvious, if you look at it, that it has not been made after the event. It is there in the middle of the page, in its proper order.

*(The Witness withdrew.)*

**FREDERICK FLEET, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

17216. Frederick Fleet, you have been in the employ of the White Star Company for some seven years, have you? - Yes.

17217. And you went on the trial trip of the “Titanic,” did you not? - Yes. 17218. As look-out man? - Yes.

17219. And then you signed articles at Southampton as look-out man? - Yes. 17220. And went this voyage that ended so disastrously? - Yes.

17221. Before you went on the “Titanic,” had you been look-out man for a number of years on the “Oceanic”? - Yes.

17222. That was also in the North Atlantic service? - Yes.
17223. How many years? - About four years.
17224. Had your eyes been tested by the Board of Trade? - Yes.
17225. You have gone through an examination? - Yes. 17226. And got a certificate? - I had one, but I lost it.
17227. Lost it? - In the "Titanic."
17228. But, at any rate, you had got it before you went this voyage in the "Titanic"? - Yes.
17229. Your watch as look-out man, I think, was from 4 to 6 and 10 to 12? - Yes.
17230. Is that 4 to 6 in the day? - And night.
17231. And 10 to 12 in the day and night? - Yes.
17232. Your mate, I think, was Lee? - Yes.
17233. (*The Attorney-General.*) Lee has been examined, and you will find his evidence at page 72. (*To the Witness.*) And it was your duty to relieve Jewell. You did relieve him that night? - Yes, and Symons.
17234. Jewell was the first witness called. Jewell and Symons were the two? - Yes.
17235. When you relieved Jewell and Symons on Sunday, 14th April, at 10 o'clock you went to the crow's-nest? - Yes.
17236. Was any word passed to you when you relieved them? - Yes.
17237. Tell us what it was? - They told us to keep a sharp look out for small ice and growlers.
17238. Did they say whether they had had any orders to do that? - Yes, they said they had had orders from the bridge.
17239. They got the orders from the bridge? - Yes, and passed it on to us.
17240. They had had orders to do that whilst they were on the watch and then they gave the word to you when you were going to take up the duties of look-out men? - Yes.
17241. Then you remained in the crow's-nest with your mate Lee, and the other two left? - Yes.

## Page 410

17242. Did both of them say anything to you about this, or only one? - One, Symons.
17243. Did Lee say anything to you about it? - No.
17244. Up to that time had you heard anything at all about ice? - No.
17245. Now at the time you went into the crow's-nest, which would be at 10 o'clock on that night, was the sky clear? - Yes.
17246. The sea we know was very calm? - The sea calm.
17247. The stars shining? - Yes.
17248. Could you clearly see the horizon? - The first part of the watch we could.
17249. The first part of the watch you could? - Yes.
17250. After the first part of the watch what was the change if any? - A sort of slight haze.
17251. A slight haze? - Yes.

17252. Was the haze on the waterline? - Yes.
17253. It prevented you from seeing the horizon clearly? - It was nothing to talk about.
17254. It was nothing much, apparently? - No.
17255. Was this haze ahead of you? - Yes.
17256. Was it only ahead, did you notice? - Well, it was only about 2 points on each side.
17257. When you saw this haze did it continue right up to the time of your striking the berg? - Yes.
17258. Can you give us any idea how long it was before you struck the berg that you noticed the haze? - No, I could not.
17259. Can you tell us about how long you had been on duty before you noticed the haze? - I could not say. I had no watch.
17260. I want you to give us some idea. You came on duty at 10 o'clock. We know that the berg was struck at about 11.40. That gives us an hour and 40 minutes, during which time you were in the crow's-nest all the time. That is right, is it not? - Yes. You say the first part of the watch it was clear and then there came this change which you have described. I want you to give some idea of when it was you noticed the change - when it got to a haze.
17261. (*The Commissioner.*) We do not want you to guess, you know; if you cannot tell us you must not guess.
- The Witness:* Well, I daresay it was somewhere near seven bells.
17262. (*The Attorney-General.*) Somewhere near seven bells, which would be half-past 11? - Yes.
17263. Did you say anything to your mate about it? - Well, I told him there was a slight haze coming.
17264. Is that Lee? - Lee.
17265. At the time that you noticed the haze was there anything in sight? - No.
17266. Did it interfere with your sight ahead of you? - No.
17267. Could you see as well ahead and as far ahead after you noticed the haze as you could before? - It did not affect us, the haze.
17268. It did not affect you? - No, we could see just as well.
17269. You did not report it then, I gather from that? - No.
17270. You did not say anything about it to the bridge? - No.
17271. (*The Attorney-General.*) I think it is necessary to direct your Lordship's attention to Question 2408 at page 73 of Lee's evidence. I have asked him his story in detail, but I think it is necessary to put it to him now. I will read it. (*To the Witness.*) Just listen to this, Fleet. This is a question put to your mate and I will read you his answer. "Did you notice this haze which you said extended on the horizon when you first came on the look-out or did it come later? - (A.) It was not so distinct then - not to be noticed. You did not really notice it then - not on going on watch, but we had all our work cut out to pierce through it just after we started. My mate" - that is you - "happened to pass the remark to me. He said 'Well if we can see through that we will be lucky.' That was when we began to notice there was a haze on the water. There was nothing in sight"? - Well, I never said that.
17272. You never said it? - No.

*The Commissioner:* I may tell you, Mr. Attorney, I am not at all disposed to give credit to that man's evidence on that point. It is quite inconsistent with all the other evidence.

*The Attorney-General:* I thought it right to call your Lordship's attention to it, and put it to the witness. I put the conversation to him, and he has given his answer, and there it rests. Your Lordship has to determine which you accept. I gather from what your Lordship said just now - I want to be clear that I am right - that his evidence with regard to the haze as interfering with his sight is the matter which you say is not satisfactory.

*The Commissioner:* Yes, I will tell you at once. My impression is this, that the man was trying to make an excuse for not seeing the iceberg, and he thought he could make it out by creating a thick haze.

*The Attorney-General:* There is some other evidence, but I will direct attention to it later, when we come to deal with it. I am not sure, but my impression is that up to this moment we have no evidence of anybody who was watching, except these two men; I mean there is no officer who has been able to give evidence as to this, no officer was actually looking or watching at the time.

*The Commissioner:* Or seeing?

*The Attorney-General:* Or seeing. Of course, I mean who have been called before you. I am speaking of evidence. The only evidence we have got of persons who were actually looking out is the evidence of Lee and this witness.

*The Commissioner:* We have evidence of the state of the sky before the accident and after the accident.

*The Attorney-General:* Yes.

*Sir Robert Finlay:* And Mr. Boxhall, I think, was on the bridge.

*The Commissioner:* I mean the evidence before and after the accident is that the sky was perfectly clear, and therefore if the evidence of the haze is to be accepted, it must have been some extraordinary natural phenomenon - something that sprang up quite suddenly, and then vanished.

*The Attorney-General:* Yes.

*The Commissioner:* However, this witness denies he said it.

*The Attorney-General:* It is all in a very small compass, the evidence with regard to this, and certainly Lee's evidence is the strongest about the haze. I do not think any witness goes as far.

*The Commissioner:* It was so thick that you would have great trouble, as he said, cutting through it.

*The Attorney-General:* Yes, I think that is the only evidence to that effect.

17273. (*The Commissioner - To the Witness.*) I understand you to say that whatever it was, it made no difference to the look-out? - Yes, my Lord.

17274. (*The Attorney-General.*) Who was it first saw the berg? Was it you or Lee? - Well, I do not know.

17275. Well, which of you gave the signal? - I did.

You were looking ahead. Will you tell my Lord what it was - what you saw?

*The Commissioner:* This is the three bell signal.

17276. (*The Attorney-General.*) Yes, we are coming to it, the three bell signal, something ahead. (*To the Witness.*) Now describe to my Lord what it was you saw? - Well a black object.
17277. A black object. Was it high above the water or low? - High above the water.
17278. What did you do? - I struck three bells.
17279. Was it right ahead of you, or on the port or starboard bow? - Right ahead.
17280. You struck three bells immediately, I suppose? - Yes, as soon as I saw it. 17281. What did you do next? - I went to the telephone.
17282. Was that on the starboard side of the crow's-nest? - Yes.
17283. You went to the telephone, and - ? - Rang them up on the bridge.

**Page 411**

17284. Did you get an answer? - Yes.
17285. Did you say anything to them at once, or did they answer you before you told them? - I asked them were they there, and they said yes.
17286. Yes? - Then they said, "What do you see?" I said, "Iceberg right ahead." They said, "Thank you."
17287. Then you dropped the telephone, did you? - Yes.
17288. What did you do next? - I kept the look-out again.
17289. You were approaching the berg meanwhile? - Yes.
17290. Are you able to give us the distance, or about the distance, the berg was from your ship when you first saw it? - No.
17291. And except for what happened you have nothing to guide you as to the time either, have you? - No.
17292. We must get it from the events. Did you notice any change in the heading of your vessel after you gave this report? - After I rang them up on the 'phone and looked over the nest she was going to port.
17293. You were looking over the nest. Were you still on the starboard side of the nest? - No; my place is on the port, but I went to starboard to telephone.
17294. Did you remain there when you dropped the telephone, or did you go back to your own place? - I went back to my own place again.
17295. It would be on the port side of the crow's-nest? - On the port side.
17296. You saw her head turn to port, I think I understood you to say? - Yes. Was the vessel still turning to port when she struck the berg, can you tell us?

*(After a pause.)*

17297. (*The Commissioner.*) Do not say you can if you cannot? - She went to port all right, and the berg hit her on the starboard bow.
17298. (*The Attorney-General.*) She went to port. Do you mean she had a slight turn to port? - Well, going to port.
17299. She was still going to port when the berg struck her? - On the starboard bow.
17300. When you saw the vessel strike you felt it, did you; could you see it? - Certainly.

17301. What did you see when that happened? Your vessel, as I understand you, was going to port. Then you say she struck an iceberg. Tell us what you saw. You were in the crow's-nest, watching it were you not? - Yes.
17302. Did you see any ice come on the deck? - Yes, some on the forecastle head and some on the well deck.
17303. Could you tell how high, at all, the berg was? - No, I could not.
17304. You could not tell us in feet, of course, or measurement in that way, but can you give us any idea; was it as high as you were? - Just a little bit higher than the forecastle head.
17305. (*The Commissioner.*) Now someone can tell me how high from the water was the forecastle head? - I do not know.
- The Commissioner:* No, you cannot; but someone can.
- The Attorney-General:* About 40 to 50 feet, I think.
- Sir Robert Finlay:* About 55 feet, my Lord.
17306. (*The Commissioner - To the Witness.*) This berg that you struck must have been higher than the forecastle head because ice fell from it on to the forecastle head and on to the well deck, so I suppose it must have been higher than the forecastle head. That would be so, would it not? - Yes.
17307. Now, how much above the forecastle head did this berg stand, about. Can you show me in this room, I mean. If you cannot, do not try? - No, I do not know.
- The Commissioner:* It is far better to say you do not know.
17308. (*The Attorney-General - To the Witness.*) You will tell me if you can? - I cannot say; I do not know.
17309. Was it as high as you were on the crow's-nest? - No, it was not. 17310. Not as high as that? - No.
17311. But above the forecastle head? - Yes.
- Sir Robert Finlay:* Mr. Wilding has just verified it again, and finds it was 55 feet above the waterline.
- The Attorney-General:* I think the crow's-nest is about 40 feet above the deck.
- Sir Robert Finlay:* Above the forecastle, yes.
- The Attorney-General:* One can form some impression of the height.
- The Commissioner:* In the crow's-nest you know he would be looking down upon this when it struck, and not looking up to it. He said that the berg was not as high as the crow's-nest.
- The Attorney-General:* Yes, he is quite clear about that. What I have got from him is: It was not as high as the crow's-nest, but it was higher than the forecastle head, and that is about as much as we could expect to get.
- The Commissioner:* It may have been standing about 75 feet above the surface of the water.
17312. (*The Attorney-General.*) Yes, that is probably as near as we should ever get to it. (*To the Witness.*) You say the berg passed, did you? - Yes.
17313. As you were looking over to the starboard side of the ship? - Yes.

17314. Could you give us some idea of what it looked like when it came. Was it a great big mass that passed you, or was it a small mass that you could see? - Well, a great big mass.

17315. Do you mean like a great block? - Yes.

17316. When you saw it first could you form an idea of what height it was? - No.

17317. Well, it looked smaller, presumably? - Yes.

17318. Then did you remain on the crow's-nest? - Yes. 17319. Until eight bells? - Till eight bells went.

17320. At eight bells, in the ordinary course, you were relieved? - Yes.

17321. I think then Hogg and Evans relieved you. Now, will you tell me, supposing there had been a haze, would it be your duty to report it at all to the bridge? - I have never reported haze yet.

17322. They would be on the bridge, you mean, and see it for themselves; is that what you mean? - Yes.

17323. Did you have any conversation with your mate, Lee, after you struck? - Well, I told him I thought it was a narrow shave - after we had hit it, after we had hit the ice. 17324. (*The Commissioner.*) It was a little more than a shave? - That was only my idea. 17325. (*The Attorney-General.*) You thought it was not anything very serious? - No, it was such a slight noise; that is why I said it.

17326. You thought it was nearly serious, but not quite? - Yes.

17327. (*The Attorney-General.*) I do not propose to take him right through the story of what happened with regard to the boats. We have heard enough, I submit, about that. (*To the Witness.*) You were eventually saved in boat No. 6? - Yes.

17328. (*The Attorney-General.*) Your Lordship will remember we have had some evidence about that from the Quartermaster, Hichens, but your Lordship shall have all that in the digest we are making for your Lordship. It is the one in which Major Peuchen was also. There is only one thing I would ask. (*To the Witness.*) Do you remember how many women there were in the boat, in boat No. 6? - About 23 or 24.

17329. (*The Commissioner.*) And how many altogether, including the crew? - Well, about 28 or 29; there was only me and Hichens of the crew.

17330. Twenty-four women. Were there any men passengers? - Two - one first and one-third, and two crew.

17331. And that was the whole boatload? - Yes.

*The Attorney-General:* That does not quite agree with the evidence of Hichens, the Quartermaster. That you will find at page 43.

*The Commissioner:* Will you tell me the effect?

*The Attorney-General:* He says this at Question 1106: "How many people did you take on board? - (A.) 42, all told." He said there was one seaman besides himself, and 40 passengers, and of that 40 all were women except one man and one boy. That is his evidence, and he went through it in some

detail. The passenger was Major Peuchen, your Lordship will remember.

*The Commissioner:* Yes; if that witness is right, this witness is probably making a mistake about the number of women.

*The Attorney-General:* I think so.

*The Witness:* I am not making any mistake at all.

17342. You are not? - I am not.

17343. Did you count them? - I did.

17344. Very well. How many were there? - I said 24 women. I know what I am talking about.

Well, I should hope so. Do not be angry about it. We are not making any attack upon you; we are only calling attention to the evidence.

*The Commissioner:* Do not take offence. No one intends to annoy you.

*The Attorney-General:* No one is casting an imputation upon you.

*The Commissioner:* We only want you to state the truth, that is all.

*The Witness:* Well, I am telling the truth.

*The Commissioner:* I am sure you are doing your best.

17345. (*The Attorney-General - To the Witness.*) Perhaps you can tell us this. Did you count the women there were? - I was in the boat when they were passed in.

17346. And you were in the boat, I suppose, when Major Peuchen got in? - Yes.

*The Commissioner:* There is no doubt at all - we have not had the figures proved, but I suppose there is no doubt at all - about the numbers that were saved ultimately? *The Attorney-General:* No.

*The Commissioner:* They were all saved on board the "Carpathia"? *The Attorney-General:* That is right.

*The Commissioner:* And there is no doubt about the numbers the "Carpathia" took?

17347. (*The Attorney-General.*) No. (*To the Witness.*) Perhaps you can tell me this: Were there any more women on the boat deck at the time your boat was lowered? - Well, I cannot say; I think there were.

17348. There were some? - But they would not come in.

17349. Did you hear them asked to come in; did you hear them told to get into the boat? - Yes; Mr. Lightoller asked if there were any more women.

17350. There were women there, you think? - I think there were; I am not quite sure, though.

17351. But they would not get into the boat? - No.

17352. At any rate, none came forward to get into the boat? - No.

17353. As I understand, you were there passing them into the boat? - Yes. 17354. When none came forward the order was given to lower away. Is that right? - Yes.

17355. Did you notice when you got into the boat and were in the boat before daybreak, any icebergs? - It was only at daybreak we noticed them.

17356. At daybreak you saw a good deal, did you not? - Yes.

17357. Icebergs? - And fields of ice.

17358. All round you? - Yes.

17359. If I understand you aright, whilst you were in the boat, from the time you were in the boat till daybreak, you did not notice any icebergs. Is that right? - That is right.
17360. And when day broke you saw them all round you? - Yes.
- The Commissioner:* Well, that is not unimportant.
17361. (*The Attorney-General.*) I am not quite sure that I understand. You said just now, in answer to a question that I put to you that you saw ice all round when the day broke? - At daybreak.
17362. So that you had passed it, but had not seen it. Is that what you mean? You had been going through some ice? - Oh, I do not know. I am only just telling you when we were in the boat.
17363. That is what I am asking about, in the boat; you got into the boat, and you pulled away for some time? - Towards a light; we got ordered to. We got an order from Mr. Lightoller to pull for a light which was on the port bow.
17364. You did pull towards it? - We tried to get up to it.
17365. But you could not? - No.
17366. It was a white light, was it not. Then, when you were pulling towards that light you did not see any ice. Is that right? - That is right.
17367. But when the day did break you found that there was ice, if I understand you aright? - All round us.
17368. Not only in front of you, but all round? - All round the horizon like.
17369. (*The Commissioner.*) And icebergs? - Yes.
17370. (*The Attorney-General.*) Icebergs and field ice. There is only one other question I want to put to you; When you were in the "Oceanic" and employed there as the lookout, did you have glasses? - Yes.
17371. Glasses provided for you in the crow's-nest? - Yes; every trip.
17372. Were they kept in the crow's-nest? - No; at the end of the voyage we took them back to the Second Officer.
17373. But whilst on the voyage they were kept somewhere in the crow's-nest? - Yes, in a bag.
17374. Did you ask for glasses? - I did not, but Symons did.
17375. You had better tell us what he said? - He said there were none aboard for us, intended for us.
17376. There was a locker there for glasses, was not there? - Yes, in the nest.

**Examined by Mr. SCANLAN.**

17377. I understand you had glasses in the crow's-nest during the journey from Belfast to Southampton? - Yes.
17378. Were those glasses marked in any special way? - It had on one side of it, "Second Officer," and on the other, s.s. "Titanic."
17379. Were those taken from you at Southampton? - Yes.
17380. Will you tell me how long have you been of the rank of look-out; how long you have held that position? - About four years. All the time I was in the "Oceanic."

17381. The only boats on which you have been a look-out man are the “Oceanic” and the “Titanic”? - Yes, that is all.

17382. Is it your evidence that on every trip on the “Oceanic” you had glasses? - Every trip.

17383. Now, I want you to go back for a moment to the appearance of this iceberg when you first saw it. When you first saw it, did it appear as a very small object? - A small object.

In giving evidence in America as to this -

17384. (*The Commissioner.*) Did you call it a small object? - I said it was the size of a small table.

*Mr. Scanlan:* He gave a description of it in America, which I am anxious to bring to your Lordship’s notice. *The Commissioner:* Quite right.

*Mr. Scanlan:* I will read to you the evidence which you gave in America, and you can just tell me if it is correct?

*Sir Robert Finlay:* What day?

17385. (*Mr. Scanlan.*) It is the 24th April: - “(*Senator Burton.*) You say when you first saw that iceberg that it was about the size of these two tables”? - That is right; that is the way I put it.

*The Commissioner:* We have not got the tables here.

17386. (*Mr. Scanlan.*) We have plenty of tables, my Lord. (*To the Witness.*) When Senator Burton was asking you that question, were there two small tables in the room? - The two tables were in the room, which I mentioned to him.

17387. Were the two tables in the room any bigger than *those (Pointing.)*? - I do not know.

17388. At all events, is it correct to say when you first saw this iceberg it appeared to be very small. Is that so? - [No Answer.]

*The Commissioner:* Did he give any answer to the question?

## Page 413

*Mr. Scanlan:* I do not think he has, my Lord.

*The Commissioner:* Very well, I am quite satisfied to leave it where it is. *The*

*Attorney-General:* There was an eloquent look - I do not know whether your Lordship caught that.

*The Commissioner:* What was the look? What was it, Mr. Scanlan?

*Mr. Scanlan:* This is the question -

*The Commissioner:* Yes, I heard the question; I heard no answer, and I am now told that, in place of an answer, there was an eloquent look. Did you see the eloquent look? 17389. (*Mr. Scanlan.*) I did not, my Lord. I have not as good an eye as the AttorneyGeneral. (*To the Witness.*) If it is not troubling you too much, Mr. Fleet, would you tell his Lordship this; when you first saw the iceberg, the first sight of it you caught at the distance you were from it, did it appear as a very small object? - Yes.

17390. Was this a good night for seeing; would you describe it as a clear night, or a night in which it was difficult to see? - It was not difficult at all.

One of the officers who was on the bridge up till 10 o'clock, said this. He was asked this question: "Then you both realised at the time, that since it was a flat calm it would be more difficult to see the ice? - (A.) As far as the case of the berg was concerned, yes, it would be more difficult; naturally you would not see the water breaking on it if there were no wind." Was it an ordinary clear night, or did you experience some difficulty as look-out man?

*The Commissioner:* He has just said he experienced no difficulty. He has told us so several times, you know.

17391. (*Mr. Scanlan.*) Yes, my Lord. (*To the Witness.*) Could you see water breaking on the iceberg when you noticed it? - No.

17392. I think you said when you were being examined that you said to your mate Lee that there was a slight haze coming? - Yes.

17393. I want to make this perfectly clear. Is it your evidence that there was a haze that night? - No, there was not. I said there was a slight haze.

Could you recall now how long you had observed the haze before -

*The Commissioner:* He told us once that he could not.

*Mr. Scanlan:* He was asked, I think, how long after he came on the watch.

*The Commissioner:* He was asked by the Attorney-General, and he told us that he could not; and as I myself have very grave doubts about there being a haze at all, I can understand his having a difficulty in saying how long before the collision it was that he saw it.

*Mr. Scanlan:* As your Lordship made that observation in reference to the haze, I thought I might refer your Lordship to the evidence of Mr. Symons, at page 268.

*The Commissioner:* By all means.

17394. (*Mr. Scanlan.*) The question was asked by Mr. Laing, at Question 11983. (*To the Witness.*) You know George Symons; you know Symons was also a look-out man? - Yes.

He was asked: "While you were on the look-out up to 10 o'clock, what sort of a night was it? - (A.) Pretty clear, Sir; a fine night, rather hazy; if anything, a little hazy on the horizon, but nothing to speak of."

*The Commissioner:* Then the next question.

17395. (*Mr. Scanlan.*) "Would you describe it as a very clear night? - (A.) Yes. (Q.) With stars? - (A.) Yes." Do you agree with this description of the night - "fine night, rather hazy; if anything a little hazy on the horizon."

*The Witness:* Not when I went on the look-out; it was not hazy.

17396. But when the haze did come was it like that? - A slight haze.

17397. And did it extend right round the horizon? - No.

17398. It did not extend all round? - No.

17399. Was it right in front of you? - Right in front.

17400. (*The Commissioner.*) I understand you to say two points on each bow? - Two points on each bow; that is in front.

17401. (*Mr. Scanlan.*) Do you think if you had had glasses you could have seen the iceberg sooner? - Certainly.

17402. How much sooner do you think you could have seen it? - In time for the ship to get out of the way.

17403. So that it is your view that if you had had glasses it would have made all the difference between safety and disaster? - Yes.

17404. (*The Commissioner.*) Would it depend upon whether you had the glasses up to your eyes, or not? I suppose having the glasses in the box would not have been any good to you? - When I have to keep a sharp look-out I have the glasses in my hand, if there are any there, till my watch is finished.

17405. Glasses in your hand will not help you to see anything unless you had them up to your eyes? - I put the glasses before my eyes. I pick things out on the horizon with the glasses.

*Mr. Scanlan:* Is it your experience on vessels where you have had glasses that the glasses enabled you to pick out objects more quickly than you would have done with the naked eye?

*The Commissioner:* No doubt; that is his evidence, at all events.

17406. (*Mr. Scanlan.*) You were told when you went on watch that you had to keep a sharp look-out. In these circumstances, if there had been glasses in the crow's-nest would you have used them? - Yes.

17407. Constantly? - Yes.

17408. After all, you are the man who discovered the iceberg? - Yes.

17409. (*The Commissioner.*) Did you know at the time you went into the crow's-nest, which was at 10 o'clock that night, that there were no glasses in the box or bag? Did you know that? - I knew that as soon as we left Southampton.

17410. And you knew it when you went into the crow's-nest at 10 o'clock the night of the 14th April? - Yes.

17411. You also knew that you were to keep a look-out for ice; who told you that? - Symons.

17412. Did you say at the time, "But we have got no glasses"? - No, I did not; he knew we had none.

17413. Do not you think, if it was necessary to have glasses in order to do what you were told to do, to keep a sharp look-out, you should go to the bridge or telephone to the bridge and say, "I am told to keep a sharp look-out, and I have not got any glasses"? - They would know that.

17414. But did not you call their attention to it? - No. I did not.

17415. (*Mr. Scanlan.*) On that point did you report or did one of your mates report in Southampton that there were no glasses in the crow's-nest? - Symons went up, and asked Mr. Lightoller.

*The Commissioner:* I know that; I have heard that already.

17416. (*Mr. Scanlan - To the Witness.*) Were you told when this report was made on the absence of glasses that there were none intended for the look-out? - Yes, they told us that, or told Symons that, and he told us.

17417. Was that what was conveyed to you? - Yes.

17418. Then you had to accept that as the provision of the ship? - That is it. 17419. If you had complained would you have got yourself into trouble with your superior officers? - No, I should have been told the same, I suppose.
17420. Have your eyes been tested? - I got tested at Washington in the Marine Hospital lately, while I have been at Washington.
17421. That is since the accident? - Yes.
17422. (*The Commissioner.*) Were your eyes all right? - Yes.  
*The Attorney-General:* I think they were tested before.
17423. (*The Commissioner.*) But you have had your eyes tested since the accident? - Yes.
17424. And they have been found all right? - Yes.
17425. (*Mr. Scanlan.*) When were your eyes tested

#### Page 414

- before the accident? - I do not know; it may have been a couple of years or a year.
17426. When were they tested, and where? - Southampton, by the Board of Trade.
17427. When this test was made by the Board of Trade, was it made by a doctor? - Oh, I do not know; it got done by the Board of Trade; I do not know who it was through. *The Commissioner:* I should have thought that any person who knew how to do it could easily test eyesight. I daresay you know how it is done?  
*Mr. Scanlan:* There is some importance attaching to this, because there is a rule of the Board of Trade about this.  
*The Commissioner:* What is it?  
*Mr. Scanlan:* I understand that a test is supposed to be made, but I am told it is not invariably carried out, and I am instructed to direct your Lordship's attention to it in connection with the rules, and I thought it would be a convenient part of the examination to do so.  
*The Commissioner:* Quite.
17428. (*Mr. Scanlan - To the Witness.*) Now I want to ask you this question. Before you left the "Titanic" did you observe the lights of any ship in your neighbourhood? - Well, there was a light on the port bow.
17429. Did you see this light on the port bow before you left the crow's-nest? - No, it must have been about 1 o'clock.  
Did you observe it before you left the "Titanic"?
17430. (*The Commissioner.*) He says he saw it at 1 o'clock. (*To the Witness.*) When did you leave the "Titanic" - at what time? - I think I got into the water in the boat about 1 o'clock.
17431. And it was about that time that you saw this light? - Or just a little before it - about that time.
17432. (*Mr. Scanlan.*) Will you describe to my Lord the kind of light it was? - A white light.
17433. (*The Commissioner.*) What did you think it was? - I had no idea; I just saw a light, that is all.

17434. You did not know whether it was a masthead light or a stern light, or what it was?  
- No.

17435. Did you know it was the light of some ship? - Yes.

17436. (*Mr. Scanlan.*) During this last watch of yours on the "Titanic" from 10 to 12, did you hear at any time from the bridge, or get any advice from the bridge about the look-out you were to keep? - No.

17437. Or about ice being expected? - No. The only order we got was from Symons, to keep a sharp look-out.

17438. The only order you got was an order which had been passed along to you by the look-out men whom you relieved? - That is all.

**Examined by Mr. COTTER.**

17439. In your four years' experience on the "Oceanic" did you ever see ice at any time?  
- No.

17440. You could form no judgment how far you could see an iceberg? - No.

**Examined by Sir ROBERT FINLAY.**

17441. You have been asked as to what Symons said about the night. Will you listen to this question. It follows after the one which was read to you. It is on page 268, Question 11987. It is about the glasses. This is the question put to Symons about the glasses: "If you were on the look-out on a fine clear night, would you rather trust to the eye than a binocular to pick up anything? - (A.) Yes; you use your own eyes as regards the picking up anything, but you want the glasses then to make certain of that object." Do you agree to that? - Yes.

17442. That is right: For picking up anything would you trust to the eyes, and then having picked it up -? - You look with glasses to make sure.

17443. Then as regards picking up an iceberg or anything else, you would pick it up with the naked eye at first? - That is all we had to do that night - use our eyes. 17444. Yes, but do not you see -? - I see what you mean.

17445. Do you agree with this. This is what Symons says: "You use your own eyes as regards the picking up anything, but you want the glasses then to make certain of that object." Do you agree with that? - Yes.

17446. On the White Star Line I think they have special look-out men? - Special?

17447. Yes? - I do not know.

17448. You were one of them, were you not? - Yes.

17449. You signed on as a look-out man? - Yes, I signed on as a look-out man.

17450. I mean that is your work? - Yes.

17451. That is the practice on the White Star Line, is it not? - Yes, that is it. 17452. To have special look-out men. Do you know whether it is the practice on other lines?  
- I do not know; it is the only company I have been on the look-out.

*The Attorney-General:* They sign on as look-out men.

17453. (*Sir Robert Finlay.*) Yes, for that purpose. (*To the Witness.*) Now, with regard to this light which you saw when you put off from the ship, had you any doubt that that was a ship's light? - I could not tell what it was; it might have been a sailing ship or it might have been a steamer.
17454. (*The Commissioner.*) Was it a ship's light? - Yes.
17455. (*Sir Robert Finlay.*) You are quite clear about that? - Yes.
17456. You were rowing towards it? - Yes.  
How came the two men to get into your boat?  
*The Commissioner - To the Witness:* Two men passengers were in your boat, you know.
17457. (*Sir Robert Finlay.*) How came they to get in? - One man we found out afterwards was underneath the thwarts. The Major got into the boat as we were in line with the square ports; he came down the life-line.
17458. We have heard that Major Peuchen was ordered in by Mr. Lightoller? - Yes.
17459. And he came down in the way you have described? - Yes.
17460. Were any women left behind who were willing to go? - I could not say.
17461. Were there any women on deck when you left? - I think there were.
17462. Were they willing to go into the boat? - I could not say. Mr. Lightoller sang out for more women and none seemed to come.
17463. None came? - None came.
17464. You did not leave behind any women who wanted to get into the boat I suppose? -  
[No Answer.]
17465. I understood you to say some time ago the women on the deck refused to get in? - I did not say refused.
17466. Well I thought you did? - Did you?  
Would not get in. What did you say to it? I want to understand.  
*The Commissioner:* As far as I am concerned you need not trouble him with any more questions.
17467. (*Sir Robert Finlay.*) I am obliged to your Lordship. (*To the Witness.*) Now just one or two questions with regard to the iceberg. Did you describe it when you gave evidence in the United States, on the other side of the water, as a black mass when you saw it? - Yes.
17468. And did you say that you estimated that it was 50 or 60 feet above the water? - Did I say that? No, I said it was little higher than the fore-castle head when he asked me that.
17469. I will just read you what you said on 23rd April, at page 16, about it. "I reported an iceberg right ahead, a black mass." Is that right? - Yes, that is right.
17470. And then on page 18 - this is also on the 23rd April - this question is put to you: "How large

## Page 415

did it get to be finally when it struck the ship"? - that is the iceberg. "(A.) When we were alongside it was a little bit higher than the fore-castle head. (Q.) The fore-castle head is how high above the waterline? - (A.) Fifty feet, I should say. (Q.) About fifty feet? - (A.)

Yes. (Q.) So that this black mass, when it finally struck the boat, turned out to be about fifty feet above the water? - (A.) About fifty or sixty. (Q.) Fifty or sixty feet above the water? - (A.) Yes. (Q.) And when you first saw it it looked no larger than these two tables? - (A.) No, Sir.” Was that about the height, as far as you can judge? - [No Answer.]

*The Commissioner:* I think we can form our own opinion as to the height of it; obviously it must have been above the forecastle head because ice fell from it on to the forecastle.

*Sir Robert Finlay:* Yes, my Lord.

*The Attorney-General:* Higher than the forecastle, and lower than the crow’s-nest.

17471. (*Sir Robert Finlay.*) As your Lordship points out, it must have been higher than 55 feet; how much higher we do not know. (*To the Witness.*) Did you notice where the blow was struck, where the “Titanic” was struck? You said on the starboard bow? - Just before the foremast.

*The Commissioner:* That means just in front, on the starboard side of the crow’s-nest?

17472. (*Sir Robert Finlay.*) Yes, my Lord, exactly. (*To the Witness.*) Did the “Titanic” answer the helm, going to port, while you were still at the telephone? - I do not know.

17473. Well, just let me recall to your memory what you appear to have said in America. On the 23rd April, at page 18, you are asked this: “Do you know whether her engines were reversed?” That is the “Titanic’s” engines. You say, “Well, she started to go to port while I was at the telephone. (Q.) She started to go to port? - (A.) Yes; the wheel was put to starboard. (Q.) How do you know that? - (A.) My mate saw it and told me. He told me he could see the bow coming round.” Is that right, that the ship was going round to port while you were still at the telephone? - Yes.

17474. And then the same thing on the 24th April, page 3, “Did you notice how quickly they turned the course of the boat after you sounded the gongs? - No, Sir; they did not do it until I went to the telephone. While I was at the telephone the ship started to move.” That means to answer her helm to answer the starboard helm and turn to port? - Yes.

17475. There is only one other matter. Do you remember any conversation with Mr. Lightoller about the look-out and seeing the berg. Just let me read you what Mr. Lightoller said. It is page 343, my Lord. Mr. Lightoller is asked this at Question 14884: “Did you have any talk with Fleet, the look-out man? - (A.) On the “Carpathia”? (Q.) Yes? - (A.) Yes. (Q.) He has not been called yet, but you might tell us what he said? - (A.) I asked him what he knew about the accident, and induced him to explain the circumstances. He went on to say that he had seen the iceberg so far ahead. I particularly wanted to know how long after he struck the bell the ship’s head moved, and he informed me that practically at the same time that he struck the bell he noticed the ship’s head moving under the helm. (Q.) That is what you told us before? - (A.) Yes. (Q.) Did he tell you anything else? - (A.) With regard to distance? (Q.) No, with regard to weather or conditions? - (A.) Oh, yes. He said it was clear. (Q.) That is really what I wanted to know. - (A.) Oh, yes. (Q.) Did he say anything about haze? - (A.) No, he never said anything about haze. (Q.) He never complained about haze, or anything of that sort? - (A.) No.” Is that right? - Well, I am not going to tell him my business. It is my place in Court to say that, not to him.

17476. (*The Commissioner.*) You really do not understand. That gentleman is not trying to get round you at all? - But some of them are, though.

*The Commissioner:* They are not, indeed. I can see you think most of us are, but we are not. We only want to get from you your own story. We want nothing else.

17477. (*Sir Robert Finlay.*) You know Mr. Lightoller? - Certainly I do.

17478. Did you have any conversation with him? - Yes. *The Commissioner:* That is all we want to know.

*Mr. Harbinson:* There are a couple of questions suggested by Sir Robert Finlay's examination I should like to put.

### **Examined by Mr. HARBINSON.**

17479. Did I understand rightly that when you left the boat deck there were some women left behind on the boat deck? - [No Answer.]

*The Witness:* (*After a pause.*) Is there any more likes to have a go at me? *The*

*Commissioner:* Well, I rather sympathise with him. Do you want to ask him anything more?

*The Attorney-General:* Oh, no.

*The Witness:* A good job, too.

17480. (*The Commissioner.*) I am much obliged to you. I think you have given your evidence very well, although you seem to distrust us all.

*The Witness:* Thank you.

### **(*The Witness withdrew.*)**

*The Attorney-General:* I have been looking to see what this eyesight test was that has been spoken of. There is none obligatory on the men, but under the regulations relating to the examination of masters and mates in the marine under the Board of Trade. There is a rule which says that any person serving or intending to serve in the Mercantile Marine, if desirous of undergoing an examination for form vision or colour vision must make application, and he pays a fee of one shilling, and then he can be examined and get a certificate. It is purely voluntary.

*The Commissioner:* Is that what you were referring to?

*Mr. Scanlan:* Yes, my Lord. I am informed that the rule is not carried out.

*The Attorney-General:* It is not obligatory; it has nothing whatever to do with the men, but it is a test imposed upon masters and mates, and there is a superintendent who applies a test for that purpose.

*The Commissioner:* It seems to me very desirable that there should be some test for a look-out man.

*Mr. Scanlan:* What I have been instructed to apply for is that such a test be made obligatory with regard to look-out men.

*The Commissioner:* That will come at the proper time.

*The Attorney-General:* You agree it is not obligatory at the present time, Mr. Scanlan?

*Mr. Scanlan:* Yes.

**GEORGE ALFRED HOGG, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

17481. You have been at sea for some 13 years and able seaman for 10, I think? - Yes.

17482. You have been in the employ of the White Star Line how long about? - Four years, I should think, off and on.

17483. All the time as look-out man? - No.

17484. Were you first an able seaman and then became a look-out man? - Yes, able seaman, boatswain's mate, and look-out man.

17485. Was that the order? - That is what I have been in those ships. 17486. The White Star ships? - Yes.

**Page 416**

17487. How long have you been a look-out man? - I went one trip in the "Adriatic" and three days in this ship. That is all.

17488. And you have also been employed in ships of the P. and O. Company and the Royal Mail? - Yes.

17489. The Union Castle? - Yes.

17490. And other lines? - Yes, and other lines.

17491. And you have acted as look-out, I suppose, in some of those lines? - They do not carry look-out men; everybody takes their turn.

17492. You have acted as look-out, but you did not sign as look-out? - That is so. 17493. In these other vessels, as far as I understand you, there was no question of signing as look-out man. It is only in the White Star that has happened in your experience? - Yes.

17494. Do you remember when the "Titanic" was leaving Belfast - you signed on the "Titanic" as look-out man, we know - were a pair of glasses given you? - Yes.

17495. For the crow's-nest? - Yes.

17496. Who gave them to you, do you remember? - Mr. Blair, the acting Second Officer then.

17497. Mr. Blair, who was then acting as Second Officer? - Yes.

17498. Did you notice how they were marked? - "Theatre, marine and field." "Second Officer, S.S. 'Titanic.'"

17499. That was on one side, was it? - Yes.

17500. Was "Theatre, marine, and field" the same? - No, you worked them as you wanted to use them.

17501. When you left the ship at Southampton, what did you do with those glasses? - Mr. Blair was in the crow's-nest and gave me his glasses, and told me to lock them up in his cabin and to return him the keys.

17502. Who returned the keys? - I gave them to a man named Weller, as I was busy on the forecastle head.

17503. As far as you were concerned, the glasses, you were told, were to be locked up in the cabin of the Second Officer? - I locked them up.
17504. And they were locked up. When the ship left Queenstown were there any glasses in the crow's-nest? - There were none when we left Southampton.
17505. Did you ask for them? - Yes.
17506. When you left Southampton? - I did not exactly ask for them, but my mates asked for them at that time.
17507. Did you ask for them at all after you left Queenstown? - After I left Queenstown.
17508. You personally asked for them? - I personally asked.
17509. Whom did you ask? - Mr. Lightoller.
17510. Will you tell us what you said to him, quite shortly, about it? - I said, "Where is our look-out glasses, Sir?" He made some reply, I did not exactly catch it. "Get them later," or something like that.
17511. At any rate, you did not get any? - I did not get any.
17512. You went on your look-out duties without glasses for the rest of the time? - Yes.
17513. Have you had experience of glasses; have you used them much? - Never before; only in the White Star Line.
17514. But had you used them before you were on this voyage? - On another ship.
17515. Of the White Star Line? - In the "Adriatic."
17516. You had never had them in any ship you have been on except in the "Adriatic," which was another ship of the White Star Line you had sailed in? - No other ship except the White Star.
17517. Did you find them of use? - Well, I believe in my own eyesight.
17518. Do you mean you believe in your own eyesight better than you do the glasses? - Yes.
17519. It is suggested - I only want to know how far you agree with it - that it is easier, or just as easy, to pick up an object that you may see on the horizon with your own eyesight as it would be with the glasses? - You might not see the object, but if you think it is a ship you might just see the smoke.
17520. With your own sight? - Yes, with your own sight. You would not see the ship first; you would see the smoke first.
17521. Would you see it any better with glasses? - You would put the glasses up to your eyes then and make sure.
17522. What it comes to, if I understand that, is you pick it up with your eyesight, and then if you want to see as well as you can what it is you would use the glasses? - That is what they are handy for, Sir.
17523. But not for picking up things, you mean? - No, I pick up things with my own eyesight.
17524. I should like to know what your experience is in the use of these glasses. Is that what the rest of the men who were on the look-out with you have done? Is that the way the glasses are used - when you have picked up an object to look closer? - I could not say; I am speaking for myself. I do not know what they did with the glasses.

17525. On this particular night, Sunday the 14th, when the collision happened, your mate was Evans, was he not? - Yes.
17526. You were not on duty - you did not go on duty till 12 o'clock? - Twelve.
17527. That is right? - That is right.
17528. You relieved Fleet and Lee? - Yes.
17529. What were you doing when the collision happened? - Asleep.
17530. Did you feel anything at all of it? - None.
17531. Did you know anything of it at all until you had to get up? - I knew there was an accident because everybody rushed up into the fore-castle. I asked what was the matter and what the confusion was about.
17532. What did they say? - They said she had hit something.
17533. What was the last watch you had had before you relieved Fleet and Lee at midnight? - 6 to 8.
17534. And whom did you relieve at 6? Was it also Fleet and Lee? - I relieved Lee and Fleet at 6.
17535. Did you get any warning about ice?  
*The Commissioner:* Do you mean at 12 o'clock?  
*The Attorney-General:* No. *The Witness:* At 6?
17536. Yes, that is what I mean? - All that was handed over to me was, "Nothing doing; keep a look-out for small ice."
17537. You did hear it at 6 o'clock "Keep a look-out for small ice"? - Yes, but I believe it is the usual password in the nests in these ships.
17538. I do not understand what you mean by that? - I do not believe they got it from the bridge at the time.
17539. Never mind where they got it from. You got it from them? - Yes.
17540. Who gave it to you? - Fleet and Lee - I think Lee gave it to me.
17541. You say you believe it is a usual password. Had you ever had it given you before, a password of that kind? - Sometimes.
17542. But I mean on this voyage? - Yes. I believe I did: I would not be quite sure. It seems a password there from what I can see of it.
17543. (*The Commissioner.*) I do not understand what you mean by a "password." What do you mean? - A joke, Sir. I should think.
17544. (*The Attorney-General.*) A joke to the look-out men to keep a look-out for ice? - This is what is passed on to one another.
17545. Have you any recollection of their doing that to you on that night at 6 o'clock in the evening? - At 6 o'clock in the evening: "Nothing doing; keep a look-out for small ice."
17546. (*The Commissioner.*) I am not sure that I understand you when you say you regarded that as a joke. What do you mean? - Well, as I say, it seems a password.
17547. Do you mean by "a password" a mere matter of form? - That is what they always seemed to say to me, Sir.
17548. What? - "Keep a look-out for ice" as we relieved each other.
17549. But I suppose they do not say that to you on board ship when you are going through the tropics? - No, there were no tropics there at that time.

17550. It is not a message that you get on all voyages at all times? - I never heard it before.
17551. (*The Attorney-General.*) How often had you heard it, if at all, before 6 o'clock that evening? - I heard it several times before that.
17552. How often had you heard it before. You say several times. Do you mean half-dozen times? - I have no idea how many times it was.
17553. But several times? - Several times.
17554. Several days before? - We were only out about three days.
17555. I know. - A couple of days before.
17556. Do you mean that every time you went and relieved them they gave you that password, as you call it? - Yes.
17557. Daytime or nighttime? - Any time they would pass it along to one another.
17558. (*The Attorney-General.*) This is quite new, my Lord, but I will pass on. (*To the Witness.*) At 12 o'clock, when you went there, did you get any message about ice then when you relieved them that night after the collision? - We got a message we had hit one.
17559. When you went to relieve them at 12 o'clock, was anything said to you then? - Nothing was passed on to me at all then.
- The Commissioner:* I do not see what the importance of this is.
17560. (*The Attorney-General.*) Not of that, but I thought he might say something else. I quite agree it is of no importance at all. (*To the Witness.*) Eventually you were saved in boat No. 7? - Yes.
- The Attorney-General:* We have had evidence about that boat, so I am not going into any particulars about it. I will tell your Lordship why we have called him. We wanted to exhaust the look-out-men. You have had five out of six before you now. The only one who has not been called is Evans, and I do not think it is necessary to call him, because he goes on with this witness, to relieve at 12 o'clock. *The Commissioner:* It is of very little importance.
- The Attorney-General:* Very little. It was only so that your Lordship should see him as the relieving watch.

**Examined by Mr. SCANLAN.**

17561. On the ships of the P. and O., the Royal Mail, and the Union-Castle Lines is there a crow's-nest? - In the Royal Mail there was a crow's-nest when I was there in several ships.
17562. Was it the practice on the Royal Mail boats to have look-out men on the fore-castle head or the stem head, as well as in the crow's-nest? - Not stationed men. 17563. Are they sent there from time to time? - Everybody takes their trick as an able seaman.

17564. Are other seamen stationed at the stem head? - At the stem head if she has not a crow's-nest.

17565. I mean, even when there is a crow's-nest, is it usual at nighttime, or if there is a haze, to station additional look-outs? - Double the look-outs, yes.

17566. (*The Commissioner.*) That, I suppose, would depend upon the character of the haze? - Yes, my Lord.

17567. (*Mr. Scanlan.*) Would there not be a double look-out put on, no matter what the haze was, if it was at night? - If it was very thick; if it was a slight haze they would not double the look-out.

17568. Have you been on any of those lines when ice was reported? - No, not in those ships.

**Examined by Sir ROBERT FINLAY.**

17569. Only one question. Were you told to get the Jacob's ladder ready? - Yes. 17570. Is that a rope ladder? - Yes.

17571. Where was that to be used? - I could not say. I left it on the boat deck. I was told to throw it down as soon as I fetched it up from the fore-castle head.

17572. Who gave you the order? - The boatswain.

*Sir Robert Finlay:* I only asked that, my Lord, in connection with what was said about the gangway doors, your Lordship recollects, at the side of the ship. He says the boatswain told him to get the rope ladder, the Jacob's ladder, which was obviously, I suggest, for use when those gangway doors were opened, and then he was told to throw it down; it was not used.

*(The Witness withdrew.)*

**GEORGE THOMAS ROWE, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

*The Attorney-General:* Mr. Rowe will give you some evidence, my Lord, about the starboard collapsible boat.

17573. (*Mr. Butler Aspinall - To the Witness.*) Were you serving as Quartermaster on board the 'Titanic' at the time of this accident? - Yes.

17574. I think you have served as Petty Officer in the Royal Navy? - Yes.

17575. And you have also served as Quartermaster in the "Majestic" and "Oceanic"? - Yes.

17576. And have been in the service of the White Star Company for the last two years? - Yes.

17577. And during that time have you been voyaging in the Atlantic? - Yes.

17578. Now you were saved in the starboard collapsible boat? - Yes.

17579. On the 14th, when were you first on duty that day? - 8 to 12 in the forenoon; 4 to 6 in the dog watch, and 8 to midnight.

17580. Now 8 to 12 you were on duty. Were you steering at any time? - 4 to 6, the first dog-watch
17581. Did you hear any talk amongst the officers whilst you were steering about ice? - No.
17582. You heard nothing mentioned? - No.
17583. During that watch, did you alter the course at any time? - Yes.
17584. Do you remember when it was? - Yes, at 5.45.
17585. At 5.45 you altered course? - Yes.
17586. Now, before you altered course, do you remember what course your vessel was steering? - Yes.
17587. What course was she steering? - S. 85 deg. W.
17588. By the compass in front of you, I suppose? - By the steering compass.
17589. That is all you would know about it? - Yes.
17590. At 5.45 to what did you alter it? - N. 71 W.
17591. (*Mr. Butler Aspinall.*) Mr. Pitman, the Third Officer, gave evidence about this matter at page 351, Question 15173: "Do you know at what time the course that the steamer was to take was mapped out that day? - (A.) Yes, noon. (Q.) And, so far as you know, was the steamer's course deflected at all from the course that had been marked out at noon; did it vary to the south, or in any way from the course which had been marked out at noon? - (A.) Yes, I considered we went at least 10 miles further south than was necessary. (Q.) Do I understand you rightly that in marking the course at noon, the course was marked ten miles further south than you considered necessary? - (A.) No. We had a certain distance to run to a corner, from noon to certain time, and we did not alter the course so early as I anticipated. Therefore, we must have gone much further south. (Q.)

When

## Page 418

- did you alter the course? - (A.) 5.50. (Q.) Who was responsible for the alteration? - (A.) The Commander. (Q.) To whom did he give the order? - (A.) The officers of the watch. (Q.) Do you know their names? - (A.) Mr. Wilde. (Q.) Were you there? - (A.) No. (Q.) Do you know what conversation took place? - (A.) No. (Q.) But you say he gave instructions to alter the course of the ship? - (A.) The course was altered at 5.50. They were the Commander's orders. (Q.) Ten miles further south. Was any record made of that at the time? - (A.) No, and I thought that the course should have been altered at 5 p.m. (Q.) Why did you think so? - (A.) Judging from the distance run from noon." Have you any reason to remember that time, 5.45? - Yes.
17592. Will you tell me what it was? - We always make a practice of what we call rounding the corner, and the man at the wheel generally takes notice of it.
17593. And did you take notice of it on this occasion? - Yes.
17594. And you noticed the time? - Yes.
17595. Now that is the dog watch. You came off duty -? - At 6 o'clock.
17596. Then at eight did you go on duty? - Yes.

17597. Your watch, then, would be 8 to 12. Now, during any part of that time were you at the wheel steering? - No, on the poop.
17598. You were on the poop aft, were you? - The whole time.
17599. (*The Commissioner.*) From 8 to 12 you were on the poop? - Yes.
17600. (*Mr. Butler Aspinall.*) Were you on the poop when you felt a jar? - Yes.
17601. And that proved to be a collision with an iceberg? - Yes.
17602. What did you do? - I thought it was something unusual being a fine night, and I went on the bridge and waited for orders to come through the telephone.
17603. Before you went on the bridge did you go and look at the taffrail; did you look at the patent log? - I did, after the iceberg was cleared.
17604. Then you first went to the bridge? - Yes.
17605. Did you see the iceberg? - Yes.
17606. Did you look up at it? - Yes.
17607. Then did you go back and have a look at the register of the patent log? - I went on the bridge to find that out. The log was on the port side of the bridge.
17608. What did it register? - 260.
17609. Do you know, of your own knowledge, when the patent log is set on board this ship? - Yes.
17610. When? - At noon.
17611. So that that would mean that since noon up to the time you had looked at it, she had run 260 knots, would that be? - Miles.
17612. You mean nautical miles? - It is marked "miles" on the log itself. *The Commissioner:* That means 260 knots.
17613. (*Mr. Butler Aspinall.*) Yes. (*To the Witness.*) How long after the ship struck do you think it was you looked at this patent log - ten minutes or a quarter of an hour? - About half a minute.
- The Commissioner:* What does this work out at?
- Mr. Butler Aspinall:* I worked it out, and I make it, subject to correction, very nearly 22 knots.
- The Attorney-General:* That is right.
- Sir Robert Finlay:* Twenty-one and three-quarters.
- The Attorney-General:* It is rather more than that; it is between 21 3/4 and 22, but it does not matter.
17614. (*Mr. Butler Aspinall - To the Witness.*) I do not want to go into this matter at great length, but did you, after that, see some boat in the water? - Yes.
17615. Do you know which boat that was? - No. I should think it was either 13 or 15.
17616. And was anything said by one of the officers to you about that boat? - No.
17617. Are you sure of that? - I telephoned up to the fore bridge.
17618. Did this happen? Did you ask if the bridge knew that a boat was in the water? - Yes.
17619. Where were you when you asked the bridge that? - On the after bridge at the telephone.
17620. How did you ask them; by the telephone? - Yes.

17621. And what was the answer? - The answer was "No, is there." I said "Yes." 17622. And that is all you know about that incident? - They asked me if I was the Third Officer and I said no.
17623. What did you do? - I said "I am the Quartermaster."
17624. That is all you know about that matter? - That is all.
17625. After that did you notice that the boats were being lowered? - No.
17626. Were the covers taken off the boats? - I could not say.
17627. Later on were you saved in the starboard collapsible boat? - I was.
17628. And did Captain Smith tell you to go into it? - Yes.
17629. Were you told to take charge of it? - No, I was not told to take charge because I was in charge.
17630. Who got into that boat? - The boat was partially full when I got into it; I had 53 women and 3 children in the stern. Chief Officer Wilde was asking for more women.
- There were none forthcoming, and two gentlemen got in.
17631. Who were the two gentlemen who got in? - One was Mr. Ismay.
17632. And who was the other? - I never saw the man before.
17633. You do not know his name now? - Well, I know by the papers.
- The Commissioner:* Let me know his name.
17634. (*The Attorney-General.*) I think from the American evidence it is a Mr. Carter? - Yes; Mr. Carter.
17635. (*Mr. Butler Aspinall.*) Did you know at the time that it was Mr. Ismay? - Yes.
17636. You had seen him about, had you? - Yes.
17637. How came it these two gentlemen came in? You said they got in. How came they to get in? - There were no more passengers in the vicinity to get in. 17638. Did anybody tell them to get in? - I never heard anybody.
17639. You did not hear anybody say, "Get into that boat"? - No. 17640. No officer? - No.
17641. They got in. This was the starboard collapsible boat? - Yes.
17642. Then was the boat lowered to the water? - It was lowered to the water, yes.
17643. When the boat got down to the water, how many people were in it? - 39.
17644. How was that number made up. Were there two gentlemen? - Yes.
17645. And how many crew? - Myself, three firemen and one steward.
17646. And the rest of the people were what? - What I thought were women and children.
17647. Did they prove to be women and children? - No, not at daybreak.
17648. Why? Tell me about that? - I found four Chinamen aboard.
17649. Where were they? - I could not see at the time.
17650. They were in the boat somewhere? - They were in there at daybreak.
17651. How they got in you do not know, I suppose? - No.
17652. (*The Commissioner.*) Were they all women and children, with the exception of three Chinamen? - Four Chinamen and Mr. Ismay and Mr. Carter.
17653. I have the two male passengers. Were the rest all women and children with the exception of the crew and the four Chinamen? - And the two gentlemen.

17654. (*Mr. Butler Aspinall.*) How many women would that be? - I cannot say how many women, because there were children there as well - 28, I think.

*The Attorney-General:* It would be 28 if he is right about the 39.

*Mr. Butler Aspinall:* Mr. Pearcey, who was a third class pantry steward, gave evidence about this boat. He took the view that there were some

## Page 419

60 or 70 people in. I will give your Lordship the reference to that. It is page 231. He was a pantryman who, your Lordship will remember, picked up two babies on the way to the boat.

*The Commissioner:* Yes.

17655. (*Mr. Butler Aspinall.*) He goes on at page 238 and sums it up at Question 10417, that there were "66 passengers and 5 of the crew - 71" - he took that view. (*To the Witness.*) You do not think there were as many? - I am certain.

17656. That boat remained in the water and none of the passengers were taken out, and all of them were put out of the collapsible into the "Carpathia"? - Yes.

17657. Before you left the ship did you see anything of the light of another vessel in the neighbourhood? - Yes.

17658. What light was that? - A white light, bright.

17659. What sort of distance did you think it was? - Four or five miles. 17660. Was anything said by you about it to anybody, or did any of the officers mention it to you? - They did not mention it to me, personally, but we were Morsing to her.

17661. You were not, were you? - The Fourth Officer and myself.

17662. After you had got into the boat and before you got to the "Carpathia," did you notice that same light? - Yes.

17663. What I think you meant to tell us was, the ship had struck an iceberg, and then, after that, before you got into the boat, you saw this light? - I went on the fore bridge.

17664. While you were on the bridge? - Yes.

17665. And afterwards you go away in the starboard collapsible boat and see some light? - Yes.

17666. At about the same sort of distance? - About the same.

17667. When you saw this light did you notice whether the head of the "Titanic" was altering either to port or starboard? - Yes. 17668. You did notice? - Yes.

17669. Was your vessel's head swinging at the time you saw this light of this other vessel? - I put it down that her stern was swinging.

17670. Which way was her stern swinging? - Practically dead south, I believe, then.

17671. Do you mean her head was facing south? - No, her head was facing north. She was coming round to starboard.

17672. The stern was swung to the south? - Yes.

17673. And at that time you saw this white light? - Yes.

17674. How was it bearing from you? - When I first saw it it was half a point on the port bow, and roughly about two points when I left the bridge.

17675. Did you notice before you left the ship whether she had a list either way? - Yes.  
17676. When did you first notice that? - When I left the after bridge to go on the fore bridge.  
17677. Which way was she listed? - To port.  
17678. Was it a big list or a small list? - When I left she would be about six degrees.  
17679. When you left what? - When I left the ship.  
17680. In the boat? - Yes.  
17681. Was it increasing? - I could not say.  
17682. You did not notice? - No.  
17683. Did you take any part in firing distress rockets? - Yes.  
17684. How long do you think it was from the time you commenced firing the rockets till you finished firing the rockets? - From about a quarter to one to about 1.25.  
17685. Yes, that is right. You gave evidence in America about it, and I see what you said there was: "I assisted the officer to fire them" - that is, rockets - "and was firing distress signals until about five and twenty past one." That is accurate? - Yes.

*(After a short adjournment.)*

*The Attorney-General:* Before your Lordship proceeds with this witness's evidence, there is a matter which is, I think, of considerable importance upon which I would like to have some direction from you.

In Question 26, the last Question, the Court is invited to make any recommendations or suggestions that it may think fit, having regard to the circumstances of the casualty, with a view to promoting the safety of vessels and persons at sea. When the Court resumes after the adjournment and we proceed to deal with the evidence as to the construction of the vessel, it occurs to me it would be well to know how far your Lordship proposes to make recommendations with regard to watertight compartments, and as to any system which you may think should be adopted in the future.

The reason why I am asking your Lordship for some direction is that I can quite follow that after you have heard the evidence you may come to a conclusion that some improvement should be made in some particular form of the system adopted in the "Titanic." Of course, your Lordship came to that conclusion. If we were to inquire into that, of course, the evidence we should put before you would be directed to giving some indication of what is done, in other systems or in other vessels, in the way of some other method of construction.

What is troubling me at the moment with regard to the preparation of the evidence is whether we are to put before you evidence which will enable the Court to say which is the best system in the Court's opinion. The difficulty in regard to that is that if we are to inquire into it it would mean that we should have to put before you all the evidence that can possibly be obtained in reference to watertight compartments, and the various systems adopted. That would, no doubt, make a very serious inroad upon the time of the Commission.

Your Lordship may know also that there has been an Advisory Committee appointed by the Board of Trade to inquire into this and to report upon it. The point I desire to draw your Lordship's attention to is whether or not we are to pursue that method, namely, of giving evidence enabling you to pronounce upon the best system, or whether you think that in this Inquiry it would be better to confine the evidence to indicating generally the systems which may be adopted by other vessels, for the purpose of enabling you to report whether or not you think there may be some improvement in the present method of construction.

Your Lordship will see that if we are to pursue the more extended Inquiry it means getting together a great deal of evidence which we have not as yet got, and which must, of course, occupy a great deal of time. I would like to know whether you think it would be advisable to take the more extended form of Inquiry and to get all that evidence, or whether you would propose to confine yourself to considering the advisability of any improvement in the system, which will be proved before you, which was adopted in the "Titanic."

The same observations would apply with reference to boats, because at a later stage we shall call before you the evidence from the Board of Trade of the course that has hitherto been pursued, and the precautions that are taken by the Board of Trade with reference to boats. There again the question will arise whether this Court proposes to recommend particular boats or a particular form; for example, of collapsible boat, or whether it would confine its recommendations to more accommodation in the shape of boats, if you should think that to be advisable. Possibly, your Lordship may consider whether it is necessary to have more collapsible boats or more lifeboats.

Both of these matters are very vital to us in the preparation of the evidence we are going to lay before you. I should respectfully submit to the Court that it would be almost impossible to go into the wider consideration of both points, and,

## **Page 420**

if you think fit to make recommendations that they should then be carried out by some special committees which may be appointed by the Board of Trade, or in such other form as may be deemed desirable.

It is for that reason that I am making the application to you so that we may be able both to form some opinion as to how long this Inquiry will last, and also as to the nature and extent of the evidence which we shall have to call before you; because it is useless to deal with evidence of that kind from day to day. It must be carefully prepared so as to be laid before the Court in the best form.

If your Lordship can assist us with regard to that I shall be very glad, so that we may occupy the time between now and the re-assembling of the Court in determining the evidence to be laid before you when we resume.

*The Commissioner:* Well, Mr. Attorney, I regard the main object of the present Inquiry in which we are engaged here to be to ascertain the cause of this loss, and to fix, as far as we can, the blame on those who are properly to be blamed for it, if there be anybody. Our object also is to inquire into the loss of life following upon the disaster, and to report as to

whether the means that were at hand were sufficient for the purpose of preventing loss of life, and, if not, in what respect those means were deficient.

Those are the two main objects that we have to deal with, and it is, in my opinion, very undesirable that the Report that we have to make should be delayed for more than a reasonable time. It is desirable that it should be dealt with, and that the Report should be made as speedily as possible. If we were to sit here to hear scientific evidence and expert evidence which would enable us to report in detail upon all the means that should be taken for the purpose in the future of averting a calamity such as this, we should be a very long time over it; indeed, speaking for myself, I should have to be instructed thoroughly in matters on which I am comparatively ignorant at the present time.

But, at the same time, I think it will be possible for the Board of Trade to gather together in a comparatively short time general evidence bearing upon these subjects which will enable us probably to say to what particular methods affecting construction and the provision of means for life-saving, attention should in the future be directed. And, inasmuch as I understand there is a Departmental Committee appointed for the purpose of inquiring into these matters, it appears to me that it would be a mistake if we were to inquire into the same matters, and that it would be sufficient if we were to confine our attention to what I may call general recommendations, leaving it to that tribunal which has been appointed for the very purpose of enquiring into these matters in detail, to act upon the recommendations as they think proper. I do not know whether I have expressed a view that will enable you to collect your evidence?

*The Attorney-General:* Yes, my Lord, I think so.

*The Commissioner:* I do not propose to sit here for six or twelve months, and we might have to do that, you know, in order to go into all the details which would possibly enable us to make useful recommendations upon questions of a scientific character. I do not think that when I was appointed Wreck Commissioner in connection with this matter it was ever contemplated or intended that we should do any such thing. Our great object is to ascertain the cause of this loss, and to see whether, the loss having happened, there were provided sufficient and proper means for saving the lives that were put in peril by the accident. When we have done that we can direct our attention generally to the question as to whether improvements are not possible both in the construction of the ship and in the provision of life-saving apparatus; and then, in a general way, and not in particular, make our recommendation.

*The Attorney-General:* I am much obliged, my Lord. That will enable us to prepare evidence to meet your Lordship's views, which we are very glad to have had expressed; and, of course, it will make it much shorter. At the same time we will call general evidence of that character on both the points I have mentioned; and if there is any evidence that your Lordship thinks will be of assistance, if you will indicate it, when we have called that, we will take care to have it brought before you either in respect of the Board of Trade matter or with regard to watertight compartments.

*Mr. Scanlan:* My Lord, may I draw your Lordship's attention in this matter to Question 26. It has reference to the Board of Trade and the administration of the Merchant Shipping Acts. I submit that at the institution of this Commission it was contemplated and expressed most distinctly in the place where the setting up of this Commission was mentioned, that the conduct of the Board of Trade itself -

*The Commissioner:* You need not go into that. I have not been dealing with that at all. I shall expect evidence from the Board of Trade as to the steps that they have taken to keep their requirements up to date.

*Mr. Scanlan:* Yes, my Lord.

*The Commissioner:* The observations that I have been making are not directed to that part of Question 26 at all, but to the last part of Question 26, the last few lines. *The*

*Attorney-General:* May I point out - I do not know if my Friend caught it - that I particularly drew your Lordship's attention to the fact that it was only with regard to the last few lines, and I said I was going to call evidence from the Board of Trade. *The*

*Commissioner:* Yes. I do not think you need fear that this tribunal will not inquire and not require evidence into the conduct of the Board of Trade previous to this disaster.

*Mr. Scanlan:* Yes, my Lord.

*The Attorney-General:* I shall call whatever evidence is required about that.

*The Commissioner:* I do not know whether you think that will be the proper course, Sir Robert?

*Sir Robert Finlay:* I entirely agree, my Lord, if I may say so. I think if this Tribunal were to be invited to go into detail as to particular improvements, either in construction or with regard to the boats to be used, it would occupy so vast a space of time that the report upon the matters for which this Tribunal was really constituted, would be very unduly delayed. I entirely agree that it would be desirable that the evidence brought forward should be of a general nature, so as to enable the Court to indicate what are the points on which improvements may be possible, leaving the details to be investigated by committees or tribunals specially appointed for the purpose.

*The Commissioner:* Very well. Now here is the witness. Are there any questions?

*Mr. Scanlan:* I have no question, my Lord.

*The Commissioner:* Very well. I am delighted to hear that.

#### **Examined by Sir ROBERT FINLAY.**

17686. This collapsible boat you got into, was it the last boat put off from the starboard side? Yes.

17687. When you put off, was the vessel awash in the fore-well deck? - Yes. 17688.

The fore-well deck was under water? - Yes; the fore-castle head was not submerged.

17689. With regard to the situation of the patent log that you examined, where was that; what part of the vessel was that streamed from? - The port side of the after bridge.

17690. The after bridge? - Yes.

17691. The docking bridge? - Yes.

17692. That is right aft of the upper deck? - Yes.

17693. The port side of that docking bridge aft? - Yes.

17694. Was this collapsible lowered by the davits that lowered the emergency boat on the starboard side? - Yes.

17695. Were you present when the emergency boat was lowered? - No, not the emergency boat.

17696. It was the same davits that lowered No. 1 boat that lowered your boat? - Yes.

17697. I think you told us you took away all those women and children that you have mentioned, roughly speaking 28 women and children, with the crew, in your collapsible?

- Yes.

17698. That was after No. 1 boat went? - Of course, because we were the last one to leave that side.

17699. And you were lowered by the same davits? - Yes.

17700. (*The Commissioner.*) Did you see the "Titanic" go down? - Yes.

17701. You know how the foundering has been described to us by some witnesses; that is to say that she was down by the head. Supposing *this* is the head (*indicating*), that she was down by the head in *that* way and then before she went down her afterpart righted itself and lay on an even keel, as far as the keel went, on the surface of the water. Is that so? - I could not say that. I was looking at her practically stem on - what we call stem on.

You were looking at her stem on; very well.

*(The Witness withdrew.)*

*The Commissioner:* How many more witnesses from the ship do you require. *The Attorney-General:* I think after this witness is called there are three or four with reference to other boats which you have not yet had evidence about. It will necessarily be short in view of what you have said. It is merely to prove they were in the boat, and who were in it.

**SAMUEL HEMMING, Sworn.**

**Examined by Mr. RAYMOND ASQUITH.**

17702. You were a lamp-trimmer on the "Titanic," I think? - Yes. 17703.

Do you remember the evening of Sunday, the 14th? - Yes.

17704. Do you remember reporting to Mr. Murdoch, the First Officer, that all the lights had been placed? - Yes.

17705. About what time was that? - I think about a quarter-past 7.

17706. Do you remember what he said to you when you reported that? - Yes. 17707.

What did he say? - I was walking off the bridge, and he called me back, and he said: "Hemming, when you go forward get the fore scuttle hatch closed, there is a glow left from that, as we are in the vicinity of ice, and I want everything dark before the bridge."

17708. Where is the fore scuttle hatch? - On the fore-castle head.

17709. Did you carry out those orders? - I closed it myself.

17710. When the ship struck, I think you were asleep? - Yes.

17711. Were you awakened by the jar? - Yes.

17712. What did you do? - I came out of the room, put my head out of the port to see what we struck, and could not see anything.

17713. Did you hear a noise? - I heard a hissing noise.

17714. Did you go and try to find out what that was? - I did.

17715. Where did you go? - Right forward under the forecastle head.

17716. Will you describe what you did and where you went? - I went there and could not see anything, so me and the storekeeper took the hatch off the storeroom and went down to see if she was making water and she was dry. We went down as far as the tank top.

17717. Do you mean a storeroom in the fore part of the ship? - Yes, right forward, in the very fore part.

17718. Would that be the storeroom above the four-foot tank? - Yes, directly above it.

17719. When you got down to the storeroom what did you find? - Nothing; everything was dry.

17720. You could not find any sign of damage? - No.

*The Commissioner:* Just tell me where it is.

*Mr. Raymond Asquith:* I will point out what I think he means. Your Lordship sees this tank in the blue (*pointing on the cartoon.*) I think he means the place just above that, marked "Store."

*The Commissioner:* Very well, that is sufficient; I see where it is now.

17721. (*Mr. Raymond Asquith - To the Witness.*) Was the store-room you went to immediately forward of the chain-locker? - Yes. That is the place where you pointed out just now.

17722. You told us you did not see any sign of damage? - No.

17723. Did you still hear the hissing noise? - Yes.

17724. What did you do then? - I came up to ascertain where the noise was coming from, and I went on the forecastle head again, and I found it was coming from an exhaust pipe in the four-foot tank.

17725. Was that a pipe which came out on the top of the forecastle? - Underneath the forecastle head.

17726. (*The Commissioner.*) What purpose does it serve? - It is the air exhaust for the water going into the tank.

17727. (*Mr. Raymond Asquith.*) Was that a pipe which connected with the four-foot tank? - Yes.

17728. Do you know whether the four-foot tank had water in it when you started on the voyage or not? - I could not say.

17729. At any rate, you found air coming out of this exhaust pipe? - Yes.

*The Commissioner:* That indicates that water was coming into the tank.

17730. (*Mr. Raymond Asquith.*) Yes, my Lord, that is the effect of it. (*To the Witness.*) Was the air coming out with considerable force? - It was.

*The Commissioner:* That would indicate, would it not, that the vessel had been injured in the fore part forward of the collision bulkhead?

17731. (*Mr. Raymond Asquith.*) Yes, that is the importance of this witness. We have never got the wound so far forward before. (*To the Witness.*) Did you see the Chief Officer shortly after that? - Yes.
17732. What did you say to him? - He asked me what it was. I said: "It is the air coming out of the four-foot tank. She must be making water there."
17733. Nothing more? - He said: "All right." I said; "The store rooms are dry though." He said; "All right," and went away.
17734. I think you saw the carpenter after that? - The joiner.
17735. Did he tell you something about there being water in the ship? - Yes. 17736. What did he say? - He said she was making water in 1, 2, and 3, and the Racquet Court.
17737. What did he mean by 1, 2, and 3? - 1, 2, and 3 holds. 17738. Shortly after that, did you see the boatswain? - Yes.

**Page 422**

17739. What did he say to you? - He told us to turn out; that the ship had half an hour to live, from Mr. Andrews; but not to tell anyone, but to keep it to ourselves.
17740. I did not hear what you said about Mr. Andrews? - The boatswain told us to turn out; the ship had only half an hour to live, from Mr. Andrews, but not to tell anyone. The boatswain heard it from Mr. Andrews, and he told us.
17741. (*The Commissioner.*) When was this; how long after the jar which you heard? - About 10 minutes, I should say.
17742. (*Mr. Raymond Asquith.*) After this, did you go at once up on deck? - As I was ordered to, to go to the boats.
17743. And you stood up to help with the boats? - Yes.
17744. Which side of the ship were you? - The port side.
17745. When you were told by the joiner there was water in 1, 2, and 3 holds, what did you understand by that? - That she was making water there.
17746. Yes, but by 1, 2, and 3 holds? - The cargo holds.
17747. Did you understand hatches by holds? - Yes.
17748. Three hatches? - Yes.
17749. You told us you went up on deck and helped with the boats. Did Mr. Lightoller ask you to get some lamps? - No.
17750. Did someone tell you to go and get the lamps? - I had a message from the Captain.
17751. Did you go and get some lamps? - Yes.
17752. You knew where they were because you were the lamp-trimmer? - Yes.
17753. Did you put some lamps in some of the boats? - Yes.
17754. How many boats did you put lamps in? - I could not say. All those boats were on the davits.
17755. All the ones which had not been lowered? - Yes.
17756. Were oil and wicks in the lamps? - Yes.

17757. After you had done that did Mr. Lightoller give you an order about one of the collapsible boats? - Yes.

17758. What collapsible boat was that? - The port foremost.

17759. The port collapsible boat? - Yes, forward.

17760. Did you help to lower that boat and fill it? - Yes.

17761. After you had done that did you go to another collapsible boat? - Yes.

17762. Which one was that? - The port one at the top of the officers' house.

17763. The port collapsible on the top of the officers' house? - Yes. 17764. Did you see that launched? - No.

17765. What did you do to that boat? - Helped to clear it away.

*Mr. Raymond Asquith:* That was the one launched upside down.

*The Commissioner:* It never was really launched.

*Mr. Raymond Asquith:* No.

*The Commissioner:* It was washed off the deck by the water.

17766. (*Mr. Raymond Asquith - To the Witness.*) Then you went over to the starboard side and helped with the starboard collapsible? - I did not help with the boat; I helped with the starboard falls.

17767. Shortly after that you jumped into the sea, did you not? - Yes. 17768. And swam to another lifeboat? - Yes.

17769. Which was No. 4, I think - and were picked up by that? - Yes.

I think we have already heard what that boat did, so I will not ask you about that.

**Examined by Mr. SCANLAN.**

17770. Can you tell us when you were told that the ship was in the vicinity of ice? - Mr. Murdoch told me when I put the lights out that night.

17771. Can you tell us at what hour Mr. Murdoch told you that? - About a quarter-past 7. I would not be sure on the point.

17772. Would you repeat, if you can, exactly what Mr. Murdoch said to you about ice? - The words he said were: "Hemming, when you go forward see the fore scuttle hatch closed, as we are in the vicinity of ice, and there is a glow coming from that, and I want everything dark before the bridge."

17773. The object of stopping the glow, I suppose, was to give the people on the bridge a better chance of seeing ahead? - Yes.

17774. You are sure it was a quarter-past 7? - About a quarter-past 7; I am not sure of the time.

**Examined by Mr. HARBINSON.**

17775. The boatswain told you that Mr. Andrews had said the ship had only half an hour to live? - Yes.

17776. And to tell no one? - Yes, to keep it to myself.

17777. Did he mean that Mr. Andrews had said the ship had only half an hour to live and to tell no one, or was it the boatswain himself who told you to tell no one? - The boatswain himself told me to tell no one.

17778. He did not say whether Mr. Andrews had said to tell no one? - No, I do not know anything about that.

**Examined by Sir ROBERT FINLAY.**

17779. How many lamps did you bring up? - Fourteen.

17780. Were they all full of oil? - All full of oil.

17781. And properly trimmed? - All brought up alight. I lit them myself.

17782. Did you supply them yourself to a good many boats? - Yes.

17783. You did not put those 14 yourself, as I understand it, all into the boats? - No.

17784. But they were there for the use of the boats? - They were there for the use of the boats.

*(The Witness withdrew.)*

**WILFRID SEWARD, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

17785. Were you Second class Pantry Steward on the "Titanic"? - Yes.

17786. And I believe you were in your bunk when you felt the shock? - Yes.

17787. You got up, and after you got up, did you look after the second class passengers, or help to look after them? - I went to sleep again.

17788. I do not want the whole story. You did, after a time, get up? - Yes.

17789. And then you knew that it was necessary to help the passengers? - Yes. 17790.

Did you help your second class passengers, put lifebelts on them and warn them about what they were to do? - I put lifebelts on lots of passengers, not knowing what class they were.

**Page 423**

17791. Had you a boat assigned to you according to the boat list? - Yes.

17792. I think you had seen the boat list? - Yes.

17793. You knew your boat was No. 3? - Yes.

17794. Finding that people were taking to the boats, you went to your boat? - I went to No. 5 boat first.

17795. But eventually you went to your boat? - Yes.

17796. And when you got to your boat were there people being put into it? - No.

17797. Later on were they put into it? - Yes.

17798. I do not want the whole story; we have heard it so often. Was that boat lowered to the water? - Yes.

17799. Were there about 58 people in that boat - 60 people, say? - Between 50 and 60.  
17800. I think you were in it? - Yes.  
17801. And a steward? - No other steward.  
17802. Were there some firemen and sailors in it? - Yes.  
17803. How many do you think? - About 15.  
17804. Fifteen firemen and sailors? - Yes.  
17805. Of the 15, about how many do you think were firemen? - There would be 10 firemen and four sailors.  
17806. Who else was in the boat? - First class and second class passengers.  
17807. Were they men or women? - Men and women.  
17808. How many do you think were men? - About 10 men.  
17809. And how many women? - The rest were women and children.  
17810. But how many? - I have not the exact numbers.  
*Mr. Butler Aspinall:* We can do the sum.

**Examined by Mr. COTTER.**

17811. Who got you out of your bed that night? - The Second Steward.  
17812. Did he give you any orders? - No, not special orders, only to get on deck.  
17813. And you went to the second cabin instead? - I went to my own place. 17814. What did you do when you got to the second cabin; did you go into the diningroom? - I went into my own place to see the boat list.  
17815. Did you go into the second cabin dining-room? - No.  
17816. Where did you go to put the lifebelts on people? - Down on the companions.  
17817. Do you remember seeing the emergency door open on E deck? - All emergency doors were open at that time.  
17818. How long after the collision was this? - About three-quarters of an hour. 17819. Were any general orders given at all throughout the ship in the stewards' department? - To get all the passengers on deck and see they had lifebelts.  
17820. That was the order? - That was the order.  
17821. Do you remember seeing any bulkhead doors closed along that deck? - No, I could not see that; it would be inside.

**Examined by Sir ROBERT FINLAY.**

17822. Was there difficulty about getting people into the boats? - They did not seem to wish to get into the boats.  
17823. Your room would be aft off the main alleyway? - Amidships.  
17824. I suppose you would go along by the main alleyway? - Yes.  
17825. In doing that, did you see the stewards attending to the people? - The stewards were doing the best they could.  
17826. Were there many third class passengers you saw? - They were all third class passengers I saw then.  
17827. Coming along? - Yes, going to the emergency door.

17828. Were there biscuits and stores being got out from the storekeepers? - They were bringing them up from the store rooms for the boat at that time.

*(The Witness withdrew.)*

*The Attorney-General:* That, my Lord, subject to evidence as to boats 8, 10, and 16, will be all the evidence of the officers and crew on board the vessel. I propose, when we resume - we have not been able to get the witnesses here today - to call one man only from each of those three boats to identify the boats, and tell us how many passengers there were, and to subdivide them as far as we can in the way we have done. With that exception that will exhaust all the evidence with reference to the ship. I do not know whether your Lordship would find it convenient that we should adjourn now and not start a new matter.

*The Commissioner:* Very well.

*The Attorney-General:* I propose also, if it meets with your Lordship's approval, to let all the witnesses from the ship, that is all the crew who have been detained in this country, go, and go about their business. I do not propose to detain them any longer.

*The Commissioner:* So far as I am concerned I do not want them kept. I do not know whether any of the gentlemen here desire any of them.

*Sir Robert Finlay:* I think not, my Lord.

*(Adjourned to Tuesday, 4th June, at 10.30 o'clock.)*

## **Wreck Commissioners' Court.**

SCOTTISH HALL,

BUCKINGHAM GATE,

*Tuesday, 4th June, 1912.*

### PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC."

### SIXTEENTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third-class passengers. (Admitted on application.)

MR. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian." (Leyland Line). (Admitted on Application.)

MR. H. E. DUKE, K. C., M. P., and MR. VAUGHAN WILIAMS (instructed by Messrs. A. F. and R. W. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff-Gordon. (Admitted on Application.)

**Page 426**

**ALFRED CRAWFORD, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

17829. Is your name Alfred Crawford? - Yes.
17830. And were you serving on the "Titanic" as first class bedroom steward on the 14th April of the present year? - Yes.
17831. I believe you were on watch on that evening? - Yes.
17832. At about 11.45 did you feel the shock? - Yes, I did.
17833. You subsequently learned you had struck an iceberg? - Yes.
17834. I think you got up and assisted passengers to put on their lifebelts. I do not want you to tell us the whole story. We have heard it very many times. I am just going to take you to the few main points. Later on I think you went to No. 5 boat and then eventually to No. 8 boat? - Yes, I did.
17835. No. 8 was your proper boat? - Yes.
17836. Did you assist to get the ladies into the boat? - Yes.
17837. I think some ladies, one in particular at any rate you can tell us of, refused to leave her husband, did she not? - Yes, Mrs. Straus. [Ida Straus.] 17838. And she and her husband were left behind? - Yes.
17839. I believe you got all you could in and the boat was lowered to the water's edge? - Yes.
17840. Now, before the boat was lowered down, did Captain Smith ask you how many crew were in the boat? - Yes.
17841. And how many crew were in the boat? - There were two in the boat.
17842. Besides yourself? - No, he told me to get in then.
17843. That made three? - Yes; and another man got in as well, making four.
17844. Did the boat get away with four of the crew in it? - Yes.
17845. How many passengers were in it? - I should say about 35.
17846. What were they; were they women? - All women.
17847. And before you left the ship's side did Captain Smith give you any directions with regard to a light? - Yes, he pointed to a light on the port side, the two masthead lights of a vessel, and told us to pull for there and land the people and return to the ship.
17848. Did you see those lights yourself? - I did.
17849. And what did you think they were? - I thought they were a vessel with two masthead lights.
17850. A steamer's masthead lights? - Yes.
- The Commissioner:* Is there anyone here representing the "Californian"?
- Mr. Cooper:* Mr. Dunlop will be here in a few minutes.
- The Attorney-General:* Somebody will be here, because we are calling somebody from the "Californian" today, and we have given them notice of it.
17851. (*Mr. Butler Aspinall - To the Witness.*) I do not know whether you are a judge of distance of lights at sea, but what would you say? - I should say she was 5 to 7 miles away from us.
17852. The Captain gave the directions? - Yes, he pointed the ship out.
17853. Having got down to the water's edge did you obey that direction as well as you could? - We did.

17854. And rowed in the direction of that light? - Yes, we pulled all night in the direction of the steamer.

*The Commissioner:* Does 5 to 7 miles away agree with the information from the "Californian" as to the position she took up when she anchored?

*Mr. Butler Aspinall:* It is widely different, my Lord.

*The Commissioner:* That is what I was thinking. The distance would be about 20 miles, would it not?

*Mr. Butler Aspinall:* Yes; 19 was in my mind - 19 to 20.

*The Commissioner:* We have had the log of the "Californian." *Mr.*

*Butler Aspinall:* We have.

*The Attorney-General:* The point your Lordship is upon is one which wants a little clearing up. Our attention has been directed to the same point.

*The Commissioner:* Very well, I will not say anything more about it now.

17855. (*Mr. Butler Aspinall - To the Witness.*) I was asking you your view of distance.

It was a good night for seeing lights - a clear dark night? - Yes, clear and very dark.

17856. You say you pulled all night, but were you ever pulling at any speed?

- I could not say the speed. We were pulling the whole night, the four of us.

17857. Who was steering? - A lady was steering.

17858. Did these ladies behave well? - Yes, very well indeed.

17859. One lady was steering. Did any of the ladies assist at the oars? - They assisted the men, yes.

17860. They did? - Oh, yes.

17861. Pulling towards these lights, you would have your back towards them, I suppose? - Yes.

17862. Do you know what happened about those lights? - There was a lady at the tiller; she reported the sidelights in view.

17863. You say she was at the tiller? - Yes.

17864. Did she show a knowledge of steering? - Oh, yes.

17865. Do you know her name? - The Countess of Rothes.

17866. And was she making reports, as it were, from time to time to you about these lights? - Yes.

17867. And what happened in the end about these lights? - When daybreak came we saw another steamer coming, and we turned round and left that one; we could not seem to make it.

17868. What was the last you yourself saw of those two lights you told me about? - It seemed as if the vessel was turning round and leaving us.

17869. How long before it was daylight was that? - I could not say the exact time, but not long before daylight.

17870. Did you yourself ever see any sidelights? - Yes.

17871. You did? - Yes.

17872. What sidelight or sidelights of that steamer did you see? - There was the red and the green light.

17873. You saw them both? - Yes.

17874. I suppose you turned round to look? - Yes, I stopped rowing then.

17875. Did you see those sidelights on one or more occasions? - On the one occasion.  
17876. (*The Commissioner.*) I do not understand that. Do you mean to say you saw both the red and the green lights at once? - We drifted.
17877. I know you did; but you say you saw them both at the same time, as I understand?  
- We were bow on.
- Mr. Butler Aspinall:* He might, my Lord.
- The Commissioner:* Of course he might; if he was in such a position as to see the vessel stem on he might see both.
17878. (*Mr. Butler Aspinall.*) Yes. (*To the Witness.*) Do you think the vessel's head was pointing right towards you? - Yes.
17879. How long have you been serving on the sea? - Since 1882.
17880. So that you have had a good deal of experience? - Yes.
17881. Is it your view that at the time you looked and saw the sidelights of that steamer that you were about dead ahead of her? - Yes.
17882. Is that your view? - Yes.
17883. Can you at all accurately fix the point of time when you saw those two sidelights?  
- I cannot say.
17884. You cannot help us at all? - No.

**Page 427**

17885. Later on you were picked up by the "Carpathia"? - Yes. 17886. At daylight did you see any icebergs about you? - Yes.
17887. Many? - Six or seven, I should say, round us.
17888. Those were bergs; were they large bergs? - There were one or two very large ones.
17889. And was there ice as well? - There was no field ice there.
17890. There was not? - No.
17891. Only the bergs? - Only the bergs.

**Examined by Mr. SCANLAN.**

17892. Do you know at what time lifeboat No. 8 was lowered and launched? - After 1 o'clock, I should say.
17893. There was still some other lifeboats to be launched? - Yes; there was No. 10 to go.
17894. You have stated that, in addition to the crew, there were only 35 passengers? - Yes.
17895. What additional room do you think you had in this boat, No. 8, for passengers? - I should say there was room for another 20 more.
17896. The "Titanic" did not sink and disappear for, I think, about an hour after your boat was lowered? - No.

17897. Can you give any explanation of this boat No. 8 being lowered and launched with only 35 passengers? - No. The only thing is that Mr. Wilde, the Chief Officer, said there were quite enough in that boat to be safe to lower it.

17898. Was that in reference to the strength of the falls? - Yes.

17899. And the tackle for lowering? - I should say that is what he thought. 17900. (*The Commissioner.*) That is rather a leading question, and I am not satisfied about it, Mr. Scanlan. (*To the Witness.*) This boat was being lowered, like the others, from the davits? - Yes, my Lord.

17901. And being lowered a long way? - Yes.

17902. From the davits to the water? - Yes.

17903. Does it occur to you that Mr. Wilde might have thought that the load in her was quite enough? - Yes, I think that is about what he thought. He said there was quite enough in it to lower from the davits.

*The Commissioner:* That is what I mean, Mr. Scanlan. I do not know that it alters your point at all, but I think that the idea was that these boats slung out from the davits at that great height from the water might buckle; not that the davits themselves were insufficient, or that the falls were insufficient; they were probably strong enough; but that there was a fear that the boat might collapse and throw the whole of them into the water.

*Mr. Scanlan:* What has occurred to me is that some explanation is needed of the despatch of these boats with such a small number.

*The Commissioner:* You are quite right.

*Mr. Scanlan:* Considering that the boat accommodation was insufficient.

*The Commissioner:* What occurred to me was that you were putting the blame on the davits and the falls, and I do not think myself, at present, that the davits and the falls had anything to do with it, but it was the fear of the boat buckling and throwing the people out.

17904. (*Mr. Scanlan.*) I quite agree, my Lord. (*To the Witness.*) The davits were quite new? - Yes.

17905. And all the equipment of this lifeboat? - Yes.

17906. The falls were perfectly new? - Yes, I think so.

17907. Was any difficulty experienced in lowering No. 8? - None whatever.

17908. No. 8 was on the port side? - Yes.

17909. And you had been assisting at the lowering of some other boats? - No. 5.

17910. When No. 5 was lowered, can you say what its complement of passengers was? - I could not say; the boat looked very full.

*The Commissioner:* You may ask him; I do not know that he saw No. 5 lowered. 17911. (*Mr. Scanlan - To the Witness.*) Did you? - Yes. I saw No. 4 and No. 5 lowered to the water.

17912. No. 5 and No. 4? - No, not No. 4.

17913. (*The Commissioner.*) And No. 5, you say was full? - Yes.

17914. (*Mr. Scanlan.*) Had it considerably more passengers in it than you had in No. 8? - I could not say about that. The boat was crowded and looked very full. I was standing alongside of her.

17915. And there was no difficulty in lowering No. 5? - None whatever.

17916. Did you think, yourself, there would have been any difficulty in lowering No. 8 if it had been filled to its utmost capacity with passengers? - I could not say.

*The Commissioner:* I think, Mr. Scanlan, there was one boat lowered with 70 in it?

*Mr. Scanlan:* Yes.

*The Commissioner:* And it did not buckle.

17917. (*Mr. Scanlan.*) That is so, my Lord, and there is considerable evidence on that point. (*To the Witness.*) You did not see any difficulty yourself in regard to lowering this boat? - No, I was in the boat; I could not see any difficulty in going down in the boat. 17918. It did not suggest itself to you as a difficult matter to lower one of these boats filled with the full complement of passengers? - No.

17919. Did you know amongst other members of the crew that you had insufficient boats to take off all the people? - No, I could not say that.

17920. When No. 8 was being lowered were there many passengers on the boat deck on the port side? - There were a few, and Mr. Wilde told them to go along to No. 10 and get into that.

17921. Do you mean a few women passengers? - Yes.

17922. And those women passengers were sent along to another boat? - Yes, No. 10.

17923. (*The Commissioner.*) I do not like an expression of that kind. When you say "a few," give me a notion of how many? - I should say about 20 or 30 probably, my Lord. 17924. (*Mr. Scanlan.*) And were there many men passengers on the deck near at hand at that time? - Yes.

17925. So that if those who were responsible for ordering the lowering of No. 8 desired a full complement of passengers for it, they had the passengers there on deck ready to come in? - Yes.

17926. Was there any other officer superintending the lowering of No. 8? - I did not notice.

17927. Except Mr. Wilde? - Only the Captain, he came there; he came there and lowered the forward falls - he assisted in doing so.

17928. (*The Attorney-General.*) Which boat was this? - No. 8.

17929. (*The Commissioner.*) As I understand, you crossed over from the starboard side to the port side? - Yes, I went to my proper boat.

17930. (*Mr. Scanlan.*) Then you have stated that the crew you had for the boat consisted of two and yourself? - Four altogether. 17931. There were three in addition to you? - Yes.

17932. Who were the other three? - Two were sailors and one worked in the kitchen, and myself.

17933. Two sailors and a kitchen hand? - Yes.

[There were no Questions 17934-39.]

17940. Was that crew sufficient to manage this boat in the sea? - Yes, I think it was.

17941. Did not you have to get the assistance of some of your passengers? - It was not really necessary to have their assistance; they helped, to keep themselves warm.

17942. You did get their assistance in any case? - Yes, they volunteered.

17943. Did they give you assistance in the lowering? - No.

17944. In keeping the boat off the side? - No.

17945. Had you any difficulty there whatever? - No.

17946. (*The Commissioner.*) There was a list to port, was there not? - Yes.

**Page 428**

*The Commissioner:* They would not want to keep off the side; the list would keep them off.

17947. (*Mr. Scanlan.*) Yes. (*To the Witness.*) But you needed someone to steer, did you not? - The Countess of Rothes volunteered to steer.

17948. If she had not been steering, you would have required someone permanently? - Yes.

*The Commissioner:* Never mind. You are going too far. *If* she was not there and *if* he was not there, does not help me.

17949. (*Mr. Scanlan - To the Witness.*) Did you consider it necessary for the rowing of the boat to have four men, two on each side, at the oars, in addition to the services of one person at the tiller? - If we had had more it would have been better for us, naturally. *Mr. Scanlan:* It would have been better.

*The Attorney-General:* "Better for us," he said.

17950. (*The Commissioner - To the Witness.*) Can you tell me now what better would have happened than that you were saved, if you had had more? You were saved? - Yes. 17951. Then what better would have happened to you if you had had three or four more; you would have kept out three or four more passengers, but what better would have happened to you than did happen? - We might have pulled quicker to this vessel - that is all I thought.

17952. Do you mean you could have pulled this distance to this vessel? - We thought so when we left the ship, Sir.

17953. (*Mr. Scanlan.*) I want your opinion on this point, as a man of some experience.

Would four men in ordinary circumstances be sufficient to row a big boat like No. 8?

*The Commissioner:* I know what the answer to that would be; the answer is, No. 17954. (*Mr. Scanlan - To the Witness.*) It would have been insufficient? - It would not be sufficient.

*The Commissioner:* But it happened to be sufficient on this night.

17955. (*Mr. Scanlan.*) In specially calm weather, my Lord. (*To the Witness.*) In ordinary circumstances how many men do you think would be sufficient to row a boat like this? - I cannot say; I am not on deck, and I cannot say.

17956. You have not had much experience of rowing yourself? - Well, I have done a bit.

17957. Was the kitchenhand an experienced man at all? - Yes.

17958. He was? - Yes.

17959. And the two sailors? - Yes.

17960. Was any order given to you to keep within hail of the "Titanic"? - No, we were told to make for the steamer and return to the ship.

17961. And return to the "Titanic"? - Yes, and return to the "Titanic."

17962. (*The Commissioner.*) What were you told to do, to make for the light? - To make for the light, land the passengers, and return to the ship.

17963. Who gave you that order? - Captain Smith.

17964. The gentleman who gave you that order must, I suppose, have thought that the lights that were visible were close to? Did Captain Smith say to you, "Make for those lights"? - He did.

17965. "Put your passengers on board that ship with those lights and then come back here"? - Yes, my Lord.

*The Commissioner:* Then I presume - I do not know - that he must have thought those lights were close to. I do not at present think he is right about that. He may very well have been told to keep away, to go out a bit and be ready to go back.

17966. (*Mr. Scanlan.*) I will ask him to give the exact order he got, my Lord. (*To the Witness.*) Will you tell my Lord exactly what the Captain said to you as to what you were to do when your boat was lowered; what order did you get? - He pointed in the direction of the two lights, and said: "Pull for that vessel; land your people and return to the ship." Those were Captain Smith's words.

17967. And did you think you would go to that ship and land your passengers, and go back to the "Titanic" and pick up more? - We did at the time.

17968. (*The Commissioner.*) This was about 1 o'clock in the morning? - About 1, yes.

#### **Examined by Mr. HARBINSON.**

17969. In what direction were the lights that you saw? - On the port side. 17970. Before the boat was launched, did you see the lights? - No, not till Captain Smith pointed them out.

17971. It was he who directed your attention to them? - Yes.

17972. After the boat was launched that you were in, did you see any rockets sent up? - Yes, from the "Titanic." I also saw the Morse code being used.

17973. About how many rockets did you see sent up? - I should say I saw about a dozen go up; probably more.

17974. A dozen rockets from the "Titanic"? - Yes, they kept going up. 17975. And you could see those quite distinctly? - Yes.

17976. And should those lights have been seen by the steamer towards which you were pulling? - Yes.

17977. Those rockets should have been seen? - Yes, I think they ought to have been seen.

*The Commissioner:* Well, we know they were, Mr. Harbinson.

17978. (*Mr. Harbinson.*) Yes, my Lord. (*To the Witness.*) Seen distinctly? - Yes, I should think they ought to have been at the height they were sent up from the "Titanic." 17979. Now, can you tell me about how long after the impact with the iceberg was it that you knew that the "Titanic" was doomed? - Well, I should say about 20 minutes. 17980. Did you get any instructions from Captain Smith or any of the officers as to what you should do then? - The order came down below to see the passengers out, and get the lifebelts on and put them on the boat deck.

17981. I think you told us you were one of the first class bedroom stewards? - Yes.

17982. Did you see any of the stewards of the second or third class carry out the order which had been given? - No.

17983. And you know nothing about what took place there? - No.  
17984. So far as you were concerned, you attended to the first class? - Yes.  
17985. Did you know before you left the "Titanic" that the "Carpathia" was coming to the assistance of the "Titanic"? - No.  
17986. You had not been told anything about it? - No.

**Examined by Mr. ROBERTSON DUNLOP.**

17987. When you saw the lights of this steamer on your port side, do you know how the "Titanic" was then heading? - I could not say what course.  
17988. Not the course, but was she heading for New York or heading for Europe? - She was heading for New York.  
17989. (*The Commissioner.*) How do you know that? - She seemed to be going the way we were going.  
17990. That is another matter altogether. If she had swung round, you know, then she was not heading for New York? - I cannot say whether she had swung round or not. 17991. (*Mr. Dunlop.*) Did you notice whether the "Titanic" had swung round? - I did not.  
17992. If the "Titanic" had swung round, do you think you would have noticed it? - No, I do not think so.

**Page 429**

17993. Was the vessel you saw apparently heading the same way as the "Titanic" was heading? - It seemed to be coming *this* way, towards the "Titanic."  
17994. Was she to the southward of you, or to the northward of you? - I could not say. *The Commissioner:* He does not know these things; a steward does not know these things.  
17995. (*Mr. Dunlop.*) What lights on her did you see - one masthead or two masthead lights? - Two masthead lights.  
17996. How far do you estimate they were from you when you saw them first? - Between five and seven miles I should say, at the most.  
17997. Did they appear to remain stationary, or go away, or come nearer to you? - They seemed to be stationary.  
17998. Did you see her Morse signalling at all? - No.  
17999. If she had been Morse signalling you would have noticed that, would you? - I should think so.  
18000. At what time was it you first saw her? - Just after one, when the Captain pointed it out.  
18001. And how long had you her under observation? - Nearly all the night. 18002. What happened to her afterwards; did she come nearer to you, or did she disappear? - I could not say. We saw the "Carpathia" coming up, and we turned round and made for that one.  
18003. (*The Commissioner.*) Your interest in the "Californian," if it was the

“Californian,” ceased as soon as you saw the “Carpathia”? - Yes, my Lord.

*The Commissioner:* Very naturally.

18004. (*Mr. Dunlop.*) When you saw the “Carpathia,” was the other vessel in sight? - No, I did not notice her.

18005. When did you lose sight of this other vessel? - Just as it got daylight.

18006. Was she so far away that you were not able at daylight to see the ship herself? - We never looked for her after that.

18007. Did you lose sight of her before you saw the “Carpathia”? - I do not remember.

18008. At what stage did you begin to lose sight of this vessel whose lights you say you had seen? - Only when we saw the “Carpathia” coming, that is all.

*The Commissioner:* Can you give me the position of the “Carpathia” at the time she received the position of the “Titanic,” Mr. Attorney?

*The Attorney-General:* I do not know that I can at the moment. We shall be able to tell you, but I do not think we can now.

*The Commissioner:* Was she to the southward or the northward?

*Sir Robert Finlay:* I think those on the “Carpathia” thought she was to the northward.

*The Commissioner:* Who thought so?

*Sir Robert Finlay:* A witness from the “Carpathia.”

*The Attorney-General:* We have not had a witness from the “Carpathia.”

*Sir Robert Finlay:* I mean the “Californian.”

*The Attorney-General:* My Lord’s question was directed to the “Carpathia,” not the position of the “Californian.”

*The Commissioner:* No, the “Carpathia.”

*The Attorney-General:* My friend, Sir Robert Finlay, understood it was with reference to the “Californian.”

*The Commissioner:* No; I was thinking of the questions which had been put to the witness which were questions about the “Carpathia.” I want to know if anyone can tell me where the “Carpathia” was at the time she received the position of the “Titanic”?

*The Attorney-General:* The only possibility of answering the question today would be by seeing what was said in the American evidence. We have no evidence at present; we shall call some.

*The Commissioner:* Very well.

*The Attorney-General:* You shall have the information later.

18009. (*Mr. Dunlop - To the Witness.*) How long before you saw the “Carpathia” was it that you last remember seeing the other steamer? - I could not say how long.

18010. Did the other steamer at any time appear to be steaming towards you? - No, she seemed to be stationary there.

18011. At no time steaming towards you? - No.

18012. Did you see any other vessel besides the “Carpathia” after the “Carpathia” came in sight? - After we were picked up the “Californian” came on the scene.

18013. Did you see the “Mount Temple”? - No.

18014. Did you see any sidelight of this vessel? - Yes.

18015. Which sidelight? - I saw both lights.

*The Commissioner:* He said he saw both, you know.

18016. (*Mr. Dunlop.*) You saw two masthead lights and two sidelights? - Yes. 18017. While she was lying apparently stationary? - Yes; we drifted.

**Examined by Mr. LEWIS.**

18018. Can you say what class of passengers they were in the boat? - I think they were nearly all first class; I would not be sure.

18019. There were no women left when you left the ship? - Yes.

*The Commissioner:* Yes, there was one lady, Mrs. Straus. [*Mrs. Ida Straus.*] 18020.

(*Mr. Lewis.*) There was no other lady there? - There were several other ladies there.

They were taken to No. 10 boat.

18021. Did the other ladies refuse to go into the boat? - I only heard Mrs. Straus refuse.

18022. There were a number of men left, you said. Did any of them try to get into the boat? - No.

18023. Were you there all the time the boat was being prepared to be lowered? - Yes.

18024. But you have no recollection of any man or any men trying to get into the boat?

- No.

18025. Or being refused. After you left, and you found you could not approach the lights, was any suggestion made that you should return to the ship? - During the pull across one sailor offered to return to the ship, but all the ladies said, "Why not obey the Captain's orders?"

18026. (*The Commissioner.*) And you were the Captain? - No, Captain Smith - "Obey the Captain's orders."

18027. (*Mr. Lewis.*) Captain Smith said you were to make for the ship, land your passengers, and return? - Yes.

18028. And the ladies objected? - Yes.

18029. Did the men agree with the suggestion? - Yes, I think so.

18030. And it was because the men objected you did not return? - Yes.

*The Commissioner:* No, that is not right at all. It was not because the ladies objected.

The ladies *did* object.

18031. (*Mr. Lewis.*) I will put it in another way. (*To the Witness.*) I understood you to say a suggestion was made in the boat that you should return, seeing you could not approach the light? - Yes.

18032. I understand you to say every man in the boat agreed with that suggestion? - I did not understand you.

*The Commissioner:* I did not understand him to say that.

*The Witness:* No.

18033. (*Mr. Lewis.*) They did not agree? - Oh, no.

18034. Did they express any opinion upon it? - No, none of the crew spoke. *The*

*Commissioner:* Are you asking all these questions at random, or have you some instructions upon which you ask them?

*Mr. Lewis:* I have evidence that a suggestion was made in the boat that they should return to the ship.

*The Commissioner:* I asked you, do you ask these questions at random or have you some instructions upon which you put them?

*Mr. Lewis:* I have evidence from a witness, who will give evidence later, I understand, that a suggestion was made in the boat that they should return to the ship.

*The Commissioner:* Are those instructions in writing?

*Mr. Lewis:* Yes, my Lord.

*The Commissioner:* Let me look at them, and I will ask a few questions of the witness. *(The document was handed to the Commissioner.)*

18035. *(To the Witness.)* Do you remember a man, an A.B. named Jones - T. or J.

Jones? - Yes. [Thomas William Jones.] 18036. Do you remember him? - Yes.

18037. Was he sent for some lamps? - Not to my knowledge. The lamp-trimmer put the lamp in the boat before we lowered.

18038. Was Jones's boat No. 8? - Yes, my Lord.

18039. Was he one of the men in your boat? - Yes, my Lord.

18040. Do you remember Captain Smith asking him if the plug was in his boat? - No, I do not remember that.

18041. Did Jones put the plug in himself? - I could not say. I stood on the deck and Jones was in the boat.

18042. Do you remember a man trying to get in and being prevented? - No, I never saw that.

18043. Do you remember a child being brought and put into the boat? - No, we had no child in the boat.

18044. Did you hear Captain Smith turn round and say, "Any more women or children for this boat. We have plenty of time if the women will get in there"? - No, I never heard that.

18045. Then you did not hear him shout three times, "Any more women or children for the boat"? - Not for that boat, no.

18046. I am talking of that boat. Did you hear him shout that for any boat? - No. 18047. Then it is right to say that this man Jones suggested going back to the "Titanic"? - He did.

18048. And that the ladies said, "You must carry out Captain Smith's orders"? - Yes.

*The Attorney-General:* Your Lordship says "the ladies" said that; there is some question about that. Perhaps your Lordship would ask him what he means. *The*

*Commissioner:* I am putting it from this statement. The statement here is - I suppose it is proposed to call this man at some time - "Most of the ladies objected." *The Attorney-General:* That, if your Lordship will permit me, is rather different. I have documents before me. It may be necessary to go into this matter more fully. When your Lordship said "the ladies" suggested going back it would include Lady Rothes.

*The Commissioner:* I was inaccurate. I ought to have said "most of the ladies." *The*

*Attorney-General:* Perhaps the witness might tell us with regard to it, because Lady Rothes is rather concerned about that.

18049. (*The Commissioner - To the Witness.*) Did the lady who was steering object to go back? - I did not hear her; I was in the forward part of the boat.

18050. You saw the ship go down? - Yes.

18051. Did you hear the cries of the people as the ship went down? - We heard a little, but we were a long distance away.

*The Commissioner:* Thank you, Mr. Lewis; this quite accords with what you were suggesting.

*Mr. Lewis:* I am obliged to your Lordship; I have no further question, my Lord. I should like to ask whether I have to submit documents in future to your Lordship or whether I am entitled to ask the witnesses questions.

*The Commissioner:* You are quite entitled to ask the questions.

*Mr. Lewis:* Thank you, my Lord.

**Examined by Mr. HOLMES.**

18052. You have not told us what distance you rowed in the direction of these lights? - I should say between 3 and 4 miles; by the time the morning came we were furthest away from the "Carpathia."

18053. Did they ever appear to get any nearer? - No.

18054. Do you think the other boat was moving? - I thought probably she might have been drifting.

18055. You thought they were drifting? - The other ship was drifting.

18056. In the same direction as yourselves? - No, it seemed as if she was drifting away from us.

18057. Well, that would be in the same direction? - Yes.

**Examined by Sir ROBERT FINLAY.**

18058. How far off were you from the "Titanic" when you heard the cries? - I should say a mile and a half.

18059. You had been obeying the orders to row in the direction of these lights? - Yes, of the other vessel.

18060. You say that you saw at some time both the sidelights of that other vessel? - Yes, we were right bow on to it; I could see both the lights.

18061. For how long was it that you were able to see both the sidelights of that other vessel? - I did not see them long.

18062. Only a short time? - Only a short time, that was all.

18063. After that, did you see one sidelight? - I did not look any more; I had my back to it, and was pulling all the time.

18064. You mean you only looked round for a short while? - Yes.

18065. So that what was happening after that or before that you cannot tell us at all? - No.

*The Commissioner:* I am told that with four men, a boat of this size, carrying about 35 passengers in such a sea as we know there was, would not move along quicker than about two and a-half to three miles an hour.

*Sir Robert Finlay:* They must have gone very slowly.

*The Attorney-General:* Perhaps that is rather more than they did; that is a little more than they did with four men rowing. I should have thought they would have done a little less than that. I certainly do not suggest they would have done more. I should have expected rather less.

18066. (*Sir Robert Finlay - To the Witness.*) According to the best of your judgment how far off were these lights when the Captain said "Row there and come back"? - Between five and seven miles, I should say.

18067. You say at that time two masthead lights? - Yes.

18068. Nothing else? - Nothing else.

18069. At that time, in your judgment, were the masthead lights stationary or moving? - They seemed stationary.

18070. What deck were you on when the collision took place? - On B deck, forward.

18071. Did you see to getting the passengers cleared out of that part of the ship? - Every one.

18072. Every one? - Yes.

18073. Did you do anything in the way of closing doors? - I closed all the doors up.

18074. What doors do you mean? - The cabin doors - the state-room doors.

18075. After the people were cleared out? - Yes.

18076. You said, besides that lady who refused to leave, there were some other ladies on deck? - Yes, there were several ladies round the boat.

18077. What became of them? - They went in No. 10 boat, I believe. *The Attorney-General:* Not Mrs. Straus.

## **Page 431**

18078. (*Sir Robert Finlay.*) I said the other ladies. (*To the Witness.*) Mrs. Straus refused to go at all? - She refused to go without her husband.

18079. And she remained? - Yes.

18080. And the other ladies went in boat No. 10? - I believe so.

18081. (*The Commissioner.*) You did not see them go? - No, Sir.

18082. You were already in the sea in No. 8? - Yes.

18083. (*Sir Robert Finlay.*) How do you know they went in No. 10? - The Chief Officer told them to go along to No. 10 boat and get in there.

18084. You heard him give that order? - Yes.

## **Re-examined by the ATTORNEY-GENERAL.**

18085. I want you to help us upon this if you can. Did you see the "Carpathia" lights, or did you see her in daylight first? - I saw her lights coming round.

18086. You say you saw her lights? - Yes.

18087. Do you remember what lights? - I saw a big ship lit up, and we turned round and went back to her.

18088. You turned round and went back to her; but what I want to know is, where was she? I want to get at that if I can from what you saw of her lights. Do you remember? - She was coming over *that* way and we were going *this* way (*demonstrating*).

18089. You mean you were coming *this* way and she was coming *that* way? - Yes.

*The Commissioner:* It does not help me for this witness to say, "She was coming *that* way and we were going *this* way."

*The Attorney-General:* It helps us to fix the position; we cannot do more than that at present. We can follow what he means having followed out where the "Carpathia" was to some extent. We make her a little to the S.E.

*The Commissioner:* South and east.

18090. (*The Attorney-General.*) Yes, almost exactly S.E.; but we will work it out later, and your Lordship will see from the evidence of the captain of the "Carpathia" it will be made clear. That is calculating it according to the evidence already given in America. He did not give his position, but he did give a position at one time, and said how many miles he steamed after it, and from that we work out she would have been to the S.E. (*To the Witness.*) At any rate, in the way you were heading in your boat the "Carpathia" was astern of you? - No, she was on the quarter.

18091. That is quite right; she was on your quarter? - Yes.

18092. And then you turned round and went to her? - Yes.

That is sufficiently near. There was one question your Lordship put to the witness. I think it is the first time we have heard of the order from Captain Smith to which he deposed. He said something to the effect - I am not giving his exact words - that the orders of Captain Smith were that they were to row the boat to the light, that is, to the ship of which he had seen the lights, and to put the women on board and then come back, no doubt with the object of fetching more. It is right to say with regard to this witness that there are two other witnesses who were in this boat who deposed to the same thing. We have not got them.

*The Commissioner:* The proof that Mr. Lewis has of Jones says the same thing. *The*

*Attorney-General:* Jones has been examined in America, and I have his evidence before me; but I am speaking of something apart from Jones.

*The Commissioner:* What occurs to me - I do not know whether it is right - as to what the Captain probably meant is this. This is one o'clock in the morning, and my opinion is the Captain knew that she was a doomed ship at that time, and what he meant was: "Go to the light, put your passengers off, and come back to this place." *The Attorney-*

*General:* Yes, quite.

*The Commissioner:* It is different from saying "Come back to this ship." *The*

*Attorney-General:* Yes.

*The Commissioner:* Perhaps he would not say it in words, but it would mean to come back to pick people up.

*The Attorney-General:* According to one lady who has given evidence in America, what he said was: "Put these women in safety and come back for others."

*Sir Robert Finlay:* Of course, it is possible the Captain might have thought that ship would make for them. *The Attorney-General:* Yes.

*The Commissioner:* Of course, it is, and very natural, and that may, to a large extent, explain it.

*(The Witness withdrew.)*

**EDWARD JOHN BULEY, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

18093. (*Mr. Butler Aspinall.*) This witness was in boat No. 10, my Lord. (*To the Witness.*) Were you serving as an A.B. on the "Titanic" on 14th April? - Yes. 18094. I do not want you to tell the whole story, but you left the ship in boat No. 10, did you not? - Yes.

18095. You felt the shock; I think you were awake at the time. You then helped with some of the boats? - Yes.

18096. And later on you left in boat 10. Were there any crew with you in boat 10? - Yes.

18097. Who? - An able seaman forward, Evans, and a fireman and a steward. 18098.

Who else was in the boat besides those members of the crew? - Women and children.

18099. How many? - I should say about 50, 50 to 55.

18100. All women and children? - All women and children.

18101. Then, I think, having got that boat down to the water's edge, you pulled away, and then you were later on joined by one of the officers in another boat, Mr. Lowe? - Yes.

18102. We have seen him, and he has told us the story, and I think the result of his coming up was that he got his boat full. He put out a great many of his passengers into other boats and then went away with you in his boat, did he not? - Yes.

18103. To pick up any of the poor people who were in the water? - Yes.

18104. He has told us the story in a great deal of details. You succeeded in picking up some, I believe? - Yes.

18105. And then later on you were picked up by the "Carpathia"? - Yes.

**Page 432**

**Examined by Mr. SCANLAN.**

18106. Had you a sufficient crew for rowing this boat No. 10? - No.

*The Commissioner:* Oh, do not ask that question again please; they were sufficient to get the boat in safety to the "Carpathia."

*Mr. Scanlan:* There is one point I wish to submit to your Lordship at a later stage; that is, if there had been proper rules with regard to the manning of boats there would have been a greater number of men on board to man each lifeboat, and that they could have done better work in saving passengers than they did.

*The Commissioner:* But what do you mean - better work when they were once in the water?

*Mr. Scanlan:* Yes.

*The Commissioner:* They could not have saved more than the whole, you know, and they did save the whole.

*Mr. Scanlan:* There were not two-thirds of the people saved for whom it is alleged the lifeboats on the "Titanic" had capacity.

*The Commissioner:* I know that. That is a very important point; but at present I am thinking about your reiterated question as to whether there were sufficient men in the boat to manage the boat when she was once in the water. I have heard that question so often that I am beginning to get a bit tired of it.

18107. (*Mr. Scanlan.*) If I have asked the question sufficiently often to convince your Lordship of the point of view I am instructed to lay before you, I feel I have done sufficient. (*To the Witness.*) Had you any difficulty in lowering that boat? - I did not lower it.

18108. Was there any difficulty in lowering No. 10? - No difficulty, to my knowledge.

**Examined by Mr. HARBINSON.**

18109. I believe, after the collision you found some ice on the deck? - Yes, on the well deck.

18110. Was there much? - A couple of tons.

18111. Of block ice? - Of block ice.

*(The Witness withdrew.)*

**ERNEST ARCHER, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

*Mr. Butler Aspinall:* This is boat 16. I told your Lordship we were going to call a man from boat 15. We have called several, and we are not going to call any more for that.

*The Commissioner:* Then this is the last?

18112. (*Mr. Butler Aspinall.*) Yes, this is the last from the boats, my Lord. (*To the Witness.*) Ernest Archer, were you serving as an A. B. on the "Titanic" on the 14th April of this year? - Yes.

18113. And do you remember the "Titanic" hitting an iceberg? - Yes.

18114. I think you were asleep at the time. You got up, went on deck, and helped to uncover and lower boats? - Yes.

18115. And then later on did you go away in boat No. 16? - Yes.

18116. Were there any of the crew in it besides yourself? - Yes, five.

18117. Who were they? - Another able seaman, two firemen, a steward, and a Master-at-arms.

18118. (*The Commissioner.*) There were seven, then, were there?

*Mr. Butler Aspinall:* Yes, seven, including himself.

*The Witness:* No, six.

18119. Six and yourself? - No, six with me; one A.B. and myself, two firemen, a steward, and a Master-at-arms.

18120. (*The Commissioner.*) Six? - Yes.

18121. (*Mr. Butler Aspinall.*) Who else was in the boat? - All women and children.

18122. How many in all? - About 50.

18123. And how many of the 50 were children? - Five, I believe.

18124. I think you rowed away from the ship and at daybreak were picked up by the "Carpathia"? - Yes.

**Examined by Mr. SCANLAN.**

18125. I think you were not stationed in this boat in which you left? - No. 18126. The boat you were stationed to was No 7? - Yes.

**Examined by Sir ROBERT FINLAY.**

18127. Were you able to say what class passengers they were, the women on your boat?

- I should say second and third class.

18128. As far as you know? - As far as I know.

*(The Witness withdrew.)*

**ERNEST GILL, Sworn.**

**Examined by Mr. ROWLATT.**

*The Attorney-General:* Your Lordship will remember this was the assistant donkeyman of the "Californian," with regard to whom some statement was made by the other witnesses of the "Californian." The only point was he was referred to as a deserter at Boston. The suggestion at one time was that he had made a statement which was not true in America about the distress signals having been sent up, and there was a suggestion at one time made that in consequence of a story which he had put forward, which would not bear examination, he had deserted the vessel at Boston. It is no longer necessary to clear that up, because Mr. Gill's story, as told in America, has - I do not want to say more than this - been very much confirmed by the evidence which we have put before the Court of the various officers - your Lordship will remember we called a number of them - and also of Gibson, the Apprentice; so that it is not necessary now to go into his story, whatever it may be, as your Lordship will see the substance of it is no longer in dispute, and he was fully justified in what he said in America. The officers have now borne out the substance of his statement.

18129. (*Mr. Rowlatt - To the Witness.*) Ernest Gill, is that your name? - Yes.

18130. Were you second donkeyman on board the "Californian"? - Yes. 18131. On April 14th? - Yes.
18132. Do you remember her being stopped in the ice on that Sunday evening? - Yes, I was on watch at the time.
18133. How long did you stay on watch? - Four hours.
18134. When did your watch end? - 8 to 12 - it finished at 12 o'clock.
18135. Before you went off watch did you see a steamer? - Yes.
18136. Just tell us what you saw? - I was coming along the deck to call my mate and looked over the starboard rail and saw a large steamer. It could not have been anything but a passenger boat - she was too large. I could see two rows of lights which I took to be porthole lights, and several groups of lights which I took to be saloon and deck lights. I knew it was a passenger boat. That is all I saw of the ship.
18137. How far off do you judge she was? - She was a good distance off; I should say not more than 10 miles, and probably less.
18138. Did you notice whether she appeared to be moving? - I did not stand to look at the ship, but I supposed she would be moving. I did not expect a ship to be lit up like she was and stationary, and nothing to stop her, because I could see the edge of the ice flow, the edge of the field of ice; it appeared to be 4 or 5 miles away.
18139. Could you see the edge? - Yes.
18140. Between you and the ship? - Yes, what appeared to be the edge.
18141. Then, I think, you turned in? - Yes; I went and called my mate first. 18142. (*The Commissioner.*) I want to understand it. You saw this ship on your starboard side? - Yes.
18143. You thought she was 10 miles away, or about that? - She could not be more than that.
18144. And between you, the starboard side of your ship, and this large vessel which you saw, this passenger boat, could you see the edge of what you call the ice-field? - Well, what appeared to be the edge, Sir. It was darker.
18145. What you took for the edge? - Yes.
18146. And you thought that was five miles away? - About that, yes.
18147. So that the ice that you were in - you were in the ice-field at this time? - Yes.
18148. So that the ice that you were in extended for about five miles on your starboard side? - About that.
18149. And in the direction of this steamer that you were looking at? - Yes; the port side, too; there was ice on the port side.
- The Commissioner:* Oh, yes, I understand that.
18150. (*Mr. Rowlatt - To the Witness.*) You went and called your mate? - Yes.
18151. Did you take him up on deck? - No.
18152. You only talked to him about it? - Yes.
18153. I do not think it is important to get what you said to him, but shortly after that did you go up on deck again? - Yes. 18154. And smoked a cigarette? - Yes.

18155. Did you see the steamer then? - No, I could not see anything of the steamer at all. She had disappeared. She had either steamed away, or I do not know what she had done. She was not there.
18156. (*The Commissioner.*) What time was this? - After one bell.  
*Mr. Rowlatt:* Between half-past 12 and 1.  
*The Commissioner:* I do not understand that.
18157. (*Mr. Rowlatt.*) Did you see anything in the direction where the steamer had been? - I had pretty nearly finished my smoke and was looking around, and I saw what I took to be a falling star. It descended and then disappeared. That is how a star does fall. I did not pay any attention to that. A few minutes after, probably five minutes, I threw my cigarette away and looked over, and I could see from the water's edge - what appeared to be the water's edge - a great distance away, well, it was unmistakably a rocket; you could make no mistake about it. Whether it was a distress signal or a signal rocket I could not say, but it was a rocket.
18158. Now can you tell me whether that was in the same direction from you as the steamer had been that you had seen? - It was slightly astern of where I had seen the steamer. The steamer was more than ahead of us, just on our quarter, as we say, and the light was more astern. It was more abeam of our ship.
18159. Do you know whether your ship was lying in the same position on both occasions? - We were lying there.
18160. Stopped, I know, but do you know whether she had swung at all? - I could not say; I do not suppose she would stop in the same position all the time; a current was running.
18161. Was the rocket in the same direction as what you thought to be a falling star? - Yes, in the same direction.
18162. Did you watch for any more? - I stayed for about 3 or 4 minutes after that, but it was extremely cold, and I was just dressed in a thin flannel suit and I did not care to stay any longer on deck. I went below.
18163. You did not see any more? - No, no more.
18164. The next thing you know was the morning? - Yes.
18165. What time were you called in the morning? - Twenty to 7 - 6.40.
18166. Was the vessel under way then? - Yes.
18167. You do not know how long she had been under way? - No.
18168. You were told then to hurry up and assist in getting the boats ready, and so on? - Yes, the Chief Engineer came.
18169. Were you out of the ice by then? - Yes, we had cleared the ice. There were some large bergs in the vicinity, but no field ice; we were clear of that.
18170. Then we know you came up with the "Carpathia," and so on. I think you were served with a subpoena in America, were not you? - Yes.
18171. And was that the reason why you did not get back to the "Californian" before she sailed? - Yes.
18172. I think you came back by the "Cestrian," the next boat of the same company? - Yes.
18173. You had no intention of deserting the "Californian"? - Oh, not a bit, Sir.

**Examined by Mr. ROBERTSON DUNLOP.**

18174. As I understand, you came on deck for a moment at midnight and then went to your cabin? - At midnight? No.
18175. After you went off duty at midnight I understand you went forward to your cabin? - Yes.
18176. And on your way forward you saw the lights that you have described? - Yes.
18177. Then did you go to your cabin? - Yes.
18178. And remain there for some time? - Yes.
18179. While you were in your cabin did you hear the noise of ice? - Yes. 18180. What kind of noise was it? - A grinding noise.
18181. Grinding against your ship's side? - Yes, I was as close to the ship's side as I am to you; it kept me awake; I could not sleep for it.
18182. Was it a noise of thick field ice? - No, just a grinding, rubbing noise.
18183. Of field ice that was surrounding you? - Yes. Supposing somebody was taking a barrel along the road where I was sleeping, and it scraped along the side - that was just the noise. It was not very loud, but just a grinding noise.
18184. Was it thick ice which was around you? - No.
18185. The ice was sufficient to make a noise to prevent you from sleeping, apparently? - Yes.
18166. And then you came on deck? - Yes.
18187. To smoke a cigarette? - Yes.

**Page 434**

18188. And it was while you were smoking a cigarette that you saw what you took to be a rocket? - Yes, I was certain of it.
18189. Did you mention the fact to anybody? - Yes, to several people.
18190. At the time did you report this rocket to anyone? - No, Sir.
18191. Was there anyone on the bridge? - I could not say, there should be.
18192. Whether anybody else saw that rocket you at that time did not know? - I do not see how they could help it. There is a look-out man and a Quartermaster, and there is the officer of the watch. I do not see how they could help but see it.
18193. Did it occur to you that what you saw was something which you ought to report to the officer who was in charge of your ship? - No, I had no business to report it.
18194. And after you had finished your cigarette, you went down to your cabin and turned in and slept till you were called the next morning? - Yes.
18195. You did not attach much importance at the time apparently to what you say you had seen? - No, not any importance. It was a signal, and other people on the ship, the proper people would attend to that. It was nothing to do with me.
18196. And it was not till after you had heard of the loss of the "Titanic" that it occurred to you that this signal that you had seen might have been of some importance? - Yes.

18197. And until then you did not mention this signal to anyone on board the ship, did you? - I did not have the chance.

*The Attorney-General:* I do not quite follow. Is it suggested that signals were not sent up?

18198. (*Mr. Dunlop.*) No, I am not suggesting that. (*To the Witness.*) What I am suggesting is that neither you nor anyone who saw those signals attached at the time any importance to them? - I do not know whether anybody else did who saw them, but I did not.

*The Attorney-General:* What he said was, "It was nothing to do with me." *The Commissioner:* He is a donkeyman, working in the engine room.

18199. (*Mr. Dunlop.*) Yes; and I suppose interested in rendering assistance. (*To the Witness.*) If there was any chance of earning salvage you, as a donkeyman, would be one of the persons interested? - Yes, Sir; but that is not the question; we are not talking about salvage.

18200. (*The Commissioner.*) Have you ever benefited by a salvage action? - No, Sir.

*The Commissioner:* You are living in hopes, I suppose.

18201. (*Mr. Dunlop.*) You have not taken part in one? - No.

18202. But I suppose, like all seamen, you are on the outlook to get a bit out of a salvage service if you can render assistance to a vessel in distress? - In the first place, we have to render the assistance, and what is coming to us afterwards - well, we get it. 18203. When you were lying stationary that night in the ice did you appreciate that you were waiting there till daylight because it was dangerous to proceed through the ice? - Yes.

18204. And when you went down to your room after 12.30 you thought, I suppose, that your vessel would not get under way until daylight? - I did not give it a thought.

**Examined by Sir ROBERT FINLAY.**

18205. You saw the lights of this vessel, if I followed you rightly, on your starboard side? - Yes, on the starboard side.

18206. When you first saw these lights on your starboard side you had two masthead lights? - Yes.

18207. Not a sidelight? - Not steaming lights, not red or green lights, but plenty of sidelights, if you call them sidelights; I mean for illumination.

18208. Was the vessel that carried these lights moving? - Well, I did not stay long enough to see whether she was moving or in what direction she was going. She was there; she was a ship passing; and I had no interest in her, merely that she was a ship. She was a big ship, I could see that at a glance; in fact, I did not think she was a British ship; I thought probably she would be a German boat, and I made that remark to my mate as I woke him up.

18209. You could not make out whether she was moving or not? - No.

18210. (*Mr. Dunlop.*) There is one question I should have asked, if your Lordship will allow me. (*To the Witness.*) When you saw the lights of this steamer, how was she heading with reference to you; was she heading in the same direction as you were at that time? - That I could not say; I did not stay long enough to observe which

way she was going. No doubt if I had stayed another minute I could have been sure of the direction. 18211. But you have, have you not, stated what the heading of this vessel was when you first saw her? - Yes, but, of course, they said was she moving. I did not think the ship would be standing still with nothing to stop her. 18212. Have you ever stated that the vessel you saw was heading in the same direction as the "Californian"? - Yes, I have made that remark. 18213. Is that right or wrong? Do you want to correct it? - Well, I am not sure whether she was going in that direction or not. On second thoughts I cannot be sure. 18214. On second thoughts you appreciate now that if that other vessel was heading in the same direction as you were she was heading towards Europe? - Well, I do not know. 18215. Do you think she was heading towards Europe or towards New York? - I do not know about that. I am not a sailor. I do not know anything about the latitude or longitude. My compass is the steam gauge.

**Re-examined by the ATTORNEY-GENERAL.**

18216. Have you been seen by the Solicitors of the "Californian" since you have been home? - How do you mean? Will you be more explicit? 18217. I am anxious to understand from you whether since you returned to this country you have made a statement to anybody? - Yes. 18218. Was that the Solicitor representing the owners of the "Californian"? - No, a Board of Trade Official. 18219. To the Board of Trade? - Yes, at the Wrecks' Office. 18220. That, of course, we know; that is the deposition. Do you mean you have made no other statement? - None whatever. 18221. And you have not been seen by anybody? - No. 18222. I am not suggesting there is any harm in it; I only want to know the fact? - No, I am telling you the truth; you asked me and I am telling you. 18223. You are perfectly right. You are justified in what you have said in America by what has transpired since. I am not going to ask questions, my Lord, in detail about it because your Lordship has the evidence of the "Californian" before you; but I want to say this, so that my friend, Mr. Dunlop, may understand the contention, that I disagree entirely with his observation that, according to the evidence, nobody paid any attention to these rockets. I have the evidence.

*The Commissioner:* It is not in accordance with my recollection.

*The Attorney-General:* Nor with mine. I only say it so that my friend may not think I am passing it because I admit the statement; I differ entirely from it.

**Page 435**

*(The Witness withdrew.)*

**JOSEPH BRUCE ISMAY, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

18224. Mr. Ismay, are you a member of the firm of Ismay, Imrie and Company; they are the managers of the Oceanic Steam Navigation Company, Limited? - Yes.
18225. And that Company was the owner of the "Titanic"? - Yes.
18226. You are also, I think, managing director of the Oceanic Steam Navigation Company, Limited? - Yes.
18227. I do not want to go in elaborate detail into the constitution of the Company or the American company, but I must ask you just one or two questions so that my Lord may understand how this matter stands. It is a little complicated. But apparently the Oceanic Steam Navigation Company, Limited, is an English company, is it not? - Yes.
18228. With its registered office at Liverpool? - With its registered office at Liverpool.
18229. And the Oceanic Steam Navigation Company owns all the White Star Line steamers? - Yes, the Oceanic Steam Navigation Company is the legal name of the Company.
18230. That is the Company, and it owns the vessels which are generally spoken of as the White Star Line? - Yes.
18231. The White Star Line runs from New York to Liverpool, does it? - Yes.
18232. And New York to Southampton? - Yes, and to many other ports as well.
18233. And also from Liverpool to Australia? - Yes.
18234. And from Liverpool to New Zealand? - Yes, and to Canada.
18235. I was going to ask about that - and also the Mediterranean? - Yes.
18236. And from Boston to the Mediterranean? - Yes.
18237. And from Montreal to Liverpool? - Yes.
18238. Then there is the Mississippi and Dominion Line. Has that anything to do with the Oceanic Steam Navigation Company? - No.
18239. That is another? - It is a separate company altogether.
18240. That is another company controlled by what I may call for convenience, the American Shipping Trust? - Yes.
18241. Is the International Mercantile Marine Company the name of the American company? - Yes.
18242. What one speaks of for convenience as the American Shipping Trust? - Yes.
18243. I do not mean to suggest that it is a Trust - there is some objection, I believe, in America to calling it a Trust, but I only want to get the fact so that we may see where we are about it. That is the American company? - Yes.
18244. Is the share capital of the Oceanic Steam Navigation Company held by the American combination? - Yes.
18245. That I have referred to for convenience to save a long name as the American Trust. Are the Oceanic Steam Navigation Company's shares a most important branch of the American Company's assets? - Yes.
18246. I think it represents very nearly half the total tonnage controlled by the American Trust? - Very nearly.

18247. Then the American Trust also controls the Mississippi and Dominion Line, does it not? - Yes.

18248. It runs from Montreal to Liverpool? - And from Avonmouth to Canada.

18249. Then there is the British North Atlantic? - Yes.

18250. Does that also run from Liverpool to Canada? - Yes.

18251. Is that also an English company the shares of which are held by the American Trust? - Yes.

18252. Then I think there is also the Atlantic Transport Company, is there not? - Yes.

18253. And are the shares held in the same way by the American Trust? - Yes.

18254. The Atlantic Transport Company is an English registered company? - Yes.

18255. And that also runs from London to New York? - From London to New York and from the Continent to Baltimore and between London and Philadelphia also. 18256. I think, with the exception of some American lines, and one other which I am about to call attention to, the Leyland Line, that represents substantially the shipping controlled by the American Trust, does it not? - There is the American Line and the Red Star Line.

18257. I said with the exception of the American Lines? - Yes.

18258. There is one other Company which I must refer to, because it will interest my Lord in reference to this Enquiry; the American Shipping Trust also controls the Leyland Line, does it not? - It holds a controlling interest in the Leyland Line.

18259. (*The Attorney-General.*) My Lord, the Leyland Line, you will remember, would be the owners of the "Californian," that is the point of it. (*To the Witness.*) And you have mentioned the Red Star, which was an American Line, which is also owned by the American Trust? - Yes, the American Line running between Southampton and New York.

18260. (*The Commissioner.*) How many lines of steamers does the American Trust control? - Do you mean how many companies, my Lord, or how many different lines?

18261. I mean how many companies altogether - British companies? - Five, I think it is.

18262. How many American companies does it control? - Two.

18263. Then the American company holds substantially, though not completely, all the share capital in these different companies? - Yes, with the exception of the Leyland Line. 18264. You told me they had a controlling interest? - Yes, there is a controlling interest in the Leyland Line.

*The Attorney-General:* In the Leyland Line it is only a controlling interest, as I understand.

*The Commissioner:* That is to say, they hold the majority of the shares.

18265. (*The Attorney-General.*) That is it, my Lord. (*To the Witness.*) Does the tonnage of these vessels owned or controlled by the American Trust in the way you have described represent about a million tons altogether? - I think it is rather less than a million tons, but very nearly a million tons.

18266. In round figures it is a million tons? - Yes, in round figures it is a million tons.

18267. But the White Star Line and these other vessels which are owned originally by British companies still run under the British flag, do they not? - Yes.

*The Commissioner:* They are registered, I suppose?

*The Attorney-General:* They are registered as belonging to the English company. The only point of that is, that it is not the Company but the shares of the Company that are held by the Trust.

*The Commissioner:* Although these ships, including the "Titanic," are registered under the British flag, they are in fact American property?

*The Witness:* A certain amount of the stock in the International Maritime Company is held in this country, but to what extent I have not the slightest idea.

18268. But the American company, as I understand, is an American company constituted according to the laws of America.

*The Attorney-General:* Your Lordship is perfectly right in the questions you have put, with this qualification, that a number of the shares in the American company are held by persons in this

### **Page 436**

country who I suppose were the original owners of shares in the various English companies.

*The Witness:* Very likely so.

18269. (*The Commissioner.*) Some of the shares may be owned by Frenchmen, I suppose? - Certainly.

18270. I should like you to tell me what is the object of an American company managing its affairs through the English Laws affecting English companies; why do they do it? - I am afraid I cannot answer that question, my Lord.

18271. I should think you ought to know. You know that in substance the "Titanic" was an American-owned ship? - That is true.

18272. In substance, and I want to know why an American company should manage its ships, or why it registers its ships under English management or under the English flag? - Those ships could not be registered under the American flag.

18273. Why not? - Because the ships are built, I suppose, in this country.

18274. Then according to the laws of America can no ship that is not American-built be registered there? - No; you cannot register a foreign ship; you cannot get the American flag for a foreign-built ship. She must be built in the country.

18275. Now, will you tell me where the business of this American company is transacted; is it in New York, or in London, or Liverpool, or in Southampton? - I am president of the American company, and it is worked in Liverpool; we have a committee in London, a British committee.

18276. And there are no American gentlemen on the Board? - In America, yes; there is a Board of Directors in America. The Chairman of the Board of Directors is an American, and there are a great many Americans on the Board, and English people. 18277. (*The Attorney-General.*) I suppose it works out in this way, that the shares are held by the English company, and the ship is registered in consequence as a British ship?

- Yes.

18278. Then the shares in the company which owns the ship are the shares which are held by the American Trust? - That is true.

18279. Now, I want you just to tell me about the building of the "Olympic" and the "Titanic," two sister vessels. I am not going to ask you the details of the construction, I am going to keep that for skilled witnesses, and those who have had more to do with it and who know - but generally speaking, first of all, have you any financial interest by way of shareholding or otherwise in the firm of Harland and Wolff? - Absolutely none.

18280. Or any of those which take an active part in the management of the Oceanic Steam Navigation Company? - I do not quite follow you there. For instance, Lord Pirrie, who is a Director of the Oceanic Steam Navigation Company, is also a Director of Harland and Wolff, but he is the only gentleman that has an interest in both the Company and the shipbuilding yard.

18281. That is what I thought. Now one other general question with regard to the construction of vessels by Harland and Wolff; are they constructed under contract at a lump sum in the ordinary course, or are they constructed at cost price plus a percentage? - Cost price, plus a percentage. We build no ships by contract at all.

18282. So that what it amounts to, if I follow you correctly, is, that there is no limit placed by you upon the cost of the vessel? - Absolutely none. All we ask them to do is to produce us the very finest ship they possibly can; the question of money has never been considered at all.

18283. Do you give your orders for the construction of a vessel in writing? - Yes.

18284. Then substantially it is as you say? - We simply pass a letter between us.

Messrs. Harland and Wolff would write us a letter, and we would confirm it.

18285. To the effect that you are to pay them a certain commission or percentage upon the cost price? - Yes, that is referred to in the letter.

18286. And is that the system practically upon which Messrs. Harland and Wolff have constructed your steamers for the White Star Line? - Yes, practically the whole fleet has been built upon those terms.

18287. And the "Olympic" and "Titanic" were both built upon those terms? - Exactly.

18288. The plans would be drawn and submitted, of course, to you or your company? - Yes, and discussed between us and then settled on.

18289. Will you give me approximately what the cost of the "Titanic" was? - A million and a half sterling.

18290. Now you were on board the "Titanic" on this voyage? - I was. 18291. You sailed in her as a passenger? - I did.

18292. You joined her first, I think, at Southampton? - Yes.

18293. Then you went to Cherbourg, and from Cherbourg to Queenstown? - Yes.

18294. As we know, she left Queenstown on the 11th April? - Yes.

18295. She carried mails as well as passengers? - Yes.

18296. That was under contract which you had with the British Government? - Yes.

18297. That contract is, of course, in writing? - Yes.

18298. Can you produce it? - I have not got it here, but it can be produced. 18299. I am not asking you for it at the present moment, but you will produce it for inspection

- either by the Court or by anyone who is interested in the Enquiry represented here who thinks it may be of value? - Yes.
18300. I only want to ask you one question with reference to it. Under that contract are you bound to keep up a certain rate of speed? - No.
18301. What I wanted to know was whether there was any such condition in the contract that your vessels must be constructed to steam at 20 knots or anything of that kind? - That I am not quite clear about. There is some reference in the contract. I think we are allowed to run a ship with mails even at 18 knots.
18302. I think you said in America 16, but we will look at the contract and see how that is? - It is down in writing.
18303. But the substance of it is that you are not bound to proceed at any rate at anything like the speed at which your vessels can go? - No, there is no penalty for not making a certain speed; in other words, we get paid a lump sum.
18304. Now, on Sunday, the 14th April, do you remember dining in the evening? - I do.
18305. With the Doctor? - Yes.
18306. On this very fateful day? - Yes.
18307. Did the Captain dine with you? - He did not.
18308. (*The Attorney-General.*) My Lord, you appreciate why I ask that? - The Doctor dined with me; there was nobody else at our table.
18309. But the Captain was in the restaurant dining, I think, with somebody else? - Yes, I believe he was; in fact, I know he was.
18310. At all events, you say he was not dining with you that evening? - No, I never spoke to him at all; I had nothing to do with him at all.
18311. You were a passenger on the vessel, but I suppose you travelled as a passenger because of your interest in the vessel and in the company which owned it? - Naturally I was interested in the ship.
18312. I mean, you had nothing to do in New York; you travelled because you wanted to make the first passage on the "Titanic"? - Partly; but I can always find something to do.
18313. I mean to say, you were not travelling in the "Titanic" because you wanted to go to New York, but because you wanted to travel upon the maiden trip of the "Titanic"? - Yes.
18314. Because in your capacity as managing director or as President of the American Trust you desired also to see how the vessel behaved, I suppose? - Naturally.
18315. And to see whether anything occurred in the course of the voyage which would lead to suggestions from you or from anybody? - We were building another new ship, and we naturally

**Page 437**

wanted to see how we could improve on our existing ships.

18316. That was the real object of your travelling on the "Titanic"? - And to observe the ship.

18317. What I want to put to you is that you were not there as an ordinary passenger? - So far as the navigation of the ship was concerned, yes.
18318. That I will ask you some questions later on about. I am not suggesting that you controlled the navigation, but what I suggest to you is that it would not be right to describe you as really travelling on that ship as an ordinary passenger, because of the interest you had in the "Titanic," and because of your natural watchfulness as to the behaviour of the "Titanic" on her first voyage? - I looked upon myself simply as an ordinary passenger.
18319. You have told us in what capacity you were travelling across the Atlantic? - Yes.
18320. (*The Commissioner.*) Did you pay your fare? - No, I did not.
18321. (*The Attorney-General.*) You recognise, do you not, that my Lord's question is one which rather disposes of the ordinary passenger theory, does it not; however, I will not press it? - I think if I had crossed on any other ship going across the Atlantic, I should have travelled exactly on the same terms.
18322. (*The Commissioner.*) If you had travelled in a Cunarder you would not have paid? - No.
18323. (*The Attorney-General.*) Now I think we understand what you mean when you say you were travelling as a passenger. Now on this day, on the 14th, did you get information from the Captain of ice reports? - The Captain handed me a Marconi message which he had received from the "Baltic" on the Sunday.
18324. He handed you the actual message as it was delivered to him from the "Baltic"? - Yes.
18325. Do you remember at what time it was? - I think it was just before lunch. 18326. On the Sunday? - Yes, on the Sunday.

*The Attorney-General:* Your Lordship remembers the message from the "Baltic." I am going to hand up to you a little later a document which gives the messages in their proper order of dates, but this is the one I am referring to now - I will read it. It is sent at 11.52 a.m. to Captain Smith, "Titanic": "Have had moderate, variable winds and clear, fine weather since leaving. Greek steamer 'Athenai' reports passing icebergs and large quantity of field ice today in latitude 41.51 N., longitude 49.52 W." If your Lordship will take this list you will see how convenient it is (*Handing up a copy*). We will have some more printed to hand up to the Assessors.

*The Commissioner:* Yes, it would be very convenient for all my colleagues to have a copy of this before them.

*The Attorney-General:* Yes; we have got them printed. Strictly speaking, of course, we shall have to prove these, and they will be proved. If your Lordship will look at page 2, or, perhaps, it would be better if you will look at page 1 first to see how this is compiled. First of all, you have the copies of messages received by the "Titanic" between midnight of the 11th April, 1912, up to the 14th of April, 10.25 New York time, when her distress signals were first received. That is what I said we would have done before we adjourned. If your Lordship will look at page 2 you will see the message of the "Baltic" in the middle. It is referred to as the message book No. 77. You see it is to "Captain Smith, 'Titanic.'" "You have it, no doubt.

*The Commissioner:* Yes.

*The Attorney-General:* That is the one which contains a further reference after the figure which I just gave you, "Greek steamer 'Athenai' reports passing icebergs and large quantity of field ice today in latitude 41.51 N., longitude 49.52 W. Last night we spoke German oiltank 'Deutschland,' Stettin to Philadelphia. Not under control. Short of coal, latitude 40.42 N., longitude 55.11." Now if your Lordship would like to complete this whilst you have got it before you, you will find, if you turn to the bottom of page 4 of the same document, the answer, "Time received 12.55 p.m. To Commander of 'Baltic.'" Thanks for your message and good wishes. Had fine weather since leaving - Smith." Your Lordship will recollect that both these messages are said to be New York time. According to the description we have got here of the message sent and the message received, that is according to the evidence you have already got from the Marconi Company, New York time.

*The Commissioner:* I have got it marked in my own note that the message was sent out by the "Baltic" at 3.19.

*The Attorney-General:* I think that is too late. You say, sent out by the "Baltic." *The Commissioner:* Yes.

*The Attorney-General:* That would be too late; it must be rather before two, anything from one to before two.

*The Commissioner:* Two o'clock. Your opening was not quite in accordance with what we know today.

*The Attorney-General:* The statement in the affidavit, I agree, is not quite the same as we have now got it.

*The Commissioner:* There is a substantial difference. *The Attorney-General:* Yes, we know the facts now.

*The Commissioner:* I rather gathered from the Solicitor-General's examination that the difference was of no consequence, but it seems to me to make a substantial difference. There was only one message from the "Baltic."

*The Attorney-General:* That is all as far as we know, and we have been examining into it because of what was said originally by the Captain of the "Baltic" upon affidavit, upon which the statement was made if your Lordship remembers.

*The Commissioner:* However, this is the printed message in this document.

18327. (*The Attorney-General.*) Yes, that is quite right. I rather think my learned friend did say something with regard to it. He agreed that it made a difference, of course, because it did not agree with the statement in the affidavit, and we mentioned that we would enquire into it, and we have got it now. Of course, there is the message, and, as you will appreciate, we attribute very great importance to that particular message; we think it is of very great importance. (*To the Witness.*) Now what I want to understand from you is this - that message was handed to you by Captain Smith, you say? - Yes.

18328. Handed to you because you were the managing director of the company? - I do not know; it was a matter of information.

18329. Information which he would not give to everybody, but which he gave to you. There is not the least doubt about it, is there? - No, I do not think so.

18330. He handed it to you, and you read it, I suppose? - Yes.

18331. Did he say anything to you about it? - Not a word.

18332. He merely handed it to you, and you put it in your pocket after you had read it?  
- Yes, I glanced at it very casually. I was on deck at the time.
18333. Had he handed any message to you before this one? - No.
18334. So that this was the first message he had handed to you on this voyage? - Yes.  
18335. And when he handed this message to you, when the Captain of the ship came to you, the managing director, and put into your hands the Marconigram, it was for you to read? - Yes, and I read it.
18336. Because it was likely to be of some importance, was it not? - I have crossed with Captain Smith before, and he has handed me messages which have been of no importance at all.
18337. Surely he had had other reports which, as far as I follow from your evidence, he had not said anything about? - Not a word.
18338. He had had other Marconigrams during this voyage, at any rate? - I daresay he had, and I had no knowledge of them.
18339. So I understand. Therefore he singled out this one apparently to give to you for you to read it? - Yes.

**Page 438**

18340. And, as I understand you, you took it from him and read it? - Yes.
18341. And you kept it for the time being? - Yes, I put it in my pocket.
18342. Where was the message handed to you by Captain Smith? - On deck.
18343. Were you alone? - No, I was not.
18344. Were there other passengers present? - There were.
18345. Did you read the message to them? - I did not.
18346. Did you say anything to the passengers about it? - I spoke to two passengers in the afternoon. At that time I did not speak to anybody.
18347. (*The Commissioner.*) When you say the afternoon, what time was it that the Captain handed you this message? - I think it was just before lunch.
18348. (*The Attorney-General.*) That would be somewhere near 2 o'clock? - I should think it would be somewhere about 20 minutes past one. No, I am wrong; I think it would be about 10 minutes to one.
18349. I rather think you must be making a mistake about that. When you were examined in America you said, "It is very difficult to place the time. I do not know whether it was in the afternoon or immediately before lunch. I am not certain." - I think I was rather trying to place the time by the time we had lunch. I know it was immediately before we had lunch, and now when I come to think of it, when we go west, we have lunch at 1 o'clock, and coming east we have lunch at half-past one, so that it must have been half-past one when he handed me the Marconigram. That is to the best of my knowledge and belief.
18350. I suggest to you that probably what you said in America was accurate, that you were not certain whether it was in the afternoon or immediately before lunch? - I am practically certain it was before lunch.

*The Commissioner:* Now, just think. The information that we have at present is that this telegram, or whatever it is called - the Marconigram - arrived on the "Titanic" at about 2 o'clock.

*The Attorney-General:* 1.40 really.

*The Commissioner:* 11.52, as I understand, by New York time.

*The Attorney-General:* That is right. According to the evidence we have got that would be about 1.40 or 1.45.

*The Commissioner:* Very well, that is 20 minutes to 2, and then he says 20 minutes past 1.

*The Witness:* It was the hour of lunch I was trying to fix the time by.

18351. (*The Attorney-General.*) Very well. Now let us take it that you received it immediately before lunch. You said nothing about it then, as I understand you? - No, I did not.

18352. But having read it, you put it in your pocket? - Yes.

18353. And did you then go down to lunch? - Yes, I went down to lunch.

18354. Were you alone at lunch? - I was. 18355. You lunched alone? - Absolutely.

18356. Then you spoke about it in the afternoon to two lady passengers? - Yes.

18357. Will you tell me to whom you spoke? - I spoke to Mrs. Thayer and Mrs. Ryerson. [Mrs. Marion Thayer and Mrs. Emily Ryerson.]

18358. Will you tell us what you said? - I cannot recollect what I said. I think I read part of the message to them about the ice and the derelict - not the derelict, but the steamer that was broken down; short of coal she was.

18359. Did you understand from that telegram that the ice which was reported was in your track? - I did not.

18360. Did you attribute any importance at all to the ice report? - I did not; no special importance at all.

18361. Why did you think the Captain handed you the Marconigram? - As a matter of information, I take it.

18362. Information of what? - About the contents of the message.

18363. The ice report? - About the contents of the message. He gave me the report of the ice and this steamer being short of coal.

18364. It conveyed to you at any rate that you were approaching within the region of ice, did it not? - Yes, certainly.

18365. Did Mrs. Ryerson say anything to you about slowing down in consequence of this ice report? - I have no recollection of it at all.

18366. Will you pledge yourself that she did not? - Yes, I think I can.

18367. Up to this time had you been increasing the number of revolutions? - I believe the revolutions were increased from 70 to 72 and up to 75.

18368. You had begun at 70, I suppose? - We began at 68.

18369. Was that when you left Queenstown? - When we left Southampton.

18370. When you left Southampton you began at 68? - Yes.

18371. What would that give in knots? - I cannot tell you; it is easily worked out. 18372. Then we know, I think, that 75 gives between 21 3/4 and 22 knots; we have got that in evidence already? - Yes.

18373. You started, you said, at 68. Did you then get to 70? - I believe she went at 70 from Cherbourg to Queenstown.

18374. When was it you first got to 75? - I really have no absolute knowledge myself as to the number of revolutions. I believe she was going 75 on the Sunday. 18375. But really, Mr. Ismay, if you will just search your recollection a little.

Remember that this question of speed interested you very materially. You, as Managing Director of the Company, were interested in the speed of the vessel? - Naturally. 18376. And when the report was made to you, as I suppose it was, that she had increased to 75 revolutions, you were aware, I think, that it was not quite her full speed? - 78 I believe was her full speed.

18377. Seventy-eight was her full speed, and she had got to 75? - Yes, that is right.

18378. Your intention was, was it not, before you reached New York, to get the maximum speed of 78? - The intention was that if the weather should be found suitable on the Monday or the Tuesday that the ship would then have been driven at full speed.

18379. Which would be 78? - Yes, 78.

18380. So that your intention was to increase the speed at which she was travelling already on the Sunday of 75 revolutions, if the weather was satisfactory, to 78 on the Monday or the Tuesday? - Yes, to increase the speed to 78 if the conditions were all satisfactory.

18381. When she was proceeding at 75 revolutions were all her boilers on? - I believe not. I have no knowledge of that myself.

18382. Were the single-ended boilers on? - I have no knowledge of it myself. I was told they were not - at least, I have heard they were not.

18383. That none of the single-ended ones were on? - That is as far as I know. 18384. Then I will just refer you to what you said in America with regard to this? - As far as I know the single-ended boilers were not on on the Sunday.

18385. "The full speed of ship is 78 revolutions?" - Yes.

18386. "She worked up to 80. As far as I am aware she never exceeded 75 revolutions. She had not all her boilers on, none of the single-ended boilers were on. It was our intention if we had fine weather on Monday afternoon or Tuesday to drive the ship at full speed." Is that correct? - Yes, quite.

18387. With whom would you discuss this question of driving her at full speed on the Monday or Tuesday? - The only man I spoke to in regard to it was the Chief Engineer in my room when the ship was in Queenstown.

18388. Is that Mr. Bell? - Yes.

18389. The Chief Engineer? - Yes.

18390. Can you tell me on what day it was that she first made the 75 revolutions on this voyage? - I think it would be on the Saturday.

18391. And when was it that you discussed the question of putting her at full speed on the Monday

or the Tuesday? - On the Thursday when the ship was at anchor in Queenstown Harbour. 18392. Will you explain that. It is not quite clear why you should discuss the question in Queenstown? - The reason why we discussed it at Queenstown was this, that Mr. Bell came into my room; I wanted to know how much coal we had on board the ship, because the ship left after the coal strike was on, and he told me. I then spoke to him about the ship and I said it is not possible for the ship to arrive in New York on Tuesday. Therefore there is no object in pushing her. We will arrive there at 5 o'clock on Wednesday morning, and it will be good landing for the passengers in New York, and we shall also be able to economise our coal. We did not want to burn any more coal than we needed. 18393. Never mind about that, that does not answer the question I was putting to you. I understand what you mean by that, that you did not want to get there till the Wednesday morning at 5 o'clock, and that therefore it was not necessary to drive her at full speed all the time? - No.

18394. But the question I am putting to you is this, when was it that you discussed putting her at full speed on the Monday or the Tuesday? - At the same time.

18395. You have not told us about that? - That was when Mr. Bell was in my room on Thursday afternoon, when the ship was at anchor at Queenstown.

18396. But what was said about putting her at full speed? - I said to him then, we may have an opportunity of driving her at full speed on Monday or Tuesday if the weather is entirely suitable.

18397. Then you did know on the Sunday morning that in the ordinary course of things between that and the Monday evening you might be increasing your speed to full speed? - I knew if the weather was suitable either on the Monday or the Tuesday the vessel would go at full speed for a few hours.

18398. And I suppose you knew that in order to get the full speed of the vessel, the maximum number of revolutions, it would be necessary, presumably, to light more boilers? - I presume the boilers would have been put on.

18399. Do you know in fact that they were lighted on the Sunday morning? - I do not. *The Attorney-General:* Your Lordship will remember that evidence; I will give the reference to it, but we have got the evidence I think that they were lighted at eight o'clock on Sunday morning, the five single-ended boilers?

*Mr. Laing:* No, no.

*The Commissioner:* Were they lit at the time of the collision?

*The Attorney-General:* I do not think the single-ended ones were, but I think you will find that more boilers were lit on the Sunday morning; that is the point, but I think not the single-ended ones.

*The Commissioner:* Where is the reference to these particular ones that you suggest were lit on the Sunday morning?

*The Attorney-General:* I think your Lordship will find it at page 69, in Barrett's evidence, Question 2217, where he was asked, "Then, as far as you know, there was no reduction in speed?" And your Lordship will see that the answer to that is: "There were two main boilers lit up on the Sunday morning, but I could not tell you whether they were connected with the others or not. (Q.) You mean two main boilers which had not been lit up before? - (A.) Yes, they were lit up. (Q.) That is extra? - (A.) Yes. (Q.) On the Sunday morning. - (A.) Yes. (Q.) That is why you told me that there had been eight boilers out,

and afterwards you thought there were only five or six out, is that it? - (A.) Yes.” Then your Lordship says: “What he said was five boilers, certainly, and perhaps eight.” Then it is cleared up at Question 2222: “(*The Solicitor General.*) That is what you said, Barrett - you said five boilers were out, certainly, and perhaps eight. Now just explain why you say that?” And he said, “When you light a boiler up it will take twelve hours before you can connect it with the others to get steam on as a rule in a merchant ship as far as my experience goes.”

Then he is asked, “These three, the difference between the five and the eight, were they lit up? - (A.) Those three were lit up on the Sunday morning.” Then at Question 2226 he was asked, “Do you know in which section they were? - (A.) In the after section - the next one to the after section. That would be No. 2 section.” Now, the aftermost section your Lordship will see is the one in which there are the single-ended boilers. He is not referring to those. He is referring to the after boilers in No. 2 boiler room, which are the double-ended.

*The Solicitor-General:* He is referring to those (*Pointing to the plan*).

*The Commissioner:* That is a double-ended boiler.

*The Solicitor-General:* Yes, that No. 2 is a double-ended boiler.

*The Commissioner:* The other ones, further aft, are single ones.

*The Attorney-General:* Yes, my Lord, that is right; and those were never lit. But if your Lordship will now look at Question 2232, you will see that Barrett was asked, “Can you tell me when those two or three main boilers were lit on the Sunday morning - about what time? - (A.) As near as I could say, 8 o’clock in the morning. (Q.) Then they may have been connected that same night? - (A.) Yes.” There is some other evidence about it, but as far as I know there is no suggestion that this evidence is not correct. What it amounts to is that it took 12 hours apparently before they were connected. They were lit at 8 o’clock on the Sunday morning. That was the reason the question was put by the Solicitor-General, “Then they may have been connected that same night?” and the answer is “Yes.” That is how the evidence stands.

*The Commissioner:* This man is what is called a leading fireman.

*The Attorney-General:* Yes, my Lord. He was a very important witness. He was a leading stoker.

*The Commissioner:* He describes himself as a leading stoker. *The*

*Attorney-General:* Yes, my Lord, I think that is right.

*The Commissioner:* I do not know what the “a” means.

*The Attorney-General:* In one particular section, I think.

*The Commissioner:* How many leading stokers are there?

*The Attorney-General:* I could not say, my Lord, but I imagine it means a leading stoker in a particular section; probably that is what it means.

*Sir Robert Finlay:* He was the leading stoker in No. 6 Boiler Room.

*The Commissioner:* Can you tell me which is No. 6 Stokehold?

*The Attorney-General:* Quite the foremost one of all, my Lord. We have had evidence about water going in there.

*The Commissioner:* Quite the foremost?

*The Attorney-General:* Yes, my Lord; it is described there as No. 6 Boiler Room. *The Commissioner:* Was that the stokehold where he was located?

*The Attorney-General:* Yes, that was Barrett's.

*The Commissioner:* He was not located in this stokehold where the boilers were lit up?

*The Attorney-General:* No, my Lord.

*Sir Robert Finlay :* There is just one other question, Barrett was asked at 2358 on page 66: "With regard to the revolutions, did you keep the same revolutions all Sunday, so far as you know? - Yes." *The Attorney-General:* Yes.

*The Commissioner:* If, Mr. Attorney, they kept the same revolutions all the Sunday, which I understand means up to the time of the collision, then these three boilers had not begun to operate upon the engines, apparently?

*The Attorney-General:* Probably not.

*Sir Robert Finlay:* I understand that, even if the boilers were connected, it would not follow that there were more revolutions. That would depend upon what was done in the engine room.

*The Attorney-General:* That would not follow.

#### **Page 440**

*The Commissioner:* I suppose, Sir Robert, the object of lighting up extra boilers is to get additional speed.

*Sir Robert Finlay:* Not entirely, my Lord. The thing may work easier. Greater speed can be attained if they choose, but as a matter of fact the evidence is that they did not exceed the 75 revolutions, which the witness said they got on the Sunday, up to the time of the collision.

*The Commissioner:* It leads me to think that Barrett, or whatever his name was, may be inaccurate about the time when these additional boilers were lit.

*Sir Robert Finlay:* It may have been a little later, your Lordship means?

*The Commissioner:* Yes.

*Sir Robert Finlay:* It would probably take 12 hours before they could be connected.

*The Commissioner:* You see, according to the evidence of Mr. Ismay, they would not want the additional speed until Monday or Tuesday. *Sir Robert Finlay:* Yes.

*The Commissioner:* It is evident from Mr. Ismay's evidence that they did want additional speed. If the weather was clear and the circumstances favourable, they would want additional speed on Monday and Tuesday.

*Sir Robert Finlay:* Yes, and coal being the object at the time one would suppose they were not lit up quite so hurriedly.

*The Commissioner:* Well, I am not quite so sure. This was the first voyage of a new ship.

*The Attorney-General:* Monday was very close at hand, after all.

*Sir Robert Finlay:* But you do not want more than 12 hours.

18400. (*The Attorney-General.*) Very well. (*To the Witness.*) At least we know this, Mr. Ismay, that certainly there was no slowing down of the vessel after that ice report was received? - Not that I know of.

18401. You knew, of course, that the proximity of icebergs was a danger; you knew that much, did not you? - There is always danger with ice - more or less danger with ice.

18402. I suppose you are familiar with the reason of the different tracks which are marked upon the charts? - Perfectly.

18403. Different tracks for different seasons of the year? - Yes.

18404. And that is for the purpose of avoiding ice, is it not? - Not entirely. 18405. I will not argue with you about entirely, but, at any rate, it is an important factor? - It is.

18406. And for that reason you get, I think, I am right in saying, a more southerly track during a certain period of the year? - That is true.

18407. Had you no curiosity to ascertain whether or not you would be travelling in the region in which ice was reported? - I had not.

18408. (*The Commissioner.*) I thought you said just now that you knew that this was the point at which you were approaching the region of ice? - I knew we were approaching the region of ice, yes.

18409. (*The Attorney-General.*) How did you know that? - How did I know what?

18410. How did you know that you were approaching the region of ice? - By this Marconi message.

18411. The Marconi message which you had received from the "Baltic"? - Yes. 18412. And you knew, did you not, that you would be in the region of ice some time on that Sunday night? - I believe so, yes.

18413. Now, I should like to understand who told you that? - I think the information I got was from Dr. O'Loughlin, who said we had turned the corner.

18414. That is the doctor with whom you had dined that night in the restaurant? - Yes.

18415. Was he the doctor who always travelled with the ship? - He had been in the service over 40 years.

18416. As a doctor? - Yes.

18417. But did you tell him about the Marconigram? - I did not.

18418. I do not quite understand then how you mean what he said to you? - He made the remark at dinner, "We have turned the corner."

18419. Did you know what turning the corner meant? - Yes, I knew that.

18420. You knew, I suppose, that you would alter your course then? - Yes, I knew that.

18421. And you would alter your course, I think, more to the northward? - Yes. 18422. And you knew that that would bring you nearer to the region of ice which had been reported to you? - I could not say exactly where the ice was. I do not understand latitude and longitude.

18423. Do you mean that? You are giving evidence here in the Court. Would you reconsider that statement, that you do not know the meaning of latitude and longitude? - I said the Marconi message did not convey any meaning to me as to the exact position of that ice.

18424. Did it not convey to you that it was possible to ascertain whether the latitude and longitude designated in that Marconigram would be a track that you would have to cross? - For me to ascertain that?

18325. Yes? - No. That is for the Captain of the ship. He was responsible for the navigation of the ship. I had nothing to do with the navigation.
18426. Yet you were the Managing Director and he thought it of sufficient importance to bring you the first Marconigram which he had shown to you on this voyage and to give it you, and then you put it in your pocket? - Yes.
18427. And you, of course, appreciated that that report meant to you that you were approaching ice, as you told us? - Yes.
18428. And you knew also that you would be approaching ice that night? - I expected so, yes.
18429. And that you therefore would be crossing the particular region which was indicated in that Marconigram that night? - I could not tell that.
18430. About that region? - Yes, I presume so.
18431. And therefore that it behoved those responsible for the navigation of the ship to be very careful? - Naturally.
18432. And more particularly if you were approaching ice in the night it would be desirable, would it not, to slow down? - I am not a navigator.
18433. (*The Commissioner.*) Answer the question. - I say no. I am not a navigator.  
*The Attorney-General:* You are not quite frank with us, Mr. Ismay.  
*Sir Robert Finlay:* The Attorney-General will forgive me; I do not think there is the slightest justification for that remark.
18434. (*The Attorney-General.*) You have told me now what your answer is. What was your answer? - I should say if a man can see far enough to clear ice, he is perfectly justified in going full speed.
18435. Then apparently you did not expect your Captain to slow down when he had ice reports? - No, certainly not.  
*The Commissioner:* That is the evidence of one of the witnesses.  
*The Attorney-General:* Yes, my Lord, I know.  
*The Commissioner:* Of course, if you had got a perfect look-out and there is nothing to prevent you from seeing, then there is no occasion to slow down.  
*The Witness:* I should say none at all.
18436. You could see the ice then a long way off, and it would not be necessary to slow down for icebergs? - Presumably so, yes.
18437. (*The Attorney-General.*) What is the object of continuing at full speed through the night if you expect to meet ice? Why do you do it? - What is the use of doing it?
18438. Yes? - I presume that the man would be anxious to get through the ice region. He would not want to slow down upon the chance of a fog coming on.
18439. So that, of course, the object of it would be to get through it as fast as you could? - I presume that if a man on a perfectly clear night could see far enough to clear an iceberg he would be perfectly justified in getting through the ice region as quickly as he possibly could.
18440. Now, I want to put a statement to you. Do you know a Mrs. Douglas? - I do not.

18441. Do you know a Mrs. Ryerson, of Philadelphia? - Yes, I met her on board the ship.

18442. And she, I gather from what you said just now, was one of the two lady passengers to whom you mentioned the Marconigram in the afternoon? - That is true. 18443. You showed her the wireless message, did you not? - I read it to her, I think. 18444. Now, I want to put to you this: Did she say to you (*I am speaking now of what took place on the Sunday. I will put the whole conversation to you, and see if it helps your recollection*): "Of course you will slow down," and did you reply, "Oh, no; we will put on more boilers to get out of it"? - Certainly not.

18445. It seems to have been rather in accordance with your view, that the faster you could get out of the region the better? - Assuming the weather was perfectly fine, I should say the Captain was perfectly justified in going full speed.

18446. That means that your view is not only would he be justified in going the 75 revolutions, but he would be justified in going the 78? - If the weather conditions had been satisfactory.

18447. And, according to your view, what do you say as to the weather conditions? - So far as I could judge, it was a perfectly fine, clear night.

18448. So that on a perfectly fine, clear night, with the expectation that you are coming within the region of ice, your view is that the Captain would be justified in increasing his speed? - I do not see any reason why he should not, so long as he could see sufficiently far to clear the ice.

*The Commissioner:* I suppose if you had a perfectly good and reliable look-out and could see the ice at a sufficient distance to enable you to steer clear of it that would be sufficient.

*The Attorney-General:* Assuming the "ifs" which your Lordship has put, yes.

*The Commissioner:* Yes, that is what I mean. Those are the "ifs" he assumes.

*The Attorney-General:* Quite so. Assuming that you can see far enough to get out of the way at whatever speed you are going you can go at whatever speed you like. That is what it comes to.

*The Witness:* Assuming you can see far enough to clear the ice.

18449. I want to get at what your view was with regard to it; whether it is right or wrong is a question, of course, which the Court will decide. But it seems to me that what you have just told us in your answer is not very different from what I put to you, or not substantially different from what I put to you, from the conversation you had with Mrs. Ryerson? - I did not have any such conversation with Mrs. Ryerson.

18450. I will not argue it further, so long as you have admitted the view that it would be best to go as fast as you could to get out of the region of ice? - I say he was justified in going fast to get out of it if the conditions were suitable and right, and the weather clear.

18451. I think we understand. Now, did you have any conversation with Captain Smith at all, between the time of his giving you the wireless message and the impact with the iceberg, about ice? - The only conversation I had with Captain Smith was in the smoking room that night. As he walked out of the smoking room he asked me if I had the Marconi message, and I said, Yes, I had, and I gave it to him.

18452. What time would that be? - I think it was 10 minutes or a quarter-past seven.

18453. (*The Commissioner.*) You had not been on the bridge? - I had never been on the bridge during the whole trip.

18454. (*The Attorney-General.*) Did he say why he wanted you to give him back the message? - He said he wished to put it up in the officers' chartroom.
18455. (*The Commissioner.*) What would be the object of putting the Marconigram up in the chart room if good navigation dictated going on at full speed? - I presume he put it up for the officers' information, my Lord.
18456. According to you, it did not matter? - Not if the weather was clear.
18457. As it was? - As it was.
18458. (*The Attorney-General.*) Then, when the Captain asked you for the message and you gave it back to him, did you have any conversation with him then? - No further conversation at all.
18459. Did you not ask him whether your vessel would come at all within that latitude and longitude indicated in the "Baltic" Marconigram? - I did not. 18460. And he said nothing to you about it? - He did not.
18461. But you understood that you would be there during that night? - Yes, I understood that we would get up to the ice that night.
18462. Now, the thing that is not clear to me is why it was that you understood that you would get to the ice that night if it was not from the Marconigram, and that you understood what the latitude and longitude there indicated meant? - The doctor told me we had turned the corner, and I knew, when we had turned the corner, we must be getting towards the ice region.
18463. (*The Commissioner.*) How did you know that? - Because we were going directly up North.
18464. No. You were turning almost directly West? - No. You come down to a point and then you go up.
18465. You did not go up North. You went straight west? - It is what is always known as turning the corner.
18466. You seem to know a good deal about this navigation of the Atlantic? - I am afraid I do not.
18467. (*The Attorney-General.*) What is the latitude and longitude of turning the corner? - I do not know.
18468. Have you no idea? - No, I have not.
18469. Have you never looked? - I may have looked, but I have no idea of the latitude and longitude.
18470. (*The Commissioner.*) I want to have it quite clear from you. Is your position this, that in clear weather, whether it be day or whether it be night, there should be no reduction or need be no reduction in the speed, although the master of the ship knows that he is in the ice region? - That is right.
18471. That is your case? - Yes. If the conditions are all perfectly satisfactory, and he can see far enough to clear the ice.
18472. (*The Attorney-General.*) When you speak of the region of ice I want to be quite clear that we mean the same thing. You said that when the doctor told you that you had turned the corner you understood you would get to the region of ice that night? - That we must be approaching the ice region.
18473. Do you mean by the ice region, the region which is indicated on the chart? - I could not tell, because I had not got the chart. After you turn the corner I should

- think it is anywhere about - I really could not tell, but of course I know where it was we struck the ice.
18474. Would you have ordinarily have expected to have come into the region of ice on that Sunday night; was that what you expected would happen? - I expected that we would be in the region of ice on the Sunday night.
18475. Before you had seen the Marconigram? - Oh, no.
18476. Then, if I follow you, it was because of the Marconigram that you expected to come into the region of ice that night? - Oh, yes.
- The Attorney-General:* Your Lordship will see why I asked him the question. He might have meant something else, but he does mean on account of the Marconigram.
- The Commissioner:* Yes.
18477. (*The Attorney-General.*) Now I want to be quite clear about this. Is it your statement to my Lord that from first to last on that Sunday you never had any conversation with Captain Smith about ice? - Absolutely.
18478. Or with any other officer? - Or with any other officer.
18479. Including the Chief Engineer? - Including the Chief Engineer. 18480. Or, as I understand you, with Dr. O'Loughlin? - No, nor with him.

**Page 442**

18481. Or with anybody, if I correctly appreciate your evidence, except for the statement that you made to Mrs. Ryerson and another lady? - That is true.
18482. When you told them the substance of the Marconigram? - That is true.
18483. (*The Commissioner.*) I want to ask a question. You have told the AttorneyGeneral that it was the Marconigram which led you to the conclusion that after you had turned the corner you would be approaching the ice region? - Yes. I knew when we had turned the corner that we would be approaching the ice region.
18484. I want to have this quite clear. I understood you to say to the Attorney-General that you came to that conclusion because of what was in the Marconigram? - Largely.
18485. Then the Marconigram was unintelligible to you, was it not, unless you understood the latitude and longitude? - It was unintelligible to me as far as latitude and longitude were concerned.
18486. But the latitude and longitude were the things which would tell you where the ice was? - Yes.
18487. And the only things in the Marconigram which would tell you where the ice was? - Yes.
18488. Then I am quite at a loss to understand why it is you say that you came to the conclusion that you would be in the ice region because of the Marconigram? - Because of the Marconigram and having turned the corner.
18489. Is it both? - Yes, the two together.
18490. Now what information in the Marconigram led you to the belief that you were approaching the ice region? - Because I presumed the man would not send the Marconi message to us unless the ice was there and that we were approaching it. He knew where we were.

18491. Then what you mean is this, that you presumed the "Baltic" had sent a message, without knowing whether it was right or wrong, apprising you of ice in your track? - Yes, or it must have been very close to the track.

18492. Near it? - Yes.

18493. Is that what you mean to say? - Yes.

*(After a short adjournment.)*

18494. (*The Attorney-General.*) You occupied a cabin on B deck? - Yes.

18495. Did you occupy a suite there? - I did.

18496. That is on the port side of the vessel? - The starboard side, I think. 18497. No, it is the port side - at least, I think so, if it is the one I mean. Do you remember the number? - I think it was 52 or 56, or something like that.

18498. Will you just look at the plan and you will see. (The witness examined the plan.) I will remind you of what you said in America. At one time you were not quite sure of the number. You thought it was 52? - I think some other gentleman said he had that room. 18499. That is right; some other gentleman said he had it? - Yes, but I still think I had 52. The passenger plan would show that. The plan of the accommodation in the office would show which room I had.

18500. It is not very important. If your Lordship will look at B deck, it is on the port side - what is called the bridge deck. You will see the staircase which is marked there, and then "First class," and then there is a boiler casing amidships, and then on the port side you will see B 52, 54, and then a bathroom, and then 56. It is either 52 or 56, I understand that you occupied? - Or the corresponding rooms on the other side.

18501. (*The Commissioner.*) You do not mean on the other side of the ship? - Yes; I am not certain which side it was - the corresponding rooms.

18502. (*The Attorney-General.*) Very well. I do not think it matters much. At the time of the impact you were in bed and asleep? - I was.

18503. You were awakened by the impact? - Yes.

18504. Did you realise what had happened? - I did not.

18505. Did you then get up? - I stayed in bed a little time, and then I got up. I really thought what had happened was we had lost a blade off the propeller.

18506. You got up, and where did you go? - I went along the passageway out of my room and I met a steward.

18507. Did you ask him what had happened? - I asked him what had happened.

18508. What did he say? - He told me he did not know.

18509. Then what did you do? - I went back to my room and I put a coat on, and I went up on to the bridge.

18510. Was Captain Smith there? - He was.

18511. Then did you ask him what had happened? - I did.

18512. And what did he tell you? - He told me we had struck ice.

18513. Did you ask him anything further? - I asked him whether he thought the damage was serious, and he said he thought it was.

18514. What did you do then? - I then went downstairs again; down below. 18515. Did you meet Mr. Bell, the Chief Engineer? - I met the Chief Engineer at the top of the staircase.
18516. Did you have some conversation with him - will you tell us what it was? - I asked him whether he thought the ship was seriously damaged, and he said he thought she was, but, as far as I remember, he thought the pumps would control the water. 18517. This is what you said in America. Is this right? You were asked by Senator Smith: "Did the Chief Engineer of the 'Titanic' state to you the extent of the damage? - (A.) He said he thought the damage was serious, but that he hoped the pumps would be able to control the water"? - I do not know whether he said "he hoped" or "he thought"; it is to the best of my recollection. I cannot remember every word he said.
18518. I think in an earlier passage there is a statement made somewhat to that effect, that he thought the pumps would be able to control the water, but I am reading now from your own words given in answer: "He hoped the pumps would be able to control the water." What did you do then? - I think I went back to my room for a short time, but I am not absolutely certain.
18519. Did you hear any order given by Captain Smith? - I went up after that on to the bridge, and I heard Captain Smith give an order; I am not quite certain whether it was to lower the boats or to get the boats out; it was in connection with the boats.
18520. When you heard that order given on the bridge, what did you do next? - I went along the deck, and I think I spoke to one of the officers.
18521. You do not remember which officer it was? - No. I do not remember which officer it was.
18522. Did you help to get the boats out? - I rendered all the assistance I could.
18523. And to put the women and children in? - To put the women and children in.
18524. That was on the boat deck? - That was on the boat deck.
18525. And did you stay there until you left the ship? - Yes, practically. I do not think I ever left that deck again.
18526. Can you tell us at all how long it was after you felt the impact that you heard the order given by Captain Smith to get the boats out, or to lower the boats? - No, I really could not tell; it is very difficult indeed; it might have been 20 minutes, but it is very difficult to judge time.
18527. Did you see some of the boats lowered? - I did.
18528. On which side of the deck were you? - On the starboard side. 18529. When you were assisting with the boats? - Yes.

### **Page 443**

18530. Was there any confusion? - I saw no confusion at all.
18531. Did you see any attempts by men to force their way into the boats? - I did not.
18532. Or to get into the boats? - I did not.
18533. Were there a number of women and children on the deck? - There were. 18534. Did all those who were on the deck get away in boats? - All the women that I saw on deck got away in boats.

18535. Did you realise that they were not all the women and children who were on board the ship? - I did not.

18536. Did you know at all what was happening on the port side? - I did not.

18537. Did you hear any reports of the ship making water? - I did not.

18538. You were not told about that? - I was not.

18539. Did you notice any list? - When I left the ship she had a list to starboard.

18540. To starboard? - To port, I beg your pardon.

18541. Did you notice whether she had any list to starboard? - No, I did not. 18542. With regard to the four boats that you saw lowered, did you see whether they were full? - No, I could not tell that; I saw 3, 5, 7, and 9 lowered.

18543. How long did you remain on the "Titanic" after the impact? - I should think, as I said in Washington, an hour and a half, or perhaps longer than that.

18544. And meanwhile did you notice that the vessel was going down by the head? - I did.

18545. That, of course, increased as time went on? - It did.

18546. Did you think it was in a very serious condition? - As time got on I did.

18547. And that the ship was sinking? - I did.

18548. Did you tell anybody that? - I did not.

18549. So far as you know, were any of the passengers told that the vessel was sinking? - Not so far as I know.

18550. Do you remember the collapsible boat on the starboard side being lowered? - I do.

18551. You were present then? - I was.

18552. And were you assisting in helping the women and children in? - I was.

18553. Were there any other passengers there, I mean passengers other than women and children? - No, not that I saw.

18554. Was there any other boat on the starboard side; was there any boat left when the collapsible was being lowered? - I believe there was another collapsible on the top of the officers' house.

18555. But, except the collapsibles, had every boat been lowered? - Every wooden boat was away.

18556. All the eight on that side? - Yes.

18557. Did you see how many passengers were put into this collapsible? - No, I did not see at the time.

18558. Did she appear to be full? - She was very fairly full.

18559. Would you tell us what happened after you got the women and children in? - After all the women and children were in and after all the people that were on deck had got in, I got into the boat as she was being lowered away.

18560. There was no order to you to get in? - No, none.

18561. Did any other passenger get in? - One.

18562. That is a Mr. Carter? - Mr. Carter.

18563. Am I right, then, in this, that there were women and children and some members of the crew to man the boat and two passengers, yourself and Mr. Carter? - Yes, and four Chinamen were in the boat.

18564. Four Chinamen who, we have heard, were discovered after the boat was lowered?  
- Yes.

18565. That, your Lordship will remember, is Rowe's evidence. Did you see Mr. Andrews at all between the time of the impact and your leaving the vessel? - I did not.

18566. Before you got into the boat was any attempt made to call up other passengers to come up on to the boat deck? - That I do not know; I was never off the boat deck.

18567. You do not know? - I do not.

18568. Am I right then, Mr. Ismay, that you did not hear any such order given and you did not enquire whether any such order had been given? - Of passengers coming up from down below?

18569. Yes? - No, I did not.

18570. And you did not inquire whether any such order had been given? - I did not.

18571. Did you think then when you left the vessel that she was rapidly going down? - I did.

18572. Before you left the vessel did you see the rockets being sent up? - I did.

18573. That went on for some time? - For some time.

18574. When you got into the boat and she was lowered, how were you sitting? - I was sitting with my back to the afterend of the boat.

18575. Facing the bow? - Facing the bow.

18576. And did you assist with the oars? - I did.

18577. Did you see any light? - We saw a light a long way from us, which, I think, was a little bit on our starboard side.

18578. That is a little bit on the starboard side of the "Titanic" or your boat? - Of both.

18579. You were heading the same way? - Yes.

18580. Did you pull towards it? - We did.

18581. But without success? - We thought we gained on her, and then she seemed to draw away from us again.

18582. Then the light disappeared? - In daylight, yes.

18583. I say the light of the vessel disappeared? - Yes, when daylight came.

18584. Not till daylight came? - If you will excuse my saying so, I do not think it was a steamer at all; I think it was a sailing ship we saw.

18585. (*The Commissioner.*) Am I to understand that you do not think it was the "Californian"? - I am sure it was not.

18586. I am rather sorry to hear that? - This was on the starboard side of the ship. I understand the "Californian" was seen on the port side of the ship - or the ship that was supposed to be the "Californian." This light I saw was on the starboard side.

18587. Never mind about what side it was at all; have you come to the conclusion that the vessel whose lights were seen for so long a time was not the "Californian"? -

No, Sir. 18588. I thought you said you had come to that conclusion? - No, I said that the light that we pulled for I do not think was the "Californian's" light.

18589. Then was there more than one light visible? - The only light I saw was the one we rowed for.

18590. Was there any other light visible? - I saw no other light. This was one plain, white light.
18591. (*The Attorney-General.*) There was very little wind that night? - Very little.
18592. Practically a dead calm, we have been told? - Yes, up to a certain hour in the morning, when the wind did get up.
18593. A sailing vessel would not have been making any way at all, or practically none? - Well, very little.
18594. The "Californian" is of course a vessel under the control of your company, the company of which you are president? - Financially, yes; so far as the management of the company is concerned I have nothing to do with it.
18595. I did not suggest you had, but it is one of those in the Leyland Line, the controlling interest of which is in the American Trust? - Quite.
18596. Did you continue pulling towards it all the time? - Yes, for a very long time.
18597. Did you continue pulling towards it till daylight? - No.
18598. Do you mean you gave it up? - We gave it up because the wind got up; a little sea got up and we were making no progress at all.
18599. Did you see the lights of the "Carpathia" before daylight? - No. 18600. You only saw her when day broke? - Yes.
18601. Can you tell me how long it would take to stop the way of the "Titanic"? - No, I could not tell you that, but I think we have the information with regard to the "Olympic."

**Page 444**

18602. What is it? - I could not tell you.
18603. Then we will get it from somebody else. Have you considered the use of binoculars at all for your look-out men? - Yes, I have.
18604. You did use them, and supplied them, on the "Oceanic," I think? - I believe we did; I cannot speak from any absolute knowledge. 18605. We have heard that they were supplied? - Yes.
18606. And that they were supplied also on the "Titanic"? - I believe they had them on the run round from Belfast to Southampton; but I am simply repeating what I have seen in the papers, in the evidence.
18607. Had your company come to the conclusion that binoculars were of assistance to the look-out men? - I believe up to the year 1895 we used to supply look-out glasses to the look-out men, and since that date I think it has been left to the discretion of the commander whether he gives them look-out glasses or not.
18608. But if he elects to do it then you supply them? - We certainly would if they are asked for.
18609. Have you considered the use of searchlights? - I have not.
18610. That has never been considered by you? - It has never been considered by us at all.
18611. Do you give any special instructions to your captains with respect to what they should do when approaching ice? - No, we give them a general instruction that

- the safety of the lives of the passengers and the ship is to be their first consideration. 18612. Yes, those are your general instructions? - General instructions which are contained in our book of Regulations.
18613. But there are no special instructions, if I understand you correctly, with reference to the approach of ice? - No, not that I know of, not that I can think of.
18614. Have you also considered in your company the question of the track that the vessels should follow? - Yes, we follow the track which has been agreed to by all the various steamship companies, which, I think, was agreed to in 1895 - I really do not remember the year.
18615. Those are the tracks indicated on the chart? - Yes.
18616. And you always follow those? - We do.
18617. Do you get any special reports from your captains if they meet with ice on those tracks? - Yes, they would report it.
18618. There is a letter which it is simpler I should read upon this. There is a letter from your firm, Ismay, Imrie and Co., of April 26th of this year, to the Assistant Secretary of the Marine Department of the Board of Trade: "Sir, - We beg to acknowledge receipt of your communication of the 25th instant advising us of the question to be asked by Mr. Rowlands in the House of Commons on the 29th idem regarding Track Rules in the North Atlantic, and have to say that definite routes, according to the season of the year, have been agreed upon by the principal companies concerned, both British and otherwise, and that in abnormal times a variation of these routes is arranged by mutual assent. The details are circulated by Lloyd's for general information, and we think you are aware that the idea is not only to avoid ice as far as practicable, but also to obviate risk of disaster by keeping outward and homeward steamers on separate tracks. At the end of each voyage Commanders furnish us with a Track Chart, which is checked by our Marine Superintendent, and any deviation from the rule has to be explained, but when such deviation has been in the interests of safety, their action is always approved, and the only cases we can bring to mind where they have been censured is when other reasons, such as shortening the distance have obtained." I suppose that correctly states your view? - Quite true.
18619. I notice in that letter you say "in abnormal times a variation of these routes is arranged by mutual assent"? - I think on two occasions, when ice has been reported on the Southern track we have adopted a more Southern route, gone further South. I think it has been done on two occasions.
18620. So that I mean when ice is reported apparently what you do is to go further South, to get away from it? - Yes, if a great deal of ice is reported on the track then we should go further South. That would be done by mutual consent of all the steamship companies interested in the tracks.
18621. That would mean this that when you have a report of ice upon the tracks which you usually follow you give directions then to your captains to go further south? - No; I mean if there was a small quantity of ice reported on the track we certainly would not do it; if there was an abnormal quantity of ice reported on the track then we probably would, in conjunction with the other steamship companies, agree to follow a more Southern route.

18622. Do you mean that is only done if the other companies assent? - If any one steamship company suggested going a more Southern route it would be very difficult indeed for any of the other steamship companies to decline to fall in with that suggestion. But that would only be done in the event of an abnormal quantity of ice being reported. 18623. The more Southern route being taken then to avoid the ice that is reported? - That is right.

18624. (*The Attorney-General.*) Your Lordship will remember there was one question (it is a small point) which we said we would put to Mr. Ismay when he came, about the Marconigram. It is at page 384. I said I would put it to him. I think it is pretty clear what is meant. If your Lordship will look at page 384, Question 17165, there was a Marconigram produced which contained these words: "Mr. Ismay's orders Olympic not to be seen by 'Carpathia'?" - Captain Rostron came into my room on board the "Carpathia" and told me he had received a Marconigram from Captain Haddock that the "Olympic" was coming to us as quickly as possible. He suggested that it was very undesirable that our passengers on board the "Carpathia," who were just settling down, should see the "Olympic," as it would only probably harrow their feelings; the "Olympic" coming to us could do no good whatever, and I therefore entirely agreed with his suggestion that it was undesirable the ship should come to us.

*The Attorney-General:* I believe the whole of the Marconigram is at Question 17158. I attribute no importance to it. The explanation seemed fairly obvious, but we said we would ask Mr. Ismay so that he could explain.

18625. (*The Commissioner.*) Are any sailing orders given to your captains before they leave England? - No special orders.

18626. No sailing orders are given to them before they sail on a voyage? - No. We always receive a letter from the Commander of the ship from his last port, to say that everything is satisfactory on board the ship.

18627. (*The Attorney-General.*) There are letters which are sent, as I understand, by the firm to their captains giving them general directions. I have not referred to them? - That is when they are put in command.

18628. I mean, there is nothing in any of these letters, so far as I have seen, which have been supplied by you, relating specifically to ice? - No, certainly not; those are general instructions.

18629. They are general instructions that they must regard the safety of passengers? - It is a general letter given to all our commanders when they are first appointed to the command of a ship.

18630. As far as I know, those are the only instructions which are given, at any rate in writing? - Those are all.

*The Attorney-General:* I did not trouble your Lordship with them, because I did not think they assisted as they do not relate to ice.

18631. Is it the case that since the disaster to the "Titanic" a more Southern route, both Westward and Eastward, has been agreed to by the companies? - Yes, it is.

18632. And at the present time are your ships and other liners in the Atlantic taking a more Southern route than the one which was taken at the time the accident happened to the "Titanic"? - They are.

18633. I think the difference in mileage which this alteration makes is about 150 miles? - I could not tell you that.

*The Commissioner:* What do you mean by that; does it lengthen the voyage by 150 miles?

*Mr. Scanlan:* Yes, my Lord.

*The Commissioner:* How much further South is it?

*Mr. Scanlan:* I was going to ask that question, my Lord.

*The Witness:* I could not tell you that.

*The Commissioner:* I am told they would get to a point about 180 miles South; that is to say, the turning point is about 180 miles further South than the turning point in the old route.

18634. (*Mr. Scanlan.*) Yes. (*To the Witness.*) I suppose working on this track, you would be out of the region of the disaster to the "Titanic"? - Yes; but I think I am correct in saying that ice has been reported on this track.

18635. Since? - I believe so.

18636. But of your own knowledge you do not know? - No.

18637. (*The Commissioner.*) How much further South would you have to go to sight the Azores? - I am afraid I could not answer that, my Lord.

18638. (*Mr. Scanlan.*) Did your Company or did you yourself move in having this route altered? - I do not know what was done; I was in America at the time the alteration was made.

18639. (*The Commissioner.*) But have not you asked? - No, I have not.

*The Commissioner:* Is there anyone who can tell us, Sir Robert?

*The Witness:* Yes, Mr. Sanderson will be able to tell you.

*Sir Robert Finlay:* Mr. Sanderson will tell us.

*The Commissioner:* What does *he* say? Who was it suggested the alteration? *Mr.*

*Sanderson:* The matter was under discussion amongst the British lines, and about that time a telegram came from the Germans and asked if we would join with them in adopting a more Southern track, and we then got together and agreed on a Southern track, which has subsequently been altered again.

*The Commissioner:* That is while Mr. Ismay was in America?

*The Witness:* I was in America at the time.

*Mr. Scanlan:* I have the route map showing the alteration.

*The Commissioner:* I have it; I have the altered route.

18640. (*Mr. Scanlan.*) During the voyage had you any conversation with the Captain as to speed? - I had no conversation with the Captain with regard to speed or any point of navigation whatever.

18641. Or as to the time of landing? - Or as to the time of landing.

18642. And you gave him no instructions? - Absolutely none.

18643. On either of those points? - No.
18644. When you had the conversation with reference to speeding up, who was present? - Mr. Bell only and my secretary.
18645. Mr. Bell, your secretary, and yourself? - Yes.
18646. What is the name of your secretary? - Mr. Harrison.
18647. Is he a survivor? - He is not.
18648. I think it was decided then that some day in the course of the voyage you would run the ship up to her full speed? - It was.
18649. And you expected then to take 28 knots out of her? - I beg your pardon!
18650. You expected then that she would do 78 revolutions? - Yes.
18651. Who suggested that it was possible for you to arrive in New York on Tuesday? - Nobody.
18652. I thought you said in answer to the Attorney-General, that Mr. Bell said that you could arrive on Tuesday night? - That we could not arrive - we could *not* arrive in New York on Tuesday.
18653. Did you fix with him the time it was suitable to arrive? - I told him I thought we should arrive at the Ambrose lightship about 5 o'clock on Wednesday morning.
18654. Had you made any calculations to enable you to come to this conclusion? - I had not.
18655. Now, Mr. Ismay, I want to ask you this question: What right had you, as an ordinary passenger, to decide the speed the ship was to go at, without consultation with the Captain?
- The Commissioner:* Well, I can answer that - none; you are asking him something which is quite obvious; he has no right to dictate what the speed is to be. *Mr. Scanlan:* But he may as a super captain.
- The Commissioner:* What sort of a person is a "super captain"?
- Mr. Scanlan:* I will tell you as I conceive it, my Lord. It is a man like Mr. Ismay who can say to the chief engineer of a ship what speed the ship is to be run at.
- The Commissioner:* I do not know that he did. You know the Captain is the man who must say all those things.
- Mr. Scanlan:* I daresay, my Lord, but I think it is important that this conversation and this decision was not arrived at with regard to the speed of the ship in the presence of the Captain, but was arrived at at a meeting between this gentleman and the Chief Engineer.
- The Commissioner:* I suppose the Captain would or ought to know hour by hour what his ship is steaming?
- Mr. Scanlan:* I should think, my Lord.
- The Commissioner:* Never mind, we will not argue about it. The question you put to him is answered by me. You take my answer that he had no right at all to do anything of the kind.
- Mr. Scanlan:* I will take it that that would be his answer, my Lord.
- The Commissioner:* I do not know whether it would.
18656. (*Mr. Scanlan - To the Witness.*) Were the designs for the "Titanic," the plans and designs, submitted to you? - They were.
18657. The builders' plans? - They were.

18658. Those plans included the plans for the davits and lifeboats? - Yes, they would be on the plan.

18659. Did you examine those yourself? - I could not say whether I did or not. 18660. I want to draw your attention to a statement which appeared in the "Daily Mail" of April 18th. Let me put this to you: Is it correct to state that in the original plans and designs there was provision made for having four lifeboats on each pair of davits for the "Titanic," which would have meant a total of over 40 boats? - I have no recollection of it whatever.

*The Commissioner:* What is that? Is this the "Daily Mail's" statement? *Mr.*

*Scanlan:* It is, my Lord.

*The Commissioner:* Do tell me again what it is, because I do not understand it. *Mr.*

*Scanlan:* This is a statement of an alleged interview - I can see your Lordship does not believe everything the "Daily Mail" says - *The Commissioner:* There is a great deal that I believe.

*Mr. Scanlan:* We all believe a great deal in it, my Lord - of an alleged interview between a representative of this paper and the designer of the "Titanic," the Right Honourable A. M. Carlisle, who was the late general manager of Messrs. Harland and Wolff, who built the "Titanic" and partly designed her. If your Lordship allows me to submit this point to the witness, I think it is of very great consequence. Amongst other things

#### **Page 446**

in this newspaper it was stated: "In working out the designs of the 'Olympic' and the 'Titanic' I put my ideas before the davit constructors and got them to design me davits which would allow me to place, if necessary, four lifeboats on each pair of davits, which would have meant a total of over 40 boats." *The Commissioner:* A total of what?

*Mr. Scanlan:* Forty lifeboats.

*The Commissioner:* I do not know what is the meaning of it. I thought you said four lifeboats.

*Mr. Scanlan:* Yes.

*The Commissioner:* How are four lifeboats equal to 40?

18661. (*Mr. Scanlan.*) I mean, to place four lifeboats on each pair of davits, which would have meant a total of over 40 boats. (*To the Witness.*) Did you personally examine the designs for the lifeboats? - I did not.

18662. Who of your Company did examine the designs? - The design would be submitted to us by the shipbuilders.

18663. Will you tell me who, amongst your officials, would be responsible for accepting or rejecting a design of this kind? - I never saw any such design and I do not know that anybody connected with the White Star Line saw such a design.

18664. If there was a question of accepting or rejecting a design which provided for greater lifeboat accommodation than you had on the "Titanic," I want to ask you whether it is you yourself or some subordinate of yours, or some associate of yours - ? - It would be done jointly between the shipbuilders and the managers of the White Star Line.

18665. Evidently you were not the manager who was responsible for examining this

design? - I saw the design I have no doubt; I saw the design with the rest of the ship.

18666. I suggest to you that a design was submitted which would have provided sufficient lifeboats to take off everybody on board, and was rejected by the White Star Line? - I tell you I have never seen any such design.

18667. (*The Commissioner.*) Have you ever heard of it before? - No, I have not. 18668. (*Mr. Scanlan.*) Of course, I take it this is what you say, that you have no recollection of seeing the design at all? - No; I have no recollection of seeing any design which showed the "Titanic" fitted up for 40 boats.

18669. Or the fitting up of boats at all? - Oh, yes.

18670. You did see it? - Oh, yes.

*Mr. Scanlan:* Very well.

18671. (*The Commissioner.*) But I want to know. (*To the Witness.*) Have you ever until today heard that there was a design for the "Titanic" by which she was to be provided with 40 lifeboats? - No, my Lord.

18672. (*Mr. Scanlan.*) I take it your statement is, you personally have not seen it. Can you give any explanation of this circumstance that, while the boat capacity, according to your calculation and that of the Board of Trade, was to give accommodation to 1,178 passengers and crew, there were only 703 in all saved? - Can I give any explanation? 18673. Yes; what do you attribute it to? - I presume that the people were not put into the boats.

18674. Whose fault was that; whom do you blame for that? - I cannot blame anybody for it.

18675. Why were they not put into the boats? - That I cannot answer.

18676. I think the information you had from those you consulted on the ship before leaving her was that the ship was not likely to sink? - I had no conversation with anybody in regard to the ship sinking.

18677. In regard to whether or not the ship was likely to sink? - No.

18678. You had no such conversation? - No.

18679. When you were examined in America were you asked with regard to this. It is on page 924. Senator Smith asked you: "Did the Chief Engineer of the 'Titanic' state to you the extent of the damage? - (A.) He said he thought the damage was serious, but that he hoped the pumps would be able to control the water. (Q.) How long was it after the impact? - (A.) I should think it would be perhaps half an hour afterwards - 35 or 40 minutes." I want to know, were you told at any time before you left the ship, by the Chief Engineer or the Captain, or by any of the officers of the ship that the ship was doomed? - No, I was not.

18680. We have heard a good deal in the course of this Enquiry of people being unwilling to leave the ship in the lifeboats. Do not you think if those in charge of the ship knew that she was doomed, and was about sinking, that they should have given this information to all the passengers?

*The Commissioner:* That is not a question to ask him. That is a question for me.

18681. (*Mr. Scanlan.*) So far as you know, I take it from your evidence that there was no general intimation conveyed to the passengers that the "Titanic" was sinking, and could not be kept afloat? - Not that I know of.

18682. You have ordered additional lifeboat accommodation for all your ships, I understand? - Yes.
18683. That is one of the first things you did on reaching America, according to your statement over there? - We have.
18684. And do you now in all your ships provide sufficient lifeboat accommodation to accommodate every passenger and every member of the crew? - Yes.
18685. Have you made any alteration in the manning of your ships in order to provide a greater number of men to lower and navigate your lifeboats? - I have no knowledge in regard to it.
18686. Do you know whether or not this has been done? - I do not.
18687. Does it not strike you, being a large shipowner and a man of great experience in shipping, that, seeing it took your crew on the "Titanic" over two hours to lower nineteen boats, including the collapsibles, and to give accommodation to 703 people, in order to have adequate provision for taking away say 2,500 people, you would require drastic alteration in the crew? - Naturally.
18688. (*The Commissioner.*) Will you paraphrase "naturally," and tell me exactly what you mean by it? - If you wanted to get the same number of boats out in the same length of time you would naturally want a greater number of crew to do it.
18689. If you wanted what? - If you wanted to get the extra boats out in the two hours you would want more men to do it.
18690. Are you talking about a possible 40 boats? - Yes, or whatever extra number of boats you put on.
18691. Then your "naturally" comes to no more than this, that it takes more men to work more boats? - Yes, if you want to put them out in the same length of time.
18692. (*Mr. Scanlan.*) Do you mean extra deckhands? - I do not think it is absolutely necessary to have a deckhand to lower a boat.
18693. To lower or man the boats? - Yes.
18694. You think that would require a greater number of men experienced in the manning and lowering of boats? - For the number of boats we had on board the "Titanic"?
18695. No. You state now that you have altered your system. Formerly you provided accommodation for a limited number. In the case of the "Titanic" it was for 1,100. The "Olympic" is a boat of the same size, and you had, I daresay, a similar provision on her, and now you have provision for 3,000, say - 2,500 to 3,000 - on the "Olympic." Do you agree with me in this, that it is necessary to have a larger number of trained men to look after those boats?

*The Commissioner:* This question, again, is put in the interests of your union.

*Mr. Scanlan:* If I may respectfully say so, it is put in the interests of this Enquiry, and to assist your Lordship.

*The Commissioner:* You know you are asking a question that does not assist me; it does not assist me at all. It is quite obvious that if you have more boats, you must have more skilled men to attend to them. You are asking something that is quite obvious.

18696. (*Mr. Scanlan.*) I will ask another question, my Lord, which, I think, will show the justification of my insisting on the point. (*To the Witness.*) You have doubled the boat accommodation on the "Olympic," is not that so? - I do not know whether it has been doubled or not; I know it has been considerably increased.

*The Commissioner:* Are you going to ask whether they have doubled the men on that?

*Mr. Scanlan:* I am not going to put it just that way, my Lord.

*The Commissioner:* That is what it is leading to, and it has nothing to do with this Enquiry.

18697. (*Mr. Scanlan.*) If I may respectfully say so, my Lord, it is not just that that I am going to ask. (*To the Witness.*) Can you tell my Lord what alteration, if any, has been made in the crew of the "Olympic" and your other ships to correspond with the increase you have made in boat accommodation?

*The Commissioner:* I will not have that question asked. I am not going to inquire into any such matter.

18698. (*Mr. Scanlan.*) Very well, my Lord. (*To the Witness.*) We have had it from a captain of a ship of the Canadian Pacific Railway fleet, the "Mount Temple," that his company issue instructions in regard to ice-fields that their captains are not to enter an ice-field under any conditions. I am reading from page 194 of the examination of James Henry Moore?

*The Commissioner:* "Those instructions we usually get, that we are not to enter field ice, no matter how light it may appear." That is it?

18699. (*Mr. Scanlan.*) Yes, my Lord. (*To the Witness.*) I take it you do not issue any similar instructions to your captains? - We do not.

18700. He is also asked at Question 9264, "When you got warning there was ice ahead, what precautions did you adopt?" And then, at Question 9267: "Do you make any change in the look-out?" and the answer is: "If we expect to see ice we always double the lookout." You do not give any similar instructions to your captains about that. May I ask how many men they have on the look-out?

*Sir Robert Finlay:* Yes; I think the next two questions should be read on that.

*Mr. Scanlan:* "On this occasion, in daylight, when you were warned there was ice ahead, did you double the look-out? - (A.) No, because I made sure I could pass that ice. (Q.) At night, even going at 11 knots, do you double the look-out? - (A.) No, unless we expect to see ice."

*Sir Robert Finlay:* No; but it is the next question. "If you expect to see ice, do you double the look-out? - (A.) Oh, yes. (Q.) When you double the look-out, just explain to my Lord what you do. (A.) Put an extra hand on the forecandle head, besides the look-out in the crow's-nest. (Q.) In ordinary circumstances, have you two men in the crow's-nest? - (A.) Only one. (Q.) And one on the forecandle head. - (A.) Yes, or on the forward bridge. We have a look-out on the forward bridge. (*The Commissioner.*) Not in ordinary circumstances. (*Mr. Scanlan.*) No. (*To the Witness.*) In ordinary circumstances have you any man stationed at the forecandle head? - (A.) No. (Q.) Supposing there was ice ahead of you, would you double the look-out? - Certainly! There was only one man on the lookout."

18701. (*Mr. Scanlan - To the Witness.*) You do not issue any similar instructions to your captains? - We carry two look-outs always.

18702. (*The Commissioner.*) In the crow's-nest? - Yes.

18703. (*Mr. Scanlan.*) But you do not issue instructions; you carry two look-outs for fair weather and foul weather? - Yes.

18704. Who are there constantly day and night? - Yes.

18705. What I am trying to get from you is this: Do you take any extra precautions in circumstances of danger such as the proximity of ice? - No.

18706. You do not? - No.

18707. I put it to you that it would be a reasonable precaution and justified by your recent experience, to give such an order? - That is a matter which is entirely in the hands of the Commander of the ship; he can put extra look-outs if he wishes to, at any time.

18708. But do not you think it is a matter on which you might give instructions to your Captains? - I think it is unnecessary to give those instructions.

18709. You think the Captains should do it themselves? - If they think it necessary.

18710. And double the look-out? - If he thinks it necessary.

18711. Did you know that on the night of the accident the weather conditions made it difficult to keep the look-out and to see ice? Did you know that? - I did not.

18712. And that the state of the weather was giving considerable anxiety to the Captain, or giving some anxiety to the Captain and to Mr. Lightoller? - I did not.

*The Commissioner:* Does Mr. Lightoller say the weather was giving him any anxiety?

*Mr. Scanlan:* He describes the weather conditions as being quite abnormal, my Lord.

*The Attorney-General:* Yes, because it was so good.

*The Commissioner:* My recollection is that he said you could see perfectly well.

*Mr. Scanlan:* He states this, my Lord, if your Lordship will look at page 303, at Question 14197: "Can you suggest at all how it can have come about that this iceberg should not have been seen at a greater distance? - (A.) It is very difficult indeed to come to any conclusion. Of course, we know now the extraordinary combination of circumstances that existed at that time which you would not meet again once in 100 years; that they should all have existed just on that particular night shows, of course, that everything was against us." Then your Lordship asks: "When you make a general statement of that kind, I want you to particularise. What were the circumstances? - (A.) I was going to give them, my Lord. In the first place there was no moon. (Q.) That is frequently the case? - (A.) Very - I daresay it had been the last quarter or the first quarter. Then there was no wind, not the slightest breath of air. And most particular of all, in my estimation, is the fact, a most extraordinary circumstance, that there was not any swell. Had there been the slightest degree of swell I have no doubt that berg would have been seen in plenty of time to clear it." Then, again, your Lordship continues: "Wait a minute. No moon, no wind, no swell? - (A.) The moon we knew of, the wind we knew of, but the absence of swell we did not know of. You naturally conclude that you do not meet with a sea like it was, like a tabletop or a floor, a most extraordinary circumstance, and I guarantee that 99 men out of 100 could never call to mind actual proof of there having been such an absolutely smooth sea. (Q.) But the swell got up later on? - (A.) Yes, almost immediately; after I was in the water I had not been on the raft, the upturned boat, more than half an hour or so before a slight swell was distinctly noticeable." At other points of his evidence also, my Lord, this

point is brought out. Of course, he does state, in spite of that, that it was easy to see; but what I suggest is that this statement from Mr. Lightoller, taken in conjunction with the evidence of the three men who have spoken to a haze, shows that it was very difficult to see that night.

*Sir Robert Finlay:* I must point out that Mr. Lightoller is there speaking by the light of what he knew.

*The Commissioner:* I know. As I understand Mr. Lightoller, if you had put fifty men on the look-out in those peculiar abnormal conditions that he talks about, this berg would not have been seen.

*The Attorney-General:* That is so, my Lord.

*The Commissioner:* That is right, is it not?

*Mr. Scanlan:* I do not think it is, my Lord.

*The Commissioner:* Well, two could not see it - three could not see it, because there was a man on the bridge - and according to him they could not see it because it could not be seen; therefore, it seems to me to follow that if you put 50 men on the look-out they would not have seen it.

#### **Page 448**

*Mr. Scanlan:* I wish to recall this to your Lordship's recollection. One man saw it - that is the man in the crow's-nest, Fleet.

*The Commissioner:* He saw it when it was too late.

*Mr. Scanlan:* He stated to your Lordship that if he had had glasses he could have seen it in sufficient time to have made the difference.

*The Commissioner:* I know. At present my opinion about glasses, and I may tell you at once (I may have to change it) is that they are intended to examine things which the eyesight has already picked up.

*Mr. Scanlan:* Yes, my Lord.

*The Commissioner:* That is my notion about binoculars.

*Mr. Scanlan:* That is exactly the position I am instructed to take up, but in the evidence of Fleet, what he said in America and what he said here practically - he was not the most communicative witness we had.

*The Commissioner:* Who was this?

*Mr. Scanlan:* Fleet, the man who looked at us all - the suspicious man.

*The Commissioner:* Yes, I remember.

*Mr. Scanlan:* He said in America that when this object was first sighted by him it was about the size of two tables. What he said to me on that point was that it appeared a very small object.

*Sir Robert Finlay:* But he also said that the moment he saw it he reported it as an iceberg.

*Mr. Scanlan:* I do not know.

*Sir Robert Finlay:* Yes, he did.

*Mr. Scanlan:* What I submit is that a man of this kind - *The Commissioner:* What kind?

*Mr. Scanlan:* Like Fleet, a man in Fleet's position would not report this as an iceberg until he had looked at it for some time, and if he had had glasses when the small object appeared to him he could have decided earlier that it was an iceberg, and given warning.

*The Attorney-General:* He says he did report directly he saw the object.

*The Commissioner:* These men in the crow's-nest were to ring three bells directly they saw anything ahead.

*The Attorney-General:* He says he did.

*The Commissioner:* They were not to stop to look at it through glasses or do anything of the kind. What they were to do was to ring a warning bell and report what they saw. *Mr. Scanlan:* In any case if your Lordship is not with me on that point, let me emphasise this; the people on the bridge did not see the iceberg at all. The man in the crow's-nest did. It might be that if the look-out had been doubled, and if there had been a man on the bows that he could have seen it.

*The Commissioner:* Well, you were crying in aid Lightoller, and my notion of the effect of Lightoller's evidence is that no number of men on the look-out would have made any difference.

*Mr. Scanlan:* He was not asked the question, like that, my Lord.

*The Commissioner:* No, he was not.

*The Attorney-General:* That is his evidence.

*The Commissioner:* That is what his evidence comes to. I will not say what I think of Mr. Lightoller's evidence at present.

*Mr. Scanlan:* If there was any difficulty whatever experienced that night in seeing ahead, do not you think it would have been the proper thing to have doubled the look-out. *The Witness:* I am quite certain it would have been done.

18713. Do not you think, as ice was reported in your track, and as you expected to be in the presence of ice, that the look-out should have been doubled? - I do not.

18714. Is it still your view that your captains and officers are discharging their duty in crossing the Atlantic, when ice is reported to them, in going ahead at full speed and taking no extra precautions? - So long as they can see the object far enough ahead to be able to avoid it.

18715. So long as they can see the object far enough ahead? - To be able to clear it.

18716. To be able to avoid it. Now, if you accept this statement from Lightoller that this was not a good night for seeing ahead, but that these circumstances he mentioned to my Lord, prevented anyone from seeing ahead, do not you think it would have been a wise precaution, at all events, to slacken speed?

*Sir Robert Finlay:* I must object to the question being put in that form. Mr. Lightoller did not say it was known at the time it was not a good night; he says they afterwards found out when they got down to the water that it was a dead calm.

*The Commissioner:* Well, I see no objection to the question.

*Sir Robert Finlay:* But it involves an assumption as to what Mr. Lightoller said. But I leave that in your Lordship's hands.

18717. (*Mr. Scanlan.*) If it was the fact on the night of the collision that it was impossible to see ahead with certainty a sufficient distance to enable you to turn the course of the ship in order to escape this iceberg and the ice which you were warned of as

being in your track, do not you think the speed of the ship should have been slackened? - If it was certain they could not have cleared the object in going at that speed, certainly the speed ought to have been reduced.

**Examined by Mr. ROCHE.**

18718. There are two or three topics I want to ask you about. You remember the "Baltic" telegram communicating the fact of the ice? - Yes.
18719. And you remember you told us Captain Smith asked you to give it back to him and that you understood it was for the purpose of being put up in the Chart Room? - That is right.
18720. I think a doubt arose in my Lord's mind, and in some of our minds why that was to be done, if nothing was to be done, if the speed was not to be slackened. I do not know whether this has occurred to you as an explanation that it was to inform the officers what they were to keep a look-out for - namely, ice? - Certainly.
18721. That is a possible explanation. We know, I think, from Mr. Lightoller, that those were the instructions he left when he went off watch - to keep a sharp look-out for ice. That leads me to another matter. I understood you to say that you thought at the time there was no occasion to slacken speed if ice could be seen at a sufficient distance, but I want you to distinguish, if you will, what you thought then and what might be thought now as the result of experience? - So far as the speed of the ship is concerned, I would not think of interfering with the Captain. It is a matter for him.
18722. Of course, you would not interfere on the spot; but, of course, it is open for your company to give general instructions to your Commanders as to what they are to do under particular circumstances, including the vicinity of ice? - Yes.
18723. That is the topic I want you to bring your mind to. Of course, it all depends, if you are going full speed, on the look-out? - Yes.
18724. That is obvious; it all rests on the look-out. A great distinction arises between daylight and night with regard to look-out, does it not? - I should think it would be easier to see things in the daylight than at night.
18725. Naturally, and particularly with regard to unlit objects, such as ice, your range of visibility at night must be comparatively small? - I should say that is so.
18726. And it is obvious from Mr. Lightoller's evidence that if the sea be smooth one of the main elements of safety, the power of seeing waves or surge breaking upon ice, is lacking. Now I want you to tell me whether your Company has considered the advisability of giving instructions now, in the light of events which have happened, in regard to the navigation of your ships when ice is in the vicinity.

**Page 449**

*The Commissioner:* What has that to do with it?

18727. (*Mr. Roche.*) I have made the suggestion. It is obvious it is more for your Lordship than for the witness, but I wish to put the point. Have you considered that, or perhaps you have not had time? - I have not.
18728. It is a matter which, perhaps, you will take into consideration. Now, one other matter. You know, I suppose, from your knowledge of the general conduct of the business of the Company, that there are boat station lists on every ship? - Yes.
18729. And I daresay you know that the general scheme is that in a boat such as the "Titanic," which has 16 boats, two engineers are allotted to each boat? - I could not tell you how the boats' crews are picked out.
18730. We have been told so? - I could not tell you.
18731. You know, of course, that in this case of some 30 odd engineers not one was saved? - Yes.
18732. That, of course, renders it obvious that no engineers went in the boats, and that we know. Now, assuming that there is an increase of boat capacity so that all may be saved, passengers and engineers alike, it is clearly proper that the engineers should have a fair chance of getting to their boats, the boats to which they are allocated? - Yes.
18733. Have any general instructions been given at all by your Company that warning shall be given to those in the engine room enabling them to come up and get their places in the boats? - Not that I know of.
18734. That also would be a matter which it would be desirable, in the light of events which have happened, to consider? - Certainly.

**Examined by Mr. HARBINSON.**

18735. Is it a fact that there is a condition in the passenger contracts of the White Star Line that the Company shall not be liable for the careless or unskillful or negligent navigation of their servants or officers? - That I could not answer.
18736. You do not know that? - No.
18737. If there was such a condition, would you consider that a reasonable condition?  
*The Attorney-General:* Oh!
- The Commissioner:* There must be some limit to this sort of examination. You will be enquiring into bills of lading next.
18738. (*Mr. Harbinson.*) My object in putting the question is that, if there is such a condition, and probably it may be proved before the Enquiry is finished that there is, that might have a bearing upon the sense of the responsibility of the Commanders of the vessels. (*To the Witness.*) You ship, I think, a different crew for each voyage; do you sign on a different crew for each voyage that one of your ships make across the Atlantic? - I suppose it hardly ever happens that the entire crew goes back in the same ship. 18739. They are signed on, as I understand - you will correct me if I am wrong - a few days before the vessel starts? - As a rule.
18740. Do not you think it would be a better system if you could have continuous crews who understand the vessel, and, of course, who understand their boat stations, and so on? - Undoubtedly.

18741. Have you as yet given any consideration to the possibility of modifying the existing system and introducing the system I have suggested? - I think that is a matter which entirely rests with the men themselves.

18742. Do you think if that modification were made, and as far as possible continuous service crews employed? - What modification? I do not understand.

18743. That is the modification in favour of continuing the crews from voyage to voyage - longer service? - But there is nothing to prevent crews, when they are paid off, signing on again. They are paid off and signed on at the same time.

*The Commissioner:* Are you suggesting that all the crews should be compelled to remain on?

*Mr. Harbinson:* Yes, my Lord, in this way: My suggestion is that if crews were retained on boats -

*The Commissioner:* Supposing a man says he will not stay on, what are you going to do with him? He is landed at New York, and he says, "I am going to leave this ship." Do you suggest there should be some law or regulation to force him to come back to the ship? *Mr. Harbinson:* No, my Lord; my suggestion is not that, but my suggestion is that if the men were not paid off they probably would remain on; and a further reason I say is this that they would not be paid off probably if there was work for them to do. Such things as shore gangs I understand are employed, and my suggestion is instead of being paid off these men should be kept while the boat lies in the harbour as a shore gang. *The*

*Commissioner:* But supposing they do not choose to remain, what is to happen then?

*Mr. Harbinson:* As I understand, the option is not given them.

*The Commissioner:* That may be, but I do not know what it is you want. If the men will not remain, is there to be some law to make them remain?

*Mr. Harbinson:* No, I could not go so far, and under the existing law I understand it cannot be done.

*The Commissioner:* No, I assure you it cannot be done. But are you suggesting such a law should be passed?

*Mr. Harbinson:* No, but an inducement should be held out by the Company for them to remain, and so far as possible to continue in the service on the same boat. That would make for greater safety in the case of emergency, because the crews would understand the ship and also their stations in the boats, and be able to act with more dispatch. *The*

*Commissioner:* Your suggestion is that the Company should take reasonable and practicable steps to secure the same crew for a considerable time to keep the same men employed on the vessel?

*Mr. Harbinson:* As far as possible, my Lord; that is so.

*The Commissioner:* That, of course, would be a good thing.

*The Witness:* Yes, and a certain number of men are retained; a certain number are kept on board every ship during the time she is in port to do the ship's work, and they go on what is called port pay.

18744. That is something less? - No, they get more, because we do not feed them on board the ship. But I do not think it would be feasible for a steamship company to keep the whole crew in port for three weeks and keep all those men on pay, because naturally the men want to go back to sea again; they would not wait to go back in the ship for three weeks.

*Mr. Harbinson:* On the question of feasibility, I read a letter written by a very distinguished Admiral quite recently, and he said it was quite feasible that these shore gangs could be recruited from the men who were actually employed on the ships when those men would come ashore. Is that possible? - And not have any regular shore gang? 18745. And not have any regular shore gang, but recruit them from the men who travel backwards and forwards, when these men, for a time, want to remain on shore? - I am afraid it would be very difficult.

18746. Have you considered the suggestion? - No, I have not.

18747. If I gave you the date of the letter in the "Times" from this Admiral of the Fleet would you give it your consideration? - Certainly.

## **Page 450**

18748. I gather from you, in answer to the Attorney-General, that you yourself gave the instructions for the building of the "Titanic" and the "Olympic"? - Yes. 18749. I think to Harland and Wolff? - Yes.

18750. These ships constituted a departure as regards magnitude? - They did. 18751. Did your company carefully consider this new departure? - Certainly. 18752. And, of course, in considering them you considered the question of the flotability of these ships in cases of accident or emergency? - We did.

18753. And also, of course, the accommodation that they would provide for an additional number of passengers? - Yes.

18754. Did you give any special consideration to the question of providing additional lifeboat accommodation to cope with the additional number of passengers that you proposed to carry? - I do not think any special attention was given to that.

18755. Would not that have been a consideration that should have specially engaged you? - I think the position was taken up that the ship was looked upon as practically unsinkable; she was looked upon as being a lifeboat in herself.

18756. That is owing to the transverse bulkheads? - No; to the bulkheads and the power of flotation she had in case of accident.

18757. I understand that you considered that either of these steamers would float with two adjacent watertight compartments full? - Two of the largest compartments full.

18758. If that were so, and you considered those boats practically as lifeboats themselves and unsinkable, on that theory it was not necessary to carry any lifeboats at all? - Yes, because we might have to use them to pick up a crew from another ship. 18759. It was practically for that purpose you carried lifeboats? - Or landing, in the case of the ship going ashore.

18760. You did not consider having them for the purpose of saving the crew and passengers carried? - No, I do not think so.

18761. (*The Commissioner.*) Supposing there was a fire on board, might not you want lifeboats then? - Yes, if the passengers had to leave the ship on account of fire you would need lifeboats.

18762. I think your suggestion that lifeboats were only required for the purpose of saving the crews of other vessels is -? - Or, I said, of landing passengers in the case of the ship going ashore.

*The Commissioner:* I do not think that is right.

18763. (*Mr. Harbinson - To the Witness.*) Do you know if the builders; Messrs. Harland and Wolff - had you discussed the question with them? - No.

18764. Do you know whether or not, they accepted the view which you have now expressed? - No.

18765. Did you at that time consider the question when you were considering the construction of these boats, of launching lifeboats from a height, roughly speaking, of about 70 feet above the water? - No.

18766. You did not consider that question in conjunction with the builders? - No.

18767. Or the difficulties that might attend it? - No.

18768. You know now, of course, that it has come out in the course of this Enquiry that, except under the conditions which prevailed at the time of the "Titanic" accident, it would have been a very difficult operation to launch those boats? - In the case of a sea way?

18769. Yes? - It would have been difficult if we had only to lower them thirty feet.

18770. Yes, in heavy weather. Have you given any consideration to this question of launching the boats generally from a height further down? - We have not yet; we have hundreds of suggestions as to how we can lower boats.

18771. Instead of lowering them from davits seventy feet high? - Yes, we have had hundreds of suggestions how it could be done.

18772. Whether it would be feasible to launch them in a heavy sea from another part of the boat? - Yes; that we have not gone into. We have these plans.

18773. The collapsible boat that you left the ship in was launched from the davits on the starboard side that No. 1 boat was launched from. - Was it No.1?

18774. Yes, I think it was? - I think it was No. 2.

*The Attorney-General:* No. 1, on the starboard side.

18775. (*Mr. Harbinson - To the Witness.*) Did you see No. 1 boat launched? - I did not.

18776. Were you on the boat deck? - Yes, practically the whole time. I did not see No.

I go.

18777. At the time prior to your boat being launched, did you know whether or not messages had been sent round the ship to rouse all the passengers? - I did not know it.

18778. And you did not know whether all the passengers had got off at the time you left the ship? - No.

18779. You had a crew of five, I think, in the boat you left by? - I thought there were four.

18780. Do you know, as a matter of fact, that the No. 1 boat had a crew of seven? - I know nothing about No. 1 boat; I never saw it at any time.

*The Attorney-General:* There were five in the collapsible.

18781. (*Mr. Harbinson.*) Thank you, Mr. Attorney. (*To the Witness.*) And seven in No. 1? - I do not know how many.

18782. You may take it from me that it has been given in evidence that there were? - Yes, but I know nothing about it.

18783. It does not strike you as a curious coincidence that those two boats should have respectively crews of five and seven when some of the other boats had not so many? - No.

18784. You told my Lord about this telegram that Captain Smith showed to you on the afternoon of Sunday, the 14th? - Yes.

18785. As a matter of fact you had discussed this question of speed with Mr. Bell in Queenstown. Now, would I be stating what was accurate if I said you were more or less partly responsible for the speed the "Titanic" was making going across the Atlantic? - I was not responsible for the speed of the ship in any degree.

*The Commissioner:* That is not a question to put to him.

18786. (*Mr. Harbinson.*) I will put it to him in this way, if I may. (*To the Witness.*) Did you say in America on the first day of the proceedings: "It was our intention, if we had fine weather on Monday afternoon or Tuesday, to drive the ship at full speed"? You say there, "It was our intention." You mean, I presume, it was the intention of yourself and the Captain? - It was the intention to run the ship for about four hours at full speed.

18787. You say, "It was our intention." It was the intention? - Yes.

18788. I suggest to you, you were one of those who were responsible for controlling the speed and generally directing it? - No, I was not.

*The Commissioner:* Oh, no; he was not responsible, and he had no business to interfere in such matters.

*Mr. Harbinson:* Perhaps I would be more accurate if I put it in this way.

*The Commissioner:* What I think you want to suggest is that he took upon himself to ask that it should be done. Apparently he did.

18789. (*Mr. Harbinson.*) It was his influence that was responsible for it, perhaps not actively for carrying it out, but he instigated it. (*To the Witness.*) You used the word

"our" there, you notice? - It was the intention.

18790. And you say this further on page 3 in answer to a question. The question was put: "You spoke of the revolutions on the early part of the voyage? - (A.) Yes, Sir. (Q.) Those were increased as the distance was increased? - (A.) The "Titanic," being a new ship, we were gradually working her up." You see you use the same personal pronoun "we," incorporating yourself? - I could not say *I* was gradually working her up. 18791. You could have said "the Captain"? - I daresay I could.

18792. You said "we"? - Perhaps I should have said: "She was being gradually worked up."

*The Commissioner:* I have often been on these steamers, or similar steamers, and I have said to

another passenger, "We are doing so many miles a day"; but I never imagined that I was interfering in the navigation or was responsible for it.

18793. (*Mr. Harbinson.*) No, my Lord, I should think your Lordship is much too good a maritime lawyer to ever dream of doing so. (*To the Witness.*) There is one suggestion I should very much like to make to you, Mr. Ismay, and it is this: It did strike you as rather an exceptional thing the Captain showing you this Marconigram with regard to the ice, the message that he had received from the "Baltic"? - No, it was not an exceptional thing.

18794. I suggest to you that the Captain in doing so, in showing this Marconigram to you, the Managing Director, was inviting an expression of opinion from you on the question of the speed that the vessel should take?

*The Commissioner:* Really, you must not ask such a question. Ask questions about facts, and then when you come, if you ever do come (I do not know we shall ever reach it) to the time when you make a speech, then you can make these suggestions to me, but at present confine yourself to asking the witness about facts. Have you any other question?

*Mr. Harbinson:* No, my Lord, I think not.

#### **Examined by Mr. CLEMENT EDWARDS.**

18795. Were there any financial relations at all except those for building the ship, between the International Mercantile Marine and Harland and Wolff, the builders? - Absolutely none.

*The Commissioner:* I do not know whether you have exhausted that question?

*Mr. Edwards:* My Lord, I have not.

*The Commissioner:* Very well, I will wait.

18796. (*Mr. Edwards - To the Witness.*) Had the International Company, or have the International Company, any shares in Harland and Wolff? - None.

18797. Have Harland and Wolff any shares in the International? - That is a matter which I know nothing whatever about.

*The Commissioner:* That is not what you want to ask.

18798. (*Mr. Clement Edwards.*) I am only laying the foundation, my Lord, for a certain other question. (*To the Witness.*) None of your boats are classed with either of the registration societies, are they? - They are not.

18799. Had they been classed with Lloyd's or the other registration societies, there would have been an independent survey by the Surveyors of those societies? - I believe that is so.

18800. Before the "Titanic" sailed, was there any independent survey of her at all? - That I do not think I can quite answer, but I think she would have been surveyed by the Board of Trade.

18801. Except by the Board of Trade, do you know of any other survey? - No, not that I know of.

*The Commissioner:* Are any of the other big liners such as the Cunarders surveyed by any body except the Board of Trade?

*Mr. Edwards:* My instructions, my Lord, are that they are so surveyed.

*The Commissioner:* By whom?

*Mr. Edwards:* And that they are surveyed by the particular registration society by whom they are classified.

*The Commissioner:* Are the Cunarders classified?

*Mr. Edwards:* My instructions are that they are.

*The Commissioner:* Then are the steamers of the White Star Line the only steamers that are not classified?

*Mr. Edwards:* Of great lines I believe that is so, my Lord.

*The Commissioner:* Is that so, Sir Robert?

*Sir Robert Finlay:* I cannot at the moment tell your Lordship.

*The Commissioner:* (*To the Witness.*) Is it so? - I could not answer that.

*The Commissioner:* I understood - I may be wrong - that none of the steamers of the very big lines were registered at Lloyd's.

*Mr. Edwards:* My instructions are that, with the exception of the boats now controlled by this International Company, all the great lines are classified with either one or other of the three great registration societies.

*The Commissioner:* I am told it is not so, but I do not know.

*Sir Robert Finlay:* I understand that Lloyd's have no rules applicable to vessels of this size, such as the "Titanic."

*The Commissioner:* I am told that is so.

18802. (*Mr. Clement Edwards.*) I am coming to the question of Lloyd's rules in a moment. (*To the Witness.*) When you were considering the plans of the "Titanic" with your fellow directors, had you any discussion at all as to whether you should be classified? - No.

18803. Have you any knowledge as to the standard laid down by Lloyd's for the resisting strength of a bulkhead? - Have I any knowledge? 18804. Yes? - No.

18805. Have you any knowledge at all as to the standard laid down by Lloyd's or either of the other registration societies, as to the method by which watertight doors should be worked? - I have not.

18806. Have you any knowledge as to the standard of either of the registration societies of the relative height of the bulkhead in relation to the several decks? - I have not.

*The Commissioner:* Have you any information on this point, Mr. Edwards?

*Mr. Edwards:* Yes, my Lord.

*The Commissioner:* I wish you would put it to him, and suggest what the provisions in the "Titanic" were as compared with the requirements of Lloyd's. *Mr. Edwards:* If this witness has no knowledge as to the relative - *The Commissioner:* But I want *your* knowledge.

*Mr. Edwards:* At the right time, my Lord, if evidence has not been forthcoming I shall be in a position to submit -

*The Commissioner:* No, but cannot you tell me now?

*Mr. Edwards:* What counsel says, my Lord, is not evidence.

*The Commissioner:* Never mind that. I want to know: Can you tell me what the actual strength of the bulkheads in this vessel was, and what the requirements of Lloyd's are? Do you know?

*Mr. Edwards:* I shall be able through the necessary expert witnesses to do that.

*The Commissioner:* No; but can you do that?

*Mr. Edwards:* I should not attempt to do it, my Lord.

*The Commissioner:* Does that mean you cannot. I am asking if you can do it?

*Mr. Edwards:* With great respect, your Lordship - *The Commissioner:* You decline?

*Mr. Edwards:* I propose conducting the cross-examination of this witness in accordance with the rules, and not putting forth the particular evidence upon which my instructions are based.

*The Commissioner:* You call it a cross-examination, and I rather agree with you that it is. I do not think it ought to be. I think it ought to be an examination conducted for the sole purpose of informing the Court, and when you ask him whether he knows the difference between the "Titanic" and the requirements of Lloyd's I want you to assist me by telling me, if you can, what the difference is?

*Mr. Edwards:* At the right time, my Lord.

*The Commissioner:* But *this* is the time I want it. I suspect you do not know. *Mr.*

*Edwards:* I shall not attempt to cross-examine you as to the foundation for that suspicion.

*The Commissioner:* There is plenty of foundation for it.

18806a. (*Mr. Edwards - To the Witness.*) You neither considered with your Board the relative standards of the different registration societies, nor

## **Page 452**

are you in a position to say what those relative standards are? - I have already said so.

18807. (*The Commissioner.*) Will you let me ask him a question. (*To the Witness.*) Can you tell me whether you insure these vessels? - Yes, we do.

18808. Is there any other line of steamers that get their property insured at a less premium than yours? - No.

*The Commissioner:* Perhaps you do not appreciate what I am asking.

18809. (*Mr. Clement Edwards.*) Yes, my Lord, and I will follow it up with this further question. (*To the Witness.*) Is there any other line of steamers that offers to bear so large a proportion of the initial loss as your line of steamers? - I could not answer that. 18810.

Am I right in saying that on the "Titanic" the initial loss which your Company bears is something like a quarter of a million? - I do not think it is quite so large; I think it is £200,000.

*The Commissioner:* If so, it shows the confidence that they have in their boats. 18811.

(*Mr. Clement Edwards.*) Yes, my Lord; and it also shows that they appreciate the kind of element that would appeal to the insurers to enable them to get excellent terms of insurance. (*To the Witness.*) Can you tell me any other company that even approximates to your Company in the high proportion of initial loss the Company are prepared to bear before coming on the insurers? - I have no idea what the other steamship companies do in regard to their insurance.

18812. When the plans were considered by you and your co-directors, do you remember any discussion taking place as to the number of lifeboats that you should carry? - No, I do not.

18813. Do you know whether there was any discussion at all as to the extent to which safety might have been interfered with or militated against by the extra large decks on the top? - No, I certainly do not.

18814. Have you and your co-directors at any time considered the relation between the luxurious equipment of a ship of this kind and the safety of the crew and the passengers? - I do not understand your question.

18815. If there had been less of those high decks, take A deck - there would have been greater safety, probably, would there not? - I should not think so.

18816. May I put this to you? If the bulkheads in the "Titanic" had gone much higher than they did, there would have been greater safety? - I presume there would. 18817. And if the bulkheads had been taken higher they would have interfered somewhat with the luxury of the super decks? - You mean to say, if they had been taken right away to the top? How high are you going to take them?

18818. I will put it this way; we will take it in stages. As I understand, the bulkheads go to Deck E? - They are shown on the plan.

18819. (*The Commissioner.*) Are you a ship constructor? - No, I am not.

*The Commissioner:* I think you had better wait until the evidence of the expert comes. You are suggesting to him, as I understand, that the bulkheads ought to have been carried higher?

*Mr. Edwards:* Yes, my Lord.

*The Commissioner:* I can perfectly understand that.

*Mr. Edwards:* If I may say so, my Lord, with respect, as I understand the position from this witness, it is this - that the plans of the "Titanic" are submitted to him and his codirectors, and they, in the last resort, decide what is to be the character of the ship.

*The Witness:* In conjunction with the shipbuilders.

*Mr. Edwards:* And my question is as to whether the directors, when deciding upon those plans, did direct their attention at all to the question of the effect that those plans, if adopted, was likely to have upon the safety of the people who were to be carried in the ships.

*The Attorney-General:* I mean to call a witness who can answer that.

*The Commissioner:* All I am suggesting is this. This gentleman is not the constructor of the ship, nor is he a naval architect, as far as I understand; and I think it would be better if you waited until witnesses of that character are called before asking these questions.

*Mr. Edwards:* With respect, my Lord, I agree.

*The Commissioner:* You are right to put the questions, but I suggest to you that you will probably find some witnesses far better qualified to answer them.

*The Attorney-General:* I prefaced the questions I put to Mr. Ismay by saying that I was not going to ask him questions on construction, because Mr. Sanderson is going to be called, and Mr. Wilding will be called, and they are the gentlemen who will answer any questions, with regard to the suggestions of my friend. I understood that Mr. Ismay,

although he knows something about the plans, was not the gentleman who could probably deal with construction.

18820. (*Mr. Clement Edwards.*) I am obliged to the Attorney-General. (*To the Witness.*) I understand you to say that there are no printed instructions issued to your captains? - In regard to what?

18821. In regard to the sailing directions? - No; they have a book of general instructions. Every captain and officer has a book of these general instructions.

18822. (*The Commissioner.*) That is the red book, is it not? - Yes.

*The Commissioner:* Have you had a copy of it, Mr. Edwards?

*Mr. Edwards:* I have not, my Lord.

*The Commissioner:* I think you ought to have one.

18823. (*Mr. Edwards - To the Witness.*) Is *that* the book to which you refer? - Yes.

*Mr. Edwards:* I do not think it has been formally put in.

*The Commissioner:* I think it was not; it was handed up to me by Sir Robert Finlay. *Sir Robert Finlay:* I think it was on the second day of the Enquiry.

*The Commissioner:* This is Ship's Rules and Uniform Regulations.

*Mr. Edwards:* Perhaps Mr. Ismay will formally produce it to the Court.

18824. (*The Commissioner - To the Witness.*) *This* is the book that you call the rules issued to officers? - That is right.

18825. (*Mr. Clement Edwards.*) Just one other question. You stated your view was - and I presume it was the view of your Company - that the "Titanic" was unsinkable? - We thought she was.

18826. I am only going to ask you one question upon that, and that is this: What was the ground upon which you based that belief? - Because we thought she would float with two of the largest compartments full of water, and that the only way that those compartments were at all likely to be damaged was in case of collision - another ship running into her and hitting her on the bulkhead.

18827. I only want to get it for the purpose of future witnesses; you based the belief of her unsinkability upon what was said to you by building experts? - Absolutely.

18828. Now I will come to the question of the "Baltic" telegram. Did you before that particular Sunday know what was the practice with regard to Marconigrams received by the officers on the ship relating to the navigation of the ship? Did you know what it was the practice to do with those Marconigrams as soon as they had been received? - I believe the practice was to put them up in the chart room for the officers.

18829. Did you know that on Sunday, April the 14th? - Yes.

18830. Was not the Marconigram from the "Baltic" essentially a message affecting navigation? - Yes.

18831. Then will you say why, under those circumstances, with that knowledge, you put that Marconigram into your pocket? - Because it was given to me, as I believe now, just before lunchtime, and I went down and had it in my pocket.

18832. And you suggest that you put it in your pocket simply in a fit of absentmindedness? - Yes, entirely.

18833. And had it occurred to you when you were talking to Mrs. Ryerson that you had absentmindedly put this message into your pocket? - It had not.
18834. It had not occurred to you? - No.
18835. And you still retained it in your pocket until it was asked for by Captain Smith late in the evening? - Ten minutes past seven, I think it was, he asked me for it.
18836. That is to say, it had been in your possession for something like five hours? - Yes, I should think so.
18837. And you seriously say it was put into your pocket in a fit of absentmindedness and retained for five hours? - Yes.
18838. Although you were discussing it with two of the lady passengers? - I was not discussing it with them.
18839. You mentioned it? - I mentioned it. 18840. And took it out and read it? - Yes.
18841. If you had not taken the view that the "Titanic" was unsinkable, would you have insisted in the plans for provision being made for a larger number of lifeboats? - No, I think not. She conformed to the Board of Trade requirements; in fact she was largely in excess of the Board of Trade requirements.
18842. I think you are sufficiently familiar with the Board of Trade regulations to know that the number of boats is treated in relation to the number of bulkheads, and bulkheads are treated in the regulations in relation to safety or unsinkability? - Yes.
18843. If you had not taken the view that the "Titanic" was unsinkable, would you or would you not have insisted upon provision being made for a larger number of boats? - I do not think so.
18844. So that the number of boats, in your view, had nothing at all to do with the relative sinkability of the "Titanic"? - The "Titanic" had more boats than were necessary by the Board of Trade regulations.
18845. Will you answer the question? - What is the question?
18846. The question was this, that according to your view the number of boats had nothing to do with the relative sinkability of the "Titanic"? - No; I do not think so.
18847. So that if you had taken the view that the "Titanic" was not unsinkable you would not have had more boats provided? - No, I do not think so.
18848. You were one of those, as the Managing Director, responsible for determining the number of boats? - Yes, in conjunction with the shipbuilders.
18849. When you got into the boat you thought that the "Titanic" was sinking? - I did.
18850. Did you know that there were some hundreds of people on that ship? - Yes.
18851. Who must go down with her? - Yes, I did.
18852. Has it occurred to you that, except perhaps apart from the Captain, you, as the responsible Managing Director, deciding the number of boats, owed your life to every other person on that ship? - It has not.

*The Commissioner:* I do not think that is a question to put to him; that is an observation which you may make when you come to make your speech. It is not a question for him.

*Mr. Edwards:* I thought the witness ought to have an opportunity of answering before I attempted to make the observation.

*The Commissioner:* You will make that observation, if you think it worthwhile, when the time comes.

18853. (*Mr. Edwards - To the Witness.*) According to your statement you got into this boat last of all? - I did.

18854. So that if a witness says that you, in fact, got into the boat earlier and helped the women and children in, that would not be true? - It would not.

18855. I suppose you know that it has been given in evidence here by Brown? - Yes.

*The Commissioner:* What evidence?

18856. (*Mr. Clement Edwards.*) The evidence of Brown was that Mr. Ismay got into this particular boat some time earlier. On page 219, at Question 10520, the question was:

“Was Mr. Bruce Ismay taking any part in connection with that boat? - (A.) Yes, he was calling out for the women and children first. He helped to get them into that boat, and he went into it himself to receive the women and children.” That is not true? - No, it is not.

18857. Now, it has been given in evidence here that you took an actual part in giving directions for the women and children to be placed in the boats. Is that true? - I did, and I helped as far as I could.

18858. If you had taken this active part in the direction up to a certain point, why did you not continue and send to other decks to see if there were passengers available for this last boat? - I was standing by the boat; I helped everybody into the boat that was there, and, as the boat was being lowered away, I got in.

18859. That does not answer the question. You had been taking a responsible part, according to the evidence and according to your own admission, in directing the filling of the boats? - No, I had not; I had been helping to put the women and children into the boats as they came forward.

18860. I am afraid we are a little at cross purposes. Is it not the fact that you were calling out “Women and children first,” and helping them in? - Yes, it is. 18861. Is it not the fact that you were giving directions as to women and children getting in? - I was helping the women and children in.

18862. Please answer my question. Is it not the fact that you were giving directions in helping them? - I was calling for the women and children to come in.

18863. What I am putting to you is this, that if you could take an active part at that stage, why did you not continue the active part and give instruction, or go yourself to other decks, or round the other side of that deck, to see if there were other people who might find a place in your boat? - I presumed that there were people down below who were sending the people up.

18864. But you knew there were hundreds who had not come up. That is your answer, that you presumed that there were people down below sending them up? - Yes. 18865. And does it follow from that that you presumed that everybody was coming up who wanted to come up? - I knew that everybody could not be up.

18866. Then I do not quite see the point of the answer? - Everybody that was on the deck got into that boat.

*The Commissioner:* Your point, Mr. Edwards, as I understand is this: That, having regard to his position, it was his duty to remain upon that ship until she went to the bottom. That is your point?

*Mr. Edwards:* Yes, and inasmuch - *The*

*Commissioner:* That is your point?

18867. (*Mr. Clement Edwards.*) Frankly, that is so; I do not flinch from it a little bit. But I want to get it from this witness, inasmuch as he took upon himself to give certain directions at a certain time, why he did not discharge the responsibility even after that, having regard to other persons or passengers? - There were no more passengers to get into that boat. The boat was actually being lowered away.

18868. That is your answer? - Yes.

### **Examined by Mr. HOLMES.**

18869. You have told us at the conversation between you and the Chief Engineer the Captain was not present? - He was not.

18870. And that you had no conversation with him during the voyage about speed? - Absolutely none.

### **Page 454**

18871. Then will you tell us how it was he was to become aware of your decision to increase the speed on the Tuesday? - I think the Engineer would probably have spoken to him.

18872. Did you make any arrangement with the Engineer about that? - I did not. 18873. Then as far as you know the Captain was not aware that you were going to make this increase in speed? - No.

18874. Do you know under whose instructions those extra boilers were put on on a Sunday morning? - I do not.

18875. Is that a thing the Chief Engineer would be likely to do on his own account? - I should say so.

18876. Unless he had had instructions from the Captain that the speed was to be increased? - I think he would if he was going to work up to 78 revolutions.

18877. At all events, you had no conversation with the Captain about it? - Absolutely none.

18878. We have been told that amongst the junior officers of this ship the two-watch system was in force? - It was.

18879. That is to say, they never have longer than four hours off before they have to go on watch again? - That is right.

18880. Do you consider that that is conducive to their being able satisfactorily to perform their duties on that ship? - I think a junior officer can quite well. He has no watch to keep.

18881. Four hours from the time he leaves his watch till he goes back again? - Yes.

18882. Have you had any complaints from your officers about that? - An officer spoke to me coming home on the "Adriatic" about it.
18883. Have your Directors generally had any petition or memorial from your officers in this or other ships? - A requisition came from the officers of the American Line, who, in the olden times, kept four hours on and eight hours off. We changed that to two on and four off.
18884. You still consider that four hours is quite sufficient for them to come off watch and have their sleep and go on watch again? - For a junior officer, yes.
18885. When you saw these boats 3, 5 and 7 being lowered, did you hear any orders given to the individual boats by any officer or the Captain? - No, I did not.
18886. No orders at all? - No.
18887. Nothing as to coming back? - No, I did not.
18888. You are still of opinion that it is perfectly good seamanship for your captains to go full speed ahead provided they can see far ahead enough to clear the ice? - Yes. 18889. Can you suggest any reliable method by which they can say whether the weather is such as to enable them to see the ice in time? - No.

**Examined by Mr. LEWIS.**

18890. How many first trips have you taken part in? - Three, I think.
18891. Is it a fact that attempts have been made to make a record on trial trips? - Never.
18892. Do you think your presence on board would encourage the officers to make special efforts? - I do not think it had the slightest effect.
18893. Can you tell me with regard to the boats, do you think more men could have been utilised to have got the lifeboats down quicker? I understand they went from boat to boat to lower them. Do you think more men could have been used? - No.
18894. Did you see anything of the firemen; were they mustered up at all? - No, I did not see them.
18895. When you were on the "Carpathia" can you tell me whether you were consulted by the Captain or by the Marconi operator with regard to the sending of names of the passengers or of the crew? - I was not.
18896. Not in any way? - No.

*(The Witness withdrew.)*

*(Adjourned to tomorrow at 10.30 o'clock.)*

**Wreck Commissioners' Court.**

SCOTTISH HALL,  
BUCKINGHAM GATE,

*Wednesday, 5th June, 1912.*

**PROCEEDINGS**

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC."

### SEVENTEENTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINAL, K.C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland.

(Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third-class passengers.

(Admitted on application.)

MR. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s.

“Californian.” (Leyland Line). (Admitted on Application.)

MR. H. E. DUKE, K. C., M. P., and MR. VAUGHAN WILIAMS (instructed by Messrs. A. F. and R. W. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff-Gordon. (Admitted on Application.)

MR. F. LAING, K.C. and MR. ALFRED BUCKNILL appeared on behalf of Messrs. Harland and Wolff.

(Admitted on application.)

## Page 456

### JOSEPH BRUCE ISMAY, Recalled.

#### Examined by Sir ROBERT FINLAY.

18897. You were asked about the arrangements between the American Company, as it has been called, and the Company here? - Yes.

18898. Has the American Company ever interfered with regard to the management on this side of the water of the White Star Line? - No.

18899. With whom does that rest? - The management of the White Star Line?

18900. Yes? - With the managers in Liverpool.

18901. And they have never interfered on the other side of the water with them? - No.

18902. You have, I suppose, repeatedly crossed the Atlantic before? - I have.

18903. In your own vessels? - Yes, and in others.

18904. Have you ever on any occasion attempted to interfere with the Captain as regards the navigation of the vessel? - Never.

18905. If I rightly followed the drift of some questions put to you yesterday, it was suggested that you, when you heard of ice, ought to have said something to the Captain with regard to what precautions were to be taken. Would that be in accordance with the practice you have always followed? - It would be absolutely outside my province.

18906. And you have never done so? - I have never done so.

*The Commissioner:* Will you ask him why the Captain handed him the Marconigram?

*Sir Robert Finlay:* If your Lordship pleases.

*The Witness:* I think he handed it to me simply as a matter of information, a matter of interest.

18907. Not as asking your advice? - Certainly not.

18908. Now we have heard about a number of other messages, some of which have been proved, and others not. Your Lordship has seen the additional printed document which contains the same messages, which have not yet been proved. Were any other messages except the message from the “Baltic” handed to you? - No.

18909. You did not see any of them? - I did not.

18910. Did you have any conversation with any of the officers or with the Commander with regard to them? - No.
18911. You knew nothing about them? - Absolutely nothing.
18912. Now will you tell us exactly in your own way what took place when the Captain handed you this message from the "Baltic"? - I was talking to some passengers on deck when he handed me this message.
18913. Which deck were you on? - I was on A deck: I was talking to some passengers, and he handed me this message, and I looked at it casually.
18914. Did he say anything? - No, he said nothing at all.
18915. He simply handed you the paper? - He simply handed me the paper and I looked at it and put it in my pocket.
18916. Did he stop when he handed you the paper? - No.
18917. Did he walk away without saying anything? - Yes, he went away.
18918. You looked at it? - Yes.
18919. And you put it in your pocket? - Yes.
18920. I think you said you were going down to lunch at the time? - To the best of my recollection the lunch bugle went almost immediately and I went down to lunch.
18921. That is your recollection? - That is my best recollection.
18922. Was anything said, apart from the two ladies you have told us about, about this, until Captain Smith asked you for the message some considerable time later? - No.
18923. You have told us that you realised that you would be getting near the ice region from something said by the Doctor at dinner? - Yes.
18924. He said that you had turned the corner? - He said that we had turned the corner.
18925. Did you know whether you had run further South than the corner which is usually adopted would have taken you? - No, I knew nothing at all about that.
18926. Then your conclusion that you were getting near the region of ice was from putting together the intimation that you had turned the corner which would take you on a less Southerly course than you had been following, and the "Baltic" having sent a message which partly related to ice? That is what led you to infer that it would be somewhere on the ordinary track? - Yes.
18927. As I understand you, you did not realise from the latitude and longitude mentioned in the "Baltic's" message, the exact position of the ice relative to the vessel? - No.
18928. The "Baltic," I think, was one of your vessels? - Yes.
18929. Now, passing from that matter, when you left the deck to go into the collapsible boat, did you hear the officer calling out for more women? - I do not think I did.
18930. Just let me recall to you what was said by another witness on the point on page 395; it begins at Question 17627 and runs on for two or three questions and answers. This is Rowe's evidence: "Later on were you saved in the starboard collapsible boat? - (A.) I was. (Q.) And did Captain Smith tell you to go into it? - (A.) Yes. (Q.) Were you told to take charge of it? - (A.) No, I was not told to take charge because I was in charge. (Q.) Who got into that boat? - (A.) The boat was partially full when I got into it; I had 53 women and 3 children in the stern. Chief Officer Wilde was asking for more women. There were none forthcoming, and two gentlemen got in. (Q.) Who were the two gentlemen who got in? - (A.) One

- was Mr. Ismay. (Q.) And who was the other? - (A.) I never saw the man before.”  
Did you hear Mr. Wilde asking for more women? - No, I do not remember that particular occasion. I heard of it so often that I cannot remember whether I did then or not.
18931. It was put to you that one witness, Brown, said that you helped the women to get into the boat and were standing in the boat and helping them in? - I think he was mistaken.
18932. Is that a mistake? - I think so.
18933. You never got into the boat till the last moment? - That is so.
- The Commissioner:* What is the reference to that?
- Mr. Laing:* Page 219.
18934. (*Sir Robert Finlay.*) If your Lordship pleases, I should like to read that. It is Question 10519: “Did you then proceed to fill it up with women and children?” That is the collapsible boat. - (A.) Yes. (Q.) Was Mr. Bruce Ismay taking any part in connection with that boat? - (A.) Yes he was calling out for the women and children first. He helped to get them into that boat, and he went into it himself to receive the women and children. (Q.) Was that boat filled? - (A.) It was filled.” You say that is not correct as regards your getting into the boat? - No, not to my memory.
18935. You helped the women and children in, but not from inside the boat? - That is so.
18936. And you did not go into it until the last moment, as you have told us? - Not till she was leaving, at the last moment.
18937. Now, I want you to tell me about this light that you rowed for. Your impression is that that was not the light of the “Californian”? - That is my impression.
18938. Now, will you just give me your reasons for that? - Because it was a dull white light.
18939. On which side of the “Titanic”? - When we left the ship it would be on the starboard side.
18940. Did the light continue to be visible as you rowed on in its direction? - We rowed on, and we thought the light became more distinct, and then it seemed to draw away from us again.
18941. Did you see anything of the light on the port side of the “Titanic” which has been so much referred to? - I did not.

**Page 457**

18942. Anyhow, in your judgment, that is not the same light which has been referred to as on the port side? - I do not think so.
18943. (*The Commissioner.*) I am afraid I misunderstood the answer that you gave yesterday - have you any doubt, having heard the evidence, that the “Californian” did see the rockets from the “Titanic”? - Have I any doubt that the “Californian” saw them? 18944. Yes, saw the rockets from the “Titanic”? - Judging from the evidence, I should say not.
18945. Judging from the evidence you would say -? - That our rockets were seen by the

“Californian.”

18946. I thought yesterday I misunderstood you. Your opinion is that the rockets sent up from the “Titanic” were seen by the people on board the “Californian”? - Yes, from what I have read.

*Sir Robert Finlay:* I thought there had been a little misapprehension.

*The Commissioner:* Yes.

18947. (*Sir Robert Finlay.*) It is perfectly clear now. (*To the Witness.*) Now, a question with regard to one point. Are you aware that there is considerable difference of view with regard to the use of glasses by the look-out men? - Yes. 18948. Some commanders approve and others do not? - Yes.

18949. And you always supply glasses for the look-out men if the commanders desire it? - Certainly.

18950. And you have left it in that way? - Absolutely.

18951. Now, you were asked about the instructions you gave to your officers with regard to the navigation of the vessel and so on, whether there were any specific directions about ice. Now, the instructions, I think, are contained partly in the “Ships’ Rules” - that book which has been handed in - partly in the letter which is given to the officer on appointment to the vessel? - Yes.

18952. And partly also in a notice which is stuck up in the chart room? - Every ship is supplied with one of those printed notices. It is framed and put up in the chart room. 18953. I will not stop to read these just now; they can be read afterwards. Some part certainly ought to be read, but I wish to identify the documents. *This* is the book of rules, which, of course, requires no further identification. Then is *this* (*Handing a paper to the Witness.*) the letter given to every commander on appointment? - Yes.

(*The same was handed in.*)

18954. And is *this* the notice which is stuck up in every chart room (*Handing same to the Witness.*)? - Yes.

(*The same was handed in.*)

18955. There is nothing specifically directed to the question of ice in any of these regulations? - No.

18956. That is left to the discretion of the Commander? - Certainly.

18957. How long had Captain Smith been known to you and to your Company? - He had been in the service 32 years, I think.

18958. Had you seen a good deal of him? - I had.

18959. Had you had opportunities for forming an opinion as to his judgment and capacity for conducting a vessel? - He was a man in whom we had entire and absolute confidence.

18960. And you showed it by appointing him to the “Titanic”? - Yes. I think he had been in command for 24 years; I think that is the right number of years.

18961. Had anything ever occurred in the slightest degree to shake your confidence in him? - No.

18962. Something was said by one of the gentlemen who examined you with regard to instructions given by the Canadian Pacific Company to their steamers with reference to field ice? - Yes.

18963. That is with reference to the Canadian traffic? - Yes.

18964. You have also some share in the Canadian traffic, have you not? - We have.

18965. And do you give special instructions with regard to vessels engaged in the Canadian traffic? - We do.

18966. Is this an extract from the instructions in regard to field ice (*Handing same to the Witness.*)? - Yes.

18967. I will read it. This is only an extract. The whole document, of course, can be produced: "Extract from the instructions given to Commanders in the Canadian Service respecting field ice. Field ice may be met off the Eastern edge of the Bank, across the Bank, and along the South Coast of Newfoundland. This ice is often very heavy and should not be entered unless it is obviously in loose patches. Lanes in the ice often come to an end, and it is unwise to enter them unless clear water can be seen beyond. It is usually the safest course to go South to get round the field ice, and Commanders have permission to use their discretion to deviate from the track under such circumstances." Were any such instructions necessary with reference to the tracks which we have been considering in this Enquiry? - I think not.

18968. (*The Commissioner.*) This Canadian track, I suppose, is much to the North of the track to America - to New York? - Yes.

18969. (*Sir Robert Finlay.*) Yes, that is shown by the localities specified at the beginning of this extract: "Field ice may be met off the Eastern edge of the Bank, across the Bank, and along the South Coast of Newfoundland." This field ice is much commoner there, of course? - Yes.

18970. And you, yourselves, issue the instructions which have just been read with regard to field ice in those localities? - We do.

18971. (*The Commissioner.*) Is the ordinary track to Canada across what they call the Great Bank of Newfoundland? - I am afraid I could not answer that.

*The Commissioner:* It appears to be marked.

*Sir Robert Finlay:* I am told in reference to the question your Lordship has just put to Mr. Ismay that the ordinary route to Canada, unless it be the Belle Isle route, is always across the Bank.

*The Commissioner:* The "Mount Temple" went South of the track? *The Attorney-General:* Yes.

*The Commissioner:* In fact she went South of the track to New York - slightly South.

*Sir Robert Finlay:* Yes.

*The Commissioner:* And she was therefore South of any indicated field ice, as distinguished from icebergs, I mean.

*Sir Robert Finlay:* Yes, that is so. Those instructions, of course, with regard to field ice that I was referring to are issued with regard to the ordinary route where field ice is much more commonly met with than further South.

*The Commissioner:* But the instructions, as I recollect them from your reading them, gave permission to deviate.

*Sir Robert Finlay:* Certainly, my Lord. "It is usually the safest course to go South to get round the field ice, and Commanders have permissions to use their discretion to deviate from the track under such circumstances."

*The Commissioner:* Now have you similar directions given by the Canadian Pacific Railway to the "Mount Temple"?

*Sir Robert Finlay:* I have not got a copy, my Lord. I do not know whether Mr. Hamar Greenwood can give us one.

*Mr. Hamar Greenwood:* I can supply you with a copy of the instructions issued.

*The Commissioner:* Do you know the contents of the directions?

*Mr. Hamar Greenwood:* They are rather voluminous, but I know the essentials of them.

*The Commissioner:* What I want to ask you - perhaps you can tell me now - is whether they are substantially the same as these instructions issued.

*Mr. Hamar Greenwood:* They are rather more detailed instructions in reference to ice.

*The Commissioner:* Are they substantially the same, although more detailed?

*Mr. Hamar Greenwood:* I should say yes; substantially the same.

## **Page 458**

*The Commissioner:* Then it comes to this, that the White Star Company issue to their boats engaged in the Canadian trade, instructions somewhat similar to, though not identical with, the instructions issued by the Canadian Pacific Railway to their steamers engaged in the same trade?

*Mr. Hamar Greenwood:* It is difficult for me to answer that, because I have only heard this one extract read by Sir Robert Finlay.

*The Commissioner:* Then perhaps you had better look at this and at your own papers - the papers which you say you can get - and tell me afterwards whether there is substantial agreement. I do not want all the details.

*Sir Robert Finlay:* Perhaps my friend, Mr. Hamar Greenwood, will let us have a copy of the instructions which are issued by the Canadian Pacific?

*Mr. Hamar Greenwood:* Certainly.

*Sir Robert Finlay:* I only refer to it because one of my friends in cross-examining put a question to Mr. Ismay with reference to the Canadian Pacific's instructions as to field ice, and it was desirable to make it clear that under the same circumstances the White Star issue similar instructions.

*The Commissioner:* The reason I was putting the question was this: that the Commander of the "Mount Temple," who gave evidence, told us that he had invariable instructions on this point from the Railway Company, and I rather gathered until you asked Mr. Ismay these questions, that the White Star Company did not give such instructions. Apparently they do.

*Sir Robert Finlay:* Oh, they do. Instructions of that kind are necessary when you are dealing with a route which takes you through a latitude where a good deal of field ice is often to be found.

18972. (*To the Witness.*) Then a good deal has been said about the tracks? - Yes.

18973. They are called the North Atlantic Lane Routes, I think? - Yes.

18974. And they were agreed upon in consultation between the Lines using that trade? - Yes.

18975. As far back as 1898, I think? - Yes.

18976. Is that a copy (*Handing a paper to the Witness.*)? - Yes.

(*The same was handed in.*)

*The Commissioner:* You can perhaps procure for us the instructions that are issued by other large Transatlantic lines such as the Cunard, with reference to ice. *Sir Robert Finlay:* We will endeavour to get them, my Lord; I am sure we can. *The*

*Commissioner:* And I am anxious, if I can get them, to have the corresponding instructions given by the German lines.

*Sir Robert Finlay:* Certainly: I think we shall be able to get all those instructions by the English lines and the German lines. Does your Lordship include in that the Canadian trade or the New York?

*The Commissioner:* I should like both, if I could have them.

*Sir Robert Finlay:* And any French instructions also, if there are any French lines?

*The Commissioner:* Yes, certainly.

*Sir Robert Finlay:* In fact, all the information that can be got with reference to lines of repute using that route will be obtained and laid before your Lordship.

*The Commissioner:* You see my view as to whether the "Titanic" took all proper precautions, having regard to the knowledge that they had at the time, would no doubt be influenced by what other large lines were doing in the same circumstances. *Sir Robert*

*Finlay:* Now I have handed up to your Lordship the copy of the memorandum as to the North Atlantic Lane routes, as they are called. That was agreed upon in 1898?

*The Witness:* Yes.

*Sir Robert Finlay:* It is a memorandum which I have handed up, my Lord.

*The Commissioner:* Beginning "West-bound." *Sir*

*Robert Finlay:* Both ways.

*The Commissioner:* "West-bound, East-bound," and so on.

*Sir Robert Finlay:* Yes. There is a chart inside it.

*The Commissioner:* Yes; what is the document?

*Sir Robert Finlay:* It is a memorandum of what was agreed upon with regard to the routes to be adopted westward and eastward, agreed upon at a conference held between all the companies engaged in that trade.

*The Commissioner:* Do you mean foreign companies as well as English companies?

18977-8. (*Sir Robert Finlay - To the Witness.*) Were there any foreign companies? - I think so; the agreement is signed.

*Sir Robert Finlay:* I think your Lordship will see on the last page that it is signed - The Hamburg-Amerika, I see, and the Norddeutscher Lloyd; the Compagnie Generale Trans-Atlantique; the American Line; and then the other companies are the Atlantic Transport Company, Elder Dempster and Co., the Cunard, the Furness Line, W. Johnston and Co., Limited, the National Steamship Co., Limited, the Red Star Line, the Wilson Line and the White Star Line.

18979. (*The Commissioner - To the Witness.*) The White Star Line means the Oceanic Company? - Yes, the Oceanic Steam Navigation.

18980. (*Sir Robert Finlay.*) The chart gives the substance of the regulations agreed upon, showing the route from August to January. From August to January they can go further north with propriety, because, owing to the action of the heat of the summer the ice has by that time been melted in the southern latitudes to which it has drifted. I need not stop to read this, my Lord. (*To the Witness.*) Now, with regard to ice, your Company gets notice from other companies, I suppose, as to ice having been sighted by any of their vessels? - Yes, there is a system of interchange - of information between the Captains; we pass it on to one another.

18981. Just describe what that arrangement is. Every notice of ice received by any company is sent on to the other companies? - Yes.

18982. Do you supply to your Commanders before they start on any voyage all the information up to date that has been received with regard to ice in that way? - Certainly.

18983. Now, one question with regard to another matter, Mr. Ismay, if you please. You were asked some questions as to a design for 40 boats for the "Olympic" or the "Titanic." Did you ever hear of such a design? - No.

18984. You know nothing whatever about it? - No, I have no recollection of it whatever.

*The Commissioner:* You asked about that, Mr. Scanlan.

*Mr. Scanlan:* Yes, I did, my Lord.

*The Commissioner:* Can you tell me - do not hold back your information till some later period, but tell me now, if you can - whether you have made any enquiries with reference to the communication to the "Daily Mail." *Mr. Scanlan:* I have, my Lord.

*The Commissioner:* Very well; now will you tell me the result?

*Mr. Scanlan:* The result satisfies me that the design which I referred to was submitted by the builders to the Company which Mr. Ismay represents, and I suggest that the designer should be called to give evidence.

*The Commissioner:* Who was the designer?

*Mr. Scanlan:* The gentleman who gave the interview to the "Daily Mail." *The*

*Commissioner:* Do you mean Mr. Carlisle?

*Mr. Scanlan:* Yes.

*Sir Robert Finlay:* I have made enquiries about that and evidence may be given later. What I say is merely a statement of what I have been told will be proved. There was some discussion about it, not with the Company at all, but a discussion in view of the Advisory Committee of the Board of Trade requiring a greater number of boats. Your Lordship remembers there was an Advisory Committee appointed, which reported in July, 1911, and while that Committee was sitting it was thought possible that they might insist upon a larger number of boats; and there was some discussion, not with the "Oceanic" at all, but there was some discussion between the designer, I think, for Messrs. Harland and Wolff and another gentleman who had a patent with reference to the

## **Page 459**

working of davits for these boats - Mr. Welin - as to how, if the Advisory Committee should recommend a larger number of boats, special arrangements might be made for getting these boats into the water with rapidity. One idea was by having the davits so that

they could be put at a slope - bent over - and so enable those davits to get four boats into the water one after the other.

*The Commissioner:* Is that the substance of what you have heard, Mr. Scanlan? *Mr.*

*Scanlan:* No, my Lord, it is not quite in accordance with what I am instructed are the facts. I am instructed that, according to the facts, for the "Olympic" and the "Titanic" a special design by the builders was submitted to the owners.

*The Commissioner:* Yes, but that is not quite the point. Was that special design made in view of the possibility of the Board of Trade requiring a larger number of boats?

*The Attorney-General:* It cannot have been, on that statement.

*Mr. Scanlan:* As far as my information goes the design was for the purpose of supplying those boats, the "Olympic" and the "Titanic," with additional accommodation. *The*

*Attorney-General:* Then it must have been before July, 1911.

*Sir Robert Finlay:* I think Mr. Wilding, who will be called - I think my friend is going to call him -

*The Attorney-General:* I am going to call him, but at the same time it is desirable that this should be cleared up.

*The Commissioner:* I want it cleared up now.

*The Attorney-General:* My friend, Mr. Scanlan, attributes some importance to it. We will take care that Mr. Carlisle, as far as we can, shall be called before the Court, and then we can get the answers from him. I know nothing about it at the present moment, except that I have heard the suggestion, and did mean to put some questions to Mr. Ismay about it, not as to 40 boats, but as to a larger number of boats having been at one time spoken of and shown in plans for the "Titanic" or the "Olympic."

*The Commissioner:* You were pointing out that when this vessel was constructed, this Advisory Committee did not exist.

*The Attorney-General:* No, not quite. What I said was this: Mr. Scanlan said his point was that this related both to the construction of the "Olympic" and the "Titanic," and I said if that was the case then it cannot have been in consequence of the recommendation from the Advisory Committee, which was not made till July, 1911.

*Sir Robert Finlay:* It was not in consequence of it.

*The Attorney-General:* Nor in anticipation of it, because it was not appointed till April, 1911.

*The Commissioner:* But although not appointed it may have been in contemplation. *The*

*Attorney-General:* To some extent it is always in contemplation; that a Committee may be appointed is always in contemplation.

*The Commissioner:* But a Committee on this particular matter?

*The Attorney-General:* I think your Lordship will see there have been a good many. *Sir*

*Robert Finlay:* My information is what I have given here. I am not sure that I was right in saying four boats; it may have been two boats, double-banking.

*The Attorney-General:* I have heard of two.

*Sir Robert Finlay:* Two on each side; and it was purely in view of its being required.

*The Commissioner:* Have you a copy of the letter that you say you read?

*Mr. Scanlan:* In the "Daily Mail," my Lord? *The*

*Commissioner:* Yes.

*Mr. Scanlan:* What I referred to yesterday was an interview, and I have it here.

*The Commissioner:* That is what I mean.

*The Attorney-General:* That is an interview with Mr. Carlisle?

*Mr. Scanlan:* Yes.

*The Commissioner:* Will you let me have it?

*Mr. Scanlan:* Certainly, my Lord.

*(The same was handed in.)*

*The Commissioner:* Have you any other information besides that contained in this letter or communication?

*Mr. Scanlan:* I hope your Lordship will accept the statement I have made. Some of the information I have is quite confidential, but the information I have enables me, with a sense of responsibility, to make the statement.

*The Commissioner:* I quite accept that; but I thought your information was to be found in this document which you have handed up.

*Mr. Scanlan:* No, it is not all there.

*The Commissioner:* It does not seem to bear it out. Perhaps you have not seen it, Sir Robert.

*Sir Robert Finlay:* No.

*The Commissioner:* "When working out the designs of the 'Olympic' and the 'Titanic'" (this is what Mr. Carlisle is reported to have stated) "I put my ideas before the davit constructors" (who they are I do not know) "and got them to design me davits which would allow me to place, if necessary, four lifeboats on each pair of davits, which would have meant a total of over 40 boats. Those davits were fitted in both ships, but though the Board of Trade did not require anything more than 16 lifeboats, 20 lifeboats were supplied." Now, I understand that to mean this: "I did ask the davit constructors to design me davits which would hold or accommodate 40 boats, and they did it, and those davits were, in fact, supplied to the 'Olympic' and the 'Titanic,'" and there the matter stops. He says nothing more. That is right, is it not, Mr. Scanlan, as far as it goes?

*Mr. Scanlan:* That is the interview there, my Lord.

18985. (*Sir Robert Finlay - To the Witness.*) Did you ever hear anything of that kind? - No.

18986. It is quite new to you? - It is.

18987. Now then, with regard to the number of boats. You are familiar with the Board of Trade Rules? - Yes.

18988. And with the recommendations which were made by the Advisory Committee which reported in July, 1911? - Yes, I think I know the figures.

18989. Can you tell us how the number of boats on board the "Titanic" compared with either the Board of Trade Regulations or the Recommendations of that Advisory Committee in July, 1911? - In the cubic capacity?

18990. Yes? - The Board of Trade, I think, would call for 9,500 cubic feet. We had 11,300 or 11,400 cubic feet. Owing to the construction of the "Olympic" and the "Titanic," the bulkheads being carried and the wireless installation, I think the Board of Trade would have asked us to supply 7,500 cubic feet, whereas we had 11,300 cubic feet.

*The Commissioner:* What has it to do with the Marconi installation?

*Sir Robert Finlay:* I suppose the facilities for calling help, my Lord. Perhaps your Lordship will allow the witness to answer. I was about to make my own suggestion. 18991. (*The Commissioner.*) Perhaps you will repeat it to me, and I shall then understand it.

*The Witness:* The Board of Trade take the ordinary emigrant ship and the "Titanic" size.

*The Attorney-General:* I think I may make this observation in public which I had made to my friend. I understand from my friend's question now put to Mr. Ismay that Mr. Ismay is asked to give information to the Court with reference to the boat accommodation and the Board of Trade Rules and compliance with the Board of Trade Rules. That, of course, involves to some extent the construction. I understood from Mr. Ismay himself, and from what has been suggested to us, that Mr. Ismay was not able to speak to these matters, that they did not come into his department, and that he did not enquire into them, and therefore we purposely refrained from putting questions to him; but if he is put forward as a gentleman who does know, then we must go through the whole matter with him.

## **Page 460**

*Sir Robert Finlay:* I was only asking Mr. Ismay very generally. Mr. Sanderson knows a great deal more about the details.

*The Attorney-General:* It is a little unfortunate to ask him generally.

*The Commissioner:* Would it be more convenient for me to wait until Mr. Sanderson comes?

*Sir Robert Finlay:* If your Lordship pleases, certainly.

*The Attorney-General:* It means I must go into it, if my friend does.

*The Commissioner:* Very well, I will wait.

*Sir Robert Finlay:* I merely say what I think your Lordship will find will be proved by Mr. Sanderson, that the accommodation on board the "Titanic" was considerably in excess of that required by the Board of Trade Rules, and was considerably in excess of that that would have been required under the recommendations of the Committee which reported in July, 1911.

*The Attorney-General:* I agree it is in excess of the Board of Trade requirements.

*Sir Robert Finlay:* And of the recommendations of that Advisory Committee in July, 1911, as applicable to a vessel with such watertight compartments as the "Titanic" had.

*The Attorney-General:* Yes.

*Sir Robert Finlay:* That is, as I understand it, what Mr. Sanderson will say. *The*

*Attorney-General:* That is what I opined - that it carried more boats than were required by the Board of Trade Regulations.

18992. (*Sir Robert Finlay - To the Witness.*) Now, since this deplorable accident, I think a number of rafts have been carried as well as more boats? - Yes, I believe that is so.

18993. Rafts with air tanks below, so as to be able to carry a number of people upon them, and boats? - Yes.

18994. You were asked a question on a very important subject, that was the desirability of securing continuous service by the same crew approximately for a series of voyages in the same vessel? - Yes.
18995. Has your Company taken steps to endeavour to secure that end? - Some years ago we were very anxious to try to get the men to stick to the Company and to stick to the ships. With that in view, we offered a bonus of £2 10s to every sailor who could show ten V.G. discharges in the year, and to every fireman and trimmer we offered a bonus of £5 if he could show ten V.G. discharges in the year. That we continued for certainly three years, but, the result was so unsatisfactory that we eventually gave it up, so few of the men ever earned the bonus.
18996. Were your Company most anxious to secure such continuous service if it could be achieved? - That was the object we had in view in offering the bonuses to the sailors and the firemen and trimmers to remain by the ship and with the Company.
18997. And are you still anxious to secure it if it can be done? - Certainly.
18998. The difficulty is not with you? - Not at all.
18999. To what extent have you been successful in securing continuous service; do you know? - No, I could not answer that.
19000. Now, I think there is only one other matter I want you to tell me about. You were asked about a conversation with Mr. Bell that took place at Queenstown? - Yes.
19001. And it was suggested, if I followed the questions, that you had given some orders to Mr. Bell as to the speed? - No, I had given no orders.
19002. Will you just repeat again exactly what took place between you and Mr. Bell? - Mr. Bell came into my room, and I spoke to him with regard to the coal which he had on board the ship. I also said that there was no chance of the ship arriving in New York on the Tuesday; that we had very much better make up our minds to arrive there on the Wednesday morning and be off the lightship at 5 o'clock, and if the weather was fine and right in every respect on the Monday or Tuesday we then could take a run out of the ship.
19003. Was that all? - That is all.
19004. Did you ever contemplate that being done without communication with the Captain? - Certainly not.

**Re-examined by the ATTORNEY-GENERAL.**

19005. I want you to direct your mind for a moment to the instructions given to the commanders in the Canadian service respecting field ice. I see from that extract which was read by my friend, Sir Robert Finlay: "It is usually the safest course to go South to get round the field ice, and Commanders have permission to use their discretion to deviate from the track under such circumstances." That is, of course, dealing with the track to Canada? - Yes.
19006. The object of those instructions, I suppose, is to tell the Captain that he should get away from the field ice, and that he should go South in order to get away from it? - Yes.

19007. So that if a Captain is pursuing his course along the track and is advised of field ice, he ought to go South to get away from it? - He ought to take steps to avoid it.

19008. It is suggested here that the safest course would be to go South? - That naturally would be the safest course.

19009. That would be the natural thing; and it is right to say that you finish up with this, that "Commanders have permission to use their discretion to deviate from the track under such circumstances"? - Yes.

19010. You have no such instructions to commanders in the Atlantic service - that is to say from New York? - Not in regard to field ice, but there is the general instruction.

19011. Would this document get before Captain Smith at all? - I could not answer that question.

19012. It would not be supplied to him by your Company? - I could not answer that.

19013. Just follow me for a minute, and either you can answer me or one of my friends - anybody representing your Company. What I am anxious to know from you, or somebody on behalf of your Company, is whether there are instructions of any kind given to your commanders on the route travelling from New York to the United Kingdom with reference to ice. Are there any instructions of any kind? If so, I should like to see them? - Not that I know of.

*The Commissioner:* I thought you said coming from the United States to the United Kingdom. You mean both ways?

*The Attorney-General:* What I meant to say was trading between.

*Sir Robert Finlay:* There are no such special instructions; that is left to the judgment of the Commander.

*The Attorney-General:* I understood that was the case from what Mr. Ismay said yesterday, but I was not quite sure from some of the questions today whether it might be suggested that similar instructions, or those instructions were given to the commanders.

*Sir Robert Finlay:* Oh, no; I said expressly that those instructions with regard to field ice were for vessels going further North on the Canadian route, and that as regards the routes with which we are dealing there were no special instructions with regard to ice. 19014. (*The Attorney-General.*) Very well; that makes it quite clear. (*To the Witness.*) It is in contemplation that on a voyage from the United Kingdom to New York an ice-field might be met? - So far as I am aware, it has hardly ever been known for field ice to come down there.

19015. "Hardly ever been known" means it has been known? - It may have been known, but I cannot give you any reliable information with regard to that.

*The Commissioner:* The chart does not indicate such a thing.

*The Attorney-General:* As what?

## **Page 461**

*The Commissioner:* As field ice as far South as the track.

*The Attorney-General:* No, field ice not, but icebergs certainly.

*The Commissioner:* Oh, yes; I thought you were dealing with field ice.

*The Attorney-General:* I was on the question of ice, and the one question I was putting was on field ice, but I am directing it also to icebergs.

*The Commissioner:* Icebergs are marked a good deal further South.

*The Attorney-General:* Your Lordship sees "field ice between March and July." *The Commissioner:* Somewhat to the North of the track.

19016. (*The Attorney-General.*) A little to the North of the track - not much, very little; but icebergs, of course, as shown by the chart, have been seen within this line in July and August, and the line there indicated is South of the track to New York. (*To the Witness.*) Are you aware of that? - Am I aware of what?

19017. That on the chart it is indicated that icebergs have been seen within a dotted line on the chart in July and August which is South, a good deal South, of the track to New York? - I have not seen the chart, but I have no doubt that is so.

19018. I do not want to ask you about the chart, because that is for my Lord. Why I am directing your attention to it is for this purpose: It seems to indicate, at any rate, that you may meet ice? - Certainly.

19019. If you follow the track when you have turned the corner and follow the track to New York, you may meet ice, either field ice, I suppose - infrequently apparently - or icebergs? - Certainly icebergs, but I should hardly think it was possible for field ice to be there.

*The Commissioner:* When they are indicating icebergs South of the track, what the chart says is: "Icebergs have been seen within this line in April, May and June." *The Attorney-*

*General:* Yes, I was looking at the one a little above it, but your Lordship is quite right. That is more Southerly still.

*The Commissioner:* I do not see any corresponding indication of field ice below the etched mark which is described as "Field ice between March and July."

*The Attorney-General:* No, I do not think there is anything.

*The Commissioner:* There is an indication on the chart that icebergs are occasionally seen South of what you may call the iceberg line. There is no indication on the chart that field ice is occasionally seen South of that.

19020. (*The Attorney-General.*) I agree that is so. (*To the Witness.*) I suppose you have had reports from your vessels of meeting icebergs on the voyage to the United States before? - Oh, yes.

19021. Had you had any during this particular year? - Not to my knowledge.

19022. From any of your vessels? - Not to my knowledge.

19023. Would they be brought before you in the ordinary course? - No, they would not.

19024. Who would know about them? - I should think either Mr. Sanderson or Mr.

Buchanan.

19025. Have you enquired at all whether there were any reports of icebergs before this voyage received by your Company? - No.

*The Commissioner:* My attention is drawn to a book which is called "The United States Pilot, East Coast, Part I., 2nd Edition, 1909," in which on page 34 this passage occurs: "To these vessels" (that is to say, the larger liners crossing between America and Europe) "one of the chief dangers in crossing the Atlantic lies in the probability of encountering

masses of ice, both in the form of bergs and of extensive fields of solid compact ice released at the breaking up of winter in the Arctic regions and drifted down by the Labrador Current across their direct route.” Now, that does not agree with the evidence that I have heard so far that probably compact ice will be found across the direct route. I thought it was a very rare thing.

*The Attorney-General:* So far as the evidence goes I thought so too.

*The Commissioner:* I am speaking of the evidence. So far as the evidence goes it surely is not the fact that you will probably meet fields of compact ice in the direct and ordinary route between England and New York.

*The Attorney-General:* No, not according either to the evidence or the information that we have.

*The Commissioner:* I understood the object of adopting this track was because, generally speaking, it avoids field ice.

*Sir Robert Finlay:* Yes, in fact I am told by men who have passed a great many years there - 18 years - they have never seen field ice on this track.

*The Attorney-General:* May I see the book?

*The Commissioner:* Here is the book. I am told they are the Admiralty Sailing Directions. (*Handing the book to the Attorney-General.*) Can you tell me this: Were the routes the same at the time that these regulations were published as the routes that are followed now?

*The Attorney-General:* Oh, yes, because those regulations which are referred to are November, 1898.

*The Commissioner:* I have another book now, called “The Nova Scotia South East Coast and Bay of Fundy Pilot, 6th Edition, 1911.”

*The Attorney-General:* There is no doubt the answer to the question you have put is that this book of 1909 is some nine years after that agreement as to the track which my friend read and has put in.

*The Commissioner:* The one I have in my hand is published in 1911, and there is exactly the same statement in it. The Admiralty Hydrographic Office publishes it. All I can say is the paragraph in that book published by the Admiralty does not agree with the chart. It gives this startling information, Sir Robert, that a steamer following the ordinary route, the fixed route between Europe and America, will probably meet compact field ice on that route. To me it is most extraordinary.

*Sir Robert Finlay:* It is contrary to all our information, and, as I gather from what my friend the Attorney-General said, it was contrary to his.

19026. (*The Commissioner.*) These books would be on board the ship, of course?

*The Witness:* I do not know.

*The Commissioner:* I am told these books would be on board the ship, but at present they appear to me to be quite inconsistent with the chart.

*Sir Robert Finlay:* Yes.

*The Commissioner:* And quite inconsistent with the evidence that I have heard, and I cannot understand how a route between Europe and America could be laid down through a region in which you will probably meet compact field ice - it is a most extraordinary thing - and that that route should be agreed by all the large lines of steamships. *The*

*Attorney-General:* The effect of the evidence and the information, at any rate, which has been laid before the Court and which is in our possession to lay before the Court, if it had become necessary, is that you do not expect to encounter field ice on this voyage, but you ought to, I will not say, expect, but to know, that in all probability you will encounter icebergs at this time.

*The Commissioner:* Yes, that is a different matter altogether.

*The Attorney-General:* That is how I think the matter stands, so far as our information goes. We have also got the monthly Meteorological Charts, which indicate facts according to the reports which have been given from time to time during the month.

*The Commissioner:* By the word "probable" I understand that it is more usual than not.

*The Attorney-General:* I should not have thought that.

*The Commissioner:* "Probable" appears to me to mean that of 20 times you may expect to meet it, at all events, 11 times. The odd thing about it is

## **Page 462**

that these paragraphs I have been reading are headed with a reference to the particular chart which I have been looking at all through.

*Sir Robert Finlay:* The copy I have purports to have corrections up to 1911.

*The Commissioner:* Yes.

*The Attorney-General:* What is that?

*Sir Robert Finlay:* The route chart - large corrections up to January, 1908, small corrections up to 1911.

*The Commissioner:* Have you had this book "Sailing Directions" before you, Mr. Attorney?

*The Attorney-General:* No, it is the first time our attention has been directed to it.

*The Commissioner:* The paragraph I have been reading, and the pages on this subject, are all intended to explain the chart because they are headed all along, "Chart 2058, North Atlantic Route Chart." So that it is extremely desirable to read the chart with the book. My attention is drawn to this passage at page 17. *The Attorney-General:* Is that the Nova Scotia one?

*The Commissioner:* The paragraph is the same in both: "It is impossible to give within the outer limits named any distinct idea where ice may be expected, and no rule can be laid down to ensure safe navigation, as its position and the quantity met with differ so greatly in different seasons. Everything must depend upon the vigilance, caution and skill with which a vessel is navigated when crossing the dangerous ice-bearing region of the Atlantic Ocean."

*The Attorney-General:* I am very much obliged to your Lordship for calling our attention to it.

*Sir Robert Finlay:* Your Lordship will recollect what Captain Moore, the Captain of the "Mount Temple," said at page 197, Question 9388, "Was the ice further South than you had known it? - (A.) I never knew it to be so far South before. Not in my whole experience of 27 years, I never knew it so far South. (Q.) And you are constantly running backwards and forwards? - (A.) For 27 years."

*The Commissioner:* I am told these books are based on an experience of over 100 years, but, at all events, the experience of a lifetime. What one may call a lifetime has not shown that ice is found ordinarily or probably in these regions.

*The Attorney-General:* Field ice.

*The Commissioner:* I am talking of field ice.

*Sir Robert Finlay:* And icebergs not frequently.

*The Commissioner:* And evidently the Attorney-General did not realise when he was opening the case, and has not since realised, that there is any reason to expect ice in the sense that it is usually found there.

*The Attorney-General:* No. The case that I have made and that I have been putting before your Lordship in regard to it up to the present has been that information was given of this apparently very extraordinary occurrence of field ice being encountered on this particular track.

*The Commissioner:* That is the "Baltic" telegram.

*The Attorney-General:* That is the "Baltic" telegram, and therefore the view I suggested was that it involved an obligation upon those responsible for the navigation of the ship, to take extreme care when they got that report.

*The Commissioner:* Of course; whatever the information of the chart may be, the information of the telegram was most specific, and referred not only to icebergs, but to field ice.

*The Attorney-General:* That is the point. Your Lordship is quite right. I have not made the case that the Commander ought to have taken the precaution to discover field ice without having received any report from any other vessel. I did not suggest that. In point of fact I did not go into it, and according to the evidence that was then before me, I did not think that he would expect to encounter it. Now that I see the book, of course it may be another question; but I am upon the telegram, which seems to me to place it so much higher.

*The Commissioner:* Oh, of course it does; I only want to have it cleared up, because I was quite startled when I was told that there was no occasion for a telegram, because you most probably expect ice there. That startled me, and with all respect to this book, as I understand it at present, it seems to me to be quite inconsistent with the fact that the numbers of steamship companies' liners crossing have agreed to follow this route. *The*

*Attorney-General:* As I understand, what the book says that may be so, but at the same time you may encounter field ice in this track, and therefore must be very careful.

*The Commissioner:* It does not say that; it says: "You probably will."

*The Attorney-General:* I suppose it is a matter of extreme precaution; that emphasises it. I read the paragraph rather hastily, I admit, but it seems to me devised for the purpose of impressing on navigators the necessity for extreme caution when they are in these parts at this time of the year. It is not meant to do more than that, but it does that. *The*

*Commissioner:* Well, but it says something which is not in accordance with the evidence.

*The Attorney-General:* Yes, it says that with the object of impressing the necessity for caution.

*The Commissioner:* It is equivalent to crying "Wolf." *The*

*Attorney-General:* I do not know. I will not say that.

*The Commissioner:* That is what you mean now, you know. In order to induce people to be extra careful they put in what is not there.

*The Attorney-General:* No, I am not saying that; that is not my suggestion of it. I hear of the book, of course, for the first time for the reason I have indicated, that our case has been put on the wireless telegraphy reports, which seemed to place it beyond this category, as your Lordship agrees. But when we do examine into it and have that brought before us, in view of the fact that your Lordship is asked to answer some questions about tracks in the Enquiry, it does become of importance, and, speaking for myself, I am very much obliged to those who have called our attention to the fact that attention should be specifically directed to this point.

*The Commissioner:* Quite right.

*The Attorney-General:* Because, although it may not have happened for 25 years, it has happened this year, and it may happen again in another year.

*The Commissioner:* My attention is drawn to the fact, and no doubt it is a fact, that the chart is based upon the book, but if the chart is based upon the book, then I do not know why the line of field ice is not South of the track.

*The Attorney-General:* I find in the Meteorological Charts they speak of it as a mean limit.

*The Commissioner:* A mean?

*The Attorney-General:* Yes.

*The Commissioner:* That may explain it, possibly.

*The Attorney-General:* I had not seen the Meteorological Charts till this question arose, but when I look at them I see that there.

*The Commissioner:* I thought it meant the usual limit.

*Sir Robert Finlay:* Beyond all question that is the meaning of the legend upon this route chart, because it says "Icebergs have been seen within this line." *The Commissioner:* Yes, I was thinking rather of pack ice.

*Sir Robert Finlay:* And then "Field ice between March and July" is the legend round the etched line.

*The Attorney-General:* If your Lordship would look at Question 8 you would see why I think it all important now that we should direct some attention, at a later stage, of course, to it.

*The Commissioner:* "What was, in fact, the track taken by the 'Titanic' in crossing the Atlantic Ocean? Did she keep to the track usually followed by liners on voyages from the United Kingdom to New York in the month of April? Are such tracks safe tracks at that time of year? Had the Master any, and, if so, what, discretion as regards the track to be taken?"

*The Attorney-General:* Yes.

## **Page 463**

*The Commissioner:* Have you the sailing directions?

19027. (*The Attorney-General.*) Yes. (*To the Witness.*) Now, Mr. Ismay, according to what you have told us and what we have heard during the course of this Enquiry as to

encountering field ice, had you been told during the course of this voyage that you would encounter field ice within 24 hours, that would have shown the necessity for extreme caution? - Certainly.

19028. And you know, do you not, from what you have told us that when Captain Smith handed you the Marconigram just about lunchtime, as you say, which had been received from the "Baltic," that did indicate quantities of field ice in the track along which you were travelling? - About on the track, I think.

19029. So that you see the result of that would be that information was given by this wireless telegram that you would certainly within less than 24 hours be encountering field ice if you pursued the same course? - I believe that is so.

19030. So far as you were concerned, did it strike you as a serious thing that you would encounter field ice? - No, I do not think it did.

19031 I do not quite understand why not. That is what puzzles me. According to your view the encountering of field ice was a very serious matter? - The only thing for the Commander to do would be to take steps to avoid the field ice.

19032. I agree? - Therefore, it did not concern me.

19033. You thought that your Commander would take steps to avoid it? - Certainly.

19034. And to keep off that track? - I thought he would take steps to avoid it. 19035.

And to keep off that track along which he would meet it? - If he thought it necessary to do so.

19036. But if he thought he would meet field ice along that track would you expect him to take steps to avoid meeting it? - Certainly.

*The Commissioner:* In fact, this steamer never did encounter field ice. *The*

*Attorney-General:* Which steamer?

*The Commissioner:* The "Titanic."

*The Attorney-General:* No, but she had the report.

*The Commissioner:* Oh, she had the report, but in fact, she never encountered any; she encountered an iceberg.

*The Attorney-General:* Yes, she came into collision with an iceberg.

*The Commissioner:* As far as I know, she never encountered field ice.

*The Attorney-General:* No, but the evidence is there were a good many icebergs seen in the morning; so that apparently they were coming across the track. *The Commissioner:* That is something quite different from field ice.

*The Attorney-General:* I do not wish to argue it now, but your Lordship sees that there is a report of it, and a question of what he should do. Whether he encountered it or not is of importance later on. I quite appreciate what your Lordship means. The only evidence of field ice is from the "Californian," I think. *The Commissioner:* And the "Mount Temple." *The Attorney-General:* Yes.

*The Commissioner:* And I am told the "Mesaba" too.

*The Attorney-General:* Yes, that is wireless - I was not thinking so much about that. There is a little difficulty about the "Mesaba." We are not relying upon it so far, because we have not proved it satisfactorily.

*The Commissioner:* At present my view is that the "Mesaba's" message never reached them at all.

19037. (*The Attorney-General.*) We are not referring to it for that reason. (*To the Witness.*) The only thing I want to ask you about this is: When you realised that this was a serious matter - that you would be, according to this telegram, encountering field ice within less than 24 hours, did you say nothing to the Captain at all about it? - I did not.

19038. Not ask him whether he was going to change his course? - No.

19039. Nor he to you? - No.

*The Commissioner:* Will you tell me what the danger would be with a vessel of this size going at this speed if she encountered field ice as distinct from an iceberg? Would there be any serious danger?

*The Attorney-General:* I should have thought so.

*The Commissioner:* I do not know. I am asking because I should think when you approach field ice it is probably not so compact as it is in the middle of it. You see what I mean?

*The Attorney-General:* Yes, you may have loose places before you get into the field.

*The Commissioner:* Yes, I doubt whether there is anything like the danger in running into the edge of field ice which there is in running up against an iceberg.

19040. (*The Attorney-General.*) Well, my Lord, there are those with your Lordship who can answer that better than I can. I should have thought it was a very serious matter. There are various dangers which occur when a ship once gets amongst ice, all round it, even though it does not happen to be compact. (*To the Witness.*) When the "Baltic" telegram was brought to you and handed to you by the Captain, it follows from what you have already told us, Mr. Ismay, that nothing was said; in point of fact, there were passengers to whom you were talking when the Captain passed, were there not? - Yes. 19041. So that unless he meant to convey to passengers the information that was in that telegram, in the ordinary course he would hand it to you for you to read for yourself and not to say anything about it? - Yes.

19042. That would explain, no doubt, why he said nothing when he handed the telegram. But what I am asking you about now is later than that, some hours later; I think you told us something like 7 or a quarter-past, when you were in the smoking room he asked you for the telegram which had been in your pocket all the time? - He did. 19043. As I follow you, you had not had any conversation with him between those times or at that time? - No.

19044. You simply handed him back the telegram? - That is all.

19045. If I understand rightly what you have said this morning, leaving it to him to take such precautions as he thought right as the person responsible for the navigation of the ship? - Absolutely.

19046. You thought that he would take precautions? - Naturally.

19047. But what they were you left to him? - Absolutely.

19048. There is just one question I wanted to ask you about the speed. Was the "Titanic" built to go about the same speed as the "Olympic"? - About the same, perhaps a little bit better.

19049. A little bit better than the maximum of the "Olympic"? - That is what was expected.

19050. I asked you some questions about this, and you were not able to give me definite information as to what the maximum speed was that you thought you would get from the "Titanic"? - No, I could not say.

19051. But I see that you were able to tell the Court in America what the maximum speed you expected of the "Olympic" was. I just call your attention to it; you may not remember it. Senator Fletcher put to you this question: "You say you expected in the 'Titanic' the same speed that the 'Olympic' had, but you did not mention that speed?" And your answer was: "I should call the 'Olympic' a good 22-knot ship. She can do better under very favourable circumstances; I think she can work up to 22½ or perhaps

22¾ as a maximum"? - I think that is about right.

19052. And the "Titanic"? - We were hoping that she would do a little bit better than that.

19053. A quarter of a knot, do you mean? - Yes, something like that, a little bit better, so we were told by our shipbuilders.

19054. According to that, then, if she was going 22 knots, that, at any rate, would be within a

#### **Page 464**

knot of her maximum speed in favourable circumstances? - I should think so.

19055. I think there is only one other matter I want to ask you about. You knew, I presume, that you had not boats sufficient on the "Titanic" to accommodate all the passengers and crew? - Yes.

19056. So that I mean, supposing all your boats did leave the "Titanic" fully loaded, there still must have been a considerable number of passengers and crew left on the ship?

- Yes.

19057. And, indeed, your boat accommodation was not sufficient to take off all the passengers, without the crew, was it? - I believe not.

19058. (*The Attorney-General.*) I do not know whether your Lordship remembers the figures. It is 1,178 they could carry, all told, and in fact, she carried 1,316 passengers and 892 crew. The object of these questions I am putting to you, Mr. Ismay, is to draw your attention to this, that at any rate when the last boat left the "Titanic" you must have known that a number of passengers and crew were still on board the vessel? - I did.

19059. And you have told us that you did not see any on the deck? - I did not. 19060. At least, I think you limited that to passengers; I am not sure you were asked about the crew? - There were no passengers on deck.

19061. And you said also that you did not see any as the boat was lowered? - I did not.

19062. I am not sure whether you said it in answer to the Court, or whether it is only in the statement I have got from you, but at any rate that was your view; as the boat was lowered and you passed the decks you did not see any passengers on the decks? - I did not.

19063. Where were the passengers then? - I can only suppose the passengers had gone to the afterend of the ship.

19064. Do you mean you would not be able to see them, as your collapsible being just afore the foremost funnel you would not be able to see what was happening on the afterpart of the ship. Is that what you mean? - Yes.

19065. That is where you would expect them to be? - I presume they went there. I was really not thinking about it.

*Sir Robert Finlay:* Then I put in the letter of instructions.

19066. (*The Commissioner.*) I want to ask a question before the witness goes. (*To the Witness.*) Have you made any Enquiry as to whether any other liner was following this track in the direction of America during this day? - I have not.

19067. Has anyone made any such Enquiry? - I do not know.

*The Commissioner:* Has such Enquiry been made, do you know, Sir Robert?

*Sir Robert Finlay:* I am told, my Lord, there were others following it up.

*The Commissioner:* Following the same track?

*Sir Robert Finlay:* I am told so, my Lord.

*The Commissioner:* I should very much like to know what those steamers were and whether they received similar warnings to that received from the "Baltic," and at what speed they were travelling?

*Sir Robert Finlay:* We will endeavour to get all that information for your Lordship.

19068. (*The Commissioner - To the Witness.*) Have you a note of any Enquiry as to whether, upon the receipt of warning as to ice, the German liners or the French liners slow down? - I have no knowledge what they do, my Lord.

19069. Can any information of that kind be obtained as to the practice of these large liners when they receive notice of the existence of ice? - We could ask for the information, my Lord.

19070. Do you think you could get it? - I am afraid not, my Lord.

*Sir Robert Finlay:* I might suggest, my Lord, that the Board of Trade would probably be able to insist upon the information from British ships as to following this line, according to our information, and what warnings they got, and so on, and I have no doubt if the Board of Trade were to apply they would get the information from the foreign lines which your Lordship has mentioned. I think the Board of Trade can do more than we can.

*The Commissioner:* I would just say that if Mr. Ismay or his Company were to ask for the information, it might not be readily granted, but I think if the Board of Trade asked for it, it would be supplied.

*The Attorney-General:* I said some time ago that your Lordship should have it when you asked the question some days ago.

19071. (*The Commissioner.*) Very well. (*To the Witness.*) Now can you tell me, from the information you have got, in your opinion, how many of the watertight compartments were injured, that is to say, broken into, by the collision? - I think there was water in the first four compartments, from the evidence I have read.

19072. Not the first six? - I am not including the forepeak.

19073. Then if you included the forepeak, it would make five? - Yes.

*The Commissioner:* Mr. Asquith, will you just point out on the plan where the actual injury to the ship was - how far aft it occurred?

*Mr. Raymond Asquith:* The five compartments.

*The Commissioner:* Yes, counting the forepeak as one.

*Mr. Raymond Asquith:* To *there*, counting the forepeak as one - that is to say, to No. 6.

*Sir Robert Finlay:* But there was some water in No. 6.

*The Attorney-General:* Yes.

*The Commissioner:* I thought, Mr. Attorney, that the evidence was that there was water coming in in No. 6.

*The Attorney-General:* Certainly, my Lord, that is quite right, and I may also say that we have evidence that water was coming into No. 5. Your Lordship will remember that when they came along after fetching the suction pipe from the aftermost funnel they came along, and then when they got to the aftermost door of No. 5, separating No. 4 from No. 5, that they stopped there because they knew that there was water in No. 5. We have direct evidence on that, too. That is how it stands. May I call your Lordship's attention to one piece of evidence which I think has hitherto escaped particular observation, because our attention was not directed to this point, but it is not right to say that the evidence has only established that there were icebergs in the morning when day broke - on the morning of the 15th, that is.

*The Commissioner:* No, I am aware of that. *The*

*Attorney-General:* That is on the track.

*The Commissioner:* Yes, that is on the track, but I was speaking about ice having been seen on the track before the collision. None was seen, as I understand. *The Attorney-*

*General:* Your Lordship means none was seen by the "Titanic."

*The Commissioner:* Yes, by the "Titanic."

*The Attorney-General:* No, I agree on account of the iceberg, which was the first thing.

***(The Witness withdrew.)***

*Sir Robert Finlay:* Now, my Lord, there are some portions of those documents I have put in which I should desire to read.

*The Commissioner:* If you please.

*Sir Robert Finlay:* A good deal may be omitted, but the first is the letter of instruction given to the Commander on his appointment to the vessel. "In placing the steamer. . . temporarily under your command, we desire to direct your attention to the Company's Regulations for the safe and efficient navigation of its vessels, and also to impress upon you in the most forcible manner the paramount and vital importance of exercising the utmost caution in the navigation of

**Page 465**

the ships, and that the safety of the passengers and crew weighs with us above and before all other considerations. You are to dismiss all idea of competitive passages with other vessels, and to concentrate your attention upon a cautious, prudent and ever watchful

system of navigation which shall lose time or suffer any other temporary inconvenience rather than incur the slightest risk which can be avoided. We request you to make an invariable practice of being yourself on deck and in full charge when the weather is thick or obscure, in all narrow waters and whenever the ship is within sixty miles of land; also that you will give a wide berth to all headlands, shoals and other positions involving peril, that, where possible, you will take cross bearings when approaching any coast, and that you will keep the lead going when approaching the land in thick or doubtful weather, as the only really reliable proof of the safety of the ship's position." Then there is a paragraph about "The most rigid discipline on the part of your officers must be observed, and you will require them to avoid at all times convivial intercourse with passengers or each other; the crew must also be kept under judicious control and the look-out men carefully selected and zealously watched when on duty, and you are to report to us promptly all instances of inattention, incapacity, or irregularity on the part of your officers or any others under your control. Whilst we have confidence in your sobriety of habit and demeanour, we exhort you to use your best endeavours to imbue your officers and all those about you with a due sense of the advantage which will accrue, not only to the Company, but to themselves, by being strictly temperate, as this quality will weigh with us in an especial degree when giving promotion. The consumption of coals, water, provisions, and other stores, together with the prevention of waste in any of the departments, should engage your daily and most careful attention, in order that you may be forewarned of any deficiency that may be impending, that waste may be avoided, and a limitation in quantity determined on, in case you should deem such a step necessary, in the interest of prudence." Then I do not know that I need read the next two paragraphs, but will pass to the next over the page: "We have alluded, generally, to the subject of safe and watchful navigation, and we desire earnestly to impress on you how deeply these considerations affect not only the well-being, but the very existence of this Company itself, and the injury which it would sustain in the event of any misfortune attending the management of your vessel, first from the blow which would be inflicted to the reputation of the Line, secondly, from the pecuniary loss that would accrue (the Company being their own insurers), and thirdly, from the interruption of a regular service upon which the success of the present organisation must necessarily depend. We request your cooperation in achieving those satisfactory results which can only be obtained by unremitting care and prudence at all times, whether in the presence of danger, or when, by its absence, you may be lured into a false sense of security; where there is least apparent peril the greatest danger often exists, a well-founded truism which cannot be too prominently borne in mind." The passage about the Company being their own insurers was strictly accurate when this letter was drafted. Since then they are insured not wholly but partially.

*The Commissioner:* They are still their own insurers up to a large amount.

*Sir Robert Finlay:* Yes. Then the annexed letters are of importance. "On the 22nd June, 1898, we addressed the following letter to each of the Commanders in the Company's service, to which we desire to call your particular attention." Then I need not read the first paragraph, I think, which refers to what has happened to one of the Company's steamers, and I go on to the next page: "We desire to avail ourselves of this opportunity to call once more to the minds of the Company's Commanders the terms of their letters

of appointment, in which they are requested to dismiss all idea of competitive passages and concentrate their attention upon a cautious, prudent, and ever-watchful system of navigation which should lose time or suffer any other temporary inconvenience rather than incur the slightest risk that can be avoided. As far as lies in our power in the selection of Commanders and officers (on whom we wish you to impress as strongly as possible at an early opportunity these views and urgent representations), the extra staff put on board, payment of bonuses, in warnings given and repeated by the adoption of specific tracks, although the voyage is thereby lengthened, by the acceptance of all risks of insurance of hull, passage money, and freight, and frequently on cargo, and by a liberal expenditure in all departments we do all we can to render the navigation of the Company's steamers as safe and efficient as possible, and we need scarcely point out that life and property are too often sacrificed because at an important juncture plain and simple precautions in the direction of safety are not observed. The safety of all those on board weighs with us beyond all other considerations, and we would once more impress upon you and the entire navigating staff most earnestly that no risk is to be run which can be avoided by the exercise of caution, and that upon this the question of watchful and safe navigation are dependent for the well being of the Company and their and their own professional career, and that it is only to be achieved by the exercise of care and prudence at all times, and under all circumstances, and by choosing, whenever a doubt exists, the course that tends to safety." Then there is another annexed letter; this is about land, I think, and I do not think I need to read it. Then, my Lord, the instruction which were stuck up in the chart room, which I have already handed up to your Lordship, are these - it is the bill which was stuck up in the chart room: "White Star Line. The Managers are desirous of impressing upon Commanders the importance of strictly adhering to the Company's Regulations, and attention is particularly called to the following points: (1) The vital importance of exercising the utmost caution in navigation, *safety outweighing every other consideration*. (2) *Over-confidence*, a most fruitful source of accident, should be specially guarded against. (3) It cannot be too strongly borne in mind that any serious accident affects prejudicially not only the welfare of the Company, but also the prospects and livelihood of the Commanders and Officers of the ships; and, as every consideration is shown to those placed in positions of responsibility, the Company relies upon faithful and efficient service being given in return, so that the possibilities of accidents may be reduced to a minimum. The Company assumes the entire risk of insurance on its vessels, their freights, and on a considerable portion of the cargoes carried by them; whilst the large sum which is paid annually to its officers as a bonus for absolute immunity from accident is additional evidence of anxiety to subordinate all other considerations to the paramount one of *safety in navigation*. (4) No thought of making competitive passages must be entertained, and time must be sacrificed or any other temporary inconvenience suffered rather than the slightest risk should be incurred." Then there is a paragraph which relates to the use of the lead: "Commanders should be on deck and in full charge during thick weather, in narrow waters, and when near the land," and then are set out articles, "Regulations for preventing collisions at sea," and then this: "The Regulations as to inspection of watertight doors, and fire and boat drill are to be carefully observed; rigid discipline amongst officers maintained, and the crew kept under judicious control. Convivial intercourse with passengers is to be avoided." Then, my Lord, in the Ship's

Rules there are few passages that I desire to call attention to. The first is in the Article which is opposite page 11; it is stuck in opposite Article 17. "Sea Watches - Regular sea watches must be kept from the time the ship leaves the port of departure until she reaches the port of arrival. The watches are to

## **Page 466**

be equally divided, and the ship is never to be left without an officer in charge of the bridge. When the Officer of the Watch believes the ship to be running into danger it is his duty to act at once on his own responsibility, at the same time he is immediately to pass word for the Commander. The Chief, First and Second Officers are never to give up charge of the bridge during their respective watches unless with the express permission of the Commander." I do not know that I need read the rest of that article. Then on pages 18 and 19 there is this passage, "Responsibility." It is headed "The Commander," at the bottom of page 18. "Responsibility - (A.) Commanders must distinctly understand that the issue of these Regulations does not in any way relieve them from responsibility for the safe and efficient navigation of their respective vessels, and they are also enjoined to remember that they must run no risk which might by any possibility result in accident to their ships. It is to be hoped that they will ever bear in mind that the safety of the lives and property entrusted to their care is the ruling principle that should govern them in the navigation of their vessels, and that no supposed gain in expenditure or saving of time on the voyage is to be purchased at the risk of accident. The Company desires to maintain for its vessels a reputation for safety, and only looks for such speed on the various voyages as is consistent with safe and prudent navigation." Then (b) relates to entry into ports, and information being got as to vessels that they were likely to meet. Then (c) is: "Commanders are reminded that the steamers are to a great extent uninsured, and that their own livelihood, as well as the Company's success, depends upon immunity from accident; no precaution which ensures safe navigation is to be considered excessive." Then page 28: "Responsibility" "The Chief Officer is held jointly responsible with the Commander for the safe and proper navigation of the steamer, and it shall be his duty to make a respectful representation to the Commander if he apprehends danger when his responsibility shall cease. Any neglect in this respect will not be excused." Then page 32: "Officer of the Watch - 252 - Duties (A.) He must remember that his first duty is to keep a good look-out, and avoid running into danger, and though it is desirable to obtain the position of the ship as often as possible, he must on no account neglect his look-out to do so. He must also preserve order in the ship. (b) He must not alter the course without consulting the Commander, unless to avoid some sudden danger, risk of collision, etc. (c) When he believes the ship to be running into danger it is his duty to act at once upon his own responsibility, at the same time he will immediately pass the word to call the Commander. (d) When it is his duty to alter the course for some approaching or crossing vessel, he must do so in plenty of time, signify by sound signals such alteration, and give such vessel a wide berth. (e) He must call the Commander at once if it becomes foggy, hazy, if he does not think he can see a safe distance, or if in doubt about anything. (f) He is expected to make himself thoroughly conversant with the usual Channel courses, and to be thoroughly posted in the run of the ship. Any doubt he may have as to the safety of

the position of the ship, or of the course steered, he will immediately express to the Commander in a respectful manner." - Then there is pasted in on that page opposite Article 254 - "Look-outs." "All Quartermasters and, as far as possible, the regular lookout men in the Company's various services, must hold a Board of Trade certificate of examination of their eyesight." I do not think there is anything more that I need read.

**HAROLD ARTHUR SANDERSON, Sworn.**

**Examined by the SOLICITOR-GENERAL.**

19074. Are you a member of the firm of Messrs. Ismay, Imrie and Company, the Managers of the White Star Line? - I am.

19075. And are you also a Director of the Oceanic Steam Navigation Company, Limited, of Liverpool, who are the owners of the steamers? - That is so.

19076. How long have you been associated with the White Star Line? - About 17 years.

19077. As we know, the "Titanic" and the "Olympic" were the two latest steamers of that line? - That is so, yes.

19078. I think you produce a little diagram like *that*, do you not? - I do. It is instructive of the progress of the Company in regard to the size of its ships.

19079. It is just to show, as I understand, how your fleet has tended to consist of vessels of an increasing size? - That is the intention.

19080. (*The Solicitor-General.*) Your Lordship will see on the extreme right hand the largest outline, which is labelled "Olympic," "Titanic," the two being substantially the same. (*To the Witness.*) Are the details on the little table I have in my hand, the black table, supplied from the White Star Company, and are they accurate? - They are accurate, yes.

*The Solicitor-General:* Your Lordship will see towards the top of this little table, "Average speed, knots per hour."

*The Commissioner:* Yes.

19081. (*The Solicitor-General.*) What I was calling attention to, as Mr. Sanderson says the particulars are supplied by the White Star Line, was the "Average speed, knots per hour," which is a heading for a line which runs across at the top immediately above the line entitled "When built," and I see, Mr. Sanderson, that "average speed, knots per hour" which you put down for the "Titanic" is 21 knots? - That is inaccurate, and arises in this way. That information was given at the time the ship was under construction. While she was under construction a new system of propulsion, a combination of turbine and reciprocating engines, was adopted for the ship, and when adopted, with her 21 to 21 1/2 knots, which is what we anticipated, she proved to be considerably faster. 19082. Does what you have just told us apply both to the "Olympic" and the "Titanic"? - That is true of both ships.

19083. Was the "Olympic" also under construction when this table was compiled? - I think it is probably so; I cannot recall the exact occasion when that was framed or the name of the vessel. Both the ships were ordered at the same time, and I have no doubt

that that 21 knots was put in before the results of the "Olympic's" and the "Titanic's" new system of propulsion had been ascertained.

*The Commissioner:* It seems to me to indicate that it may be a little more or it may be a little less.

*The Solicitor-General:* It would indicate that if the ship was going more than 21 knots she was going in excess of her average speed. Now, my Lord, I think the facts about Messrs. Harland and Wolff will come more conveniently from Mr. Wilding, and I will not delay about that. I think the shortest and simplest way of dealing with Mr. Sanderson would be to refer him to the subject matter of some of these questions in order that your Lordship may be sure you have got the information from him as far as he is able give it. There has been a print of them, my Lord (*handing up the same*).

*The Attorney-General:* I think it would be very convenient, as we are approaching the time at which these will involve your Lordship's consideration, that we should have them not printed as they are here, but on a double page, so that you will not have to turn back, and then your Lordship will be supplied with them.

## **Page 467**

19084. (*The Solicitor-General - To the Witness.*) Have you got a copy? - I had a copy; I have not one before me at the present moment.

19085. You had better have one (*Handing the same to the Witness*). The first question had to do with the total number of persons on board, passengers, and so on. The figures which the Attorney-General opened were figures which had been supplied by the White Star Line to the Board of Trade, and I may take it, may I not, that they are correct? - They are correct.

19086. And the convenient thing, I think, will be to have printed on the Shorthand Note in a tabular form those figures. I will hand it up, if I may, for your Lordship to see the form in which the figures are, and if your Lordship agrees I will have them printed on the Shorthand Notes.

*The Commissioner:* Very well.

*The Solicitor-General:* They show the division of the passengers according to class and according to sex, and according as to whether they are children or adults, and they give the number saved out of the totals, and the percentages, and then they give the number of the crew.

*The Commissioner:* Have you several of these?

*The Solicitor-General:* At the moment, I have not, but I will see they are put upon the Notes.

*The Attorney-General:* I have just asked that that should be done, and given in in larger type.

19087. (*The Solicitor-General - To the Witness.*) We may take it that those figures are correct? - They were carefully compiled.

19088. (*The Solicitor-General.*) That will give your Lordship the material, I think, for the first question. Then the next one, Mr. Sanderson, has to do with whether the "Titanic"

complied with the requirements of the Merchant Shipping Act when she left Southampton. She is given, I think, a passenger certificate? - She was.

19089. When we call the Board of Trade witness we will go into it more in detail, but there is a copy of it (*handing in the same*). It is a certificate which shows that she is certified for 905 First class Passengers, 564 Second Class, 1,134 Third Class, and a crew of 944, making a total of 3,547? - I believe that is correct.

19090. I will just hand that in to my Lord, and I will call attention to one thing in passing, about it. That certificate shows that the total passengers and crew for which the certificate was issued, was 3,547? - Yes.

19091. Whereas your first table shows the total passengers and crew that were carried was 2,206? - Yes.

*The Commissioner:* What is the difference?

19092. (*The Solicitor-General.*) The difference is 1,300, the exact difference is 1,341. And in addition to that passenger certificate, Mr. Sanderson, was the ship duly certified by the Board of Trade officials before she left for this particular voyage? - That is true.

19093. We will ask the Board of Trade witnesses in detail about that, but it is so no doubt. I do not think there is anything that this gentleman would wish to say about No. 3. We have had some evidence, and Mr. Wilding will give the details. *The*

*Commissioner:* Look at No. 2. The Attorney-General opened what the requirements of the Board of Trade were, and stated what the requirements of the American Rules with regard to either emigration or immigration were also. Now I want to know what that means - what are those figures?

*The Solicitor-General:* We had intended to give your Lordship that information in one statement along with the other Board of Trade information. This witness may be able to tell your Lordship something about it. I cannot tell you in detail about it now.

*The Commissioner:* I see what the Attorney-General's information is from; it is from the description furnished by Ismay and Company or by the Oceanic Steamship Company on the construction of the ship.

*The Solicitor-General:* Harland and Wolff.

*The Commissioner:* Yes, Harland and Wolff, and I think the Attorney-General's statement is almost taken verbatim from that statement.

*The Solicitor-General:* I have no doubt of it.

19094. (*The Commissioner.*) I want to know from you, Mr. Sanderson, if you can tell me what are these American Rules with regard either to emigration or immigration - I understand it ought to be immigration. What are those rules? - Up to a short time ago the United States Government had passenger regulations which in some respects differed from those framed by the Board of Trade. Considerable confusion arose as a consequence, and the two Governments eventually got together and arrangements were made whereby the United States Government agreed to accept for the purpose of their passenger inspection the Regulations of the Board of Trade, so that in complying with the Board of Trade Regulations now for a passenger ship we automatically comply with the United States Regulations.

19095. First of all, do the Board of Trade Regulations deal with the question of boats? - Yes.

19096. Then am I to understand that the existing American arrangements or regulations are identical with our Board of Trade requirements? - I do not think I can say that, because they have regulations of their own.

19097. But are they identical so far as the question of boats is concerned? - I do not think I can say that, my Lord, because if we had to comply with those regulations, there would be possibly some differences, but in fact they have accepted the Board of Trade Regulations as being sufficient. They still maintain their own for countries with which they do not have this reciprocal arrangement.

19098. I think I understand you. So far as the "Titanic" was concerned it did comply with the American Government's requirements in the matter of boats? - Yes, my Lord. *The Commissioner*: Do you think that is right, Mr. Solicitor?

19099. (*The Solicitor-General.*) I understand so, my Lord. You have seen the Passenger Certificate; for the moment I am only calling attention to the number of passengers and crew. Now that, my Lord, your Lordship will find when we call our Board of Trade evidence, is in its turn based upon a certificate given by a Board of Trade official in Belfast, Mr. Carruthers, and it is right, I think, that Mr. Sanderson should just have the substance of it put to him, because it shows how the ship comes to satisfy the Board of Trade. The certificate of Mr. Carruthers (I will just read it) is on the 2nd April, 1912. He says he completed the inspection of the steamship "Titanic." He says that the hull and machinery were sufficient for the service intended, and in good condition. He says "that the boats and life-saving appliances, lights, signals, compasses, safety valves, and firehose are such and in such condition as are required by the Merchant Shipping Acts." He says, "that the hull and machinery and equipments will in my judgment be sufficient until (b) 2nd April, 1913." That is to say, they will for 12 months be sufficient. He says, "That the load to be placed on the safety valves should not exceed the pressure in pounds per square inch on page 4 of this form, and that the safety valves have been adjusted accordingly. That the vessel, as regards hull, machinery, and equipments, is in my judgment fit to ply as a foreign-going passenger steamer. That the vessel is in my judgment fit to carry the number of passengers stated on page 2 of this form," and when one turns to page 2 of this form, one finds that the total number of passengers is 2,603, which added to the 944 of crew gives that same figure of 3,547 which is in the Passenger Certificate. That is where it comes from. Then he also says, "That the certificates of the Master, Mates, and Engineers are such as are required by the Merchant Shipping Act." Your Lordship has this form before you, and it is on that, that the Passenger Certificate is issued if your Lordship will look at the last page, it is the right hand of those two pages, and the reference back to page 2 of the form will show your Lordship that he certifies for passengers. What I have handed up to your Lordship last is the survey, which justifies the certificate for a passenger ship. Now, this ship, I think, Mr.

## Page 468

Sanderson, passed not only as a passenger ship, but as an emigrant ship? - She did.

19100. And for the purpose of showing it satisfies the Board of Trade that it is an emigrant ship is there a separate document? - Yes, there is.

*The Solicitor-General:* The Attorney-General points out to me that that Report of Survey ought also just to be handed in, in order that your Lordship may see it, because it is more stringent. (The Report was handed in.) I will hand up the Attorney-General's copy, if I may.

*The Commissioner:* What is the date of it?

19101. (*The Solicitor-General.*) The certificate is dated the 12th April, 1912, and is signed by Mr. William Tillar. This is the report of the survey of an emigrant ship - some of the material is the same. If your Lordship will turn to the third page you will see it is headed, "Reports by Board of Trade Officers," and No. 1 is: "A passenger certificate is in force for this vessel, and no damage to the hull or engines has been reported since its issue, I am satisfied that the hull, boilers and machinery are in good condition and fit for the voyage." Your Lordship will see that there is a reference in the margin to the document we just looked at before. Then No. 2 refers to the distilling apparatus, there is no point about that, and No. 3 refers to the fresh water on board, which is certified to amount to so many gallons. Then No. 4 is: "The coal on board is certified to amount to 5,892 tons, which is sufficient to take the ship to her next coaling port." Then No. 5 is the important one: "I have inspected the boats and their equipments, and have seen 16 swung out and lowered into the water. The lifebelts are in order and are conveniently placed. The distress signals and their magazine and the other equipments comply with the regulations and are to my satisfaction." That is signed by Mr. Carruthers on the 3rd of April, 1912. Then the 6th is: "The various steerage compartments comply with the regulations as regards light, air and ventilation, and measurement for the numbers for which they are fitted. No cargo is stowed so as to affect the health or comfort of the steerage passengers." And the 7th is: "I have inspected the provisions which are sufficient for 1,150 adults; and the quality of the provisions and water for the passengers and crew is entirely to my satisfaction." Then the 8th is: "I have inspected the medical stores, and they comply both as to quality and quantity with the Regulations, and are to my satisfaction." Then, my Lord, turning over to the back of the page, I do not think No. 9 matters, but No. 10 says: "I was on board this ship immediately before she sailed. I saw two boats swung out and lowered into the water. From the foregoing reports of inspection, and from what I saw myself, I was satisfied that the ship was in all respects fit for the intended voyage, and that the requirements under the Merchant Shipping Acts have been complied with." That is the Certificate of Captain Clarke, of Southampton. Then last of all the report says: "I have satisfied myself that everything on board this vessel is in order, and have issued the necessary Certificate for Clearance." (*To the Witness.*) And it is the Certificate of Clearance which would enable the ship to sail, I imagine, Mr. Sanderson? - That is true.

*The Solicitor-General:* Of course, your Lordship appreciates that we will call the Board of Trade people about it, but it is well for your Lordship to see this now.

*The Commissioner:* What does Mr. Tillar's note certify?

*The Attorney-General:* He is a Surveyor, my Lord, of the Board of Trade.

*The Commissioner:* But what does he certify to?

*The Solicitor-General:* He is Captain Tillar. He is the Principal Officer of the Board of Trade (this Department) in Ireland, and I understand his signature is a covering signature,

the details or the headings having been certified by one or other of these officials, who are subordinate to himself.

*The Commissioner:* He cannot say anything about what happened at Southampton?

*The Solicitor-General:* No.

*The Commissioner:* All these different matters are certified to by different people, and then Mr. Tillar's name, whose name does not appear among the persons who certify, comes in at the end, and I want to know what he does, whether he does anything. Tillar may not have seen the ship at all.

*The Solicitor-General:* I think that is the position, my Lord. He really certifies that he has got all this previous information, each paragraph of which is docketed with its appropriate name. Perhaps I may just give your Lordship the reference, in order to get it on the note, to the definition of "emigrant ship" and "passenger ship." It is not necessary to trouble you to look at it now, but an emigrant ship is defined in the Merchant Shipping Act, in section 268: "The expression 'emigrant ship' shall mean every sea-going ship, whether British or foreign, and whether or not conveying mails, carrying upon any voyage to which the provisions of this part of this Act respecting emigrant ships apply, more than 50 steerage passengers or a greater number of steerage passengers than in a certain proportion." (*To the Witness.*) And of course you were carrying in this vessel steerage passengers, and she was therefore an emigrant ship for the purposes of this Act? - Yes.

*The Attorney-General:* My Lord, at a convenient time what I propose is to put in an abstract of all those sections in the Merchant Shipping Act which have any relation whatever to the subject matter of this Enquiry. I have got it now. You can do it in quite a convenient form. We will have that done, so that it may be handed to the Court and the Assessors.

19102. (*The Solicitor-General.*) Of course I am coming back to the boats, but subject to that we can pass from those documents now. I am now going to 3. (*To the Witness.*) Now, correct me if I am wrong. Just look at 3. Mr. Wilding, I understand, is going to give evidence about design and construction. Is there anything you want to say about 3? - I could only help you with regard to 3 by indicating under the heads the features which we look upon as the special features in this ship. Mr. Wilding, for the builders, could give you the details, which will probably be much more valuable.

19103. Can you give me in a couple of sentences what you say the special features are to which you attach importance, and leave Mr. Wilding to explain them in detail? - Very well. I should mention that she had a specially powerful wireless installation, long distance. She was built with an unusual number of watertight bulkheads, 15 in all; those bulkheads were of special construction, carried up as much as possible in one fair line, and they were built in excess of the requirements of Lloyd's. The plating and connections were also of special strength, and in excess, I am told, of what Lloyd's requirements would have been. She had a double bottom, which was carried nine-tenths of the way; that double bottom was divided for the midship section of the ship into four tanks athwartships, and the rest of the distance into two tanks athwartships; and the double bottom, instead of terminating at the bottom of the bilge, which is

- ordinarily the case, was carried up to the top of the bilge. In regard to the wireless installation, she had got the power for that from three different sources; in the first place, from the ordinary electric light plant; in the second place, from an emergency plant which could be put in use if the ordinary electric light plant in the engine room were flooded; and, in the third place, she had storage batteries in the Marconi Room. The pumping arrangements were exceptional, each boiler compartment having its own equipment, which is quite an unusual thing of the kind. I think I have now indicated the special features.
19104. That indicates in general language the points, and Mr. Wilding will deal with them when he comes? - Yes, I think that would be better.
19105. Now the fourth question is about the officers, which I want to ask you about in some little detail. We will come to the boats in a moment. The fourth question is, "Was the 'Titanic' sufficiently and efficiently officered

## Page 469

- and manned"? Captain Smith - what was his standing in your service? - He was our senior commander; he had been in the service since 1880; he had been a commander since 1887; he was an extra master; he was a retired Commander in the Royal Naval Reserve, and a man in whom we had special confidence; otherwise, he would not have been in the position.
19106. Then the three senior officers, I think, also held an Extra-Master's certificate? - They did.
19107. Were the officers in the Naval Reserve? - I think they all were.
19108. And had been in your service some years? - Yes.
19109. And I see at the end of the fourth question there is a question about charts. You produce, do not you, the report of Captain Smith before he sailed on this voyage? Let me just hand that up to you (*Handing same*). Is that his report to your Company before this ship sailed from Southampton? - Yes; it is written from Southampton. 19110. What is the date of it? - It is dated the 10th of April.
19111. It is quite a short report. Just read it, will you? - "I herewith report this ship loaded and ready for sea. The engines and boilers are in good order for the voyage, and all charts and sailing directions up-to-date. - Your obedient servant, Edward J. Smith."
19112. (*The Commissioner.*) The sailing directions were those books to which reference was made this morning? - No doubt he refers to what is usually supplied by the Marine Superintendent for the purpose of navigation on board the ship.
19113. (*The Solicitor-General.*) The only other thing is the watches. I had better just give your Lordship the reference. It is the first page, I think, in the Report. Just turn to page 10. (*To the Witness.*) Just a question about the watches. There is a question the Court is asked to answer, whether the watches of the officers and crew were right and proper. I see on page 11 there are set out what the senior officers' watches are to be, and the junior officers' watches? - That is true.
19114. We have had some evidence about it from Lightoller. So far as you know, was the usual course followed? - It was.

19115. Now we go to No. 5; that is boats. Just give us the evidence. What is the number of boats of any kind on board the "Titanic," and then I am going to ask about their carrying capacity and so on? - She had 14 lifeboats of large size, two what we call working boats or emergency boats, making 16, and 4 Englehardt boats - collapsible boats. 19116. The Board of Trade Regulations distinguish between boats carried under davits and boats which are not? - Yes, they do.

19117. Of those, I think, the 16 were carried under davits? - Yes.

19118. The 14 lifeboats and the two emergency boats? - Yes.

19119. Let us first take the 14 lifeboats. What number of persons was each of those lifeboats to carry - the capacity? - 65.

19120. And what is the number of persons for each of the two emergency boats? - 40.

19121. And for each of the four Englehardt's? - I believe the Board of Trade passes them for 47.

19122. I will just take those three figures: 14 lifeboats, each carrying 65, gives 910 persons; 2 emergency boats, each carrying 40, gives 80; and 4 Englehardt boats, each carrying 47, gives 188, and that is a total of 1,178? - That is correct.

*The Attorney-General:* May I just say, my Lord, to avoid confusion that your Lordship will remember in opening I gave according to our calculation the figure of 1,167. My learned friend, Mr. Laing, said they made it 1,178, and I said, well, I will accept that view, it was not worth discussing, and I think probably they are right; 1,178 was therefore the figure to be substituted.

*The Commissioner:* Yes.

19123. (*The Solicitor-General.*) Now I want, with your help, Mr. Sanderson, just to compare these figures with the Board of Trade requirements, although of course the detail about them will be put to the Board of Trade witnesses. Have you got before you what the capacity in cubic feet of these boats is? You have mentioned the number of persons they carry, namely, 1,178. What is the total capacity in cubic feet? - 11,325 cubic feet. *The Solicitor-General:* My Lord, as regards some of the boats the Board of Trade

Regulation requires 10 cubic feet for each person. As regards the others, I think it is the four collapsibles -

*The Witness:* The working boats.

*The Commissioner:* The emergency boats.

*The Solicitor-General:* Yes. As regards the emergency boats, they require 8 cubic feet, and working it out, allowing 10 cubic feet in some cases and 8 in others, the total is 11,325 cubic feet.

*The Commissioner:* That includes the collapsibles.

*The Witness:* Yes, that is true.

19124. (*The Solicitor-General.*) Now I want to see what the Board of Trade Rules would require. For a vessel of this size, 10,000 tons and upwards, the Board of Trade requirement is a minimum 16 boats under davits? - That is true. 19125. And that is the number which you had under davits? - Yes.

19126. And those 16 as minimum cubic contents were to be at least 5,500 cubic feet, according to the schedule at the end of the rules? - Yes.

*The Solicitor-General:* Has your Lordship got the rules before you?

*The Commissioner:* I have them somewhere, but I have not them before me at the moment.

*The Solicitor-General:* I think I can show your Lordship the way through this point.

*The Witness:* I think the Board of Trade requirement is 9,605 cubic feet.

*The Solicitor-General:* I am coming to that. Would your Lordship just follow me for a moment. It needs a little following, and it will be found to work out all right. Would your Lordship first turn to page 6 of your print which, if it is like my copy, is headed "Division (A), Class 1. rules for steamships carrying emigrant passengers subject to all the provisions of the Merchant Shipping Act." That was this class of ship, so it was A1 then. "(A) Ships of Division (A), Class 1, shall carry boats placed under davits, fit and ready for use and having proper appliances for getting them into the water, in number and capacity as prescribed by the table in the appendix to these rules such boats shall be equipped in the manner required by and shall be of the description defined in the general rules appended hereto." Then if you now turn to page 17 you will find the appendix to these rules. The top line of page 17 shows that a ship with a gross tonnage of 10,000 tons and upwards, the minimum number of boats under davits is to be 16, and the minimum cubical contents is to be 5,500. Now will your Lordship turn back to page 6, (C). (I need not bother about (B)). "Not less than half the number of boats placed on the davits having at least half the cubic capacity required by the tables shall be boats of Section (A.), or Section (B)." That refers to a particular make of boat, regard being had to the extent of its buoyancy, and that has reference to page 13. I do not think your Lordship need turn to it now. "The remaining boats may also be of such description, or may, in the option of the shipowner, conform to Section (C), or Section (D), provided that not more than two boats shall be of Section (D)." Now, it is those two boats of Section (D) which are calculated at the rate of 8 cubic feet per person instead of 10 cubic feet. *The Commissioner:* The emergency boats.

*The Solicitor-General:* Yes, my Lord. Then, my Lord, "(d) If the boats placed under davits in accordance with the Table" (that is the 16 boats) "do not furnish sufficient accommodation for all persons on board" (that is this case your Lordship sees) "then additional wood, metal, collapsible, or other boats" (in this case it is collapsible) "of approved description (whether placed under davits or otherwise) or approved life-rafts shall be carried." That is where the four collapsible boats come in, your Lordship sees. Then the important rule is the rule which is in the next paragraph, not (e) I mean, but the next printed paragraph: "Subject to the provisions contained in paragraph (f) of these rules" - that is to say subject to the rule that they need not carry more boats than are sufficient for everybody on board -

## **Page 470**

subject to that - "such additional boats or rafts shall be of at least such carrying capacity that they and the boats required to be placed under davits by the Table provide together in the aggregate in vessels of 5,000 tons gross and upwards, three-fourths, and in vessels of less than 5,000 tons gross, one-half, more than the minimum cubic contents required by column 3 of that Table." My Lord, that is all that it is necessary to observe. Now if I may

apply that: since the 16 boats are not sufficient to carry everybody on board, there has to be an addition to the cubic capacity in accordance with this paragraph; that addition must be to the extent of three-fourths addition on the cubic contents which the Table requires. The Table requires, on page 16, 5,500 cubic feet; three-fourths of 5,500 cubic feet gives you 4,125, and if you add the 4,125 to the 5,500 that gives you 9,625, which is the number of cubic feet which the rules require for the "Titanic."

*The Commissioner:* Will you give me the last figure again?

*The Solicitor-General:* 5,500 is the figure from the rule in the Appendix.

*The Commissioner:* Therefore, that means 9,725.

*The Solicitor-General:* I think it is 9,625, my Lord.

*The Commissioner:* I beg your pardon. You are right - 9,625.

19127. (*The Solicitor-General.*) So that if one applied the Board of Trade Rule 9,625 would be the number of cubic feet capacity which would have to be provided. (*To the Witness.*) I believe you agree with my calculation, that what you had on board the "Titanic" was 11,325? - Yes, that is right.

*The Solicitor-General:* Now there is one other thing about it, and I will ask your Lordship just to look at the rule at the bottom of page 16, the page that just faces the table. It is headed, your Lordship sees, "Watertight Compartments," at the bottom. "When ships of any class are divided into efficient watertight compartments to the satisfaction of the Board of Trade, they shall only be required to carry additional boats, rafts, and buoyant apparatus of one-half of the capacity required by these rules, but the exemption shall not extend to lifejackets or similar approved articles of equal buoyancy suitable to be worn on the person."

*The Commissioner:* Is that "one-half" in substitution of the "three-fourths"? *The Solicitor-General:* Yes.

*The Commissioner:* Then what does that make it?

19128. (*The Solicitor-General.*) It would mean that instead of adding to the 5,500, 4,125, you would only add 2,062. It is half the 4,125; and the result of that would be a figure of 7,563. (*To the Witness.*) Now, as a matter of fact, did your Company make any application to the Board of Trade for the reduction which that rule - "Watertight Compartments" - appears to contemplate? - No, we did not.

*The Solicitor-General:* Of course, your Lordship sees it turns upon whether the Board of Trade is satisfied, and that is not a matter which I can ask this gentleman about.

*The Commissioner:* At any rate, it did not become necessary to have recourse to this rule?

*The Solicitor-General:* No, my Lord, no recourse was had to it at all.

*The Commissioner:* Therefore, as I understand, more than the extreme requirements of the Board of Trade in the matter of lifeboats was complied with?

19129. (*The Solicitor-General.*) Yes, that is quite right, my Lord. There is just this question I can put shortly to get rid of the point. There are a number of other regulations in these rules as to how these boats are to be built. (*To the Witness.*) Did your boats comply with those regulations? - I have no doubt whatever that they did, but as to speaking from my own knowledge, I cannot.

*The Solicitor-General:* Then we will call our Board of Trade witnesses about that; they do, there is no doubt.

*The Commissioner:* Can you tell me whether the two emergency boats were fitted up as lifeboats?

*The Attorney-General:* They were not, my Lord. Your Lordship will remember that there were 14 lifeboats and two wooden cutters, which are called the emergency boats, and four collapsibles.

*The Commissioner:* The emergency boats are only wanted in what may be called emergencies.

*The Attorney-General:* In one sense, I suppose, they are more often required than in any other.

*The Commissioner:* Yes. For instance, when somebody falls overboard.

*The Attorney-General:* Yes; or if a boat has to be let down to do something.

*The Witness:* I think the Englehardt boats are lifeboats in a sense, in so far as they have tanks.

*The Commissioner:* I am not speaking about those. I am speaking about the wooden cutters - the emergency boats.

*The Solicitor-General:* Page 14 of these rules is the page which contains the classification of boats according to different Sections. It begins at the bottom of page 13 really. Section (A.) boats are described, your Lordship sees, as "A boat of this Section shall be a lifeboat, of whale-boat form, properly constructed of wood or metal, having for every 10 cubic feet of her capacity, computed as in rule (2), at least 1 cubic foot of strong and serviceable inclosed air-tight compartments." Now, that is a lifeboat, but these two emergency boats were under Section (D), and Section (D) says nothing about lifeboats and nothing about internal buoyancy. I mean artificial buoyancy.

*The Commissioner:* "A boat of this Section shall be a properly constructed boat of wood or metal."

*The Solicitor-General:* Yes, my Lord, that is all. No doubt they were. I think I did refer your Lordship to it really in calling attention to page 6. The Attorney-General points out that it clinches the point. When I first asked your Lordship to look at page 6, I called attention, I think, to the paragraph which is labelled (c): "Not less than half the number of boats placed under davits" (that is half of the 16) "having at least half the cubic capacity required by the Tables shall be boats of Section (A.), or Section (B)." (That is lifeboats or boats with internal buoyancy). "The remaining boats may also be of such description" (of course, in this case they were the remaining boats all except two), "or may, in the option of the shipowner, conform to Section (C), or Section (D), provided that not more than two boats shall be of Section (D)." That is the way it fits in, my Lord.

*The Commissioner:* Have you finished that point now?

*The Solicitor-General:* Yes, my Lord, I think so.

*(After a short adjournment.)*

19130. (*The Solicitor-General.*) We had just been comparing the provision of boats in the "Titanic" with the maximum regulations of the Board of Trade. I want to ask you now

the view of your Company as to the expediency of providing more boats than were on this ship? - I think, to answer that question, I should have to divide the subject into two. I should have to tell you what was in our minds before the "Titanic" accident happened, and then modify it by the result of experience.

19131. If you please? - I do not think it had ever been in our minds, nor do I think it had been in the minds of any of the experts who had been responsible for framing the existing regulations, that the whole ship's company of a ship like the "Titanic" could under any conceivable circumstances be required to be put afloat in boats; nor do I think, if

## **Page 471**

provision were made for that, that in fact we ever would, 19 times out of 20, or even perhaps 99 times out of a hundred, succeed in utilising those boats by filling them and launching them. The weather conditions in the Atlantic are such that I should look upon it as a very remote contingency, and one to be avoided at all costs. Therefore, in my judgment, I would rather devote myself to accomplishing in fact what we thought we had done with the "Titanic"; in other words, to make her so safe that we would not have to consider the possibility of putting all these people afloat, and, having regard to the extraordinary nature of the accident which happened to the "Titanic," I still do not feel that it would be a wise or a necessary provision to make; that is to say, to provide boats for everybody on board the ship. I do think, however, that we might advantageously increase the boat accommodation somewhat. But I am looking forward to the recommendation that will be made by this Court for our guidance, and I am quite certain that the public will accept it gratefully and we shall do so likewise. In the meanwhile, in order to satisfy the public, on whom we are dependent for our living, we are putting on the ships more boats than I think it is wise to do.

19132. I should just like to follow one thing about that. You speak of the wisdom of the course of adding to the number of boats. Of course I can quite understand it involves more expense, and I can quite understand that it would occupy more space, but why is it an unwise thing to add substantially to the number of boats? - It is all a question of degree. I think if we were to carry boats on the boat deck of all our ships which would be equal in capacity to the total number of people on board we should, in fact, have those boat decks so crowded with boats that it would materially interfere with the efficiency of a great many of them, that is to say, the men would not have proper room to work to get them over the side.

19133-4. Just let me look at the model for a moment. One sees there the boat deck, and I see there are four lifeboats in the afterpart on this side, and there are three lifeboats and an emergency boat on the forward part, and there is a space between the two lots. Do you see? - Yes.

19135. Give us your view and help us about it; from the point of view of wisdom or unwisdom what is in your view the argument for or against putting further boats amidships? - I am rather in favour of doing that.

19136. (*The Commissioner.*) That does not answer the question quite. You have said that in your opinion it would be unwise to increase, as I understand, the number of boats that were in fact on the "Titanic." It is pointed out to you that there is apparently looking at

the model, room for more. Why would it be unwise to put them there where there is room? - I think, my Lord, I did not make myself clear. What I intended to convey was that in my judgment it would be unwise to boat the ships for the total capacity of people whom they may have on board. I believe to do that you would have to crowd the boat decks to such an extent that you would materially interfere with the possibility of getting them all into the water properly. If you take 3,500 people as the full capacity say of the "Titanic" or the "Celtic" that would roughly mean something in the nature of between 50 and 60 boats. Now, any additional boats which we could put in the space which you refer to there, doubling it on the two sides of the ship, would go a very small way towards providing the difference between the 20 boats and the 50 or 60 which would be required to carry the whole ship's company.

19137. That is an answer to the suggestion that you should provide enough boats for everyone on board, but it is not an answer to Sir John Simon's question. Why could you not increase wisely the number that you have? - I think we can increase them wisely.

19138. Wisely? - Wisely - increase them somewhat, but we are looking for guidance as to the extent to which we should increase them.

19139. (*The Solicitor-General.*) Amongst other things we want your evidence. I think the tribunal will want to use it too - in order to help us. Just return to my question.

Look again at the boat deck if you will. You spoke of the danger of too great a number of boats interfering with the proper working of the launching and so on, did you not? - Yes.

19140. That is what you had in mind? - Yes.

19141. Now, take any one of those boats shown there on the model. In order to launch it what you want is sufficient and efficient help opposite the boat? - Quite.

19142. You do not want when you are lowering one of those boats shown there any people to work amidships? - No.

19143. Then what would be the difficulty in increasing the boats so that they lay along either side of the boat deck from one end of it to the other? - I do not think, so far as your question goes, that there is any real difficulty in increasing the number of boats under davits. The difficulty I have in my mind applies to the boats which you cannot put under davits, and which will have to be spread across the ship amidships.

19144. I quite see that is a different question. Let us first of all take boats under davits. We want your guidance about it. Taking your experience, what do you say as to the possible suggestion that davits might be provided and boats might be slung along the length of the side of the boat deck? - Speaking generally, I think they might, but before you take that as definite I should like to pass a word with our Nautical Advisers as to whether there is any part of the ship opposite which it is not wise to have a boat lowered.

I do not know of any myself.

19145. I feel certain you must have been considering it, you and your fellow directors and managers, have you not? - We have.

19146. Who is the gentleman whom you would regard in your Company as the person who would express the best opinion about it? - The Marine Superintendent. 19147.

Who is that? - Our senior marine superintendent is Captain Bartlett.

19148. Have you formed any estimate, or have you arrived at any conclusion as to how many additional boats could be put on the boat deck under davits if you used the intermediate space? - No, I do not think I could give you a figure. At the present moment, as I say, we have put a lot of extra boats on, and we are just maintaining that position until the finding of this Court is heard.

19149. You speak of the extra boats which you have put on in the meantime, and I understand it, but are those extra boats which you have put on under davits? - No.

19150. As I understand, they are collapsible boats of some kind or another? - Yes; not in all cases. We have also put a number of wooden boats on the ships' decks. 19151. I should like to put it to you - I pass now from filling up the sides of the boat deck - what is your view as to the expediency, or the possibility if you like, of providing additional boat accommodation over and above that? - Generally speaking, I think we can prudently increase the accommodation over what the "Titanic" had.

19152. Where would you put the extra ones? - I should put them in the first place in the spaces you have referred to, and I think we might have a certain number placed inside or under the boats that were on the davits. The boat under would have to be a collapsible boat; the boat inside might be a wooden boat.

19153. You mean inboard? - Yes, I mean inboard, a double row.

*The Commissioner:* Have you considered the desirability of using double davits? - I have never heard of a double davit, my Lord, and I do not know what it is.

19154. By a double davit I mean davits which would carry two boats abreast? - I am afraid I do not follow what that means. I could understand a davit being sufficiently high so that there might be two boats one above the other.

19155. Not abreast, but one above another? - I think I would like to be advised on that matter by an expert.

## **Page 472**

19156. Have you ever seen that done? - I have never seen that done.

19157. Have you ever heard of it? - Never. I have heard of a collapsible boat being put under a wooden boat, but of course that does not involve the davit being very high. 19158. Just look at this plan and tell me whether the additional boats suggested there in pencil could be, in your opinion, conveniently placed on a ship like the "Titanic." It is an addition of 14 boats, seven on each side (handing a paper to the witness)? - I should say I think they might be.

19159. Now how many more would those 14 boats accommodate? - If they were lifeboats they would accommodate - 19160. 65 each? - Yes, that would be 830.

19161. (*The Solicitor-General.*) 14 more boats? - Yes.

*The Attorney-General:* 910 is the number.

19162. (*The Solicitor-General.*) It would exactly double the lifeboats? - Yes.

19163. You have already told me 14 lifeboats carried 910 people? - Yes.

19164. (*The Commissioner.*) Now what proportion of the total number, assuming the ship was full, of passengers and crew would those boats accommodate? - That would

make a total of 2,088 capacity and her full complement would be in the neighbourhood of 3,500 people.

19165. So that that would accommodate about four-sevenths of the whole of the people on board? - That is about right.

*The Attorney-General:* If they carried the full complement.

19166. (*The Commissioner.*) I am saying if she carried the full complement of passengers and crew. The lifeboats, even if they were supplied as put down on that sketch, would merely provide accommodation for a little more than half of the total number on the ship? - That is correct. I would like to add further that one must not lose sight of the fact that in the Atlantic, particularly, there is always a weather and a lee-side. 19167. Except on this occasion? - When I say always, I should modify it to this extent - I think you might say 19 times out of 20.

19168. I bow to your much better knowledge, but I should have said in 999 cases out of 1,000? - I would like to have taken that figure, but I was afraid they might think I was exaggerating. For all practical purposes the lee-side of the ship and the boats that can be moved over to the lee-side are the only boats that would be put out.

*The Commissioner:* I am told that is probably so.

19169. (*The Solicitor-General.*) I was going to accept that, my Lord. (*To the Witness.*) Bearing that fact in mind, that as a rule you can only use the boats on one side of the ship, in your view is that an argument for increasing the number of your boats or not? - It is an argument for increasing the number.

19170. Then I daresay you have noticed that though these boats which you had were qualified to carry 1,178 people, the number of people who, in fact, were saved, even if we include those that were picked up in the sea, was only 703? - I have noticed those figures. 19171. I suppose one may take it that, however good the discipline may be, one may expect not to fill every boat to its absolute full capacity in a moment of crisis? - I am sure the full capacity of the boat - that is to say, 65, speaking of lifeboats is a figure which in practice would never be reached, because even though you might get conditions such as the "Titanic" was lost in, you would not get the people into the boats, in the first place, and if those conditions did not exist it would not be safe to put them in if you could do it.

They would not float with them in; they would be swamped.

19172. Are you referring to the fact that in certain conditions of the weather you cannot launch a boat at all, or are you referring to the fact that in some conditions of weather you can only launch it and carry fewer people? - I am referring to the latter. I am assuming a condition which would be normal fine weather in the Atlantic, that is to say, in an ordinary sea such as you find in the Atlantic. I do not think, in my judgment - I may be quite wrong - that any of those lifeboats would be seaworthy with 65 people in them.

19173. Have you formed any judgment how many people they would carry in normal fine weather in the Atlantic? - I am not an expert.

19174. But surely your Board has been considering it? - I should think a matter of 40 people would be quite enough to put into them.

19175. (*The Commissioner.*) I do not know whether any one has ever considered the possibility of moving lifeboats from one side of the ship to the other? - It has often been considered, my Lord, and there are various suggestions made recently more particularly,

but I have not myself seen any which I think are practicable. If a vessel is rolling about, as you must expect it to be in the Atlantic, to handle a boat which weighs anywhere from a ton to a ton-and-a-half, and move her about under those conditions, and bring her into a position where she can be reached by the tackles and the davits on the lee-side, would be a most difficult if not a dangerous operation.

19176. (*The Solicitor-General.*) Have you or your colleagues considered at all whether it would be practicable to have any form of life-saving craft, not a boat - one has heard suggestions, for instance, that a portion of the deck, or a portion of the structure, might be detachable in some way. Has that been before you? - The only practical thing that has been suggested to us, and that has in fact been adopted, is to have certain seats made which are of the nature of life-rafts. Over and above that we are putting life-rafts pure and simple on the ships which will give flotation in the event of a vessel foundering.

19177. What do you mean by a life-raft; what is it? - I mean a raft in the ordinary sense of the word, a flat raft built upon tanks with life lines round it.

19178. And you say you are at this time providing some of those? - We are putting some of those on.

19179. Now where do you carry them? - Well, we are putting them on the boat deck.

19180. On the boat deck? - Yes. I cannot say whether that has been done, but we have told certain ships where the accommodation on the boat deck is restricted, that they can carry them in nests on the hatches.

19181. One above the other? - Yes, the idea being that if we should have the misfortune to lose a ship these things would float away, and they would be there for the purposes of flotation.

19182. With regard to these life-rafts which you speak of had you made any use of them or provided them before the "Titanic" disaster, or is it in consequence of it? - Only to a very limited extent; we had some, but very few.

19183. Of course, in order to launch more lifeboats you would require more men to man them and launch them than if you had a smaller number, obviously. Have you considered the matter from that point of view, having regard to your existing crews? - I think we have plenty of people on board the ship, given a reasonable amount of boat experience. You do not need to put extra hands on. When you consider the crew we had on the "Titanic," one-half of them were never near the boats at all for the purpose of launching them.

19184. Will you repeat that? - When you consider the number of crew we had on board her, I should think probably a very large proportion of them took no part in the launching of the boats; they were not needed.

19185. You had a crew of 800 or 900? - 894, I believe.

19186. Yes, just on 900. You think that crew would be sufficient in number, assuming that it had practice, to deal with a larger number of boats? - More than sufficient. All they want is a moderate knowledge of what is required.

19187. I am coming to their practice in a moment. Now there is one other thing about it you might tell me. Can you help us at all as to this suggestion that at one time they had contemplated to double the boats on the davits? - I can only help

you by telling you what I learned after I saw this story in the newspapers.

19188. Well, I think you may tell us? - When I saw that I expressed great surprise. I enquired of the builders what it meant. I told them that, to the best of my recollection, I had been present at practically all the discussions which had taken place with them with regard to the building of the "Olympic" and the "Titanic," and that I never heard, to the best of my knowledge, of any such suggestion as was referred to in that paper. I was told that the builders, when they heard that the Board of Trade was reconsidering the matter of boating for ships communicated with Mr. Welin, who was the designer of the particular davit which was on the "Titanic," and is on the "Olympic," and they asked him to what extent he could increase the arrangements for putting boats under davits on these ships; and I believe that Mr. Welin did submit a sketch or a plan showing how these additional boats could be arranged for. Whether the builders have still got that sketch I do not know, but I am quite clear, in my own mind, that the managers of the White Star Line never saw it and never heard of it until after the "Titanic" accident. I have not the faintest recollection of ever hearing a word about it.

19189. Then your information now is that such a sketch was put forward by Mr. Welin before the disaster? - Oh yes, something like a year ago, I imagine, or more.

19190. And put forward by him to Messrs. Harland and Wolff? - That is my understanding.

19191. That is your information. Have not you enquired of Messrs. Harland and Wolff whether they have got it now? - I have not asked them whether they have got it. I asked about this matter and I have just told you the information I got from them.

19192. One of their gentlemen is here, and no doubt he will take a note of that? - I have no doubt they have it.

19193. We should like to see the sketch. That is the first branch of Question 5, my Lord. Now one comes to the arrangements for manning and launching boats on board the "Titanic," and were they proper and sufficient.

*The Commissioner:* Will you ask him whether the number they determined to put on this boat was fixed according to any principle?

19194. (*The Solicitor-General - To the Witness.*) You heard the question? - I find that rather a difficult question to answer. I believe there are certain requirements for deckhands which are based upon the boating arrangements. There are requirements for firemen in regard to their service and the amount of coal which a man has to handle on the watch.

19195. Certainly there are? - But over and above that we are guided by the recommendations of our various superintendents, and I fancy that the "Titanic" would be found to be manned very largely in excess of any requirements.

19196. (*The Commissioner.*) I was not talking about the manning. You did provide the "Titanic" with considerably more boats than you were bound to provide her with under the Board of Trade Rules? - Yes.

19197. Now what I want to know is, upon what principle did you proceed, if any, when you fixed the number of boats that you would provide. Why did you stop at the number

which you stopped at? - I do not think there was anything more definite in our minds than that we should comply with the requirements, and, as is our usual practice, go a little in excess of them, without any particular theory as to what that excess should be. 19198. You went a great deal in excess of them? - I do not think we went on any theory; I think it was mere guess or rule of thumb.

*The Solicitor-General:* Your Lordship says "a great deal." Of course your Lordship has the figures in mind. The Board of Trade requirement would have been 9,625 as a minimum, and they provide 11,325.

*The Commissioner:* Twenty percent.

*Sir Robert Finlay:* 7,562.

*The Solicitor-General:* No, my friend must not take that, that would only arise if there had been an application to the Board of Trade for approval, and it had been approved.

*Sir Robert Finlay:* That is so, on the Board of Trade being satisfied; but there is not the slightest doubt the Board of Trade were satisfied with the watertight compartments, and that being so, they could if they had applied to the Board of Trade have got the necessary certificate and in that case only 7,562 were wanted.

*The Commissioner:* You did not apply?

*Sir Robert Finlay:* No.

*The Commissioner:* And not having applied, and not having got the permission, you were bound to provide the larger number?

*Sir Robert Finlay:* Oh, yes.

*The Solicitor-General:* I do not think it had better be assumed until the Board of Trade evidence comes, that the Board of Trade would have been satisfied. I do not say they would not.

*The Commissioner:* It is a mere suggestion.

19199. (*The Solicitor-General.*) Perhaps I might ask this further question following up what my Lord was putting to you. Supposing you build a new ship. Probably you decide what her size is to be, and get her general dimensions determined, the number she will carry, and her horse-power and the like, but who is it that decides how many boats she will have? - I think we should be very largely influenced by the builders. They would on their plans no doubt show us boating arrangements to comply with the requirements, and they would say: "We suggest that over and above those you put boats here and there," and so on. We should then consult our Marine Superintendent, and we should be very largely guided by his advice on the matter.

19200. Do you anticipate that there are documents in existence which show in the case of the "Titanic" what the builders suggested, what your marine adviser suggested, and what you determined on? - I doubt it very much. These plans are submitted to us and we examine them round a table and talk over the different points and make little notes of what we would like to speak of with the builders when they next come to us, and then we go over them again.

19201. I daresay you will have a search made to see whether there are such documents? - I will.

19202. And ask Messrs. Harland and Wolff? - I should doubt it, but I will have them looked up.

19203. (*The Commissioner.*) I should have thought there would have been correspondence on the subject? - There may be, but I have no recollection of it. 19204. I do not know whether Messrs. Harland and Wolff send someone to Liverpool to talk over these matters or whether you talk them over with your Marine Superintendent at Liverpool, and then write to Harland and Wolff? - They send us plans and we consider them amongst ourselves, and later on they send one of their people over to us and we go over it with him, or we have the advantage of conferring with Lord Pirrie himself in London.

19205. It may be there is nothing in writing? - I am pretty sure that is so, my Lord, but I will have it traced if there is.

19206. (*The Solicitor-General.*) I understood you to say just now that you thought you had on such a ship as the "Titanic" a crew abundantly sufficient to deal with a larger number of boats? - That is my feeling.

19207. Were you referring then to the launching of the boats? - I was referring to the launching and the manning of them, too, for that matter.

19208. Let us just take the manning. To man these boats, do you want sailors? - You want a man who understands something about using an oar for the purpose of rowing; he need not be a sailor.

19209. I suppose a fireman or a trimmer or a greaser does not necessarily know anything about it does he? - I like to think that sailors do, and as to the firemen, I think the majority of them have a general knowledge of it. It does not require a highly educated man, as you can understand.

19210. We are speaking of the possibility of disaster. Is it your view that one of your boats would

#### **Page 474**

be properly and efficiently manned if it did not contain a sailor in it? - No, I should think there ought to be a sailor in it.

19211. How many? - I should like to have a couple.

19212. Two sailors? - I should think so.

19213. Then if you have two sailors for each boat, and you are to increase your number of boats by adding another 14, would you have enough sailors, taking the crew of the "Titanic," for the purpose? - I have not offhand the number of sailors in my mind that we had on board.

19214. Have not you considered the question of the supply of additional sailors, supposing that you had more boats; that is what I want?

*The Commissioner:* I do not quite know what you are doing now, Sir John. *The Witness:* The suggestion has been made that only people who are qualified to do boat work (I have heard it made in this Court, I think) are sailors. Now if we were to provide sailors in adequate number to man all our boats efficiently, then I say the sailors are not

in existence, but I do not think we need sailors. *The Solicitor-General*: Very well, I will not pursue it.

19215. (*The Commissioner*.) I do not know what that means - the sailors are not in existence - what do you mean? - I do not think there are qualified A.B.'s in the country sufficient to carry out any such programme.

19216. You mean in the whole of your fleet? - No, I mean in the country; in Great Britain.

19217. I do not understand that at all. Do you mean to say that if you wanted to get sufficient sailors to man the lifeboats upon all the vessels in your lines you would not be able to find them in Great Britain? - No, I did not mean that.

19218. Then what is it? - I mean if it is the decision of this Court to make a regulation which would require all steamship companies to man their boats efficiently with sailors -

A.B.'s I am speaking of - those A.B.'s do not exist in the country.

19219. (*The Commissioner*.) Now I understand. I am wondering have you any figures upon which this opinion of yours, just uttered, is based? - I have not got the figures with me, but they are in existence, and I have been advised by those who are well qualified to express an opinion that what I state is correct.

19220. Because you know we should require to know in order to check the opinion that you are forming, and I should think also to enable you to form an opinion, how many lifeboats would be required under the new suggestion for the whole of the steamers leaving the United Kingdom, and then how many available A.B.'s there are. Otherwise I do not see how you can arrive at the opinion? - That is quite true. My statement is a rough and ready one, but I believe it to be a correct one all the same.

19221. I do not see what your belief is founded on. It must be founded on some sort of figures. I have not any notion at all how many available A.B.'s there are in the ports of Great Britain and Ireland, and I have not the vaguest notion how many lifeboats would be required by all the steamers if this new system which Sir John Simon suggests were introduced? - May I put it in this way, my Lord? We know today there is not a very large margin of A.B.'s. We are approximately working on a very small margin. Now, if you are going to increase the requirements of the mercantile marine of Great Britain in an appreciable percent, which, I take it, you would do if you are going to increase the number of boats, and then make it a requirement that those boats must be manned by A.B.'s. I think it automatically follows that the A.B.'s are not there.

19222. (*The Solicitor-General*.) I will not pursue it, but you might tell me this. In what you have just been saying to my Lord, how many people have you assumed as manning one of your lifeboats: how many do you think it takes to man one properly? - I should think to pull a boat, under ordinary conditions, you ought to have four oars and a helmsman.

19223. That makes five men? - Yes, that is to do boat work.

19224. Now, about boat drill and the like, what is your Company's regulation or practice about boat drill in respect of these Atlantic liners? - The Company's requirements are that boat drill - a boat muster that is - shall be held once each passage. I am

not referring to the Board of Trade muster. Over and above that it is required that there shall be a boat muster once each passage.

19225. Does that mean the passage from one side to the other, or do you call it one passage going backwards and forwards? - No, one side to the other.
19226. (*The Commissioner.*) Will you tell me exactly what a boat muster consists of? - As many of the crew as can be spared are required to muster at their boats in accordance with the boat lists which are posted in the ship.
19227. What does mustering at their boats mean? - Well, they come to their stations alongside the boat. I am not sure to what extent the covers are taken off. I do not think they are. I think it is more a muster to see that people are familiar with their boat positions and that they come to their stations when they are told to do so.
19228. It means the muster is nothing more than this: the men come on deck and go to the boats that are allocated to them? - Yes; but over and above that we give an instruction that whenever it is possible a certain number of the boats are to be put into the water and pulled.
19229. And pulled? - Yes, pulled away from the ship and back again.
19230. Is that ever done? - Yes, my Lord, it is.
- The Commissioner:* How often? That is what I should call a boat drill.
19231. (*The Solicitor-General.*) I have a document here which I think throws a little light upon it, if I may say so. (*To the Witness.*) Do your Commanders make reports to your firm from time to time when they return to this country after crossing the Atlantic and back? - They do.
19232. I think you have furnished us with three as specimens. One is a bundle of reports by Captain Haddock, of the "Oceanic," extending from the 30th September of last year to the 17th March this year, and there is another one from the Commander of the "Majestic," and a third is from Commander Smith from the "Olympic," his last boat. I will take Commander Smith. I see he reports when he gets to Southampton after each double voyage? - Yes.
19233. This is the first one, "Southampton, 15th December, 1911. "It gives the date when he left outwards and left homewards. He then reports the conduct of the officers and crew, the chief officers, and then "General Remarks." I find on the 15th December, 1911, he was reporting, "Boats Nos. 1 and 3 lowered and crews exercised at Southampton. All davits and falls in good order." Then the next return, which is on the 6th January, 1912, he reports, "Boats Nos. 6 and 8 lowered before leaving Southampton, and crews exercised. All davits and falls in good order and condition." The next one is the 31st January, 1912, "Before leaving Southampton Nos. 10 and 12 boats lowered and crews exercised. All davits and falls in good order." The next is the 28th February, 1912, the last but one. He says, "February 6th, Boats Nos. 9 and 11 lowered, and crews exercised. Everything working well. Davits and falls in good order." Then the last one is the 30th March, 1912. He puts, "Tuesday, 22nd March." that, as I see from high up on the page, is the day before he left New York: "Nos. 13 and 15 swung out, lowered, and crews exercised. All davits and falls in good order." *The Commissioner:* What boat was this on?

*The Solicitor-General:* This is all the “Olympic”; this is all Captain Smith; and your Lordship will note, therefore, from those documents that it would appear as though two boats were selected on each occasion, but they do not take the same two boats, and by taking different boats it does appear as though there was a gradual testing of different people.

**Page 475**

*The Commissioner:* Is there any drill during voyage?

19234. (*The Solicitor-General - To the Witness.*) What do you say to that? - I think nothing more than the muster in addition to what Sir John is speaking about.

19235. While a ship is under way there cannot be a question of lowering a boat, so that if that is to be done it must be done in harbour? - Quite so.

19236. I gather from these documents it is done in some cases at Southampton, and then apparently not done in New York, and in some cases at New York, in which case it is not done at Southampton. Is that so? - We leave a considerable discretion to Commanders as to where it shall be done. Sometimes it is done in Queenstown, and sometimes in Liverpool, but rarely, and sometimes in New York.

19237. Each of these pages refers to the double voyage? - It does.

19238. And each of these pages contains a report of two boats being lowered on a particular day, and that is all? - Yes.

*The Solicitor-General:* Perhaps my Lord would like to see it. (*The document is handed to the Commissioner.*)

*The Witness:* I should like to say in regard to this boat muster or boat drill, that we have experienced very great difficulty in carrying it out. In the first place we have a difficulty, which is a natural one from the fact that we carry large numbers of passengers, and that many of the crew cannot be spared from their duties. But, over and above that we have experienced a very serious difficulty arising from the unwillingness of certain portions of the crew to comply with the Company’s regulations. To such an extent has that existed that they at times refuse duty on the voyage.

19239. But what rating are you referring to now? - I am particularly speaking of the firemen.

19240. I think that the trouble you speak of began some short time back? - I think it is only within the last two years it has occurred. Up to that time we had no difficulty of the kind.

19241. Where did it arise in what port? - The one I refer to was on the “Oceanic,” on a voyage to New York. The men refused duty on the voyage when ordered to a boat muster.

19242. On the voyage the firemen would not muster? - That is true.

19243. (*The Commissioner.*) What excuse did they make, if any? - I am not aware that there was anything more than a reluctance. They did not think it was fair to ask them to do it. Captain Haddock was in charge of the ship and he logged the men for not complying with orders, and there was so much friction about it that we decided to modify the orders and allow him to muster the men in New York

- instead of mustering them on the voyage, if that would make it easier to get the firemen to do it; and I believe, in fact, they have been mustering them in New York occasionally instead of mustering them on the voyage.
19244. (*The Solicitor-General.*) Just let me take the last instance. Since this disaster, on the 8th May, 1912, had you an instance of this? - I am not clear of the date, but we have had two occasions.
19245. That is the date, I see, that is in the statement? - Then I am sure you are right.
19246. I see according to this "the firemen were instructed by the Captain personally to muster at the boats at 11 am, but of the total engine department of 157 as many as 37 did not muster, and 7 deserted"? - That occurred in Southampton since the disaster. 19247. As far as regards these boat drills at Southampton which we see take place before the vessel leaves sometimes, are those done voluntarily by the White Star Company or are those the drill which the Board of Trade Surveyor, Captain Clarke, requires? - I think they take advantage of the Board of Trade drill requirements to do their rowing at the same time. As a matter of fact we asked the Board of Trade recently, having regard to statements which have been made, that these men do not get the necessary opportunity to familiarise themselves with the boats, if they would be so good as to help us by making their examination and drill, so-called, more extensive than had been their practice. And we have experienced, as you have seen from those reports, great difficulty in getting this drill carried out in Southampton owing to the reluctance of the men to comply with the orders.
19248. There is one further thing about it. Take one of these drills at Southampton when two boats are lowered, manned and pulled round. I want to understand. Are the crew that go into the boat on that occasion the people that are allotted to the boat - a steward and a trimmer, a fireman and a sailor or two - or are they a crew of sailors? - I am afraid I am not able to answer that, I would not like to say.
19249. Who would be able to tell me? - I do not know whether the Marine Superintendent could tell you.
- Captain Bartlett:* They are generally a crew of sailors.
19250. (*The Solicitor-General - To the Witness.*) It is a crew of sailors? - Yes, it seems so.
19251. So that it is not a practice of the people who are allotted to the boats? - No, it does not seem to be so.
- Sir Robert Finlay:* The lists are not made up for the boats until the ship is sailing. The men join up at the last moment.
19252. (*The Solicitor-General.*) It looks rather as though the object of this boat drill is rather to be sure that the boat is in good order and the falls work and all that sort of thing than to give any practice to the crew? - It would seem so from what the Marine Superintendent has said.
19253. I think you can give me the number of lifebelts and buoys. We ought to have those. I have the figures. It is 48 lifebuoys with beackets. What are beackets? - Just ropes round them, weaved round them.
19254. Of the Board of Trade approved pattern, I think, and 3,560 lifebelts? - Those are the figures.

19255. (*The Solicitor-General.*) I think one can go to Question 6 now, my Lord. (*To the Witness.*) We have heard a good deal about wireless telegraphy. Have you got the agreement which exists between your Company and the Marconi Company, or are we to get that from the Marconi people? - It will be handed in; it is in Court. (*The document was handed to the Solicitor-General.*)

19256. (*The Solicitor-General.*) It is "Agreement of the 9th August, 1909, between the Marconi International Marine Communication Company, Limited, and the Oceanic Steam Navigation Company. The Marconi Company undertakes to maintain at its own cost on board such of the White Star steamers as are already equipped with the Marconi system of wireless telegraphy a set of all necessary apparatus for the transmission and receipt of messages." Then: "The Marconi Company undertakes to provide and pay the salary of the necessary operator or operators." Of course the ship provides the current. And then paragraph 6 is "The Marconi Company shall receive and transmit free of charge messages having relation to the navigation of or any business connected with ships passing between the masters of the ships and the ship owners or between the masters of the ships and the master or other person in charge of any other ship," with a limit of number of words, and a charge for excess. So that those masters' messages by this agreement are to go free? - That is so.

19257. Your company, the White Star Company, by paragraph 7, is to provide suitable cabin accommodation for the exclusive use of two of the company's operators and their apparatus, and you are to feed them and you are to sign the operators on the ship's articles, and through your Master supervise and report to the company on the operators' general conduct? - That is for purposes of discipline.

19258. And save to that extent do the Marconi operators remain the servants of the Marconi Company throughout? - Absolutely. We pay them certain wages by agreement, but only on account of the Marconi Company.

## **Page 476**

19259. There were as we know, two operators on this ship so that you had a continuous Marconi service? - We had.

19260. Have you also got two on the "Olympic"? - Yes.

19261. What is your practice with regard to the rest of your fleet? - With few exceptions in the Atlantic trade we have two, but those exceptions cease to exist. We have made two on all the ships.

19262. That is what I was going to ask. Is that since the disaster? - Yes, but we do not do that with the ships trading with the Colonies, because you will understand that for many hours and days they are out of touch, and, to have two men doing nothing is not good.

19263. As far as regards your North Atlantic service today as I follow you, you have two operators on every single ship? - We have.

19264. Was that change made in consequence of the disaster? - Yes.

19265. And it is one which I suppose you intend to persist in? - Absolutely. 19266. I did not notice it in the agreement, but you may be able to tell us: is there any

- provision by which your navigation Marconigrams, the Master's messages, have any sort of precedence? - I think not; there is nothing in the agreement to that effect. 19267. As I follow, if the Marconi operator is sending private messages there is payment being made for them? - Yes.
19268. They are a source of income? - Yes.
19269. The other messages, of course, are going gratuitously? - Yes.
19270. There is no provision, so far as you know, for priority as between one and the other? - I recall none.
19271. I think that will do for No. 6. Now one comes to the instructions as to navigation given to the Master, No. 7. Sir Robert Finlay has read a number of documents about that. I do not think there is anything you want to add, is there, about instructions given to the Master? - I think I can only add that when we do appoint a Master we supplement what Sir Robert Finlay has read by remarks to him. I see of late years - I have seen most of them myself, and we never fail to tell them, in handing them these letters, that we do not wish them to take it as a mere matter of form; that we wish them to read these letters and to write an acknowledgment to us that they have read them, and that they will be influenced by what we have said in those letters; and I always assure them that if they get into trouble, notwithstanding that they have carried out the Company's regulations, and complied with our wishes, they will find us kind and considerate employers; but if they neglect anything in the way of a precaution which we might expect from them as good seamen they may expect no mercy at our hands. I never fail to tell them that, and that is thoroughly understood throughout the service.
19272. I should like to know this about it. In the ordinary course, when one of your ships leaves Southampton, is there some understanding or arrangement made as to when she is to aim at reaching the other side? - None whatever, with this possible exception, that we have with certain ships that have high speed from time to time told the Masters not to arrive before a certain time. In other words, we do not want to have them pushing for an arrival which might be an inconvenient one from the passengers' point of view and which might put the ship under pressure to arrive. We have repeatedly told them with certain ships of high speed at certain times of the year to make a landing. They have never been told to make a landing by any particular time.
19273. I am not suggesting that they should be recommended to do anything improper, but I want to know what the course of business is. If one of your ships leaves Southampton at some advertised time, presumably if one asks at the White Star Office they can say when she is expected to arrive? - In a general way.
19274. Is it any part of the arrangement for the voyage that she shall leave at such a time, and aim at arriving at such another time? - Yes.
19275. Who decides that? - We do, to this extent: We have told the Commander, for instance, of the "Olympic" that we do not want him to land on the Tuesday evening at certain times of the year when he is on a long voyage; we do not want him to try to do it. We have told him again and again to make a Wednesday morning arrival. To that extent we have given instructions, but not beyond that.

19276. The Attorney-General has just given me the mail contracts with the Oceanic Steam Navigation Company, and one looks at them to see if there is any provision in them for a minimum of speed. One of them is the contract for the conveyance of American mails, dated 31st July, 1899, and clause 10 provides: "Provided also that whenever the mail ship employed by the Company for the conveyance of mails under this agreement is of less speed than 17 knots per hour, the Postmaster-General shall be at liberty to transmit by any steamship available all or any part of the mails which would otherwise be delivered under this agreement, but so that no postal packet specially superscribed by a sender for transmission by the said mail ship shall be transmitted otherwise." That gives the Postmaster-General the right to go elsewhere if the ship does not go 17 knots.

*Sir Robert Finlay:* If it is not capable of going 17 knots?

*The Solicitor-General:* Yes, I think it means that.

*Sir Robert Finlay:* It means, the capacity of the ship for doing 17 knots; not its actually doing it.

*The Witness:* That is quite right.

19277. (*The Solicitor-General.*) And as far as we have noticed it that is the only provision in your mail contracts which has anything to say on speed? - That is true. It is only put in because occasionally we replace a ship.

*The Commissioner:* With whom is that contract?

*The Attorney-General:* The Postmaster-General with the Oceanic Steam Navigation Company. You will remember I asked about it yesterday.

*The Witness:* We occasionally replace one of the regular ships with a boat that is not regularly employed, and if she is less than 17 knots the Postmaster-General exercises his right to send the mails elsewhere.

19278. (*The Solicitor-General.*) One other question with regard to speed. What is, in fact, the White Star record from Southampton to New York, the voyage which the "Titanic" was going; or from Queenstown to New York, I think you count it? - The best speed that the "Olympic" has ever done - and that is our fastest ship - is, I think, something less, going West, than 22 knots.

19279. (*The Commissioner.*) We were told between 21 and 22? - It is nearer 22 than 21. That is my recollection. The best speed the other way is 22 1/2 knots.

19280. (*The Solicitor-General.*) I daresay you could provide us with the time - days and hours? - I could.

19281. No doubt the White Star keeps a record showing what is the best done by the White Star and we shall see how this matter stands? - I can give it to you. The fastest passage the "Olympic" has ever made from Queenstown to New York is 5 days, 7 hours, 29 minutes.

19282. And the other way? - Strangely enough, I have not got it.

19283. Well, you can give it to us later on? - Excuse me, she does not call at Queenstown coming the other way. That is the reason. I can give it to you from New York to Plymouth, if you want it.

19284. It is as well we should see it? - From New York to Plymouth her fastest passage is 5 days, 14 hours, 32 minutes.

19284a. Mr. Ismay told us that he and Mr. Bell, the Engineer, arrived at the conclusion that the "Titanic" might hope to reach New York at five o'clock on Wednesday morning? - I think his idea was that they should not try to arrive before that.

19285. Quite right, not before that. Just assume that. Now will you tell me what that would be in

**Page 477**

days and hours from Queenstown? - I am afraid I should have to work that out. I can tell you something which perhaps would answer your purpose. We have had it worked out from the time of the accident to the "Titanic," that all she would have required to go in order to make a five o'clock landing on Wednesday morning would be twenty knots from the point of the accident.

19286. I should also like to know, if you could give me, what it would work out in days and hours from the time she left Queenstown. I do not remember what time she did leave Queenstown? - I am sure Captain Bartlett could work it out for us.

19287. That brings us to No. 8, which is the question about the tracks, and on that I think some evidence has been given. This agreement of the 15th November, 1898, which Mr. Ismay produced, was negotiated between your Company and the other Steamship Companies, I understand? - It was, in London.

19288. Apart from the question of choosing a suitable track, is it desirable in the North Atlantic trade that the different steamers should keep to the same track following one another? - Very.

19289. So that they may be within touch in case of need? - And to avoid the risk of collision.

19290. So as to avoid those on the return journey? - To avoid meeting ships. 19291. Was it you who arranged the new track, after the disaster, with the other companies? - I cannot say that. We were directly responsible for it, but when this accident happened, and we then for the first time heard that ice had got down to this southern track, we immediately got in touch with the Cunard Company. That is our usual procedure. We try to come to an agreement with them in the first instance, and, having done that, we get in touch with other British lines, and send a recommendation over to the Continent, and get them to agree to what the British lines have provisionally agreed to. But the Continental lines were as quick as we were on this occasion, and while we were still talking with the Cunard Company, within a few hours of our first taking the subject up, we got an urgent wire from them to join with them.

19292. (*The Commissioner.*) From whom? - From the German lines; the German lines communicate on behalf of all the Continental lines. They asked us to join in taking a specially Southern track, and we put forward a suggestion, and after a little wiring backwards and forwards we agreed on a new track, and sent the ships down to it.

19293. (*The Solicitor-General.*) Can you help us about this new arrangement. We have got the old one. Is there a formal agreement and a chart? - No.

19294. Then in what form is it? - We arrive at it in this way. The only tracks which are fixed are those two which you have marked on the chart. But it occasionally

- happens, rarely however, that on this Southern track we do come across ice in considerable quantities. It is then understood that as soon as that information reaches us, word is passed round and we go to the Southern track, which is South of that one on the chart. Since 1898 I think only three times, to the best of my recollection, have we had to do that. We have gone down to this specially Southern track which is not marked, by agreement, but on this occasion we went South even of that track.
19295. (*The Commissioner.*) Which track? - After this "Titanic" accident we went South even of that track, and only a couple of weeks ago we got word that ice was on that track, and we went South of that again; and in communicating with the Hydrographic Office at Washington we got word from them only as late as this morning that it is practically impossible to go sufficiently far south to avoid all risk of meeting ice, because icebergs have been sighted from Bermuda.
19296. Then my suggestion yesterday that you should sight the Azores would not take you out of possible danger? - It would seem not from what the Hydrographic Office tell us.
19297. Is there anywhere, as far as you know, where you are out of the reach of icebergs? - I think so. I think in a short time it will be safer to go North. We shall see no ice in the North directly. It is passing South; it will be all going away from the Northern track.
19298. I am not talking about this particular track, but is there any track, say, for the months of March and April which will be absolutely safe from ice? - I think it is a very rare thing, almost an unheard of thing, to meet ice on our Southern track, the track which the "Titanic" was on, in March.
19299. What about April? - In April we have met it, unfortunately. It is unusual so early as April.
19300. (*The Solicitor-General.*) Is it a later month in the year when you might expect to meet it on the Southern track more constantly? - Yes.
19301. What is the month? - May and June, I think, are the months that you are more liable to meet ice to the Southward.
19302. You said something to my Lord which I want to follow up. First of all, let me be sure that I have got what you said rightly. Did you say, "It occasionally happens that ice is met with on the Southern track in considerable quantities"? - It has happened two or three times since 1898. I am speaking of icebergs.
19303. When you say it occasionally happens, may I take it that means that you get reports of it from your Captains? - Or from other ships in the agreement.
19304. Are reports made then to the White Star Company by their Captains about such a matter as this? - Always.
19305. Are they reports in writing? - They are by wire.
19306. Do you keep a file of them? - They would be filed away. We have not a special file for those particular telegrams. The practice is, as we receive them we communicate them to the other signatories and they to us, and if the occasion seems urgent we immediately agree on a new track and send the ships further South.

19307. Have you looked to see whether in the month of April the White Star had any reports from any of its Captains about ice? - I am quite sure we had none.
19308. You are sure you had none? - Prior to the sailing of the "Titanic" we heard nothing about ice.
19309. That means, no doubt, that you have looked or had search made? - Yes.
19310. That is prior to the sailing of the "Titanic." Now, since the "Titanic" disaster have you had reports of ice from your Captains in the North Atlantic? - I do not think our ships have reported ice on this Southern track, but as I have said it has been reported on this exceptionally Southern track, and, of course, ships going to Canada continually see it.
19311. You said something had happened three times since 1898. I think it was the shifting of the track? - Yes, going to this extreme Southern track; one that is not marked on the chart.
19312. On each occasion has it been done by arrangement and agreement between the companies? - Yes, arranged by telegram. I am speaking from memory when I say three, I believe that is correct.
19313. And arranged apparently in the same sort of way in which it has been arranged this time? - That is right.
19314. Take the present arrangement to go on a more Southerly track which you indicate, is that to go on until you agree to stop it or is it to go on for a given length of time? What is the arrangement? - I should think we will keep it up very likely until the next change would come about in the ordinary course, which would be August. 19315. Is that when you go North? - Then we go North. Unless somebody suggests we should go North sooner than that it would not be considered.
19316. Then, if it occasionally happens that you meet with ice on this Southern track, of course a message to a Captain of your ship that there is ice near the Southern track, is obviously a matter of

**Page 478**

great importance. He would recognise it as such? - Undoubtedly.

19317. Now, would you tell me, as far as your knowledge of the conduct of the White Star Line goes, do you, or do you not, reduce speed if you have news that ice is in your track, in front of you? - In clear weather I have no hesitation in saying they do not reduce speed. I do not believe that any ships reduce speed. That is only an opinion.

*The Commissioner:* That leads me to ask you to get information, or ask this witness for information, as to the conduct of other liners in the same circumstances.

*The Solicitor-General:* We had it in mind, my Lord.

19318. (*The Commissioner - To the Witness.*) Can you give me any information about that? - We will try to get it, but I think it is very difficult to get any Master of any ship in active service to come into Court and say that he would do what is before him as having brought about an accident.

19319. It is not what he would do. What he would do now is one thing, but what did he do in circumstances like these because of reports of ice - did he slow down or not? - My opinion is he did not. I do not think you can possibly prove it except by getting the logs of other ships that had reports of ice, and seeing whether they did slow or not. 19320. I have heard that these large Atlantic liners - take fog, for instance - pay no attention to fog, but steam just as quickly when they get into fog as when they are not in fog. Is that true? - My Lord, any man that told you so was either a very ignorant or a very vicious man. It is absolutely untrue.

19321. I am told that they pay no attention to fog, but steam ahead as fast as they can? - He told you what was absolutely untrue.

19322. Fog is different from ice, of course, because ice in clear weather can be seen.

Do you say if they can see the ice they do not slow down at all? - I believe not. 19323.

*(The Solicitor-General.)* You say in clear weather. Does your answer extend to night as well as day? - Yes, in clear weather at night I am advised by our Commanders that they

would expect to see ice at a safe distance to avoid it going at full speed. 19324. *(The Commissioner.)* It is with reference to this point that I want, if possible, to get the logs or some reliable information about what other liners were doing in this region on the 14th April last? - No doubt logs can be obtained, my Lord, but it goes without saying that having regard to the agreement we have with the other companies, which is very rigidly adhered to, all the ships belonging to the companies in that agreement were in fact following the same track West-bound that the "Titanic" was following. 19325. I want to know what speed they were going? - That you can only get from their logs, my Lord.

*The Commissioner:* When we get their logs we can see that.

19326. *(The Solicitor-General - To the Witness.)* I suppose we may take it that whether there is a message about ice or whether there is not, the keenest look out would be expected to be kept on one of your liners? - I hope so.

19327. In your view what is the importance of getting a message sent to a Captain that there is field ice in his track if it does not have any effect on his speed or his course?

*The Commissioner:* They were icebergs here.

*The Solicitor-General:* The message was field ice.

*The Commissioner:* And icebergs.

*The Witness:* I think it would be given to him as a warning to be on the look out for it, or if he thought fit, if the case was sufficiently urgent, to alter his course.

19328. *(The Solicitor-General.)* What is in your mind when you say, "If the case was sufficiently urgent"? - If there was a large quantity of ice. I do not imagine if he was merely told there were a few icebergs about that he would necessarily alter his course; he would expect to see them.

19329. Supposing he was told that there was a great quantity of field ice? - I think he would consider whether he would alter his course or not, and in fact he did alter his course.

19330. *(The Commissioner.)* You mean by a slight alteration of the turning point? - That is right, my Lord.

19331. That made a very slight alteration? - It took him several miles South. 19332.

How many? - I believe he was seven miles South of the track. Probably in his judgment he thought that was sufficient.

19333. Well, I cannot put my judgment against his. Do you think that alteration was a deliberate alteration or was it an accidental alteration? - I am quite certain it was deliberate. I cannot conceive that a Commander or a ship officered as the "Titanic" was officered could run on past the normal turning point for 50 minutes by accident. 19334. (*The Solicitor-General.*) Rather confirming that, my Lord will remember that when the new course was set, the new course was set on a line which I think differed by one degree from the course on the chart, which would tend to bring them back at last on to the track; it would recover their position. (*To the Witness.*) I think I should ask you this: Has your Company given any further directions to your Captains since this disaster with any reference to ice? - No, we have not given any special written directions, but we have taken occasion to speak to each of our Commanders in regard to this lamentable occurrence, and impressed upon them the necessity for carrying out the Company's wishes in regard to safe navigation.

19335. But what are the Company's wishes supposing that a ship finds itself in similar circumstances, a clear night and capable of going 22 knots - what are the Company's wishes? - We should expect our Commanders, who are all men of great experience, to exercise prudence and discretion, and to err on the safe side, and that is what we impress upon them. That is what we think is the lesson we have learned from this accident.

19336. It depends upon the circumstances of each case, as I follow you? - I think so.

19337. I just call your attention to the last part of this question, "Had the Master any, and, if so, what discretion as regards the track to be taken?" We understand Mr. Ismay's view about that, but will you do this for me. Will you look in the records of your Company and see if you can show the Court an example of one of your Masters reporting exercising his discretion in departing from the track? - I have no doubt we can do it. 19338. We should like to see it? - We can do it in two ways. Occasionally we get a report from a Commander that he has departed from his track for certain reasons. On other occasions we notice from the track that he has followed that he has departed from it. If there is no explanation forthcoming we ask, and we invariably commend him if there is good reason.

19339. I think you might produce an example of that for us? - Yes.

19340. I do not think the next questions are matters which this gentleman will wish to concern himself with, my Lord. No. 9 is plainly not a matter for him, nor No. 10.

*The Commissioner:* No, those are matters which happened on board.

19341. (*The Solicitor-General.*) Yes. (*To the Witness.*) I might ask you a question about No. 11. Mr. Ismay has given some evidence about the binoculars. Do you agree in what he said about them? - Generally, yes. I think Mr. Ismay believes a little more in binoculars than I do.

19342. We have been told by the look-out people that there were binoculars on the "Olympic"? - Coming from Belfast to Southampton.

19343. On the "Olympic" I am speaking of? - Oh, I beg your pardon, yes.

19344. And that there were not binoculars on the "Titanic"? - Yes.

19345. Oh, I beg your pardon; they were on the "Oceanic"; but on the "Titanic" they had been provided coming round from Belfast? - Yes.

19346. (*The Commissioner.*) What had become of them? - They must have been a pair of bridge

glasses which were sent forward (I am only assuming this) by one of the officers to the look-out, to look out for some particular purpose, I presume, at night.

19347. As I understand, a special box or bag is provided in the crow's-nest for the very purpose of carrying binoculars? - It is a proper thing that there should be a bag there, because obviously at times, even when a particular ship is not supplied with glasses for the look-outs, glasses will be sent forward by the bridge officer to the look-out for the purpose of trying to pick up, or helping him to pick up, some particular light, and it would be a proper thing for him to have a bag or a box to put his glasses in when he was not actually using them.

*Sir Robert Finlay:* Your Lordship will recollect it was proved the glasses used between Belfast and Southampton were marked "Second Officer."

19348. (*The Commissioner.*) Yes, that is true. (*To the Witness.*) You used an expression that to my mind is a little ambiguous. The binoculars are useful, you said, to enable a look-out man to pick up. Now that is not the view at present I am disposed to take? - To pick up a light.

19349. What do you mean by picking up a light? My impression is they pick up first with their eyes and then use the glasses afterwards to get better or closer information as to what the light is? - I entirely agree, my Lord, for ordinary purposes, but I do think if they were looking for a light which is at a great distance they would probably, if they were looking in the right direction, pick that light up quicker with the glasses than they would with the naked eye.

*Sir Robert Finlay:* It is a light the position of which is known.

*The Commissioner:* I see - I understand.

19350. (*The Solicitor-General.*) Not searching the horizon for what you can see but knowing you ought to find a particular light on a particular bearing? - Yes.

19351. (*The Commissioner.*) Looking for a light which you expect to see? - Yes. *The Commissioner:* Yes, that I understand.

19352. (*The Solicitor-General.*) As a liner is approaching the British Islands, for instance, it is always a point to pick up the first light which is on the main land wherever it is - the Fastnet, or whatever it is? - Yes, and presuming he has had good observations he knows pretty accurately where to look for it.

19353. There is a reference in this same Question No. 11 to searchlights. Has your company had any experience of searchlights at all? - Very little. We had a searchlight fitted on the "Teutonic" many years ago when she went down to the Naval Review. It was used, I think, then more for purposes of illumination. It certainly has never been used; it was taken off the ship and never was used on the Atlantic, and I think I am right in saying that our nautical staff would be very much opposed to it.

19354. (*The Commissioner.*) Are searchlights used, so far as you know, in any vessels other than men-of-war? - I never heard of it being fitted except perhaps for ships

going through the Suez Canal. I believe they have a searchlight fitted for lighting up the canal ahead of them, but I am only speaking from hearsay.

19355. Those are not wanted for sighting icebergs? - No.

19356. (*The Solicitor-General.*) About the binoculars, I meant to have asked you this. Since this disaster has your company taken any steps to provide binoculars for the crow's-nest? - We have.

19357. For all your vessels? - We have ordered binoculars to be given to all the lookouts for much the same reason that we have put all these extra boats on. There is a popular cry that they want to have glasses, and we are going to satisfy them.

19358. Have you had enough experience of it to know whether your look-out men use them? If you do not know, you had better say you do not? - I cannot speak of my own knowledge.

*The Solicitor-General:* In the same way the next questions do not affect this gentleman, I think.

*The Commissioner:* Which are they?

*The Solicitor-General:* Nos. 12, 13, 14 and 15 - in fact all of those. The one which does affect him in a way is the second part of No. 19, but I think your Lordship has probably got sufficient evidence about it. "Did the boats, whether those under davits or otherwise, prove to be efficient and serviceable for the purpose of saving life." *The Commissioner:* I do not think you need ask this witness about that.

19359. (*The Solicitor-General.*). There is one circumstance which I think has come to our knowledge which I might ask him about. (*To the Witness.*) Do you know whether those "Titanic" boats which were taken on board the "Carpathia" were found, any of them, when they reached New York to have suffered - to have sprung or buckled at all? - I have not heard so.

*The Commissioner:* Question 20 he knows nothing about?

19360. (*The Solicitor-General.*) No, except that I am going to hand to your Lordship a list of the crew, which will give your Lordship the rating. We want to divide them up amongst the different classes. (*To the Witness.*) You will recognise the bundle, Mr.

Sanderson, I think? - Yes.

19361. It is particulars of the crew, showing their rating and the departments to which they belonged. We can have it analysed to your Lordship, if you wish. I do not think the remaining matters touch this witness at all.

*Sir Robert Finlay:* There is the second part of Question 24.

19362. (*The Solicitor-General.*) Yes. I will pass to the second part of Question 24. The question is, "Was the construction of the vessel and its arrangements such as to make it difficult for any class of passengers or any portion of the crew to take full advantage of any of the existing provisions for safety?" (*To the Witness.*) Your attention has been directed to the class question in the course of this Inquiry, I daresay? - It has.

19363. What do you say about it? - I say that the "Titanic" was as simple as it was possible to make any ship of her size carrying three classes of passengers. I do not think there was a simpler or more straightforward ship afloat than the "Titanic" for getting from one part of the ship to the other.

19364. Since the disaster and this class question has been raised have you considered it particularly? - I have thought a great deal about it; I have heard it with great surprise. 19365. It is a question which is naturally raised, but as far as you and your advisers are concerned you could not suggest any improvement in that regard? - I really do not know how we could make a ship more straightforward and simple.

*The Solicitor-General:* I think that is all my Lord.

*(The Witness withdrew.)*

*(Adjourned to tomorrow at 10.30 o'clock.)*

## PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC."

### EIGHTEENTH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K.C., M.P. (Attorney-General), SIR JOHN SIMON, K.C., M.P. (Solicitor-General), MR. BUTLER ASPINALI, K.C., MR. S. A. T. ROWLATT and MR.

RAYMOND ASQUITH (instructed by SIR R. ELLIS CUNLIFFE, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K.C., M.P., MR. P. LAING, K.C., MR. MAURICE HILL., K.C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.), appeared as counsel on behalf of the White Star line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted On application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes, of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company.

MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. William A. Crump and Son), watched proceedings for the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P., (instructed by Messrs. Helder, Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside, and General Workers Union of Great Britain and Ireland.

(Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third-class passengers.

(Admitted on application.)

MR. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian." (Leyland Line). (Admitted on Application.)

MR. H. E. DUKE, K. C., M. P., and MR. VAUGHAN WILIAMS (instructed by Messrs. A. F. and R. W. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff-Gordon. (Admitted on Application.)

**Page 482**

### **HAROLD ARTHUR SANDERSON, Recalled.**

#### **Examined by Mr. SCANLAN.**

19366. In the ordinary course of events would the mails carried by the "Titanic" be delivered to the postal authorities immediately on her docking in New York? - Before she docked.

19367. Now from what port on this side is the advice sent to the postal authorities in New York, letting them know when to expect her? - From no port on this side; they would undoubtedly get their information from the New York office of the White Star Line.

19368. Do you know what communication was made from Southampton or Queenstown to your New York office as to the time of the arrival of the "Titanic," the time it was expected at which she would arrive? - I certainly know of none, and I should say offhand that none was made.

19369. Do you mean to say that at the time the vessel left Queenstown your people in Queenstown would not send any advice to the New York office apprising them of the hour at which they expected the "Titanic" to arrive? - Most certainly not. Such a thing would be most unusual and most un-businesslike.

*The Commissioner:* Do not ask speculative questions. If you have anything leading you to believe that such a thing would be done, then by all means ask it, but it takes up a great deal of time to ask these particulars.

*Mr. Scanlan:* Of course the statement we have, my Lord, is the statement of Mr. Ismay in his evidence as to the boat, the "Titanic" being expected to arrive in New York on Wednesday, but there is also mention of it in the evidence of Tuesday.

*The Commissioner:* That may be, Mr. Scanlan, but pass it by.

19370. (*Mr. Scanlan.*) If you please, my Lord. (*To the Witness.*) In ordering the “Olympic” and the “Titanic” was any specification delivered to the builders? - Delivered to the builders?
19371. Yes? - None.
19372. Or prepared by the builders and submitted to you? - None.
19373. Did you make any request to the builders, Messrs. Harland and Wolff, as to lifeboats? - No.
19374. Can you tell me whether there was any discussion between you personally, as a Director, and the builders, or any responsible member of their firm as to the provision of lifeboats for the “Olympic” or the “Titanic”? - Yes, I believe there was.
19375. Can you recall any conversation in which you yourself took part in regard to this? - I cannot say I recall a conversation, but I recall that at one of our interviews with Lord Pirrie the question of the number of lifeboats that would be supplied was referred to, but it was only referred to in general terms, and I cannot recall that any opinion was expressed one way or the other as to the number that Messrs. Harland and Wolff would supply.
19376. Then was it left to Messrs. Harland and Wolff to decide for themselves how many lifeboats would be supplied to the “Titanic”? - It is not quite fair to put it in that way, but Messrs. Harland and Wolff would in the first instance be under an obligation to boat the ship equal to the Government requirements, and, as the result of the discussion which I refer to, additional boats were put on, to be on the safe side.
19377. I would like to direct your attention to the evidence given on this point by Mr. Ismay in the American Enquiry. It is right I should say that this was not put to Mr. Ismay here in the witness-box, but it is from the Official Report of the evidence. If your Lordship thinks it right, I will suggest to you the question I propose to put.
- The Attorney-General:* What are you reading from?
- Mr. Scanlan:* I am reading from the Report of Tuesday, the 30th April. *The Commissioner:* What is the question?
- Mr. Scanlan:* Mr. Ismay is asked here, “How does it happen that the “Titanic” had but 20 lifeboats?”
- Sir Robert Finlay:* What page are you referring to?
- Mr. Scanlan:* Page 925, “How does it happen that the “Titanic” had but 20 lifeboats including lifeboats, emergency boats, and collapsible boats? - (*Mr. Ismay.*) That was a matter for the builders, Sir, and I presume that they were fulfilling all the requirements of the Board of Trade.”
- The Commissioner:* That is quite right.
- Mr. Scanlan:* That is what I put to you, Mr. Sanderson? - I think I have answered very much on the same lines.
19378. That it was left in the first instance to them? - Yes; that it was left in the first instance to them. They would submit a profile plan of the ship showing the boating arrangement to us, and they would undoubtedly say that it complied with the Board of Trade requirements, and as the result of this conversation which I am giving, referring to

the additional boats with which she was supplied were put on, but as to what we said or what Lord Pirrie said on that particular occasion, I cannot say.

19379. And so far as you know is there any correspondence available to you in reference to this matter? - Yes. The Solicitor-General asked me yesterday to have our records looked up -

*The Commissioner:* No, no; do answer the question. It admits of "Yes" or "No" or "I do not know"; and you can give any one of the three. Do not have any discussion, or we shall never get to the end of this Enquiry.

19380. (*Mr. Scanlan.*) There is no such correspondence - you have never heard of it? - I said yes, there was.

*The Commissioner:* Then there is an end of that question.

19381. (*Mr. Scanlan.*) Quite. (*To the Witness.*) Will you produce that correspondence? - I have handed it to the Board of Trade.

19382. Apart from what the Board of Trade or the Advisory Committee may have been contemplating, had it suggested itself to you in view of the increase in the carrying accommodation, and in the size of those sister ships, the "Olympic" and the "Titanic," that, independently, your firm ought to provide more lifeboats? - It had not - when you say -

*The Commissioner:* No, no. You have given your answer.

*The Witness:* My Lord, he has made a statement which is not correct.

*The Commissioner:* No, he has not made a statement; he asked a question, and you answered it. The question was quite intelligible, and so was your answer. *The*

*Witness:* With all respect, my Lord, he has made a statement that there is an increase in the carrying capacity of the ships.

*The Commissioner:* No, he has not. He asked a question and you answered it.

19383. (*Mr. Scanlan.*) The davits which were supplied for the "Olympic" and "Titanic" are, I understand, what are called Welin double-acting davits? - Yes, they are. 19384. Before the building of the "Olympic" and "Titanic" were such davits supplied for any of your other ships? - They were.

19385. Is the object of having these davits in order to enable you to deal with a larger number of boats with each pair of davits? - Not that I am aware of.

*The Commissioner:* That is the right way to answer.

*Mr. Scanlan:* There is a plan here, my Lord, which I should like to submit to him, to ask him if he thinks it is practicable. There is printed on this "s.s. 'Olympic' and 'Titanic' building, by Messrs. Harland and Wolff, Limited, Belfast, for the White Star Line. Each vessel fitted with a

## **Page 483**

new Welin double-acting davit, handling in all two lifeboats." Will you look at this, Mr. Sanderson. (*Handing the plan to the Witness.*)?

*The Commissioner:* What is this?

*Mr. Scanlan:* This is a plan, my Lord, referred to in papers produced by the inventor of those davits.

*The Attorney-General:* Which davits?

*Mr. Scanlan:* The Welin davits.

*The Commissioner:* What is the question upon it?

19386. (*Mr. Scanlan.*) This is the question, my Lord. (*To the Witness.*) Was such a plan submitted to you showing the working of each pair of davits of two boats, one carried outboard and the other inboard, as shown there? - A newspaper with this in it was sent to us by a firm called Crawford and Company in Liverpool in 1910.

19387. Your firm, then, did not authorise the production of this? - Certainly not. 19388. Or the statement that this provision was being made for the boitage of those ships of yours? - Certainly not.

19389. Looking at this plan (a plan was submitted to you yesterday, which I have not seen, by my Lord), do you see any difficulty in working with those davits supplied to the "Olympic," at least, two boats for each pair? - Off-hand, I should say it would be practicable to have two boats opposite each pair of davits.

19390. And, of course, if you had two with the davits which were carried, 16 pairs, you would have 32 wooden lifeboats? - You would.

19391. I think you stated yesterday that in addition to that there could be lifeboats on the boat deck in the free space between the forward and the after boats? - There are positions *here* where you could not put boats. You have handed to me a plan and do not give me time to study it, and I should say offhand that more could be put, but there are positions there where only ignorant persons would put boats.

19392. Now, may I ask you if you have seen the statement made in the lecture delivered by the inventor of this davit, Mr. Welin, at the spring meeting of the session of the Institution of Naval Architects on March 29th this year, the President being the Hon. Sir Charles Parsons, in which he stated -

19393. (*The Commissioner.*) First, let us have the question. (*To the Witness.*) Have you read the account of that meeting? - I have not read it, and I do not think I have ever seen a report of it.

*Mr. Scanlan:* Then the next question is this, my Lord, if I may refer him to the statement made there.

*The Commissioner:* Yes, certainly.

*Mr. Scanlan:* "On the boat deck of the White Star Liner 'Olympic' and also of the 'Titanic' this double-acting type of davit has been fitted throughout in view of coming changes in official regulations. It was considered wise by the owners that these changes should be thus anticipated, and so make it possible to double, or even treble, the number of boats without any structural alterations, should such increase ultimately prove to be necessary."

*The Commissioner:* Now, what is the question?

19394. (*Mr. Scanlan.*) This is the question, my Lord. (*To the Witness.*) Do you agree with this statement in so far as it says that you, as representing the owners, considered it wise that the changes which you expected should be anticipated, and that it was for that purpose that those davits were altered? - It was not so, so far as we are concerned.

*Sir Robert Finlay:* By whom was that statement made?

*Mr. Scanlan:* By Mr. Welin, the inventor, my Lord.

*Sir Robert Finlay:* He is the patentee.

*The Commissioner:* You know, Mr. Scanlan, I may tell you I have been deluged with circulars from all sorts of patentees of all sorts of lifeboats, and if I am to sit here to hear the merits of every one of those patents I shall be here to doomsday.

*Mr. Scanlan:* Of course, I would not think of bothering your Lordship with a number of those things which have been submitted to myself and those who are instructing me, if I did not think it was necessary.

*The Commissioner:* I am sure you have had them, too.

*Mr. Scanlan:* Yes, I have.

*The Commissioner:* I am most anxious, Mr. Scanlan, to spare you, if I can - *Mr.*

*Scanlan:* And I am most anxious to spare you, my Lord; but surely these are the davits that were on the "Titanic."

*The Commissioner:* Do not argue the point - go on; we shall get on quicker.

*Mr. Scanlan:* Very well. I hope I have not unnecessarily detained your Lordship.

*The Commissioner:* Oh, no.

19395. (*Mr. Scanlan - To the Witness.*) Then it has been stated that a design was submitted, or something of this kind was submitted, to you, and I take it to be your evidence (and this is the last question I shall ask you) that, apart from a paper sent you by some person named Crawford in 1910, you never heard of any suggestion that on those boats you should have a greater number of lifeboats than you carried? - That is true.

19396. On the davits? - That is so.

19397. According to your statement yesterday, you put it to my Lord, as an objection to increasing the number of boats, that if you had any considerable increase of working space on the boat deck it would be insufficient? - I did so.

19398. Is it not the case, Mr. Sanderson, that the great objection from the owners' point of view is to depriving the boat deck of space for promenading? - No, it is not.

19399. Now, I am going to ask you a question with regard to the crew for working a lifeboat. You stated, I think, a crew of four with one man for the tiller in addition - that is five? - Yes, for a certain purpose, I stated that.

19400. Do you think a crew of five would be able to row a full-loaded lifeboat such as yours?

*The Commissioner:* That is a question that does not affect us very much. Will you describe the sort of sea that you presuppose, Mr. Scanlan?

*Mr. Scanlan:* I have made some ineffectual efforts to describe the sea to other witnesses

-

*The Commissioner:* The question of the number in the boat depends very much, I should say, upon the sea.

*Mr. Scanlan:* I suppose it does, my Lord.

*The Commissioner:* If you put this question to him it may be of some value perhaps - in an oily sea as this was.

19401. (*Mr. Scanlan.*) Yes. In an oily sea, a perfectly calm sea, I suppose four or five would be sufficient? - I should say in such a sea as you describe two would be sufficient.

19402. In a fairly rough sea you would require more? - Yes.

*The Commissioner:* I suppose if you had a sea bad enough you would require none, because the boat would not live, however many you put into it; you get to the two extremes.

*Mr. Scanlan:* Of course, I always like to get at the mean position between those extremes.

*The Commissioner:* Yes, get the mean position. That is what he meant, for a lifeboat of this size the crew, in his opinion, would be five men, and he means then in average weather.

19403. (*Mr. Scanlan - To the Witness.*) I suggest to you that to row a boat like your lifeboats in average weather you would require a crew of nine? - Well, I differ with you entirely.

19404. Very well. Now you stated yesterday, and I agree with you, that it is not necessary to have a larger crew?

*The Commissioner:* I suppose the larger the crew the less number of passengers can be carried?

*Mr. Scanlan:* Yes, my Lord.

*The Commissioner:* But I suppose the crew weigh the same as the passengers? *Mr.*

*Scanlan:* I suppose so, and they have an elementary right to safety next after the passengers.

## **Page 484**

*The Commissioner:* Certainly, and for all I know before the passengers.

19405. (*Mr. Scanlan.*) I do not suggest that, my Lord. (*To the Witness.*) But in making up your crews, of course you do make up a list of crews for your different lifeboats. You assign men to different stations. Do not you assign more than five to each of your lifeboats? - Yes, but not with any idea that they should go in the boat necessarily. 19406. Not necessarily, but surely that is the object of stationing a man at a boat and expecting him in ordinary circumstances to go to his position, that in an emergency he will go there? - To the boat, yes, but not necessarily go in the boat.

19407. But in so far as men are wanted, I presume the intention is that if they are there at their stations the men stationed to a particular boat will be sent with it? - Some of them.

19408. Now you stated yesterday that you do not think it is necessary that the full crew of the boat should be seamen, and I am instructed to agree with you, but is it not necessary, if the use of lifeboats is to be maintained, that the crew, from whatever department of the ship they are taken, should get proper training? - They should have a reasonable knowledge.

19409. Have you any suggestion to make as to how they ought to be trained for this work? - Yes.

19410. Will you tell my Lord what it is? - My suggestion is that the leaders of the men should do their best to get the men to carry out the Company's regulations and to take advantage of the opportunities for drill which we are trying to afford them.

19411. But until this disaster to the "Titanic" you have stated, or it has been stated, and you have accepted the statement from my friend, Captain Barclay, that when you have this so-called drill at Southampton you put into the boats, not a mixed crew of firemen and stewards and sailors, but a crew composed entirely of sailors? - It is quite true Captain Barclay said that, but he made a mistake. I am now in possession of further information.

19412. (*The Commissioner.*) On what subject? - On the subject of what is done with these boats. May I read a telegram which I received?

19413. Yes. - I sent a telegram after the rising of the Court yesterday to ask if it was the fact that other ratings than deckhands had no opportunity of getting boat experience, and this is the reply.

19414. Who is answering it? - Our Manager in Southampton. "Replying to your wire, boats on sailing morning have been recently manned by deckhands and stewards, we muster them here. Occasionally stewards will man one or two boats entirely. This was done on the 'Titanic' - 'Olympic' today had six boats in the water manned by stewards and deckhands."

19415. Tell us what is done now. I understood Mr. Scanlan to be asking you what was done before the "Titanic" went down.

19416. (*Mr. Scanlan.*) I will just accept the statement of Captain Barclay as to what was done. (*To the Witness.*) I take it now that since the "Titanic" disaster an effort has been made to train all hands, men of all classes in the ship, for the working of the boats? - An effort is being made, and we are being met with an absolute refusal on the part of the men.

19417. And you would like the men's leaders to co-operate with you in getting the men to take the opportunity of getting this drill? - I would like anything to be done that would help us to carry out the necessary drill.

*Mr. Scanlan:* I understand, my Lord, that the people whom I represent are very anxious that the men should all be trained in order to secure greater efficiency and to co-operate with Mr. Sanderson.

*The Commissioner:* I do not quite know, Mr. Scanlan, whom it is you do represent. Do you represent the leaders of these men, or do you represent the men themselves? *Mr.*

*Scanlan:* I think your Lordship will remember that an application was made by me on behalf of the Union to be represented here.

*The Commissioner:* I supposed then and I do suppose still that you represented all the men, but I am not convinced about it. I suppose you do represent all the men. You are not here merely instructed by officials or leaders of the Union.

*Mr. Scanlan:* The officials and leaders of the Union which I represent, represent the members of the Union, who, I understand, comprise about 80,000 to 100,000 men. *The*

*Commissioner:* What I want to know is this: Assume that the men are directed to submit to this drill, do the leaders of the Union insist upon them going through their drill?

- I have been told here that the men object to the drill, and will not do it.

*Mr. Scanlan:* Up to the present I am instructed that this is the first time a request has been made for this cooperation with Mr. Sanderson.

*The Commissioner:* That is another matter. Is it true that sometimes the men will not do what they are asked to do in connection with drill?

*Mr. Scanlan:* My information is, my Lord, that the leaders of the Union - those who represent the Union and who are alone capable of giving instructions for an Enquiry like this - are desirous that all men should be trained in the handling of boats in order to secure greater efficiency, and that they will cooperate.

*The Commissioner:* What are they going to do, supposing the men say they will not drill?

19418. (*Mr. Scanlan.*) They have never had an opportunity, and I think it is quite sufficient that I should be instructed to express the desire of those I represent to cooperate with Mr. Sanderson.

*The Witness:* We have offered them half-a-day's pay to do this drill, and they have refused - I am speaking of the firemen.

*The Commissioner:* I can understand the firemen having an objection, it being no part of his business to go through this drill. I can understand that. He is engaged primarily, at all events, to perform services below deck, and he may say, I have got nothing to do with boat drill or boats, and I will not do it. However, I am far from saying he will be unreasonable.

19419. (*Mr. Scanlan.*) I have heard a very interesting and very practical remark from Mr. Sanderson just now that he has offered a half-day's pay - this is the first I have heard of it. I understand it is not generally known that such an offer is open. (*To the Witness.*) When was it made? - I did not say it was open; I said we had tried the experiment and it had failed. It was tried in the case of the "Olympic." 19420. When? - Last week.

19421. So that it is not open now?

*The Commissioner:* It is no use making an offer that will not be accepted.

*Mr. Scanlan:* You have only the word of Mr. Sanderson at present. We do not know the circumstances under which it was made, or to whom it was made.

*The Commissioner:* No, I do not know anything more about it than I have heard here.

19422. (*Mr. Scanlan.*) I will leave it at that, my Lord. (*To the Witness.*) Now I think you expressed the opinion that of the crew of a boat two should be seamen? - I think it would be a wise precaution for boat work.

19423. Have you taken precautions that you have two for each boat where you have made an increase? - It is not necessary to take any precautions. They would not send a boat away for boat work with less than two seamen in it.

19424. So that it is the intention that two men shall be on board each lifeboat? - There is no regulation on that subject, but I am sure no lifeboat would be sent away for boat work with less than two seamen in it.

19425. But, then, you do not say that it is your purpose where you have increased lifeboat accommodation to secure that of your crew you shall have two seamen for each boat? - For each boat on board?

**Page 485**

19426. Yes? - No.

19427. (*The Commissioner.*) I do not understand that, Mr. Sanderson. Are there not two seamen allocated to each lifeboat on the vessel? - No, my Lord.

19428. Why not? - Because I think it would mean providing the ship with an unnecessary number of sailors. Under no conceivable circumstances that I can think of would it be necessary to provide for manning for boat work all the boats on the ship.

19429. I think, Mr. Sanderson, there are instructions relating to emigrant ships issued by the Board of Trade, are there not? - There are, my Lord.

19430. And this subject that Mr. Scanlan is upon is dealt with in those instructions? - I have not read them recently; I do not recall the point.

19431. In the Company's steamships are what are called deckhands sailors? - Yes.

19432. "In steamships deckhands should be carried in accordance with the following, which is based upon the total boat and raft capacity with which the ship is required to be provided under the statutory rules relating to life-saving appliances;" and then we get the total capacity of boats and rafts required and the life-saving appliances. Take 9,300 cubic feet - you must have apparently 48 deckhands? - That is quite right, my Lord. 19433.

Now then, I see it goes on to say that the term "deckhands" means the master and mates and all bona fide able-bodied seamen? - We go far in excess of that, my Lord. 19434.

Now if you were to go further would it follow that you would have a number of deckhands, these able-bodied seamen, doing nothing at all during the whole of the voyage, or the whole of the return voyage, doing nothing at all, in fact, until the wreck of the steamer? - That would be correct; we should have to make work for them.

19435. You would have to keep them doing nothing in anticipation of the wreck of the steamer? - That is true, my Lord.

*Mr. Scanlan:* If I am right, from what my Lord has read to you from the regulations, the 48 men mentioned there would be where your lifeboat accommodation was for 900 persons?

*The Commissioner:* No, no, 9,300 cubic feet.

19436. (*Mr. Scanlan.*) I think it works out at 10 cubic feet per person, and, generally speaking, that is for 900 people? - Yes, that is correct.

19437. So that if you carried your boat accommodation up to, say, 32, or for double that number of people, you would require a greater number of seamen? - If we are going to put all those boats into the water for boat work, not flotation.

19438. If the requirements of this regulation of the Board of Trade were extended in correspondence with the number of boats carried, and increasing accommodation, it follows that there would be a considerable increase in the number of men? - If the Board of Trade increased the scale that my Lord has read out the number of men would have to be increased, no doubt.

19439. (*The Commissioner.*) But my point is this, and I want to know whether I am right or wrong about it. Would the effect of making that increase in the number of men be, that you would be carrying always a number of men who could not be employed? - That is perfectly true, my Lord. The ship is efficiently manned now for all reasonable purposes.

19440. (*Mr. Scanlan.*) Does it suggest itself to you that this demand might be met if the lifeboat accommodation was to be increased by giving proper training to the men in the other departments, and carrying only sufficient deckhands for the proper duties which

deckhands have to discharge? - That is obvious. There is no difficulty about giving the necessary training to most of the ratings.

19441. (*The Commissioner.*) You mean to say, if they are amenable to take it? - I find the stewards are very amenable, and the deckhands also; it is only in the firemen's case that we cannot get them to do it.

*The Commissioner:* You must not say that, I am afraid, to Mr. Scanlan.

*The Witness:* I think he wants the truth, and that is the truth.

19442-3. (*Mr. Scanlan.*) Now, with regard to speed, you have given verbal instructions to your Captains in regard to speed under certain circumstances since this disaster, have you not? - No, we have not. I do not quite follow the question - Will you put it a little more clearly?

19444. With regard to precautions for safety and the emergency of meeting ice in the Atlantic, I take it you have given some instructions to your Captains since this accident? - I think I told the Court yesterday what we have done, which is that we have impressed upon them the necessity for exercising even more caution in future than they have done in the past.

19445. But no special directions of any kind have been given? - No.

19446. Does it suggest itself to you as a reasonable thing, that at nights the look-out should be increased? - At nights, ordinarily, no.

19447. At nights when ice is expected? - If it is clear I should think two men would see the ice as well as six.

19448. Now, I want to put this to you: Do you think with your knowledge and experience, which, of course, is very extensive, that it would be advantageous when running at night in a region where ice is expected to station a look-out man at the stem head in addition to the look-out men in the crow's-nest? - Reasonable - if the Commander thought it would help him, he would do it, undoubtedly, but as to whether it is reasonable or not, I cannot say. There could be no harm in it, certainly -

19449. Do you think it is a desirable thing to do? - I really do not think so. I think two men on the look-out in clear weather are sufficient for any purpose, whether it is for ships or ice or anything else, but perhaps when it was hazy it would be advisable.

19450. Do you think, for the purpose of detecting ice, that it is not desirable to have always a man stationed at the stem head at night? - The term "desirable" bothers me. If you say "desirable" it might be desirable to have a score of people there, but I do not think it is necessary.

19451. Do you think, as a practical man, that it should be done? - No.

19452. Now, do your Company have regulations in regard to sight tests for the look-out men? - We have.

19453. Can you say whether all the look-out men on the "Titanic" had been tested for their sight? - I cannot say of my own knowledge. I am informed that they have experienced difficulty in Southampton in getting men with sight certificates, but it is our wish that it should be done as far as possible.

19454. And that only men with sight certificates should be got for this purpose? - Yes, that is right.

**Examined by Mr. ROCHE.**

19455. I just want to carry a very little further this question of the firemen in the boat (I represent the engineers). As I understand it, you are agreed, and Mr. Scanlan's clients agree, that it is desirable that the firemen should be practised, if possible, in boat station work and in the manning of boats and in the rowing of boats? - Yes, I think so. 19456. And your boat station list (I do not know that my Lord has seen the actual document) contains in each boat some two engineers and some half a dozen firemen, or in some cases

**Page 486**

there are firemen allocated. There is space for them? - I think so.

19457. Of course, as you say, everybody who is on the list is not meant to go in the boat? - I think that is so.

19458. But they are supposed to be of some use at the boat stations? - Yes.

19459. And the firemen included? - Yes.

19460. Of course, if the firemen were no use in the boats there would always be a tendency to shut them out as being either of no use or as occupying space which passengers would take up; if they were no use that would be the tendency? - I think, obviously, the officers would select the best men.

19461. And, of course, if the firemen do not go, the tendency will be that the engineers and officers' staff will not go either? - I do not think that follows at all.

19462. You know, of course, that no engineers went in this case, and that there always is a very large percentage of firemen drowned in these cases? - I think there is a very good reason which you need not be afraid of.

19463. I just want to pursue this topic at the moment. I want to carry this question of training a little further. Of course, you have a difficulty with the crew apart from the firemen; they do not like drills and matters of that sort, I understand you to say? - I do not think we have had any difficulty except with one rating - the firemen.

19464. That may arise from reluctance to do another man's job, or it may be that they are tired? - I am afraid I cannot say.

19465. Now I want you to consider whether that may not be overcome now with the goodwill of the unions, and whether, if some bonus is offered, that would not facilitate matters? - It does not seem a reasonable thing that we should have to offer a man a bonus to make himself efficient.

19466. You know, of course, that in certain branches, for instance, in His Majesty's Navy, there are very important and laborious operations, such as coaling ships, that they have to go through, which are carried out with extraordinary facility.

*The Commissioner:* What are you trying to make out?

*Mr. Roche:* I want to make out or suggest to the Witness that in some way some practical suggestion should be made by which all ratings could be made efficient to man the boats. I wanted to see whether the Witness could not help us.

*The Commissioner:* I thought you were suggesting that some additional pay ought to be made.

*Mr. Roche:* Yes, that was the suggestion, my Lord.

*The Commissioner:* That seems to me to be very remote from our Enquiry. *Mr. Roche:* I have made the suggestion, and, having made the suggestion, I thought nothing was remote which could in a sense add to the efficiency of the boats. *The Commissioner:*

But you know, I do not like these different suggestions coming from different gentlemen that these men ought to be paid more money. *Mr. Roche:* This is an entirely disinterested suggestion as far as my clients are concerned, my Lord. It is only in the interest of their lives that this suggestion is made; it does not touch their pockets at all.

*The Commissioner:* As I understand, you suggest that they ought to be paid more money in order to make them more efficient in working the boats.

19467. (*Mr. Roche.*) I am suggesting that the firemen should do so for the safety of all concerned, but there was no suggestion made that the engineers should be so trained or should be paid extra. (*To the Witness.*) I think you understand my suggestion, that it relates simply to firemen in the interests of the general safety of everybody concerned? - Yes.

19468. But there was no suggestion made that this bonus should attach to them, or that they should participate in the drill. Now just a question about another matter, with regard to the question of speed at night when ice is about. I quite understand you to say that as things stood at the time of the calamity to the "Titanic," you did not think that any other liners did slacken speed under those circumstances, or that it was reasonable to expect a navigating officer to do so? - Yes, that is so. 19469. That I understand to be your position? - Yes.

19470. But I want to quite understand. I do not know that you suggest now in the light of after experience that it would not be prudent under those circumstances, particularly when there is no sea to break on the ice to reduce speed? - The circumstances were that the officer over-estimated his ability to see. Under those circumstances, of course, he would have been wise to slacken speed.

19471. Do not you think that that may frequently happen at night in dealing with unlit objects, and that some general regulation from your Company, or better still, from a group of companies, that moderation of speed should be strictly attended to under such circumstances would be an advantage to navigation? - I really do not think we can add anything to the instructions we have given our navigating officers at the present time with regard to that, beyond cautioning them to carry out their instructions.

19472. As I understand it, there are no instructions whatever relating to speed when ice is in the neighbourhood or when ice is expected? - That is part of a navigating officer's duty, to exercise caution under those circumstances.

19473. One of your objections was that no other company did it, that if you could get the other companies, just as they attend to questions of track, to attend to the moderation of speed in the region of ice, it would be an advantage to the

- travelling public and to everybody concerned? - I hope the Court will take my word for it, that we should not be influenced in the slightest degree by what other companies do about it. We shall do what we consider right in the interests of the safety of life.
19474. Now, I just want to get from you what you were going to tell your view with regard to the engineers. You said that there was a reason, in your view, why they were all to a man drowned? - There was. Shall I give you my reason?
19475. If you please? - My reason for saying that is that yesterday of Mr. Ismay you asked whether he did not think some regulation might be made whereby the engineers might be called on deck in time of emergency. I do not think any such regulation is necessary. I think the engineers on the "Titanic" were fully alive to the danger in which they stood, and that if they did not come on deck it was due to a magnificent conception of their duty.
19476. That is quite a possible explanation, but, of course, the reason for questioning whether that applied to all the engineers was very shortly this; that fairly obviously this water was driving everybody in the ship, in the lower part of the ship, back and back until they got to the engine room, and it is rather difficult to suppose that all the engineers were required in the engine room when the calamity was pending? - You remember they sent the firemen on deck, and therefore there was more need for the engineers in the engine room
- Mr. Roche:* I follow your reasoning.

**Examined by Mr. HARBINSON.**

19477. Am I right in saying that the firemen had to be sent down from the deck by one of the stewards? - I believe the firemen behaved gallantly in the ship.
19478. Now, were your Company, the Oceanic Steam Navigation Company, the pioneers in building these huge steamships? - I think we did lead.
19479. And would I be right in saying that you

**Page 487**

- found it necessary to do so owing to the increasing demand for luxury in ocean travelling? - That is true.
19480. Now, with your experience, which is a very extensive shipping experience, and also in the light of this recent calamity, do you not think now that some of this space which is devoted to millionaires' suites and extra deck promenades could not possibly be better utilised for the purpose of ensuring the safety of all the passengers? - If there was anything we could do to ensure the safety of the passengers the question of millionaires suites would disappear in a moment.
19481. Do not you think, with regard to the boat deck, the extra space devoted to promenade decks, especially on the boat deck and the A deck, that if the recommendation of my Lord should take the form of a provision for additional boats, emergency boats I mean, lifeboats and collapsible boats, you have no

hesitation in saying that that space will be placed at their disposal? - I do not say that space. We will find space on deck for the boats which my Lord recommends us to carry.

19482. Do you think that the provision of such an extra number of boats as would cope with the requirements of all the passengers that would be carried on such a ship as the "Titanic" - that the provision of those boats so high up would in any way endanger the safety of the ship? - You are supposing something which I objected to from the first. 19483. (*The Commissioner.*) I did not quite catch that answer. Will you repeat it? - I contend my Lord, that it is unwise to do, in the first place, what this gentleman is asking me to express an opinion about.

*The Commissioner:* That I understand. But I understood his question to be whether, if you were to put the boats suggested - I do not know how many that is, double the number than at present are there - the question is if you were to double the number of boats would it imperil the safety of the ship? I do not know whether it means would it interfere with the working of the ship.

*Mr. Harbinson:* It would make her top-heavy, my Lord.

*The Witness:* 60 boats would be required, and I say to put 60 boats on the "Titanic" would be ridiculous in the first place, if it is possible, and I do not think it is possible.

19484. (*The Commissioner.*) Would it make the vessel top-heavy? - It would certainly make her tender. As to whether it would make her dangerously tender or not would be a matter for the builders.

19485. (*Mr. Harbinson.*) Am I right in assuming that that opinion is based on the theory of the unsinkability of the ship, that your opinion is that such a number of boats would not be necessary? - Not only on that account, but I have told the Court that to put so many boats as that on the boat deck would make the boat deck so congested that it would leave very little space for those who wish to use the boat deck.

19486. You do not, I understand, suggest to the Court that to carry that number of boats, stowed away elsewhere, would be ridiculous? - I do not suggest that such a number of boats would be carried under any circumstances.

19487. I suggest to you that, in the interest of public safety, there should be boat accommodation for every passenger and for every member of the crew? - In the same interest my answer is that it is not necessary and it is not wise.

*The Commissioner:* You know you can imagine a case of a different kind. People when they are ill require doctors - whether they get any advantage from them I am not sure, but they require them. If there were an epidemic of cholera on the ship would you suggest that sufficient doctors ought to be always carried to attend to all the people suffering from the epidemic.

*Mr. Harbinson:* No, my Lord, because my suggestion there would be that, provided time allowed, one doctor would be adequate to attend to all.

*The Commissioner:* I am assuming an epidemic to which one doctor, or two doctors or half-a-dozen doctors could not possibly attend.

*Mr. Harbinson:* Then, my Lord, under such special circumstances my suggestion would be that, with notification to the Company beforehand, that that contingency was going to arise, it would be their duty to provide a sufficient number of doctors to attend to the passengers and crew.

*The Commissioner:* Then you would have to carry a ship full of doctors. 19488. (*Mr. Harbinson.*) I cannot conceive the circumstances where that would be possible, my Lord. (*To the Witness.*) Now, Mr. Sanderson, I would just like to ask you a question about this launching of the boats from such a height. Of course, you will agree with me, and with what other witnesses have said, that in a heavy sea with a heavy roll on it is a very dangerous operation to launch these boats? - From any height.

19489. Have you considered the matter, or can you offer any suggestion as to whether or not it would be feasible to launch the boats from slips further down, constructed nearer the water? - I do not understand what you mean by a slip.

19490. I mean by a gangway or doors so constructed nearer the water's edge that it would be possible, probably by means of rails, to shoot the boat out on to the water? - I think that would be quite an impracticable suggestion.

19491. And your Company have not considered any suggestions to that effect? - We usually put a thing of that kind in the waste-paper basket.

19492. That suggestion was very seriously made in a debate which took place not very far from here quite recently, but you say you do not consider it practicable? - We have a very great many suggestions sent to us, for which we are very grateful, but the majority of them go into the waste-paper basket. 19493. I presume you read them all - *Sir Robert Finlay:* Where was the debate?

*Mr. Harbinson:* In the House of Commons, Sir Robert. I think he is a member of your party, I am not sure.

*Sir Robert Finlay:* Who made it?

*Mr. Harbinson:* Mr. George Terrell.

*The Commissioner:* I want to know what we are doing at present.

*Mr. Harbinson:* My purpose, my Lord, is to ask Mr. Sanderson a question now about the classification at Lloyd's. (*To the Witness.*) I understand your steamers are not classified at Lloyd's? - No.

19494. Do you not think that it would probably add to the general efficiency of ships and increase the public confidence if there were some inspection made other than the inspection that is made by the Board of Trade? - I am quite sure it would not. 19495. Why do you say so? - Because the White Star ships are recognised as being of such a superior type to the ships which are ordinarily classed in Lloyd's that the fact that Lloyd's passing them would commend itself to no one in particular.

19496. That is to say, you consider that public confidence could not be increased by Lloyd's making an examination? - I am quite sure it could not.

19497. Do I rightly understand that there is no examination made of your ships beyond that made by the Board of Trade? - The Board of Trade, and, of course, the builders building up to their special specification.

19498. By the Board of Trade examination, do I understand that that was the examination upon which the certificate read by the Attorney-General is founded? - Yes, that is correct.

19499. Would you explain to the Court of what exactly that examination consists? - I prefer to leave that to the builders. The construction of the ship is supervised, to a certain extent, by the Board of Trade people.

19500. I understood that it was you, representing the White Star Line, who were on the

“Titanic” when the trials were made. Is that right? - No, it is not right, in so far as I only

**Page 488**

made the trip from Belfast to Southampton. It is true the engines were tried on that trip, but I took no part in the trial.

19501. Were you there as representing the White Star Line? - Yes.

19502. Was any trial made as to the efficiency of the watertight doors? - There was a trial made every day of those doors.

19503. Was there a trial made on this trip? - No, there was not, because she was not on business then.

19504. Now, your Company have carefully considered the question of watertight doors, have they not? - Very.

19505. (*Mr. Harbinson.*) Then, my Lord, I should like, if I may, to ask Mr. Sanderson a few questions on that point. (*To the Witness.*) Would you agree with this view that if you pierce a bulkhead with the idea of making a watertight door you defeat your own object in making a watertight compartment? - No, I do not think so.

19506. You would not agree with that view? - No, I should not agree with it.

Would you agree with this view, that you cannot close the watertight compartments in a sudden rush. In a big compartment the rush of water is so terrific that you cannot close the door.

*The Commissioner:* Who says this?

*Mr. Harbinson:* Lord Charles Beresford, my Lord.

*The Commissioner:* What is the rush of water? Where is it coming from? Is it coming from a burst pipe, or what?

*Mr. Harbinson:* It came in in this case from the rip in the side of the “Titanic.” *The*

*Commissioner:* But I understand that is an observation about a rush of water the dimensions of which are not mentioned and the volume of water not given. *Mr.*

*Harbinson:* Well, my Lord, it is a speech made on the same occasion as I read before, by Lord Charles Beresford.

*The Commissioner:* Do spare me the House of Commons speeches, please.

*Mr. Harbinson:* It was the opinion of Lord Charles Beresford, my Lord.

*The Commissioner:* That may be.

19507. (*Mr. Harbinson - To the Witness.*) Now, would you agree with the view that the lifeboats on the “Titanic” ought to have been provisioned in the same way as the lifeboats in a man-of-war are provisioned? - I am not familiar with the man-of-war practice.

19508. I understand that the man-of-war practice is that the lifeboats have always got biscuits and all the requirements necessary on board? - So have the White Star ships.

19509. They are supposed to have? - I believe, in fact, they have.

19510. But in view of the evidence that has been given now in the course of this Enquiry, do you still adhere to that view? - I do.

*The Commissioner:* I am told that you are quite wrong in supposing that lifeboats on a man-of-war are provisioned in that way. They are not. There are two emergency boats that are provided with such luxuries.

19511. (*Mr. Harbinson.*) I think, my Lord, there were luxuries in the boats on the "Titanic." (*To the Witness.*) Now you, I understand, disagree with the view that searchlights would be useful? - My own opinion is that they would be worse than useless; they would be a positive source of danger to the ship.

19512. Upon what is that opinion founded? - Because of the well-known fact that if you are going to keep a good look-out at night the worst thing that can happen to the man on the look-out is to have a glare to look into. I believe if they had a searchlight and the man looked down the lane of that glare he would not see anything on either side of him for some five minutes afterwards.

19513. You do not think it would enable the man on the look-out to see ice? - I think it would help him to find the ice; but would get him into trouble with passing ships.

19514. Would there be any likelihood of coming into contact with passing ships? - I am afraid we cannot look upon the system of meeting ships as perfect as that. In spite of our lane roads we are meeting and crossing ships constantly.

19515. Now, do you think, in view of what has occurred that the opportunities of getting from one part of a big ship like the "Titanic" to another part are adequate? - I think they are as near perfection as they can be on the "Titanic."

19516. Do you think, with regard to the passengers fore and aft that their opportunities of getting from the very front and back of the ship to the boat deck might not be improved upon? - I do not see how they could be.

19517. In this case you have read the figures, the percentage of loss was higher of that particular class. Now, do not you think that the intricate maze of passages may have been one of the reasons why these people did not find their way to the boat deck? - I do not admit that there was any intricate maze of passages, and I do not think the position of the third class passengers was directly affected by that or that your point, that they could not get there, had anything to do with their not going away in the same number. I think that the position in which the boats are placed on the ship necessarily being the position which is the best for launching them, happens to be abreast of that portion of the ship in which the first and second class passengers are carried, and, therefore, when the call for women and children came, the women and children who were handiest came to the boats first, and that is the reason, I think, why there were more first and second class women and children saved than third class, because the nearest were taken first.

19518. Then the third class women were aft? - Yes.

19519. Would it not be possible, in consequence of what you have just said, to place a number of boats for third class women somewhere about the well deck? - It would be a very inconvenient place to carry a boat and almost an impossible place to launch a boat from, because of the overhang.

19520. Would it not be possible so to alter the construction of your ships that these boats for third class passengers could be carried in the rear of the ship (pointing to the model)? - If you look where you are pointing, you will find the line of the ship comes *there*, and to put a boat out *there* would be a most dangerous thing.

19521. I mean carrying them in? - I mean to launch a boat would be a most dangerous thing to attempt in that portion of the ship.

19522. Dangerous even with a steamer, as it was in this case, slowed down? - That is an exceptional case.

19523. Then would you think it desirable, in view of the fact that you do not consider it feasible to put the boats so near the stern, that when you are issuing passengers tickets to all the passengers the number of the boat to which they are assigned in case of emergency should be put on the passengers tickets you issue? - What am I going to put on the tickets for which we have not got places in the boats?

19524. I am assuming for the purposes of my question that you would provide - *The Commissioner*: That is very remote. First of all, you have to assume that there is boat accommodation for every soul on board. Otherwise, as Mr. Sanderson says, you could not fill up a ticket.

*Mr. Harbinson*: I am assuming that for the purposes of my question.

*The Commissioner*: It is too remote.

19525. (*Mr. Harbinson - To the Witness.*) Would it be desirable to indicate upon the tickets the boats which the passengers would be assigned to? - I can conceive no useful purpose that could be served.

19526. Do you not know that it is actually done in the case of some lines? - I do not know.

*The Commissioner*: Can you tell me which line?

## Page 489

*Mr. Harbinson*: I do not know of my own knowledge, my Lord, but I have been told that it is done in the case of some of the Japanese Lines, but I will try and obtain the information for your Lordship.

*The Commissioner*: From where to where?

*Mr. Harbinson*: I take it, it is the ships that ply in the Far East, probably between the East and England.

*The Commissioner*: You mean boats plying in Eastern Waters.

*Mr. Harbinson*: That is my information, my Lord - that that has been done.

*The Commissioner*: Well, I do not like cross-examining gentlemen in your position, Mr. Harbinson, but will you tell me the name of the line?

*Mr. Harbinson*: That I cannot do, my Lord, but I can ascertain it for your Lordship.

*The Commissioner*: Can you tell me the source from which the information comes?

*Mr. Harbinson*: I have been told so, personally.

*The Commissioner*: By whom?

*Mr. Harbinson*: I was told so by a nautical man in London.

*The Commissioner*: What is his name?

*Mr. Harbinson*: His name, I believe, is Macdonald.

*The Commissioner*: Where does he live?

*Mr. Harbinson*: I cannot give your Lordship his address.

*The Commissioner*: Is the question based simply upon information given to you by a gentleman named Macdonald, who lives somewhere, and you do not know where.

*Mr. Harbinson*: I know where he is to be found.

*The Commissioner:* Where is he to be found?

*Mr. Harbinson:* At a club, of which I am a member, my Lord. I hope I have submitted patiently to your Lordship's cross-examination.

*The Commissioner:* But you know, really, if I am to sit here to listen to questions based upon information or suggestions derived from somebody in a club, I do not know when I am to get to the end of the Enquiry.

*Mr. Harbinson:* The question, I submit to your Lordship, is important in this way, that if a station had to be allotted to each individual -

*The Commissioner:* We are upon the question of practice in Eastern Waters of Japanese Lines, the names of which I do not know, and upon matters mentioned apparently by a gentleman named Macdonald in a club.

*Mr. Harbinson:* I submit, my Lord, that one of the functions of this Commission is to make recommendations.

*The Commissioner:* It is; and it is one of the functions to try and get reliable evidence upon the question.

*Mr. Harbinson:* I was merely putting the suggestion to the Witness in order to ascertain his opinion.

*The Commissioner:* Are you going to call Mr. Macdonald?

19527. (*Mr. Harbinson.*) That I shall exercise my discretion upon when the proper moment arrives. (*To the Witness.*) Now, do you know whether the Board of Trade have got regulations with regard to boat drill? - They make a certain boat inspection before the ship sails.

19528. Do they take any steps to ascertain from time to time whether proper boat drill is carried out? - I do not recall that that is any part of their Regulations; it may be. 19529. At present you do not know whether they do or do not? - I do not recall whether they have any Regulations upon that point.

19530. You consider it of course, eminently desirable that proper boat drill should be carried out? - Certainly.

19531. And you consider that it is in the interest of the safety of the passengers that in cases of emergency the men should know exactly what to do, know their stations and what is expected of them? - Yes.

19532. Now I think you told my Lord yesterday that in the case of the "Oceanic" the men had refused boat muster? - Yes, I did.

19533. In your view, is the Master or the Captain of the ship not the right man to fine the men? - Yes.

19534. And to punish them for refusing to comply with his orders? - Yes, but that does not make them do it. They were logged in this instance for refusing duty.

19535. And your evidence today was that up to the present inducement has failed? - To a very large extent it has failed. You cannot get them to turn out in any satisfactory numbers.

19536. You know that Mr. Andrews was the designer of this boat? - I cannot say who the designer of the boat was. It was designed by Messrs. Harland and Wolff; but who they employed for the particular work I cannot say. 19537. Do you know Mr. Andrews? - Very well indeed.

19538. I am not referring now to this question of davits. Do you know whether or not prior to the launching of the "Olympic" and the "Titanic" a suggestion was made that these ships were insufficiently boated? - I do not know of any such suggestion.

19539. You have never heard of that? - No, I have never heard of any such suggestion.

19540. Now upon the question of crews, I put a question with regard to continuous service to Mr. Ismay, and I would like to invite an expression of your opinion upon it. Would you consider it feasible to provide, as far as possible, for keeping on the crew which does the voyage backwards and forwards during the time the steamer is in port? - It is feasible, but not commercially feasible.

19541. Do you think it could be made commercially feasible by employing these men instead of employing shore gangs, as you do at present? - We do put those men on the shore gangs as near as we can, but in practice it is not their desire to work while the ship is in port.

19542. Up to the present, have you in practice given them the opportunity? - Yes, they have had lots of opportunities.

19543. Then I take it that you would not disagree that for the purposes of managing a big steamship you require a well-disciplined and thoroughly-trained crew? - Of course.

19544. And that cannot be secured by shipping a fresh crew for every voyage? - There is no regular liner that does ship a fresh crew for every voyage.

19545. But I gather that the men when they come home are discharged, are paid off, and then that you sign on a fresh crew when she is leaving again? - I do not know what you mean by a fresh crew. I should say that 70 percent of the men that come in on one voyage go out on the next.

19546. According to the Government requirements, they are all paid off each time they come into port.

*The Commissioner:* All this we have heard before, and I really do not want to hear it half-a-dozen times.

19547. (*Mr. Harbinson.*) Would it not be possible to increase the number of those who continue in your service and continue on the particular boat they are employed upon? - We told you yesterday of the efforts we have made to do it, and it was not any good, and we have met with no encouragement.

19548. Now, Mr. Ismay, in answer to the Attorney-General at Question 18434, said this: He was asked: "You have told me now what your answer is. What was your answer?" And he says: I should say if a man can see far enough to clear ice, he is perfectly justified in going full speed. (Q.) Then, apparently, you did not expect your Captain to slow down when he had ice reports? - (A.) No, certainly not." Do you agree with that? - Entirely.

19549. And in view of what has occurred, would you in giving the verbal instructions that you have told us about to your Captain - would you repeat and say this: We do not expect you to slow down when you have ice reports? - I most certainly will not say anything of the kind.

## **Page 490**

19550. You would not give them instructions to that effect? - No, of course I would not.

To tell a man not to slow down! It would be ridiculous.

19551. Although at the same time you would justify him when he had failed to slow down although he had ice reports? - I should expect him to exercise his discretion as a good seaman, and err on the side of safety; but as to telling him not to slow down it would be criminal.

19552. But you would justify him when he did not slow down? - Under proper conditions I would, yes.

**Examined by Mr. CLEMENT EDWARDS.**

19553. Yesterday you said that in your view it would be unwise to have such a number of boats as to accommodate everybody aboard ship? - I did.

19554. Was your idea of the un wisdom based upon your faith in the unsinkability of the ship? - No.

19555. What was it based upon? - I have already said, I think, that my objection to it would be that in the case of a ship such as the "Titanic" she would have to carry something like 60 boats, and I do not consider it is possible to put 60 boats on that ship without hampering her deck so that the working of those boats would not be interfered with.

19556. Then do you believe that you could still have less boat accommodation and passengers carried though you have not faith in the unsinkability of the ship? - I do. There are certain risks connected with going to sea which it is impossible to eliminate, just as there are risks in connection with travelling on land.

19557. And you think that those risks ought to be borne by, at all events, a proportion of the passengers and crew on every one of your ships?

*The Commissioner:* Ought to be divided amongst them, not borne by a proportion, but divided amongst them generally. This does not help me very much. It appears to me that Mr. Sanderson is quite right. Every person who goes to sea, or, for that matter, who walks on land, must expect some risks.

*Mr. Edwards:* Yes; quite so, my Lord, and, as I understand, the purpose of this Commission is to find out how we can reduce those risks to an absolute minimum.

*The Commissioner:* That is quite true; that is one of the purposes, no doubt. *Mr.*

*Edwards:* So that I can put it to Mr. Sanderson that your idea with regard to boat accommodation bears no relation to your ideas as to the sinkability of the ship.

*The Commissioner:* I do not understand that question. What does it mean?

19558. (*Mr. Clement Edwards.*) I will put it in parts, my Lord. (*To the Witness.*) First of all, I understand you to say that you regard it as unwise to carry such a number of boats as would provide accommodation in the event of disaster for every person on board the ship? - I do.

*The Commissioner:* He has said that three or four times. Now, what is the question?

19559. (*Mr. Clement Edwards.*) I understand you to say that that is not based upon your faith in the unsinkability of the ship? - It is not based upon that because I think the objections I have mentioned apply to any ship, unsinkable or not.

19560. If that is your view, will you say why there is any need to carry any boats at all?

- For transfer purposes.

19561. Purely for transfer purposes? - That is my judgment.

19562. That is to say, transferring from ship to shore in the event of disaster, or from ship to ship in the event of disaster? - That is my view.

19563. And that the case of being in such a situation as that there are no ships to which to transfer is a risk that must always be taken? - Yes, and it is a very, very small one.

19564. We all thought it was, I daresay, Mr. Sanderson. Now, yesterday you stated that in certain respects the construction of the "Titanic" exceeded the requirements of Lloyd's? - I did.

19565. You stated with regard, first of all, to the watertight bulkheads, that she was superior to Lloyd's requirements? - In regard to her strength I am told that she is.

19566. May I take it, with regard to her height, that there are 15 bulkheads on the "Titanic"? - Yes.

19567. Do you know up to what decks they came? - They came up to the E deck forward and D deck aft.

19568. And intermediately in the bunkers in the boiler section? - The same thing - E deck until you come aft and then they go up to D deck.

*The Attorney-General:* The two forward ones go to D deck. The two forward decks are stepped one forward to E deck and the other one aft to D deck.

*The Witness:* I am sorry I made a mistake. I suggest, however, that this is a question which really had better be answered by the builders; it is technical.

*The Commissioner:* If Mr. Edwards will promise me not to ask the next witness the same question, we will have it now.

*Mr. Edwards:* I should not have attempted to examine Mr. Sanderson upon this point if it had not been for the statement which he made in reply to the learned Solicitor-General yesterday.

*The Commissioner:* What was that statement?

19569. (*Mr. Clement Edwards.*) The statement that he made yesterday was this, my Lord: "I should mention that she had a specially powerful wireless installation, long distance. She was built with an unusual number of watertight bulkheads, 15 in all; those bulkheads were of special construction, carried up as much as possible in one fair line, and they were built in excess of the requirements of Lloyd's." (*To the Witness.*) Now, take the bulkhead immediately in front of boiler section No. 6, what is the height of that?

- It seems to go to E deck.

19570. Do you say that it does go to E deck? - I am looking at the plan, and I think I am correct in saying that it goes to E deck.

*The Attorney-General:* Which one?

*Mr. Edwards:* The one immediately in front of boiler section 6.

*The Attorney-General:* Yes, that is right; it goes to E deck.

19571. (*Mr. Clement Edwards.*) Now, take the bulkhead between boiler sections 6 and 7, does it run continuously? - There is a step in that one apparently up to E deck. I think you will find I said so far as possible in a fair line.

*Sir Robert Finlay:* We have had a model made, my Lord, which shows in a very convenient form the watertight compartments, and which, I think, may save time, and which shall be shown to your Lordship.

*The Commissioner:* That will be much more intelligible than these plans.

*(The model was handed to the Commissioner.)*

*Sir Robert Finlay:* It shows the two forward bulkheads going up to D deck, and the other to E deck.

*Mr. Laing:* The decks are numbered.

*Sir Robert Finlay:* The number is on the decks. You will not see it if it is lying flat in that way.

*The Commissioner:* Now, Mr. Edwards, what is your question?

*Mr. Edwards:* I just asked as to how high the bulkhead between boiler sections 5 and 6 ran, and the Witness said there appears to be a step. *The Commissioner:* According to this model it goes to E.

*Mr. Edwards:* I have not seen the model, my Lord. It runs fairly to E. Does it show the step?

*The Attorney-General:* There is no step.

*The Commissioner:* There is no step in *that*.

*Mr. Edwards:* May I ask if between 4 and 5 there is a step shown?

## **Page 491**

*The Commissioner:* Yes, there is. Now that I have it in my mind, I will hand it down to you, Mr. Edwards.

19572. *(Mr. Edwards - To the Witness.)* You spoke yesterday about the bulkheads being superior to the requirements of Lloyd's. Are you familiar with requirements of Lloyd's? - No, I am not.

19573. Why do you say that this is superior to the requirements of Lloyd's? - Because I am advised so by the builders.

19574. So that it is not upon your own information? - These are matters on which I accept information from the builders.

19575. If you were told that Lloyd's requirements as to bulkheads were that they were to be taken right through to the height of the upper deck, fair, would you then say that your bulkheads were superior to Lloyd's requirements? - If what you say is correct, apparently they would not be.

19576. I will take you now to the question of the strength of the bulkheads. Do you of your own knowledge know what the plate thickness of the bulkheads in the "Titanic" was? - I do not know.

19577. Do you know anything in respect of that what Lloyd's requirements are? - I do not know.

19578. Do you know any particulars as to the stiffness of the bulkheads of the "Titanic"? - No, I am not familiar with those details.

19579. Do you know what Lloyd's' requirements are in that respect? - No, I have said that. I do not know what they are.

19580. So that I may take it that while you said yesterday that in certain respects the construction of the "Titanic" in the matter of bulkheads was superior to Lloyd's, that is entirely based upon what you have been informed by the builders? - It is.

19581. Then I will not trouble you any further upon that point. I should like to ask you one or two other questions. Have you had any experience at all of classification for Lloyd's register? - No.

19582. (*Mr. Clement Edwards.*) Do you know that if you had sought the "Titanic" to be classified there would have been independent Surveyors superintending the construction?

*The Commissioner:* I know it. You need not trouble about it. I know it well.

*The Witness:* It is so.

19583. (*Mr. Clement Edwards.*) Then I will not pursue that point any further, my Lord. (*To the Witness.*) You spoke of complying with the regulations of the Board of Trade in the construction of the "Titanic"? - Yes.

19584. What you really meant was, was it not, that what you did was to satisfy, after the construction, the inspectors of the Board of Trade? - I think we have to do a little more. I think that while the ship is under construction she is subject to a certain supervision by the Board of Trade.

19585. You do not suggest, do you, that you have to answer certain elements of construction to comply with any definite Regulations of the Board of Trade? - I believe there are such, but what they are I am not in a position to tell you. 19586. You have never seen any such Regulation? - No, I have not.

19587. A Regulation as to plate thickness? - I am quite unfamiliar with these details. I think you had better ask the builders.

19588. I only wanted to see. You stated yesterday you had complied with the Board of Trade Regulations, and I wanted to make it perfectly clear what it was with which you did comply? - I am only repeating information which was given to me.

19589. As I understand, your Company is owned by the International Marine? - They own the shares.

*The Commissioner:* That is not legally true. What the International Mercantile Marine Company does is to hold the great bulk of the shares in the Oceanic Company.

*Mr. Edwards:* I understood from the evidence of Mr. Ismay that they hold all the shares.

*The Commissioner:* I say the great bulk. They do not hold all of them. There must be some left in the Oceanic Company itself which are not held by them.

*The Witness:* To be quite correct they do not hold them in their own name. They are held indirectly. It is a mere detail.

19590. (*The Commissioner.*) I should like to know, are they held by some Trust Company? - Yes.

19591. Some American Trust? - They are held, in the first place, by the International Navigation Company, of Liverpool, whose shares are again held by a Trust Company in America.

19592. These ramifications are rather a mystery to me? - I know they are rather complicated.

19593. Let us trace them through. There is the Oceanic Company? - Yes, my Lord.
19594. That took over, as I understand, all the ships, as I understand, of the White Star Line? - It always owned them.
19595. No, it did not, because these ships were owned at that time by Ismay, Imrie and Co? - Never, my Lord.
19596. Do you mean to say there never was a firm of Ismay, Imrie and Co.? - They were the managers of the Oceanic Company.
19597. I do not know it, but you may be right. Do you mean to say that from the beginning of the White Star Line the boats have been owned by the Oceanic Company? - Yes, from its very first.
19598. Very well. Some years ago the International Mercantile Marine Company was formed? - It was.
19599. That company was an American Company, I understand? - Yes.
19600. And did that company acquire all the shares, or practically all the shares in the Oceanic Company? - It did.
19601. And then you say that the International Mercantile Marine Company acquired them. They did not have them registered in their own name? - No.
19602. In what company's name were they registered? - They are held by the International Navigation Company of Liverpool; but it is purely a financial transaction.
19603. So I suppose. I was going to ask you what is the business of the International Navigation Company of Liverpool? - It is one of the subsidiary companies controlled by the International Mercantile Marine Company.
19604. What is their business? - Steamship.
19605. What steamers do they manage? - They run at present the "Marion," the "Haverford," and the "Dominion" to Philadelphia.
19606. They do not run any of the White Star Line? - None.
19607. But it is a company that runs steamships? - Yes, it is.
19608. I will not ask you, because it may not be of the least interest, why the shares which the International Mercantile Marine Company took over from the Oceanic Company were registered in the name of this financial company, but they were registered in the name of this company, the Navigation Company. Are they, then, held by any Trust company in America? - They are, as security for a certain issue of bonds.
19609. Has this Navigation Company transferred those shares in their turn to the Trust Company in America? - It has.
19610. And what is the name of the Trust Company in America? - There are two Trust Companies, my Lord. I would not like off-hand to quote the names, as I am not very familiar with them.
19611. They are companies instituted, I suppose, and worked for the purpose of, holding the security which bondholders have recourse to? - That is right, my Lord.
19612. (*Mr. Clement Edwards.*) I suppose the real reason for your having a series of English Companies -
- The Commissioner:* No, not English Companies. There is only one, the Oceanic. The Navigation Company, perhaps, is an English Company.

*The Witness:* It is an English Company.

19613. (*Mr. Clement Edwards.*) Well, the reason for having an English Company is, of course, to enable

**Page 492**

you to register under the first Section of the Merchant Shipping Act? - I do not quite follow you. Who are to register?

19614. I think you are familiar with the Merchant Shipping Act? - I am going to answer your question if you will let me. I can answer it quite easily. It is not necessary to transfer to the International Navigation Company the shares for the purpose of holding under the Navigation Act.

19615. That I know; but the International Mercantile Marine Company, being an American Company, although the substantial owners of these ships, could not be the registered owners in this country by reason of the First Section of the Merchant Shipping Act of 1894? - That is true.

19616. And, therefore, you have set up this special independent English Company for the purpose of complying with - ? - No, excuse me. The intermediate Company that you are referring to was used for financial reasons quite independent of the actual question.

19617. I put it to you that if you had not the Oceanic Company you would have to have some other English Company if these ships were to be registered in England? - Certainly. *The Commissioner:* Or a British subject; you do not want a company.

19618. (*Mr. Clement Edwards.*) Yes. Quite so. Either a British firm, or a company, or an individual? - They must be a registered company or an individual.

19619. I see that the ship's rules and uniform regulations are issued by the International Mercantile Marine Company. That is the red book. You have a copy there, have you not? - Yes.

19620. (*The Commissioner.*) I did not know that. They are issued, then, by an American Company? - That is not quite correct, my Lord. Perhaps I may explain. Each of these companies which have come under the control of the International Mercantile Marine Company had, up to a few years ago, its own book of rules. For the sake of uniformity we went through these various books and put them all into one, and to save having the names of all the companies referred to on it we called it the "International Marine Companies' rules."

19621. In point of fact these rules which now apply to all the steamers, certainly all the steamers of the White Star Line, and probably to a great many others, are American rules? - No, my Lord.

19622. They are rules issued, apparently, by the American Company, because I hold the book in my hand. "The International Mercantile Marine Company" - that is the American company? - Those rules were drafted and prepared here by myself and my colleagues.

19623. That may be. But they are issued by the American company - "International Mercantile Marine Company: Ships' Rules and Uniform Regulations." Is not that so? - Their name is on the book, my Lord.

19624. (*Mr. Clement Edwards.*) May I take it that every one of the companies or lines controlled by the International Mercantile Marine Company are guided by these rules? - They are.

19625. Does that apply to the Leyland Line too? - I think they also have adopted the same book.

19626. Do you mind turning to page 23, paragraph 112? Before I read that, however, I should like to ask you a question. You have just said that before this International Company came into existence there were a number of separate Regulations for each of the Companies. You yourself have been for some years attached to the White Star Company, and you have said that you had drawn up these rules. In regard to assisting vessels in distress do you remember whether this rule here is at all similar to the old rule of the White Star Company? - I could not say at this distance of time whether it is identical with it or not.

19627. But this is the rule to which, as far as its owners are concerned, Captain Lord would be subject? - I believe so.

19628. "Assisting Vessels in Distress - (A.) In the event of falling in with vessels derelict or in distress, Commanders (of the passenger steamers especially) should bear in mind that by deviating from their courses or from the usual employment of their ships, in order to render assistance to other vessels, otherwise than for the purpose of saving life, questions as to insurance may arise, and responsibility may be incurred to passengers and owners of cargo for detention or risk to which they or their property on board may thereby be exposed. As a general rule, therefore, Commanders of the passenger steamers in the North Atlantic trade are reminded that it will be better not to interfere in such cases, unless the circumstances be of very special character, or it be for the purpose of protecting or saving life. (b) In the trans-Pacific and Colonial trades, Commanders of the passenger steamers, in coming to a decision on this point, should bear in mind the great distances involved and the comparatively infrequent opportunities of obtaining assistance which may occur, and that under such circumstances a liberal interpretation of these rules is permissible." That, of course, is not on the Atlantic. "(c) In the case of the cargo steamers other considerations apply, and the Commanders of these vessels may, should they consider the circumstances such as to justify their doing so, exercise a wider discretion in carrying out this regulation. (d) Commanders of all steamers are cautioned that under no circumstances are they, in assisting vessels in distress, to unduly risk their own vessels, or expose the lives of those on board to hazard." So that as far as the Company itself is concerned the thing that is impressed upon their officers is rather in the direction of not helping than helping? - I do not think that is a fair interpretation of the rule.

*The Commissioner:* Mr. Edwards, are you asking him to interpret what this means?

*Mr. Edwards:* Yes.

*The Commissioner:* Because, if so, that will not do. I must interpret it.

19629. (*Mr. Clement Edwards.*) Yes, my Lord. With due respect, my Lord, I perhaps ought not to have asked the question. (*To the Witness.*) Will you kindly look at Rule 113: "Commanders are required to navigate their vessels as closely as possible on the Transatlantic routes adopted by the principal Atlantic Passenger Lines"? - I am familiar with it.

19630. I only want to refer you to two other rules. The first is Rule 248. It is on page 45, "Examination of Coal Bunkers." The respective senior engineers of each watch, before going off duty, must go through the coal bunkers, and note their condition on the log-slate, and should there be any signs of spontaneous combustion taking place, they are at once to report same to the Chief Engineer, who is immediately to notify the Commander. All coal should, as often as possible, be worked out of the bunkers." We have had it in evidence that there was a fire in one of the bunkers when the "Titanic" was coming over from Belfast to Southampton? - Yes.

19631. Would a copy of the log of the "Titanic" be taken for the use of the Company before she left Southampton? - The Engineers Log from Belfast to Southampton? 19632. Yes? - I presume there would be one, but I do not remember it. It is a very short trip, and perhaps the ordinary regulations might not have been carried out on it. 19633. You cannot tell me whether there was any entry in the log as to the fire? - I could not tell you; but I know that there was a fire.

19634. When did you know that? - I heard it at this Enquiry first of all. I then sent down to Southampton, and they said, "Yes, there was a small fire."

*The Commissioner:* What are these questions directed to? Spontaneous combustion in a coal bunker is by no means an unusual thing. Are you suggesting that we are concerned in enquiring as to whether it was entered in the log, or not?

*Mr. Edwards:* No, my Lord. With respect, that is not the point.

*The Commissioner:* What is the point?

## **Page 493**

*Mr. Edwards:* The point, with very great respect, is this - that the part of the particular bulkhead which showed damage, according to the evidence, was a bulkhead which stood in the bunker where there was evidence that a fire had existed continuously on the journey from Belfast to Southampton, and even subsequently; and that the coal had to be taken out down to a certain level, and black paint put on so as to hide whatever marks there might be, or the damage caused by the fire. It would be a matter, of course, for your Lordship's consideration as to whether -

*The Commissioner:* Do let us confine ourselves to the real serious issues of this Enquiry. That fire in the bunker has nothing to do with it.

*Mr. Edwards:* With very great respect, my Lord, I should have thought it was.

*The Commissioner:* I differ from you there entirely.

*Mr. Edwards:* With very great respect, I would suggest that it was a little premature for your Lordship to say this until after you had heard the expert builders, and perhaps other experts as to what is calculated to be the damage done by a continuous fire. *The*

*Commissioner:* Will you tell me what the evidence hitherto with respect to this bunker is?

*Mr. Edwards:* Yes, my Lord.

*The Commissioner:* What is it? That there was a fire in this bunker between Belfast and Southampton; that the coal was worked out; that some dent or dinge was observed (*so one witness says*) in the wall of the boiler. Is there anything else?

*Mr. Edwards:* Yes, my Lord.

*The Commissioner:* What is it?

*Mr. Edwards:* That in order to get the hose through to work upon this fire a hole or holes had to be bored through the bulkhead.

*The Attorney-General:* There is no evidence of that.

*The Commissioner:* Who is it that says that?

*The Attorney-General:* I have never heard that.

*Mr. Edwards:* Barrett, I think, is the witness.

*The Commissioner:* Will you refer me to the Question and Answer?

*Sir Robert Finlay:* There is nothing of the kind.

*Mr. Roche:* I think your Lordship will find the evidence that my friend is talking about on page 70.

*The Commissioner:* Will you read it?

*Mr. Roche:* It is in answer to a question by myself. I think it is with reference to the same bunker, No. 5. It is Question 2249: "Now I want to ask you one question about the hole in this bunker you have described to my Lord."

*The Commissioner:* He must have said something previously to this.

*Mr. Roche:* Yes, my Lord. He had said fairly early in examination-in-chief that there was a hole in the bunker after the accident.

*The Commissioner:* After what accident?

*Mr. Roche:* After the accident with the ice - after the collision with the iceberg.

*The Commissioner:* Do you mean a hole knocked through the ship's side by the iceberg?

*Mr. Roche:* Yes, my Lord, that is Barrett's evidence.

*The Commissioner:* That is not the hole Mr. Edwards is talking about.

*Mr. Roche:* That is the evidence of Barrett. That is what my friend is thinking of.

*Mr. Edwards:* Allow me to say, my Lord, that I had this so definitely in my mind when I went over the "Olympic" at the inspection that I made special enquiries as to the position where this hole was supposed to have been made.

*The Commissioner:* Of whom did you enquire?

*Mr. Edwards:* Of two officers.

*The Commissioner:* Two officers of the Olympic? *Mr. Edwards:* Yes.

*The Commissioner:* What did they know about it?

*Mr. Edwards:* It so happened, my Lord, that two of the men employed by the White Star in helping to clear out the coal had also been employed on the "Olympic," and had conversed with the officers on the subject.

*The Commissioner:* Do you know their names?

*Mr. Edwards:* The officers' names? No, I do not, my Lord.

*The Commissioner:* Do you know the names of the firemen?

*Mr. Edwards:* Yes, my Lord, the trimmers.

*The Commissioner:* What are their names?

*Mr. Edwards:* With very great respect, my Lord, unless the man is called here as a witness -

*The Commissioner:* Can you give me their names?

*Mr. Edwards:* Yes, my Lord.

*The Commissioner:* Then do so.

*Mr. Edwards:* They shall be supplied to your Lordship.

*The Commissioner:* Do so, please.

*Mr. Edwards:* Very well, then.

*The Commissioner:* What are their names? You seem at all events to be mistaken in supposing that any evidence has been given at this Enquiry of a hole in the wall of that bunker except possibly the hole knocked in it by the ice - which would be the skin of the ship. If you think it worthwhile pursuing it, by all means do so.

19635. (*Mr. Edwards - To the Witness.*) I was only going to ask one short question upon it - as to whether the fire in that bunker had been reported to you independently of anything which might possibly appear in the log? - I have no doubt it was reported to the Superintendent at Southampton. It would not have come to my knowledge unless it was important.

19636. In these rules issued by the International Company I see that with regard to the boat drill it is suggested that the crews might have boat badges. It is on page 11, paragraph 18, of the red book: - "Boat and Fire Drill." - "If boat badges are used, they will be distributed at the beginning and collected at the end of each passage, before the ship's arrival in port. A fine will be imposed for the loss of boat badges." When you drafted that rule had you had any experience in your mind? - I had not.

19637. Had either of the Companies which are now controlled by this Company had any experience of the working or the use of boat badges? - I believe they have made a practice of it.

19638. Do either of the lines now controlled by this Company utilise boat badges? - I think they do, but I cannot speak positively.

19639. Have you any knowledge at all which would enable you to express an opinion as to the advantage or disadvantage of the use of boat badges? - I do not think there is much in it. If we had thought there was much in it we would have made it compulsory. 19640. Do you think, after the experience of this disaster, that it might be advisable, so as to avoid confusion, to have boat badges? - I believe that our people are now using boat badges, but I know of nothing that happened in connection with the "Titanic" which would have been bettered by boat badges if they had been in existence. *Mr. Edwards:* I do not think I need pursue that point any further.

### **Examined by Mr. LEWIS.**

19641. I have one or two questions I should like to ask. Are you acquainted with the methods of boat drill adopted by the Cunard Company? - No, I cannot say that I am.

19642. Do you know whether their boat drills take place, for instance, the day before sailing instead of on the day of sailing? - No, I do not know what their practice is.

19643. Do you think you would be more likely to get the men to drill effectively if the boat drills did take place on some other day than the day of sailing? - I do not think so. We have tried to get the men to come the day before sailing, and they have refused.

19644. At Southampton? - Yes, at Southampton.

19645. Is it not a fact that some two years ago

**Page 494**

the men made a request that, instead of their attending at eight o'clock in the morning and leaving and then returning just about the time of the ship leaving, they should attend boat muster at 10 o'clock and remain on board and serve the ship? - We made that change because the firemen came on board when the other men did, early in the morning, and they refused, like the other men, to stay by the ship, and insisted upon going on shore. In order to keep them on board the ship after they once joined, we allowed the firemen to join at 10.30, expecting them to stay on board the ship, but we found, in practice, that they refused to stay on board the ship.

19646. That has been adopted quite recently, has it not? - A year or two ago that was established.

19647. I understand that the system of starting at 10 or half-past 10 has recently been adopted. That suggestion was made by the men themselves as far back as two years ago - and it was refused by your Company - that they should start at that hour and stay on board the whole time? - I think the regulation was altered at the request of the men. It must be all a year ago or more. I am speaking of the firemen, and they have sometimes only come on board at 10.30.

19648. Is it not a fact that a good many of your firemen are naval-trained men used to discipline? - I believe so.

19649. Is it not also a fact that they are most anxious that they should have proper boat drill? - You say so, but the circumstances do not seem to justify it.

*The Commissioner:* He has answered that question, and he has been examined about it over and over again?

*Mr. Lewis:* The point, my Lord, is this: that a great many men do not consider the boat drills which are adopted to be proper boat drills. They desire proper and efficient boat drills.

*The Commissioner:* That is another and a different question. You may ask him that question.

*Mr. Lewis:* I used the term "boat-drill."

19650. (*The Commissioner.*) Have the men who have been summoned to a boat drill, and have not come, made the excuse that the drill was a useless drill? - Never to us, my Lord.

19651. Or that it may be improved in any way? - Never, my Lord.

19652. (*Mr. Lewis.*) Do you drill your men separately, the stewards and sailors and firemen separately? - I was going to give you exactly what they are doing in Southampton when I was reading the telegram.

*The Commissioner:* Please do not. Answer the question.

19653. (*Mr. Lewis.*) Is it a fact that the firemen are drilled separately from the sailors and stewards? - I do not know what you mean by "separately."

19654. They do not take part in all drills? - All at the same time. That is the intention.

19655. Then you do not know whether they drill together or not? - I know that the

firemen do not drill at all in practice, so far as my information goes. The stewards and the deckhands are doing it and the firemen are not.

19656. Not even at the present time? - Not even at the present time. They are still refusing. That was my information here.

19657. I think you said that you tried it on in the "Oceanic," and that the men refused, and that you logged some of them? - No, I did not say that. I told the Court that about a year ago or more the men while on the passage to New York refused to attend boat muster and were logged for not doing it. It is a different thing from the boat muster at Southampton.

19658. Quite recently on the "Oceanic" seven men left. You said that seven men left the ship? - That was a boat muster at Southampton.

19659. They refused to attend, and left the ship? - Thirty-seven of them.

19660. Those are not the ordinary men employed by you as a rule? - I do not know that.

19661. Is it not a fact that when the "Oceanic" came back from New York she was short-handed? - I never heard of it.

19662. And that the men complained of the extra work they had to do, and, as a consequence, objected to the drill? - It never came to my knowledge.

*The Commissioner:* Would it be an extraordinary thing if they did?

*The Witness:* Complain?

*The Commissioner:* Yes.

19663. (*Mr. Lewis.*) I think in your evidence you complained of the shortage of A.B.'s. I think you said that in the event of extra men being required through new regulations it would be difficult to obtain a sufficient supply of A.B.'s? - Yes, I think it would be. 19664. Do you not think that there are a large number of A.B.'s who prefer to work ashore owing to the irksome duties they have to perform? - I am not aware of it. I am not aware that they regard their duties as irksome.

19665. Do you not think that the majority of sailors object to the system of four hours on and four hours off? - It has not come to my knowledge if it is so.

19666. Do you not think that it would be desirable to have three watches of sailors instead of two watches? - No, I do not.

19667. Are you satisfied with the number of petty officers that are supplied? - Entirely.

19668. Do you not think it would be desirable to have extra bo'suns or bo'sun mates? - The necessity for it has never been suggested to me.

*The Commissioner:* How many more men of your Union do you suggest ought to have been on board this boat?

*Mr. Lewis:* How many do I suggest? I am not suggesting it from the Union point at all.

19669. (*The Commissioner.*) Never mind about that. How many of the men you represent do you think ought to have been employed on this boat in addition to those who were employed? - I do not suggest that any particular number of my Union should be employed. I suggest that all we ask for is that enough men should be employed. It does not matter what Union they belong to.

*The Commissioner:* Will you tell me how many more men you suggest there ought to have been on this boat?

*Mr. Lewis:* I suggest, my Lord, that there should have been on the “Titanic” at least 15 extra men.

*The Commissioner:* 15 out of 890 odd?

*Mr. Lewis:* Deckhands, I am speaking of.

*The Commissioner:* How many deckhands were there altogether?

*Mr. Lewis:* My information is that there were about 48 or 49 able seamen.

*The Commissioner:* You think there ought to have been 60 odd?

*Mr. Lewis:* I suggest, roughly, that there ought to have been 60.

19670. (*The Commissioner - To the Witness.*) What do you say to that? What would the extra 15 men be doing during the voyage if you had had them? - I do not know, my Lord. I suppose some work would have been made for them to do - polishing brass or something.

19671. You mean by that they would be doing useless work? - Quite so, my Lord. Polishing brass or something like that.

19672. (*Mr. Lewis.*) You must remember that the “Titanic” and “Olympic” are extremely large boats - very heavy tonnage? - I do.

19673. How many able seamen do you carry on the “Oceanic”? - I am afraid I cannot give you the figure off-hand.

19674. Would I be right in suggesting that, approximately, there were 38 and 4 ordinary seamen? - You may be right. You have the figures; I have not.

19675. I understand that there were 38 able seamen and 4 ordinary seamen. I understand you do not carry ordinary seamen on the “Olympic” or the “Titanic.” The gross tonnage of the “Oceanic” would be 17,274? - I think that is the figure.

## **Page 495**

19676. And the “Titanic” 46,328? - Yes, that is right.

19677. In view of the fact that that is an increase of double, and that there were such a very large number of passengers, do you consider that is a sufficient extra number of men to carry? - I certainly do. I do not think that you can measure the number of the deck crew by the tonnage of a ship.

19678. That works out at about eight more than on the “Oceanic”? - I repeat that the question of the crew was fully considered, and we were advised as to what we should put and we put the men we were advised to put in her.

19679. I understand that to allay public feeling you have placed extra lifeboats on the “Olympic”? - We have extra lifeboats.

19680. Collapsibles, I believe? - Yes.

19681. And I understand that you placed about 24. Is that so? - You first of all put a larger number on board and then took them off, did you not? - We started to put on board a number that would be equal to the possible total of people that might be on board. We saw that that was so absurd that we took them off.

19682. And, finally, you took 24 extra boats? - Yes, we put a number of boats equal to the number of souls on board the ship when she sailed on that voyage.

19683. How many extra men did you put on board to look after those boats? - If my recollection is right I think we shipped five extra seamen. *Mr. Lewis:* My information is four.

*The Commissioner:* I am not enquiring into the "Oceanic," but the "Titanic."

*Mr. Lewis:* This is with regard to her sister ship, the "Olympic."

*The Commissioner:* That may be, but I am enquiring into the "Titanic," and the circumstances attending the loss of that ship.

*Mr. Lewis:* I understand that, my Lord, but Mr. Sanderson said in his evidence that the boats would be in the way if they were placed on the boat deck. I was anxious to find out whether they have found that the placing of those 24 boats upon a similar ship, the "Olympic," had occasioned any difficulty. After all, they are similar boats, my Lord.

*The Commissioner:* You can ask him that question.

*The Witness:* The boat deck, as those who have seen it know, with the number you speak of, is already very congested, and she is not nearly boated to her full capacity. 19684-5. (*The Commissioner.*) In your opinion, is she, with these 24 collapsible boats added to the number that were previously on deck, as seaworthy a boat as she was without them? - I think she is quite seaworthy.

19686. What I mean is, can you work the boats quite as easily? - You mean put the boats in the water as easily?

19687. Yes? - I should not like to say that we could, and I would not like to say we could not. I think she is fairly well congested now.

19688. What do you mean by "congested"? - The boats are very close together, and there would not be much room for the men to work. If the men started on these boats, which are amidships - opening them out and moving them to the side of the ship - they would have very little room to work in.

19689. I suppose - I do not know - there comes a point when an additional lifeboat, instead of being of service to the ship, is a disservice? - That is my feeling, my Lord.

19690. (*Mr. Lewis.*) Is it not a fact that you contemplated - I want to find out the number of men that are really required for these boats - sending the "Olympic" away without any extra men to look after the extra boats that you put on? - I should not have hesitated to do it.

19691. Is it not a fact that your Company did not contemplate, in the first instance, sending any extra men? - I do not remember that; I do not remember how the matter came up. I know that five extra men were shipped, but at whose instance I cannot tell you.

19692. Are you not aware it was at the request of the men themselves that extra men were placed upon her? - I will take your word for it.

19693. And that objection was taken by the Company that they could not afford the space? - I will take your word for it; I attach no importance to it.

19694. Just one word with regard to the speed of ships during fogs. I understand you said in your evidence that you have never known your boats to proceed at full speed during a fog? - I do not remember stating that. If I did find one of our ships proceeding at full speed during a fog, somebody would hear about it. I never said it.

19695. Your boats frequently run into fog off the banks of Newfoundland? - Yes. 19696. Would they telegraph from the bridge to the engine room to stand by? - I am sure they would.

19697. Is it not a common practice as long as no sounds of other steamers' whistles are heard to continue full speed even in a fog? - My dear Sir, I thought I had made myself abundantly clear on that point.

*The Commissioner:* I put the question myself of this witness yesterday.

19698. (*Mr. Lewis.*) So I understand, my Lord. I have read the evidence? - I say the suggestion is an outrageous one.

19699. I understand you say that the person who made that suggestion would be a very ignorant person? - Ignorant and malicious.

19700. The average revolutions at full speed would be about 75 to the minute, would they not? - I think 78 was mentioned as full speed.

19701. 75 to 78. Is it not a common practice when half speed is rung down to proceed very often at 65 revolutions? - I have not got the figure of half speed in my mind. You cannot get half speed by dividing the revolutions in half. 19702. Are the engine room logs kept? - Certainly they are kept.

19703. If men who follow the sea, such as greasers and leading firemen, were to suggest that ships do frequently run through fog - in fact, the term they use is "run through anything" - they would be ignorant persons and malicious? - They would. *The Commissioner:* Is there anyone else who wishes to ask this witness any questions?

#### **Examined by Sir ROBERT FINLAY.**

19704. You were asked with regard to the number of passengers that the "Titanic" carried as compared with other vessels? - Yes.

19705. Were there other vessels before the "Titanic" and the "Olympic" which carried as many passengers as they do? - There are, and they are running today in our service.

19706. You are prepared to give their names? - Certainly. The "Celtic" and the "Baltic" are approximately the same capacity.

19707. Carrying as many passengers and crew? - Altogether, yes. 19708. Taking them altogether, I mean? - Yes, totals.

19709. How does the deck space of these vessels compare with the "Titanic" and the "Olympic" deck space? - Not as great.

19710. Would there be the same accommodation for boats on vessels of that type? - No, there would not be as much accommodation.

19711. Very roughly, how would it compare with the deck space available for that purpose on such a ship as the "Titanic"? - I am afraid I should not like to guess. I might go so far afield.

19712. Anyhow, it would be considerably less? - Materially less.

19713. Have you looked into the question of the number of lifeboats carried by other liners, with

reference to the number of passengers, as compared with the "Titanic" and the "Olympic"? - I have not done so myself. Enquiries are being made, and I cannot say for the moment whether we have got the information or not.

19714. Do you know the general results? - I have not been informed yet.

19715. Enquiries have been made, and that will be established? - Yes, it will be. 19716. Now, with regard to another matter - as to the boat drill. Are *these* the lists which you have - three of them, I think; one for the sailing department, one for the engine department, and one for the victualling department - the stewards, I suppose, with reference to the boats? - Those are what are put up in the different departments. 19717. These are the documents (*Handing same to Witness.*)? - Yes, they are. 19718. Perhaps you will keep them for one moment. In addition to those, is there the general boat list? - There is a general boat list, subdivided into these.

19719. Are these put up or framed or stuck up anywhere? - They are put up in the different departments. I am not sure where the general one goes; I think it goes in the chart room. *These* go in the departments.

19720. Are there emergency lists in addition (*Handing same to Witness.*)? - Yes, there are. *That* is an emergency boat list.

19721. (*The Commissioner.*) I see on this list that an officer is assigned to each boat, and then there are spaces for the names of four other men. That is so, is it not? - I think in practice they would have to put more names in than that, my Lord. The term "Officer," I think, is used for the purpose of a man who would go in command of the boat. It does not necessarily mean that he would be a ship's officer. He might be a petty officer. 19722. It begins, "Commander, Chief Officer, First Officer, Second Officer, Carpenters, Boatswains, Quartermaster," and so on; and then a space is left for four additional names, and they are bracketed together and described as "Seamen." What does that mean? - I suppose, technically, that every man who goes to sea is a seaman. They would distinguish between the sailors and the firemen.

19723. It does not necessarily mean a deckhand? - I do not think so.

*Mr. Roche:* The next page talks about the firemen.

*The Attorney-General:* There is a special one for the firemen.

*Sir Robert Finlay:* There are three departments. The first is the sailing department; the second the engineers' department; and the third is the victualling department.

*The Commissioner:* I beg pardon, Sir Robert. That is quite so. So that there are a great many more than five men allocated to each boat.

*The Witness:* I should think in the case of the "Titanic" that there must have been between 30 and 40 to each boat.

*The Attorney-General:* I went through it earlier with one of the witnesses. I put those in.

19724. (*Sir Robert Finlay.*) With regard to the question of boat drill and getting firemen to take part in it, had you moved in that matter long before the loss of the "Titanic"? - We have always attempted to do it.

19725. Of how old standing are the difficulties about getting firemen to take part in the boat drill? - I think our real difficulties have only been of recent years - in the last two years. I do not recall that we had any real difficulty before that.

19726. Since this disaster you have been continuing your efforts to ensure proper drill? - We have increased them.

19727. Can you tell us what is being done now? - Yes, we have asked the Board of Trade to make their inspection a more thorough one in so far as instead of turning out two boats to turn out a good many. We have turned out as many as 13 or 14, and we have had a large number of those boats manned and sent out, rowing some distance and back again. As I say, the stewards and deckhands have done that work. They do not seem to have had much success with the firemen.

19728. Have you got any information in writing as to what is being done? - I have this telegram, which I have already alluded to.

19729. You only read a line or two. Perhaps you would read it to recall it to his Lordship? - It is rather long. I shall be glad to read it. It is as follows: "Replying your wire, boats on sailing morning have been recently manned by deckhands and stewards who muster at eight. Occasionally stewards lower and man one or two boats entirely. This was done on 'Oceanic.' 'Olympic' today had six boats in water manned by stewards and deckhands. Difficulty has been experienced in interesting engine department, who now only muster at 10.30, as if muster earlier as in past the men all evade boat drill, go ashore, and come back at last moment more or less under influence of drink, or fail to join altogether. In case of 'Oceanic,' in order to exercise engine crew with boats all were asked to come down Tuesday morning and offered half-a-day's pay for boat drill from nine until one, but men would not come, and thirteen boats were therefore put in water by deck crew that day. Experiment not repeated with 'Olympic,' as Blake confident men will not turn up day before sailing on three weekly schedule as time in port so short. After muster all engine room staff now put on lifebelts and muster at their allotted boats, so that each man knows own boat before ships sail. This was very successful with 'Olympic,' 'Oceanic,' 'Majestic,' and satisfactory to Emigration Officer. When crew sign on each is given a number, which is also shown on articles giving boat to which each man is allotted. Previous practice was two boats put out on sailing morning by deckhands, but stewards and firemen not exercised at all by reason of former being busy and latter gone ashore after muster."

19730. Thank you. Now, you have been asked about the number of deckhands on board the "Titanic." Had you enough deckhands for all the work that there was for them to do? - I believe so.

19731. Was the number of deckhands in excess of the Board of Trade requirements? - Considerably.

19732. Have you looked up the amount of loss of life in your vessels that has happened while your line has been running? - We have had some figures made up. 19733. Is this the statement (*Handing same to Witness.*)? - Yes, we prepared that statement.

19734. The statement goes from 1901 to 1911? - Yes.

19735. Taking the result, apart from the loss of life that took place on the "Titanic" up to that time how many passengers during those 10 years had been carried, and what was the total loss of life? - The total number of passengers shown by these figures carried during those 10 years is 2,179,594; the loss of life is two.
19736. When did that happen? - That happened in the case of the "Republic," which came into collision with the "Florida," and those two people were injured in the collision. 19737. That was in January, 1909? - Yes, that is right.
19738. I think these were first class passengers? - They were.
19739. And is that the whole amount of loss of life which took place in that number of passengers carried? - Yes, it is.
19740. (*The Commissioner.*) How many passengers do you say you have carried in those 10 years? - The 10 years in question - 2,179,594.
- The Attorney-General:* Is it not eleven years? 1901 to 1911 - both inclusive? *The Witness:* I expect it is inclusive, in fact it must be. You are right, it is eleven years inclusive.
19741. (*Sir Robert Finlay.*) Adding the figures of the "Titanic" to that, and taking the loss of life,

#### **Page 497**

- what is the total number of passengers carried and the total loss of life, and what percentage does that yield? - Including the "Titanic," the total becomes 2,180,910 passengers, and loss of life 822. The percentage is .038.
19742. I will hand that statement in. (*The statement was handed in.*) You referred, I think, in connection with questions put to you with regard to the davits, and Mr. Welin's way of constructing the davits, to a correspondence which you said you had handed to the Board of Trade? - I did.
19743. Is that the correspondence? (Handing same to witness.) - Yes, that is a covering letter.
19744. And the other letters? - That is a memorandum.
- The Commissioner:* Give the substance of it.
- Sir Robert Finlay:* I do not think it is at all important.
- The Commissioner:* Perhaps you had better tell us the substance.
- Sir Robert Finlay:* It relates to some address given with reference to Mr. Welin's plan for the construction of the davits, and your Lordship will see that it has no special reference to anything but to the construction of the davits. I will hand it up to your Lordship.
- The Commissioner:* There is no importance attaching to it?
- The Attorney-General:* I do not think it is important.
19745. (*Sir Robert Finlay.*) The Attorney-General agrees with me that it is not important. (*To the Witness.*) With regard to the routes, a question was put to you as to the unlikelihood of there being crossing ships. These lane routes, as they are called, are adopted by all the liners, are they not? - Yes.
19746. By a combination amongst the companies? - Principally passenger liners and a few cargo boats.

19747. These routes, of course, are not necessarily observed by sailing vessels; in fact, they could not do so? - No.
19748. You may have a sailing vessel come across the track at any time? - Yes.
19749. Are they observed by tramps? - A few may, but I do not think to any extent.
19750. So that there is always a possibility, as you have pointed out, of a crossing ship on the line? - Or even a vessel on either bow which would not be a crossing ship; they would not see her.
19751. Exactly. Now, you said something with regard to the deviations by the commanders of your vessels from the routes, and the reports that were made with regard to that and the enquiries held? - Yes, I did speak of it.
19752. Is this a list of cases in which such enquiries were held of such deviations? - I had this looked up at the Solicitor-General's request yesterday.
19753. It is not necessary to go through them, my Lord. It shows the deviations reported, and the ground of them is stated? - And the Captain commended in most cases for doing it.
19754. In most cases it would be found that the reason for the deviation is regarded as satisfactory? - Yes.
19755. I think there is only one other matter I want to ask you about. With reference to this red book, when were the rules which are comprised in this red book drawn up originally, and by whom? - They would be originally drawn up when these various subsidiary companies were formed, and this book is a selection from the various books which were in existence in 1907.
19756. Was there a book for the "Oceanic" for the White Star Line? - Yes.
19757. How did that compare, as regards the rules, with the contents of this book? - I think I am right in saying that there is more of the "Oceanic" Company's Rules in this book than of any other subsidiary company.
19758. In 1907 I think the rules were modified. Who drew up the rules in their modified form, as they appeared in this red book in 1907? - A committee, consisting of the managers of the various companies concerned went through them rule by rule.
19759. Where? - Here in London.
19760. They were settled in London in the way you have described? - Yes, by the local managers.
19761. It is headed "International Mercantile Marine Company"? - That is to give it a name.
19762. They are intended for use by a good many companies? - Yes, about five.
19763. Five companies? - Yes, about five.
19764. That name was given, and they were prepared in the way described? - Yes.

**Further examined by the ATTORNEY-GENERAL.**

19765. Have you been through these letters? - I have seen them all at one time or another, but I have glanced through them this morning.
19766. That extends from 1892 to the present year? - Yes, I think there is one selected for 1892 for a particular purpose.

19767. Of course, these are only samples? - Yes.

19768. You have not attempted to get them all? - No.

19769. I have been going hastily through it, but I do not think I have come across any deviations on account of ice? - I think there are some.

19770. Except this year? - I would not like to say what they were.

19771. I find two, but they are only after the event? - I told our people to find as many as they could, and send them on.

19772. There are two, my Lord, which, in view of a question your Lordship put yesterday, I think I might call particular attention to, and that is one of the 24th April of this year. I notice there is one, as I am informed, which is dated "Montreal," which refers to ice? - Yes.

19773. That is in 1911? - Yes.

19774. What I wanted to know was whether there were any other reports of this year, after the "Titanic" disaster, with reference to ice encountered in the track from Queenstown to the United States, to New York? - I instructed our people by wire yesterday to send all they could get, all they could find. I think I am right in saying there have been very few deviations on account of ice for some years. There has been very little ice seen on the Atlantic; but these do show, Sir, that the Captains do exercise their power to deviate whenever they think it necessary for any purpose whatever. 19775. I do not want to argue with you as to what the effect is, but they show clearly that when they report to you they have deviated for derelicts, or on account of heavy labourings - I see that is one of the reports - and that the explanation has been accepted by the Company? - Yes.

19776. It shows that, I agree. What I wanted to know was whether there were any reports of deviation on account of ice being encountered or reported on the track from Queenstown to New York? - I have no others to put forward than those.

The only ones that I see are these two, and they are both after the event, the 24th April, 1912, and the 27th April, 1912.

*Sir Robert Finlay:* You see the ice has been coming so much further South.

19777. (*The Attorney-General.*) I understand, of course, that there is more ice this year. That is quite right? - May I put it this way, Sir, that we have issued no fresh instructions in regard to deviating from the track since the "Titanic" accident.

19778. I only want to get the fact; the argument will be of interest later on to the Court. Am I right in this, that you can only find reports of deviations from the track since the "Titanic" accident? - I take your word for it. I have not looked at them very carefully.

19779. It is quite clear that there are no others here? - I simply handed in the bundle as I got it from Liverpool.

## Page 498

*The Attorney-General:* The first, my Lord, is on the 24th April, 1912, and it is this: "Track. Owing to the numerous ice reports received, I deemed it prudent not to go North of latitude 40° until in the vicinity of longitude 55° W. Trusting that my deviating from

the usual track will meet with the approval of the management," and that is commended.

*The Commissioner:* What vessel is that?

*The Attorney-General:* The "Canopic," I am told. It is dated from Boston, the 24th April, 1912.

*The Commissioner:* And the Master of that vessel, of course, had heard of the loss of the "Titanic."

*The Attorney-General:* Quite. This is sent by him from Boston on the 24th April, and the "Titanic," as your Lordship knows, was reported on the 15th April. The other one is the "Laurentic," on a voyage Eastward, according to this. *The Commissioner:* These are not of much value.

*The Attorney-General:* I think none.

*The Commissioner:* For two reasons. In the first place they relate to a time when an extraordinary quantity of ice was apparently about; and secondly they relate to a time subsequent to the loss of the "Titanic."

*The Attorney-General:* Quite. I do not think they are of any importance, for that reason.

*The Witness:* I understood the Attorney-General to say, my Lord, that there is one there from the Canadian service.

19780. (*The Attorney-General.*) Yes, there is one in September, 1911? - Is it fair to ignore that, because the Canadian service is under the same Regulations in regard to tracks, but they have different tracks. I mean the same authority is given to the captains.

*The Attorney-General:* That is quite right; there is one on September 24th, 1911. 19780a. (*The Commissioner.*) That, of course, relates to a different track? - It is a different track, my Lord, but the discretion in both cases is the same.

19780b. (*The Attorney-General.*) Again, you know, I do not agree with that - that the same instructions are sent. Upon the evidence the same instructions are not given? - I beg your pardon; I did not mean to say that; I said the same discretion.

*The Attorney-General:* Discretion, yes, of course. Your Lordship will remember we had this yesterday.

*The Commissioner:* Yes, I remember it.

*The Attorney-General:* They were very different instructions, you know. I will read it if you desire it.

*The Commissioner:* No, I do not think it is necessary.

*Sir Robert Finlay:* The only point is that the Captain has exactly the same discretion with regard to the ice. It is totally immaterial whether it is North or South.

19781. (*The Commissioner.*) Can you recall, Mr. Sanderson, any occasion when the captain of one of your ships traversing this track has advised the Company that he had deviated in consequence of meeting ice? - I cannot recall one, my Lord, but I have no doubt there are such.

19782. (*The Attorney-General.*) It is those we are asking for? - I did my best to find out.

19783. Perhaps they may still be found? - If there are any you shall certainly have them.

19784. You see the point? - I quite understand.

19785. We want to see whether there is any record of it. It may be that you have not had time to look them up carefully. If you find any subsequently you might hand them in? - I will ask them to pursue the examination.

*The Commissioner:* I can understand that they may have deviated if they came across what I call field ice or pack ice, I do not know whether there is any difference. Then I can understand them deviating to get out of the way of it because they could not make their way, but they may not have deviated on account of icebergs.

19786. (*The Attorney-General.*) That would depend on how many they expect to encounter or sight. With one or two probably one would have thought they would not; they would simply get out of the way of the iceberg. (*To the Witness.*) There is one other fact I want from you, or at least I will take it from you if you can help us. Can you tell me the time, from any record of your Company, when your vessel, the "Titanic," left Queenstown on the 11th April? - Yes. I think I have it here.

19787. Will you tell me it? - I am sorry I have not got the hour, but I can easily get it for you.

*The Attorney-General:* I have been enquiring about it.

*Sir Robert Finlay:* I think I handed that information in.

*The Witness:* It must have been somewhere between one and two o'clock.

19788. (*The Attorney-General.*) 2.30, I am told it was by your marine superintendent. We will take it at that? - It would be about that.

*The Attorney-General:* That enables us to answer a question which was asked yesterday. Supposing she had left Queenstown at 2.30 on the 11th April, and had arrived in New York on the Wednesday morning at 5 o'clock her passage would have taken, allowing, of course, for the voyage westward, 5 days 19 hours and 30 minutes. *Sir Robert Finlay:* Arriving on Wednesday morning. *The Attorney-General:* Allowing for her arrival at 5 o'clock on Wednesday morning. The record, I think that was given yesterday of the "Olympic" from Queenstown was 5 days 17 hours and 29 minutes.

*The Commissioner:* So that the "Titanic" would have taken about two hours longer? *The Attorney-General:* Yes, if she had arrived at 5 o'clock on Wednesday morning. *The Witness:* I think the difference was more than that, my Lord. I think the "Olympic's" time was 5 days 7 hours - not 17 hours.

*Mr. Maurice Hill:* It was seven hours, my Lord. You will find it on page 450 of the notes.

*The Commissioner:* What is it, Mr. Hill?

*Mr. Maurice Hill:* 5 days 7 hours 29 minutes.

*The Attorney-General:* Is that right? - Yes, 5 days 7 hours and 29 minutes is correct.

*The Commissioner:* Then it is a difference of 12 hours.

*The Attorney-General:* Yes, 12 hours. My own note is wrong. I had 5 days 17 hours 29 minutes.

*(After a short adjournment.)*

*Mr. Laing:* My Lord, may I apply with my friend, Mr. Alfred Bucknill, to represent the shipbuilders, Messrs. Harland and Wolff, so far as it may be necessary. *The Commissioner:* Certainly.

**EDWARD WILDING, Sworn.**

**Examined by Mr. ROWLATT.**

19789. What is your Christian name? - Edward Wilding.

19790. I think you are a Naval Architect? - Yes.

19791. And are you in the employment of Messrs. Harland and Wolff? - Yes.

19792. And did you design or did you take part in the designing of this ship, the "Titanic"? - Yes, it was made in our designing office at Belfast. I was one of the people connected with the making of the design.

**Page 499**

19793. You are in a position to give us the details about the construction of the ship? - Yes, that is right, as far as possible.

19794. We know a great deal about it already, you understand, but you can give us all the dimensions of the ship? - Yes.

*Mr. Rowlatt:* Your Lordship has the extract from the Register which gives you a great many of them, and I do not propose to ask questions on those points. *The*

*Commissioner:* You might ask him whether the figures are right.

19795. (*Mr. Rowlatt.*) Yes, my Lord. (*To the Witness.*) Are the figures in the Register correct? - Yes.

19796. There are two figures here which I think are not in the Register. One is the load draught; how much is that? - 34 feet 7 inches.

19797. And the displacement at load draught is what? - 52,310 tons.

19798. Does that mean that when the ship is loaded down to her load draught she displaces and therefore weighs 52,310 tons of water? - Yes, a ton of 2,240 lbs.

19799. It is distinct altogether from the tonnage of the ship? - Entirely.

19800. That is what the mass of the ship would weigh? - Yes, actually loaded to that draught.

19801. You can also give us, can you not, the heights above the decks? - Yes. 19802. I have them here; just see if they are right. The height between the Orlop and lower deck is 8 feet? - Yes.

19803. Between the lower and middle 8 feet? - Yes.

19804. Between the middle and upper, 8 feet 6 inches? - Yes.

19805. Between the upper and saloon, 9 feet? - Yes.

19806. Between the saloon and shelter, 10 feet 6 inches? - Yes.

19807. That is amidships, is it not? - Yes, for about half the length.

19808. Between the shelter and bridge decks, 9 feet? - Yes.

19809. Between the bridge and promenade, 9 feet? - Yes.

19810. And between the promenade and boat, 9 feet 6 inches? - Yes.

19811. And the camber on all decks was 3 inches? - Yes, 3 inches in the extreme beam.

19812. The vessel was constructed, was she not, under the survey of the Board of Trade? - She was.

19813. In order to get a passenger certificate? - Yes.

*Mr. Rowlatt:* My Lord, a passenger certificate certifies that the requirements of the Act have been complied with. It states the limits beyond which the steamer is not fit to ply, and the number of passengers which she is fit to carry, distinguishing, if necessary, between the different parts of the ship.

*The Attorney-General:* Your Lordship has the abstract in the little buff book, and you will find that at page 9 of the Act.

*The Commissioner:* "Issue of passenger steamer's certificate"? *The Attorney-General:* Yes.

19814. (*Mr. Rowlatt.*) Was the "Titanic" also made to comply with the American Immigration Laws? - Yes.

19815. We know that the steam was supplied from six independent sets of boilers and that there were reciprocating engines and a turbine engine also? - Yes.

*The Commissioner:* Mr. Rowlatt, I have had handed up to me a descriptive statement of the "Titanic." It comes from Harland and Wolff, I understand. Have you a copy of it?

*Mr. Rowlatt:* I am examining from it, my Lord. I purpose in parts to amplify it slightly and in parts to pass very lightly over it.

*The Commissioner:* I should like you to put it in.

*Mr. Rowlatt:* If your Lordship pleases.

*The Commissioner:* Unless there is some correction to be made in it.

19816. (*Mr. Rowlatt - To the Witness.*) Did you prepare this descriptive statement? - With assistance.

19817. Is it correct as a whole? - Yes. I wrote most of it myself, but, of course, the information had to be collected by many people.

19818. Of course, but so far as you know it is, on the whole, correct? - Yes, certainly.

*Mr. Rowlatt:* Put it in, my Lord, but I will ask a few questions about it, and if at any part of it I seem to be going too much into detail, your Lordship will check me.

*The Commissioner:* Are you going through it page by page?

19819. (*Mr. Rowlatt.*) Yes, my Lord, I am now on page 2. (*To the Witness.*) You said something about the American Immigration Laws. Can you tell us what they are at all? - A particular requirement of the American Immigration Laws that has to be complied with is the question of area provided for each third class passenger, each immigrant into the United States. That is considerably in excess - something like 20 percent, in excess of the British Board of Trade requirements for emigrant passengers - which has to be provided and allotted to the third class passengers. That is the principal point. Other points in connection with the American Immigration Laws are covered by the reciprocal Treaty which acknowledges the British Board of Trade Certificate as the equivalent of the American inspection which would otherwise be carried out.

19820. The next paragraphs of your Report deal also with the boiler sections, but I think we know all about that. Then we come to the main electrical machinery. Perhaps you might explain a little about that. You say that the main electrical machinery is in a section which is abaft the turbine engine room, as shown on the plan? - Yes.

19821. And you also say there are two emergency dynamos up at the top above

- the turbine engine room - two decks above the turbine engine room? - Yes, on D deck, above the top of the bulkheads.
19822. Where did those dynamos get their steam from? - They had a special pipe, provided from three of the boiler rooms. They had also a cross connection to this pipe, so that any steam reaching the special part of the engine room from any boiler of the ship could be passed along to them by opening two or three valves.
19823. Is that true of both the engines? - Yes, of both the emergency dynamos. 19824. Where did the other electrical machinery get its steam from? - From Nos. 1, 2 and 4 boiler rooms.
19825. Just to clear up a question which arose earlier in the case. If the engines which actuate the propellers are stopped, that has nothing whatever to do with the engines that actuate the dynamos? - Nothing whatever. They have a separate pipe of their own.
19826. They are separate engines drawing, by means of separate pipes, steam from the pipes of the ship? - Certainly. Of course, there are boilers which also supply the main engines.
19827. I quite understand that. The next paragraph of your Report deals with the general equipment, which is not very material to this accident except the installation of wireless telegraphy. That is the first one to which I wish you to refer. Where was the electricity for the wireless telegraphy generated? - There were certainly two, and, I believe, three provisions. It could be taken in the first instance, from the main dynamos of the ship, of which one, at least, was always running. It could, in addition to that, be taken from the emergency dynamos which were running every night after sunset; and I believe - though I am not quite sure in regard to this matter, because I have not got the information from the Marconi Company - they had a small battery which would take them on for a short time.
19828. A storage battery? - Yes, a storage battery.
19829. Then you had submarine signalling apparatus? - Yes.
19830. And electric lighting apparatus? - There was one point which was rather of a special

## **Page 500**

- character in that. Some of the lights in the electric light equipment could only be controlled from the switchboard, so that in the event of accident one could practically ensure the ship being fairly well lit, and that a passenger could not accidentally put out the lights.
19831. Then you had a system of telephones? - Yes, of which you have heard something.
19832. And electric elevators? - Yes.
19833. I see on page 3 of your Report you say there were four electrically-driven boat winches provided on the boat deck for handling the boats? - Yes.
19834. Where were they situated? - They were marked on this general arrangements plan (*Showing.*).

19835. Do you know whether they were used on this occasion? - They are not necessary for lowering. You can lower just as fast without them, but they are necessary if you have to raise.
19836. That is what they are used for? - That is what they are used for. 19837. Then you have telephones and engine and docking telegraphs, emergency telegraphs, steam whistles, and so on. I do not think that apparatus is material to the present Enquiry particularly, but you have a plan, have you not, if the Court wishes to see it, the rigging plan of the vessel, which would show all these connections. You need not produce it? - It does not show the telegraphs, but it shows several of these things. 19838. I do not think you need produce it, but you have the plan, if necessary? - Yes. 19839. We will go on to the question of the decks now. We know generally now what decks there were, but will you just tell me how high the boat deck was above the keel? - It was about 92 feet 6 inches above the keel at the lowest point. It was a little more at the ends because of the shear of the vessel.
19840. It would be about 60 feet above the water when she was loaded? - Rather more than 60 feet.
19841. That deck was about 500 feet long, was it not? - About - a few feet under 500.
19842. Can you tell us shortly - I do not know whether it is in the mind of the Court or not - what access there was to the boat deck? - Yes, but it is simpler to follow it on the plan. Would your Lordship like a copy of the plan (*Handing the plan.*)?
- Mr. Rowlatt:* Is that the same plan that we have had all through?
- 19842a. (*Mr. Laing.*) What plan have you handed up? - The 32nd scale general arrangements plan.
19843. (*Mr. Rowlatt.*) How will you take it? Will you first of all go along the deck and show where the access comes from? - Yes. At the forward end of the boat deck there are two ladder-ways which lead down to the next deck, the promenade deck, the A deck, as we have called it, below.
19844. Those are the little brown marks close to the Englehardt boats? - Yes, that is right.
19845. On either side? - Yes. The next approach to the boat deck is the large first class entrance, abaft the officers' house.
19846. That is the thing that spreads out like a fan, in brown? - Yes. The next means of access down to A deck are two ladders abaft the raised roof over the first class lounge under the third funnel.
19847. That is near the officers' mess? - One at the officers' mess, and one outside the deck chair house. Those go down. If you look down the deck on to A deck they are marked on the big plan in the rear of the third funnel leading aft.
19848. Is that what goes down by the lounge pantry? - No. The lounge pantry is yet another one. There is a diagonal line under the third funnel.
19849. Just below the third funnel? - There is one each side, of course - port and starboard.
19850. It is shown on this plan, my Lord, as that diagonal line under the third funnel. (*Showing.*) That is it, is it not? - Yes, that is right - one port and one starboard. The line is dotted on that line.

19851. Then just abaft that again? - There is another stair leading down into the lounge pantry which has connections right down to E deck. You come off the stair and walk round the foot of it, and go down again.
19852. That is a continuous stair right the way down? - That is right.
19853. (*The Commissioner.*) Where is that? - Just abaft the third funnel, my Lord.  
*Mr. Rowlatt: Here, my Lord (Pointing.).*
19854. (*The Commissioner.*) Is that it? - There is a transverse stairway - a stairway leading down athwart ships.
19855. (*Mr. Rowlatt.*) Instead of going *this* way, as *this* one does, it goes that way across the ship (*Showing.*)? - Across the ship. It is so marked on the plan. You will see the length of it. The length of the brown mark is across the ship.
19856. (*The Commissioner.*) That goes down to where? - Eventually to E deck, my Lord.
19857. (*Mr. Rowlatt.*) Then abaft that again, what is there? - From the boat deck there is the forward second class main stairway.
19858. Is that the one at the end of it? - Close to the afterend of it, the one that is between the mast and the funnel, that has a little knob called "Elevator gear" on top of it.
19859. *This one (Showing.)?* - Yes.
19860. This goes right down? - Yes.
19861. That is the boat deck, and it goes right away down to the bottom (*Showing.*)? - Yes.
19862. That can be communicated with at every deck; you can reach the staircase at every deck? - At any deck except A deck. There is no entrance on to that staircase on A deck. There is a landing but no entrance.
19863. When we were at the E end of the boat deck we did not say how far these ladders that went from the boat deck went down into the ship? - They go down two decks to B deck.
19864. The little ones, you mean, near the Englehardt boats? - The one that is close to the Englehardt boats.
19865. You can see it there going down two decks (*Showing.*)? - You will notice there is a landing between the two pieces of it.
19866. And then there is another ladder goes down beyond? - Yes, but you have to turn the corner of the house to get to it on B deck.
19867. There is the other big first class stairway. Does that go right down through the ship? - That goes right down to the middle deck, to F deck. 19868. That is the one between the two first funnels? - Yes.
19869. And that is underneath this big brown mark at the top of the plan? - Yes, it goes right down.
19870. Can you tell us how that acts in practice for the first, second, and third class passengers to reach the boat deck? - If you will turn to page 21 you will find it is described in detail - "Access of passengers to boat deck."
19871. I see; it is at the bottom of the page. "First class passengers. The following routes lead directly from the various parts of the first class passenger accommodation to the boat deck: From the forward ends of A, B, C, D, and E decks by the wide staircase in the forward first class entrance direct to the boat deck, also by

- elevators from the same decks as far as A deck, and then up to the top flight of the main staircase.” Do you mean by that that in the forward ends of A, B, C, D and E decks you can go from these decks to the boat deck by the wide first class entrance between the first and second funnels? - Quite right. With regard to the width of the stairway, it is a double stairway varying from 4 to 7 feet on each side. It is 7 feet wide at the fantail. It is 4 feet at the narrowest point and double. That makes 8 feet in all.
19872. “The same route,” you say here would be available “for first class passengers forward of midships of B, C, and E decks”? - Yes. There are no first class passengers amidships on D deck. It is occupied by the saloon.
19873. “First class passengers abaft amidships on B and C decks could use the wide staircase in the after main entrance to A deck, and pass out on to the main deck” - That wants correcting. It

## Page 501

- should be “pass out on to the open deck.” That is a clerical error.
19874. (*The Commissioner.*) Where is that? - I say “pass out on to the open deck” instead of “pass out on to the main deck.”
19875. (*Mr. Rowlatt.*) It is the paragraph which begins “first class passengers abaft the amidships”? - Yes. It is the fourth paragraph in that clause.
19876. Where are the first class passengers that you are speaking of here? - Those in way of the third and fourth funnels, and there is a stairway going up two decks there on to A deck. (*Showing.*)
19877. And then, where? - Out on to the open deck outside the house.
19878. And then, by the way you have described to the top deck? - Yes, in the way I described a minute ago - that is right, the diagonal ladder. (*Showing.*)
19879. “They could also use the stewards’ staircase between the reciprocating engine casing and Nos. 1 and 2 boiler casing.” That is it, is it not (*Showing.*)? - That was the long vertical one, *that* one (*Showing.*)
19880. They could also use that one, and that last route again could also be used by passengers on E deck. Is that so? - Yes.
19881. And the passengers on E deck could also use the first class main stairway? - Yes, they would have to walk along the corridor.
19882. And get up that stairway between the first and second funnels? - That is right.
19883. That is the whole of the first class? - That is the whole of the first class - that deals with every one.
19884. Now take the second class passengers. Are they on D deck? Where are the second class passengers on D deck? Are they forward or aft? - There are no second class state rooms higher than D deck.
19885. “Second class passengers on D deck used their own after stairway to B deck up behind the mast.” Is that right? - That is right - up to B deck. That stairway is 5 feet wide, I may say.

19886. "And then passed up their forward stairway"? - They would then go through the smoking room and up the forward stairway which is 5 feet 6 inches wide on to the boat deck, or, if they liked, they could go through at the lower level through the second class saloon to the same forward stairway. They get to the same point, but they go across at one of two levels.
19887. With regard to the second class passengers on E deck, there are some of those by the reciprocating engines, are there not? - Yes, down on E deck abreast of the engine casing. That is right, just where Mr. Asquith is pointing.
19888. It would not be shown in that section? - It was correct where Mr. Asquith was pointing.
19889. Where did they go? - It depends on whether the watertight door abaft of their accommodation has been closed or not.
19890. The watertight door is between D and E decks there (*Showing.*)? - Yes, that is right.
19891. What happens if that is closed? - There is an emergency door provided into the engine room and then they can go straight up the engine room ladders to the boat deck inside the engine room casing.
19892. Is that the turbine engine room casing? - No, in the reciprocating engine room. There is a special door provided.
19893. Where does the ladder come up there? - At the forward end. There are steel ladders going right up.
19894. As opposed to a stairway? - Yes, that is, it is a slope, but it is a steel runged ladder, and not a wood stair.
19895. I think we went down it on the "Olympic"? - I think you did.
19896. That is if the watertight door is shut? - If it has been necessary to close that door from an accident just close by. If there has been any accident close by it would be the duty of the steward or somebody to see that that door was open, and that they were passed aft.
19897. How would they pass along; they would go aft? - They can go aft, and then join the other second class passengers going up the forward second class stairway.
19898. When the watertight doors are closed, making a watertight compartment complete, you have to go by a ladder to get up to the top deck? - You must make some arrangement for getting them out, and that was the easiest way in this case.
19899. What other second class passengers are there? You have given us these alongside the engine casing. Now there are some alongside the turbine casing? - Yes, that is the next section further aft.
19900. How do they go up? - They have a special ladder of their own. If the watertight door is open abaft them they can go and join the forward second class stairway, but, if not, they have a special short ladder going up two decks. It is close up to the bulkhead, and then they turn through the entrance through the saloon. May I come and show you.
19901. Certainly. - They come up this transverse ladder and again turn round and come up *this* ladder, and then through the door. (*Showing.*) They are now above the watertight bulkhead, and they can go through the doors into *this* entrance, and then up.
19902. Then there are others on F deck below? - *That* is F deck. (*Showing.*) These people have the same ladder, and they come up in the same way.

19903. You mean there are second class passengers abreast the turbine casing on two decks? - Yes.
19904. And the ladder goes through those two decks? - It is not quite the same ladder, but there is a ladder.
19905. Passengers between M and N bulkheads on both E and F decks go where? - That is those two. (*Showing.*) They go in through the doors right into their entrance, and then right up *this* staircase. (*Showing.*)
19906. No question of watertight doors affects them? - No, because they have the staircase in their compartment.
19907. Then between N and O bulkheads? - That is between *that* and *that*. (*Showing.*) There are three, in all, three possible routes, 1, 2 and 3. They can go right up this stairway to B deck, come through the smoke-room, or outside on to the deck, and up that stairway. Or if they like, they can go through the dining saloon, and up the stairway, and eventually reach the boat deck by the forward second class stair.
19908. Now, the third class passengers. Go to the fore end of the vessel first, will you please. You say here "The third class passengers at the fore end of the vessel passed by the staircase in accordance with the Board of Trade requirements to C deck in the forward well"? - That is up to *here*. (*Showing.*) The Board of Trade or Immigration Survey insist on that ladder being provided up to the level from each compartment. There are other ladders running up here, 1, 2, 3, 4, and the ladders go up here and ladders go up there - these ladders are specially wide - to get them on to the forward well deck.
19909. I see there is written there "Third class open space." Can you point to that? - Yes. (*Pointing.*)
19910. Does that mean that that is open deck? - It is not exposed to the weather, but it is open from large obstructions.
19911. Open inside? - Yes.
19912. But the ladders are required to go to the top of that? - Yes.
19913. When they get there is that a deck? - *This* is a deck, and *that* is the forward well deck. (*Showing.*)
19914. Is there a way up from that deck to the boat deck? - Yes, by this ladder at the forward end of the bridge deck, round the corner of this house, either port or starboard, and then up by these ladders direct to the boat deck.
19915. Is there any other way for them to get to the boat deck. Can they come aft along the working alleyways? - They can go up the working passage, which has been referred to as Scotland Road, along this deck, and enter the forward first class

## Page 502

entrance through an emergency door *here*. (*Showing.*); then go up this main stairway, or they can continue still further on and go up this stewards' stairway. It is open to Scotland Road, as we call it, the big working alleyway. (*Showing.*)

19916. At the afterend of the ship, the third class accommodation is where you are pointing now? - Yes. (*Showing.*)

19917. There are ladders, are there, in each of those parts. (*Showing.*)? - Yes, gradually increasing in width as you go up to the top deck.
19918. And then when they are on the top deck? - They come up on to an open deck. They can then go one of two ways, either up ladders at the afterend of the bridge deck, or to B deck and along to the forward second class entrance, and then up to the boat deck, or they can go, as I understand, from some of the evidence they actually did go, through and past the second class library into the first class accommodation along the first class alleyway right to the first class entrance. I think one of the stewards gave evidence that he had taken two parties that way.
19919. With regard to the crew, you say that an escape is provided from each boiler room direct to the boat deck by the fidleys. What is that? - The fidleys are the trunks which carry down the air supply. They go down at each end of the funnel, and there are ladders provided in each of those leading direct from the stokehold plate up to the boat deck. Including the engine room there are nearly 200 tons of those steel ladders in the ship.
19920. Can you enter these fidleys from the E deck? - Yes. There is a door at each fidley. As it passes E deck there is a steel door, which is never fastened in any way. You can get out into the working passage, and then you can choose any of the ways from the working passage.
19921. Those are the provisions made with regard to the boiler rooms. Are ladders also provided from the engine rooms? - Yes, going up this way, and then up that way like *that* (*Showing.*), up the engine room skylight direct to the boat deck. They can also again come out on to E deck. There are doors from the engine room on to E deck, but, of course, if the watertight doors between D deck and E deck are shut, they must go up the ladders.
19922. Are there also ladders from the other engine room? - Yes, from the turbine engine room there are similar ladders up the base of the dummy funnel.
19923. And also from the electrical machinery room? - There is a special escape up from the afterend up to E deck, and then they can come out and use the stairway. There is no exit on to B deck.
19924. Supposing there was somebody in the tunnel, what would he do? - There is a similar arrangement that brings them up into the afterend of the working passage, and then they can come out like the third class passengers.
19925. If anybody was in the after tunnel what would he do? - There is a special tunnel escape up *here*, up into the steering gear house (*Showing.*).
19926. We have had some evidence of one man especially being released, one greaser? - That was quite unnecessary in his case. He must have been a stranger to the ship. It is not a nice passage, but there is no difficulty in getting up it; I have been up it several times.
19927. Is there any passage from here to there? (*Showing.*) - Yes, it is quite open. That line is only a web, a frame for carrying the heavy castings - a steel plate-frame for carrying the heavy castings.
19928. (*The Commissioner.*) It does not represent a bulkhead? - No; it is not marked as such, my Lord.

19929. (*Mr. Rowlatt.*) The stewards and the engineers' accommodation communicates through the working passage - I need not take you through that in detail? - Yes.  
*Mr. Rowlatt:* There was one question I ought to have asked you while we were on page

3.

*The Commissioner:* Have you left this question of the means of egress from the different classes?

*Mr. Rowlatt:* Yes, my Lord.

19930. (*The Commissioner.*) I want to ask a question about that. (*To the Witness.*) Take the third class passengers. In order to enable them to get to the boat deck they would have to go through parts of the ship ordinarily reserved for the first class? - For the second class, my Lord - the afterend.

19931. Would the second class passengers have to pass through parts of the ship ordinarily reserved for the first class? - No, my Lord. The second class can get up by their own entrance.

19932. Are there any doors of any kind, or rails, or other impediments, between the egress of the third class passengers and the boat deck? - There are rails on the outside. On this ladderway at the afterend of B deck there is a hinged gate which anyone can lift and walk through - port and starboard.

19933. Is that the only thing? - That is the only thing preventing third class passengers in the ordinary course getting up to the boat deck.

19934. The only thing? - The only block.

19935. Is it a rail which can be lifted up by hand? - Quite readily, my Lord. 19936. Is it kept locked or fastened? - Not in any way. There is no lock on it, and no means of locking it provided.

19937. Then there is nothing to prevent a third class passenger who desires to do so passing in to the second class part of the boat? - Except the watchfulness of the stewards and men.

19938. Except the rules, there is no actual impediment? - No actual impediment.

19939. (*The Attorney-General.*) Is it this that is shown here? (*Showing.*) - Yes. *The Commissioner:* I remember, I think, Mr. Rowlatt, a statement being made by several witnesses that the barriers were down, and I thought from that there was more than one barrier.

19940. (*Mr. Rowlatt.*) What does the barriers being down mean? - I can only imagine that it means that the gate was open.

19941. (*The Commissioner.*) What was open? - This hinged gate was open. 19942. There was only one, I understand? - There is only one - of course, there is one each side of the ship. There are other ways to the boat deck, one of which we had evidence was used where there is a door that would have to be opened.

19943. (*Mr. Rowlatt.*) Is that the emergency door? - That is the emergency door to the second class stairway from the working alleyway.

19944. (*The Commissioner.*) I was going to ask you a question about the name "emergency door." The very name "emergency door" suggests that it is ordinarily shut? - Yes.

19945. How many of these emergency doors are there? - There are in all three, one to the forward first class main stairway. In each case they come from the working alleyway.

19946. You mean Scotland Road? - From Scotland Road. There is one leading direct into the forward first class entrance from Scotland Road up on to the top, and then you can go on there; one from Scotland Road into the forward second class entrance, and one from Scotland Road into the after second class entrance.

19947. How are these emergency doors shut? - With an ordinary handle, as far as I know, my Lord. They have means for locking them, but I understand they are not locked at sea.

19948. They are not locked? - Not locked - I understand not. There is a lock on them, but I understand they are not locked at sea. I have frequently passed through them at sea.

19949. What is the object of having a door there? - The passage is used by the third class passengers and crew extensively, and it is to prevent their being able to get in without continuously watching them. That was the intention. If you do not put doors there, or barriers of some sort, you would have to have somebody continuously stationed there to prevent people going into the second class accommodation and losing their way, for example.

19950. Do the stewards use those doors? - I believe they do on the way from their own quarters to the accommodation of the passengers they have to attend to.

### Page 503

19951. That is what I mean - passing from the place where they do their work to the place where they sleep, and so to speak live, they would have to use these doors? - I believe they would, my Lord.

19952. So that they are being used daily? - Regularly, as I understand.

19953. (*Mr. Rowlatt.*) There were other emergency doors that we heard of on E deck right aft in the third class quarters here (*Showing on plan*)? - Those are the two doors I was referring to from Scotland Road into the forward and after second class stairways.

Those are two, and then there is a third one right forward.

19954. They are marked on this plan. There is the one right forward that goes into the first class entrance, and then there is one in the middle at the boiler casing? - No, those are doors into the boiler casing, the fidley escape doors. They are the escape doors. This door is not an emergency door, because it is always open.

19955. You remember, my Lord, he said, there were doors into the fidleys by the chimneys, what is marked on this plan as "Emergency door"? - It is at the foot of this long stair.

19956. It is that stair (*Showing.*)? - At the foot of that stair.

19957. And those doors are into the fidleys? - Yes, and are not emergency doors. 19958. As I understand it on this plan the emergency door leads into that staircase which runs by the lounge pantry. The two other doors which are marked here are the doors into the fidleys, but they are not called emergency doors? - And are not for the use of anyone except the firemen coming into the working passage.

19959. You have spoken of four emergency doors, have you not? - In all, now, I had forgotten the one at the foot of the stewards' stairs. 19960. You said three earlier? - Yes.

19961. There are two right away aft, and one, which is the one we have been speaking about, in the boiler casing, and one in the first class entrance? - Yes.

19962. On page 4 you describe the decks and the groups of boats, which I need not take you through, and on page 5 you say the next deck below the boat deck was the promenade deck? - Yes.

19963. Then you say the next lowest deck is the bridge deck - B deck? - Yes.

19964. As a matter of fact, it is the deck below the bridge that the officers use, is it not? The bridge that the officers use for navigation is on the boat deck, is it not? - It is the boat deck. The B deck is constructionally known as the bridge deck - not as the navigating bridge. That is the distinction.

19965. Until you get down to the B deck is the ship of lighter construction? - The decks above B deck are of lighter construction.

*The Commissioner:* I am not following you, Mr. Rowlatt.

19966. (*Mr. Rowlatt.*) Just see if I am right, Mr. Wilding. This is the roof of the officers' quarters, is it not. (*Showing*)? - That is right.

19967. This is the boat deck on which the officers' quarters stand? - Quite right - with the navigating bridge at the forward end.

19968. The navigating bridge being there. (*Showing*)? - Quite right.

19969. This is the A deck or promenade deck. (*Showing*)? - Quite right.

19970. And this is the B deck. (*Showing*)? - Quite right.

19971. It is called constructionally the bridge deck, although, as a matter of fact, the bridge is not there? - The Captain's bridge is not there, but it is what is known as a bridge house, and on top of it is the bridge deck.

19972. Is the sheathing composing the sides of the vessel, so to speak, of these decks lighter? - Yes, above B deck it is much lighter.

*The Commissioner:* Now, just put the pointer upon the decks which are lighter than the decks below them. That is the bridge deck you are pointing to, is it not?

*Mr. Rowlatt:* That is a boat deck.

*The Witness:* A boat deck or A deck.

19973. That is the roof of the deck-house, the Captain's quarters; that is the boat deck, and that is A deck. (*Pointing*)? - Quite right.

19974. And here is the B deck or bridge deck, where you first get into the construction of the ship? - Quite right, into the heavy construction of the hull. *The*

*Commissioner:* Just put your pointer on the bridge, please.

*Mr. Rowlatt:* The Captain's bridge is there my Lord. (*Pointing*.)

*The Commissioner:* Below that is the boat deck.

19975. (*Mr. Rowlatt.*) That is on the boat deck? - On part of the boat deck, my Lord.

19976. The Captain's bridge is a room on the very forward part of the boat deck; below that is the A deck, and below that is the B deck? - Quite right.

19977. (*The Commissioner.*) Where does the lighter construction begin? - At B deck.

*Mr. Rowlatt:* All above B deck.

*Mr. Laing:* Including B deck.

*The Commissioner:* All above B deck is of lighter construction. The decks are then of lighter construction, I understand.

19978. (*Mr. Rowlatt - To the Witness.*) Is that so? - Quite right.

*The Attorney-General:* If you look at it on the model, my Lord, it is very clearly shown there.

*The Commissioner:* Just show it to me again.

(*The Witness explained the plan to the learned Commissioner.*)

Once you change from the heavier to the lighter construction - does the lighter construction extend right away up without changing? - Substantially. The top tier is very slightly lighter than the lower tier, but not much.

19979. (*Mr. Rowlatt.*) I was here speaking of the bridge deck and describing it in that way. It is the deck which constituted the strong top deck of the vessel? - The top of the vessel considered as a girder.

19980. As I understand it, the principle of a vessel is that its bottom, its sides and its deck make a girder? - Yes, and with suitable stiffening constitute other decks. 19981.

And this is the deck of the ship as a ship - as opposed to upper works, such as 'A' deck and so on? - Yes, certainly.

*Mr. Rowlatt:* I do not think we need go into the question of accommodation, because we can follow that on in the Report. Now, I will go to page 10, my Lord. I am not going to ask much about the intervening parts. You say on that page: "Below G deck were two partial decks."

*The Commissioner:* I cannot find that on page 10. How does the paragraph begin?

19982. (*Mr. Rowlatt.*) "Below G deck were two partial decks - the Orlop and the lower Orlop decks, the latter extending only through the forepeak and No. 1 hold." That is the deck which is above the blue peak deck? - That is right. (*Showing.*)

19983. Which is the lower Orlop? - Here. (*Showing.*) It extends through No. 1 hold at the same level, then runs through the No. 2 hold, up again, and through No. 3 hold, and then ceases as a deck. (*Showing.*)

19984. I see at the top of the words "peak tank" above the blue the Orlop deck is marked with a very heavy line. Is that watertight? - It is. That is the watertight top of the peak deck.

19985. I do not know whether your Lordship noticed what he said - that the roof of the peak tank there is watertight, so that the peak tank has a watertight roof as well as a watertight bulkhead abaft it? - That is so as to prevent the water rising into the stores when filled.

*The Commissioner:* It is a watertight box.

*Mr. Rowlatt:* Yes, my Lord, and below that comes the inner bottom.

*The Commissioner:* Are there any of these decks which are watertight, too?

19986. (*Mr. Rowlatt.*) There is that one and there is another further aft, is there not? - On the

same deck. The deck resumes again abaft the machinery space - this deck coming through No. 4 hold, No. 5 hold, and No. 6 hold. (*Pointing.*)

19987. Where does it begin to be a watertight deck? - At about the turbine engine room. There is a recess in the middle of it here, a watertight recess. (*Pointing.*) A watertight box is formed. The deck is watertight throughout most of its area.

19988. When you say that, that applies to the space that is labelled "Electrical machinery"? - That space has a watertight roof.

19989. Do I understand you to say that is a watertight box in the same sense as the peak tank? - Yes.

19990. But people go up, you told us? - Yes, but they have to get up to the top of E deck before they can get out of it.

19991. But there is a fan trunk? - The fan trunk, again, is watertight up to this level.

19992. What I am speaking of is this: His Lordship asked whether there was any further watertight deck, a horizontal division? - Yes, this deck (*Pointing.*). The deck that forms the roof is made watertight. Any recesses in it are carried up watertight - any necessary holes.

19993. You mean that this passage, this funnel, which goes up from it is carried up, and that is watertight in itself? - That is watertight.

19994. Therefore it is a watertight hole going down into a watertight box? - Yes. 19995. (*The Commissioner.*) So that there can be no escape of water until it had reached the top of that hole, and then it would come out? - That is the point of it, my Lord. 19996. Will you tell me, if it is not inconvenient, what the object is of making this watertight deck in the afterpart of the ship? - Yes, my Lord. It is in the event of anything going wrong with the propeller shafting and damaging the ship's side. It makes a convenient way of protecting it. The Board of Trade require us to make the aftermost section watertight in that manner, and we carried it forward.

19997. (*Mr. Rowlatt.*) That is the aftermost section of all? - Yes, the aftermost part of all.

19998. You say the Board of Trade require you to do that. Does their requirement extend to the peak tank? Is that the aftermost section? - Yes, but also the piece forward of the peak tank, forward of the stern gland.

19999. How far forward does what you call the aftermost section carry you - as far forward as this (*Pointing.*)? - The Board of Trade specify that a part of this deck - they give a length for it which will extend to somewhere about there (*Pointing.*) - must be watertight.

20000. And as I understand it you carried it on to here (*Pointing.*)? - That is right. 20001. (*The Commissioner.*) Will you explain to me again what the object is of making this part of the ship watertight - that deck? - There are fast running shafts in it, my Lord, and there is only at the side of the ship close to the shafting the single skin of the vessel. In the event of any accident to the shafting, or anything of that character happening where there are moving parts, and it damaging the skin, it prevents any flooding. That, I understand, is the motive of the Board of Trade in asking for it to be protected. As we do not work any cargo or anything through that space, it was a reasonable precaution to carry it on into the two forward sections.

20002. It is to protect the ship in the event of the machinery damaging the skin of the ship, and then if it did, if it made a hole in any part of the skin of the ship, the effect

would be that the water would come in and would be confined by the bulkheads on the one hand and by the watertight deck on the other? - Provided the hole was completely below the deck, of course.

20003. (*Mr. Rowlatt.*) As I understand, the hole would be very unlikely to be anywhere but below the deck, if the hole were to be made by the moving parts? - Yes. 20003a. It could only be below the deck? - What was in my mind when I made the qualification was the case of the "Olympic," where she was damaged both above and below.

20004. (*The Commissioner.*) But that was by external violence? - Yes, that was by external accident.

20005. But you say this precaution is taken in anticipation of possible internal violence? - Yes, my Lord, that is quite right.

20006. (*Mr. Rowlatt.*) I just want to get clear another little point about the fore end of the ship. This is the firemen's passage (*Pointing.*)? - Yes.

20007. That is a passage which is in the middle of the ship? - Yes. 20008. Is that watertight? - It is.

*The Commissioner:* What are you asking him about now? When you say "Is this watertight?" what do you mean?

*Mr. Rowlatt:* The firemen's passage, my Lord.

*The Commissioner:* You mean watertight on all sides? - Yes.

20009. The roof, sides, and bottom? - Yes, certainly, my Lord.

20010. (*Mr. Rowlatt.*) It is a longitudinal hole, just as that was a vertical hole? - Yes.

20011. (*The Commissioner.*) Now why is that made watertight all round? - It was made watertight because it was desired to enable firemen to use it as a means of access to their accommodation, which is forward of B bulkhead, the second bulkhead, and in order to do that, in order to provide them with access through it and not shut them out by a watertight door it had to be carried through as a watertight pipe.

20012. Then in point of fact it is a watertight communication to the firemen's quarters, which does not in any way interfere with the watertight bulkhead which you have just explained? - It was with the object of making it watertight, my Lord.

*Mr. Rowlatt:* May I ask, my Lord, one or two questions as from this model? *The Commissioner:* Certainly.

20013. (*Mr. Rowlatt.*) Is that the firemen's passage represented here in the model standing back from the side of the ship but running down the middle of the ship? - Quite right.

*The Commissioner:* I cannot see it, but I can follow it.

*Mr. Rowlatt:* It is that piece of wood which is standing back (*referring to the model*).

*The Witness:* That is the firemen's passage, my Lord. *The*

*Commissioner:* It is like a watertight tube.

*Mr. Rowlatt:* Yes.

*The Commissioner:* Put through a watertight bulkhead.

*Mr. Rowlatt:* And going through the middle of another watertight compartment.

*The Witness:* Certainly.

*The Commissioner:* It goes through two, I think.

*Mr. Rowlatt:* Yes, it goes through two.

*The Witness:* That is so.

20014. It is in communication as soon as you get halfway up the spiral staircase with the second watertight compartment in the ship right forward there? - Quite, and in that way this pipe, this firemen's tunnel becomes a part for flooding purposes of No. 1 hold.

20015. That is what I wanted to get? - And it was because it was recognised that it became that that it was made watertight.

20016. Now, just as we are upon that, I think I had better ask you a question with regard to the evidence. You know there has been evidence that water was flowing into that firemen's passage at the bottom of the spiral staircase? - There was.

20017. Was the firemen's passage at any such point in contact with the outside skin of the ship? - No, it was 3 feet 6 inches - I have a plan showing it.

*The Commissioner:* 3 feet 6 inches what - away from the skin of the ship? - I should have thought it was much further than that.

*Mr. Rowlatt:* I should have thought so too, my Lord. *The*

*Witness:* I have a plan showing it. (*Producing the same.*) *The*

*Commissioner:* Now I understand it.

20018. (*Mr. Rowlatt.*) Would you look at this blueprint for a moment, Mr. Wilding? - I have a copy.

## **Page 505**

20019. You show here the two spiral staircases? - Yes, two spiral staircases, one port and one starboard.

20020. Now, on either side of those there is an upright white line representing a division, is there not? - A watertight wall.

20021. Is that a watertight wall? - Yes, it is a watertight wall to the trunk containing the stair, the side wall.

20022. And the 3 feet 6 inches that you mention is that from the corner at the bottom of that watertight wall to the skin of the ship? - I think it scales a little less, about 3 feet 3 inches from the corner horizontally to the shell of the ship.

20023. Is that the nearest point at which that cavity in which the spiral staircases are approaches to the skin of the ship? - That is right.

20024. So that is it a fair deduction to say that if water from the sea was running into that spiral staircase space something must have penetrated the ship through the skin for 3 feet 3 inches, and then through iron, the thickness of which you will tell us by and bye, of the watertight compartment again? - That it must have come far enough in through the side of the ship to disturb effectively that watertight wall.

*The Commissioner:* In other words, the ice must have penetrated into the ship more at this point than 3 feet 6 inches.

20025. (*Mr. Rowlatt.*) Yes, and have penetrated in sufficient bulk to break this partition at the end of the 3 feet. It must have been a good heavy sharp piece that succeeded in coming in as far as this in order to do further damage. (*To the Witness.*) Is not

- that so? - It probably came in gradually. It started some few feet further forward and came in gradually; I do not think it went in with a bang.
20026. You do not think the puncture was necessarily confined to this spot in the vessel?  
*The Commissioner:* No, no; but at that spot there must have been a puncture which penetrated at least 3 feet 6 inches into the ship at that point.
20027. (*Mr. Rowlatt.*) How much further forward than that you cannot say? - No, we cannot say, but we know damage was done in the 4 feet. My Lord, we put a mark upon the model, if you remember, at the time down *here*, as showing the position, when Hendrickson's evidence was given. I remember that.
20028. (*The Commissioner.*) And that, you say, is where the ice penetrated if there was water in that tunnel as described. It was there that the ice would have penetrated and have admitted the water? - That is right.
20029. (*Mr. Rowlatt.*) Now, Mr. Wilding, on page 10 you then go to the inner bottom of the ship? - Yes.
20030. You say it extends fore and aft through about nine-tenths of the vessels length, and on this were placed the boilers, machinery and auxiliary machinery and the electric lighting machines. Now, the top of that blue space running the length of the ship was what we heard of as the tank top, was it not? - Yes, the inner bottom or tank top are absolutely synonymous.
20031. Now, you say it runs fore and aft about nine-tenths of the vessel's length? - Quite right. Of course, it stops in the forepeak and it stops a little forward of the afterpeak; it stops at the afterend of the forepeak.
20032. That means that when I see your peak tank there are no longer two floors to the peak tank, so to speak; the peak tank goes right down to the bottom of the ship? - Yes, to the shell of the ship.
20033. And then it comes here abaft the bulkhead (*Pointing.*)? - In the aftermost piece of the tunnel. It does not go right to the afterend.
20034. It stops two-thirds of the way between O and P, does it not? - Yes, that is right, two-thirds of the way between O and P.
- The Commissioner:* Just look at this plan, and tell me whether it is accurate.  
(*The Witness explained upon the plan.*)
20035. Are these structural tanks at the bottom of the ship, ballast tanks? - Yes. For ballast and fresh water, my Lord.
20036. Some of them are used for fresh water for the use of the ship? - Some of them are available for fresh water.
20037. And the others are available for sea water, are they? - Those in the way of the boiler rooms are available for sea water only. Most of the others are available for fresh water.
20038. And on this voyage do you suppose they were full or empty? - One or two of them would be full as she neared the end of the voyage.
20039. Full of fresh water? - All would be full of fresh water when she left, and then it would be gradually used during the voyage. You do not put salt water into the same tanks to preserve the same stability outside the ship, but you do put salt water into some of the salt water tanks.

20040. When you start on your voyage are these tanks full of fresh water? - I believe every tank was full, all of the fresh water tanks.

20041. (*Mr. Rowlatt.*) I think it comes, my Lord, further on in the report. Now on page 10 you deal with the firemen's passage, but I took that out of its order. Now, on page 11 you get "structure" - you see it is headed "structure." You say, "The vessel was built of steel and has a cellular double bottom of the usual type with a floor at every frame." Now I just want to have this explained. When you talk of cellular double bottom you are speaking of the inner bottom and the skin of the ship which we have just been dealing with, are you not? - The space between the two. It is cut up into cells by watertight partitions, and hence its name.

20042. Now when you say "with a floor at every frame" will you just explain what that means. I think I know, but will you just explain it to the Court. Have you got a section there or a plan that will show it? - Yes. (*Handing up a midship section.*)

*The Commissioner:* Now it has been explained to me that the floor is not a floor. 20043. (*Mr. Rowlatt.*) As I understand Mr. Wilding, a floor is a sort of tie? - A vertical plate running across the ship and keeping the inner and upper bottoms apart and tied together.

*The Commissioner:* These floors are about 3 feet apart? - Every 3 feet apart amidships.

20044. (*Mr. Rowlatt.*) Is that where the frame comes? - The frames are carried up outside the double bottom. The floor constitutes the frame in way of double bottom. 20045. Now the depth of this frame is, you say, 63 inches for the most part, but 78 in way of the main reciprocating engines. I see there that the inner bottom is run up a little when you get to the engine section and falls again when you get to the first boiler room section - is that what you are alluding to? - That is quite right, it is necessary under the very heavy part of the engines to put heavier and stronger framing.

20046. Is that for weight? - No, for the movement, the internal movement of the engines, to keep them within control.

20047. Now you say for about half the length of the vessel this double bottom extended high enough up the ship's side to protect the bilges and the bilge plating was doubled. Now "extended high enough up the ship's side to protect the bilges," does that appear upon this model? - To a certain extent.

20048. Does this piece of wood here in the bottom represent the space that we are speaking of between the two bottoms? - That is so.

20049. As far forward as that, extending up to the bilge and then forward where it has to be cut back only being in the middle of the ship, and not coming up to the bilge at all? - Only coming up to the lower part where the ship begins to rise away.

20050. And then it stops? - Yes, it stops, the idea being to protect the part of the ship which is likely to come on the ground in the event of her grounding.

*The Commissioner:* Will you let me look at that model. (*The model was handed up to his Lordship.*)

## **Page 506**

20051. (*The Commissioner - To the Witness.*) You said something about for protection in the event of the ship taking the ground - what did you mean by that? - In the event of the

ship accidentally grounding as ships sometimes do, it is very desirable that water shall be as far as possible kept out of the machinery spaces, that is to say the engine and boiler rooms, and it is very usually the bilge which gets damaged because the ship gets a slight list, and then the part of the ship that is beginning to rise gets damaged and water gets in; therefore we carried it round the curve, above the round of the curve of the bilge. 20052. (*Mr. Rowlatt.*) Now have you got a midship section? - I have already handed one up to My Lord.

20053. Does it end in that way, running right up to the ship's side and ending in an angle? - Practically it comes to a knife-edge at the corner - a sharp corner, as shown in the midship section.

20054. That is not the case, is it, where you get to the other part of the ship where it is not brought to the bilge? - It is not above the bilge - it turns.

20055. This that you gave us here, the double bottom only, extends, does it not, as far as that point - (*Pointing.*) - immediately under the centre of the spiral staircase, so that it does not go out until the roof of the double bottom meets the side of the ship, so to speak?

- No, it is only done in the machinery spaces, in the engine and boiler spaces.

20056. May I ask you this, as an expert? Would it be of any protection to a ship in the case of accidents such as this that has overtaken the "Titanic" if this double skin could be carried more round the bilge? - Well, it does not seem so, because in the one case where we have a double skin in the way at the foot of the spiral staircase it was ruptured. We had a double skin there.

20037. What you say is that the outer skin of the ship and the wall of the spiral staircase are equivalent to two skins of the ship? - Yes, because we know that the water got through that inner wall.

20058. But I suppose you would agree, I do not know how far it is feasible, but for any lesser wound a double skin would protect it? - Certainly.

20059. Such as the wound described, for instance, by Barrett in the boiler section? - Probably.

20060. Is that a feasible idea at all? - Well, there are objections as well as advantages. Do you want me to go into them?

20061. I do not know. You think the objections would outweigh the advantages? - It is a matter for careful consideration.

20062. But it is a matter for consideration perhaps? - It is a matter which I may say we have under consideration.

20063. (*The Commissioner.*) Perhaps you had better state, Mr. Wilding, what the advantages are, and what the objections are? - Well, the great advantage is of course what Mr. Rowlatt was saying, that it does protect from small wounds, slight wounds. The chief disadvantages are that it does reduce the space inside the ship available for any use such as bunkers or anything else. It is too small in itself to use as a bunker. It is a very difficult space to satisfactorily look after in practice and to ensure the proper upkeep of. If things were looked after in an ideal fashion, it would do away very largely with that objection, but judging by our experience of the upkeep of such very restricted spaces which are very difficult of access,

- there is considerable risk in our judgment; we believe that such spaces will not be as well looked after as they might be, that corrosion, which is the most subtle enemy that we have to deal with, might set up and weaken the outside shell plating and in that way it might prove to be a disadvantage eventually, though for a new ship a protection.
20064. Do you know how this part of the ship is constructed in men-of-war? - In broad outlines, yes, I do, my Lord. I have been in the Naval service.
20065. Well, I am informed that the difficulty which you point out is not found of any consequence in men-of-war where the stronger plan is adopted? - I am quite aware that it is adopted in men-of-war, but I would like to point out that there is a good deal better - shall I say, a good deal more time and labour available for the upkeep of His Majesty's ships than there is for most commercial ships.
20066. Then, does it mean that if more money were spent you would be able to look after these inaccessible parts of the ship, and therefore might make them stronger than you do? - More money, and more careful supervision and more pains taken. It is a practical, mechanical thing. Our commercial experience of such structures where they have been tried has not been encouraging.
20067. (*Mr. Rowlatt.*) You are speaking of such a space being carried up the side of the ship, not being used as a tank, of course? - Not being used as a tank. To use it as a tank would only put salt water into it, and that is one of the troubles which causes corrosion. 20068. You put salt water into some, at any rate, of these lower tanks, do you not? - We do.
20069. How do you keep the corrosion in check there? - In the first place, they are much larger; and, of course, in the second place, it is much easier to walk about in a space which is flat than in a high narrow space.
20070. There is more room for a man to walk about there? - Yes; you can walk through the double bottom of the "Titanic" almost without stooping.
20071. Now you say at that point, that is to say where the double bottom extends to the bilges, the bilge plating was double? - Yes.
20072. What do you mean by that? - Taking the strake of plating, the skin plating of the ship in the way of the bilge, there were two thicknesses put together. The reason for that is that the bilge is one of the corners of the girders of the ship, and consequently it was desirable to strengthen it.
20073. That is just on the turn of the bilge, all along there, there is double plating? - That is right; two thicknesses closely riveted together.
- Mr. Rowlatt:* I do not know how much longer your Lordship desires to sit. I am now about to enter upon a thing which will take a few minutes, perhaps a quarter of an hour, or something of that sort.
- The Commissioner:* I intended to sit till a quarter to four. We will use now if you like, Mr. Rowlatt?
- Mr. Rowlatt:* If your Lordship pleases.

*(The Witness withdrew.)*

*(Adjourned to tomorrow at 10.30 o'clock.)*  
In the Wreck Commissioner's Court.

SCOTTISH HALL,  
BUCKINGHAM GATE,

*Friday 7<sup>th</sup> June, 1912*

PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

LOSS OF THE S. S. "TITANIC."

**NINETEENTH DAY.**

THE RIGHT HON. SIR RUFUS ISAACS, K. C., M.P. (*Attorney-General*), SIR JOHN SIMON, K. C., M.P. (*Solicitor-General*), MR. BUTLER ASPINALL, K. C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by Sir R. Ellis Cunliffe, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K. C., M.P., MR. F. LAING, K. C., MR. MAURICE HILL, K. C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.) appeared as Counsel on behalf of the White Star Line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland, and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted on application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company; and (instructed by Messrs. William A. Crump and Son) also on behalf of the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P. (instructed by Messrs. Helder Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside and General Workers' Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third class passengers. (Admitted on application.)

MR. C. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian" (Leyland Line). (Admitted on application.)

Mr. H. E. DUKE, K. C., M.P., and MR. VAUGHAN WILLIAMS (instructed by Messrs. A. F. and R. w. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff Gordon. (Admitted on application.)

MR. F. LAING, K. C., and MR. ALFRED BUCKNILL appeared on behalf of Messrs. Harland and Wolff. (Admitted on application.)

## **Page 508**

*The Attorney-General:* My Lord, I propose to call a witness and to interpose him because I do not want to keep him here unnecessarily. He is very short. He was on the ship.

*The Commissioner:* Yes.

**PAUL MAUGE, Sworn.**

### **Examined by the ATTORNEY-GENERAL.**

20074. Were you Secretary to the Chef of the Restaurant *a la carte* on the "Titanic"? -

Yes, I was.

20075. You have never been on a ship before? - No, it was the first time.

20076. First of all, do you remember where your berth was - was it 21? - My cabin, do you mean?

20077. Yes? - 21.

20078. Was it by the engine room? - I cannot tell you exactly; any way, I had No. 21.

20079. Do you remember whether it was on the port or starboard side? - Well, it was on the left side.

20080. That is the port side; and in the third class corridor, was it? - In the third class corridor.

20081. Do you remember what deck it was on? - I can show you by this model, if you wish.

20082. Yes, show us by this? - It was this one (*Pointing*). I cannot say exactly; it is very difficult to say, but it was the third class corridor.

20083. We will see if we can arrive at it more closely directly. There were other people in your cabin, I suppose? - We were four.

20084. Were you asleep when the vessel came into collision with the iceberg? - Yes; I was sleeping.
20085. Did it wake you up? - The head pastry cook got up and I got up after him. 20086. Did he call you? - No; I got up after when I saw him come back, but one steward said to me "Oh, there is no danger; it is better you go to sleep." I had been sleeping again. At the moment I heard the alarm signal, and I went to the front, but the stewards sent me back to my cabin.
20087. I think I heard you saying there was an alarm signal? - Yes, an alarm signal.
20088. What do you mean by that? - A ringing.
20089. A bell ringing? - Yes.
20090. Down where you were on the third class corridor? - Yes.
20091. Alarming everybody on that corridor? - Yes.
20092. That is what I wanted to know. Then did you come out of your cabin? - Yes, I have been on the front of the ship, just to see what it was, but a lot of people came and sent me back to my cabin. I have been passing by the staircase of the restaurant, and I have been on the first class passenger deck. I forgot to tell you before that I saw Captain Smith had been to the engine room. He came back two minutes after. After that I have been to the first class passenger room by the staircase and I saw Captain Smith again at the first lifeboat. He said to a lady, "It is all right, lady." 20093. It was for her to get into the boat? - Yes.
20094. Do I understand it rightly, he was encouraging a lady to get into the boat? - Yes, because no lady or gentleman would like to go; everybody thought it would be quite safe.
20095. When you heard the bell ringing, giving the alarm in the third class corridor, did you see other persons coming out of that third class corridor? - Yes, a lot of persons came from the front and went to the back, some of them with luggage, some with children. Some showed us a piece of ice.
20096. What I want to understand from you is, the effect apparently of the ringing of the bell there was to alarm the third class passengers in that corridor? - Yes, it was to alarm the third class passengers.
20097. I thought I understood you to say that some went forward? - I do not follow exactly.
20098. Were you near the chef's room? - Yes.
20099. That will help us - on the same deck? - Yes, on the same deck and the same corridor.
20100. That would be deck E - near the pantry were you? - It was marked "pantry," but no pantryman was with us; it was washing men - men who washed the plates.
20101. What were the men who were in the cabin with you? - The pastry cook and two washing men. They washed some plates or glasses or something like that.
20102. (*The Attorney-General.*) I see about where it is. If you look at E deck, my Lord, it is somewhere here (*Pointing on the plan.*) (*To the Witness.*) When you speak of the third class corridor, I should like to understand what you mean by that. Was that the corridor into which your cabin opened? - Yes.
20103. And were there also a number of third class cabins with passages leading down to the side of the ship? - Yes, the cabin of the chef was just close to the ship.
20104. Close to the side of the ship? - Yes.

20105. That is where your cabin was, do you mean? - Yes, I was three before. 20106. So you had to walk down the corridor to get to yours; it was the fourth cabin, the nearest to the side of the ship? - No, that was for the chef only; the chef was the nearest cabin on the side of the ship. I was four or three rooms before.

*The Attorney-General:* Your Lordship sees the "chef"; that is on the port side and he is quite right. That is the closest; that is just on the side of the ship, against the side of the ship.

*The Commissioner:* Yes.

20107. (*The Attorney-General - To the Witness.*) And you say you were before that? - Yes.

*The Attorney-General:* He means by that that there were four.

*The Witness:* Four or three cabins and three people with me. We were four together.

20108. There were three cabins? - Yes.

20109. Yours was one of the three cabins? - Yes, the last one.

20110. In your cabin there were four persons? - Yes.

20111. (*The Attorney-General.*) Then what he means, I understand, my Lord, is that there would be three cabins before you got to the last cabin against the side of the ship. (*To the Witness.*) So that you would have to walk down a corridor or an alleyway, and yours would be the first of the three. Was it so? - The first of the three, the nearest to the corridor.

*The Attorney-General:* That is right, it would be nearest to the corridor before you turn.

20112. (*The Commissioner - To the Witness.*) When you were walking towards the chef's cabin, was your cabin on your left-hand side? - On my left-hand side, yes. 20113. Was it near where the fourth cook was? - Well, it was marked so, but they changed their cabin with some others.

*The Commissioner:* I think I know sufficiently well, Mr. Attorney, where it was. 20114. (*The Attorney-General.*) I see it better on a larger plan. (*To the Witness.*) There was a wide corridor first of all, along which you walked? - Yes.

20115. And if you were walking towards the stern of the ship - you know what I mean - the afterpart of the ship? - Yes.

20116. Did you turn to the right in order to go to your cabin? - I do not follow you exactly.

20117. Well, as I understand you there is a wide corridor, and then from that there is a smaller corridor which runs at right angles to the side of the ship? - The small corridor was where I was, my room, my cabin, and the chef too; my cabin was on the left and the cabin of the chef was on the right.

20118. That is quite right; on the larger plan it is much easier to see, my Lord. (*The Attorney-*

## **Page 509**

*General pointed out the position on the larger plan.*) Very well, now we understand. When you say you came out in consequence of the alarm and got into the corridor, do you mean the wide corridor? - The big corridor, yes.

20119. When you got into the big corridor which way did you go? - The first time I tried to go in front of the ship just to see what had happened, but there was a rush of people sent me back to my cabin. I went on the first class passenger deck and I saw there Captain Smith.

20120. I do not want to go through that. When you came back did you go along the stern of the ship at all? - I have been once on the first class passenger deck.

20121. Did you have a difficulty? - No, because we had a staircase which was going on the first class passenger deck, a private staircase only for the staff.

20122. Then you did get there? - Yes.

20123. Did you see women and children being put into the boat? - Yes, but not many, because that was only the first one.

20124. Only the first boat? - Yes, the first boat.

*The Commissioner:* The first boat does not mean No. 1?

*The Attorney-General:* No, he means the first boat launched.

*The Witness:* Yes.

20125. What became of all the other persons who were employed in the restaurant; did they remain on the deck or did they go up with you? - Well, I go down again, and I said to the chef, "There is some danger happening; we must get up." He lost his temper - he lost himself.

20126. He lost his presence of mind? - Yes.

20127. Do you mean that he was agitated at what you told him? - Yes.

20128. And lost his head - is that what you mean? - Yes. I said to the other cooks to wait for us. After that we had been by the third class deck just at the back, and we have been trying to go on the second class passenger deck. Two or three stewards were there, and would not let us go. I was dressed and the chef was too. He was not in his working dress; he was just like me. I asked the stewards to pass. I said I was the secretary to the chef, and the stewards said, "Pass along, get away." So the other cooks were obliged to stay on the deck there; they could not go up. That is where they die.

20129. The other cooks were not allowed to pass? - They could not go on *this* deck (*Pointing on the model.*)

20130. Why? - Because some stewards were there, and would not let them pass. 20131. (*The Commissioner.*) Who were there? - Some of the stewards, some members of the crew.

20132. (*The Attorney-General.*) You say they would not let them pass. You were allowed to pass? - They let me pass, me and the chef, because I was dressed like a passenger. I think that was why they let me pass.

20133. You think? - I think, I cannot say.

20134. When you got on deck were they still putting the women and children in the boats? - Oh, yes.

20135. Was this right, that they were preventing the men, the cooks and the other persons, engaged in the restaurant, from coming up on the deck where they were putting the women and children into the boats. Is that what you mean? - No. I mean exactly this, that it was not possible for the number of the crew of the

- restaurant to be saved, because on the third class passenger deck there was no lifeboat at all, and it was not possible for them to go on the second class passenger deck.
20136. There was no lifeboat on the third class deck. That is right? - No, that is what I say.
20137. You mean they could not get into a lifeboat unless they had got up on the boat deck? - That is right.
20138. And they were not allowed to get up on the boat deck? - No, Sir; they were not.
20139. (*The Commissioner.*) Why were they not allowed to get up on the boat deck? Why was it they were kept from getting to the boat deck? - Well, I cannot say; I do not know.
20140. (*The Attorney-General.*) How many of them were there? - I think all the members of the restaurant were there.
20141. How many would that be? - Perhaps 60.
20142. You mean "soixante"? - Ah! You understand French. Yes, 20 cooks and 40 waiters.
20143. They were all men, I suppose? - Yes.
- Very well, then we understand. When you came on the deck they were loading the boats, were they?
- 20144-5. (*The Commissioner.*) Who was keeping them back? - Who was keeping the men from the restaurant from going on the second class deck?
20146. Yes? - Some stewards.
20147. How many stewards? - Well, there were two or three on each side.
20148. Am I to understand two or three stewards were keeping back 60 men? - I cannot say after that how they managed to try to pass. Anyway they could not pass because I stood on the second class passenger deck for half an hour.
20149. And you did not see them? - I did not see them.
20150. (*The Attorney-General.*) You stayed on there for half an hour and then eventually you got up on to the boat deck, did you not? - Yes, after.
20151. Then after you got up to the boat deck they were still putting the women and children into the boats? - Yes.
20152. Did you see any boats lowered whilst you were on the boat deck? - I do not follow you exactly.
20153. (*The Commissioner.*) Did you see any boats put into the water? - Yes, I saw some; just the last one.
20154. (*The Attorney-General.*) On which side do you mean? - On this side.
20155. The starboard side? - Yes.
20156. Do you mean the last one of the last four? - It was the second or third, I cannot say which of the two.
20157. Do you mean you saw the second or third of the last four boats on the starboard side let down into the water? - Yes.
20158. And filled with women and children, were they? - No, because some of the women stayed with their husbands and would not like to go.

20159. You got into one of the boats, did you not? - Oh, no; the second or third lifeboat was between two decks and I jumped directly from the top deck to this lifeboat. About six or ten persons were jumping in it.
20160. Now let me understand that. Are you speaking now of the second or third lifeboat of those last four on the right side? - Yes.
20161. It had been lowered, or was being lowered to the water? - Yes, it was going to the water, but it was between two decks when I jumped.
20162. But it was stopped between the two decks? - Yes, was stopped between the two decks.
20163. And then you jumped into it? - Yes.
20164. About 10 feet? - I cannot say; I do not know.
20165. (*The Commissioner.*) How big a jump did you take? Just show us along this curtain? - About half *this*, perhaps (*pointing*).
20166. Down to where you are standing? - Yes, to the lifeboat.
20167. (*The Attorney-General.*) He said about 10 feet. (*To the Witness.*) You got into the boat, and eventually were saved? - Yes, but before that I did ask the chef to jump many times, but the chef was too fat I must say - too big, you know. He could not jump. 20168. He was too stout, and, at any rate, he would not jump? - No.
20169. You jumped. I suppose you saw it was very serious? - Yes, and when I was in the lifeboat I shouted to him again in French. "Sautez."
20170. To jump down to you? - Yes; he said something, but I could not hear because at the same moment a man said to me, "Shut up," or something like that. At the same moment another man from the "Titanic" (because at the moment the

## Page 510

- lifeboat was going down past the other deck; it was just like *that*), a man from the "Titanic" tried to get me off to take my seat.
20171. He tried to take you off? - Yes.
20172. You were in the boat? - Yes, he tried to take me off the lifeboat.
20173. Where could he take you off; the boat was being lowered? - That is what I said, the boat was lower. I will show you. The boat was just like *there*. (*Pointing on the model.*)
20174. Do you mean he leant forward. I do not understand how he could try, if your boat was being lowered. What do you mean by saying he tried to get you off the boat? - He did try.
20175. (*The Commissioner.*) Where did he take hold of you? - Well, just when the lifeboat arrived at the deck.
20176. Do you mean took hold of your arm? - No, like *that*, just on the back. 20177. Of the back of you, by your coat? - Yes.
20178. You were on the boat, and he was on the "Titanic"? - He was on the "Titanic."
20179. (*The Attorney-General.*) And your boat was then going down, was it? - Yes.
20180. And as you passed he caught you by the coat. Is that it? - Yes, that is what I mean exactly.

**Examined by Mr. SCANLAN.**

20181. Had you a lifebelt on? - Yes.

20182. And all your people had got lifebelts - those 60? - Yes.

20183. Was this objection to people going up on to the deck only to your class of people - stewards from the Chef's Department?

*The Commissioner:* No, the objection was by stewards, and it was made against waiters in the restaurant.

20184. (*Mr. Scanlan.*) I only want to get from him, my Lord, that this did not apply to passengers or anybody else. (*To the Witness.*) This did not apply to passengers, did it; there were no passengers prevented from going up? - No, there were not.

**Examined by Sir ROBERT FINLAY.**

20185. You were allowed to pass because you were taken for a passenger? - Yes, but I said to the members of the crew that I was secretary to the chef. I said, "There is the chef, and I am his secretary." That is what I said to the steward, and he let me pass. *The Commissioner:* I regret to say so, but, it is unintelligible to me. What was it he said?

20186. (*The Attorney-General.*) He said he was secretary to the chef, and upon that they let him pass? - I was secretary to the chef, and I said to the steward, "I am secretary, and there is the chef. Can you let me pass?" and he said, "All right, get away," and he let me pass.

20187. (*Sir Robert Finlay.*) I thought you said you were dressed so that you might be supposed to be a passenger? - I think so; I was dressed like a passenger, just like this. *The Attorney-General:* The steward might have thought that the secretary to the chef was a passenger.

*The Commissioner:* It was his dress, and that he was secretary to the chef; the two together got him through.

**(*The Witness withdrew.*)**

*Sir Robert Finlay:* My Lord, Mr. Sanderson would like to make a correction with regard to one thing he said yesterday, if your Lordship will let him.

*The Commissioner:* You need not go into the box, Mr. Sanderson, if you tell us what it was.

*Mr. Sanderson:* Thank you, my Lord. In the report of my evidence in regard to the boating of the "Olympic" there is a possibility that I would be misunderstood in the record as it now is. I would like to say that after the accident to the "Titanic" we started out with the intention of boating the "Olympic" to the full extent of her capacity for passengers, that is to say, for about 3,500 people, 60 odd boats; and we found we were getting into such a ridiculous position, we were crowding the ship so with boats, that we modified those instructions and directed them to only boat the ship for the actual number

of passengers and crew she was carrying at the time, and that is now the policy we are carrying out, which is a considerable reduction from the original intention. *The Commissioner*: Very well.

**EDWARD WILDING, Recalled.**

**Further examined by Mr. ROWLATT.**

*Mr. Rowlatt*: We were on page 11, my Lord; we were dealing with the double bottom.  
*The Commissioner*: Yes.

20188. (*Mr. Rowlatt - To the Witness.*) Now, Mr. Wilding, I asked you yesterday about carrying up the double bottom a little higher. We have got here particulars of the way in which the "Mauretania" and "Lusitania" are built in that respect. Do you know, as a matter of fact, how they are built? - In general terms; they are interesting ships, and one follows their general construction.

*Mr. Rowlatt*: Would your Lordship mind looking at this plan. It will simplify matters enormously.

(*Plan of the "Mauretania" and "Lusitania" was handed to the Commissioner.*) 20189. (*Mr. Rowlatt - To the Witness.*) Perhaps you might come down here, as the plans are rather few. Will you look, first of all, on the transverse section on the right of the plan here. You see the double bottom there is carried up 8 feet from the level of the bottom of the keel? - Yes.

20190. I see there is "8 feet" marked up against it in the margin. Now how does that compare with yours? - It is carried one foot higher than is shown on the amidships section.

*The Commissioner*: What is the section I am looking at?

*Mr. Rowlatt*: It is the transverse section of the "Mauretania" and "Lusitania." *The Commissioner*: Two Cunarders.

20191. (*Mr. Rowlatt.*) Yes, amidships. (*To the Witness.*) Is this amidships? - About.

20192. It corresponds roughly to that which we have on the wall? - In general terms, yes.

*The Commissioner*: Now, am I to understand that this double bottom of the ship in the "Titanic" is carried up from the external portion of the bilge 16 feet?

*Mr. Rowlatt*: No, my Lord, 7 feet.

20193. (*The Commissioner.*) Then I misunderstood you. (*To the Witness.*) In the "Titanic" it is one foot short? - Yes, one foot less.

*Mr. Rowlatt*: Your Lordship has the amidships section, I think, which will show you on the "Titanic." I have not a copy, but Mr. Wilding gave you one.

*The Commissioner*: But it is quite enough. Mr. Wilding tells me they carry up the double bottom about 7 feet above the turn of the bilge.

**Page 511**

*Mr. Rowlatt*: No, from the bottom of the keel, my Lord.

*The Commissioner*: Yes, from the bottom of the keel.

*Mr. Rowlatt:* Yes.

*The Commissioner:* From what one may call the external bottom of the ship.

20194. (*Mr. Rowlatt.*) Yes, the very lowest part of the outside of the ship. (*To the Witness.*) The result of it being a foot higher is that it comes more round the bilge of the ship? - The bilge of the "Lusitania" is rather rounder, that is it has a bigger sweep than the bilge of the "Olympic" or "Titanic," consequently 8 ft. in the "Lusitania" carries it up to about the top of the large curved part of the bilge in the same way that our 7 feet does. 20195. (*The Commissioner.*) Structurally you would say that their double bottom extends as high as the "Mauretania's"? - Not in feet and inches, but relatively to the turn of the bilge.

20196. Not in feet and inches, but as a matter of construction, you say they are the same, I understand? - To the same point up to the turn of the bilge - to the top of the turn of the bilge - it takes a foot more for the "Lusitania" to get there.

20197. It takes a foot more in the "Lusitania" to get to the point which you reach with your double bottom in the "Titanic"? - That is right, as I understand it, my Lord. Of course I am not an expert on the "Lusitania."

*Mr. Rowlatt:* No, I do not ask you to criticise the "Lusitania" for a moment; I am only just getting these facts.

20198-9. (*The Commissioner - To the Witness.*) Let me ask you, do you mean to say that the space from what may be called the flat of the side to the skin of the ship is the same in both vessels? - Owing to a rather larger sweep round the bilge in the "Lusitania" and "Mauretania" to reach the flat of the side you have to go rather higher up the ship's side. But the space between the flat of the side and the skin of the ship in the "Titanic" and in the "Mauretania" would be the same.

*Mr. Rowlatt:* Do you mean between the two skins?

20200. (*The Commissioner.*) Where the double bottom joins the skin of the ship in the one vessel and in the other is the space from that point to the flat of the side, the same in both ships? - Roughly; that is, they are both round the turn.

20201. I do not know what "roughly" means? - I have not the details.

20202. But when you say "roughly," do you mean within a few inches? - As far as I know, my Lord.

20203. (*Mr. Rowlatt.*) Of course you do not know in detail anything about the "Mauretania" or "Lusitania"? - Not in exact detail.

20204. You are just looking at this plan I put before you? - Yes.

20205. (*Mr. Rowlatt.*) Now, would your Lordship continue to look at that plan for a moment? (*To the Witness.*) The circumstance that the shape of the bilge is different in these two ships gives a different appearance of shape to the shaded part, representing the double bottom. In yours it comes straight across, and ends in a sharp point? - Yes.

*The Commissioner:* Where shall I see the transverse section of the "Titanic"? *Mr.*

*Rowlatt:* This is very good, my Lord, very good and very big (*Pointing to the plan on the wall.*)

*The Commissioner:* You mean up there on the wall?

*Mr. Rowlatt:* Yes. What I was asking Mr. Wilding was this; the top line of the double bottom runs pretty well straight across till it meets the side of the ship.

*The Commissioner:* Yes, I see that.

*Mr. Rowlatt:* As the other ship is a little sharper, so to speak, and has not got such a rectangular bilge, to get to the turn of the bilge you have to run up the side a little, and therefore there is a corner and a different shape. So that it appears to be more different than it is.

*The Commissioner:* That is to say, the sweep at the bottom of the transverse section in the "Mauretania" is much greater than the sweep there.

*Mr. Rowlatt:* Yes, my Lord, it comes sharper. At that corner, as I understand it, it is cut off.

*The Commissioner:* That is what I mean by saying the sweep is longer. The sweep, or curve, in the "Mauretania" is longer, so that it is a longer line to reach the perpendicular line of the outside skin of the ship.

20206. (*Mr. Rowlatt.*) Is that right, Mr. Wilding? - Yes, that is right.

20207. Now also in this ship, in the "Mauretania," the bilge keel is fitted where the bottom is still double, if I make myself clear? - Yes, and so it is in the "Titanic."

20208. I could not see it in the "Titanic." Is there a bilge keel on the "Titanic"? - Yes. *The Commissioner:* The bilge keels are marked in both.

*Mr. Rowlatt:* Yes. I had not that one in my hand, my Lord.

*The Commissioner:* Does anything turn upon the bilge keel?

*Mr. Rowlatt:* No, my Lord, because they are the same.

*The Commissioner:* They are both inside?

*Mr. Rowlatt:* Yes, my Lord.

*The Commissioner:* They both project through what you may call the double bottom?

20209. (*Mr. Rowlatt.*) Yes, my Lord. (*To the Witness.*) Now, if you look at the plan of the ship - the plan as opposed to the section - at the bottom here of this same piece of paper, you see there are longitudinal watertight compartments all along the side of the ship? - Yes.

*The Commissioner:* I see that.

20210. (*Mr. Rowlatt.*) And is the same shown in section in this transverse section at *this* end here, where "W.T. Compartment" is written? - Yes.

20211. That hard line? - Just outside the boiler. It shows the section of the same watertight bulkhead.

*The Commissioner:* So that every coal bunker on the "Mauretania" is a watertight compartment?

20212-3. (*Mr. Rowlatt.*) That is so, and laterally in the roof too, as I understand it? - Yes, that is shown so, at any rate.

20214. As I gather the wings outside the engine room casing are also longitudinal watertight compartments. They are shown so? - You say "outside the engine room casing." It is really bulkheads separating different engine rooms.

20215. (*The Commissioner.*) I do not hear you? - It is really the bulkheads separating different engine rooms, not as Mr. Rowlatt worded it.

20216. (*Mr. Rowlatt.*) If your Lordship will look at the plan, your Lordship will see my question was inaccurate, because there is a big parallelogram marked "engine room" amidships, and I treated that as the only engine room. The wings outside it are also marked "engine room," and, therefore, my question was inaccurate in form. (*To the Witness.*) But what I want to know is; as shown here are the engine rooms and other spaces outside the big engine room space also longitudinal watertight compartments? - They appear to be so.

*The Commissioner:* Just as the coal bunkers are?

20217. (*Mr. Rowlatt.*) Yes. (*To the Witness.*) And further aft again, in the place where "auxiliary machinery" is marked, there appears to be again a longitudinal watertight division? - By the plan, yes.

20218. I only want to ask you generally. I do not ask you to criticise this in any way. Can you say, as a naval architect, whether you think construction of that kind generally might be resorted to so as to protect against accidents such as this? - It is a very much disputed point. There is much to be said on both sides, both for and against. One of the greatest of objections is that as each coal bunker is a watertight compartment it involves that the coal shall be worked through watertight doors, and it is very difficult under such conditions to ensure that the watertight doors shall work when they are wanted to. There are other objections, but that is a very serious one.

20219. (*The Commissioner.*) I am advised that that may be a serious difficulty? - It is.

## **Page 512**

20220. The coal has to be got out of these watertight compartments through doors? - Through doors.

20221. And if the ship is steaming 20 knots an hour, or whatever it may be, these doors are open and in continuous use? - Continually.

20222. It may be a serious matter to consider whether in those circumstances it would be practicable to automatically close them? - To do so with certainty.

*The Commissioner:* Now is there any other objection to it?

*The Attorney-General:* On that last matter which your Lordship dealt with we have some further evidence which your Lordship will have which deals with that precise point.

20223-4. (*The Commissioner.*) What strikes me about the "Mauretania" is that practically from stem to stern on the port side and starboard side she is encased in watertight compartments. That is so, is it not? - That is so; it is one of the features of the design.

20225. It is a thing which, at all events, to my mind appears to be an advantage? - On the face of it it is.

20226. I want you to tell me what the disadvantages are? - I have named one to your Lordship.

20227. You have named one, yes? - Another serious disadvantage is that, suppose some of these coal bunkers or side compartments are flooded and the doors are shut, the water is shut in to one side of the ship. That promptly produces a considerable list of the ship,

and makes the lowering of the boats on the other side impracticable. It therefore practically destroys the value of half your boats.

20228. In answer to that, I want to remind you that the "Titanic" had a very great list to port? - So far as I have followed from the evidence, I gather the list has been quite small as long as there were any boats.

*The Commissioner:* I thought it was a serious list?

*The Attorney-General:* Only at the end, I think, my Lord. That is my view of the evidence. A slight list to starboard first and then a slight list to port.

*The Commissioner:* Perhaps it is in the evidence and I have overlooked it; but I have not yet understood what the cause of this list to port was.

*The Attorney-General:* I agree it is very difficult to understand. Mr. Wilding has a view about it, and he might answer it at once.

20229. (*The Commissioner.*) Wait a moment. It is suggested to me that perhaps the list in the "Titanic" was very much smaller than the list which would be caused by one of the "Mauretania's" side bunkers being flooded. Is that so? - Probably, my Lord.

20230. (*Mr. Rowlatt.*) Can you, to any extent, counteract the flooding, we will say, of one of the bunkers on the side of a ship like the "Mauretania" by letting in water to the double bottom on the other side of the ship, for a greater length of the ship, at the extreme wing of the double bottom? That has been suggested, you know. - I quite understand the point, but the available arrangements, the pipe arrangements for flooding any bottom space, act comparatively slowly, and it would therefore take in the first place a long time to correct the list.

20231. But suppose, instead of flooding these spaces on the bottom of the ship, you were to flood a corresponding coal bunker on the other side? - It would be very difficult to keep flooding arrangements in a bunker in good working order. It might be done, but it would not be easy. The same objection applies as to working the watertight doors.

Coal dust chokes up the working of them; it is a practical difficulty, my Lord. 20232.

(*The Commissioner.*) Oh yes; practical difficulties are serious. Have you ever considered the practicability, when one bunker fills with water, of an automatic arrangement by which a space at the other side of the ship could be filled at the same time? - I have seen proposals for that, my Lord, but the same difficulty arises, that it is very difficult to keep any apparatus in a coal bunker, or through which coal is being continuously worked, in really good working order. We have had some experience of watertight doors and other apparatus in bunkers, and it has not been satisfactory. We have done everything we can of recent years to discourage any such arrangement.

20233. Had you no watertight doors in bunkers in this ship? - No.

20234. None? - None.

20234a. (*Mr. Rowlatt.*) In all cases I think the watertight doors which run through the bunkers, so to speak, were in a tunnel? - Specially brought out into the stokehold so that they could be looked after.

20234b. (*Mr. Rowlatt.*) Your Lordship will see it by looking at the plan. (*To the Witness.*) Now you have given us two broad heads of objection to these longitudinal watertight coal bunkers. One is the difficulty of working doors in them, and the other is the effect they would produce if flooded on the heel of the ship? - Yes.

20235. Is there any other objection? Will you say all you have to say on the subject to the Court. Is there any other objection which occurs to you? I do not know whether there is or not, but if you have will you tell us? - I would like to think the matter over. 20236. (*The Commissioner.*) The two real objections to the plan adopted in the Cunard boats from your point of view are these: That the filling of one bunker on one side of the ship will cause a list to that side of the ship, and make the use of the boats on the other side of the ship impracticable. That is one? - That is a serious one.

20237. And the other, as I understand, is the difficulty in manipulating or working the watertight doors from the bunkers, which must of necessity be open while the ship is steaming. Those are the two objections? - Those are the two very important ones. There are some other minor ones.

*The Commissioner:* Upon this part of the case, Mr. Attorney, you know what I propose to do, and it is in accordance with what I said to you the other day. We propose to hear evidence of this kind, and if it occurs to us that the matter is of sufficient importance to engage the attention of the Committee which has been appointed, what we intend to do is not to express any definite opinion upon it, but to say that, in our opinion, the matter is one which requires full and proper consideration.

*The Attorney-General:* If your Lordship pleases. It was in view of what your Lordship has said that we got the evidence from the Cunard Company to lay before you; and also I hope to put before you some evidence from the Admiralty with regard to it, and there I intend to leave this part of it, as otherwise we should never finish.

20238. (*Mr. Rowlatt - to the Witness.*) Now, Mr. Wilding, just before we forget it - I want to get it clear on the Note - I think you did not see this before I showed it to you this morning? - I had not seen that plan.

20239. Nor was it put before you with a view that you should criticise the "Mauretania." It was only to enable us to know what we were talking about when we were alluding to watertight coal bunkers and the different arrangement at the bottom? - Yes.

*The Commissioner:* I do not think that what we are doing amounts to any adverse criticism of the Cunard boat at all.

20240. (*Mr. Rowlatt.*) No, my Lord, it is only so much more easy to deal with a concrete thing than an abstract idea. Now, will you think over that problem generally? - Yes.

20241. And if anything further occurs to you, you will be able to give it to the Court later? - Certainly.

20242. Now, in connection with this, and before we forget it, can you offer us any theory which would explain the "Titanic" having first taken a list to starboard and then a list to port before she foundered? - I can, of course, only offer a theory for it; it does not amount to proof. But as to the slight list at first to starboard, your Lordship will remember that it is in evidence that the Post Office and baggage room was flooded in No. 3 hold at an early stage. To a certain extent

there are partition bulkheads in the vessel on G deck - partition bulkheads on the port side of G deck - which would restrain for a brief time the water from entering the space which is filled by third class cabins.

20243. (*The Commissioner.*) That is to say, the water for a time would be confined to the starboard side of the ship? - Not absolutely strictly confined, but it would be more difficult for the water to rise on the port side than on the starboard side, and there would be an excess of water on the starboard side.

20244. It would be restricted in its flow? - It would be restricted in its flow.

20245. From the starboard to the port side of the ship? - Yes.

20246. Causing a slight list to starboard? - That would account for a slight list to starboard. Then, later on, the water got above E deck; we have heard of it in the working alleyway. When the water got above E deck, the broad passage we know as Scotland Road, the third class alleyway leading aft on the port side offers a much easier road for the water, and there is a much larger flow into it on that port side, because the only way the water could get into the first class alleyway on the starboard side is up the stair which comes from the Post Office; whereas there are several stairways and hatches at the former end of the deck, all of which could pour water, or enable water coming up through them to get along the working passage on the port side.

20247. The broad working passage on the port side which is called Scotland Road? - Yes, the 9 feet passage.

20248. There is a much broader passage on the port side than there is on the starboard side? - Quite right, my Lord, and also this water is restricted by the non-watertight steel door at the forward end of the first class passage on the starboard side from going into the starboard passage.

*Mr. Rowlatt:* Your Lordship sees that door.

*The Witness:* Yes, it is not watertight.

20249. (*The Commissioner.*) It is not watertight, but it is a door? - Yes, and a fairly substantial door.

20250. That may explain it. Of course, if the ship had remained afloat, all these differences in lists would have tended to right themselves? - Eventually, my Lord, yes. Your Lordship will notice that all the stewards' rooms open off the working passage and would offer considerable means for water to get over to the port side from the working passage, and the doors were opened because all the stewards had come out of them. Then when the ship was in this condition she was beginning to get a serious reduction in her stability, and any weight on the port side would give her a list to that side, and then the

list becomes cumulative, and piles up. She would not right herself, as she is continually going by the head. If, as your Lordship says, she had remained afloat she would eventually have come back.

20251. If she could have remained afloat she would have righted herself in time? - Probably, my Lord, as far as I can judge.

20252. (*Mr. Rowlatt.*) On the same page of this document, page 11, you deal with the construction of the double bottom. You say, "Forward and aft of the machinery space the construction was of the usual type. Where it extended from bilge to

- bilge it was so divided that there were four separate tanks athwartships.” Does that mean that the space between - ? - Between bilge and bilge was divided by longitudinal partitions making four tanks.
20253. “Before and abaft the machinery space it was divided by a watertight division at the centre line except in the foremost and aftermost tanks”? - Quite right.
20254. Is that something different from the four separate tanks athwartships? - Yes; before and abaft the machinery space the tank is only carried to the lower part of the turn of the bilge, as is usual in most ships. The tank, owing to the ship coming in towards the end is much narrower, and it is only divided by one division on the centre line to make two tanks, and at the extreme end next the centre division there is only one tank.
20255. That is outside the machinery space? - That is outside the machinery space.
20256. Inside the machinery space it is divided into four? - Four tanks athwartships.
20257. That part of the ship is extra strengthened by being hydraulically riveted? - Yes, it was adopted as the strongest means known to us of securing it.
20258. We have heard something in the evidence about an apparent fracture of the whole ship as she foundered, which is rather why I was going a little minutely into this part of it. Do you believe that happened? - Not in the least. I have tried to make an approximate calculation, and I feel quite sure it did not happen.
20259. That is why I was asking you - of course I will not ask it more than is thought material - as to the strength of its construction. As I understand, the whole of the ship is, as you explained to us yesterday, a girder? - Yes.
20260. Is this double bottom a girder too? - Yes, but a much shallower one than the whole ship.
20261. And to a certain extent is every deck? - It is a member of the girder. *The Commissioner:* The evidence about this breaking of the ship in two immediately before she founders and the righting of the afterend is unsatisfactory. *Mr. Rowlatt:* Very well, my Lord, then I will not examine in detail upon it. *The Witness:* It might perhaps interest my Lord to know the rough calculation I was able to make as to the probable stress arising when the ship foundered as she got her stern out of the water. I can only do it very roughly, of course. It showed the stress in the ship was probably not greater than she would encounter in a severe Atlantic storm. The ship was made to go through an Atlantic storm, and therefore would be capable of meeting that stress.
20262. Very well. Now I will not ask you about the next part of your proof, which is as to strength generally. I see you say at the bottom of page 11 that “at the forward end the framing and plating was specially strengthened with a view to prevent “panting.” What is “panting”? - When a ship is plunging into a big head sea there is a slight tendency on the part of the sides to go like a concertina, and that is known technically as panting.
20263. As I gather, that is not desirable? - It is not desirable, and therefore you try to stop it.
- The Commissioner:* Where is that word to be found?
- The Attorney-General:* It is the second paragraph on “structure.”

20264. (*Mr. Rowlatt - to the Witness.*) And you say “and damage by meeting thin harbour ice”? - In New York, to which these ships run, it is no uncommon occurrence in winter to have to force your way out through ice 3 or 4 inches thick.
20265. It achieves a double object? - Yes.
20266. Perhaps I ought to put this general question to you. The contact with this iceberg was the contact of a body weighing 50,000 tons moving at the rate of 22 knots an hour? - Yes.
20267. I gather to resist such a contact as that you could not build any plates strong enough, as plates? - It depends, of course, on the severity of the contact. This contact seems to have been a particularly light one.
20268. Light? - Yes, light, because we have heard the evidence that lots of people scarcely felt it.
20269. You mean it did not strike a fair blow? - If she struck it a fair blow I think we should have heard a great deal more about the severity of it, and probably the ship would have come into harbour if she had struck it a fair blow, instead of going to the bottom.
20270. You think that? - I am quite sure of it.
20271. (*The Commissioner.*) I am rather interested about that. Do you mean to say that if this ship had driven on to the iceberg stem on she would have been saved? - I am quite sure she would, my Lord. I am afraid she would have killed

## Page 514

every firemen down in the firemen’s quarters, but I feel sure the ship would have come in.

20272. And the passengers would not have been lost? - The passengers would have come in.
20273. Then do you think it was an error of judgment - I do not by any means say it was a negligent act at all - to starboard the helm? - It is very difficult to pass judgment on what would go through an officer’s mind, my Lord.
20274. An error of judgment and negligence are two different things altogether. A man may make a mistake and be very far from being negligent? - Yes.
20275. Do you think that if the helm had not been starboarded there would have been a chance of the ship being saved? - I believe the ship would have been saved, and I am strengthened in that belief by the case which your Lordship will remember where one large North Atlantic steamer, some 34 years ago, did go stem on into an iceberg and did come into port, and she was going fast? - I am old enough to remember that case, but I am afraid my memory is not good enough.

*Mr. Laing:* The “Arizona” - I remember it. *The*

*Witness:* The “Arizona,” my Lord.

20276. (*Mr. Rowlatt.*) You said it would have killed all the firemen? - I am afraid she would have crumpled up in stopping herself. The momentum of the ship would have crushed in the bows for 80 or perhaps 100 feet.

20277. You mean the firemen in their quarters? - Yes, down below. We know two watches were down there.
20278. Do you mean at the boilers? - Oh, no, they would scarcely have felt the shock.  
*The Commissioner:* Any person, fireman or anybody else, who happened to be in that 100 feet, would probably never have been seen again?
20279. (*Mr. Rowlatt.*) The third class passengers are there too, I think, some of them? - I do not think there are any third class passengers forward of the second bulkhead, and I believe she would have stopped before the second bulkhead was damaged. It is entirely crew there, and almost entirely firemen - firemen, trimmers, and greasers.
20280. Your opinion is that the ship would have suffered that crushing in in the first two compartments, but that the shock would not have shattered or loosened the rivets in any other part of the ship? - Not sufficiently. As it would take a considerable length, 80 or 100 feet to bring up, it is not a shock, it is a pressure that lasts three or four seconds, five seconds perhaps, and whilst it is a big pressure it is not in the nature of a sharp blow. 20281. (*The Commissioner.*) It would, I suppose, have shot everybody in the ship out of their berths? - I very much doubt it, my Lord.
20282. At 22 1/2 knots an hour, and being pulled up quite suddenly? - Not quite suddenly, my Lord. 100 feet will pull up a motor car going 22 miles an hour without shooting you out of the front.
20283. (*Mr. Rowlatt.*) What you mean is that the ship would have telescoped herself? - Yes, up against the iceberg.
20284. And stopped when she telescoped enough? - Yes, that is what happened in the "Arizona."
20285. Now, the watertight subdivisions - you have a heading in your report as to that? - Yes.
20286. You say it was arranged that the bulkheads and divisions should be so located that the ship should remain afloat in the event of any two adjoining compartments being flooded." Was that achieved in this ship - that she could float with any two watertight compartments flooded? Have you any little picture of that? Do not go into it in detail. - I have a plan showing the original calculations which were made.
20287. We do not want any calculations, because we should not understand them? - Well, I can show the results of them - the effect on the ship of flooding each pair of compartments, my Lord. (*A plan was handed to the Commissioner.*) It is the original calculation which was made and a copy of the original plan. It was to show the effect on the trim of the ship of flooding each pair of watertight compartments.
20288. (*The Commissioner.*) Is this a plan for this Enquiry, or made in the course of the construction of the ship? - The plan was made in the course of the construction of the ship to satisfy ourselves that she would comply with this condition, which was put to use as one of the conditions.  
*The Commissioner:* I should like Professor Biles to see this.  
*Mr. Rowlatt:* May we begin at the other end of the plan, my Lord? - Your Lordship sees this is a series of sections arranged so as to show every possible combination of adjoining compartments.

20289. (*The Commissioner.*) Were these plans submitted to the Board of Trade? - No.

20290. (*Mr. Rowlatt.*) I will ask one question. Have you drawn here a picture of each pair of adjoining compartments being flooded, beginning at the bow, exclusive of the collision bulkhead? - Exclusive of the forepeak, which has quite a small effect - only a few inches.

20291. Have you put upon this longitudinal section of the ship, where the waterline would be if those two compartments were flooded? - Yes, and in each case, as you will see, the line comes nearer and nearer to the deck line. It comes closer up, and then begins to get further down again.

20292. That, of course, depends upon intricate calculation? - More or less intricate calculation. Professor Biles is familiar with it.

20293. It is the fact, as I understand it, that any two adjoining compartments may be flooded and the top of the bulkhead will still be above the water? - Still be above water. It will be above the waterline by an amount which is about double the amount recommended by the Bulkhead Committee in 1891, and also be more above the waterline than in the case of an awning deck ship near 300 feet long, undamaged.

20294. How much? - The lowest case, I think, was 2 feet 7 inches.

20295. Two and a half to 3 feet was the worst? - Yes, and only one as bad as that. 20296. Now, suppose two compartments flooded which are not adjoining? - It is usually a great deal less severe on the ship, the compartments being substantially the same size as they are in this case.

(*The Commissioner.*) I am afraid I am interrupting your story, but can you tell what plans were submitted to the Board of Trade? - Offhand I cannot, my Lord.

But you will ascertain for us? - I can ascertain.

What assumption have you proceeded upon when making these calculations as to the cargo in the ship? - There are quite a list of deductions. In the first place, it is assumed that 5 percent of the volume of the space flooded will be occupied by the structure of the ship, such as decks, and cabin bulkheads and partitions. That is the first general deduction. It was assumed in making those calculations that the double bottomed tanks were flooded as well as the ship's hold. It was further assumed that in the cargo spaces about one-quarter of the volume of the space would be occupied by waterexcluding materials.

About one-fourth? - About one-fourth.

Can you tell me why you assume about one-fourth? It may be altogether wrong? - It was from a variety of considerations. We have never fully calculated it, but taking ordinary cargoes that are carried in ships of this type, it was the best estimate that we could make.

At all events, you thought it a fair estimate to make for the purpose of testing the arrangements which you were making? - Yes, my Lord. I may say I believe it is rather more. It is usually assumed cargo will exclude rather more than that, but taking the very light cargoes - light in character in relation to their bulk - which are carried by these express steamers, it seemed wiser to take one-fourth, to be on the safe side. 20303. Are those the assumptions that you proceeded upon? -

Those are the assumptions. If you go into the bunkers of course you must then assume something else for the coal. In the case of

**Page 515**

bunkers, it was assumed that about one-half of the space occupied by coal would be available for water coming in; that is that the bunker probably is not quite full. Of course water gets in between the lumps of coal.

The cubic quantity of water would be half the cubic contents of the bunker? - Quite, my Lord.

What waterline did you start at? - The intended load waterline of the ship, 34 feet 6 inches moulded draught. We eventually got a waterline not quite so deep as that by a couple of inches about.

(*Mr. Rowlatt.*) That assumed something in the cargo space, I suppose, to get that waterline? - Of course she had to be fairly full of cargo and of coal.

And then, when you came to calculate the effect of water coming in, you allowed for that again, one-fourth? - That is right. There are some spaces to which water could find entry which are neither cargo nor coal spaces, such as stores and mails and baggage room, and in those cases I believe one-sixth was allowed. I am quoting that from memory, I am not quite sure whether that applied to stores or whether stores were taken at one-fourth. I have not a note of that particular point.

Supposing you took this ship quite empty, so that every bit of the watertight compartments could be filled with nothing but water, would she then float if any two adjacent ones were full of water? - Yes, because, you see, when there is no coal and no water in the ship she is floating with the top of her bulkheads much higher out of the water, and you gain that increased height over the whole length of the ship, and you only lose on the exclusion of the water in the flooded space.

The sort of case that you did not contemplate was if the whole of the rest of the ship was loaded but only the two compartments which happened to be punctured or holed were empty; you did not assume that? - It is hardly a conceivable case; but even if they were, the ship would probably not be at her loaded draught, and so would have that buoyancy. We took what we judged to be the most severe case.

Now, have you also considered how this gradual sinking was caused and did progress in this ship, having regard to the wounds in the ship's side which have been disclosed by the evidence? - I have had some calculations made and plans prepared. 20311. Is the result pictorial? We cannot understand calculations. - No; I will put in the plans. I have copies of them. (*The same were handed in.*)

20312. Now before we explain these plans, Mr. Wilding, will you just tell us this - you have followed all the evidence that has been given? - Yes, I have followed it, but this first plan was made as the evidence was being followed and as it came out from day to day.

20313. Now will you just tell us the nature of the wound which you think this ship received? - I would rather, if I may, put the plans in, and then describe what the eventual nature of the wound was when I have described the plans. On the plan I have handed in to my Lord there are three elevations shown. In the first one, which was the evidence we had (marked A) in the earliest stages, No. 1 hold, No. 3 hold, and No. 6 boiler room,

marked with a red cross, was flooded. That was absolutely the first evidence we had. 20314. We have not had, I think, evidence of No. 2? - No, nor of the forepeak, which was mentioned quite late in the day. As your Lordship will see, the water did not then reach the top of the bulkheads.

20315. (*The Commissioner.*) The water had not reached the top of the bulkheads? - That is quite right. The result of that calculation was reported to me, and I then told them at Belfast by wire to flood No. 2 compartment, also the forepeak, and see what happened.

20316. What do you mean by flooded? - To treat it as flooded for the purposes of the calculation; it is marked B.

That would be Nos. 1, 2, 3, 4 and 5 spaces? - Yes, the forepeak, No. 1, No. 2, and No. 3 holds, and No. 6 boiler room. That is marked B, my Lord. You will notice in that that the waterline has now got above the top of the bulkhead.

(*Mr. Rowlatt.*) Are you speaking of B? - Yes.

The forepeak is flooded? - Yes, and 1, 2, and 3 holds and No. 6 boiler room. 20320. (*The Commissioner.*) As soon as that state of things arrives there is an end of the ship - as soon as you get to that state of things the epitaph of the ship is written? - And as a further assumption I have also had plan C made in which the forepeak was not flooded; 1, 2, and 3 holds and No. 6 boiler room.

As a matter of curiosity, for my information, how long after the water got above the watertight bulkheads would this ship float. Would she sink instantly? - Absolutely no, my Lord. Probably for an hour - perhaps a little more; it would depend upon the extent of the damage. Assuming the damage in this particular case, it would take, I should think, an hour to an hour and a quarter, as well as I could estimate.

(*The Attorney-General.*) Is that assuming the doors closed? - It assumes the after-door closed, and the door between A and F closed.

(*Mr. Rowlatt.*) So that the water would only progress aft over the top of the successive bulkheads? - Yes.

(*The Commissioner.*) Of course it would not do anything else. It would flow over the top and flow down; wherever it could find a space to flow down into the ship it would flow down? - Quite right.

(*Mr. Rowlatt.*) Then the ship would be further down by the head, and it would be able to flow over the next one? - I have a plan showing that.

*The Commissioner:* At all events, according to your view, it would take about an hour?

*The Attorney-General:* He has worked it out by a plan, my Lord. (*A plan was handed in.*)

*Mr. Rowlatt:* If your Lordship will allow the Witness just to say what this plan means, I think it will save trouble, and we shall get it upon the Notes.

*The Witness:* In this plan -

(*The Commissioner.*) What do you mean by "this" plan? - The plan I have just handed up to your Lordship. It is marked upon the back as the plan called "Flooding by compartments."

Row E? - Yes, that was simply for convenience in finding it.

(*Mr. Rowlatt.*) Will you say what this plan represents? - I took as the basis of this plan the same as for plans A, B, and C, the best estimate I could make of the waterline at

the time of the accident, that is, I knew what draught the "Titanic" sailed from Southampton at; I knew what the average change of draught on the voyage by the "Olympic" was for several voyages.

*(The Commissioner.)* Do you mean by the consumption of coal? - I mean by the use of coal and the use of fresh water and stores, my Lord; and also I knew that about two-thirds of the voyage had been completed. I therefore took two-thirds of the normal change in the "Olympic," of the average change, and applied it to the departure draught of the "Titanic," and used the line so reached as a basis to start from. That applies to all the calculations which I have made since the accident. This plan of "flooding by compartments," shows that waterline which I have been referring to which is marked as a black dotted line at the two ends.

*Mr. Rowlatt:* Outside the stem, my Lord; the lowest line outside the stem. *The Witness:* The first thing was to flood the forepeak tank, that was the foremost compartment of the ship, which is marked in yellow, and which gave the yellow waterline just above the black dot.

That shows the amount the ship was sunk by the head by filling the forepeak? - Quite right.

## Page 516

That is very little indeed? - Yes. Of course the water is restrained from rising in the forepeak by the watertight tank; it cannot go any higher than the top of the tank. I then flooded No. 1 hold, which is tinted green, and I got the green waterline. That is No. 1 hold plus the forepeak. I then, in addition to having the forepeak flooded and No. 1 hold flooded, flooded No. 2 hold, which is marked brown, and I got the brown waterline. Then, having flooded the forepeak and No. 1 and No. 2 holds, I also flooded No. 3 hold, which I then wanted to indicate by the red space which is represented by the red line. 20332. *(The Commissioner.)* Would *this* swamp (I daresay it is not the right expression) flood the tunnel? - Yes, between the green line and the brown line; the water comes over the top of the tunnel step, and would flood the tunnel.

That is the narrow tunnel on the starboard side? - No, the firemen's passage, my Lord, in the centre line in the bottom.

You say that the flooding of No. 2 hold would include the firemen's passage? - Yes. When No. 2 was flooded it would flood the firemen's passage, because, as your Lordship will see, the waterline has then got above the step in the bulkhead and can go down the stair. Of course, as you will see, the water is still at that time below the level of the top of the bulkheads which run to the E deck, the black continuous sheered line. I then flooded No. 6 boiler room, in addition to the others, of course, which is shown in the blue tint, and gave the blue waterline. Your Lordship will now see that the water had got up above the top of A bulkhead, and would get down into the rest of the forepeak. Your Lordship will notice that that flooding corresponds to B, shown on the first blueprint that I handed up. That condition corresponds to B on the first blueprint which I handed up. 20335.

And that is the end of the ship; that is the foundering of the ship? - It means the eventual foundering of the ship.

*Mr. Rowlatt:* Now the remaining colours, my Lord, show how she did founder. 20336. (*The Commissioner.*) In order to get it clear as we go along, does this seem to indicate or does this lead you to the conclusion that this ship was holed as far aft as No. 5 bunker? - No. 6 boiler room I have got to at present, to the blue line.

And is it not the fact that the watertight bulkhead between No. 6 boiler room and No. 5 boiler room was injured? - Yes, we have it in Barrett's evidence.

Yes, so that the holing of this ship extended from the peak to the fifth boiler room? - To No. 5 boiler section, my Lord.

I am reminded that Barrett's evidence pointed to a hole in the skin of the ship forward of the division between 5 and 6 boiler rooms, and also aft? - Yes, in the forward bunker of No. 5.

*Mr. Rowlatt:* If I may remind your Lordship, it was quite clear that there was a great hole in No. 6, and there was some water coming in, as I think he said, in the bunker in No. 5.

*The Commissioner:* Yes. It is suggested to me that, notwithstanding that state of things, the bulkhead between 5 and 6 may not have been injured at all.

*The Witness:* Well, my Lord, there is this wound. You could not rupture the shell, which is strongly connected to the bulkhead, without in some way damaging the bulkhead itself - I mean if you cut the skin, if you break the skin at the bulkhead, you must in some measure, though perhaps only in a small measure, damage the bulkhead itself. Now the next two conditions, my Lord, which I had to make to facilitate the possible calculations of assumption that the bulkheads were carried right up as high as was necessary - That seems to me to be the next point to consider? - Yes.

*Mr. Rowlatt:* I think you are at cross purposes, my Lord, with the Witness, if I may say so. The Witness is about to explain to you these other two colours. He is not upon the question of clearing up the matter with regard to the bulkheads. He is only explaining that he cannot keep the flooding even when the ship has got to this condition; he cannot keep the flooding to No. 5 and calculate No. 5 separately from No. 4, because before No. 5 is quite full No. 4 will be also partially full, and therefore this is to some extent artificial; this grey colouring which shows the black line is to some extent artificial, because he has treated it as if it was only No. 5 and not also in the hatched red part of No. 4. *The*

*Witness:* Yes, that is what I wanted to say. It was done to make the calculation a practicable one. I then flooded No. 5 boiler room in identically the same way as I had previously flooded No. 6, adding its flooding effect to the forward spaces, and I got the black line, which, as you will notice, puts the forecastle entirely under water, and also the forward end of forward deck, B deck, which is the top deck shown on these elevations. That means that the waterline is something like that (*Describing with a pointer on the model.*)

*Mr. Rowlatt:* He is showing your Lordship on the model approximately how it would be when No. 5 was also flooded.

*The Witness:* That is right; about where we got the long tube, my Lord.

Then if it went into No. 4 also, is that shown to be red hatched? - Yes. In order to understand effect of the red hatching and to see what it really means, it is best to tilt the plan and put it like this, so that the red line is approximately parallel to the

forecastle head, and it shows that the stern is out of the water as far about as the base of the mainmast, or a little further forward.

*(The Commissioner.)* I will put it quite shortly to you, Mr. Wilding - is it possible to conceive a construction of bulkheads in the forward part of this ship which would prevent the sinking of this vessel? - Not the eventual sinking, my Lord, the reason being that we had evidence that as far aft as No. 4 boiler room the water was found rising above the stokehold plates, and drove the firemen out of it, in Dillon's evidence. 20343. I had forgotten that. I thought the evidence pointed to water coming in as far aft as No. 5? - No, my Lord; you will find it in Dillon's evidence.

*Mr. Rowlatt:* I think No. 5 is the furthest place aft where we have any evidence of a wound in the side of the ship, but water from some source not quite explained was rising in No. 4 also.

20343a. *(The Commissioner.)* If the water was rising in No. 4 it must, if the watertight bulkhead between 4 and 5 was holding, have been through some external means? - Yes.

*Mr. Rowlatt:* Only we have not direct evidence of it.

*The Commissioner:* But if the evidence is to be believed that water was rising in No. 4, it follows that No. 4 was externally injured, does it not?

*Mr. Rowlatt:* Yes, my Lord.

20344. *(The Attorney-General.)* I do not know that. *(To the Witness.)* Does it follow? - It follows my Lord, because we know from the evidence that they were doing their best to pump out No. 4. If you remember, we have had evidence that they took pipes along. *The Commissioner:* Wait a moment. Could you, Mr. Laing, read to me the evidence with regards to the water coming into No. 4?

*Mr. Laing:* Yes, my Lord, I have got the references to it, and it begins at page 99.

*The Commissioner:* Well, just read it to me.

*Mr. Laing:* I will.

*The Attorney-General:* Before you read it let me just remind your Lordship that he is the man who went right aft when the doors were closed. I am giving you a description which will recall it. Then he comes forward to No. 4, and between No. 4 and 5 stops, and then my learned friend is going to read what happens after. *The Commissioner:* Who is this man?

*Mr. Laing:* Dillon, my Lord, a trimmer. "(Q.) Did you see any water before you went up in any of the boiler rooms or the engine room? - (A.) Yes, there was water coming in forward. (Q.) The furthest point forward you reached was No. 4 boiler

## **Page 517**

section? - (A.) Yes. (Q.) Was it coming in there? - (A.) Yes. (Q.) Where was it coming in? - (A.) Coming from underneath. (Q.) From underneath the floor? - (A.) Yes. (Q.) And from what part of the floor, the forward part or the afterpart? - (A.) The forward part. (Q.) Did it come in large quantities, or only in small quantities? - (A.) Small quantities. (Q.) Was there any depth of water standing on the floor? - (A.) No. (Q.) Do you mean the floor was just damp? - (A.) That is all. (Q.) And it seemed to be coming through the

floor? - (A.) Yes. (Q.) Did you see any coming through the side of the ship at all? - (A.) I never noticed.”

*The Commissioner:* That seems to me to be very unsatisfactory evidence.

*Mr. Laing:* My Lord, there is another Witness, Cavell, at page 107. My Lord, Cavell, who was a trimmer, says this.

*The Commissioner:* What was the other man?

*Mr. Laing:* He was a trimmer.

*The Commissioner:* Then this is the evidence of two trimmers?

*Mr. Laing:* Yes, my Lord. “(Q.) What happened then,” he is being asked, “(A.) The water started coming up over her stokehold plates. (Q.) In No. 4? - (A.) Yes. (Q.) Did that happen gradually, or did it happen suddenly? - (A.) It came gradually. (Q.) The water - you moved your hand - you raised it; did it seem to come up from below? - (A.) Yes. (Q.) As far as you saw in No. 4, did any water come in from the side of the ship? - (A.) Not so far as I saw. (Q.) When the water came up through the plates, what was done then? - (A.) We stopped as long as we could. (Q.) That is right? - (A.) And then I thought to myself it was time I went for the escape ladder. (Q.) They were still drawing the fires, these men were they? - (A.) Yes. (Q.) How high did the water get above the plates they were standing on? How much water were they standing in before they left? - (A.) About a foot.”

*The Commissioner:* Oh! Well, if that evidence merely relates to No. 4, as he says it does, it shows that water was coming in in considerable quantities.

*Mr. Laing:* Yes, my Lord, I think that is all the evidence that there is.

*The Commissioner:* Very well, that is sufficient.

*(Mr. Rowlatt.)* Now, may I ask Mr. Wilding a question or two about that? *(To the Witness.)* With regard to the evidence of the wound to the side of the ship, which you remember Barrett said was above the foot plate, apparently it terminated in No. 5? - It terminated in the bunker at the forward end of No. 5.

Have you got any theory as to the extent to which the outside of the ship was damaged in No. 4? - There is a space between the stokehold plate on which the men stand and the tanktop, and the inference that I drew from the evidence that was given by Dillon was that an attempt was being made to pump out this water which the engineers found coming in, and that that was the reason why they sent aft. They had only one pump in No. 4 boiler room, and the reason they sent aft for those additional pumps was to get additional pumping power on to No. 4 boiler room with a view to keeping it down. That would, in general terms, agree with the evidence given by Mr. Ismay as to his conversation with the Chief Engineer, that he hoped to keep it under by pumping. I admit the evidence is circumstantial.

What I wanted to ask you is this. A difficulty is felt as to how No. 4 could have been injured in the skin of the ship if the wound terminated, as from Barrett’s evidence apparently it did terminate, just above the watertight compartment forward of No. 5? - From a calculation which I will refer to in a moment, I cannot believe that the wound was absolutely continuous the whole way. I believe that it was in a series of steps, and that from what we heard Barrett say in his evidence it was the end of one of the series of wounds which flooded the different spaces; that before the ship finally cleared the iceberg as the helm was put over, she would be tending to swing her side into the iceberg, and that a very light contact was made in No. 4. It seemed very probable, quite apart from

actual direct evidence of the fact; that is, that after the ship had finished tearing herself at the forward end of No. 5, she would tend to push herself against the iceberg a little, or push herself up the iceberg, and there would be a certain tendency, as the stern came round to aft under the helm, to bang against the iceberg again further aft. 20348. Is the ship broadening at all as far aft as that (*pointing to the model*)? - Practically parallel.

*The Commissioner:* What do you mean by that?

*Mr. Rowlatt:* Getting wider, my Lord. It ceased, as I understand.

*(The Commissioner.)* Mr. Wilding, if this evidence of Cavell's is correct, do you draw the inference that in some way or other there was an injury to the skin of the ship as far aft as the No. 4 boiler section? - I believe that to be correct; the whole body of evidence tends that way, Barrett's in particular.

If the double skin had been carried up higher, would the water have come into No. 4? - Certainly not, my Lord; the injury was evidently a very slight one.

And, therefore, if in your design you had carried the double skin a little higher, that injury, at any rate, would not have been of any consequence? - Yes, and probably from the comparatively small extent of the injury at the forward end of No. 5 boiler room would also have been prevented in the bunker.

In the forward end of No. 5? - Yes, in the forward end of No. 5 probably. 20353. That is as near as possible to No. 4? - I do not think No. 4 would have been injured, not from the flooding, but with the ship being as she was, I believe that no bulkhead arrangement possible forward would have saved the ship, because of the red dotted line which I have drawn across as the result of the earlier calculations. 20354. From the way this ship was constructed her life could not possibly have been saved if No. 5 was flooded? - Even if No. 6 was flooded, your Lordship means. 20355. Yes, I beg your pardon. If No. 6 was flooded, the life of this ship, having regard to her construction, had gone? - Absolutely, my Lord, and, of course, No. 6, and all the compartments forward of it. Yes, of course, I mean that.

20356-7. (*Mr. Rowlatt.*) Now can you give me your view upon this point - if you do not think you can give any view upon it, do not, but I will ask you. You know what the evidence is as to the sort of wound the ship had? - Yes.

And you know how long she floated? - Yes.

And roughly, how she went down? - Yes.

Does it throw any light to your mind upon the question of whether the watertight doors in the bulkheads were or were not shut? - No. The same scale, if I may so use it, of the sinking is not sufficiently definite, because closing the watertight doors between E and F deck would only have made a delay of a few minutes, perhaps five or ten minutes. The evidence is not accurate enough upon that.

Now, there is one thing I want to ask you upon this plan in order to get it quite clear. On the top of the blue document, a sketch or section, you show her floating with the waterline below the top of the bulkheads, but you have flooded No. 1 hold, No. 3 hold, and No. 6 boiler section? - Quite right.

You mean that, do you? - Yes, that is quite correct; that is what the plan shows. 20363. Therefore, that is two adjoining watertight compartments flooded, one being a boiler section, and also another flooded? - Yes.

20364. You have three compartments flooded, two adjoining? - Yes, and it would be quite fair to say that the effect of flooding No. 1 hold would be much the same as the effect of flooding No. 2 hold, the smaller space being counteracted by the difference in leverage, and therefore the evidence of these two plans goes to show that the ship would have floated at the time of the accident if

**Page 518**

any three of these forward compartments had been flooded - any three instead of any two. 20365. Now that is having regard to the actual waterline with which she started? - The estimated waterline at the time of the accident.

The other calculations you made in the course of the building were, of course, upon an *a priori* assumption? - Yes, as to the moulded line there is one other flooding plan I would like to put in.

*(The Commissioner.)* You mean a deeper line? - A much deeper line.

And greater immersion in the water? - Yes, my Lord. This is a similar plan trying to illustrate, as far as I can, the accident as to what I understand happened; conditions D and E.

*(Mr. Rowlatt.)* What shall we call the document itself? - Flooding plans D and E.

*The Attorney-General:* If your Lordship would not mind putting on the blue ones A, B, C, and call them flooding plans A, B, C, that will identify them.

*The Witness:* The first ones put in.

*The Attorney-General:* Yes, those will be flooding plans A, B, and C.

*The Commissioner:* They are marked A, B, and C.

*The Attorney-General:* Then will your Lordship call them flooding plans A, B, and C, and the last ones that were handed up will be flooding plans D and E, and the other is flooding by compartments.

*The Commissioner:* That identifies them properly.

*The Attorney-General:* Yes, my Lord.

*(Mr. Rowlatt.)* Now, what does this plan show? - This plan shows the condition of things shortly after, as far as I can make out, or about the time that Dillon was driven out of No. 4 boiler room and shortly after Barrett was driven out of No. 5. You will see the forepeak, No. 1 hold, No. 2 hold, and No. 3 hold, and No. 6 boiler room are completely flooded; that there is a considerable amount of water in No. 5, that corresponding to the fact that there was a rush of water, according to Barrett's evidence, through the pass. He said before he went there, there was a considerable rush of water through the pass, meaning that some considerable amount of water was in there; and, according to Dillon's evidence, the water was just above the stokehold plates. That is the condition shown by the blue tinting and the black waterline. That water would then, from the wound in the forward cross bunker in No. 5, be still rising in No. 5 boiler room, and when it reached a little more it would give what is indicated in red, the red water, and what I want to point out on this plan in particular, and the reason why it was made, is that to carry all the bulkheads up to D deck would not have saved the ship in this particular, if this

water in No. 4 boiler room was merely accidental and the bulkhead not actually damaged, as I believe, because the water would then have been able to run over the top of the bulkhead between Nos. 5 and 4, even if it had been carried up the deck higher than it was.

You mean to say that if the wound came as far aft as No. 5, carrying up the watertight bulkheads to D deck, that would not have saved this ship? - That is right, and that was the real point altogether of that plan.

*(The Attorney-General.)* It is only carrying it up to D? - Yes.

*The Commissioner:* If it had been carried up to C deck, the ship would have been saved or might have been saved?

*The Attorney-General:* Yes, I think it would.

*(Mr. Rowlatt.)* Did you hear my Lord's suggestion, that if you could have carried the watertight bulkheads up to C deck the ship might have been saved? - Provided that there was not the damage I believe there to have been in No. 4, but if the damage existed in No. 4 it was only a question of delaying it perhaps an hour - this damage that we were referring to a few minutes ago.

*(The Commissioner.)* If you could by pumping have kept the water in No. 4 under control, then it would not have mattered? - If you could have done, but the evidence is that it rose in spite of their pumping, my Lord. I have no doubt that the engineers in No. 4 were doing their best to pump.

Were there any sluice valves between No. 4 boiler room and No. 3? - Does your Lordship mean in the watertight bulkhead?

Yes. - Nothing whatever. The watertight bulkhead was not pierced by actual watertight pipes.

It is suggested to me that if there had been sluice valves the water in No. 4 might have been allowed to flow from No. 4 to No. 3, and so on, to the afterpart of the ship, and that the pumps then would have been able to get it under control? - Your Lordship will remember that the watertight bulkheads are in coal bunkers. A sluice valve is only a small watertight door, and it would mean putting the watertight door in the coal bunker, which is even a worse thing than having a watertight door for trimming the coal through, to which you were taking so strong objection earlier in the day. It would be very difficult to keep a watertight sluice valve in condition inside the bunker.

Are sluice valves put in ships now? - I believe they are in some warships. I do not think they are often put in merchant ships.

Are they put in merchant ships at all? - Not to my knowledge; it is not our practice at any rate.

Now I want to ask you a question, not upon this point, but it has been suggested to me; you know the hatchway in No. 1 hold? - Yes, I know it.

Now suppose that hatchway had been trunked from the Orlop deck to the G deck, would that have been of any advantage? You will remember that immediately after the accident water was seen coming through that hatchway, and that it went down into the tunnel? - But we have had evidence that at an earlier time it was seen in the bottom of the tunnel, coming up.

Yes, but what I want to ask you is whether it would have been an advantage if the hatchway had been trunked, by which I understand made watertight, from the Orlop deck up to the G deck? - I do not think in this case it would have made the least difference, because the water, as we know, was going into No. 6 boiler room - I think, if your Lordship will look at the last plan I put in (flooding plans D and E) it shows that the water is above D deck at the extreme forward end, and therefore would have gone down the hatchway instead of coming up from below. There is a suggestion made to me - I am not sure that I quite appreciate it - but the suggestion made to me is that, if the hatchway had been trunked, the life of this ship would have been prolonged at least half an hour longer? - If the hatchway had been trunked?

Yes? - I should just like to look at that. (*After referring to the plan.*) I have now looked at the plan. As the water was rising up the spiral stair, that is outside the proposed trunk as well as inside the proposed trunk, I do not think it could have lengthened the life of the ship by more than a few minutes, five or ten.

Supposing you had had both the hatchway trunked and the spiral staircase trunked? - The spiral staircase, my Lord, had to be open to give access to the firemen for their accommodation. That is what it was for. You had to let the firemen out from the top of the spiral stair at G deck into their quarters.

You mean to say that you could not seal the top of the spiral staircase with anything that would be watertight? - Not very well. The Board of Trade would probably have refused to allow us to use it in that case for the voyage.

I do not quite see myself how the firemen would have got through the sealed cover unless they could see a sort of horizontal watertight door in it. Do you think that the life of this ship would have been lengthened if the hatchway in No. 1 had been trunked from the Orlop deck up to the G deck? - Up to the saloon deck?

Up to the G deck? - You mean a trunk between?

## **Page 519**

A trunk between the Orlop deck and the G deck? - That is to say, to prevent the space between the Orlop deck and the G deck being flooded?

Yes? - That is the intention.

Yes? - A few minutes; that is all. I may say that a watertight hatch trunk - a trunk hatch as distinct from a watertight bulkhead - is not as a rule capable of standing any great head of pressure. When once the water got up as high as the top of the trunk it would probably collapse - I mean, in the normal course of things.

Are any of these decks watertight? - None whatever, except the weather deck.

For instance, the Orlop deck is not watertight; the G deck is not watertight. 20394. (*Mr. Rowlatt.*) The Orlop deck, you told us yesterday, was watertight only just in the forepeak? - Yes, in the forepeak.

And then the after deck? - And in the three after-holds, I think.

You explained that to us yesterday? - Yes.

*The Commissioner:* In the forepeak it is a tank top?

*Mr. Rowlatt:* Yes, my Lord.

*The Commissioner:* I was not talking about the forepeak. I was talking about the watertight compartment just aft of the forepeak.

*(Mr. Rowlatt - to the Witness.)* None of the decks in No. 1 hold are watertight, are they? -

None whatever. There is no watertight deck in any of the cargo holds in the ship. Now, just a question about the strength of the watertight bulkheads. Were these watertight bulkheads strong enough to resist the pressure of water which would be upon them in the event of one side of them being flooded? - They were; they were so designed. 20399. Just tell me, what does that pressure depend upon? - The height of the top of a bulkhead above its connection to the tank top.

What you have got to calculate for is a depth of water reaching to the top of the bulkhead that you are dealing with? - Quite right.

If it gets above that it is immaterial? - It is immaterial.

*(The Commissioner.)* It flows over? - If the water can get over the top it does not matter.

*(Mr. Rowlatt.)* Just to get it quite clear. I think you have told me that it does not matter how much water there is behind the bulkhead, so to speak; it is only the depth that matters for hydraulic pressure? - Yes, the pressure depends entirely upon the depth.

*The Commissioner:* The pressure comes from outside.

*Mr. Rowlatt:* Yes, it depends entirely upon the depth of water.

*(The Commissioner.)* Yes. That is to say, if you had a thin coating of water of an inch, the pressure would be the same? - Yes, that is so; the fore and aft extension of the water behind the bulkhead.

The fore and aft extension of the water does not matter? - Not in the least. 20406. If it was only fore and aft to the extent of an inch, the pressure would be the same? - Quite right.

The pressure comes from the outside? - The pressure comes from the vertical head.

*(Mr. Rowlatt.)* Therefore, what you have to deal with at the bottom of any of these bulkheads is to take the height of the bulkhead, and then to make it strong enough at the bottom and all the way up to hold the amount of water that is represented by the distance to the top? - Quite.

Now, just to clear up one matter about the bulkhead between No. 5 and 6 boiler section. You know there has been some confusion about a hole there, an injury to the bulkhead. Just tell me, you have heard this fire in the bulkhead described? - I have. 20410. In your judgment would that injure the bulkhead as a watertight arrangement? - Not materially. The evidence as to the actual character of the fire has not been very definite, but it would have to be a much more alarming fire than anything that has been described to destroy the watertightness of the bulkhead. It might weep very slightly a few bucketsfull an hour, that could easily be handled by the pumps. 20411. It did not materially affect it? - Not materially.

*(After a short adjournment.)*

*(The Commissioner.)* There is a question I want to ask you, Mr. Wilding, with reference to the construction of the "Mauretania." Assuming that the side bunkers on one side of the ship were to be flooded and full of water, and there was a large roll, would that imperil the safety of the ship? - I am afraid it would want more detailed calculation than I could make mentally.

It is suggested to me that she would become so unstable that she might roll over? - If sufficient length of the one side was flooded, undoubtedly. It is a question of the fore and aft extent to which the side is laid open. If only a short length was flooded she would list. The greater the length flooded, the more she would list, and if you flooded her a sufficient length she would probably roll over.

*(Mr. Rowlatt.)* You mean the longitudinal bulkhead is divided transversely also by watertight divisions? - Yes.

Into bunkers? - Certainly, and, of course, flooding one division - 20416. Would not matter? - Would not matter - only a small list.

*The Commissioner:* But if the bunkers were flooded by reason of a rip going alongside the ship and filling several, it is suggested to me that the effect of that would be to cause a list on the side where the rip was, of such a kind as to imperil the life of the ship, if there were any considerable roll in the water.

*(Mr. Rowlatt - to the Witness.)* Did you hear that? - It would depend entirely on the length whether it would or not, my Lord. If it was 300 feet amidships, probably; if 300 to 400 feet of the middle, probably.

*(The Commissioner.)* I do not know that it is very material, but I would like to know whether the officers of these ships are obliged to become American subjects? - No, my Lord; I know they are all English subjects. Some of them were members of His Majesty's Naval Reserve, who can only be English subjects.

*The Commissioner:* Somebody suggests that they are of necessity American subjects. 20419. *(Mr. Rowlatt - to the Witness.)* You wanted to say something more about the longitudinal bulkheads? - It occurred to me, my Lord, that I would like to bring to your Lordship's notice a paragraph in the Report of the Committee which was appointed by the President of the Board of Trade to consider and report upon the spacing and construction of watertight bulkheads. The Committee reported in 1891, and it is, I believe, the standard to which the Board of Trade refer in their rules as being satisfactory for watertight subdivisions. They have a paragraph in it relating to this question of longitudinal bulkheads. It is paragraph 6, on page 7. "A compartment subdivided by one or more longitudinal bulkheads should be treated as one compartment only unless the owners satisfy the Board of Trade that the vessel will not have her stability seriously reduced, or list, so that any part of the bulkhead deck at the side is under water, in the event of the space between a longitudinal bulkhead and the vessel's side, or of two such adjoining spaces on the same side of the vessel being open to the sea. If the Board of Trade be not satisfied in the above respect, trimming valves should be fitted to each such longitudinal bulkhead, each valve being workable from above the bulkhead deck, and having

an index showing whether it is open or closed.” That is that this Committee, which was regarded by the Board of Trade as giving the standard, was not inclined very much to encourage watertight longitudinal division.

As I understand, the danger indicated there is that if the vessel lists, among other things, that will reduce at the side the height of the transverse watertight compartment? -

Reduce at the side the height of the top of the transverse bulkheads above water.

It might bring it below the waterline? - Yes, and thus let the water get along the deck.

There is one other thing I think you wanted to tell us upon the points you have left. Have you made any calculation as to the volume of water that came in through the apertures of this vessel? - Yes. I referred this to this condition B on the plan I put in, and corresponding very nearly to condition D on the third plan. Assuming the forepeak and Nos. 1, 2 and 3 holds and No. 6 boiler room flooded, and that the water has risen to the waterline which is shown on those diagrams, it would mean that about 16,000 tons of water had found their way into the vessel. That is the volume of the water which would have to come in. As far as I can follow from the evidence, the water was up to that level in about 40 minutes. It may be a few minutes more or less, but that was the best estimate I could make. When the inflow started the evidence we have as to the vertical position of the damage indicated that the head would be about 25 feet. Of course, as the water rose inside, that head would be reduced and the rate of inflow would be reduced somewhat. Making allowance for those, my estimate for the size of the hole required (and making some allowance for the obstruction due to the presence of decks and other things), is that the total area through which water was entering the ship, was somewhere about 12 square feet. The extent of the damage fore and aft, that is from the foremost puncture to the aftermost puncture in the cross bunker at the forward end of No. 5 boiler room, is about 500 feet, and the average width of the hole extending the whole way is only about threequarters of an inch. That was my reason for stating this morning that I believe it must have been in places, that is, not a continuous rip. A hole three-quarters of an inch wide and 200 feet long does not seem to describe to me the probable damage, but it must have averaged about that amount.

You mean, if there was a considerably thick hole, that hole could not have gone as far along the ship as four compartments? - Yes, that is so. It can only have been a comparatively short length, and the aggregate of the holes must have been somewhere about 12 square feet. One cannot put it any better than that.

I suppose it is possible that a piece of ice made a hole and then got itself broken off? - Yes, quite probable.

And then another piece of ice made another hole, and so on? - Yes, that is what I believe happened.

We know that in these watertight bulkheads there are watertight doors? - Yes.

At the bottom of the ship, descending vertically? - Yes.

And capable of being actuated from the bridge? - Capable of being actuated from the bridge, amongst other places.

In the alleyways, I think, sliding laterally? - Yes.

Because they could not descend vertically through the next deck? - Yes.

And actuated by hand either on that deck or on the deck above? - Quite right.

Of course, these watertight doors are metal things? - Cast iron or steel plates.

Working in cast iron? - Or cast steel.

Can you describe to the Court how it is they are watertight doors? - I have a model which will perhaps describe it.

How does that fit in a watertight way; just describe it? - The model is one of the vertical doors on the tank top. In the cast iron frame there is a fairly loose fitting groove which allows the door to slide pretty freely up and down like that. (*Illustrating.*) On the face of the door, and forming part of the casting, and machined in the fitting shop so as to produce a good fit - the back of the door is also machined to be a good fit - there are a number of tapered wedges. In the door frame are a number of lugs with the under side also machined, forming corresponding wedges tapered the same way, so that when the two wedges come together they will fit. As the door comes down it is quite free until the wedges are opposite their corresponding lugs in the frame, and then the wedges engage and wedge home. There are 6 on each side, 12 in all; they wedge home the machinebacked surface of the door against the machined surface of the frame. Those two machined surfaces, carefully prepared, pressed carefully together, make a very good means of obtaining watertight work.

The principle being that in the earlier stages of its descent it is perfectly loose? - Not loose, but perfectly free vertically.

And no danger of sticking. When it gets to the bottom the wedges force the machined edges at the back against the corresponding machined surface of the frame and so make it watertight? - Yes.

Supposing at the bottom there was a little bit of coal or something which prevented it getting quite down? - The door is falling; it is falling freely until it overlaps that place, and the door would smash through any small thing. This is not a very big model, but it will smash through a lead pencil if I let it go.

Supposing the door, having overlapped the step at the bottom still nevertheless is prevented by some little obstacle from getting down quite as far as is intended? - As this is falling with a rush, until the wedges actually press it home, the distance through which there is contact is only a matter of an inch or so - except just during that last inch when the door is stopped - the weight of the door would be sufficient to clear any obstacle.

Overcome anything like a piece of coal? - Yes; it would simply knock it out of the way. Some of the big doors weigh, I think, 15 cwt., three-quarters of a ton, so that it would want a pretty substantial obstacle.

Some of us saw those doors being closed, and, of course, they did not fall with a drop like a guillotine, but they descended gradually? - They descended gradually. 20442. Just explain how that was? - In order to give time after the automatic release from the bridge or by the float, so that no one coming through the door, or just passing through the door, should be injured, a hydraulic cataract cylinder, something like a gun recoil cylinder, was arranged, so that the earlier part of the drop shall be comparatively slow, depending on the leakage of a fluid back past the piston in the cylinder. To the last 18 inches or 2 feet there is a bye-pass round

the piston, and the door is practically free to fall quickly just for the last 2 feet or so.

I suppose in the earlier part it is still falling with irresistible force, only retarded? - It is falling with just the same weight, but retarded.

I do not think we want too much detail about it; I think that is enough subject to what my Lord may say. What is that photograph of? - Of the door.

I think your model is sufficient. In the first place, you have spoken of the descending door. Supposing that water was gaining access into the compartment on one side of the door in volume, so that there was water flowing along rapidly, would that stop the door descending? - It would not; we have had proof that it would not. 20446. You have had proof? - Quite.

In what way? - In the case of the "Olympic" accident. A stoker was standing by the door in O bulkhead in the tunnel in the aftermost section of the tunnel, forward of the propeller *here.* (*Pointing on the model.*) It was put in evidence

## **Page 521**

at the "Olympic" trial, and can be turned up therefore, that he saw the ram come through, and as the ship drifted out he saw the water come in with a rush; the automatic release from the bridge had not yet been worked, and he took the hand lever, standing on the fore side of the door, and released that door, and it fell and closed properly, but during the time it took to do so sufficient water had come through the door to bring about 3 feet of water into the next forward section of the tunnel - some 300 or 400 tons of water had come through. The door closed, and the water was pumped out; so that it closed against the rush of water.

How are these doors held in position when they are open? - When open they are held in by a clutch, that is, there is a disc clutch, a multiple disc clutch such as is frequently used now in motor cars for transmitting the drive, and the principle is that as long as there is a weight on a bell crank lever, a weight keeping the contact up between these plates, and as long as the contact exists, the door cannot overhaul and run, because the shaft outside to which the case of these friction discs is attached is locked, and the weight on the outside disc, keeps the other locked against them. The door is held simply by this friction between one set of discs which are locked and the other set of discs which are connected with the door.

How is it released? - As soon as anything is done which lifts the weight on the bell crank lever and releases the pressure on the discs connected with the door, it is obvious the door will be free to fall.

How is that applied? - That can be done in three ways, either by the magnetic solenoid which can be worked from the bridge, and which can pull up a lever and so lift the weight - it only needs to lift the weight by a very small amount consequently one can use multiplying gear and not a solenoid strong enough to lift the actual weight employed for the contact; or it can be worked by a float between the tank top and the floor level in the machinery space in which one walks about; or it can also be released by the hand release which is at a working height beside the door.

Very well. Now the float apparatus consists in a thing of the nature of an ordinary ball cock arrangement? - Yes, only much larger. It is a cylinder about, I think, 18 inches by 12.

That is below the plates? - Below the plates you walk about on, and above the watertight tank top.

Above the watertight floor. Now, will that cause the clutch which you have spoken of to be released if the water rises so as to lift the float? - That is quite right. 20454. How far has it to rise to do it? - It varies a little in the different compartments, but between 18 inches and 2 feet.

20455. If the water is 2 feet above the tank top these floats will rise? - And automatically release the door, whether it is released from the bridge or anywhere else. 20456. Would the operation of those floats be affected or hindered by there being a sudden inrush of water? - Not in the least. A cork will bob up just as quickly in a rush of water, and they are rather lighter than cork in proportion to their size.

20457. I see at the bottom of page 13, just before you come to watertight doors, you say this: You are speaking of the subdivision, and then you say, "By this subdivision there were in all 73 compartments, 29 of these being above the inner bottom." I think I know what you mean, but just explain what that exactly means? - In the preceding part of that clause under "Watertight subdivision," various bulkheads and decks have been described, and it means that the ship is cut up into that number of independent watertight boxes.

20458. Seventy-three of them? - Including those in the double bottom between the two skins.

You have told us the double bottom was divided four-fold in one part of the ship, two-fold in another, and not at all in another part, and then, of course, it is again divided by - ? - The transverse divisions.

Making altogether 29? - No, 44 in the double bottom and 29 above.

Twenty-nine above? - Yes.

*The Commissioner:* What paragraph are you on?

(*Mr. Rowlatt.*) It is the last few words of the paragraph immediately preceding "Watertight doors." I only thought the sentence was not quite clear, and, therefore, it was wise to have it explained. (*To the Witness.*) Are the watertight doors on the alleyways of the same character as the ones below? - The doors themselves are made of plate instead of being castings, but the principle of the tightening is identical.

You mean they fit tight in the same way? - Exactly.

And they are actuated by hand? - They are only actuated by hand from two positions, by something which you can turn round - a rack and pinion.

You have a paragraph about steering gear. Subject to what my Lord says, I do not propose to ask you anything about that or the telegraph. Now you came to pumping arrangements on page 16. You say: "The general character of the arrangement was that it was possible to pump from every compartment flooded by a system of duplex mains with suitable cross connections controlled from above the level of the bulkhead deck in such a way that it is possible to isolate any flooded space" and so on. Perhaps you will just amplify that a little? - One fore and aft pipe goes fore and aft the ship. It is duplicated in certain parts of its length in order to get round the isolation question. 20466. Are you speaking of

above the tank? - Above the tank top but below the stokehold floor. Then in each compartment there is a branch pipe taken off this, controlled by a valve which leads down to the level of the tank top where it has what you call a strum-box. It is practically a plate to prevent the pipe getting choked. On this pipe in each boiler room and also in the engine rooms are connections leading to the pumps which can draw through this fore and aft main and then throw overboard.

20467. Where are the pumps you speak of? - I think you had better refer to the plan.

20468. Whereabouts in the ship are the pumps. I want to be clear. What deck ought one to look at to see it clearest? - At the afterend of No. 6 boiler room there is an ash ejector pump which can be connected with this pipe.

20469. What is an ash ejector pump? - It is a pump normally used for pumping water through a hose and carrying ashes overboard. That water is in the normal course drawn from the sea and returned overboard, but can be taken from the bilge by a suitable valve.

*The Commissioner:* What part of the case is this on?

*Mr. Rowlatt:* I do not think it does matter, my Lord.

*The Commissioner:* Does it Mr. Attorney?

*The Attorney-General:* I think not.

*The Commissioner:* Do not confuse my mind - it is a very easy thing to do - more than you need do.

*Mr. Rowlatt:* The document you have before you is not very easily understood. *The*

*Commissioner:* No, and I do not want to understand it in parts where it is not material.

*Mr. Rowlatt:* If your Lordship pleases.

*The Attorney-General:* There has been no attack or suggestion made that there was anything defective in the pumping arrangements.

*The Commissioner:* No, there was no suggestion against the pumping arrangements.

20470. (*Mr. Rowlatt.*) There is only one matter on this. (*To the Witness.*) My Lord asked yesterday about the fresh water and the salt water? - Yes.

Now that is explained I think in the middle of page 17. You are speaking there of the 17 transverse watertight divisions under the tank top? - Under the tank top.

You say, "Fourteen of those compartments have 8-inch suction and three 5-inch suction; six compartments were used exclusively for fresh water with 4-inch suction to fresh water

## **Page 522**

pumps"? - The compartments used exclusively for fresh water were tanks under Nos. 1, 2, and 3 holds, and also those under Nos. 4, 5, and 6 holds. That is, the tanks outside the machinery space, as I explained.

That answers what my Lord was asking yesterday. Now, I think we can pass from that, and nothing arises upon the "ship's side doors"? - There has been some cross-examination on them.

Has there? - Where are the ship's side doors; just explain on the model? - (*The Witness explained on the model.*) Starting forward, there is a side door on D deck, which is only

for use in New York for baggage. The foremost passenger door is on E deck at the forward end, abreast of the forward end of Scotland Road.

*The Commissioner:* The suggestion, I understand, was that those side doors might have been utilised for the purpose of getting passengers into the boats.

(*Mr. Rowlatt.*) Had they all gangways? - They can be used without gangways. *Mr.*

*Laing:* The suggestion I understood was that if the doors were open they could not readily be shut again owing to their weight, and that water might have come in from the sea through them. That is the suggestion. *The Commissioner:* I did not understand that.

*Mr. Edwards:* Your Lordship will remember that an instruction was given to the boatswain and certain men to go down and open the gangway doors. Whether in fact they were opened or not there is no evidence clearly to show.

*The Commissioner:* No, but I understood your suggestion, or Mr. Scanlan's, I do not know which, was that these doors might have been utilised for the purpose of getting people from the decks on to which they opened into the boats?

*Mr. Scanlan:* Yes, my Lord, that is exactly how the point was raised in connection with Mr. Lightoller's evidence, and it was impressed on my mind by a statement made to me down on the "Olympic" while she was lying in Southampton and we were inspecting her, that those doors there were capable of being used for that purpose, and were meant to be used in emergencies for that purpose.

*Mr. Rowlatt:* Perhaps it would be better if I left Mr. Wilding to answer questions from Mr. Scanlan.

*The Commissioner:* You have heard what was said, Mr. Wilding; what do you say to that? - There was evidence - whether it was reliable or not it is not for me to say at present - that directions had been given, I think, by the Captain -

*Mr. Scanlan:* Yes, my Lord.

(*The Commissioner.*) Directions by the Captain that these side doors should be opened, and, as I understood, it was suggested in the examination of the witness by, I think, Mr. Scanlan (possibly by Mr. Edwards, I do not know), that if they had been open people who were either on that deck or could have been brought to that deck, could then have been put into the half-filled boats, and so more lives would have been saved. Now what have you to say to that? - The door that would most likely be used was *this*, that door, at which there is an accommodation ladder; that is, a portable sloping ladder is provided just inside the ship opposite this door, which can be shipped on either side, and the order would probably be intended to apply to that door.

(*The Commissioner.*) There is a corresponding door on the other side of the ship? - There is a door on each side with a broad passage leading through from one door to the other. If this accommodation ladder was put in position from one of these doors it would be very easy for anyone, even ladies and children, to go down the accommodation ladder to get into the boats in smooth water, which we understand prevailed. There would be no difficulty once the accommodation ladder was rigged, which would be a matter of perhaps half an hour, to use it in that way.

But we have no evidence at all, as far as I know, that anybody from the ship got into a boat from that doorway? - I have heard none, my Lord. *The Attorney-General:* No, my Lord, there is no suggestion.

*Mr. Edwards:* May I recall to your Lordship's mind Mr. Lightoller's instruction was, when they were lowering boat 6, that the boatswain and certain men were to go down and open these gangway doors, his view, as he expressed it, being that certain of the boats should come back when they saw the light and take away certain passengers from them? - So far as my questions were addressed to him they were simply to ascertain his view as to whether if the gangway doors had been opened forward - *The Commissioner:* Forward?

*Mr. Edwards:* Yes, forward. He gave the order both forward and aft, and my questions were addressed to him to show whether, in his view, if at the stage when the order was given in fact the gangway door forward was opened on the port side, that might not have accounted for a big rush of water and a sudden list to port.

*(The Commissioner.)* I do not remember that; it has escaped me. *(To the Witness.)* What do you say to that? - Mr. Lightoller did not convey to my mind that he had given any very distinct order, that is any order that made itself clear which door was intended; but there was evidence that the boats were told to go round to the after door which was the door where this accommodation ladder was provided, and which would be the natural door to go to.

*(Mr. Rowlatt.)* Is there any ladder for the forward door? - There is none. 20481. If they had gone there and the ladder had been shipped could people have gone down the ladder and stepped into the boats? - Very easily. It is like a yacht or warship accommodation ladder.

*Mr. Rowlatt:* I think there is no other question of construction which concerns this gentleman which arises. The compasses we have had no question about, and the accommodation ladder -

*The Witness:* The accommodation ladder we have just been referring to. Masts and rigging - that does not matter. We know quite well what the crow's nest is; I do not think we need trouble about that at all.

*(The Commissioner.)* By whom were the compasses adjusted? - A representative of Messrs. Kelvin and White, the makers.

And when were they adjusted? - In Belfast Lough - we got down in sufficiently deep water to swing the ship, on the 2nd of April.

*(Mr. Rowlatt.)* I think no question arises about the lifeboats. There were 48 as a matter of fact, you say? - Yes.

And the lifebelts or lifejackets you say, they are the improved overhead pattern? - Yes. As I gathered it is a sort of breast-plate of cork on the front and behind? - I understand the pattern is to be produced.

Very well. I do not think anything arises upon that. Then I see you give the size of these boats and their accommodation? - Yes, the size and accommodation I may say are furnished to us by the Board of Trade officially after measurement.

That appears upon the paper? - I do not know whether it appears in that form. 20490. It appears on your proof which my Lord has before him; therefore I need not take up time by asking the question, but over the page you give the strength of these boats, the construction of them: "Keels of elm, stems and stern posts of oak, all clinker built of best selected well-seasoned yellow pine, double fastened with copper nails clinched over rooves; the timbers were of elm spaced about 9 inches apart, and the seats pitch-pine secured with galvanised iron double knees." Now a question has been raised as to the

ability of these boats to be lowered through the air, holding 60 people in them without buckling? - Yes.

Will you just address yourself a little to that question? - I remembered when that point was first raised that I had actually seen one of the lifeboats on the "Olympic" in the air loaded with a weight which would correspond to the passengers, and I wrote for the date. On the 9th of May, 1911 - that was shortly before the "Olympic" left Belfast - we put into one of the lifeboats of the "Olympic" half-hundredweight weights distributed

## Page 523

so as to represent a load equal to about 65 people, and then we raised and lowered the boat six times. It was done with the object of testing the electric boat winches, not with the object of testing the boat. I happened to see it coming up one time myself after the weights had been removed (the boat was lowered without weights into the water), and there was nothing the matter with her; she was watertight. I do not think there was any doubt the boats were strong enough to be lowered containing the full number of passengers, and I think that it was in the evidence of Wheat that he lowered a boat with about 70 in her. I think that confirms our Belfast test.

I suppose there was a little specification for these boats; were they designed by you? - We design and construct them ourselves.

And you designed them for that purpose? - We designed them for that purpose. 20494. (*The Commissioner.*) They are constructed for the purpose of carrying that number? - Of carrying that number and of being lowered - sufficiently strong to be lowered with that number.

Where can they be lowered from except from the davits on the boat deck? That is the only place you can lower them from? - It was a boat under davits that was being tested.

And therefore they must be constructed with the object of carrying this number of people when slung out on the davits? - Certainly.

And keeping them in the boats until the boats reach the water? - Quite.

*The Commissioner:* I do not see what good the boats would be otherwise.

(*Mr. Rowlatt.*) It is not contemplated they would go round and take people from the gangway? - That, of course, is a question of sea discipline; but we feel that we must provide, at any rate, that the boats can be lowered from the boat deck with their full number, whatever way they are actually used.

And you say you did so provide? - To the best of our knowledge and belief we did so.

And so far as the evidence in this case goes that answered? - Yes; and so far as the test to which I have referred has gone, it showed they would.

Very well, I think we can pass from that.

(*The Commissioner.*) Would the officers on board this ship have any knowledge or instruction as to the number that the boats were intended to carry? - Not from the builders, my Lord. As far as I know there was no special direct intimation given to the officers that they would carry their full number, but I should have thought it was a matter of general knowledge that they were so constructed. If I had thought

there was any doubt on the matter in the officers' minds I would have done my best to remove it. 20502. The reason I ask is this, that it may be suggested that the officers, when they lowered the boats without the full complement of people, that the boats would carry, thought that the boats were already sufficiently full for safety? - Of course, what the officers thought one really cannot tell.

(*Mr. Rowlatt.*) You belong to the builders, of course? - Exactly. If the officers had asked about it, or had expressed any doubt about it at Belfast, they would have been told, and the test would have been mentioned to them.

(*The Commissioner.*) One of these boats was, in fact, lowered with 60? - Certainly, my Lord.

I do not know whether that was the last boat of all? - Not quite, my Lord.

*Mr. Raymond Asquith:* I think it was boat No. 11, not the last boat.

*The Commissioner:* Not the last boat to be lowered?

*The Witness:* No.

*The Commissioner:* It had not buckled?

*Mr. Rowlatt:* I do not know how far it would come to their attention under the circumstances, my Lord.

*The Commissioner:* The officer who permitted that boat to be loaded to that extent did not think that it was going to buckle.

*Sir Robert Finlay:* I think he said he was taking a risk.

*Mr. Rowlatt:* Mr. Lowe, I think.

*The Commissioner:* It turned out to be a risk that was not of any consequence. One had 59 - I am taking the larger ones - another 74, another 70, another 64, 70, 71, 56 - a great many of those boats carried a large number. Some of them carried very few for some reason.

(*Mr. Rowlatt.*) There is a general question raised in this case as to the utility of boats in the case of a ship of this class and size. From that point of view just tell me about the disengaging gear at the bottom that lets the boat escape from the falls after it has been lowered. What is that? I mean describe how it acts, never mind the detail? - It is a hook which is thrown out by pulling over the lever amidships in the boat. You will remember one of the witnesses could not find the lever and had to cut the falls; but there is a hook hooked into the eye under the block through which the ropes pass and the hook which is thrown out is released - is thrown apart, by this lever.

I happened to see it myself; so see if my explanation is right. This is a very magnified representation of what you are describing? - Yes.

That is in the boat? - Yes.

The fall comes down from *here*? - Yes.

And underneath the block there is a big loop? - Yes, the eye, as we call it.

An eye of iron? - Yes.

Like *that*? - Yes.

Then in the middle of the boat is there a lever going across the boat? - Yes. 20514. And when the man pulls the lever over, *that* happens (*Demonstrating.*)? - Yes, it throws the top part of the hook out of the eye.

That is more or less right, is it? - Yes.

*(The Commissioner.)* Then the falls are released? - Yes.

*(Mr. Rowlatt.)* Then the boat is released and there is no danger of one end being released before the other? - No; that is the object; both ends are connected up with one lever; when one is thrown over both are.

Released before the boat reaches the surface of the water? - There is sufficient power in the lever to draw out that hook which is in the eye while the weight of the boat is still on it.

So that the boat can be released in the air? - Yes.

*The Commissioner:* Well, not too soon, I suppose?

*(Mr. Rowlatt.)* No. One was done for our edification in the air, an appreciable distance above the water? - Quite. The reason for doing it is to facilitate launching in a seaway. When there is a sea running a man stands by the lever and watches his chance.

And they can do it instantaneously? - Practically.

Instead of making his boat float first and then work away at clearing it? - Yes. 20523. I think the evidence was that one of the boats was dropped 5 feet? - I think that was it. That was Mr. Lowe's evidence. I think that is so, my Lord.

*The Commissioner:* I have no doubt, but it would be unpleasant I should think. 20524.

*(Mr. Rowlatt.)* It looked very easy when we saw it. Would it be a very easy thing? Mr. Lowe described it as being dropped 5 feet? - I think that occurs in the evidence. There was no reason why it should not.

*(The Commissioner.)* There is no reason why it should not be dropped 20 feet or 30 feet? - If it is more than a moderate height - more than 10 feet - the shock when the boat strikes the water is apt not to be good for the boat.

*The Commissioner:* No, nor for the people in it.

*(Mr. Rowlatt.)* It is not quite a flat-bottomed boat. That appliance enables you to launch boats in a sea? - That is right. The object is to facilitate launching in a seaway. 20527.

You had here manilla falls? - It might perhaps be mentioned that that is the invention of a White Star captain for that object.

## **Page 524**

That releasing gear? - Yes.

We saw here the falls made -? - Of manilla rope.

Is that the best form of fall which has been invented hitherto? - Yes, it is the best type of fall. It is a type which is required by the Board of Trade, and is generally held to be the best.

*The Commissioner:* There is no charge against these falls, except that in one case they had to be cut.

*Mr. Rowlatt:* No, my Lord, there is not. The point is, there is a question in this case as to how far it is any use multiplying boats in view of the various difficulties in working them, launching them, and operating them also from the deck, getting your tackle back, and lowering another boat with them. That is the sort of question, and I was only going to

ask this gentleman whether he can suggest any simpler way of lowering a boat than this multiplication of ropes forming the tackle.

*The Attorney-General:* There is a point in it, my Lord.

*The Commissioner:* Very well.

(*Mr. Rowlatt - to the Witness.*) Can you suggest any simpler way, say, for instance, having a single wire rope to each end of the boat, worked in some way on deck? Is such a thing possible? - Well, it is a thing which wants looking into; but I think I may fairly say that something of the sort was done in the Navy some years ago in the case of torpedo depot ships carrying second class torpedo boats, where a big crane was on deck and took a boat out and lowered it, and I believe it was lowered by a single rope. 20532. I was not speaking of a single rope for a boat, but instead of having eight ropes at each end, is it? - Six ropes, three doubled. Instead of six, whether you could have one rope? - It is possible. I have seen a patent which proposes to do it in that way.

Over a drum on the deck in some way? - Yes.

It was pointed out on the ship. It is the case, is it not, that it is very difficult to recover the fall? - Yes, especially with a new manilla rope.

Because the block capsizes? - It tends to twist itself up, owing to the way the rope is made.

So that I may take it from you it is a question which is worth looking into, whether these falls cannot be simplified? - Yes, and one which, whenever we get rid of this Inquiry, we hope to look into.

If you could recover your fall easily and certainly from below, could you have two boats, one on top of the other, so to speak, served by the same davit; not of course hanging from the same, but served by the same davit, and in fact placed under it? - One on top of the other is not, as a rule, a very satisfactory arrangement. In practice it is much better if you possibly can do so, and want to carry two boats, to carry them side by side. 20539. Whether side by side or whether one is stowed under the other, you could have two boats served by the same davit much more certainly and safely if you are certain of recovering your falls? - You are certain of recovering your falls as it is; it is only a question of time.

But you recover them in a tangled state? - But you can untangle them. There is nothing impossible in the untangling if you take a quarter of an hour or 20 minutes and disentangle those falls.

(*The Commissioner.*) You must untangle them before you can recover them? - No, my Lord, the best thing is to pull it up and straighten it out on deck.

(*Mr. Rowlatt.*) We had a little demonstration of that, my Lord? - Recover it by a hook, or something of that sort, and pull it out on deck.

It would be much better if the falls could be simplified for the purpose of making the davits serve two boats? - Yes. It raises certain other difficulties. The strain of the weight on the single fall in lowering the boat becomes much greater, and it is not so easy to handle that fall when lowering the boat, as you can understand, because there is three or four times the strain on it.

You have not the benefit of the various blocks? - Yes, and consequently it is not pure gain.

You would have to have some way of gaining power on the deck - Against it. 20546.  
Instead of the blocks which now give you the power in the fall itself? - Yes. The point of that is that any such gain takes up part of the time that you would lose in untwisting your present manilla falls so that it is not clear gain.

I only want to take it in this way; all those are matters which are worth going into? -

Certainly, I quite agree.

Very well. Now boats were stowed on wooden chocks. I do not think there is anything in that -

*The Commissioner:* You are not going to ask this witness, I suppose, any questions on the manning of the lifeboats?

*Mr. Rowlatt:* I was not going to, my Lord; I do not think he comes here as a seaman. 20549. (*The Commissioner.*) Then I should like to ask this - it is only one of the innumerable suggestions which have been made to me - I do not mean by my colleagues - is it possible to have motor lifeboats? Have you ever heard of such a thing? - Motor lifeboats are allowed at present, my Lord, but the Board of Trade deduct from the volume of the boat the cubic space occupied by the motor in ascertaining the number of people it is eligible for.

I know. But is a motor-boat more easily handled and handled by a less number of men? - In a considerable sea-way, yes. As you have heard, on a very still night it only wants two men and someone at the tiller with the ordinary boat.

Yes, I know that? - You can hardly handle a motor-boat with less than three. 20552.

Take ordinary conditions, not the exceptional conditions that existed here. Is there any advantage in having as a lifeboat a motor-boat? - Well, there is this way of looking at it. In a given boat or a given area of boat, that is a given size of boat, with a motor in, you carry fewer people. Further, in a ship that is fitted with wireless telegraphy there is no object in the boat going any great distance. I mean if she remains near the scene of the accident she is more likely to be picked up quickly.

I am thinking about the "Californian"? - Well, the "Californian" operator woke up the next day.

I am thinking of a motor-boat reaching the light? - Quite. I agree, far faster than any crew that you could have put into her.

Then it is suggested that a motor-boat could tow the other boats? - Well, it can only do so at the expense of its own speed, to a certain extent.

(*Mr. Rowlatt.*) Of its own petrol. It could not have towed the other boats to America. No motor-boat could have been sufficiently furnished with spirit to tow the other boats to land, I suppose? - No, I think they were 500 miles from Cape Race - 400 or 500 miles.

(*The Commissioner.*) Oh, no, I daresay they could not, it is obvious they could not tow them to land, but to a light? - To the light, my Lord, it would be an advantage to have a motor-boat, except so far as the way might have been blocked by ice. 20558. Are motor-boats ever used as lifeboats? - I believe we have supplied them to some companies, my Lord.

You have? - We have.

Harland and Wolff? - Harland and Wolff.

Have supplied them? - To some other companies, but not to the White Star

Line. At the companies' request, I may say, not at our own suggestion.

*Mr. Rowlatt:* There is a Board of Trade regulation upon the subject: "A motor lifeboat approved by the Board of Trade may be substituted for one of the boats required to be kept under davits," and it is to be kept with proper appliances for putting out into the water, and adequately supplied with fuel, and so on.

**Page 525**

*The Commissioner:* It is optional.

*(Mr. Rowlatt.)* Yes. *(To the Witness.)* Would there be any object in having more than one motor-boat? The Board of Trade seem only to allow one? - I think if you are going to have them at all for the purpose either of towing or getting into communication with another ship you should have at least three or four. I mean 1 in 16 does not appeal to me as a satisfactory towing arrangement.

Do you understand these Englehardt boats, or did you not supply them? - We purchased them from an outside contractor. I am only generally familiar with them. I do know something about them.

The evidence is that one of them was washed off the deck and never had a chance? - Quite.

But another was found swamped. Apparently the sides were not up. But there was another question about her. There was a question as to whether the plug was in? - Yes.

*The Commissioner:* I understood there was no plug?

*Mr. Rowlatt:* Your Lordship thinks that matter has been cleared up? There is no plug. 20556. *(The Commissioner - To the Witness.)* There is no plug, is there, in a collapsible boat? - There is, but only in the ordinary sense of the word, not one that has to be put in before she is put in the water to keep her from sinking. There is a plug put in the outer bottom, but it is usually kept in. There is a plug. It is not a plug that has to be put in before the boat is launched, but one that is usually kept in the boat ready for service. 20567. *(Mr. Rowlatt.)* Is it necessary to have that in position in order that the boat may be seaworthy? - The plug is always in the boat unless you specially take it out for repairs or getting at the inside of the boat. They keep a little water in the boats.

*(The Commissioner.)* To let the water run out that has collected? - Yes, or got in in any way.

*(Mr. Rowlatt.)* We had evidence from one witness about the false bottom of the boat preventing him from getting at the plug? - Yes.

As I understand, there are two bottoms to this boat? - Quite.

But they are air-tight? - Practically.

And the two holes that are in the two bottoms are connected by a pipe? - Yes, they are self-emptying boats like a lifeboat.

Therefore the circumstance that he could not get underneath was a misapprehension of the witness? - Yes, quite.

*(The Commissioner.)* But although the sides of these boats are not in position they will nevertheless act as rafts, will they not? - Quite as well. The bottom part of the

boat, without the canvas sides, supplies the whole of the buoyancy of the boat. The boat does not depend upon its canvas sides for buoyancy. That is a distinction from the Berthon type, my Lord.

(*Mr. Rowlatt.*) Did you supply the distress signals? - Yes, we obtained and supplied those, I believe.

Will you tell us what they were? - The cotton powder; the approved pattern of distress signal.

I do not care about the powder. As to the effect when they were sent up, can you say whether they were indicative of distress as opposed to anything else? - I believe it is a pattern of signal which is understood to be restricted to ships in distress, and registered for that purpose.

29578-9. You only believe that? - Yes; it is not a thing I deal with.

My friend Sir Robert Finlay asks me to ask about the boat equipment. I did not know that there was any question about it. I think the boat equipment was in accordance with the Board of Trade requirements? - It has to be, or else the Board of Trade will not pass the boat.

As it left your hands, at any rate? - Yes, we supplied it, and the Board of Trade checked it, and the White Star officers checked it on taking over the boats to see it was all there. That is to say, it had the sails and the covers for the boats -

*The Commissioner:* Except in so far as it is evidence, or may be said to be evidence of general neglect, I do not think the absence of biscuits or compasses or lights or anything else has any real bearing upon this Enquiry. Whether they had lights or biscuits or compasses or not they all reached the "Carpathia." There was nothing wrong with them which was of any consequence. If it was a question of seaworthiness that would be another matter, as we know.

20582-3. (*Mr. Rowlatt.*) As a matter of fact did you supply a compass for every boat? - 14 compasses for the 14 lifeboats, but not for the emergency boats or the Englehardt's.

20584. And had they all sea anchors and provisions? - I believe so; except, again, I think the Englehardt's -

(*The Commissioner.*) The Englehardt's are folded up when they are on deck? - The sides are; the bottom remains the same.

But the bottom is an empty space, full of air? - Either full of air, or full of cork in some cases.

There is no room for kegs, or whatever they are, of biscuits and barrels of water? - Quite right, my Lord, but a certain small equipment is kept in the boats.

In the collapsible boats? - A little on the thwarts.

What is kept on the thwarts? - I could not say off-hand. *The Commissioner:* If it wants looking for, never mind.

*Mr. Rowlatt:* Now your next page we have dealt with because it is all about "access of passengers to boat deck." On page 26, my Lord, there are many paragraphs about the electrical installation.

*The Commissioner:* They are of no consequence.

(*Mr. Rowlatt.*) I think not, my Lord. (*To the Witness.*) You have told us about the electricity for the wireless. On page 32 there is the machinery.

*The Commissioner:* We are not concerned with the machinery and the boilers, or with condensing plant or the auxiliary machinery. That seems to be all there is in this. *Mr. Rowlatt:* I think so, my Lord.

**Examined by Mr. CLEMENT EDWARDS.**

*(Mr. Clement Edwards.)* By the courtesy of my friends, my Lord, I will ask a few questions first. *(To the Witness.)* You have spoken about the resistibility of the bulkheads? - No.

I rather understood you to say that the resisting strength of the bulkheads was dependent upon their height? - No, but the resisting strength required in a bulkhead is dependent upon its height.

What actual tests were made of these bulkheads? - None; I presume what you mean is an actual test by applying pressure.

Yes? - None.

None at all? - None at all.

*The Commissioner:* Now, will you ask him an additional question upon that, because I do not know. Is it usual or necessary to make such tests?

*(Mr. Clement Edwards.)* I am coming to that. *(To the Witness.)* First of all, is it the practice with your firm to make such a test? - No.

Are you familiar with the practice at Lloyds? - Generally. We sometimes build ships to Lloyd's requirements.

Is it not the fact that Lloyd's Surveyors do insist upon a water pressure test for bulkheads? - No; I never saw one carried out in our yard. 20599. You never saw one? - Not in my experience.

*(The Commissioner.)* Have you had Lloyd's Surveyors on your premises? - We have had them every day, my Lord.

**Page 526**

For the purpose of ascertaining whether their requirements are complied with? - Just for that purpose and no other.

Have you had them there when the ships they have had to inspect were ships with watertight bulkheads? - Every ship that is built for Lloyd's must have them. 20603. Have they ever applied a test of the kind suggested by Mr. Edwards? - Not to my knowledge.

*(Mr. Clement Edwards.)* Have you ever heard of such a test being applied outside your own shipbuilding yard? - By whom?

By Surveyors of Lloyd's? - Not by Surveyors of Lloyd's.

Have you ever heard of such a test being applied by representatives of the Admiralty in shipbuilding yards? - I have.

Is it to your knowledge a common practice for firms building for the Admiralty to insist upon such a pressure test for bulkheads? - I do not know. The test I am familiar with of that sort was made in one of His Majesty's dockyards.

Not in a private yard? - No; whether it is done in any private yard or not I do not know.

You do have a spraying test, as it is called? - Yes.

That only finds out -? - Whether the local caulking and riveting is good.

*(The Commissioner.)* Allow me one minute, Mr. Edwards. *(To the Witness.)* You said no tests were applied to the bulkheads of the "Titanic"? - No tests by pressure under head, my Lord.

That is what I mean. Is it a fact or not that the bulkhead at the forepeak is tested? - The lower part which forms the after boundary of the forepeak is tested because it forms part of the forepeak tank, and the double bottomed tanks are tested, but not the peak transverse bulkheads above the inner bottom.

Is the bulkhead at the afterend of the ship tested at all? - Only in the "Olympic" collision to which I have referred; they were tested because the aftermost hold was flooded.

Yes, but that is not what I mean at all. Was the aftermost bulkhead of the "Titanic" ever tested by water being let in? - Into the afterpeak, yes.

You do it in the forepeak and do not do it in the afterpeak? - Yes. 20616. Why do you do that? - Because those are tanks in which water is frequently carried and which are connected with the pumps which can apply a considerable pressure head to them.

Then it is done merely for the purpose of seeing whether they are fit to carry water that is required in the ship? - That may be required in the ship without endangering the ship.

*The Commissioner:* You will excuse me, Mr. Edwards, it was only that I wanted to exhaust the subject.

*(Mr. Edwards - To the Witness.)* What I will call the resistibility of the watertight bulkhead will not only depend upon the height, it will also depend upon its thickness; it will also depend upon what I think you technically call stiffeners, and it will also depend upon what I may call the construction? - The putting together of the stiffeners and the plating.

Yes, and not merely that, but also upon the form of construction immediately abaft the watertight bulkheads; that is to say, if I may use a simple illustration, if it is simply a bulkhead and no deck abaft it, it will want to be a good deal stronger in itself than if there are a series of decks running straight up against it? - And supporting it at different points?

Yes? - Quite right.

Then if you do not apply the water pressure test how do you arrive at your standard of resistibility? - There are two well known standards in this country, one of them furnished by Lloyd's Rules, and the other furnished by the Bulkhead Committee of 1891; and one is guided, in the first instance, in arranging bulkheads and the stiffeners and plating connected with them by those rules.

Then it is not by any scientific estimate of your own? - That is how it was first arrived at. One does check it by making a calculation of one's own. In the case of these very large ships one does not take anything for granted that can be checked.

What were the heights of the bulkheads in the "Titanic"? - They were carried up to D deck after; after D deck forward.

Will you tell me the height of the bulkheads forward? - I can give it to you approximately by scaling from the plan. Which will you have?

Give me the bulkhead immediately in front of Boiler Section 6.

*The Commissioner:* I am asked to ask you, Mr. Edwards, and I want to ask you myself, what is the object of this examination? - There is no evidence that any of these bulkheads gave way.

*Mr. Edwards:* I think there is. If your Lordship will remember, in the evidence of Barrett he was asked about leaving Boiler Section 5, and he said he left when there was a rush of water, and your Lordship put it to him. It is at question 2060. "Something that had been holding the water back gave way," to which the witness answered "That is my idea, my Lord."

*The Commissioner:* Is it based upon that and nothing else.

*Mr. Edwards:* Not entirely. What I am leading up to is this: I have already put certain questions - that in the case of the construction of this ship there was no independent survey. There was no check of the construction by anybody other than by the builder.

*The Commissioner:* That I understood. You made that point some time ago, and you suggested, as I understood, at one point in the case that these bulkheads were not as strong as they would have been if they had complied with Lloyd's requirements.

*Mr. Edwards:* That is so, my Lord.

*The Commissioner:* You suggested that.

*Mr. Edwards:* Yes.

*The Commissioner:* Well now, I have not heard from you - you promised to give me the information, you know, what the requirements of Lloyd's would be in the case of a ship of this size.

*Mr. Edwards:* What I promised to do was at the right moment, if necessary, by expert witnesses, to supply you with that information. But I may say at once that my next question but one to this witness will disclose on this particular point what is the standard of Lloyd's in respect of it.

*The Commissioner:* Very well, we will get it from him then, not from you.

(*Mr. Clement Edwards.*) Now, Mr. Wilding, will you take the bulkhead in front of Boiler Section 6? - Yes. You want the height of this D bulkhead from the tank top?

Yes? - 44 feet.

*The Commissioner:* Mr. Edwards, the Professor on my left points out to me that my question referred to a bunker bulkhead, and not to a watertight bulkhead.

*Mr. Edwards:* I think with respect, my Lord, that in that case the bulkhead between Sections 5 and 6 does not run fair across the ship, but there is for the purpose of allowing for the bunker an angle running back.

*The Commissioner:* There is, that is quite true - a sort of alleyway.

*Mr. Edwards:* Yes, my Lord; that is to say, if I may use it in this way; the ordinary bulkhead runs, of course, fair across the ship. In this particular case, as I understand it, the inner wall -

*The Commissioner:* That is quite right, but what I was pointing out to you - my attention having been drawn to it - was that my question as to the rush of water contained a suggestion that the side of the bunker, not a watertight compartment, had given way.

*Mr. Edwards:* With great respect, my Lord, the question arose in Barrett's evidence. *The*

*Commissioner:* Will you read it; just read it, please. I daresay you are right, but I would like you to read it.

*Mr. Edwards:* It is on page 60, my Lord, question 2057. (Q.) “You do not think it did come over the top?” - he is speaking of the water. “(A.) No. (Q.) Now, when it came through this pass between the boilers, did it come with a rush? - (A.) Yes. (*The Commissioner.*) I suppose he means by that as if something had given way. (*The Solicitor-General.*) So it came in with a Lord’s question.” That is not usually associated with a rush. “He is asking whether, when you said that, you got the impression that something had given way? - (A.) That was my idea. (*The Commissioner.*) Something that had been holding the water back gave way? - (A.) That is my idea, my Lord. (*The Solicitor-General.*) So it came with a rush.”

*The Commissioner:* Go on, please.

*Mr. Edwards:* “How fast did it fall? - (A.) I never stopped to look. I went up the ladder. Mr. Harvey told me to go up. (*The Commissioner.*) Could it have been a bunker bulkhead that gave way, do you think? - (A.) I have no idea on that, but that is the bunker that was holding the water back. (Q.) It was the bunker that was holding the water back? - (A.) Yes. (*The Solicitor-General.*) It is entirely my fault, but I have not followed the meaning of that.” Then take Question 2074, at the top of page 61: “You cannot tell what part of the watertight bulkhead it was which gave way? - (A.) No.” *The Commissioner:* Is that my question?

*Mr. Edwards:* No, my Lord; that is the Solicitor-General’s question. *The*

*Commissioner:* I was going to say, if it was my question, it was not a wellinstructed question. As the Solicitor-General asked it, I will not make that observation.

20628. (*Mr. Clement Edwards.*) It was not a Lord’s question, my Lord. (*To the Witness.*) This bulkhead in front of boiler section 6, you say was about what height? - Forty-four feet from the tank top.

*Sir Robert Finlay:* I think Question 2106 makes it perfectly clear. *The*

*Commissioner:* Will you read it, Sir Robert?

*Sir Robert Finlay:* I will read from Question 2104. “(Q.) The water is coming through the skin of the ship into the bunker? - (A.) Yes. (Q.) And the bunker is about 9 feet along the side of the ship. Now I want to know, was the water coming in at this level right across the bunker, or only in part of it? - (A.) Water was coming in about two feet abaft the watertight bulkhead. (Q.) Do you mean that it was coming in from the watertight bulkhead and for two feet back? - (A.) No; only from the ship’s side. The watertight bulkhead was not damaged.”

*Mr. Edwards:* That, you will remember, was at quite an earlier stage, in which Barrett had given evidence as to coming up out of Section 6 and going down into Section 5. It refers to a much earlier time.

*The Commissioner:* As I understand the evidence at present, it does not indicate any breaking of any watertight bulkhead. I am aware of the uninstructed question and the answer to it. However, go on to these dimensions, which are more important. 20629. (*Mr. Edwards - To the Witness.*) The bulkhead in front of Section 6, you say, was of a height of 44 feet? - Yes.

Now what was the thickness of the bulkhead plating on the lower decks? Take the thickness at the stokehold.

*The Commissioner:* Does the thickness vary as the bulkhead goes on?

*Mr. Edwards:* Now I am giving information, my Lord. According to Lloyd's requirements, it does.

*The Commissioner:* And I suppose it gets thinner the higher it goes up.

*(Mr. Clement Edwards.)* That is so, my Lord. *(To the Witness.)* What is the thickness? - Between which decks?

Take the boiler section: What thickness is it in the boiler section? - Pardon me, the boiler section is the whole height of the bulkhead. You must take it in sections. This is one of the bulkheads with a deck coming up against it.

You shall take it, if you will, in different decks if there is a variation. What is the greatest thickness at the lowest deck? - Pardon me, at the lowest deck or at the tank top?

Take the lowest deck.

*The Commissioner:* No, he had better take the tank top first, had he not?

*Mr. Edwards:* I do not mind how it is done.

*The Witness:* I want to give you the information you are really looking for. 20635. I have no doubt you do. Now, do you mind giving me first of all what is the thickness of the bulkhead on the level of the floor where the boilers are? - That is down on the tank top.

Very well? - The plating of the bulkhead down on the tank top is 0.56 - 56 hundredths of an inch.

Now will you give me the thickness at F deck? - That is between F and E decks?

Yes, that is so; the wall of F deck? - Yes, the wall that extends from E to F deck.

To the roof of F deck? - 30-hundredths of an inch.

What spaces are there on these bulkheads between the stiffeners? - I think it is 30 inches - very nearly 30 inches; about a quarter of an inch less.

Now is it a fact that for bulkheads of this height the minimum requirements of Lloyd's are 30 inches? - I think Lloyd's specify for stiffeners 30 inches. 20642. Thirty-inch spaces between? - We are about 29 7/8.

So that in that particular respect, for what it is worth, you are something less than Lloyd's requirements? - No, we are something better than Lloyd's requirements. *The Commissioner:* Better, not worse.

*Mr. Edwards:* I am using the term "less" not as a standard of conduct, but as a term of measurement.

*The Commissioner:* Do not slip it by.

*The Witness:* In terms of measurement, yes.

*The Commissioner:* It is better than Lloyd's requirements. It is so little that in my opinion it makes no difference. *The Witness:* I quite agree, my Lord.

*Mr. Edwards:* I was rather on the arithmetic than the ethics, my Lord. *(To the Witness.)*

Now you have Lloyd's Regulations? - I have them.

You can take it from me that that is not necessarily to be familiar with them. That is a confession. I suppose you are in the ordinary way quite familiar with Lloyd's requirements? - Quite fairly so.

And you are also familiar with their practice? - Yes, in general terms; I am not a Lloyd's Surveyor, but in general terms, yes.

When a ship is being built for classification at Lloyd's, the practice is for a Lloyd's Surveyor to be put on to superintend the whole construction of the ship from start to finish? - One Surveyor does not just take one ship. Usually what happens is, one or two Surveyors, according to the size of the yard, and the number of yards, take all the ships being classed for Lloyd's in that yard.

And from start to finish they exercise superintendence? - In general terms; and if they see anything going wrong they interfere.

I am not suggesting there was anything going wrong, but there was no such check anyhow in the case of the construction of the "Titanic"? - Yes, two checks. 20649. Well, what were they? - In the first place by our own assistant managers watching them for the purpose of informing the office whether their requirements were being carried out. In the next place, the Board of Trade Surveyors are constantly in the ship from the very time the keel is laid. They are checking the thing right through. 20650. The first check is not an independent check in the sense of being independent of the firm constructing the ship? - No, but it is independent of the people who are actually building the ship, because it works in this way, that if the Assistant Manager, outside finds that the plans are not in some instance being complied with, he has to report the matter, and the work is put right at the expense of the workmen who have made the blunder.

## Page 528

That is to say, one department checks another? - Yes.

Now with regard to the Board of Trade Surveyor, how often did he turn up during the construction of the "Titanic"? - I really could not say; probably something in the nature of 2,000 or 3,000 times.

Are there any Rules and Regulations similar to Lloyd's or either of the other classification societies by which the Surveyor of the Board of Trade is guided? - You must ask the Board of Trade as to how he is guided. I believe the Board of Trade are pretty familiar - quite as familiar as I am - with Lloyd's and the other classification societies' rules.

I have no doubt, but I only want to get this. So far, at all events, as you were concerned as one of the responsible officials in the construction of the "Titanic," you were never referred for any one single particular to any standard or regulation required by the Board of Trade? - Except that, of course, we know what their standard is - their standard, like every other engineer's, is previous practice. We know what they have been satisfied with in previous practice, and we take care we are not below that standard. 20655. I do not want to be at cross purposes. I am not talking about complying with what, in the experience of the Board of Trade's Surveyor, is required, but so far as you personally know there is not in existence anything in the nature of detailed rules and regulations for the construction of ships similar to those laid down by Lloyd's in the volume which you have before

you? - Not published. 20656. Is there unpublished to your knowledge a document

*The Commissioner:* I think he has told us that he does not know and that you had better ask the questions from the Board of Trade.

*Mr. Edwards:* With great respect, my Lord, if I had thought that was his answer I should not have pursued it. I did not gather the witness said he did not know.

*The Commissioner:* I thought he said so. You asked him whether there were any requirements of the Board of Trade similar to those of Lloyd's, and he said, "No he did not know."

*(Mr. Clement Edwards.)* I did not catch it. *(To the Witness.)* You have heard what his Lordship has said. He understood you to say that you did not know whether there were any in existence? - I do not know what exists in the Board of Trade Office.

*Mr. Edwards:* Then you do not know whether there are such regulations. That is quite sufficient.

*(The Commissioner.)* What I understand you to say you do know is this; that they have a practice, and that judging by their practice as applied in previous ships in your yard you are able to comply with their practice? - In the matter of bulkheads, my Lord, in particular, they are guided very much by the standard laid down, which is a partial publication, I know, of the Bulkhead Committee of 1891, referring to bulkheads. 20658a. *(Mr. Clement Edwards.)* That only refers to bulkheads? - We have been discussing bulkheads so much.

It does not apply to everything? - It does not apply to everything, no.

Now, I ask you whether you were familiar with the requirements of Lloyd's. Can you say in what other respects the scantlings of the "Titanic" were superior to the requirements of Lloyd's? - No, I cannot, the reason being that Lloyd's have no published requirements for ships 800 feet long.

*(The Commissioner.)* That is what I was asked to ask you: Are there any published rules of Lloyd's which would apply to vessels of the size of the "Titanic"? - Nothing whatever; they stop at about 650 feet.

*Mr. Edwards:* So that when Mr. Sanderson said he put it on the information of the shipbuilders that in certain respects the construction of the "Titanic" was superior to the requirements of Lloyd's, he must either have been in error, or, apart from the builders, he must have submitted the plans to Lloyd's and got some pronouncement upon them. *The Commissioner:* Your logic is wrong.

*The Witness:* May I point out this, for example. You are referring to bulkheads, and you did not pursue the question. If you had done you would have found that the thicknesses of the plating were between 10 and 20 percent in excess of Lloyd's requirements. That is not an immaterial matter, any way.

*(Mr. Clement Edwards.)* That is for a bulkhead of the height of 44 feet? - Yes. 20663. Now as to the operation of the automatic float in connection with the watertight doors. Have you considered what might have been the effect on that automatic float? We have had it in evidence that the watertight doors were open for the engineers to get through; assuming that to be correct and assuming that at a given moment there was a great rush of water from section 4 through sections 3, 2 and 1 on the level of the boiler room, have you given any consideration to what would

have been the effect on the automatic float, or what possible volume of water could have got through sections 3, 2 and 1 before the watertight doors came down? - In general terms, yes. The float, as I have pointed out, is under the stokehold plates. It is therefore protected from the rush, and, as I explained, the float is rather lighter than a piece of cork. The float, not being directly in the rush, would therefore float as well as a piece of cork. I do not think the question of a moderate flow of water round the float would materially interfere with its floatability.

20664. Has it occurred to you that by the construction of the ship on the level of the boiler room floor there would be an absolutely clear uninterrupted run? - Yes.

20665. And that the automatic float would not operate until a sufficient quantity of water had come off what I may call the central pathway, so as to come up under the hollow float and operate it? - Certainly.

20666. Has it occurred to you that there might be a huge volume of water in section 1 and in section 2 before the watertight door had been operated by the automatic float between sections 3 and 4? - Let me put it in this way and then you will see. I want to make it clear if I can. I think what you are referring to is, assuming a rush of water from boiler room No. 4 into boiler room No. 3 in the first place, whilst there is a clear run through for the water. The doors being open, there is no constraint at the side, if there was a rush of water through the door it would promptly spread round into that boiler room - 20667. You are not rightly assuming what I mean? - I would like to finish, and then if I am not right you can say so. It would spread round into the boiler room and get round under the plates long before it constituted a rush into the next boiler room. That is the first point. Consequently the float would be operative before the water would get very far through - that is, into the second boiler room - in the nature of a rush. But I quite agree that before the float would operate some, perhaps, three or four hundred tons of water would be able to get through into that boiler room. That three or four hundred tons of water is a small thing in a ship of 50,000 tons. The tanks are bigger than that. 20668. You have not quite assumed correctly what I mean. Just assume for a moment that the water had come with a rush following the breaking of a bulkhead. Assume that for the moment? - Yes.

The water would shoot through the watertight doorway between sections 4 and 3 at a pace quite sufficient to carry it straight through? - Oh, no.

That is what I want? - That is where we differ. The pace would be nothing like sufficient to carry it through.

## **Page 529**

Why do you say that? - Because, after all, the speed at which that water goes through is dependent on the head of water. The pace at which that water would come through the door could not exceed the pace that is due to the head of water behind it. I take it you will agree with me on that. The head of water behind it at most could not exceed the 40 feet to the top of the bulkhead. I take it you will agree with me on that. Now the speed at which that water would come through is, therefore, known. It would not suffice in the height of the door to carry more than

about 12 or 15 feet across the stokehold from the bulkhead, and by the time that it had gone 12 or 15 feet across the stokehold the water that was coming through at the level of the top of the door would have fallen to the level of the stokehold plate.

Now may I put this. Just for the purpose of my question will you assume (I know it is a large assumption) that Section 5 becomes filled up? - Yes.

And that the bulkhead between Section 4 and Section 5 had given way? - Yes.

Do you mean the door or the bulkhead?

I mean the bulkhead. That is to say, that suddenly you get precipitated into Section 4 water representing the roomful of Section 5? - No, it cannot, because the bulkhead is inside the bunker. That is why I asked you whether it was the door or the bulkhead.

But the whole of the bunker is not inside? - All except the watertight door is inside the bunker.

But the watertight door does not go the whole height? - No, but the passage, the trunk passage from the bulkhead to the watertight door, is only just the height of the watertight door.

Therefore it will be double the height of the water? - Quite unnecessary, because, if I may point out, as long as the connection at the frame at this level, just above the door, is watertight, there is no need for *this* part to be watertight. That can be common to the bunker, and is common of the bunker.

Assume for a moment that Section 5 has got filled and that the area covered by the watertight door gives way? - That means the watertight door itself gives way? All right.

Certainly. Can you calculate what would be the pace at which the volume of water represented by the area would come out of the whole sectionful? - It would be quite calculable of course. I must point out to you that in the event of the door giving way, it is very unlikely that it would give way in such a fashion as to leave a clear opening the full size of the door. That is the first thing.

The smaller the opening, the greater the hinder pressure and the further the water will shoot, is not that so? - No; the pressure behind it is the same and the water would shoot the same distance. I have had to point that out earlier. The pressure was independent of the distance behind.

So that in your view, at all events, you think that there would not be a sufficient volume of water, or a sufficient top pressure of water I will put it, on the boiler room floor to cause serious mischief in Sections 3, 2 and 1 before the automatic float would have operated the door between sections 3 and 4, if the water had burst through? - Quite right.

Now I understood you to say that each section was operated by separate and distinct pumping arrangements? - There are separate and distinct pumps into all the boiler rooms except No. 1.

Now, if Dillon's evidence is correct, can you account for the engineers requiring to put that extra pipe into Section 4? - Yes, very well.

Will you do so? - There is only one pump of a capacity, I think, of 150 tons an hour in Section 4 room. I think that is it. In Section 3 there are two pumps, one of 250 and one of 150 tons. They could put on by the permanent pipes, which are provided in the bottom of the ship, one of those pumps, I think the 250-ton one, to the pumping out of No. 4. But what I believe happened is they found the small pump in No. 4 and the 250ton pump in No. 3 insufficient. The water was very slowly rising against them, and in order to try to get it down they brought forward these temporary connections to try and couple up the other pump in No. 3, which they could only do through these portable connections.

How long ought that operation to have taken, do you think? - Well, you have got to carry a heavy pipe for about 500 feet through somewhat confined spaces, and you have then got to make the connection to the ash-ejector pump, the small pump in No. 3; and I should think if from the time the decision was reached to the time the pump was started they did it in half an hour, they would be doing very well.

Assume that that was so, can you account, if Dillon's evidence is correct, for those watertight doors being left open for an hour and 40 minutes? - Provided there was no sign of any distress on the part of the watertight door - they would have to keep the door between 3 and 4 open in order to make the temporary connection - then it would be quite a reasonable and proper thing to leave those doors open, because they can all be closed very rapidly from alongside the door just as quickly as from the bridge.

If I understand you correctly in your calculations as to the time taken to sink the ship at certain angles, the forward compartments must have been pretty nearly full of water before an hour and 40 minutes from the time of the striking of the ice had elapsed?

- I agree. About 40 minutes, I think, according to the evidence.

Then, if that is so - 40 minutes to get those compartments practically filled - could you account for those watertight doors being kept open for a further hour? - I see no reason why they should not be, provided there is no need to close them.

I will put it in this way. What point in the filling of the fore compartments do you suggest would represent a need for the closing of the watertight doors between Sections 4 and 3, 3 and 2, and 2 and 1? - Whenever water began to come into No. 4 boiler room in a serious volume.

Not until then? - Not until then. It would be of no value until then; and the reason for that is that it is not necessary till then, because it is not until water begins to come in, and in a serious volume, that it is necessary to take steps to check its flow. 20691. It would not be necessary to close those watertight doors until such a time as might represent the ship being in a state where the whole thing was hopeless? - Quite. 20692. I will ask you, if that is your view, what view you take as to the advantage or otherwise of having, at all events for a certain part, solid bulkheads, that is to say, bulkheads with watertight doors? - Bulkheads without watertight doors are ideal. Every watertight door is a little more liable to go wrong than a riveted and caulked plate. If the door is well taken care of, not much more liable, but one must be able to work as an engineering proposition in the bottom of the ships; one must therefore have watertight doors. The best is to have the

smallest possible number of them, and take care they are in positions where they will be well kept.

Not only the smallest possible number, but I suppose the fewer watertight doors there are in the lower regions, from the point of view of safety, the better? - Absolutely.

That is one of the objections I made this morning to the "Mauretania" design. There are a very large number in the bottom of it, on the tank top.

I was going to ask you one question about that. I understood your objection to the "Mauretania's" design was also an objection to the longitudinal bulkheads? -

Well, there is some objection to them; yes.

I understood you to put the objections to the longitudinal bulkheads, as in the "Mauretania," upon first of all the commercial ground, greater cost? - No. As a matter of fact, I do not think there is much difference in the cost.

### Page 530

A diminution in the effective space of the ship? - No; I am sure I never said that. 20697.

It was not your phrase, but I understood you in your evidence last night to indicate that? - I beg your pardon, you said longitudinal watertight bulkheads, not the double skin; you are mixing up two things.

I may be under a misapprehension, but if you get a double bottom continued some distance up the side above the bilges that will bring you to the construction which is usually described as a longitudinal bulkhead? - No. That is carrying the inner bottom up the ship's side. That is quite another proposition.

Is not that precisely what has happened in the case of the "Mauretania" - at all events running the length of the engine room? - Pardon me I do not think so. 20700. You will correct me if I am wrong? - I am not absolutely familiar with the "Mauretania," but I do not think there is anything of that sort.

Is not the position then, that in the "Titanic" you have the double bottom? - Quite right. Which runs out to the bilges? - Yes.

And that in the "Mauretania" the double bottom means that in the bottom of the ship there is an outer and inner skin? - It is so in both ships.

But that in the "Mauretania," at all events, running the whole length of the engine room, this inner skin runs right up the side to the height of the engine room? - I do not think so. I am not sufficiently familiar with the "Mauretania" to be sure, but I do not think so.

*The Commissioner:* I am told that is quite a misconception. I do not know whether it will assist you if I give you the transverse section of the "Mauretania." (*The same was handed to the learned counsel.*)

(*Mr. Edwards.*) Is it not the fact that in the "Mauretania," as far as you can see from the plan, there is running up from what I will call the inner bottom skin, an inner side skin running the whole length of the boiler space? - The longitudinal bulkhead not the inner skin. The two things are technically different.

What is the difference between a longitudinal bulkhead and an inner skin running up the sides of the ship? - In the case of the inner skin the two would be closely

connected together forming one girder and part of one structure. They would be connected at every frame or at alternate frames. In the case of a longitudinal bulkhead, the connections would be much more widely spaced, probably something like 30 feet apart instead of six.

So that in the one case what you might have in strength by what I will call the intrinsic strength of the bulkhead, you would probably lose in there being less binding between the outer and inner skins? - Very likely, yes.

Do you know that in the case of the "Mauretania" they utilised the space between - I will drop the term inner skin and adopt your term - the space between the longitudinal bulkhead and the outer skin for coal? - Exactly; that is one of the features of their design.

At all events so long as that space is effectively used for coaling purposes there is not anything like the risk of serious danger from the corrosion of which you spoke yesterday? - I am afraid corrosion is just as bad in a bunker as it is anywhere else, but it has this advantage; a bunker is a much more accessible thing. It is a much larger and more open space, because of the more widely spaced connections, and, therefore, you can get about in it and look after it better.

It has also the advantage if it is used for coal that, while at all events there is the coal there, there is no room for the water? - Yes, that is quite true, but you must remember that when there is coal there the coal has to be got out of there. As I pointed out to his Lordship this morning -

There is no reason why the coal should not be evenly trimmed from the bunkers on either side of the ship, is there? - There is no reason whatever, but that is not the point. To do that it means both sides must be open. You cannot pass coal through a watertight bulkhead except with the watertight door open.

That I should gather. Supposing there had been in the "Titanic" a longitudinal bulkhead there would have been greater safety? - That is a very complicated question.

I noticed that you said that you took the case of the inner skin of the "Titanic" on the starboard side of the spiral space? - Yes.

And you said that as that inner skin was a certain distance - I think you said at 3 feet 6 inches? - 3 feet 3 inches, I think it is.

That as the water was coming through there it is quite clear the ice must have penetrated at least that distance? - I agreed to a suggestion of that sort.

I am glad you call it a suggestion, because I am not aware of any definite evidence here that water was coming in through that skin on the side of the spiral staircase? - Look at Hendrickson's evidence, and you will see it. He saw water rushing from the starboard side at the bottom of the spiral stair.

He said he could not tell where it was coming from, it was such a rush? - But he saw it coming from the starboard side.

That is the starboard side? - At the foot of the spiral stair.

It would be possible for water to be coming from the starboard side to have either been coming out fore of the spiral staircase or a little aft. That is to say, even supposing water was coming more or less from that side, that is not in itself conclusive that there was penetration in the area of the spiral staircase? - The spiral staircase

being in a watertight trunk both at the fore end and across the fore end, and at the side and at the afterend, some part of it must have been penetrated. I mean the side and end and bottom are all watertight, and water can only get in if there is some penetration.

I agree, but whether that penetration is off the spiral staircase on the starboard side or is actually on the starboard side or is even fore of the spiral staircase - ? - But let me point out the spiral staircase occupies practically the whole dimension of that trunk, consequently there must be penetration of the trunk which immediately surrounds the spiral stair.

Does that follow? - How could water get through the watertight space if you do not make a hole in it?

Allow me for a moment. Is it not possible that water might have come in through the floor of the ship? - Through the floor of the spiral stair, not of the ship. 20723. Hendrickson's evidence, I think, is rather important. Hendrickson said, in reply to Question 4859: "You looked down here and saw it? - (A.) Yes, I saw the water rushing in here. (*Pointing on the plan.*) I saw it running out of the forepart of the pipe tunnel right down at the bottom of the stairs"? - Now it is not quite clear, but, of course, it is reasonable that he should call the trunk which surrounds the spiral stair part of the pipe tunnel, and it is in practice. I am only putting to you what I think is the probable explanation.

*The Commissioner:* Can you tell me what point you are on at present? What is it you are trying to establish?

(*Mr. Clement Edwards.*) In regard to this particular point, I am leading up to the question of the bulkheads, and also I am seeking to test the value of Mr. Wilding's evidence as to the disadvantage of the longitudinal bulkhead by his citing in the case of the "Titanic" on a certain assumption that an inner skin in the nature of a longitudinal protection was penetrated by ice. If it is not quite clear that that inner skin - take what I call the spiral staircase area - was not penetrated by the ice it becomes a very important factor with regard to the question of the value of longitudinal bulkheads. That is the point, my Lord. I do not want to pursue it unnecessarily. (*To the Witness.*) Supposing your assumption is not correct that this inner skin on

## **Page 531**

the starboard side of the spiral staircase was penetrated, then there is not very much of a point to be made? - There is this point to be made, that whether the bottom or side or one end is penetrated the ice must have got well inside the ship to do it.

That is to say it may have got well inside the outer skin? - Quite. It must have been inside the outer skin, and so far inside the outer skin that it would have penetrated the inner skin.

I am just coming to that. Assume for the moment that your view about the water coming in there were right, it would be equally consistent if water came in through this skin on the starboard side of the spiral staircase; it would be equally consistent with the inner skin having been wrenched and dislocated by the force of the impact as it would be by actual penetration by the ice? - Well, we have had evidence as to the force of the impact;

that is, that there was nothing in the nature of what is usually called impact, but that it was a comparatively light sliding blow. I mean that is the whole character of it. 20727. I will put it in another way. I did not use "impact" as applying to the whole area of the ship, but a sufficient strength of collision if you like, at all events, to penetrate the outside plates? - Yes.

This inner skin on the side of the spiral staircase, I presume, is connected with the outside frame? - Yes, the floor is, not the side.

So that a blow, an impact, what you will, sufficient to rip the outside plate, if made at a point where there is a connection between the outside skin and the inner skin, might be sufficient to rip the inside skin and make an aperture? - Not if the connections are properly arranged, because it is part of the regular practice, Lloyd's Rules, or other, that your boundaries are stronger than your connections. It would be a bad design if it was not so.

I suppose it is because you could not bring yourself to take that view that you have taken the other one? - Naturally.

You have said that you have estimated that the aggregate area of aperture was probably 12 feet square? - No, pardon me, not 12 feet square, 12 square feet. That is another proposition.

Again, I stand humbled on my arithmetic. Has it occurred to you that there was anything which might have been done by the ship's carpenter or any other person to repair it or to prevent the inflow of water? - We know the hole must have been spread over a length of 200 feet. With a hole of only 12 square feet area, which you can localise actually within a few feet, something might have been done, but when it is spread in unknown positions, over a length of 200 feet, I am afraid nothing could be done. 20733. That is to say, one area could be dealt with by one man? - No, it would require 50 or 60 men, at any rate, to handle a collision mat.

20734. That is to say, the difficulty, where there is a number of apertures, is having the requisite number of people to go? - No, it is a difficulty to locate where they are. 20735. I know, but the question of locating them rather depends, does it not, upon a sufficient number of persons being sent? - I do not think the number of people has much to do with it. Let me put it in this way. The only way you can locate them is this; you cannot get down inside because the water and the cargo is there; you can only get at them by trial and error - by putting something in the nature of a collision mat outside the ship, and in the case of trial and error it is a slow process.

It is a process which might be expedited if a number of persons are working on it? - I do not think, beyond a very moderate number, it would have much effect. Fifty or 60 would probably do it as fast as 500 or 600.

We have had evidence that there was a certain aperture in Section 6, and there was a very tiny one in section 5? - Comparatively small.

With your experience do you see any mechanical difficulty in the way of that aperture in Section 5 having been dealt with? - I am afraid that an aperture in Section 5 involves in itself that the bulkhead was damaged though he did not see any water coming through the damage. As you have put it, there are connections at that point. The bulkhead runs out and is in contact with the shell and to rupture the shell, you must at the same time rupture

the bulkhead, though the water in No. 6 boiler room may not have been high enough to flow through the rupture shown.

If that particular damage was a distinct and separate damage, do you see any reason why that might not have been dealt with? - No, but I do not think it would have had any influence under the circumstances.

With regard to No. 6, where Barrett was, where water was coming in in fair volume, do you see any mechanical difficulty in having stemmed the wound there? - Something might perhaps be done in the way of a collision mat; but let me point out that the water got into No. 6 so very quickly (we have had in evidence how fast it came in) that it would have risen to a fatal height if I may use the word long before anything could be got outside over the skin of the ship, to check the inflow.

But the collision mat could have been got there - the fatal height anyhow wherever it was was not reached until twenty minutes past two, the time of the sinking, that is the test of the fatal high water? - The fatal time, that is, the time when nothing that human ingenuity could do could prevent the ship sinking, is found at a much earlier time than the actual sinking of the ship.

Supposing a long time before that collision mats could have been got out? - I do not think so. My experience with rigging them shows that it must have been practically up to the fatal time before it could be done.

It has been suggested that there is a better method than that by the collision mat of dealing with apertures in an iron ship, and that is some sort of arrangement utilised from the inside (I am using quite a simple illustration) in the form of an umbrella, which is pushed out, made of suitable material, suddenly opened, and the pressure of the water suddenly drives it back like a turned umbrella into the aperture? - But you have to get inside the aperture to put that out.

One recognises that? - I think the evidence of Barrett was that he was more or less rushed off his feet by the rush of water. I do not think you could push an umbrella through it.

But you see no reason why that should not have been done in No. 5? - I have pointed out to you, I think, that I do not think the small leak in No. 5 was material. 20746. A diver might have done this even in No. 6, might he not? - Diving is a slow operation and your time is limited.

You have to take the time here which elapsed between the collision and the sinking? - There were only 40 minutes, about as far as I can tell from the evidence, before the time arrived at which none of those measures would become effective. It would be fairly quick work to get a diver into his dress and down in that time.

You do not think it could have been done in this particular case, anyhow? - I am afraid, in this case, nothing.

*The Commissioner:* If you are anxious to ask any questions, Mr. Scanlan, you must restrain yourself until Monday morning at 11 o'clock. Perhaps, in the interval, you can make what you have to say short.

*Mr. Scanlan:* It will be very short, my Lord.

*(The Witness withdrew.)*

*(Adjourned to Monday next, at 11 o'clock.)*

# In the Wreck Commissioner's Court.

SCOTTISH HALL,

BUCKINGHAM GATE,

## PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC." TWENTIETH DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K. C., M.P. (*Attorney-General*), SIR JOHN SIMON, K. C., M.P. (*Solicitor-General*), MR. BUTLER ASPINALL, K. C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by Sir R. Ellis Cunliffe, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K. C., M.P., MR. F. LAING, K. C., MR. MAURICE HILL, K. C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.) appeared as Counsel on behalf of the White Star Line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland, and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted on application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company; and (instructed by Messrs. William A. Crump and Son) also on behalf of the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P. (instructed by Messrs. Helder Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside and General Workers' Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third class passengers. (Admitted on application.)

MR. C. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian" (Leyland Line). (Admitted on application.)

Mr. H. E. DUKE, K. C., M.P., and MR. VAUGHAN WILLIAMS (instructed by Messrs. A. F. and R. w. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff Gordon. (Admitted on application.)

MR. F. LAING, K. C., and MR. ALFRED BUCKNILL appeared on behalf of Messrs. Harland and Wolff. (Admitted on application.)

**Page 534**

**EDWARD WILDING, Recalled.**

**Examined by Mr. SCANLAN.**

Did you see the plans prepared for the "Titanic" boats? - Some of them.

You personally, I take it, had nothing to do with the preparation of those plans?

- Not directly; no; they were made in the drawing office.

You had nothing to do with it yourself? - Not personally. Some of the information in connection with the boats had a bearing on the design, and I was consulted about that.

Who was the manager, or who was responsible for the preparation of the plans in Messrs. Harland and Wolff's yard? - Of which plans?

For the boats; I am confining myself entirely to the lifeboats? - They are made in the drawing office, in the principal shipyard drawing office, under the direction of whoever is taking charge of that work.

Would it be done under the direction of Mr. Carlisle? - If Mr. Carlisle chose to interest himself in it, yes.

Were those plans to your knowledge submitted to the White Star Line? - Some plans, I believe, were submitted to the White Star Line.

You have stated that you saw some of the plans, not all of them, for the lifeboats? - I saw some of them prepared. I think I have seen all the plans. 20757. I want to ask you if the plans, which you saw, provided for two or more lifeboats for each set of davits? - I saw plans prepared for discussion amongst ourselves which did show two boats under each pair of davits.

Did you see any plans showing three boats? - I think there was a plan submitted to us by Welin showing three boats. I do not think we made any plan ourselves.

You do not know whether any plan was prepared by yourselves for three boats?

- I do not remember; I do not think there was; I think only two.

20760. Would those plans in the ordinary course be submitted to the White Star people?

- Not of necessity.

20761. So far as your knowledge goes, you cannot say whether or not? - We, of course, have been making a search in all our records, and as far as I can ascertain they were not.

20762. As to your own knowledge you cannot say? - Of course, I was not at all the meetings with the White Star Line.

If lifeboats to the extent necessary to provide for everyone on board have got to be provided for vessels like the "Titanic," what do you say as to the suitability of having such an arrangement as is indicated in that plan, that is working three boats on each set of davits? - Pardon me, I did not quite take your question.

You say you saw a plan for two? - Yes.

And you think there was a plan showing three boats to be worked from each set of davits? - Supplied to us by the davit patentee.

Would that be a suitable arrangement if the number of lifeboats were to be considerably increased? - Broadly speaking, yes.

*(The Commissioner.)* Before you answer that question, tell me whether you have considered the matter? - In general terms, yes, my Lord.

Very well, then you are able to express an opinion? - Yes.

*The Commissioner:* Then answer the question.

*(Mr. Scanlan.)* Just give my Lord your opinion then with regard to that? - It is possible to carry three boats in the manner that was indicated to us on the sketch prepared by Mr. Welin. Whether it is altogether a desirable arrangement or not, is the question we were discussing amongst ourselves at Belfast.

*(The Commissioner.)* What conclusion did you arrive at, if any? - As far as my memory serves me, the conclusion we arrived at was that it was not one which we cared to recommend to the owners.

Why not? - In our opinion, the number of boats was sufficient for the purposes for which they were most likely to be wanted.

*(Mr. Scanlan.)* As some consideration was given by builders to the provision of additional boats and to the plan, I want to know why you did not give the owners, that is the White Star people, the benefit of your consideration and give them an opportunity of deciding? - A great many matters of technical detail are left by the owners, the White Star Line, to us as their experts for decision.

Have you considered whether it is practicable to carry lifeboats on the poop? - Yes; it is practicable to carry them there.

Have you provided lifeboats on the poops of some ships made at Messrs. Harland and Wolff's? - Yes, I believe we have, for foreign owners.

On these Welin davits? - No.

*(The Commissioner.)* I should like to ask you with reference to that last question. Can you give me the name of a foreign ship for which you provided lifeboats to be

placed upon the poop? - In the "Amerika," I believe it was, for the Hamburg-Amerika Line.

Did you ever build steamers for the Hamburg-Amerika Line? - Yes, a number.

Did you build the "Amerika"? - We did.

You can tell me something about that. Can you tell me what the size of the "Amerika" was, the tonnage? - I am quoting from memory, but I think it was 670 feet by 74 feet, and about 23,000 tons measurement. 20780. 23,000 tons? - About that.

She was then a smaller boat than the "Titanic"? - About half the size.

Can you give me any idea how many passengers and crew that boat was designed to carry? - I could give the figures, but I do not recollect them; I could readily get them.

You would assist me if you will get those figures? - Very well, my Lord, I will arrange to have them here.

Perhaps you can answer this question without those figures. What proportion did the lifeboat accommodation bear to the number to be carried in the ship, passengers and crew? - I would like to get the correct figures, but my impression is that the "Amerika" could carry about the same total number of passengers, or rather more than the "Titanic" could carry, and that she had somewhere about the same total capacity in lifeboats.

Do you mean to say then that the accommodation on the "Amerika" was much more confined than it was on the "Titanic"? - It was.

Although she was only about half the size of the "Titanic," she was designed, you think, to carry about the same number of passengers? - The two ships were designed to carry about the same total of passengers.

That is to say, the "Amerika," being about half the size of the "Titanic," was designed to carry the same number of passengers as the "Titanic"? - She was a much earlier design.

I daresay she was, but that involves, it seems to me, putting the passengers in the "Amerika" much closer together than you would have them in the "Titanic"? - It does my Lord. Perhaps I may explain that the number in the "Amerika" was largely made up of third class passengers, who take less space than the first class.

Yes, I am sure they do not get as much accommodation as the first class passengers; but it comes to that, that the "Amerika," being half the size, carried about the same number of passengers and crew? - Yes.

Or passengers, at all events? - Yes; I have the figures, my Lord.

**Page 535**

Wait a moment. And that the boat accommodation was substantially the same? - Broadly speaking, yes.

You will get me the particular figures? - Yes.

I have no doubt you can do that. Were there lifeboats on the "Amerika," carried on the poop? - My memory says that they were; I will verify that.

The "Amerika," of course, sails under the German flag? - She does, my Lord. 20795.

Have you taken any pains to ascertain what the requirements of the German law as to lifeboats are? - In general terms, my Lord, they are very similar to the British.

"Very similar" does not quite satisfy me? - I do not think the difference exceeds about 10 percent, or something of that sort.

You mean to say the German requirements are 10 percent in excess? - For the very large ships; that is my impression. They are in excess, but not very much in excess. 20798.

Can you tell me this? I shall no doubt get it later on, but I want now the information from you, if you can give it to me. Can you tell me whether there are specific requirements in Germany as to lifeboat accommodation in ships ranging, we will say, from 10,000 to 40,000 tons? - There are.

In that respect the requirements differ from the requirements of the Board of Trade? -

The British requirements say all above 10,000 tons. They class them all; they do not separate them.

There are no specific requirements for steamers above 10,000 tons under the Board of Trade Rules? - Well, they are specific; they say they will only require the same as for ships of 10,000 tons.

That is what I mean by not being specific. They say that a certain number of boats shall be provided for steamers of 10,000 tons, and then they say for all steamers above that it will be sufficient if the same number is carried? - That is the British Board of Trade.

What I want to know is, whether the German requirements proceed step by step as the tonnage increases from 10,000 tons, and specify what boat accommodation is to be provided? - Yes, my Lord, they do. I do not remember the details of the steps, but there are steps.

I daresay you do not remember at what point the German requirements stop? - I might be able to find out now. I think the Germans go up to 50,000 tons.

What was the tonnage of the "Imperator"? - That is just about the tonnage of the "Imperator."

Then, if they intend to build ships bigger than the "Imperator," and continue the policy which dictated the drawing up of those rules, they will have to extend them. I suppose that is so. It follows? - My impression of the German rules is that they would automatically extend them for a larger ship.

But there is no provision in the requirements as at present drawn up for what one may call an automatic increase? - The words as far as I can follow them are these: It says for 50,000 and upwards a proportionately larger number.

Have you the information there? - It was a privately printed copy from some of them.

Will you show it to me? - Certainly, my Lord. (*Handing the same to the Commissioner.*)

*Sir Robert Finlay:* I am told by Mr. Furniss that he had the German and French regulations on this subject, and has handed them to the Board of Trade.

*Mr. Butler Aspinall:* Yes.

*The Commissioner:* You have got them?

*Sir Robert Finlay:* We have handed them to the Board of Trade, and they have them.

*The Commissioner:* Then I will not pursue this.

*Mr. Butler Aspinall:* We have all the various regulations, my Lord.

*The Witness:* There is one point which I think will interest you, my Lord, before we pass from that. There are other German ships which we have built which are still smaller.

20809-10. (*The Commissioner.*) You did not build the “Imperator”? - No, she was built by the Vulkan Company, of Stettin, at their Hamburg yard; but we have built some other ships under the German flag which carry an even larger number of passengers than either the “Titanic” or the “Amerika,” and I have particulars here. I got them because they are the ships which carry the largest number of passengers of any ships which have ever been built, and I have particulars here of their boat accommodation.

And what do you find? - I find that the proportion of the total accommodation in the boats provided to the total number of souls on board is much about the same as in the “Titanic.” In one ship, the “President Lincoln,” the number of souls on board in our records is shown to be 4,108, and the boat accommodation provides for 1,465 people.

Did you build that boat? - We did, my Lord.

Is she sailing still? - She is, my Lord.

And under the German flag? - Yes.

#### **Examined by Mr. HARBINSON.**

All these huge steamers which you have mentioned in your evidence to my Lord were built on the theory that you built the “Olympic” and the “Titanic” on as regards unsinkability? - Yes, I may say that for the very large German ships, the equivalent of our Board of Trade, the “Seeberuffsgenossenschaft,” make it a requirement that a ship shall float with any two compartments flooded.

Therefore, it was on the basis of unsinkability that this number of lifeboats was provided?

- Pardon me; “unsinkability” does not describe the thing quite rightly. It is that ships shall remain afloat with any two compartments flooded.

I will say, on the theory of floatability, two compartments being submerged? - Quite right.

It was on this basis that the number of boats were apportioned? - Quite right. 20819. But that now that theory, being more or less destroyed - *The Commissioner:* What theory?

*Mr. Harbinson:* The theory of floatability with two compartments submerged.

*The Commissioner:* I do not know that it has been destroyed at all.

*The Witness:* The theory or statement is still correct that the ship would float with any two compartments flooded.

20820-1. In your view, if only two compartments of the “Titanic” had been full of water, would she have floated? - She would undoubtedly, and if any three compartments at the forward part had been flooded.

20822. Then I do not see that the theory has been misplaced? - Not at all, my Lord. *The*

*Commissioner:* Four or perhaps more of the compartments were flooded in this case?

*Sir Robert Finlay:* Two, and six partially.

*Mr. Harbinson:* Is it not popularly supposed that these huge boats, with watertight compartments the same as you have put on the "Titanic," are regarded as unsinkable? 20823. (*The Commissioner.*) I do not know what "popularly supposed" means. What do you mean? Do you mean to say that an ignorant man in the street supposes it, or what do you mean?

*Mr. Harbinson:* I mean the view held by the general public.

*The Commissioner:* Who are the general public? I am not going to sit here to enquire into what the general public think.

*Mr. Harbinson:* It was you who elicited the answer, my Lord. The point I am on is as regards unsinkability. *The Witness:* Floatability.

## Page 536

[There is no Question 20824.]

*Mr. Harbinson:* Yes, I think that is better - floatability. It now having been proved that these boats in times of danger will sink like other boats -

*The Commissioner:* That has not been proved.

*Mr. Harbinson:* My Lord, it has been proved that -

*The Commissioner:* There are many other boats that have not got any watertight bulkheads at all.

*Mr. Harbinson:* I do not think any of the first class liners - *The*

*Commissioner:* That may be, but you talked about "other boats."

(*Mr. Harbinson.*) I think Mr. Wilding pretty well understands what I mean. (*To the Witness.*) That being so, did you not consider it desirable that lifeboat accommodation should be provided for all? - No, I am of the same opinion as Mr. Sanderson, which he put very well in his evidence.

*The Commissioner:* It is for this tribunal to express an opinion upon that point. You may ask him any facts which will guide us.

(*Mr. Harbinson.*) That is what I am going to do. (*To the Witness.*) Do you know whether or not, during the construction of the "Olympic" and "Titanic" any conversation took place with Mr. Andrews regarding ample boating accommodation for all passengers and crew on these steamers? - As far as my memory serves me there was no proposal made that boats should be fitted, or even a plan prepared showing accommodation for everyone on board.

(*The Commissioner.*) Can you tell me this: Was there at the time the "Titanic" was built any liner in existence that you know of that had boat accommodation for everybody on board, and, if so, what is the name? - Some liners of moderate size, my Lord.

Do you mean the P. and O. boats? - And the Royal Mail boats.

When you say the Royal Mail, you mean the company? - The Royal Mail Steam Packet Company's boats.

They stand in an exceptional class. I mean liners on this trade between this country and America. Do you know of any liner carrying immigrants to America or emigrants from this country to America that had lifeboat accommodation for every

passenger and member of the crew intended to be carried? - I believe there is no boat which -

Will you answer the question? - I am trying to, my Lord.

You can say yes or no, and then I will ask you another question. Do you know of any such boat? - No.

Then I do not want to ask you any other question? - Your Lordship's question was not quite clear.

Do try to answer the questions simply, and then we will get on possibly? - Quite, my Lord, but your Lordship said ships which would carry boats for everyone on board.

Ships which did in fact carry such boats at the time of the "Titanic" disaster? - Boats do not always carry their full complement.

I am asking you about boats calculated to carry all the persons that a steamer may carry? - To that, my Lord, my answer is quite right. There was no such ship; I can say that emphatically.

*(Mr. Harbinson.)* You have not built any in your yard to do so - Messrs.

Harland and Wolff? - No, nor do I know any built by any other company.

*Mr. Harbinson:* I do not wish to suggest particular lines at present. I shall be able to give evidence presently.

*The Commissioner:* Do you suggest them?

*(Mr. Harbinson.)* Then I will suggest a line which does. I suggest the Allan Line carries boats for all? - It does now.

And they did? - I am not sure.

*The Commissioner:* Give us the name of the steamer.

*Mr. Harbinson:* I respectfully decline until the proper time comes, and then I will produce evidence.

*The Commissioner:* You are, in fact, cross-examining this witness. I do not think you ought to do it, but you are doing it, and if you are going to adduce later on particular cases of particular ships it is your duty to put the cases to him now. That is your duty.

*Mr. Harbinson:* I have put the questions to him, my Lord, of course, always subject to what your Lordship says -

*The Commissioner:* When the time comes I may object to your adducing any evidence with reference to particular boats. It is not right of you to keep the information up your sleeve.

*Mr. Harbinson:* If your Lordship thinks so, I shall be obliged to bow to your decision.

*The Commissioner:* Yes. Now put the cases to him.

20840. *(Mr. Harbinson.)* For the present I do not propose to put any further questions on that subject. *(To the Witness.)* Will you tell me what is the thickness of the outer skin of these ships, the "Olympic" and the "Titanic"? - Whereabouts? 20841. The outer skin? - One inch.

And, therefore, liable to give at very slight pressure?

*The Commissioner:* Really, that question is of no use to me. Do you really say likely to give at very slight pressure?

*Mr. Harbinson:* Relatively, yes.

*The Commissioner:* What is the pressure?

*Mr. Harbinson:* I am putting a concrete question.

*The Commissioner:* Tell me the pressure. "Very slight pressure" conveys nothing to me.

*Mr. Harbinson:* My information is that at the launch of the "Olympic," the sister ship of the "Titanic," built on the same principle, when the boat was being launched from the dry dock, a gale of wind, not strong, blew it against the side of the buttness, and the side of the ship crumpled up like tinder.

20842. (*The Commissioner.*) That is very good. Now let us stop. (*To the Witness.*) Did the side of the "Olympic" ever crumple up like tinder? - It did not crumple up like tinder.

20843. Do you know what crumpling up like tinder is? I do not. Put your own interpretation upon it, whatever it may be, and tell me, did you ever know of the side of the "Olympic" crumpling up like tinder? - I never knew of it, my Lord. 20844. Did you ever hear of it? - Not like tinder, my Lord.

*Mr. Harbinson:* Did you know of it crumpling up at the launch?

*The Commissioner:* Now we will strike out the tinder.

(*Mr. Harbinson.*) That is an illustration; it may be too graphic. (*To the Witness.*) I will ask you now, did it crumple up? - No, it did not crumple up.

Did it give? - It was slightly dented.

*Mr. Harbinson:* I thought so.

*The Commissioner:* If you thought it was slightly dented, why did you translate "slightly dented" into "crumpling up like tinder"?

*Mr. Harbinson:* That is Mr. Wilding's description.

*The Commissioner:* But you told us you thought so.

*Mr. Harbinson:* That is his euphemistic way of describing what I have previously suggested.

(*The Commissioner.*) It gave under pressure? - Under pretty big pressure. 20848. (*Mr. Harbinson.*) Did not that suggest to you that this thin skin would give when subjected to pressure? - It depends upon the amount of the pressure.

And would not that have suggested to you as builders the desirability of having a second skin in these boats up to the waterline? - I do not see it follows in any way. We do not build ships to bang into stone walls or come into collision.

## **Page 537**

But you build them to avert a catastrophe, if possible? - Reasonable precautions against it.

That did not suggest to you the desirability of having a second skin? - Certainly not. I believe the denting was so slight -

*The Commissioner:* Will you answer the questions, and do not dilate upon them. 20852. (*Mr. Harbinson.*) Do you think it would be possible to install in these boats some kind of mechanism for giving a general alarm in cases of supreme danger? - It is quite possible to install such a mechanism.

Was that mechanism installed in the cases of the "Olympic" and the "Titanic"? - No, and it would be most unwise to put it there.

(*The Commissioner.*) Have you ever known of such an installation in other boats? - I do not remember one, my Lord.

(*Mr. Harbinson.*) In answer to a question of mine, Question 19519: "Would it not be possible, in consequence of what you have just said, to place a number of boats for third class women somewhere about the well deck?" Mr. Sanderson said: "It would be a very inconvenient place to carry a boat, and almost an impossible place to launch a boat from, because of the overhang." Do you agree that it would be an inconvenient place to carry boats? - It would, very.

That is an inconvenient place to carry boats to swing out. Would it be an inconvenient place to carry collapsible boats? - Yes.

Why? - Because the deck is part of the accommodation clear deck space which we are required by law to provide for third class passengers.

I suggest it would be possible to provide it further forward? - But you were asking a moment ago about the well.

Yes, but I mean at the afterpart of the ship? - Certainly.

Would it be possible to carry boats, if not open boats, collapsible boats and rafts? - Quite; there are a large number on the boat deck of the "Olympic" now. 20861. Mr. Sanderson expressed the opinion with reference to the third class passengers at Question 19517, "I think that the position in which the boats are placed on the ship necessarily being the position which is the best for launching them, happens to be abreast of that portion of the ship in which the first- and second-class passengers are carried, and, therefore, when the call for women and children came the women and children who were handiest came to the boats first, and that is the reason." He means for the large number who were drowned. Do not you think it would be desirable to make provision for third class passengers by providing boats of some kind at the aft of the ship?

- That was one thing in Mr. Sanderson's evidence that I did not altogether agree with. 20862. You do not agree with it? - No.

Do you agree with my suggestion? - On the whole, no.

Have you any suggestion to offer of your own? - If additional boats are to be carried I would much prefer to have them on the boat deck.

You see what Mr. Sanderson says, that being so far from the third class quarters they did not find their way there? - We have had evidence that they did find their way there.

But we have evidence that there were more third class women, a greater percentage of third class than other classes, drowned? - I agree, but I do not think that was due to any lack of ability to reach the boat deck.

You have a theory of your own? - A very general theory; it is not one that Mr. Sanderson's evidence covers.

Are not the "Olympic" and the "Titanic" and all these big steamers built in such a way that the third class passengers are shut off from the quarters of the second and first class during the voyage? - They are not allowed to wander through the second and first class accommodation.

That is what I would expect, and therefore they are unfamiliar with the different passages that lead from the first and second class quarters to the boat deck, where the boats are installed? - Quite right, but we have had evidence that they were shown the way.

But in moments of emergency, if there are not people to show the way, would it not be possible to have boats in a position on the ship where people would be able to find their way themselves? - It would be much better to make regulations to ensure their being shown the way.

Would you prefer that? - Very much.

**Examined by Mr. HOLMES.**

Can you tell me the name of the Board of Trade Surveyor who was on the "Titanic" some two or three thousand times? - I think all three Surveyors.

20873. Three different ones? - Yes.

Were they Engineer Surveyors or Shipwright Surveyors? - Both. I must say the 2,000 to 3,000 visits include the visit to the engines as well as to the ship, because the whole thing is surveyed.

And in those two or three do you include - ? - In all, there were three.

Does that include the Surveyor for the purpose of the passenger certificate? - He was one; he was the principal one for the ship; he did all the later work for the ship.

**Examined by Mr. LEWIS.**

Did your firm build the "Teutonic" and the "Majestic"? - Yes.

Were longitudinal bulkheads placed in those ships? - I think so, and they were promptly taken out, or holes made in them, at a later date.

Can you tell us why they were dispensed with? - Because they were considered dangerous.

Can you tell us why they were considered dangerous - from what point of view? - From the point of view that if one side of the ship got flooded it might lead to a very serious list, and possibly to a capsizing.

Not from any difficulty of working arrangements? - I believe not for the working arrangements; it was done long before I was connected with it.

Now, with regard to the coal bunker, where the fire took place. You remember the evidence with regard to the fire in the bunker? - Yes.

It was stated by one witness, I think Hendrickson, that the fire caused the bulkhead to be red hot. If that is correct, would that make the bulkhead very brittle? What do you mean by "very brittle"? It does not convey anything very definite to me. 20884. Well, exceedingly brittle, so that a blow would cause damage much easier than if they were not brittle? - It depends on the force of the blow. It would not be brittle like a piece of sheet glass, but it might be more brittle than in an undamaged condition. 20885. More brittle than in an undamaged condition? - It might be a little more - yes, somewhat more.

**Examined by Mr. LAING.**

With regard to the "President Lincoln" and the "President Grant," which you told us about, have you tabulated the requirements of the different countries, the British Board of Trade, the American law and the German law? - Yes, it is tabulated on the list I have.

**Page 538**

Is it correct so far as you know? - It was correct at the time the ships were completed.

*Mr. Laing:* Would your Lordship like to have that? *The*

*Commissioner:* What is it?

*Mr. Laing:* It is the particulars of the "President Lincoln" and the "President Grant" which Mr. Wilding told us about; and he has tabulated on a piece of paper the British Board of Trade requirements, the American requirements, and the German requirements.

*The Commissioner:* I should like to see it.

*The same was handed to the Commissioner and is as follows: -*

**PARTICULARS OF BOATS FITTED ON S.S. "PRESIDENT LINCOLN."**

No.	Description	Length		Breadth		Depth		Capacity of each C ft.	Total Capacity C ft.	Persons

British Board of Trade require	9,625 C. ft.	
American Law requires	11,520 “	In each vessel.
German Law requires	13,343 “	

*The Commissioner.*) What line does the “President Lincoln” belong to? - The Hamburg-Amerika Line.

And also the “President Grant”? - They are sister ships practically. *The Commissioner:* I see, according to this paper, that on the “President Lincoln,” designed to carry 4,108 souls, the boat accommodation is 1,465, and with reference to the “President Grant,” with a total number of souls on board 3,991, the boat accommodation is 1,516. How does that bear with reference to the “Titanic”?

*(Mr. Laing.)* Have you calculated the relation between the capacities and the boat accommodation? - Broadly speaking, the proportion is about the same. 20891. I will take your word for it at present? - It will, of course, have to be worked out, my Lord.

*Mr. Laing:* Your Lordship sees at the bottom of that paper the various countries are noted with their requirements for particular ships.

*The Commissioner:* “Cubic feet.” What does that mean - cubic feet for the boat accommodation?

*Mr. Laing:* For the boats, yes.

*The Commissioner:* Looking at those figures, I find the requirements of the Board of Trade are considerably less than the American requirements.

*Mr. Laing:* Yes.

*The Commissioner:* And that observation applies with greater force again to the German requirements.

*Mr. Laing:* Yes.

*The Commissioner:* But I thought the American law substantially the same as our Board of Trade requirements.

*Mr. Laing:* I understood so. I will ask Mr. Wilding. He knows.

*The Commissioner:* This does not appear to bear that out.

*Mr. Laing:* With regard to the British steamers, as I understand it, the American authorities have agreed, by convention, to accept the British requirements. Is not that so?

*The Witness:* Quite right.

*The Commissioner:* Very well.

*Mr. Laing:* Of course, that would not apply to a German ship.

*The Commissioner:* Are there any large American liners afloat at all in this trade?

(*Mr. Laing - To the Witness.*) There are some big liners which belong to the American flag, are there not? - Yes, four in the Transatlantic trade.

Just mention them? - The "Philadelphia," the "New York," the "St. Louis," and the "St. Paul."

20893a. (*The Commissioner.*) And where do they sail from and to? - Southampton to New York, my Lord.

Then have you here the carrying capacity of those ships? - No, my Lord, I have not got the figures. We did not build any of them.

I know you did not, but I thought perhaps you could get them? - I have not got them.

*The Commissioner:* I should like to know what the boat accommodation on these large American liners is - I mean liners sailing under the American flag.

*Mr. Laing:* That may be ascertained - you can easily ascertain it, Mr. Wilding.

*The Witness:* The White Star Line could easily ascertain it.

*The Commissioner:* With reference to those figures at the bottom of the paper you have handed to me, I want to know what the tonnage of the "President Lincoln" was. *Mr.*

*Laing - To the Witness:* Can you tell me the gross tonnage of the "President Lincoln" and the "President Grant"?

20896-7. (*The Commissioner.*) Was it more than 10,000 tons? - It is about 16,000 or 17,000 tons.

Now, you have put at the bottom of this paper "British Board of Trade require 9,625 cubic feet." Does that mean the number required for a boat of 10,000 tons? - 10,000 tons and upwards.

When you give the cubic feet required by the American law and the German law, you are giving the cubic feet required for vessels of the size of the "President Lincoln" and the "President Grant"? - Quite right, my Lord.

Very much in excess of the 10,000 feet at which the British Board of Trade requirements stop? - Yes.

*The Commissioner:* It does not help very much.

(*Mr. Laing.*) No; I only thought it might be interesting to compare the three countries. (*To the Witness.*) With regard to the two lines, the P. and O. and the Royal Mail, which carry boats for all their passengers, those lines do not carry steerage passengers at all? - The Royal Mail carry a limited number.

But it is limited? - Yes

And the P. and O. carry none at all, I think? - None at all.

With regard to the pumping arrangements of the "Titanic," were they all put upon a plan and submitted to the Board of Trade? - They were.

And were they approved? - They were.

With regard to the bulkhead plating, you gave us some figures which show, I think, that the bulkhead plating is in excess of Lloyd's? - I gave them in cross-examination.

Can you make the same statement about the stiffening? - Yes, it was still more in excess - about 50 percent in strength in excess of Lloyd's requirements.

And in excess of the Bulkhead Committee's recommendations? - So far as the latter extend.

In excess of them? - Yes, considerably in excess.

Now, to the number of watertight bulkheads for a vessel of the size of the "Titanic," Lloyd's Rules do not extend, I think? - Not quite; 680 feet is their largest.

Applying proportionately the difference in length between 680 feet and the "Titanic's" length, how many watertight bulkheads would Lloyd's requirements want? - As far as one can tell, 13.

And how many had the "Titanic"? - Fifteen.

And with regard to the Board of Trade regulations, so far as those regulations are in writing, how many do they require? - Four.

There was a question cropped up in the evidence about explosions. Can you give us any information as to whether these boilers were likely to explode or not? - I should think it was very unlikely. There are very few cases, I believe, of boilers examined in ships after they have been flooded which have exploded. Of course, when sea water reaches a hot boiler there is a great cloud of steam which might give a certain impression of explosion.

Some witnesses spoke of noises, and some of them suggested that the noises might have been caused by the machinery falling forward when she got tipped up considerably. Do you think there is anything in that? - The boilers might have moved; I

do not think the machinery did.

*The Commissioner:* It was thought the boilers had got loose from their seats.

*(Mr. Laing.)* Yes. *(To the Witness.)* Is that a reasonable theory? - When the ship was about 35 degrees by the head.

That might have happened? - When the bow was down so that her stern was up, so that the slope fore and aft of the ship was about 35 degrees.

*Mr. Laing:* The question of her breaking in two has been referred to. I do not know whether I need go into that.

*The Commissioner:* I do not think you need trouble about that.

*(Mr. Laing.)* There is another matter about the boilers which occurs to me. The fact that the electric lights of this vessel remained burning up to the moment almost that she disappeared, does that indicate anything to you as to the condition of the boilers? - It indicates that one boiler room, most probably No. 2, was still supplying steam to the emergency dynamos.

There is evidence that certainly one, and I think two, of the funnels fell? - Yes.

I think the evidence is that the forward one and the after-one fell? - Yes. 20921. What would account for that? - The funnels are carried from the casings in the way of the comparatively light upper decks - that is, the boat deck and A deck. When these decks became submerged and the water got inside the house, the water would rise outside much faster than inside, and the excessive pressure on the comparatively light casings which are not made to take a pressure of that kind would cause the casing to collapse; would take the seating from under the funnel and bring the funnel down. 20922. With regard to the expansion joint which has

been described to us in the upper works of this vessel, somebody suggested that that might have caused the weakness or the breaking of the vessel. Is there any foundation for that? - No; the expansion joints go down to the strong deck and are made to save the light upper plating from the stresses.

20923. Can you assist us at all as to the maximum speed the "Titanic" would be likely to develop? - When everything had got into good working order, and the staff got used to the ship, in fine weather I think she probably would have done about 23 1/4 knots.

20924. Would that require the whole of your boiler power? - Oh, yes, every boiler.

20925. With regard to the engines, how many of Harland and Wolff's staff were on the ship for the voyage? - Nine.

Nine altogether? - Nine altogether.

Including Mr. Andrews, who was practically the designer? - One of our managing directors and eight others.

And I think none of them were saved at all? - None.

There is a small point to clear up. Did you ever have these boat falls tested? - I have had them tested since the statements that have been made in Court that they were not considered sufficient.

And what was the result of the test? - As has been mentioned in Court there are 12 parts of the fall to each boat, and the results of the test

## Page 540

were that a single section stood between 5 and 5 1/2 tons. There were 12 parts, and therefore that means that the falls passing through the blocks were good for something like 60 tons.

20931. And the boat with its complement would weigh what? - About 5 1/2 to 5 3/4 tons.

20932. Another reference occurs in the evidence to the effect of moving the people across the deck with the view of correcting the list. I think Mr. Lightoller told us about that; have you made any experiment to see what effect moving a number of people would have? - We have made an experiment to test the ship's stability, and from that it is possible to calculate the effect.

I think you have made the calculation? - Yes.

Moving 800 people through 50 feet would right her 2 degrees? - About 2 degrees.

(*The Commissioner.*) That is to say, it is negligible? - It would show quite perceptibly on the deck. You would think you were walking uphill on these very flat decks 2 degrees is about 1 in 28, and 1 in 28 on a road is quite an appreciable hill. 20936.

(*Mr. Laing.*) There was a suggestion in one of the wireless messages said to have been sent out by the "Titanic" that the engine room was flooded? - Yes.

Do you think that is possible until a very late moment of the life of this vessel? -

Certainly not. The engine room being in the afterpart of the ship, as the forward end was flooded, would tend to be raised rather than lowered, and consequently there would be no tendency till a very late stage for water to get into the engine room.

Is the term engine room often used for boiler spaces as well as the engine room? - It is often loosely used for the whole space occupied by the motive power of the ship. 20939.

I do not know that it is very material, but have you an explanation of the failure of the lights in Nos. 4 and 5 boiler rooms, which was described? - The lights in all the boiler rooms are run on two circuits. There are two common circuits -

*The Commissioner:* I do not think that is material.

(*Mr. Laing.*) If your Lordship pleases. I only wanted to clear it up if your Lordship thought it was material. (*To the Witness.*) With regard to the access from the third class accommodation both forward and aft, have you, for the sake of experiment, tried how long it would take to walk from the very lowest part of the third class accommodation on to the boat deck? - I have.

And what was the time - I mean at a walking pace? - I went at a slow walking pace. On one occasion one of the Assessors accompanied me; on one occasion one of the Board of Trade Counsel, and on one occasion the Counsel for the third class passengers. The times varied a little, but they were always between 3 and 3 ½ minutes. That is right down from the lowest third class cabin that was occupied.

Bringing your mind to the double bottom and the extension of it round the turn of the bilge, is that a usual thing or not, to extend round the turn of the bilge? - Very few ships have it carried to the top of the bilge.

Very few? - Very few.

20943a. Again, referring to the longitudinal bulkhead question, and the number of watertight doors, how many watertight doors would there be on the tank top of the "Mauretania"? I believe it is 38, but I am not sure? - I am not quite sure that my information is absolutely reliable, but I believe there were 47 doors on the tank top of the "Mauretania."

Forty-seven? - Yes.

As against your 12? - Against our 12.

Again, with regard to the "Mauretania," she was, as I think is common knowledge, intended as an auxiliary cruiser? - She was.

Is the belting of coal put round her with the longitudinal bulkhead an Admiralty plan? Is that common in the Navy? - The Admiralty adopted that plan in most warships, and it has always been put forward by the Admiralty as a thing they like to have in a vessel which they propose to subsidise at any time as a cruiser.

I suppose they have to consider torpedoes, shot, and so on? - Torpedoes and gun fire.

There was one matter about the float. You know the float which operates all the watertight bulkheads? - Yes.

*Mr. Laing:* There was some little difficulty about explaining that, and Mr. Wilding has a very good photograph of it which I should like your Lordship to have.

*The Commissioner:* The watertight door of the bulkhead?

(*Mr. Laing.*) Yes; this is the picture. (*Handing photograph to the Commissioner.*) The engine room floor you will notice, your Lordship, is missing there; the plating has been taken off showing the box of the float underneath the plating. I believe when my friend, the Attorney-General, visited the "Olympic" a compartment was flooded for demonstration purposes to see whether it worked? - Yes, the turbine engine room.

Did it work? - Yes.

*(The Commissioner.)* Were you astonished? - No, I expected it.

*(Mr. Laing.)* Now I want to sum up, to see if I understand properly the flooding plan. If No. 6 boiler room and the compartments forward of it are flooded, am I right that the vessel, as she is designed, is lost - she must sink? - If No. 6 boiler room and the three holds forward of it, and the forepeak are flooded, the ship is undoubtedly lost as built. 20954. If No. 5 boiler room is flooded in addition, supposing the bulkheads had been carried up to D, would that have saved her? - It would not. There is a plan which I have put in which is marked E.

*The Commissioner:* Will you repeat that question?

*(Mr. Laing.)* If No. 5 boiler section is flooded carrying the bulkheads up to D would not save the vessel? - No. There is another plan which shows it better than the one your Lordship has. Yes, that is the one. *(indicating)*.

And the last question is: With No. 4 section added on, no possible arrangement could save the ship? - No possible vertical extension of the existing bulkheads.

*Mr. Laing:* That is what I meant.

*The Commissioner:* What is the evidence, Mr. Laing, as to the place from which the water came into No. 4 boiler room?

*Mr. Laing:* I do not think there is any evidence as to where it came in. All the evidence is that it came up from under the floor.

*The Commissioner:* Is it possible that it came over the top of the bulkhead between No. 4 boiler room and No. 5 boiler room?

*Mr. Laing:* I do not think so - not on the evidence.

*The Witness:* It would be visible coming down the bulkhead if it did. He would not get the impression it came up from below, but he would see it falling down.

20957. *(Mr. Laing.)* He would hear it probably too? - He would hear it also. He would certainly see it, because it would be coming in like a sheet in front of him - like a waterfall.

*Mr. Laing:* Mr. Wilding has added, my Lord, that not only would one have seen the water coming over, but would have heard it falling down, if it had come over the top of the bulkhead.

*The Commissioner:* Thank you. The evidence on this point is very small.

*Mr. Laing:* It is; there are about two men only, as far as I know, who speak to it. I read them to your Lordship on the last occasion.

*Sir Robert Finlay:* I think your Lordship put this point to one of the witnesses within the last two or three days, I forget to which - I am looking for the passage. It is showing that there must have been some external lesion in this compartment.

*The Commissioner:* What is suggested to me is that possibly there was no external lesion in this

## **Page 541**

No. 4 boiler room. The evidence seems to point to the fact that there was an external lesion.

*Sir Robert Finlay:* Yes; I think your Lordship put the point specifically. I will find the passage presently.

*The Commissioner:* Very well.

(*Mr. Laing.*) So far as the height of the watertight bulkhead is concerned upon the "Titanic," as designed, how does that comply with the Board of Trade requirements, as indicated by their Bulkhead Committee Report? - The margin was about twice the margin suggested by the Bulkhead Committee.

The "Titanic" was twice the margin suggested? - About twice.

Is there any means by which you can compare Lloyd's Rules? - Lloyd's make no requirements as to floatation at all.

*Sir Robert Finlay:* I think it is at page 516. Your Lordship put it to Mr. Wilding on Friday last, at Question 20343. Shall I read it? *The Commissioner:* Yes.

*Sir Robert Finlay:* "I thought the evidence pointed," your Lordship says, "to water coming in as far aft as No. 5? - (A.) No, my Lord; you will find it in Dillon's evidence.

(*Mr. Rowlatt.*) I think No. 5 is the furthest place aft where we have any evidence of a wound in the side of the ship, but water from some source not quite explained was rising in No. 4 also. (*The Commissioner.*) If the water was rising in No. 4, it must, if the watertight bulkhead between 4 and 5 was holding, have been through some external means? - (A.) Yes. (*Mr. Rowlatt.*) Only we have not direct evidence of it. (*The Commissioner.*) But if the evidence is to be believed, that water was rising in No. 4, it follows that No. 4 was externally injured, does it not? (*Mr. Rowlatt.*) Yes, my Lord. (*The Attorney-General.*) I do not know that. (*To the Witness.*) Does it follow? - (A.) It follows, my Lord, because we know from the evidence that they were doing their best to pump out No. 4. If you remember, we have had evidence that they took pipes along," and so on. There is a good deal more of it.

*The Commissioner:* The suggestion made now is that it is possible that the water came over the bulkhead separating No. 4 and No. 5 boiler rooms.

*Sir Robert Finlay:* I do not think, speaking from memory, that is reconcilable with the evidence of Dillon and Cavell, who speak to its rising. They would have seen it coming over in a sort of cascade more or less violent.

(*Mr. Laing.*) One last question about this matter of the Welin Davit Company. Have you made a careful search through the correspondence and records of your company to find out whether any such suggested plan as my learned friend, Mr. Scanlan, suggests, was submitted by Messrs. Harland and Wolff to Ismay, Imrie and Company? - Our secretarial department, which has charge of the letters, has made a most thorough search.

With what result? - We can find absolutely no evidence, either in letters, notes or plan, that any such plan was submitted to Messrs. Ismay. We often mark a plan which is submitted to the owners as approved or condemned, and the plan made bears no mark. 20963. With regard to the advisability of increasing the number of lifeboats on ships of this class, have Messrs. Harland and Wolff formed any opinion whether it is better to increase the floatability or to increase the boats? - We have a very strong opinion. 20964. What is the opinion that you have formed? - We much prefer to increase the floatation after damage.

20965. (*The Commissioner.*) If you could secure absolute floatation, you would not require any boats at all? - Except for collecting passengers from other ships. 20966. (*Mr. Laing.*) That is all I want, at all events - that your firm have formed that opinion and have expressed it to Messrs. Ismay? - And have expressed it. 20967. A question has been asked you by some of my learned friends about the desirability of carrying lifeboats in the forward well and after-well, or on the poop. I think you have told us already that you do not think that is a good place to carry them? - I do not.

What are the reasons? - Boats, whether in the forward or after-well, are in the way of parts of the vessel where it is a good deal narrower, where her form is changing considerably. If there is any seaway, boats in that position are very difficult to launch and are not unlikely to be capsized. To both ends that applies. In addition to that boats in the forward well or forward of it are very liable to get damaged in heavy weather in winter; and boats in the after-well, and on the poop even, if they reach the water safely and are released safely from their falls, and all that sort of thing, are very near the big propeller blades, and a slight send of the sea might easily let the boat down on the top of the blades and smash her up.

This vessel, I think, was fitted with the Morse system and with the submarine signaling apparatus? - With Morse flashing lamps, one on each side of the bridge; and also the submarine signaling apparatus in the fore-hold.

Have you anything you can tell us bearing on the question of the advisability of fitting searchlights on a ship? - If you only want to look straight ahead of you, as, for example, in the Suez Canal, a searchlight is a very useful thing; but if you want to be able to see all round, for over a considerable arc, whilst objects in the way of the searchlights are well lit, it is much more difficult with a searchlight going to see boats that are not directly in its beam than if it is not lit.

Do you think that a searchlight carried on a vessel such as the "Titanic" is likely to interfere with her coloured lights being seen by any vessel approaching her? -

Undoubtedly. But of course if the searchlight is lit it would be a very conspicuous thing.

20972. Have you got a case in your mind where searchlights were tried on a steamer in the North Atlantic trade? - Yes; I know one case which I remember very well. 20973.

Were they kept on or removed? - They were removed within twelve months. 20974.

(*The Commissioner.*) Why? - I never really heard why. I believe from my memory of the statement made - it is a good many years ago now - that they were removed because they were found to be useless; but I would not like to be quite sure upon that.

What ship were they used on? - The "City of Paris," as she then was, and the "City of New York."

(*Mr. Laing.*) She is one of the American Liners? - They are two ships of the American Line.

(*Sir Robert Finlay.*) In the passage I was referring to, as bearing on the question of No. 4, at the bottom of the first column on page 517, there is a word, I think, misprinted in the transcript. Perhaps Mr. Wilding will be able to correct it if it is wrong. It is in the answer to Question 20347: "From a calculation, which I will refer to in a moment, I cannot believe that the wound was absolutely continuous the whole

way. I believe that it was in a series of steps." My recollection is that he said "stabs." *The Witness*: I said steps.

*Sir Robert Finlay*: I took it down as stabs, and I thought "steps" was a mistake; but what follows makes it quite clear that "stabs" is what is meant, because it goes on; "and that from what we heard Barrett say in his evidence it was the end of one of the series of wounds which flooded the different spaces; that before the ship finally cleared the iceberg, as the helm was put over, she would be tending to swing her side into the iceberg, and that a very light contact was made in No. 4"

*The Commissioner*: That again points to an external injury in No. 4.

**Page 542**

**Examined by Mr. ROWLATT.**

You said to my learned friend, Mr. Laing, that your view was that increased floatation was more desirable than increased boat accommodation, with a view to saving life in these big ships? - Yes.

Do I understand that you propose to increase the floatation over the floatation that there was in the "Titanic"? - I think it would be a very desirable thing to do. 20980.

Have you in mind how you propose to do it? - That is a matter that can hardly be answered offhand. It will have to be looked into, certainly.

20981-2. You are not prepared to say whether you will carry the bulkheads higher? - No.

*The Commissioner*: I understand the witness to say that, having regard to the circumstances of this case, he thinks that the object now ought to be, not to increase the lifeboats, but to increase the floatability.

*Mr. Rowlatt*: Yes, merely generally.

*The Witness*: Quite so.

*The Commissioner*: That is all, and it is quite obvious - speaking, of course, without consideration with the gentlemen with me - that if you can secure floatability - undoubtedly floatability - you do not want lifeboats, except, as Mr. Laing suggested, for the service of other ships which are not in your fortunate position.

(*Mr. Rowlatt.*) We only wanted to know if he had anything definite in his mind. (*To the Witness.*) With regard to searchlights, I quite follow all you say about the disadvantages of searchlights. What do you say to this: Supposing a ship had a searchlight for use only when such a danger as ice was expected? - As I pointed out, the searchlight is only useful in one direction, and the question of whether you would run risks, for example, of derelicts, or anything of that sort, which the searchlight would not show up so well as it would an iceberg. Of course, a white iceberg would reflect any light from a searchlight falling on it exceedingly well.

Do you say a searchlight would prevent your seeing a derelict which you otherwise would have seen? - I am afraid it would not assist you.

It would not hide it, would it? - No - well, I do not know. I do not think it would.

(*The Commissioner.*) Let me understand that. Do you mean to say that if a searchlight were directed on to a derelict, the searchlight would make the presence of the

derelict plainer than it would otherwise be? - A derelict in the North Atlantic is floating pretty well in the water.

I suppose it is? - And the amount of light it would be likely to catch would merely make it be mistaken for another wave crest, rather than a distinct and definite object. It would be something that just caught a flash of light as it rose and fell on the waves.

(*Mr. Rowlatt.*) Would it be harder to see? - After all, that is really a question for a seaman.

I understand that vessels that go through the Suez Canal are bound to have searchlights for use when they get there? - Yes, they are bound to have searchlights. It is usual to fit a vessel going through the Canal with a portable searchlight.

*The Commissioner:* What is the object of that? Why is it confined to the Suez Canal? I am told it is to pick the buoys up. I follow it now.

*Mr. Roche:* As a matter of indulgence, my Lord, might I have one answer from the witness with regard to a plan? *The Commissioner:* Certainly.

(*Mr. Roche - To the Witness.*) I had not an opportunity of following at close range your various plans, and it was a little difficult to do so, but I have had prepared by my clients, who are engineers, a little plan of the section given in the "Shipbuilder." Perhaps you can tell me whether that corresponds, broadly speaking, with your results. (*Handing a plan to the Witness.*) The bottom line is the draught of the ship as taken from your model? - Yes.

The raised line is the line at the moment of sinking, and the result of that is that the water had not got into the engine room at the moment of sinking? - Pardon me; you say at the moment of sinking. There is still a good deal of the ship above water. But that condition approximately corresponds with the condition which is on the plan I put before his Lordship, which is called "Flooding by compartments," and which was indicated by a black line after No. 5 boiler room was flooded.

Our results do approximately agree? - In general terms.

That, I think, agrees, if you verify it, in another way, approximately with Mr.

Lightoller's evidence that the bridge was awash practically at the last moment? - No, not at the last moment. The ship would float for some time - I think for ten minutes or a quarter of an hour after that - before the stern disappeared.

20994-5. (*The Commissioner.*) There are two or three questions I want to ask you. Can you give us the capacities of the peak tanks and of the ballast tanks? - Does your Lordship want the gross capacity or the capacity of each individual tank?

The capacities of the peak tanks and of the ballast tanks. Can you give me the gross capacities of all the ballast tanks put together? - The total water ballast which could be carried in the ship was 5,754 tons.

That is the ballast? - The water ballast, and that would include the tanks in the double bottom usually used for fresh water, which could be used for water ballast, if required.

But it does not include the peak tanks? - It includes the peak tanks.

Now can you give me the capacity of each of the peak tanks? - The forepeak tank, 190 tons, and the aftpeak tank, 115 tons.

Have you formed any view as to the desirability of making the decks watertight? - Like the construction of the "Mauretania," there are points both for and against it. In this particular case there is no question that a watertight deck about or a little below the level of the waterline forward might have saved the vessel. Forms of accident that are just as likely to happen as this one might result in the space of such a watertight deck being flooded, and that would almost inevitably lead to an immediate capsizing. 21001. Then, on the one hand, it might be desirable, and, on the other hand, it might be fatal? - Quite right.

Taking into consideration the pros and the cons, what do you say? Is it desirable to make the decks watertight at the top of the watertight compartments. The compartments are only watertight up to a certain height? - Certainly.

They are not watertight at the top? - Certainly not.

So that if the water fills the watertight compartment and the water still comes in, it overflows and gets into other parts of the ship? - It does.

Taking into consideration the advantages and disadvantages, I would like your opinion as to the wisdom of sealing the watertight compartments by making the decks themselves watertight? - That is not quite the question that I was answering before, because I had in mind the deck lower down.

I intended it to be the same. - I was referring to a deck lower down near the level of the waterline. You are mentioning a deck on the level of the top of the bulkheads. 21007. I am. Will you put aside the question I last asked you, and take my question in the sense in which you first understood it; that is to say, is it desirable that some of the decks should be made watertight so as to divide the watertight compartments - the compartment that is made watertight by the perpendicular bulkheads - laterally by watertight decks? - Your Lordship will remember I pointed out that there was one disadvantage that might sometimes prove fatal.

### **Page 543**

Yes, which would cause the ship to capsize? - Certain forms of accident might cause the ship to capsize, as happened in the case of H.M.S. "Victoria" some years ago off the Coast of Syria.

Then, do you think that it is not desirable to have watertight decks? - I would rather obtain safety if possible in some other way. It is a thing which depends so much on the circumstances of the whole design as put to you, that it is difficult to give a quite general answer.

Did you ever consider the question with reference to the "Titanic"? - Never; and I would much prefer in a "Titanic" ship not to do it.

You would? Can you give me generally your reasons - I do not want particulars - but generally what are your reasons. Is the danger of capsizing the main reason? - That is the main reason, and also the difficulty of securing satisfactory watertightness in a deck through which cargo has, in the normal course, to be worked.

Now, will you answer my question as I understand it originally: Would there be any advantage or disadvantage in making the deck which is at the top of the watertight

compartments watertight? - There are two points that your Lordship's attention should be drawn to in that. First of all, it is necessary to have large holes cut in the way of the boiler room and engine room to let the exhaust gases come away from the boilers and also to provide ventilation. Those holes are big holes; you cannot make the deck completely watertight; and then you would have to considerably extend vertically the casings surrounding those and make those casings watertight.

Make them like funnels? - Make them like watertight funnels. In addition to that there is the question which applied to the lower decks, that a hatch through which cargo has normally to be worked is not an easy matter to keep satisfactorily watertight; and there is a further consideration - a purely commercial one - that if this deck is made watertight and is at such a height above the waterline as to secure floatation with any two compartments flooded, it renders valueless either for passengers or crew a very large proportion of the total bulk of the ship on which her earning power depends. 21014. I suppose it is right to say that the moment a ship ceases to be commercially useful she ceases to be a sea-going vessel at all? - Her type ceases to be built altogether. 21015. If vessels are made by different devices so secure that they cease to be commercially valuable, they cease to go to sea at all? - They do.

21016. Can you tell me what would be the disadvantages, from the point of view of working the ship, of carrying up the transverse bulkheads to C deck? - The most serious disadvantage in carrying the bulkheads up to C deck would be the difficulty of providing the necessary exits required by the Board of Trade from the third class dining rooms and similar places, and also from the crew's quarters, which are along "Scotland Road."

21017. Those are the disadvantages? - Those are the disadvantages. That is a disadvantage in meeting Board of Trade requirements - not any structural impossibility.

21018. Supposing the Board of Trade requirements were altered, would you then see any disadvantage in taking the watertight bulkheads up to C deck? - The only disadvantage would be a certain increase of difficulty in obtaining certain spaces, but I think it would merely become a difficulty to be overcome in the designing office and not a difficulty of any other sort.

21019. Then the real difficulty at present is that you would violate, or would not comply with, the requirements of the Board of Trade? - We should find it impossible with the present design to comply with the requirements of the Board of Trade for ways out of the different spaces. Your Lordship asked for a list of the plans that we have submitted to the Board of Trade. Perhaps I may hand them in. (*Handing plans to his Lordship.*) 21020.

This is a list of the plans submitted by you to the Board of Trade. Who was it that prepared the general arrangement plans of the ship? - The small general arrangement plans are prepared at the designing office by the staff employed there.

Are they submitted to the Board of Trade? - They are not.

Who prepared the structural plans to carry out the general arrangement? - They are again prepared in the designing office.

Are they submitted to the Board of Trade? - At some stage or other, yes, they are supplied. You will find them as the sixth item on the list I have handed in, and they were submitted on the 3rd June, 1910.

You have given me on this paper a list of the structural and other plans that were submitted to the Board of Trade? - I wired to Belfast to obtain the list, and your Lordship has there what they have sent me.

Can you tell me what the action of the Board of Trade was after these plans were submitted? Did they criticise them or did they accept them? - We submitted the plans to them, and I think the situation is that they took no objection to them. 21026. I do not know what the procedure is. They would acknowledge the receipt of them? - That is right.

21027. After they had acknowledged the receipt, would you hear further from them at all with reference to the plans? - I am not quite sure, but my memory is that we did not.

21028. Then what happened to them at the Board of Trade you do not know? - I do not know. I think they were sent to the local Surveyor to be passed on to the head office. Where is the head office? - In London.

Were they sent by you to the local Surveyor? - I believe so.

Not direct to London? - I believe not.

The Board of Trade will tell us this, no doubt, but can you tell me at present:

Would it be the practice or the duty of the local Surveyor to forward them to the Board of Trade in London, or would it be for him to exercise his own judgment about them? - He usually applies to us for them at the suggestion of the head office in London and sends the plans to them. The head office ask him to obtain from the builders copies of the plans.

21033. Are they obtained as nautical curiosities, or are they obtained in order that they may be examined and criticised? - I understand they are obtained so that the Board can satisfy themselves that the ship will be satisfactorily built.

21034. Your information is that they do examine them? - I certainly believe so. 21035. Did you send these general arrangement plans and the structural plans for carrying out the general arrangements to the White Star Company? - No, they are not submitted to the White Star Company.

They are satisfied with what you do, I suppose? - We are responsible for that part of the work. I may say, whilst you are asking whether the Board of Trade consider the plans, that I know in some instances the local Surveyor sends to London with the plans any criticisms or remarks he wishes to make.

The reason I asked you was because you apparently do not recall any comment or criticism made by the Board of Trade upon the plans which you submitted? - There were a few comments and criticisms on minor matters as the ship was built, but not any general ones.

That would be as the result of surveys made during the construction? - Quite right.

*The Commissioner:* I am not thinking of that at all. Thank you very much, Mr. Wilding; your evidence has been of very great assistance to us.

*(The Witness withdrew.)*

**Examined by Mr. RAYMOND ASQUITH.**

Are you Naval Architect to the Cunard Company? - I am.

Did you design or assist in designing the "Mauretania" and the "Lusitania"? - Yes.

Before those ships were designed, did you carefully consider the question of bulkhead subdivisions? - Yes.

Did you consider the question both of longitudinal divisions and of transverse divisions? - Yes.

And was the result that you decided to combine the two systems in the "Mauretania"? - That is so.

Have you a plan before you of the "Mauretania"? - Yes.

In the "Mauretania" as you designed it there are transverse bulkheads - I think 13 in number? - That is so.

How high do the highest of those bulkheads run up - to what deck? - The peak bulkhead goes to the B deck.

That is the third deck. There is the boat deck, which is the highest deck, then A deck and then B deck? - That is so.

*The Commissioner:* Let me follow that. Is it marked on the plan?

*Mr. Raymond Asquith:* I do not think it is marked.

*The Commissioner:* There is the boat deck and then the promenade deck. Is that what you call A deck?

*Mr. Raymond Asquith:* Yes; and the deck below the promenade is B deck.

*The Commissioner:* It is called on this plan centre deck.

*Mr. Raymond Asquith:* That is so.

*The Commissioner:* Then is the upper deck called C?

*Mr. Raymond Asquith:* Yes.

*The Commissioner:* And the main deck is called D?

*Mr. Raymond Asquith:* That is right.

*The Commissioner:* And the lower deck is called E; and that is the end of them? 21048. (*Mr. Raymond Asquith - To the Witness.*) Going aft, all the other bulkheads go up only to C deck? - That is so.

*The Commissioner:* Then the bulkhead nearest the stem goes up to B deck, and that is the highest?

*Mr. Raymond Asquith:* Yes, that is the highest.

*The Commissioner:* All the rest go up to C deck. How many bulkheads do you say there are in those vessels?

*Mr. Raymond Asquith:* Thirteen transverse bulkheads.

*The Commissioner:* Which is the first going to the forward part of the ship? Is that the one that goes up to B deck?

*Mr. Raymond Asquith:* Yes.

*The Commissioner:* Then the next one is the one that goes up to the chain locker? *Mr. Raymond Asquith:* I do not think they are lettered or numbered in any way on the plan.

*The Commissioner:* No, they are not, but I want to do it. The first is just aft of what is called the trimming tank?

*Mr. Raymond Asquith:* Yes.

*The Commissioner:* The next is just aft of what is called the chain locker?

*Mr. Raymond Asquith:* Yes.

*The Commissioner:* The next is just aft of No. 2 hold.

*Mr. Raymond Asquith:* Yes.

*The Commissioner:* The next is just aft of the cross bunker?

*Mr. Raymond Asquith:* Yes.

*The Commissioner:* The next is just aft of No. 1 boiler room? *Mr. Raymond Asquith:* Yes.

*The Commissioner:* Is the next just aft of No. 2 boiler room? *Mr. Raymond Asquith:* Yes.

*The Commissioner:* And is the next aft of No. 3 boiler room?

*Mr. Raymond Asquith:* That is right.

*The Commissioner:* The next is aft of No. 4 boiler room.

*Mr. Raymond Asquith:* Yes.

*The Commissioner:* The next is aft of the main engine room.

*Mr. Raymond Asquith:* Yes.

*The Commissioner:* Where is the next?

*Mr. Raymond Asquith - To the Witness:* Where do you say the next is?

21049. (*The Commissioner.*) The one I have just mentioned is aft of the main engine room, and that is No. 9. Is that the watertight bulkhead that is just aft of the condenser room? - Yes, that is the next one; the one abaft the condensing room only goes to - 21050. I see that it only goes up to the second class accommodation; but what I want to know at present is, is it a watertight bulkhead? - A watertight bulkhead.

*The Commissioner:* That is No. 10.

*Mr. Raymond Asquith:* No. 11, I think.

*The Commissioner:* No, No. 10.

*Mr. Raymond Asquith:* Counting the one that goes up to B deck as No. 1, that would be No. 11 - the one aft of the condenser room.

*The Commissioner:* No, it is not. We must begin again. No. 1 is aft of the trimming tank.

*The Witness:* Yes.

*The Commissioner:* No. 2 is aft of the chain locker.

*Mr. Raymond Asquith:* Yes.

*The Commissioner:* No. 3 is aft of No. 2 hold; No. 4 is aft of the cross bunker; No. 5 is aft of No. 1 boiler room; No. 6 is aft of No. 2 boiler room; No. 7 is aft of No. 3 boiler room; No. 8 is aft of No. 4 boiler room; and No. 9 is aft of the main engine room. Is that right?

*Mr. Raymond Asquith:* Yes, that is right. Your Lordship is quite right.

*The Commissioner:* Then No. 10 is aft of the condenser room.

*Mr. Raymond Asquith:* Yes.

*The Commissioner:* No. 11 is aft of the auxiliary machinery and mail room.

*Mr. Raymond Asquith:* Yes.

*The Commissioner:* Where is the next one?

21051-2. (*Mr. Raymond Asquith - To the Witness.*) Where do you say the next one is? - I do not quite follow that counting. If No. 11 is abaft of the auxiliary machinery room, you do not count the one at the fore side of the chain locker as No. 1; that is a transverse bulkhead up to a watertight deck.

21053. (*The Commissioner.*) Then you have allowed me to miss out the short bulkhead abaft No. 1 hold? - Yes.

*Sir Robert Finlay:* That had better be No. 1A.

*The Commissioner:* We will call that No. 1A. That does not even go up to B deck, but goes up to the Orlop deck?

*The Witness:* That is right.

*The Commissioner:* What is the next after No. 11?

21054-5. (*Mr. Raymond Asquith - To the Witness.*) What is the next after the one abaft of the auxiliary machinery? - The one on the foreside of the auxiliary steering gear. There are two there in reality, one before and one abaft the auxiliary steering gear that is carried along the watertight deck and carried up to C deck, watertight.

(*The Commissioner.*) Then you call the bulkhead forward of the auxiliary steering gear a separate bulkhead? - It is up to the Orlop deck; but then the bulkhead which is continuous is the one abaft that again.

I only want to know where you get your No. 13. We will call that 12, and then there is the final one, which is a bulkhead forward of the watertight trunk? - Yes, that is one watertight bulkhead, and another is the one abaft it.

## **Page 545**

One abaft it? - I thought you alluded to the auxiliary steering gear.

Is it marked on the plan as watertight? - I am not sure if it is marked. The thick lines represent watertight bulkheads.

But there is no thick line aft of the watertight trunk? - No, not abaft that, but on the foreside only.

*The Commissioner:* I have got 14 now.

*Mr. Raymond Asquith:* Yes, I think that is so, counting the small one.

*The Commissioner:* I thought you said there were 13.

*Mr. Raymond Asquith:* So I understood.

*The Commissioner:* Now that you have introduced that small thing in the forepart of the ship and given it the number 1A, I have 14.

*Mr. Raymond Asquith:* That is so.

*The Commissioner - To the Witness:* Will you come round here and explain the plan?

(*The Witness explained the plan to his Lordship.*) *The Commissioner:* I think I understand it now.

(*Mr. Raymond Asquith - To the Witness.*) Now, will you go to the longitudinal divisions and explain what those are. They begin, I think, at the forward end of the engine room? - They begin at the afterend of the engine room and extend to the fore end of the No. 1 boiler room.

*The Commissioner:* Will you begin at the forward part?

*(Mr. Raymond Asquith.)* Begin at No. 1 boiler room; that is where they begin forward, is it not? - Yes.

And they run down each side of the ship to the afterpart of the engine room? - That is so. Between those longitudinal bulkheads and the skin of the ship are the bunkers? - Yes.

Are there also small transverse bulkheads running between the skin of the ship and the longitudinal bulkheads dividing off the bunkers? - Those are also watertight.

21066. Those wing bulkheads are the ones which are marked on the top section in dotted perpendicular lines? - That is so.

What is the space between each of those transverse wing bulkheads? - Not more than 40 feet in any case.

*(The Commissioner.)* Who built these ships? - Messrs. Swan and Hunter built the "Mauretania"; Messrs. John Brown and Company, Clydebank, built the "Lusitania."

21069. Were they built to tender or were they built as the White Star boats are built, upon the cost of material and labour, with an added percentage for profit? - That is so. 21070.

Which way were these built? - On the same principle.

*(Mr. Raymond Asquith.)* Then, if you go aft to the engine room, I see there is another longitudinal division in the part of the ship devoted to auxiliary machinery? - That is so.

In addition to those longitudinal and transverse bulkheads, are there also some watertight decks? - Yes, there are watertight decks immediately above.

Beginning again on the fore part of the ship, is there a watertight deck over No. 1 hold? - First of all, there is the watertight deck immediately above the trimming tank in the peak.

And another one over No. 1 hold and the chain locker? - Yes.

*(The Commissioner.)* Which deck was watertight? - In the peak tank it is on E deck; in No. 1 hold it is on F deck.

Which is F deck; is that the Orlop deck? - The Orlop deck.

*(Mr. Raymond Asquith.)* Going further aft, when do you come to the next watertight deck? - Aft of the transverse bulkhead No. 3.

Between 3 and 4, is it? - That is so.

Then you go further aft, to bulkhead No. 10? - Yes.

The whole of that part of the ship from bulkhead No. 10 back to the stern is enclosed on the level of E deck with a watertight deck? - That is so.

*The Commissioner:* Where is that indicated on the plan?

*Mr. Raymond Asquith:* It is indicated by a black line drawn over the three aftermost compartments of the vessel in the profile plan, beginning at the transverse bulkhead No. 10 and running to the stern.

*The Commissioner:* It goes under the mail room, and under the stewards' accommodation.

*(Mr. Raymond Asquith.)* Yes, that is the line. *(To the Witness.)* There is also a double bottom to the ship? - Yes.

Carried up to a height of 8 feet above the bottom of the ship? - That is so.

*The Commissioner:* I think we have had that before.

*Mr. Raymond Asquith:* Yes, my Lord, we have. (*To the Witness.*) Will you give us your view about the comparative merits of the systems of longitudinal and transverse divisions?

*(The Commissioner.)* You have a combination of both in those ships? - For ships of this class, I think that the transverse and longitudinal combined is best for all purposes, for very large ships.

*(Mr. Raymond Asquith.)* That combination is best? - Yes, that combination is best. Were you in Court when Mr. Wilding was asked his views about some of the difficulties of longitudinal divisions? - Yes, I was.

Did you hear him mention, I think, two difficulties, one of them being that there might be a tendency, if the ship was wounded at the side, for water to get in and cause a list, because there would be a difficulty in the water getting out again? - Yes, I heard that.

That can be counteracted.

In what way? - Supposing that any two compartments were flooded on either side, the opposite side could be filled in several ways; also you could flood the engine room and the compartment immediately abaft it; also the shaft tunnel aft.

*(The Commissioner.)* But that is rather heroic, is it not? - There would be less trouble in doing that latter part than any of the other parts.

*(Mr. Raymond Asquith.)* Have you made any experiments to see how far that is practicable? - No, no experiments have been made.

Another objection which Mr. Wilding mentioned was that there had to be watertight doors in the bunkers and that these doors had to be open, of course, continuously during the voyage? - That is so.

Do you regard that as an objection, or as a serious objection? - It is an objection, but not a serious one. The doors are all closed by hydraulic pressure, or rather all the principal doors are closed by hydraulic pressure on the Stone-Lloyd principle. The pressure is applied at the door frame; that is, the cylinder operating the door is adjacent to the frame, so that any distortion of the bulkhead does not interfere with the operation of closing the door.

Are you speaking now of the doors in the bunkers? - Yes, in the principal bunkers the doors are closed by the Stone-Lloyd system, and also all the doors in the transverse bulkheads and all the doors in the machinery spaces - that is, referring to the engine spaces.

Another objection which was mentioned to having these doors in the bunkers was that the coal dust and so forth might get into them and prevent their working effectively? - Inside the bunker doors are iron screens, which prevent very much coal from falling down, but where the hydraulic doors are fitted the coal on many occasions has been allowed to come to the angle of rest from a full bunker and the door has closed down through the lot. It has never been known to fail.

I was not putting to you that the coal might get in the way of the door and prevent it shutting, but that, owing to there being a lot of dust and grit about, the door might not work very easily.

21094-5. (*The Commissioner.*) It gets clogged? - The doors are constantly working, and we have never found any difficulty in closing the doors at any time.

(*Mr. Raymond Asquith.*) You always find that they work quite easily? - Yes, quite easily.

(*The Commissioner.*) How often do you close these doors? - This is, of course, a matter for our Marine Department, but when I have been at sea in the ships I know, as a fact, that the doors are closed every day at 12 o'clock. 21098. As a matter of precaution? - As a matter of precaution.

(*Mr. Raymond Asquith.*) You were telling me about the system of the watertight doors.

Are these watertight doors in the bunkers closed by an hydraulic system? - Not all. The principal doors are so closed. All the transverse doors are so closed, and all the large bunkers amidships are closed by the Stone-Lloyd system.

Are you familiar with the Stone-Lloyd system of closing these doors? - Fairly familiar.

Can you give us a general idea of how it works? - Yes. There are two pumps in the engine room, which are kept under a pressure of 700 lbs. per square inch; and pipes are led to the various doors along the centre of the ship and can be operated and the doors can be closed from the bridge, and they can be opened and closed locally. That is, if a man is inside a bunker or inside a confined space, he can work the door just as well from the inside as from the outside; but the door cannot remain open if the pressure is on from the bridge.

But if the pressure is not on from the bridge, then it can be raised by hand? - Yes, raised and lowered by hand. I might add that all these doors are operated from the top deck; that is compulsory by the Board of Trade. They are geared up by rods and gearing to the upper deck.

Are you speaking still of Stone-Lloyd doors? - Yes, I am speaking of all doors.

All doors which are below the waterline are worked from the upper deck.

If the pressure is not on from the bridge doors can be raised from any point? - They can be raised and lowered locally.

(*The Commissioner.*) What is it you say obliges you to have all these doors moved from the upper deck? - The Board of Trade compel us not to rely upon any method other than that of gearing from the top deck.

Is that a printed requirement? - I think so.

Are you able to refer me to it? - I do not know that I can here, I shall have to look it up; but I know we are compelled by the Board of Trade to do that.

What I want to know is, is it something that they require under their rules? - Yes.

Or is it something that they require you to do by correspondence or criticism upon the plans. Is it something to be found in the rules? - I think it is found in the rules, but I am not sure.

Perhaps between now and 2 o'clock you will find out, so that I can see it when I come back? - I will, my Lord.

*(After a short adjournment.)*

(*The Commissioner.*) Have you found the rule? - Yes.

Show me what it is? - It is on page 10 of the Regulations issued to Surveyors.

*(Handing same to the Commissioner.)*

This is not quite what I wanted, Mr. Peskett. I understood you to say that there was a rule which required that these watertight doors in the bulkheads could be worked by hand gear from the upper deck? - That is so.

This does not say anything about hand gear? - It says it is to be worked from the upper deck.

Yes, that is just the difference. The watertight doors in the bulkheads of the "Titanic" below the waterline were automatically worked from the bridge, were they not? - I believe so, my Lord.

By electric gear? - By electric gear.

Now, where is there anything in these rules which says that they must also be workable by hand gear? - I do not know. I did not know that the Board of Trade would allow them to be worked in any other way than by hand gear - worked by rods and gear. 21118. I am pointing out to you that this requirement which you have referred me to says nothing at all about hand gear? - I do not see how they could be worked in any other way from the upper deck.

But they were in the "Titanic"? - I understood, I have not examined that, that that merely relates to a clutch, but did not work it. If the clutch did not work the door would not work.

But that releases the clutch, and then the doors close automatically. Is not that so? - I would like to ask whether that door is not also operated by a rod and gear from the upper deck.

*Sir Robert Finlay:* It is.

*(The Commissioner.)* But is that what you meant when you were giving your evidence before lunch? I thought you meant that there was a requirement of the Board of Trade by which these watertight doors were to be capable of being worked by hand gear as distinguished from electric gear, or whatever the gear is that worked it on the "Titanic"? - It may not be worded in that way in that particular book, but that is a requirement of the Board of Trade, that they will not allow you to work a door by any other means than hand gear. That must be one of the gears to work the door; it must be by hand gear from the upper deck.

Then can you account for the Board of Trade having passed the plans for the "Titanic"? - I cannot account for that.

*Sir Robert Finlay:* Your Lordship recollects that those doors may also be opened and closed by hand. The lowest set of doors are closed from the bridge by pressing the button for the electric current, and then they may also be opened and closed by hand unless they have been shut from the bridge, in which case they could not.

*The Commissioner:* But the question is whether they can be worked from the upper deck by hand gear.

*Sir Robert Finlay:* No, except by the electric current.

*The Commissioner:* That is not what I call hand gear. That is the point. It may be quite immaterial, and I daresay it is, but I did not understand the witness. I gathered from what he said before lunch that there was a Board of Trade requirement by which these doors

were to be workable from the upper deck by hand gear. Now, I do not find anything in the rule that he has given to me to support that statement.

*Sir Robert Finlay:* I do not think there can be any such rule, my Lord.

*The Commissioner:* And if there were any such rule, I cannot understand how the Board of Trade came to pass the plans.

*Sir Robert Finlay:* Except, my Lord, working by the electric switch from the bridge is another matter.

*The Commissioner:* Yes, that is another matter, and if you call the electric switch hand gear, then, of course, there is hand gear on the upper deck. I do not call that hand gear.

*Sir Robert Finlay:* I did not understand your Lordship to be using the expression "hand gear" in that sense, as including the electric switch.

*(The Commissioner.)* I was not. I was regarding the two things as different. *(To Mr.*

*Wilding.)* Were there any contrivances by which

## **Page 547**

the doors could be worked from the upper deck by hand gear?

*Mr. Wilding:* Yes, my Lord.

What were they, because I have heard nothing of it?

*Mr. Wilding:* There was a rod going down as nearly vertical as possible to the door. The rod had on its lower end a worm, and that was geared into a worm wheel on the door shaft, and the door could be lowered or raised by that means.

*(The Commissioner.)* Oh, well, that is hand gear.

*Mr. Wilding:* Hand gear entirely, my Lord

*(The Commissioner.)* What deck was that hand gear workable from? *Mr. Wilding:* From two positions, one down beside the door itself, and the other from the deck above the top of the watertight bulkheads.

*(The Commissioner.)* There was no hand gear that could be worked from the upper deck.

*Mr. Wilding:* It was D deck aft and E deck forward, but not from the bridge.

*The Commissioner:* Then it depends upon what the "upper deck" means.

*Sir Robert Finlay:* If your Lordship will look at page 14 of the descriptive statement that Mr. Wilding has handed in, it is in the portion of the statement beginning "Watertight doors," if I may read a sentence or two: "The doors (12 in number) at the inner bottom level in engine and boiler room spaces were of Messrs. Harland and Wolff's latest type, working vertically. The door plate was of cast iron of heavy section, strongly ribbed. It closed by gravity, and was held in the open position by a clutch, which could be released by means of a powerful electro magnet controlled from the Captain's bridge, so that in the event of accident, or at any time when it might be considered desirable, the Captain or officer on duty could, by simply moving an electric switch, immediately close all these doors. The time required for the doors to close was between 25 and 30 seconds. Each door could also be closed from below by operating a hand lever fitted alongside the door."

*The Commissioner:* That is not what is meant.

*Sir Robert Finlay:* No. Then I need not read about the floats, but if your Lordship will go on to the paragraph next but one you will see: "The watertight doors on E deck (upper) were of horizontal pattern with wrought steel door plates. Those on F deck (middle) and the one aft on the Orlop deck were of similar type, but had cast iron door plates of heavy section strongly ribbed. Each of the 'tween deck doors and each of the vertical doors on tank top level could be operated by the ordinary hand gear from the deck above the top of the watertight bulkhead."

21128. (*The Commissioner.*) Is that a deck which would be described as an upper deck?

*The Witness:* May I explain the upper deck is always considered by technical people to be the deck immediately above the watertight bulkheads.

*The Commissioner:* Then this does comply with it?

*Sir Robert Finlay:* "Above the top of the watertight bulkhead and from a position almost directly above the door. To facilitate the quick closing of the doors from deck, plates were affixed in suitable positions on the sides of the alleyways indicating positions of the deck plates, and a box spanner was provided for each door, hanging in suitable clips alongside the deck plate." *The Commissioner:* That is sufficient.

*Sir Robert Finlay:* Your Lordship sees it results as to closing them from the bridge that the only method was by the electric switch.

21128a. (*The Commissioner.*) I will read this to the witness. Just listen, Mr. Peskett:

"Each of the 'tween deck doors and each of the vertical doors on tank top level could be operated by the ordinary hand gear from the deck above the top of the watertight bulkhead, and from a position almost directly above the door." Would that be the hand gear to which you refer? - That is so, my Lord.

*The Commissioner:* Very well, we need not go any further into it. Apparently the "Titanic" was furnished with machinery of the kind required by the Board of Trade. *Mr. Laing:* If I may just complete this, I think I have found the passage the witness refers to in the Board of Trade Regulations. It does not really appear in the Board of Trade Regulations, but it appears in the report of the Bulkhead Committee, which Mr. Wilding said was treated as being the official Board of Trade requirements, and it says this: "A watertight door may be self-acting, or otherwise should be workable from above the bulkhead deck." [Cd. 6405, 1891.] That is the point this gentleman was on. *The Commissioner:* That is synonymous with the upper deck.

(*Mr. Raymond Asquith.*) There are 69 watertight doors on the "Mauretania"? - That is the number.

Are 10 of those above the waterline on the main deck, one on the lower deck? - That is so.

Are those on the main deck all closed by hand? - Yes, they are hinged doors.

And only by hand? - Only by hand.

That leaves 58 other doors? - Yes.

And 36 of those 58 are closed either by hand or by the Stone-Lloyd hydraulic system? - Yes.

There is one question I want to ask you about the Stone-Lloyd system, because I am not sure it was made clear before lunch. I think you said if the hydraulic doors were

closed from the bridge, it was impossible to open them locally? - It is impossible to keep them open locally, is what I meant to say.  
Supposing they had been closed from the bridge, would it, or would it not, be possible for a person down below to open them on the spot? - Yes, but not to keep them open. If a man was inside a compartment he could open the door and get out, and the door would immediately close again all the time the pressure is on from the bridge. 21137. You mean in order to keep it open he would have to hold on to the lever or handle? - Yes.

21138. And as soon as he let go, the thing would close automatically? - Yes. 21139. With regard to the question of having watertight decks, first of all watertight decks of a comparatively low level in a ship, and secondly on a higher level, what do you say as to the advantages or disadvantages of having a watertight lid or roof at some fairly low point in the vessel? - The advantages of a watertight deck in the lower position would be that if damage occurred below the waterline it would confine the water to that place; and if above the waterline you could tip the ship, and allow the water to go in aft, and so get at the damage in that way.

*(The Commissioner.)* It seems to be a sort of homeopathic cure. You cure one misfortune by creating another? - Not exactly, my Lord.

*(Mr. Raymond Asquith.)* It has been suggested that there would be a danger of the ship capsizing if the water got in above the level of the watertight deck? - That would depend entirely upon the subdivision.

Do you think there could be a system of subdivision which would enable such a watertight deck to be of use?

*The Commissioner:* Are there any watertight decks here, Mr. Asquith? *Mr.*

*Raymond Asquith:* Well, my Lord, there are in a way. The three after compartments, your Lordship will remember, are covered over by a watertight deck.

*The Commissioner:* That is in the afterpart of the ship.

21142-3. *(Mr. Raymond Asquith.)* Yes, and similarly in the forward part of the ship, I think. *(To the Witness.)* Have you yourself ever considered the advisability, in constructing ships that you have

## **Page 548**

built of having a continuous watertight deck? - Yes.

What conclusion have you come to? - The conclusion we have come to is we are doing so on the ships we are building now.

*(The Commissioner.)* But there was not such a thing on the "Mauretania"? - Not a continuous watertight deck. There is only one hold there forward which has not got a watertight deck.

That is above No. 2 hold? - That is above No. 2 hold. Of course, the deck of itself is of sufficient strength and watertight, with the exception that water would come up the hatchway there.

(*Mr. Raymond Asquith.*) When you say a “continuous watertight deck,” I suppose there would have to be some interruption over the engine room? - The casings there would have to be made watertight - the casings round the hatchway.

(*The Commissioner.*) Then you would have all the engineers in a watertight box? - They would be able to come up on deck in watertight hatchways, yes, on the top deck; that is quite an easy matter.

Is it? Is it usual to have the engine space sealed at the top of the watertight deck? - No; you would take that right to the top deck watertight - the hatchway itself.

You have not got it on the “Mauretania” or the “Lusitania”? - They are watertight in that way, that there is no position in which any two compartments being flooded could bring the bulkhead sufficiently low so as to let the water come over the top; and the engineers’ entrance to the engine room is on the weather deck.

Which do you call the weather deck? - The entrance to the engine room of the “Mauretania” and “Lusitania” is on the C deck.

Looking at this plan, it does not appear now that the main engine rooms have any watertight seal - by sealing I mean above the E deck - what I call the E deck, which is on your plans called the lower deck? - The transverse bulkheads are shown watertight there, and the deck with passes at the side is also shown watertight.

But the E deck? - The E deck is shown watertight, but the decks themselves are watertight into the hatchways. The hatchways might also have been shown there to be watertight.

They are shown. Is there any watertight seal above the engine room? - Not above the engine room hatch; certainly not.

If you had a continuous watertight deck you would have to have it watertight above the engine room, would you not? - Not if it took it right to the top of the ship? - Watertight casings.

However, you say you are building such a ship now. Has she got a name yet? - The “Aquitania”.

Does she take the place of some previous “Aquitania”? - No, my Lord. 21158. Was there never an “Aquitania” before? - Not in the Cunard Company; I have never heard the name before.

(*Mr. Raymond Asquith.*) What is the length of the continuous watertight deck on the “Aquitania”: would it extend to the level of what is called E deck on this “Mauretania” plan? - It would be a little higher, of course, the construction is different. A little higher in relation to the general structure of the ship? - Yes.

And then, I understand, when that continuous deck gets to the engine room the transverse bulkhead abaft the engine room is carried right up to the top of the ship? - The engine room does not extend the full width after you get in this ship above D deck. Then the openings are comparatively small above that, and those are usually made watertight. 21162. (*The Commissioner.*) Do you make the hatches in the deck watertight now? - Up to the level of the top of the bulkheads.

Are they watertight in the “Mauretania”? - Yes, all the hatches and all the main deck for 400 feet amidships is watertight also.

For instance, in No. 1 hold are the hatchways watertight? - No. 1 hold in the "Lusitania" and "Mauretania"?

Yes? - The hatchway on the deck which is shown watertight is a watertight cover secured by screwed bolts and rubber between the hatchway and the cover. 21166. (*Mr. Raymond Asquith.*) With regard to the last point, it has been said that there is great difficulty very often in keeping the place watertight when cargo has to be put into it and taken out of it constantly. Have you experienced that difficulty in the

"Mauretania"? - Not any difficulty in the "Mauretania," no.

I will go back for a moment to the new design on the "Aquitania."

*The Commissioner:* Who was it suggested that it was difficult to keep the hatchways watertight by reason of having to open them?

*Mr. Raymond Asquith:* I understood Mr. Wilding suggested that.

(*The Commissioner.*) Did you suggest that, Mr. Wilding?

*Mr. Wilding:* I suggested that it was difficult to keep the deck watertight because it is difficult to keep the hatch cover which covers the hole watertight when cargo is worked through.

(*The Commissioner.*) When cargo is being worked?

*Mr. Wilding:* No, but when cargo is being worked through it. The hatchway flaps gets knocked about and abused, and it is very difficult to keep it watertight after that. We have had some experience with small covers of that sort.

(*The Commissioner - To the Witness.*) What do you say to that? - The

"Mauretania" and "Lusitania" carry nothing but very light parcels, and all mail boats are similar in that respect, so that there is practically no damage to the hatchway. 21170. Does that mean that if she were carrying heavy goods the difficulty which Mr. Wilding suggests might arise? - It might arise with some construction, but I have known ships where there is no difficulty arising from that.

Who is to decide between you and Mr. Wilding? Are you making any changes in your new ships in respect to watertight hatchways? - The general details of the watertight hatches have not yet been worked out.

But do you propose to make any change? - No, I think not. It may be we may do it in a different way altogether.

You are not considering any change? - No, at present we are not considering any change.

(*Mr. Raymond Asquith.*) When were these ships built, the "Mauretania" and the "Lusitania"? - They have been out about five years.

They have been on trial for five years? - They have been out about five years. 21176.

You were telling us when I think I interrupted you with another question, that in your view the danger which has been spoken of, of capsizing owing to water getting in above the watertight deck, could be sufficiently met? - I think so. 21177. Is that your view? - That is my view, yes.

21178. And are you making arrangements in the "Aquitania" with that object? - Yes.

21179. The arrangements I think you said were in the nature of a transverse subdivision? - Transverse and longitudinal. Of course, the points are in favour of transverse subdivision just as much as they are in favour of these - that is, for ordinary ships; but for

large ships I would advocate this, from the point of strength of construction, for docking, and for general protection.

21180. I am speaking now of the level above the watertight deck. Are there both transverse and longitudinal divisions in the new designs you speak of? - Oh, yes.

21181. Above the level of the continuous watertight deck? - Yes. I might also add that the new German ships are being built upon the same system.

*(The Commissioner.)* Will you speak up. I

## **Page 549**

do not hear you? - The new German ships are also being built on the same system as the "Mauretania" and "Lusitania."

*(Mr. Raymond Asquith.)* Have you ever considered the other suggestion that there should be a continuous watertight deck higher up still in the ship? - We have not considered that yet, no.

Do you agree with Mr. Wilding's view that that would be commercially unworkable? - Well, it would be difficult. To do that you would need to take the bulkheads right to the top and bring out every compartment separate to the top, and you could not work that very well with passengers.

And I suppose you could not keep your passengers underneath, in fact you could not keep any of them underneath the continuous watertight deck? - No, there would be practical difficulties.

Therefore there would not be very much room to carry people? - That is so.

*Mr. Scanlan:* I do not know whether your Lordship would think it would be useful to ask this witness with regard to the boats. That is the only point.

*The Commissioner:* Are you asking me?

*Mr. Scanlan:* Yes, my Lord.

*The Commissioner:* Very well, then I should advise you not to ask him. I have heard nearly enough about boats I think.

*Mr. Scanlan:* I agree, my Lord.

*The Commissioner:* Very well, I am delighted to hear that.

## **Examined by Sir ROBERT FINLAY.**

Did you design these vessels, the "Mauretania" and the "Lusitania"? - I had a great deal to do with it. The design was spread over a large number, but I was responsible.

You were in the office? - Yes, I am the naval architect for the company. 21189. Very well. Now are there any other British ships afloat on the plan of the

"Mauretania" and "Lusitania"? - No, not that I am aware of other than warships.

21190. I am speaking, of course, of merchant vessels. Those are the only two of the type? - The only two of the type, yes, that I am aware of.

*The Commissioner:* I daresay you are going to ask him how that arises that those are the only two of the kind.

*(Sir Robert Finlay.)* Yes. *(To the Witness.)* Were the "Mauretania" and

“Lusitania” built in order that they might be auxiliary cruisers in case of war? - That is so. And that is how they came to be built of this type? - No.

Well, partly? - Well, partly that; but the Admiralty did not press that that should be so. But still that was regarded as a recommendation? - As a recommendation, yes; but they did not put it forward as an absolute law that it should be so.

Surely if a vessel is to be used for the purposes of a war vessel it is a great advantage that she should have this protection at each side against shot and shell? - That is so, yes.

For a vessel that is to be a cruiser it is a very great advantage? - Yes. 21197. Was not that one reason for adopting this plan? - One of the reasons. 21198. Are there any foreign vessels afloat that you know of which are built like the

“Mauretania” and “Lusitania”? - None that I know of.

*The Commissioner:* I did not hear that.

(*Sir Robert Finlay.*) I asked him whether there were any foreign vessels - my first question was as to British vessels - and he says there are none afloat that he knows of? - Other than the “Imperator,” which was launched the other day.

She is afloat in a sense, but she is not completed? - Not completed, no. *The Commissioner:* Are the steamers of the Norddeutscher Lloyd and the Hamburg Amerika built so that they may be utilised in time of war?

(*Sir Robert Finlay - To the Witness.*) What do you say to that? - I could not answer that question, my Lord. I think their principal mail boats are built with that intention.

Now with regard to counteracting the list which might arise from the longitudinal watertight compartments; you propose to do that by a system of counteracting flooding on the other side? - That is so, yes.

That is a rather ticklish operation, is it not? - No.

Well, you say no in a doubtful sort of way.

(*The Commissioner.*) You do; you say it in what I call a speculative tone of voice. Have you ever known it put in practice? - I have never known it, no. I hope not.

*The Commissioner:* Well, I hope not too.

*Sir Robert Finlay:* I think that is all I need ask.

*Mr. Laing:* May I put one or two questions?

*The Commissioner:* Whom do you represent now?

*Mr. Laing:* My Lord, at the moment I am representing Messrs. Harland and Wolff. *The*

*Commissioner:* Oh, very well.

### **Examined by Mr. LAING.**

How many watertight doors have you on your tank top? - I suppose you refer to the bulkhead doors immediately above the tank top?

Yes, that is what I mean - 49, is it not? - Not quite that; they are not all above the tank top. There are 48.

How many out of those are automatic? - Are closed by hydraulic pressure?

Yes. - Thirty-six.

That does not agree with your colouring of red on the plan. However, I will not take up time. There are a large number, are there not, which have to be operated by hand only? - Yes.

About 22, my calculation was? - Yes, 22.

Were the "Mauretania" and the "Lusitania" built on the two-compartment system? - Yes.

They are designed to float with two compartments flooded? - Yes.

Just the same as the "Titanic"? - Yes; they will float with more.

It is a little misleading, my Lord, the deck arrangements are not quite the same on the "Mauretania" as they were in the "Titanic." I want to check it in this way. I think I am right. If you take your waterline, which is on that plan, is your No. 1 bulkhead four decks above the waterline? - Four deck, yes.

The "Titanic" is the same? - I am not familiar with the "Titanic."

I have been looking at it on the plan. And your No. 2 bulkhead; is that three decks above the waterline? - Three decks above the waterline, yes.

The "Titanic" is four. And the after ones until you came right aft, are they all three decks above the waterline? - All three decks above the waterline, yes.

The "Titanic" is the same. I think, my Lord, the result of that is that the C deck of the "Mauretania" is equivalent to the E deck of the "Titanic."

*The Commissioner:* Is that quite clear; I am told there is a doubt about that.

*Mr. Laing:* Until you get right aft, the watertight bulkheads in the "Titanic" come up to E deck. The two forward ones are higher.

*The Commissioner:* The C deck in the "Mauretania" is higher above the waterline than the E deck in the "Titanic"?

*Mr. Laing:* We say they are the same.

*The Commissioner:* It is suggested to me that C deck is higher above the waterline in the "Mauretania."

*Mr. Laing:* As far as decks go, counting the decks.

## **Page 550**

*The Commissioner:* We are not counting the decks. I do not know whether the spaces between the decks are the same in the two boats?

*(Mr. Laing.)* I do not know, my Lord.

*The Witness:* May I suggest the heights be given above the base line when a comparison is to be made - the base line to the bottom of the keel. That is the only fair comparison; "decks" are not a fair comparison.

*The Commissioner:* I should have thought the proper way to ascertain it was to ask what is the height above the waterline.

*(Mr. Laing.)* I have been taking decks; I have not taken it in heights. *(To the Witness.)* Do you know sufficient of the plan of the "Titanic" to know whether the heights between the decks are the same as on your ships? - No, I have never measured.

*The Commissioner:* We were told the heights were 8 feet, were we not? I am told they vary.

*(Mr. Laing.)* Yes, my Lord.

*The Witness:* The heights above the waterline are these: Taking the waterline to be 33 feet, the height of No. 1 bulkhead is 34 feet above the waterline, and taking the No. 2 bulkhead 23 feet above the waterline; the next ones, 22 feet, 20, 19, 17, 17, 17, 18, 19, 22.

That is fore and aft? - That is fore and aft, my Lord.

*(The Commissioner.)* I want to ask you two or three questions. We know how the "Titanic" was built; it was designed by Harland and Wolff and built practically by them without any control by the White Star Company? - Yes.

But the "Lusitania" and the "Mauretania" were designed by the Cunard Company? - That is so; principally by them.

Principally by them, and the builders were directed by them to build according to their design? - Yes, my Lord.

Now were the plans for your two boats submitted in the ordinary way to the Board of Trade? - They were submitted to Lloyd's and from Lloyd's I believe to the Board of Trade.

They were submitted to Lloyd's? - They were submitted to Lloyd's.

And they were also submitted to the Board of Trade? - Yes, I believe so. 21229. Were they also submitted to the Admiralty? - They were done in conjunction with the Admiralty people.

Very well. Then they were boats which were designed according to the desires or requirements of the Admiralty? - Up to a certain extent, yes.

Did that extent include these watertight bulkheads that you have talked about? - The longitudinal bulkheads?

Yes? - No, my Lord.

Did those requirements include the transverse bulkheads? - The transverse bulkheads, yes.

That is the peculiar feature of those two boats? - Yes

Let me understand. Which bulkheads was it the Admiralty stipulated for? - The Admiralty did not stipulate for any bulkheads as long as it passed the Bulkheads Committee's requirements with regard to two compartments.

What Bulkheads Committee are you talking about? - 1891.

Yes; but I am talking about the Admiralty. What was it that the Admiralty required to be in this ship, in connection with bulkheads, which would not have been required by the Board of Trade by Lloyd's? - I do not quite follow that.

Well, were there any bulkheads, or was there any provision for bulkheads, in the "Mauretania" or the "Lusitania" which would not have been there if these boats had not been built for Admiralty purposes? - No, my Lord, there were no such bulkheads. They would have been built just the same whether built for the Admiralty or not, only the plans were duplicated to the Admiralty and received their approval. A great many people have to do with it.

What I want to know is this: Did you put in the design for watertight bunkers? - That was in the original design before it was sent out at all - before the Admiralty was considered.

When were you building these vessels with reference to the Admiralty at all? - The connection with the Admiralty came on after the original designs were first prepared.

Then am I to understand that the arrangements which you made with the Admiralty were not contemplated at the time these vessels were designed? - In the original designs, no.

And did the original designs include these side watertight compartments? - The original designs contained them. The ships were not quite as big as they were afterwards decided to be, but the side bunkers were a part of the original design. 21243.

When did you first introduce the side watertight bunkers? - On the "Mauretania" and "Lusitania."

Then they are only five years old? - That is all.

Before that you had no such things? - No.

And these two boats are, as I understand, the only two boats which have been subsidised by the Admiralty with the object of possibly utilising them as cruisers? - That is so.

Is it the fact that the Admiralty have control over any other of your ships? - They have not so much control over the other ships as they have over these two. 21248. Just tell me what the nature of the arrangement between you and the Admiralty is? - That, I think, is a question for the management to answer, my Lord.

You are unable to answer it - I will not press you if you would rather not? - I am not able.

Have you made any calculations to show the effect of flooding compartments, either bunkers at the side or forward? - Yes.

You have made calculations? - Yes, such calculations were made long before the ship was started.

So I should have thought. Have you them here? - No, I have not them here.

Could you get them? - They could be obtained; yes.

Perhaps you will get them for us? - Yes.

*(The Witness withdrew.)*

*Mr. Butler Aspinall:* I propose at this stage to interpose Mr. Carlisle, to whom reference was made last week.

**The RIGHT HON. ALEXANDER MONTGOMERY CARLISLE, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

21255. I believe you have come here in compliance with the wish of the Solicitor of the Board of Trade, but you preferred not to make a statement to them officially? - That is so.

21256. Were you a member of the Advisory Committee which sat in 1911? - Yes, I was at two of their meetings.

And I believe that one of the subject matters before that Committee was the question of boats and additional boats to meet the large ships which have recently been put upon the seas? - Yes.

Now last week the attention of the Court was called to an interview which purports to be an

**Page 551**

interview between you and some representative of the "Daily Mail," dated Thursday, June the 6th. Have you seen a copy of that interview? - I do not think so.

*(The Attorney-General.)* No, April the 18th? - April the 18th.

*(Mr. Butler Aspinall.)* I see it is reprinted; it was April the 18th? - Yes, that is correct.

I got what was reprinted. Did such an interview take place? - Yes. 21262. And have you read what purports to be an interview between you and the representative of the "Daily Mail"? - Yes.

Is it correctly reported in the "Daily Mail"? - I consider it so.

And are the statements of fact attributed to you in that report correct? - I believe so.

As I say, I have had no proof of your statement from you. I believe you would prefer to make a general statement to my Lord with regard to that matter. Is not that so? - Well, whatever you like. I am quite prepared to do whatever you like.

*The Commissioner:* Mr. Aspinall is in the position that he does not know what he likes.

21266. *(Mr. Butler Aspinall.)* I will assist you if I can. Perhaps I might direct your attention - I am quite prepared to make a statement or answer any questions in connection with that, whichever you like.

I will direct your attention to statements in the interview which were suggested and cross-examined to, in the case of one or more of the witnesses who were called. This is the statement: "When working out the designs of the 'Olympic' and the 'Titanic' I put my ideas before the davit constructors, and got them to design me davits which would allow me to place, if necessary, four lifeboats on each pair of davits, which would have meant a total of over 40 boats. Those davits were fitted in both ships, but though the Board of Trade did not require anything more than the 16 lifeboats 20 boats were supplied." I will stop there for one moment. The paragraph opens thus: "When working out the designs of the 'Olympic' and the 'Titanic.'" At that time did you occupy a position in the builder's firm? - I was chairman of the managing directors and general manager of the whole works.

At the present moment I think you have retired from business? - I retired on the 30<sup>th</sup> of June, 1910.

Did you take part in working out the designs of the "Olympic" and the "Titanic"? Deal with the "Titanic." - Yes, they were entirely designed practically by Lord Pirrie. The details, the decorations, the equipments, and general arrangements all came under me.

Did you put your ideas before the davits constructors? - I did.

Who would that be? - Welin's Quadrant Davit Company.

And the paragraph goes on thus: "I put my ideas before those gentlemen and got them to design my davits which would allow me to place, if necessary, four lifeboats on each pair of davits, which would have meant a total of over 40 boats." Have you got those designs? - Yes.

Have you got them with you? - Yes.

Will you produce them? - Yes. (*Handing the same to the Commissioner.*) 21275. (*The Commissioner.*) Where did you get them from? - From the davit constructor. We made a rough design in Belfast ourselves, and then I sent it to him to draw the kind of davit he would recommend, seeing that prior to that he had designed one for the Union-Castle Line to carry two boats.

Is that the same design as the smaller one? - The first you have in your hand was got out about the middle of the year 1909. That was the original thing before the plan was made.

Which was? - That small one. That is the one for consideration which I put before Lord Pirrie and the directors of the White Star. Then when I pointed out that I expected the Board of Trade and the Government would require much larger boat accommodation on these large ships, I was authorised then to go ahead and get out full plans and designs, so that if the Board of Trade did call upon us to fit anything more we would have no extra trouble or extra expense.

You would be ready to go on with it? - Yes.

How many boats does this represent? - That represents 32 boats - 16 doubled.

There they are as fitted in the Union-Castle Line. That was done in 1909. That was on the "Edinburgh Castle," I think. (*The Witness pointed on the plan.*) When I saw that one I thought we would improve upon that, and this is the plan I got out.

(*The Witness explained the plan to the Commissioner.*)

(*The Commissioner.*) What I understand Mr. Carlisle to say is this: He was of opinion, or thought it possible, that, having regard to the size of the "Titanic," the Board of Trade might require greater lifeboat accommodation; and he mentioned this to Lord Pirrie and to other people connected with Messrs. Harland and Wolff, and he was then told to prepare plans for the installment of larger lifeboat accommodation, and he accordingly prepared this plan. Now this plan provides for, as I understand, four boats upon one set of davits. (*To the Witness.*) Is not that so? - Yes.

Later on he prepared another plan, which is this, which provides for two boats to each set of davits, instead of one, but neither plan was utilised because the Board of Trade did not require any increased accommodation beyond that which was originally contemplated before these plans came into existence. That is right? - That is so.

*The Attorney-General:* May I see the plans?

*The Commissioner:* Yes; (*Handing same.*) and then, Mr. Attorney, I did not tell you what he said and what has come out already; it is already in evidence. The davits on the "Titanic" were of the kind that would have been required if the larger number of boats, double the boats, had been provided. *The Attorney-General:* That is the Welin's.

*The Commissioner:* Yes, and they were installed when the "Titanic" went down. Of course, the boats were not there.

(*Mr. Butler Aspinall.*) Were these plans ever submitted to the White Star Company? -  
Two or three times.

(*The Commissioner.*) To whom were they submitted - the individual, I mean? - Do you wish me to name the two directors?

Yes? - Mr. Ismay and his co-director; but Mr. Ismay was the only one who spoke or said anything about it.

Who was the other director? - Mr. Sanderson was present at one or two interviews. But did Mr. Sanderson examine them or look at them? - He saw them, but he did not speak.

Did he see them in such a way as to realise what they were? - Well, that is quite impossible for me to say.

I might come into the room and see them, and not have the ghost of a notion what they were? - I came over from Belfast in October, 1909, with these plans that were worked out, and also the decorations, and Mr. Ismay and Mr. Sanderson and Lord Pirrie and myself spent about four hours together.

Did Mr. Sanderson discuss those plans? - Mr. Sanderson, I think, never spoke. 21290.

Did he sit for four hours without speaking? - No; but that was over the whole of the decorations; we took the entire decorations of that ship.

Never mind about the decorations; we are talking about the lifeboats? - The lifeboat part I suppose took five or ten minutes.

Then, am I to understand that these plans which you are now producing were discussed, at this four hours interview for five or ten minutes? - That is so. 21293. Now will you tell us what was said? - It was said they thought it would be desirable to fit them in the ship.

But what did you say first? - I showed them the advantage, and that it would put them

## **Page 552**

to no expense or trouble in case the Board of Trade called upon them to do something at the last minute.

Then it was your view, was it, that it was desirable to have these on board the ship, so that if the Board of Trade made greater lifeboat requirements than you were intending to give you could easily comply with them? - Yes.

That was the object? - That is it.

(*Mr. Butler Aspinall.*) When did this interview take place? - One took place in October, 1909, and the other in January, 1910.

Was the interview in respect of the "Titanic" alone, or was it in respect of the "Olympic" as well? - Everything was taken to be doubled. It always meant the two ships.

Anything which was taken up for one applied to the second ship the same.

Was the second ship laid down at the same time? - The keels were laid down within a few weeks of each other.

Speaking as a practical man, do those plans which were prepared for you by the davit constructors commend themselves to you as being a good working scheme? -

Yes. 21301. Which? There are two; the davits which will carry two boats, and davits which will carry four boats? - No, they all carry four.

They all will carry four? - They all will carry four.

The scheme which will carry four - does that commend itself to you as being a good working scheme? - Yes.

And would you, as a constructor, have any difficulty in putting boats upon the decks - four boats, which the one set of davits could work and serve? - I see no difficulty.

21305. (*The Commissioner.*) There is one which could never be on the deck at all; that is so, is it not? - One would be hanging outboard by the spar.

Always? - Yes, the same as the P. and O. Company generally carry their boats.

It would not incommode the deck at all? - I do not think so.

I do not see how a boat hanging over the side would influence the deck at all? - No, the one overboard has nothing to do with the deck, of course.

Would there be any difficulty in filling all these boats with passengers? - A great deal would depend upon the weather; in bad weather the boats would be little or no use.

You are talking generally about lifeboats? - Yes.

Well, I was not talking generally about lifeboats, but I was thinking about these four boats. Assume that four boats had been placed upon the davits according to your first design? - Well, I consider the whole of those boats ought to have been lowered into the water inside of an hour without any trouble.

(*The Attorney-General.*) Does that mean the 32? - The 32 ought to be done in half an hour easily, because the one boat is in the tackles ready for lowering, and then you have to pull them up. I think with the present falls the greatest time would be lost in getting the blocks up again. That is really the complicated part of the lowering of boats. Of course since that was made, if it was used on a large scale like that, I think very likely wire ropes with gearing would be the proper thing, because there is a block invented and made that always hangs plumb. The difficulty with the ordinary block is that when you go to pull it up it turns round.

(*The Commissioner.*) You say Lord Pirrie designed this ship? - Yes, what I call the design of the ship is the length, the breadth, the depth, and the modelling. 21314.

Who was responsible for the supply of the lifeboats? - The supply of lifeboats comes entirely practically under the Board of Trade.

Oh, no, because we know this ship was supplied with considerably more lifeboats than the Board of Trade required? - But we always do that. We always give something more.

I want to know who was the person at Harland and Wolff's responsible for saying, "So far with lifeboats and no further." I am going to ask another question: Were you? - If I had been there I very likely might - 21317. Were you? - Was I?

Yes? - No.

Well, that seems to me to be a grudging "No"? - Not in the very least. 21320. Well, who was? - The owners, in the first place, who would have to pay for them, would be consulted.

We know perfectly well the owners left the whole thing to Harland and Wolff. Now, who was responsible for saying, "So many lifeboats shall be put on this boat and no more"? -

The White Star and other friends give us a great deal of liberty, but at the same time we cannot build a ship any bigger than they order, or put anything in her more than they are prepared to pay for. We have a very free hand, and always have had; but I do not think that we could possibly have supplied any more boats to the ship without getting the sanction and the order of the White Star Line.

Did you try? - You must remember that I retired on the 30<sup>th</sup> of June, 1910, prior to the ship being launched.

Yes, but I suppose the boats were made, or ordered, before the ship was launched? - Oh, no, they are very often, and in that case they would be left - a great many of them - till after the launch, because it takes so many months to finish a big ship. 21324. Do you suggest that there were not, according to the views which were entertained at that time, a sufficient number of boats on board the "Titanic"? - Personally I consider there were not enough.

You consider what? - There were not enough boats.

Did you ever say so? - I have said so over and over again.

To whom? - I have said it in the works.

To whom? You do not go and talk generally in the works at large. To whom did you say it? - Well, I said it at the Merchant Shipping Advisory Committee on the 19th and 26th of May.

What year? - 1911, before either of the ships went to sea.

To whom did you say it? - I said it to the entire meeting, whoever was present heard me say it.

Who were there? - I could not name their names.

Cannot you name one or two who heard you? - These same plans which were passed round the table -

Answer the question? - I am very bad at names.

Give me the names of one or two who heard you? - Well, I think the Chairman of the Cunard Company was there for one.

Do you mean Mr. Booth? - Mr. Booth.

Well? - And I think a representative of the Underwriters.

Was any representative of the White Star there? - None that I know of. 21338. Now we will leave that body, whoever they were. Will you tell me to which of the representatives of the White Star Line you ever said: "The 'Olympic' and the 'Titanic' are going away with an insufficient supply of boats"? - To no person, as I was not there.

But did you never say it? Did you never say to them, "If we are to supply only the boats that we have hitherto supplied, she will not have enough"? - I showed them the plans of my proposals; I could not do any more.

I know you did, and you have told us the reason, because it was thought that the Board of Trade would require more? - Yes.

And therefore it was thought advisable to have the davits prepared? - Yes. 21342. Yes, that is a very good reason and quite intelligible, but I want to know from you whether I am to understand that you knew these

two ships were going to sea with these boats, you thought they were insufficient, and you said nothing? - I was never on board them, my Lord. I had nothing to do with the finishing.

I suppose you knew about the boats? - I knew nothing about the boats that she was leaving with.

Whose business is it to know about the boats? - It is the owners'.

Then I do not understand this arrangement. I thought the owners left all these questions to the wisdom of Harland and Wolff? - I have said they left a very great deal; at the same time they control us on certain points. They have to consider their other fleet and their other steamers.

What do you mean by that? - I mean if they go and make certain changes in these ships, naturally they would have to make them in the "Adriatic" and other boats. 21347. Then are you suggesting now that they were influenced to supply insufficient boats by the consideration that if they supplied more they would have to put more into their other steamers? - Certainly not. I do not know what was their reason.

What do you think was their reason? - I cannot tell.

Oh, yes you can? - I have no idea, my Lord.

*The Attorney-General:* Had not those two plans better be marked, my Lord?

*The Commissioner:* Yes.

*The Attorney-General:* May we mark the small one C1 and the other C2?

*The Commissioner:* Very well. Now you have the witness, Mr. Scanlan. *Mr.*

*Scanlan:* Yes, my Lord.

### Examined by Mr. SCANLAN.

We have been told in the course of this Enquiry that certain of the plans for the "Olympic" and the "Titanic" were submitted to the Board of Trade. I want to ask you whether this plan for boats was submitted to the Board of Trade - this plan which you have explained to my Lord? - I could not say.

*(The Commissioner.)* Do you really mean to suggest that it is possible this plan was submitted to the Board of Trade. Do you think it is probable that this plan was submitted to the Board of Trade? - I do not think it was. At the meeting of the 19th of

May, 1911, I think there was some person for the Board of Trade -

*(Mr. Scanlan.)* I understand you, Mr. Carlisle, to be speaking of the meeting of the Advisory Committee of the Board of Trade? - Yes, at the Board of Trade Office, Whitehall.

21353-4. Those meetings are attended by the Committee which consists of shipowners and representatives of the Seamen's Union and certain officials of the Board of Trade? - Yes.

The Secretary of the Advisory Committee is an official of the Board of Trade, I understand?

*The Commissioner:* What is his name?

*Mr. Scanlan:* I do not know.

*The Witness:* Here is the letter. (*handing a letter to the Commissioner.*)

*The Commissioner:* What is the name of the gentleman who is the Secretary? 21355-6.

(*Mr. Scanlan.*) Is it Mr. Matthews? - I have handed up the letter to my Lord, so that he will see exactly.

(*The Commissioner.*) I do not see the important part of this, namely, the enclosure? - That is merely some paper, I do not know what it is, whether it is here or not.

(*The Commissioner.*) I will read the letter: "In accordance with the decision of yesterday's meeting of the Life-Saving Appliances Sub-Committee, I have arranged for the next meeting of the Sub-Committee to be held at the Board of Trade at 11 a.m. on Friday, the 26th instant. I enclose a summary setting out the conclusions arrived at as the result of yesterday's meeting." Now, where is that summary? - I have not it here. I do not know whether it is among my papers, but I remember what it is. The main thing is this: The Committee was practically at the end when I was asked to join it. I was only at the last two meetings, and the majority of the points had been well considered, and it was understood that if any Act of Parliament was brought in by the Board of Trade it would not only affect a ship like the "Titanic," but that it would go back on all the old ships afloat, and it would therefore be unfair to go in for putting too many boats when they possibly could not get room on the older ships, and on that occasion one or both of the two plans which you have there were kept by the Board of Trade; those you have there are only prints - I left them in the room; I did not take them away.

Then you took these plans which you had prepared, as I understand, as early as 1909? - Yes.

You took those plans with you to this meeting at the Board of Trade in 1911? - I did.

*The Attorney-General:* Your Lordship did not say by whom it is signed.

(*The Commissioner.*) It is signed R. W. Matthews. (*To the Witness.*) Now, did you take those plans with you in 1911? - Yes.

You had resigned your position with Harland and Wolff in 1910? - I had.

So that it stands in this way. You made the plans in 1909; you left Harland and Wolff in 1910; you went to the Board of Trade in 1911 and took these plans with you? - I did.

(*Mr. Scanlan.*) Of course, minutes are kept by the Board of Trade of all those Advisory Committee Meetings? - I really do not know what they do.

*Mr. Scanlan:* I presume, my Lord it would be possible for us to get those minutes from the Board of Trade witnesses.

*The Commissioner:* I should think so; we ought to see them.

*The Attorney-General:* Certainly, my Lord. It is the first we have heard of it, but, of course, enquiry is being made about it.

*The Commissioner:* They shall be procured, Mr. Scanlan.

(*Mr. Scanlan - To the Witness.*) Now, I want to make this clear. At the time of submitting your plans to the White Star Line Directors Mr. Ismay was present? - Yes. 21366. And I suppose we may take it from you that the object of submitting the plans

was to give the White Star people an opportunity of deciding for themselves whether those plans suited them? - Certainly.

And with reference to the boats, giving them an opportunity of seeing whether they would have 20 boats or 64 boats which you could show them could be provided?

- Yes.

*(The Commissioner.)* You say yes, but I am by no means satisfied? - I shall be pleased to answer anything.

I do not complain about the questions, but they are put in a very leading form, and you say "Yes," but I am by no means sure that these plans were not submitted for the mere purpose of showing to the White Star Line that in case the Board of Trade made the requirements there was a scheme ready by which they could be complied with. Do you see the difference? - I see what you are at.

*Mr. Scanlan:* I have not got the reference at present, but I think it will be found in the evidence of Mr. Sanderson that he had discussed, at all events, in a general way with the builders.

*The Commissioner:* You are quite right.

*Mr. Scanlan:* Because I put it to him, my Lord.

*The Commissioner:* You are right, I remember it.

*(Mr. Scanlan.)* I suppose on the occasion of this long discussion you had with the Directors various changes and alterations were made in the details of the decorations and otherwise? - Yes.

And there was no reason why, if the White Star people wanted more boats, they could

## **Page 554**

not have ordered you to go ahead and install 64? - Certainly.

*(The Commissioner.)* Am I to understand you advised them to install 64? - I merely put my ideas before them.

Did you say "There ought to be 64"? - No, I did not.

Did you think there ought to be 64? - I thought there ought to be a very much larger number.

Did you think there ought to be 64? - I thought there ought to be three on each set of davits.

How many would that make altogether? - Forty-eight boats.

You thought there ought to be 48? - Yes.

Whereas, in point of fact, how many were there? - Sixteen.

You thought there ought to be three times the number. Did you say so? - I believe I did, but I could not swear.

But it is a very important matter, is it not? - You see I never put my ideas on paper unless I thought they were what should be carried out.

You do not answer my question. You were there apparently discussing this matter. Did you say, as the chairman of the managing directors of Harland and Wolff's, "I think there ought to be three times as many boats on that deck as we are at present contemplating putting there"? - No, I would not say that I did.

Did you think it? - I thought there ought to have been.

Why did you not say so? - Because I have always been accustomed to put the plans before the owners and let them judge. Unless they asked questions I did not give them an answer.

Do you mean to tell me that on this important matter, having formed the opinion, and the matter being discussed and you being the chairman of the managing directors of the builders, you did not say that? - Certainly not.

**Examined by Mr. CLEMENT EDWARDS.**

You recalled an occasion when you produced that plan at a meeting at which Lord Pirrie was present, and Mr. Sanderson, and Mr. Ismay? - Yes.

You said that on that occasion the interview lasted some four hours? - Three or four hours.

*The Commissioner:* But only five or ten minutes were devoted to the boats.

*(Mr. Clement Edwards.)* I am just coming to that precisely, my Lord. *(To the Witness.)*

And with regard to lifeboat accommodation, there was some five or ten minutes' discussion? - Yes, of the davit question.

*The Commissioner:* Do speak up. I did not hear the answer. Put your question again. *The*

*Witness:* Will you excuse me speaking a minute. There were two occasions. The first occasion I only put the plan. I forget what number the Attorney-General marked it.

*(The Attorney-General.)* The small one is C 1.

*The Witness:* C 1 was the first one submitted, and that was at an earlier date than the large one.

*(The Commissioner.)* I have not heard of this before. There were two conversations were there? - Yes, I have mentioned that before.

I daresay you have; it has escaped me? - October and January.

*Mr. Edwards:* October, 1909, and January, 1910.

*(The Commissioner.)* But were the same people present at both conversation? - I believe so.

But you do not remember? - I believe they were.

*The Commissioner:* Now, Mr. Edwards, will you ask him about each conversation, because I have not yet realised that there were two?

*(Mr. Clement Edwards.)* Yes, my Lord. *(To the Witness.)* Will you take your memory back to the interview which took place in October, 1909? Do you remember how long that interview lasted? - It lasted all day.

*(The Commissioner.)* And were you talking about lifeboats all day? - No, we were talking about two or three thousand things in the day.

How long did you talk about lifeboats on that occasion? - I could not say; I should think probably not more than five or ten minutes.

Five or 10 minutes on each occasion? - Yes.

That is 10 or 20 minutes altogether? - Yes.

*The Commissioner:* We shall get it by degrees.

(Mr. Scanlan.) Now was it on that occasion that you remember Mr. Ismay and Mr. Sanderson being present? - Yes.

Was it on that occasion that you submitted the plans for the davits? - Yes.

Was it on that occasion that Mr. Ismay said something, but Mr. Sanderson did not?

*The Commissioner:* No.

*The Witness:* In those interviews we generally arranged that only two should talk so as not to lose time, and generally, if Lord Pirrie was present, he did the talking on the one side and Mr. Ismay on the other.

And a very good plan too. - And Mr. Sanderson and I were more or less dummies.

*The Commissioner:* That has a verisimilitude.

(Mr. Clement Edwards.) Now do you remember what Mr. Ismay said in regard to this proposal that there should be equipment for this number of boats? - He quite agreed that it would be a good thing to make preparations for supplying the larger number of boats.

(*The Commissioner.*) Now do be accurate. Do you mean to say that he thought it was desirable that a larger number of boats should be supplied, or that there should be what Mr. Edwards correctly calls an equipment for a larger number of boats? They are two different things. - I take it at that first interview it was merely the davits for carrying four boats.

But you say something different. At this first interview the equipment - Was not taken up. The equipment was not under consideration at the first.

I am talking about the davits, you know. At this first interview, as I understand, the suggestion that davits should be prepared which would enable a larger number of boats to be put upon the ship and worked was approved? - Yes.

And that is all? - And that is all.

(Mr. Clement Edwards.) I am purposely taking it in stages, my Lord, so that we can get it quite clear. (*To the Witness.*) Was anything said at that interview as to the advisability, or otherwise, of carrying a larger number of boats? - Nothing. 21408. Not at that interview. Now then, when you attended the second interview in January, 1910, is that the occasion when four hours were occupied? - Yes.

21409. Was Mr. Ismay, and also was Mr. Sanderson, present on that occasion? - Yes.

21410. How long did the conversation on that occasion last in regard to the subject of boat equipment or boats? - I should say 5 to 10 minutes.

Did you have any discussion at that time with regard to the number of boats, as apart from the question of the character of the davits? - No.

None at all? - None at all.

Was there any decision arrived at at that interview in regard to what equipment for the boats you should fix up? - Nothing.

Was there any arrangement arrived at by which some decision some later time should be come to in regard to the number of boats? - No, that was not considered at that time; I did not hear anything.

Was the whole thing treated as quite tentative and simply just allowed to pass? - There is the ship and there are the boats shown on it, and that part was settled, as far as that goes; but how many boats would ultimately be fitted in the ship before she

left Liverpool, Belfast, or Southampton was not settled when I was present, nor did I hear it.

**Page 555**

If it was not settled, was there any circumstance discussed or any time mentioned at which it should be decided what should be the number of boats? - Not that I heard of.

Now then, from January, 1910, when this interview took place, until June, 1910, when you left, was there anything more said in your presence by the White Star directors or any member of the White Star Company? - No.

Nothing? - No. I merely ordered the davits after that - the same month.

That is to say, you ordered davits that should each take how many boats? - Four. 21420.

And was there, while you were still connected with the firm, any decision arrived at to your knowledge with regard to the number of boats? - None that I know of.

21421. Do you know what you were waiting for at that time; that is to say, do you know why no definite decision had been arrived at up to June, 1910, as to the number of boats? - I would say they were entirely waiting to see what the Board of Trade would require.

*The Commissioner:* Of course. They were living in hopes that the Board of Trade would not ask for any more.

*(Mr. Clement Edwards.)* Now with regard to the Board of Trade, you have said that in May, 1911, at a meeting of the Advisory Committee, these plans for the davits were produced? - Copies. Those are photographs. It is much the same drawing. Photographs were produced. We have heard from Mr. Wilding that the Board of Trade Surveyor, whilst the "Titanic" was under construction visited the ship something like 2,000 or 3,000 times.

*The Commissioner:* The fact is this, Mr. Edwards - I do not think you were here this morning - three or four different Surveyors, all representing the Board of Trade, visited the ship at different times, and if you add up all their visits they come to 2,000 or 3,000.

*Mr. Edwards:* Nothing today, my Lord, turns on the arithmetic.

*The Commissioner:* You were saying it was only one Surveyor; it was a number.

*(Mr. Edwards - To the Witness.)* There were certain Surveyors of the Board of Trade who, between them, did visit the "Titanic" while she was under construction a considerable number of times? - Yes.

Do you know whether on any occasion these plans for the davits were submitted to any one of the Surveyors? - They were not submitted while I was there. 21425. They were not submitted while you were there? - No, not that I know of. 21426. I think it was Mr. Sanderson who said that if this full number of boats were put upon the "Titanic" one of the effects would be to make the ship tender. What is your view as a practical man about that? - That is one of the objections. In a ship of that size that is the serious objection.

21427. That is what I wanted to get at. In relation to what you in drawing the plans deemed advantages, how do you place the disadvantage of the number of boats in making the ship tender? - Well, it is the top weight of the boats makes her more tender. You see if you only put sufficient weights on the boat deck you will roll her over, likely. 21428.

Supposing you sacrificed a deck - by that I mean this: In the "Titanic" and the

“Olympic” you have the boats super-imposed on what is called the boat deck? - Yes. 21429. That is to say, you have the height of the boats above the boat deck. Suppose, instead of having the boat deck as it is there, what is known as A deck were made the boat deck - that is to say, entirely sacrifice, for the height and weight of the boat, one deck? - I would think it a great mistake.

From this very point of view of the tenderness of the ship, what do you say? - The working of the boats would be nearly impossible, and you could not work the four sets between decks at all.

I am afraid I have not made my meaning quite clear. At present you have the A deck, which is a promenade deck? - Yes.

Then you have the top deck of all? - *That is A deck; (Pointing on the model.)* that is the deck you are referring to.

Yes? - I think it would be a great mistake to put the boats there, and an impossibility to work them properly.

Instead of having boat deck, A deck, B deck and C deck, taking those three superstructured decks, I suggest you should do away with one of the decks so that the height of the ship in this case would be reached on A deck? - If you scrap one or two or three of the decks you might as well scrap the whole ship, you know.

You think you could not meet the objection with regard to making the ship tender, by putting the boats on what is now the top deck? You do not think you could meet that effectively by sacrificing entirely one of the decks? - Certainly not.

Why? - Why, because it is such a short distance down that there would be very little difference. The 8 feet or 7 feet 6 inches of the height would be a mere nothing. She would still have the tenderness with the boats up there.

Now take the area of the boats, and the weight of the boats in relation to the single deck, there would be a less area of boat and less weight of boats would there not? - I do not see it.

You are familiar with the construction of this ship. Take the boat deck: What would be the weight of that deck? - It is a very light deck. It is merely what we know as an awning deck. In old times the passengers had awnings over them, and instead of those loose awnings flapping all the time, we gradually commenced to put on light wood. It is not very heavy, because it does not require to be heavy for the sake of the boats, because where the davits are the deck is stiffened with steel underneath, and, therefore, there is very little weight in it.

May I take it the superstructure above A deck, which is involved for the purpose of constructing the boat deck, would be a good deal heavier than the total weight of the 48 or 64 boats? - Oh, no; I think the boats would be much heavier.

You think they would? - Yes.

What would be the weight of the boats? - I do not know.

What would the weight of that deck be? - I do not know.

Then how do you arrive at the idea that the boats would be heavier than the deck?

*The Commissioner:* Can you suggest to him what the weight of the boats would be?

*(Mr. Clement Edwards.)* This is not in accordance with Lloyd’s contract, my Lord, so I cannot suggest what the weight would be. *(To the Witness.)* You cannot tell the weight of the boats? - I cannot say.

Is it not the fact that those boats weigh a ton and a half? - I do not know. 21446. Will you take it from me they do weigh a ton and a half? - No doubt, if you have that in evidence from the firm it will be correct.

Do you suggest that that deck would not weigh more than 64 times a ton and a half; that is to say, not more than 100 tons? - I do not think so.

You do not think so? - I do not think so.

You made a plan which involved, as I understand it, the placing of 64 boats on that very deck? - Yes.

At the time that you made that plan, with the full responsibility as managing director of the building firm, did you think that the advantages of greater safety which the larger number of boats would give would outweigh this disadvantage of greater top weight? - Ships when they are finished are tested for stability, and if we find the stability was not right it can always be rectified either by more water ballast or solid ballast. 21451. So that you had that in mind when you went over the plans? - I never considered it at the time at all - not that part of it.

## **Page 556**

21452. May I put it that you would be able to correct any disadvantage in greater top weight by more definite ballasting or greater weight near the keel? - I believe so.

21453. Do you think that the entire disadvantage of making the ship tender in that way might be corrected by ballasting? - It might be.

*(The Commissioner.)* And what would be the effect of that upon the vessel; would there be any effect upon it commercially? - If it was what you call a weightcarrying ship where you had a great deal of cargo it would tell against her, but these large liners are very seldom filled up. There is always plenty of space.

I am quite uninformed about it; would it require any more coal? - Well, it would be such a small affair that it would not be noticeable. It would be likely a quarter of an inch in the draught or something of that sort. You could argue that it would be an enormous cost if you wanted to do it.

But it does not occur to you? - It would never come into my ideas in thinking of the thing.

*(Mr. Clement Edwards.)* I only wanted to put the point in a very general way. You said that you had one interview lasting a whole day, and only about five or ten minutes was devoted to the discussion of the lifeboat question, and another interview lasting four hours part of the time taken up with that discussion. Was there at any time between you and the Directors of the White Star a definite discussion as to the effect upon the safety of the ship of these much greater and more luxurious decks? - No, no discussion.

No discussion at all. You have been present, I believe, when there has been some discussion taking place as to the relative advantages and disadvantages of longitudinal bulkheads, but have you devoted much attention to that problem? - Yes. I personally do not approve of anything but the vertical bulkheads. I do not approve of fore and aft bulkheads. 21459. You do not? - No.

What is your idea as to the deck to which the transverse bulkheads should reach? - They are carried pretty high at present, but there is no use carrying them up above what we call the weather deck. That is *here*. (*Pointing on the model.*) They ought to be carried up to that, in my opinion; there ought to be as few doors fitted as possible, and those doors ought to be always closed at night.

Can you say why in the construction of the "Titanic" the bulkheads were not carried above E deck? - Well, I could not answer that question right off; I really do not remember the pros and cons.

You have already said that there should be as few a number of watertight doors as possible. What is your view as to whether there should or should not be watertight doors at all in the boiler section, that is to say, in the lower decks? - I think the doors ought to be there for the carrying on of the work of the ship, and I think it would be practically impossible to do without them.

Is it not a fact that in the great warships there are no watertight doors in the bulkheads in the lower decks? - I never had the honour of building an ironclad, so I am not able to speak.

You know generally? - I really could not say.

Will you take it from me that that is a fact that a number of warships have bulkheads so constructed that there are no watertight doors on the lower decks? - I can quite believe it.

I quite understand different reasons apply, but if that is possible on a warship why do you say it is not possible on a great mercantile ship? - Well, really, the differences are so very great you could not compare them, I think. I could not give you a comparison between the two, they are so very different. The one is made for going out and receiving shell and everything of that sort. We build ships to float, not either to hit icebergs or hit rocks. Unfortunately they do so.

You have hit one? - We have.

They require great speed in a warship; they require to move quickly inside a warship; so that if it is possible in a warship why is it not possible on a merchant ship? - Well, I do not think it is workable.

From what point of view. Do you mean mechanically workable or commercially workable, or what? - Both mechanically and commercially.

Why do you say it is not mechanically workable on a merchant ship if it is shown to be mechanically workable on a warship? - Well, you see they have such an immense number of artificers on a warship that they are able to put one or two or three of these men in each of these stokeholds. They have not to go about, whereas in a merchant ship you must keep one of the engineers in charge constantly in these stokeholds moving rapidly from one to the other so as to see that the fires have been properly fired, to see that the water is at the proper height in the boilers, and to keep a general supervision rapidly. I do not think that in a merchant ship the thing is possible.

If it can be done with what you call artificers in the Navy it could be done with some equivalent person or persons in the merchant ship? - You could not run the ships at that expense.

It resolves itself into what I suggested, not a mechanical difficulty, but a commercial reason.

*The Commissioner:* Oh, no, it does not do anything of the kind; you must not say that.

*Mr. Edwards:* I am putting that interrogatively, my Lord.

*The Commissioner:* It is not the effect of his evidence.

*(Mr. Clement Edwards.)* I am putting it to him interrogatively. *(To the Witness.)*

Is there any mechanical difficulty in the way of having in each boiler section - in this case there were six sections - the equivalent of the artificer or artificers who you suggest make it possible to run a warship with bulkheads without watertight doors? - Will you just take the Navy and the Mercantile Service. A man in the Navy understands every inch of the ship and has very likely lived in the ship for years. The man who leaves Southampton in a great many cases has never seen an engine or a ship before; and therefore the two things are entirely different, and cannot be considered together. The Merchant Service being put on the same basis as the Admiralty to me only seems foolish.

That is your view? - That is mine.

21473a. I am only now dealing in relation to a bulkhead without watertight doors. Does it then resolve itself into this, that owing to the difficulty of getting for the Merchant Service people of a similar character to the artificers who thoroughly understand their ship, you cannot run bulkheads in the lower decks without watertight doors? - I am not able to answer a question like that. That is something for you to ask the people that are running the ships, not the builder. I as the builder do not think the thing is workable at all, but the people to ask are the shipowners of the country, if they can do it.

When I was asking them in this case they assured me that the builders would be able to tell me all about it. There will have to be recommendations from this

Commission, and I was trying to get your views as a very experienced man on the construction of ships. Do you know what the financial relations are between Messrs. Harland and Wolff and the International Mercantile Marine Company? - I know nothing about it.

It is no good asking the builder about that? - I never was a member of Harland and Wolff; I was not a shareholder; I was their general manager and their chairman of directors, but had no monetary interest in the thing, and, therefore, it was not my business to go into those details.

**Page 557**

**Examined by Mr. LAING.**

Was it not contemplated in 1909 to fit hollow tubes for davits in the "Olympic" and the "Titanic"? - It was considered.

*The Commissioner:* I think Mr. Edwards has made this part of the case very clear now. His questions have made it clear.

*(Mr. Laing.)* Yes, my Lord, I thought it was clear. I only wanted to show the reason why and the reason was as I understand it that tubular davits were considered at one

time? - They were, and afterwards the Welin's davit was adopted. That is the only point I was going to make, and if it is clear I will not go on.

*(The Attorney-General.)* I think Mr. Carlisle agrees.

*The Witness:* Yes, we fitted a great many of those.

*(Mr. Laing.)* The only point I will ask is this, and if you agree with me I shall not ask any more about it. The meetings which you refer to were meetings at which the model of the Welin davit was introduced for the purpose of considering its advantages as a davit? - No, they had had them in their ships before, it did not require to be considered. 21480. That was the object with which you took models down? - It was only a drawing; I took no models.

21481. The drawing was supplied to you by Welin himself? - From a sketch I sent him.

21482. Well, he does not say so. However, you say you sent him a sketch? - The idea is my own.

What? The Welin idea is your own? - No, certainly not, but four boats was my idea.

The sketch he sent, as a matter of fact, showed three boats? - It shows four. 21485. In his letter which is a letter to yourself, he says: "I am sending a sketch showing three boats on one pair of davits"? - He may have sent others, but that is his photograph there, so that you can take it.

I think, if I may adopt my Lord's suggestion, Mr. Edward's question made that point clear. Did you say you personally considered the "Olympic" and "Titanic" had not sufficient boats? - That was my idea.

Were you a party to the Report of the Advisory Committee of 1911? - I was. 21488. Are you aware that if the conditions required by the Board of Trade had been carried out your recommendations would involve the carrying of fewer boats than was in fact carried? - Yes.

How can you justify your signing this report if that is your opinion? - I was asked to join that Committee two days before it finished. They had come to certain conclusions on certain points, and the Chairman drew my attention to the fact that if I pushed my idea for all ships the Bill would have to go back - any Bill connected with shipping would have to go back on all those ships, and it would not be fair; and they had no doubt that big ships would fit more boats than were required by the Board of Trade? - Do you mean you signed this document without agreeing with it?

*(The Commissioner.)* Answer that question; it is very simple. - I did not consider it satisfactory, and I told them so, but I signed it.

It is a very strange thing to do, to sign something you are not satisfied with, pretending, by signing it, that you are satisfied with it? - Well, I quite confess that it looks very extraordinary, but from what occurred at the meeting, if any of you had been present you would have seen the exact reasons for agreeing not to force it, and to bring the whole thing up again that had been worked at for I do not know how long - weeks or months.

21492. Do you want to go back on what you signed? - I certainly do not think it is enough, but I was not going to be a dog in the manger when a lot of gentlemen had come to the conclusion that this was satisfactory for the mercantile shipping.

*(Mr. Laing.)* I do not understand it. There is your signature purporting to agree with the resolutions of the rest of the Committee? - Yes.

Which, in fact, reduced the number of boats? - That they could reduce them. Yes.

For the "Titanic," although your opinion is she had not enough? - Yes.  
When you talk about your idea which you pressed before the Advisory Committee was that with regard to the Welin davits? - It was with the idea of taking more boats.  
With regard to this particular davit? - No, nothing at all.  
Are you interested in that davit? - I had no interest in it at the time. I took an interest in it in August, 1910 or 1911, after I left Harland and Wolff's. I never got any interest in it until after I left Harland and Wolff's.  
(*The Commissioner.*) Am I to understand that you are commercially interested in these Welin davits? - I was. The company was floated on the 30th of August. 21500. Are you now? - Yes, and I am now.

**Examined by the ATTORNEY-GENERAL.**

I want to ask you with reference to one matter. This Committee, with reference to which Mr. Laing has put some questions to you, was the Advisory Committee in reference to Life-Saving Appliances? - Yes.  
And it was for the purpose of advising the Board of Trade what would be required that that Advisory Committee sat? - Yes.  
And you knew that in the ordinary course of things at least the Advisory Committee's Report would have much weight with the Board of Trade. You understood that? - I thought it would make them go into the matter.  
I am asking you because I see in this Report, which will be read later, when I come to the history of these Committees -  
*The Commissioner:* I have not heard of it, you know.  
*The Attorney-General:* I was not here, and I am not quite sure whether your Lordship's attention was directed to this - that the Report, which recommended the extension of the table of boat requirements - Yes.  
Had this effect, that for the gross tonnage of a vessel of 45,000 tons and upwards the total minimum cubic contents of boats required would be 8,300. Do you follow? - No, I do not.  
You were dealing with the table. There was a table already in existence. You were recommending, with a number of other expert gentlemen on this Advisory Committee, an extension of that table because of the increased tonnage which either had come into existence or might? - It was rather for the ships that were afloat - for the "Mauretania" and the "Adriatic." They were the ones that were practically considered at that meeting, as it would affect them all, any new rules that might be brought out. 21507. The gross tonnage of the vessel there - the highest requisition is 45,000 tons and upwards? - Yes.  
For that the requirement was to be a minimum of 16 boats under davits and a number of additional boats to be readily available for attachments to davits, eight? - Yes.  
Those 24 boats were to have a total minimum cubic content of 8,300 cubic feet.  
Do you follow? Look at it (*Handing a document to the Witness.*)? - Yes.  
That is right? - Yes.

So that in point of fact the Board of Trade requirements on the "Titanic" before this report, or if this report was not acted upon, required a minimum cubic capacity -? - I do not think that report was ever published till after the ship was lost. No, but if you follow my question you will see the point. It required a minimum capacity of 9,625 feet available in boats for the "Titanic"? - Yes.

**Page 558**

In point of fact, the requirements for the "Titanic," apart altogether from this report, were 9,625 feet. The boat cubic capacity required under this report, if acted upon, would have been 8,300 cubic feet; it would have been 1,325 cubic feet less if this latest report was acted upon? - Yes.

So that, as I understand it, your latest Report - this one which has been referred to, and which my Lord knows, in fact required less boating capacity than actually existed or exists at the present time according to the present Board of Trade Rules for a vessel like the "Titanic"? - Yes.

And that was your view?

*(The Commissioner.)* Answer that question. Was that your view? - It was not.

Why on earth did you sign it? - I do not know why I did. I am not generally soft. 21517.

*(The Attorney-General.)* Well, I should not have thought so? - But I must say I was very soft the day I signed that.

21518. *(The Commissioner.)* Who was it that persuaded you to sign it? - You see I do not remember one of their names although I know them nearly all to shake hands with.

21519. *(The Attorney-General.)* I suppose you know Mr. Norman Hill? - Yes. He was in the Chair, was he?

I suppose so, because he signs first? - Yes, he was. Was not there a Labour M.P. on it, Mr. Havelock Wilson?

*(The Commissioner.)* Did he agree? - I think he must have agreed.

*Mr. Scanlan:* He is one of the signatories to it.

*(The Commissioner.)* He signed it?

*The Witness:* Yes; he was also soft, because he did not approve of it I remember.

*The Commissioner:* How many signed it without approving of it? I am told that Mr. Havelock Wilson is one of the signatories.

*(The Attorney-General.)* Yes, my Lord, he is. There are ten signatories. I suppose they constituted the Committee? - At those meetings was there a note kept of my handing in those plans of extra boats, and what I said at those meetings on the boat question? Will you let me know that? Might I ask that question?

*(The Commissioner.)* No, you may not.

*The Witness:* That would put some person in a hole, my Lord, and it would be better not to do it.

*(The Attorney-General.)* Will you let me ask you a question now which I think to some extent corrects the impression that you have made by your answer to me and which I think is only fair to you, should be corrected. The table that I was putting to you was the extension of the table to 45,000 tons and upwards, but I see that

there is an additional requirement in a later paragraph: "Additional boats and rafts required shall be of at least such carrying capacity that they, and the boats required by Columns 2 and 3 of the above table, shall provide together three-fourths more than the minimum cubic contents required by Column 4 of that table." So that you would have to add that to the 8,300. - Yes, it is only a few feet one way or the other. It is only a small affair; I know about that second part of it.

*The Commissioner:* He says it is a very small affair.

*(The Attorney-General.)* I think he is wrong. Three-fourths must at least add something substantial if you compare it with the original figure they were taking. Really it amounts to this, this 8,300, and you have to take three-fourths of that? - 6,000? 21527. Yes, it is not a few feet more; it is 6,225 feet? - It is subject to the next paragraph about one thing and another. It is put on in one place and taken off in the next, I think.

I am only anxious to put it to you, because I thought I might be doing you an injustice in leaving it where it was? - Thank you very much.

You seem to be suspicious, but I assure you that is the only object I have. I put it to you as 8,300 feet as compared with 9,625, but I see in the further paragraph here there is a requisition for 6,225 feet more, which would bring it up to 14,525 as against 9,625. That would be the right comparison; but it is quite true as you say. I suppose that is what you mean - I do not know whether it is - that it is only a question of a few feet. Do you mean the paragraph which goes on to say that "vessels divided into efficient watertight compartments to the satisfaction of the Board of Trade should, provided they are fitted with wireless telegraphy apparatus, be exempt from the requirements of additional boats or rafts" - Is that so? - Yes, that was the part doing away with it; you put them on and then took them off.

*The Commissioner:* I think we have had that before.

*The Attorney-General:* I think very likely your Lordship has; I am not quite sure.

*The Commissioner:* If not I have had it before me in print.

*The Solicitor-General:* I called attention to it, my Lord, in the existing rules.

*The Attorney-General:* This is the only report; you have not had any occasion for that.

*The Commissioner:* I do not remember this signed report at all. I have heard of it for the first time today.

*The Attorney-General:* No, my Lord, but you will have it all in proper order of date.

The question I put rather suggested it exhausted it, and it was necessary to put it right.

*(The Witness withdrew.)*

21530. *(The Commissioner.)* Is Mr. Peskett here? Mr. Peskett, can you tell me how many compartments of the "Mauretania" forward, you know, would have to be full of water before she would sink?

*Mr. Peskett:* There is one of the conditions shown on that. *(Mr. Peskett explained the plan to the Commissioner.)*

*(Adjourned to tomorrow at 10.30 o'clock.)*  
In the Wreck Commissioners' Court.

SCOTTISH HALL,  
BUCKINGHAM GATE,  
*Tuesday 11th June, 1912*

PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

LOSS OF THE S. S. "TITANIC."

**TWENTY-FIRST DAY.**

THE RIGHT HON. SIR RUFUS ISAACS, K. C., M.P. (*Attorney-General*), SIR JOHN SIMON, K. C., M.P. (*Solicitor-General*), MR. BUTLER ASPINALL, K. C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by Sir R. Ellis Cunliffe, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K. C., M.P., MR. F. LAING, K. C., MR. MAURICE HILL, K. C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.) appeared as Counsel on behalf of the White Star Line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland, and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted on application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes of Liverpool) appeared on behalf of the

Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on behalf of the Allan Line Steamship Company; and (instructed by Messrs. William A. Crump and Son) also on behalf of the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P. (instructed by Messrs. Helder Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside and General Workers' Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third class passengers. (Admitted on application.)

MR. C. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian" (Leyland Line). (Admitted on application.)

Mr. H. E. DUKE, K. C., M.P., and MR. VAUGHAN WILLIAMS (instructed by Messrs. A. F. and R. W. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff Gordon. (Admitted on application.)

MR. F. LAING, K. C., and MR. ALFRED BUCKNILL appeared on behalf of Messrs. Harland and Wolff. (Admitted on application.)

## Page 560

*Mr. Harbinson:* My Lord, there is at this stage a subject I should like to mention to the Court, which I conceive it my duty to bring forward. Up to the present representatives of the owners, the officers and crew of the "Titanic" have been called and have been allowed to present that aspect of the case, and I think this would not be an inopportune time when some indication might be given by those who represent the Board of Trade as to what time we might expect the representatives of the passengers, and especially the passengers in whom I am more deeply interested, to be called. I think it is only fair as one side of the case has been presented, in the interests of justice and public confidence, that the other side of the story should also be presented.

*The Attorney-General:* I find some difficulty in understanding what it is my friend wants.

*The Commissioner:* What is it you do want?

*Mr. Harbinson:* I want some indication from the representatives of the Board of Trade as to when representatives of the different classes of passengers will be called.

*The Commissioner:* You cannot have untimely intimations of that kind. They will conduct their case as they think right. That is all.

*The Attorney-General:* I should like to say this, so that at any rate, if my friend has any witnesses whom he likes to call, he should not let them go under any misapprehension. So far as I am aware and from the material before us, there is no useful light which can be shed upon the facts into which we are enquiring by any passengers whose evidence is available to us.

*The Commissioner:* Can you suggest any passenger, Mr. Harbinson?

*Mr. Harbinson:* I daresay, my Lord, that my solicitor may be able to.

*The Commissioner:* Do not say your solicitor. Can you suggest any person who can help in this Enquiry that you know of?

*Mr. Harbinson:* Yes, my Lord, I have the names of several survivors in America who, I think, would shed a useful light upon the subject.

*The Commissioner:* Survivors are not necessarily of the least value.

*Mr. Harbinson:* I submit to your Lordship that under the circumstances it would be desirable that the evidence of survivors should be produced in order that we may know exactly what took place at the time of the collision, and more especially to throw some light on the great disparity that exists in the number of deaths in the different classes of passengers.

*The Commissioner:* Have you any proofs from anybody?

*Mr. Harbinson:* It is because I have not proofs that I -

*The Commissioner:* Do answer my question. Have you any proofs from anybody?

*Mr. Harbinson:* I have not.

*The Commissioner:* Then I cannot form any opinion. If you have any proofs of witnesses that you desire to call, you may let me see them.

*Mr. Harbinson:* Statements have been made in the public Press, and it is because that has been done -

*The Commissioner:* What public press?

*Mr. Harbinson:* In the papers.

*The Commissioner:* Will you tell me the name?

*Mr. Harbinson:* The "Freeman's Journal," of Dublin, and the "Irish Independent," of Dublin.

*The Commissioner:* Will you hand up to me the "Freeman's Journal" and the "Irish Independent."

*Mr. Harbinson:* If I have the extracts here your Lordship shall have them. *The*

*Attorney-General:* May I point this out to my friend. Of course, a number of statements have appeared; some statements have been before us, and we have enquired into them, and I see no use whatever in calling the witnesses. *The Commissioner:* Never mind, let me see those two papers.

*The Attorney-General:* I am ready to call any witnesses -

*The Commissioner:* To found a case upon statements found in newspapers seems to me most extraordinary.

*The Attorney-General:* All I am anxious to make plain is that I will call any witnesses who can give us any more light than we have at present. I do not intend to call witnesses who will only repeat evidence that we already have.

*The Commissioner:* "A terrible story of women and children locked in the steerage of the 'Titanic' is told by Miss Margaret J. Murphy, of Foster, County Longford, who, with her sister, Miss Katherine Murphy, were saved from the wreck." That lady does not appear to have been locked in the steerage. "Interviewed by a representative of the 'New York American'" - that is another paper. *Mr. Harbinson:* No, my Lord.

*The Commissioner:* Is the "New York American" the same paper? *Mr. Harbinson:* No, it is an extract.

*The Commissioner:* "Interviewed by a representative of 'The New York American' at the residence of their sister, Mrs. J. Tooney, No. 3,649 Olinville Avenue, the Bronx, Miss Murphy stated: - "Before all the steerage passengers had even a chance for their lives the

“Titanic’s” sailors fastened the doors and companionways leading up from the third class section. That meant certain death to all who remained below.” You have never asked any man who has been in the box any question directed to this. *Mr. Harbinson:* Oh, yes, my Lord, with great respect, I have.

*The Commissioner:* Tell me where you asked whether the sailors did not fasten the doors and companion ways.

*Mr. Harbinson:* I have asked them were they opened.

*The Commissioner:* That is not a fair way of asking such a question. The fair and proper way is to say, “Were they fastened by you or by any of the men working with you?”

*Mr. Harbinson:* That question, I believe, has been asked, too.

*The Commissioner:* Well, then, tell me where it is - “And while the sailors were beating back the steerage passengers, lifeboats were putting away, some of them not half filled.” Then do you want me to read about “a brave Irish youth”?

*Mr. Harbinson:* No; your Lordship asked me for the paper, and I gave it to you. *The*

*Commissioner:* It is much longer than the part I have read. Do you want me to read the passage headed, “A brave Irish youth”?

*Mr. Harbinson:* I should hope, my Lord, that is not a solitary example of Irish bravery.

*The Commissioner:* I daresay not; but has it any bearing upon this Enquiry, because, if so, I will read it?

*Mr. Harbinson:* No, my Lord.

*The Commissioner:* Very well, what is the other extract from a newspaper? Is this the only foundation you have?

*Sir Robert Finlay:* May I make this suggestion to Mr. Harbinson? If he would supply the Attorney-General with a proof taken of any witness he thinks it would be desirable to call, the Attorney-General will consider that.

*The Commissioner:* I have suggested that. Apparently no proofs of anybody have been taken, and I really cannot prolong this Enquiry while we seek to verify statements which come apparently from the “New York American,” whatever paper that is; I do not know what paper it is. I cannot do that, Mr. Harbinson.

*Mr. Harbinson:* My object was that the Board of Trade should - *The*

*Attorney-General:* We will call any witness who really can help.

*Mr. Harbinson:* I will submit to the Attorney-General a list of names.

*The Attorney-General:* That will not do.

*The Commissioner:* Oh, no, you must give the names, and you must show that a statement has been taken from them, and you must show that

## **Page 561**

that statement contains material evidence, and then you know either my discretion will be exercised or the discretion of the gentlemen at the Bar will be exercised as to whether they ought to be called; but I cannot adjourn the Enquiry on the speculation that some witnesses may be found to bear out the statements of the “New York American.”

**CHARLES ALFRED BARTLETT, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

Do you hold a Master's certificate? - Yes.

And are you also a commander in the Royal Naval Reserve? - Yes.

I believe you are a Marine Superintendent of the White Star Line? - That is so.

I believe you have held that position since January, 1912? - Yes.

Were you for 30 years before that at sea? - Yes.

And I think, of those 30 years, for 18 years you were with the White Star Line? - That is right.

And during those years have you constantly been crossing the North Atlantic? - That is so.

And in command, I think, for nine of those 18 years? - Yes, for nine years.

Are you stationed at Liverpool or Southampton? - Liverpool.

I believe you have three assistants there that assist you in the management of the line? - Yes.

And I think they are all Master Mariners. And at Southampton you have a Marine Superintendent, Captain Steel? - Yes.

He has an assistant, and I believe you have various Marine Superintendents in the United States and other countries? - Yes.

And it is the business of you and those who work with you to see to the efficiency and upkeep of the ships and manning? - Yes.

And all matters connected with their working as good and seaworthy ships? - Yes, that is connected with the Marine Department.

With regard to one matter about which certain questions have been asked, the "Titanic" carried 66 sailors? - 66 in the sailing department.

And according to the Board of Trade Regulations which have already been referred to, she was required to carry 48 in that department, I believe? - Yes.

So you had got some 18 in excess? - Yes. Of course, they are not all deckhands. In the sailing department you have to take into consideration that we have two surgeons, two stewards -

What I wanted you to tell me was this. According to the Board of Trade Regulations the number of deckhands to be carried for a ship of the tonnage of the "Titanic" is 48? - Yes.

I daresay you know that? - Yes.

How many deckhands in the proper sense of the word had the "Titanic" on this voyage? - 58.

So much for the manning. I do not think I need trouble you for more with regard to that matter. We have had a great deal of evidence with regard to the boats, and I want to take you as shortly as I can. Would it come within your department to take any part in seeing that proper drill takes place? - Yes, in Liverpool and Southampton, in the Home Ports when the clearances take place.

That is before the Emigration Officer holds his survey just before the ship sails?

- Yes, and, of course, the annual survey.

Then, in addition to that, you have an annual survey? - Yes.

Tell me, first of all, with regard to the drill before the clearance. Is it the duty of you or one of your subordinates, either at Liverpool or Southampton, to see that drill is properly performed, in conjunction with the Board of Trade Officer? - That is so. 21555. Do you, yourself, and do you see that those under you, give proper facilities for boat drill being carried out? - Yes.

In connection with boat drill, in fact, have you had any difficulties with any of the crew? We have heard in a general way from Mr. Sanderson - you have been sitting there, I have seen you - that he had difficulties. That would probably come more directly before you, would it not? - Yes. In Southampton it would come more under the other Marine Superintendent.

Since when have those difficulties been in existence? - To my knowledge, some 12 months or so.

What has been the class of difficulty that you have had? - The firemen not turning up for this boat drill.

Is this the drill before the ship is cleared? - On the clearance day, yes. 21560. And have you attempted to do anything to deal with that difficulty to get them to turn up? - Yes, we have offered them a half-day's pay to turn up on the day before.

Before the ship sails? - Before the ship sails, so as to have this drill.

Has that inducement been successful? - No, it has not.

Is it, in your view, a serious matter that you cannot get what you consider to be an efficient drill before the ship leaves her port? - Well, I think it is necessary.

You think it is necessary? - I do think it is necessary.

That they should be there for that drill? - Yes.

You say the inducement which you have offered them in the past has not availed. Are you taking any steps to see if you can now induce them to come? - Well, we are considering the matter.

The matter is under consideration? - Yes, seeing what we can do. 21568. Who is giving it consideration? - Myself and assistants in Liverpool and Southampton.

(*The Commissioner.*) I do not know how long you have been considering it, but have you arrived at any result? - We have not yet, my Lord.

How long have you been considering it? - We have been considering it since this disaster. We have taken the matter in hand to see if we can really improve matters. 21571. I know, but that is not an answer to my question. I want to know how long you have been considering the matter? - The last two months.

You have not been considering it for two months, you know. Where did you consider it; where were you when you considered it? - In Liverpool.

Where? - At my office.

Is your office separate from the office of the White Star Company? - Yes.

A separate office? - Yes.

And who were there? - My assistants.

Who are they? - Captain Thornton, Captain Roberts and Captain Lawrence. 21578.

There were four of you. Have all four of you ever been together to consider what

you can do to induce the men to come to a proper drill? - Well, I cannot say we have all four been together, my Lord.  
How many of you have been together? - Three.  
Which three? - Captain Thornton, Captain Roberts, and myself.  
How long did you sit together considering this question? - Several times. 21582. I did not ask you the number of times, but how long? - Well, I suppose about an hour.  
Do you know. Do you mean an hour each time, or do you mean an hour altogether? - An hour each time.  
Then you know, if you have been considering

**Page 562**

it for several hours together, considering how you can induce the firemen to turn up for a proper drill, I should think that you have formed some opinions about it? - It was not only that, my Lord, that we were considering; that is only one point.

I only want to know about that at present. I do not want it mixed up with something else.  
How long have you considered this question? Have you considered it at all? - We have.

Then what conclusion, or what opinions, have you formed. You say you have come to no conclusion? - Well, we have come to no conclusion.

Well, have you formed any opinions? - No, my Lord.

Then your deliberations do not seem to have been of much value up to the present point?  
- No, my Lord, they have not.

(*Mr. Butler Aspinall.*) It is a matter of importance? - I think it is necessary, yes. 21590.

(*The Commissioner.*) Can you now, in the Witness-box, suggest to me any means by which you can make men turn up to go through drill if they do not want to do so? - I am afraid I cannot, my Lord, not just now.

*The Commissioner:* Nor can I.

21590a. (*Mr. Butler Aspinall.*) There is another matter in connection with the lifeboats. The capacity of these lifeboats, we have been told - the lifeboats under davits - were to carry 65 persons, the D boats 40 and the collapsible boats 47 each? - Yes.

Have you considered whether it would be desirable to have printed in large letters any notices on each boat that would indicate to the officer in the event of a disaster that the boat was capable of carrying either 65, or 40, or 47 persons, as the case might be? - We have that on most of our boats. We have it cut in the bow of the boats in nearly all our ships.

(*The Commissioner.*) Was it done on the boats in the "Titanic"? This is the first I have heard of it? - I do not think it was.

(*Mr. Butler Aspinall.*) Is this your evidence with regard to the matter; that in the boats on other ships in your fleet it is done? - It is done.

But it was not done in the "Titanic"? - I am not quite certain; I would not like to say.

(*The Commissioner.*) Now, let me ask you this: Has it been done in the other boats since this disaster? - No, my Lord, it has always been the custom.

I cannot understand it at all. Why should you depart from the custom in the case of the "Titanic"? - I am not quite certain, my Lord, whether it was on the "Titanic." 21597. What do you mean by not quite certain; do you mean by that, that you did not see it with your eyes? - I did not.

Did you ever look? - No, I did not.

Did anyone ever look? - I cannot say.

*Sir Robert Finlay:* On the "Olympic" there were such.

*Mr. Butler Aspinall:* I am just asking the Board of Trade Solicitor to hand to me one of the depositions made in New York by the Surveyor who examined the boats, in which he does speak of such a notice appearing on one of the boats.

*The Commissioner:* How many did he examine?

*Mr. Butler Aspinall:* He examined all those that were saved. My memory is not quite clear on the matter, but it is being got. That was a collapsible boat I believe I am right in saying?

*The Commissioner:* That is only one of the four.

(*Mr. Butler Aspinall.*) Yes, only one out of all that were saved. (*To the Witness.*) I do not know whether your attention has been directed to this matter before? - No.

21601-2. But whose business would it be to see that the number was cut into the boat? - The officers of the ship would report it if it was not done.

But then it was not done, apparently, if your evidence is correct.

*The Commissioner:* What was that?

*Mr. Butler Aspinall:* He says, my Lord, that the officers would report if it was not done.

*The Commissioner:* Yes, I heard him say that, but you added some observation of your own.

(*Mr. Butler Aspinall - To the Witness.*) Do you know with regard to this matter accurately what has happened, or are you guessing about it, if I may say so? - As far as the "Titanic" is concerned, I do not know; I am not certain.

(*The Commissioner.*) I wish you would not create confusion by leading us at first to suppose that you do know, and then afterwards saying you do not know? - I said, my Lord, with regard to the "Titanic" I was not certain.

*The Commissioner:* You, Sir Robert, have been down to see the "Olympic"?

*Sir Robert Finlay:* Yes.

*The Commissioner:* So have I; but my attention was never drawn to any indication on the lifeboats that there was a notice of the number the boat would carry.

*Sir Robert Finlay:* I did not observe it myself, my Lord; but I am told it was there; my friend Mr. Laing observed it. It is a small plate stating the number the boat will carry.

*The Commissioner:* A small plate?

*Sir Robert Finlay:* Yes.

*The Commissioner:* Riveted on to the boat.

*Sir Robert Finlay:* So I understand.

(*Mr. Butler Aspinall - To the Witness.*) What is the purpose of having it there? - Well, really, it is for the use of the Board of Trade Inspectors.

*(The Commissioner.)* How can it be for the use of the Board of Trade? A notice of that kind must be for the use of the people who are going to use the boat? - Also, my Lord, for that.

It is not a Board of Trade requirement, I suppose? - No, it is not.

*Mr. Butler Aspinall:* My Lord, there is a Board of Trade requirement with regard to the rafts.

*The Commissioner:* What do you mean by the rafts - the collapsible boats?

*Mr. Butler Aspinall:* Yes, my Lord, but no requirement with regard to the lifeboats. *The*

*Commissioner:* Will you tell me what the requirement is so far as regards what you call rafts?

*(Mr. Butler Aspinall.)* Yes, I will read it. "Surveyors will note that both rafts and buoyancy apparatus must be marked in such a way as to indicate plainly the number of adult persons for which they are deemed sufficient. Plates will be supplied by the Board of Trade to be screwed on to the woodwork of both rafts and buoyancy apparatus indicating this number, and forms of demand for plates, to be filled up and returned to the Board of Trade, will be issued for the use of the principal officer. No raft or buoyancy apparatus is to be regarded as finally approved until the marking plate has been affixed." *(To the Witness.)* I suppose you know of that rule, do you not? - Yes.

*The Commissioner:* Now, is there any corresponding rule for lifeboats?

*Mr. Butler Aspinall:* My Lord, I am told not. They are of the standard size, but still it might be that it would be useful.

*The Commissioner:* What do you mean by "standard size"?

*Mr. Butler Aspinall:* They are of such a size as must hold the number of people required to be carried.

*The Commissioner:* But what does "standard size" convey? It conveys nothing to my mind. I do not know what the "standard size" is or how it is ascertained.

*Mr. Butler Aspinall:* It has to be of a certain cubic capacity, and it has been worked out.

*The Commissioner:* And these were.

*Mr. Butler Aspinall:* Yes, these were.

*The Commissioner:* As I understand, it is calculated that a boat of a certain cubic capacity is fit to carry a certain number.

*Mr. Butler Aspinall:* That is so, my Lord - 65 for the lifeboats under davits, 47 and 40.

## **Page 563**

*The Commissioner:* Have you asked whether there is any such indication as on the lifeboats carried on men of war.

*Mr. Butler Aspinall:* No, but the Assistant Hydrographer is here for other purposes, and he might be able to give me the information.

*The Commissioner:* Well, ask him.

*Mr. Butler Aspinall:* I am told that there is no such plate or notice.

*The Commissioner:* I was advised by the Admiral that there is no such thing in a man-of-war. What points are you going to examine this witness upon, because he has not afforded me much information so far.

*Mr. Butler Aspinall:* Your Lordship sees his position; he is the Chief Marine Superintendent of the Line.

*The Commissioner:* Yes, I know, but what are the points?

*Mr. Butler Aspinall:* What I was directing his attention to were points which form the subject matter of some of the questions; for instance, manning, drill, boats; and the next question I was going to ask him is this: Have you since this disaster, in view of your position in the Line and in view of your practical experience as a seaman, considered the desirability of increasing the number of boats to be fitted.

*The Commissioner:* Has this gentleman ever been to sea?

*Mr. Butler Aspinall:* Yes, he holds a Master's certificate, he said.

*The Commissioner:* Quite right; I beg your pardon. Very well, now will you ask him the question.

*(Mr. Butler Aspinall - To the Witness.)* In view of your position in the White Star Line and your practical experience as a seaman, have you since the disaster, considered the desirability of adding to the number of boats to be carried on a vessel of the class and size of the "Titanic"? - Yes.

You have. Now what opinion have you come to with regard to that matter? - Well, we have already put on board all our ships a number of boats sufficient to carry every soul that is put aboard. With regard to future arrangements, we are waiting results as to what may be said at this Enquiry.

*(The Commissioner.)* That answer I do not understand. You have done it, and yet you are awaiting results? - I have done it by orders.

Then what results are you waiting for. You have done it, you say? - I put these boats on board according to instructions, my Lord.

Can you tell me now what question Mr. Aspinall asked you? - He asked me if we had considered the advisability of putting more boats on.

Yes, and you said, "Yes"; but he asked you then another question. Do you remember what it was? - I do not remember what it was.

Then I will tell you what it was, and see if you can answer it: Have you formed any opinion as to the desirability of increasing the boat accommodation beyond that which was provided on the "Titanic"? - Yes, my Lord.

Very well. Now you say Yes to that, and his next question was this: What opinion have you formed, and then you go on to a rambling statement that you have done this and done that and done the other. You did not answer his question. Do you know what the question is now? - Yes. 21617. What is it? - What is my opinion?

Now let us have the benefit of it; if you have anything in any way, let us have it? - My opinion is we should not put too many boats on board a ship.

Cannot you answer a question? The question is, in your opinion, ought the boat accommodation to be increased? - No, not to any great extent.

And what does "any great extent" mean? - To hamper the other boats.

Oh, no; I am not talking about hampering. How many more; if any, how many?

- That I cannot say.

21622. Then you have formed no opinion? - No, no opinion as regards numbers.

*The Commissioner:* This evidence is worth nothing to me at all - nothing. *Mr.*

*Butler Aspinall:* Have you been consulted by any of your superiors, managing directors, or persons in that position with regard to this question?

*The Commissioner:* Has he given you a proof?

*Mr. Butler Aspinall:* Yes, my Lord.

*The Commissioner:* Do let me see it. *(The proof was handed to the Commissioner.) Mr.*

*Butler Aspinall:* Although the proof deals with many matters, I am not certain it deals with all the matters I have directed his attention to. I somewhat disregarded the proof, and have been rather guided by the questions which your Lordship will have to answer. That is what I was trying to get from this gentleman.

*The Commissioner:* Is there anything in this proof about boats?

*Mr. Butler Aspinall:* There is with regard to the number of boats, on the first page.

*The Commissioner:* I will read it: "With regard to the number of boats on the 'Titanic' we are guided to a large extent by the Board of Trade requirements, but, in fact, provide a larger boat capacity than the rules call for." Is that all? *Mr. Butler Aspinall:* That is all that is in the proof.

*The Commissioner:* If that is all the man said I cannot blame him now.

*Mr. Butler Aspinall:* One is not always, in these cases, guided by the proof, or limited by it. I was rather seeking information.

*The Commissioner:* You were fishing in waters that had not very much depth.

*Mr. Butler Aspinall:* They have turned out not to have very much depth. I hoped they would have had.

*Sir Robert Finlay:* I think on the next page my friend will find something more about the boats.

*Mr. Butler Aspinall:* I did not think so.

*The Commissioner:* Will you read it, Sir Robert?

*Sir Robert Finlay:* "With regard to the number of boats to be carried in future, the present appliances used on board steamships do not enable a large number of boats to be handled; and until some other arrangement can be effected for the purpose of handling and lowering boats, I think it is a mistake to load the decks up with too many boats, and so hamper the handling of those boats which can otherwise easily be handled." *The*

*Commissioner:* I must say, in justice to the witness, that is in substance what he said, but it does not help me much.

*Mr. Butler Aspinall:* I was seeking for guidance for your Lordship in this case. One has often to depart from proofs.

*The Commissioner:* Guidance? What about?

*Mr. Butler Aspinall:* In order that your Lordship should be able to answer the questions which have been put by the Board of Trade.

*The Commissioner:* That is quite right.

*(Mr. Butler Aspinall.)* That is what I was seeking to do. Of course, it has not been successful up to the present. *(To the Witness.)* With regard to binoculars. You are a practical man and have sailed these seas and advised this Company as their Marine

Superintendent? - May I say I have never been in the position of Marine Superintendent since the first of the year. I am a sailor; I have been to sea.  
With your knowledge of the North Atlantic, what do you consider as to the desirability of binoculars being provided for look-out men? - I think they are not at all necessary.  
That is your opinion. Very well, that is your answer. That is the outcome of your practical experience as a seaman? - That is the outcome of my practical experience.  
21626. Another question is with regard to searchlights. Do you think searchlights fitted on these vessels would serve a useful purpose? - Not at all.  
Since this disaster, have you considered that matter? - I have.

**Page 564**

And the result of giving your consideration to that matter is, you do not think it would be of any use at all? - No, I think it would be positively dangerous.  
Now this last matter, I am sure, is one which is within your knowledge, and it is due to the White Star Company to elicit it. With regard to the record of the officers, we have heard about Captain Smith. With regard to Mr. Wilde, he was an Extra Master. I will lead you as to it to shorten matters. I think he has been in the service of the White Star for 14 years? - That is right.  
With regard to Mr. Murdoch, he has been in the service of the White Star for 12 years? - That is right.  
With regard to Mr. Lightoller, he has been in their service for 12 years? - Yes.  
With regard to Mr. Pitman, he has been in their service for five years? - Yes.  
And all those gentlemen have either held or hold either extra master's certificates or master's certificates? - That is right.  
Then with regard to Mr. Boxhall, he has been, I believe, in the service of the Company for four years? - Yes.  
With regard to Mr. Lowe, he has been in the service for one year, and with regard to Mr. Moody, he has been in the service for eight months? - That is right. 21636. I think those three last gentlemen did not hold master's certificates, but held the necessary certificates to enable them to fill the position they occupied? - They held master's certificates.  
Did they? - Yes, all the officers in the "Titanic" held master's certificates.

**Examined by Mr. SCANLAN.**

I suppose you are aware that the Board of Trade does not at present require you to have boat drill at all? - Yes.  
*The Commissioner:* I wish you would ask him, Mr. Scanlan, what a boat drill consists of.  
*Mr. Scanlan:* I will, my Lord.  
*The Commissioner:* And then ask him what the boat muster is.  
*(Mr. Scanlan.)* Yes. *(To the Witness.)* Would you explain to my Lord what a proper boat drill is; what does it consist of? - A proper boat drill consists of mustering the

men at the boats, hoisting the boats out, lowering them down, connecting them, pulling away, hoisting the sails, and a certain time, whatever the Captain or officer decides, to pull round or sail round the harbour, wherever they are, to come back to the ship, hook on, hoist up, and place the boats away.

*(The Commissioner.)* When that boat drill is performed, how many men are there in the boat? - From four to five.

There are no people who are what I may call dummy passengers to fill the boat?

- No.

21642. Therefore there is no drill with a boat full of people? - No, my Lord. 21643.

And there is no lowering of the boats from the davits with the people in the boat? -

No.

Except the men who are going to row her? - Except the crew.

*(Mr. Scanlan.)* May I suggest to you that it would be an easy matter to put weights into a lifeboat which would correspond to a full complement of passengers in her? -

Yes.

If it were designed to test the boat as to the possibility of lowering her safely with her full load of passengers - I mean as to the falls being able to bear the strain - that could be done? - I think so, yes.

*The Commissioner:* But you would not suggest that that should be done at every boat drill.

*Mr. Scanlan:* No, I would not, my Lord.

*The Commissioner:* If it is done once you know the capacity of the boat is tested, and I think if you went on testing it for long enough you might break the boat.

*Mr. Scanlan:* One test would establish efficiency of the falls.

*The Commissioner:* I should not call that part of the boat drill; that I should call a mere testing of the boat. Now, will you ask him what a boat muster is, as distinguished from a boat drill.

*(Mr. Scanlan.)* I will, my Lord, but I propose asking him, does he contemplate having all the boats lowered, and not one boat or two. *(To the Witness.)* Would a proper boat drill, in your view, consist in lowering all the boats and exercising all their crews? - I do not think it is necessary to lower all the boats.

Of course, you would have more practice and more drilling, the more you lower. That is evident? - Yes, but we can vary that by having different boats at different drills.

I see, but if you wanted to give adequate training, or any considerable training to your boats' crews, it would be desirable to lower them all, would it not? - Not at one time; I do not think it is necessary.

You have told us what a boat drill is; now explain what a boat muster is? - A boat muster consists of all the men lining up on the deck, and having their names called, and then as they answer their names they proceed to their boats and stand opposite their boats; the officer or petty officer in charge of the boat reads their names over at the boat and reports to the Captain.

Each man goes, I take it, in a muster to the boat to which he is stationed? - To the boat to which he is stationed.

And his name is marked on a list opposite a boat with a certain number? - Yes.

And that is the boat he has to go to? - That is the boat he has to attend. 21654. Do you think it would be desirable in the boat drill to have the crew of each particular boat exercise the boat to which they are stationed and to which they would attend in a muster? - Well, they do.

That is what should be done? - They do now. That is what they are used for - for the lowering of the boat.

You stated to Mr. Aspinall that you have experienced difficulty in inducing your men to take part in a boat drill.

*The Commissioner:* I understood the firemen - I think it is confined to the firemen. *Mr.*

*Scanlan:* Yes, my Lord. I am anxious to bring before your Lordship the view I am putting before you, which is that the firemen should be practised in boat drill.

*The Commissioner:* I think it is a great misfortune, if it is true, that the men do not turn up to this boat drill, in their own interests.

*Mr. Scanlan:* The information I have, my Lord, is that boat drill was unthought of for firemen until after this "Titanic" accident, and that what happened was that on the day of sailing two boats were lowered with a crew of sailors, all deckhands, just to satisfy the Board of Trade officer that the boats were in working order and not by way of a boat drill at all. I should like to bring some information I have before your Lordship's notice on this point.

*The Commissioner:* Very well.

(*Mr. Scanlan - To the Witness.*) Do you know that you are not required by anything in the Statutes or by any rules of the Board of Trade to have a boat drill at all? - I believe that is so.

May I refer your Lordship to the section. It is Section 9 of the 1906 Act. When you have boat drill you are required to enter it in the logbook? - Yes.

And to produce this entry to the Board of Trade Superintendent when he calls for it. That is in Section 9. Now do you think it would help you in securing a boat drill if the Board of Trade made a Regulation - I do not know if they have power - or if they have not power, if you had a statutory direction that there should be a boat drill? - When? 21660. Well, I do not say when - at such times as would be found convenient and such times as

## **Page 565**

would ensure efficiency in the manning of the lifeboats? - Yes, I think so. We already do that independent of the Board of Trade, for our own interests.

21661. Perhaps your Lordship will be interested in Section 202 of the New Zealand Act of Parliament, which is based on this Act of 1906. It is in Section 202 which corresponds with Section 9 of our Act of 1906. This is a provision which is not in our Act: "The Master of any inter-Colonial or home trade ship shall cause his crew to be properly exercised in boat drill once at least in each month in the case of home trade ships, and in the case of inter-Colonial ships once at least in the course of each round voyage." *The Commissioner:* Does the Act of Parliament provide what is to be done if the men will not drill?

*Mr. Scanlan:* It lays an obligation on the Master.

*The Commissioner:* Yes; but what is the unfortunate man to do if the men will not?

*Mr. Scanlan:* I am putting this forward - *The Commissioner:* I am not grumbling a bit.

*Mr. Scanlan:* I think the penalty is on the Master, because it is in the sub-section.

*The Commissioner:* It seems rather hard.

*Mr. Scanlan:* "Every Master who fails to comply faithfully with any of the provisions of this Section is liable to a fine not exceeding £20."

*The Commissioner:* I suppose it would be no excuse for him to say: "I tried to get the men to do it, but they would not."

*Mr. Scanlan:* The Master of a ship is supposed to have very stringent disciplinary powers and authority over his men.

*The Commissioner:* We know he is supposed to have.

(*Mr. Scanlan - To the Witness.*) In your view it would help you to some extent if you had a regulation to this effect? - I do not think so.

You do not think it would help you? - No.

*Mr. Scanlan:* I thought you said you did.

*The Commissioner:* I think what he said was that they do it already.

*The Witness:* We do it for our own interests.

*Mr. Scanlan:* Did not you also say you cannot do it because you cannot induce the firemen to take part in the drill.

*The Commissioner:* Sometimes, though they try, they cannot.

(*Mr. Scanlan.*) You stated to my Lord that one inducement you held out to the men was that they should come the day before sailing and take part in the boat drill? - Yes.

And for that day you offered them half a day's pay? - Yes.

This is, of course, the fact, that their pay for the voyage does not begin until the following day? - Until the day of joining.

There may be something even from the point of view of a fireman to be said of what is reasonable recompense for putting in a reasonable day's work.

(*The Commissioner.*) Did they offer to come if they got more money? - No, my Lord.

(*Mr. Scanlan.*) You made then an offer of half a day's pay, and Mr. Sanderson informed us that this offer of even half a day's pay has been withdrawn? - It has been withdrawn.

*The Commissioner:* Will you ask how long does a boat drill occupy?

(*Mr. Scanlan - To the Witness.*) How long does a boat drill occupy? - It depends on the officer in charge really.

(*The Commissioner.*) But can the officer in charge take a week over it? - No, my Lord.

How long; do try to answer the question. How long does it take? - It can be done in half an hour and it can take two hours.

Is two hours the maximum? - Yes.

*The Commissioner:* Now I know.

(*Mr. Scanlan.*) May I take it that it would be for the convenience of the Master and officers of the ship to have this boat drill the day before sailing? - Yes. 21675.  
That is a day, so far as the men are concerned, for which without special

arrangement they are not in receipt of any pay? - Unless they are on the ship at the time, on the ship's books. That is working by the ship.

But the firemen are not, in practice? - Not all of them.

*(The Commissioner.)* If you were to put the men on the list the day before she sails, then I suppose you would be entitled to their services on that day? - Yes, my Lord, we would, but I am afraid as long as they are in port they would not come.

If they are not on the list and you merely invite them to come and go through the boat drill they are entitled to say, "No, we will not"? - Yes, my Lord.

*Mr. Scanlan:* The inducement held out to them of coming the day before has been withdrawn. I want to know whether it is your proposition now that the men who are going to be employed for the voyage should come on the day before they are entitled to pay, for nothing, and practise on the boats. *The Commissioner:* Oh, no, no one suggests that.

*(Mr. Scanlan.)* Very well, my Lord. *(To the Witness.)* Can you explain how it came, after the disaster to the "Titanic," that practically very few (I am within your Lordship's recollection on this point) of the crew, the deckhands and officers went to the boats to which they were stationed? - Officers generally have a series of boats. They are stationed on one boat, but they have a series of boats to manoeuvre themselves. 21680. Practically all the ordinary seamen and firemen, so far as my recollection goes, who went to any boat, went to one boat to which they were not stationed? - They went where the officers ordered them.

Would not one of the results of having regular boat musters be that in an emergency the men who had been trained in ordinary circumstances to go to their proper boats would do so? - They would go in their proper boats.

I must ask one or two questions on this point, my Lord. You were asked in regard to the number of deckhands carried on the "Titanic." The only Regulation of the Board of Trade for manning graduates the number of deckhands by the cubic capacity of the lifeboats? - Yes.

If you followed this Regulation and provided lifeboats to carry every passenger and every member of the crew, this scale would require to be considerably modified, would it not? - Yes.

I see if you had 48 boats, with carrying capacity of 60 in each boat, you would require 28,000 cubic feet instead of 9,000 cubic feet? - Yes.

So that if you provided a crew of deckhands on this scale, the crew would require to be considerably augmented? - On that scale they would be.

How many deckhands do you think it would be desirable to have for each boat? - It depends for what purpose.

I mean for working lifeboats? - For pulling lifeboats or for lowering lifeboats or for what?

21688-9. You say you carry a certain number of men corresponding to the number of lifeboats you have at present? - Yes.

Have you any view of your own as to how many seamen you require for each lifeboat?

*The Commissioner:* That does not help me much, because it appears to me to depend entirely upon the weather. *Mr. Scanlan:* That is so, my Lord.

*The Commissioner:* You see in this particular case, as far as the passengers were concerned, it was very desirable that very few men should be taken on the boats. The fewer sailors in the boats, the better for the passengers, in this particular case. 21690. (*Mr. Scanlan.*) Yes, of course, my Lord. We have heard from Mr. Sanderson and this gentleman that every one in the shipping world is waiting on your Lordship's decision in this case to decide as to what lifeboats they are going to carry, or they are waiting on the Board of Trade to do something. They have been waiting a long time on the Board of Trade. Now here is the Regulation of the Board of Trade relating to deckhands. If there is any Order made as to increased boat accommodation some revision of this scale

## **Page 566**

would be necessary, and I am taking this Captain as one who will be able to give some advice on it. (*To the Witness.*) How many seamen do you think should be attached to each lifeboat? - For what purpose?

For the purpose of any emergency - the purpose for which lifeboats are carried on ships?

- Two men accustomed to boats.

That would be two deckhands? - Not necessarily two deckhands.

Would you require one deckhand? - One deckhand.

For each boat? - Yes.

You heard Mr. Sanderson in his evidence say he thought you should have two seamen in each boat? - Not necessarily seamen as long as they are accustomed to boats - as long as they know anything about a boat, it is not necessary that they should be sailors.

Would you desire any sailor? - Yes.

One? - At least one.

At least one? - Yes.

Does that mean two? - No.

(*The Commissioner.*) Are you an Irishman? - I am not, my Lord.

(*Mr. Scanlan.*) Would not you require one for the tiller and one for the sails? - You are talking about when the boat is lowered into the water?

Yes? - No. As long as one of them is a seaman that can handle the tiller it is not necessary for there to be a sailor in the boat.

You have sails in the boat, and only a seaman would be able to manipulate the sails? - Not necessarily so. I have seen stewards just as good in a boat as a sailor, and a fireman as well.

*Mr. Scanlan:* If specially trained to the drill. We had some evidence with regard to the lowering of the boats which seemed to indicate confusion in the minds of the officers of the "Titanic" as to whether they could lower the boats from the boat deck, and then have the boats taken down along the sides of the ship either forward or aft to get passengers taken off.

*The Commissioner:* I do not remember that.

*Mr. Scanlan:* We had it from Mr. Lightoller, my Lord. I can give you the reference. *The*

*Commissioner:* Will you read me what he said. I remember the suggestion that the boats

should be dropped until it came to a level with one of the gangway doors, but I do not remember any suggestion that the boat, having been dropped, could be moved along the side of the ship.

*Mr. Scanlan:* Yes, that is in the evidence of Mr. Lightoller.

*The Commissioner:* I beg your pardon. I did not understand what you meant. I thought you meant lowering the boat, and then before it is dropped in the water, carrying it along the side of the ship.

*Mr. Scanlan:* No, my Lord; I mean dropping it in the water, and carrying it along the side of the ship.

*The Commissioner:* Oh, yes, that is a different thing altogether. I beg your pardon. I misunderstood you. You need not trouble.

*Mr. Scanlan:* It is at page 316 of Mr. Lightoller, and Mr. Wilding spoke of it. *The*

*Commissioner:* He spoke of lowering the boat into the water and then pulling it round.

21704-5. (*Mr. Scanlan.*) Yes. (*To the Witness.*) Do you view that as a way in which lifeboats might be filled? - They might.

In good weather conditions such as obtained on the night of the 14th April? - Yes.

Do the captains and the officers of the boats know that such a provision is made? - Oh, yes.

You are not a believer in binoculars for seamen? - No.

Do you believe in them for officers? - Oh, certainly.

Even in regard to officers they are for their use? - Yes.

In the navigation of the ship? - Yes.

To enable the officer to pick up anything ahead of him? - Not to pick up. *The*

*Commissioner:* The evidence appears to me to point to this, that they are not required for picking up objects, but for ascertaining with particularity what the objects are when they have been picked up.

(*Mr. Scanlan.*) Yes, my Lord, I think there is a great deal in that view of the utility of binoculars. (*To the Witness.*) If binoculars have always been thought useful to officers, how do you come to arrive at the conclusion that they are not at all useful for look-out men and seamen? - Because look-out men are there to use their eyes and to report immediately anything they see, not to find out the character of that object they see. 21714. How could they report anything unless they had some notion of the character of it? - They report what is seen - I mean, if they pick up a light it may be a green or white or a red light -

*The Commissioner:* If I might suggest, Mr. Scanlan, a useful question to him would be this: Why is there a provision made in the crow's-nest for binoculars if they are not wanted?

21715. (*Mr. Scanlan.*) Yes. (*To the Witness.*) You heard that question. Why have you a bag or a box in the crow's-nest to hold binoculars if you do not think they are required? - That was not always for binoculars; that was for anything the men used in the look-out.

21716. It was not always for binoculars, but it was for anything a man might use on the look-out, you say? - Yes.

What do you mean by that? - His muffler, his clothes, and his oilskin coat and that sort of thing. There is generally a canvas bag put up there.

Take this bag that was on the "Titanic"? - That was a box, I may say, on the "Titanic."

A box? - Yes.

Specially there for binoculars? - Binoculars, yes, if they had them there.

It was not for any other purpose, was it? - Yes, they put other things in. 21722. (*The Commissioner.*) What occurs to me, Captain Bartlett, is that it would be far better, if you are right, that there should be no binoculars there at all; they would be a sort of temptation to the man to be doing something he ought not to do? - I do not agree to binoculars in the look-out cage at all, my Lord.

(*Mr. Scanlan.*) A suggestion has been made that for the discovery of ice the best position for the look-out man is at the stem head. Do you agree? - In hazy weather, yes.

And at night when ice is expected? - Not a clear night, no.

On a night when it is difficult to see? - It is hard to see how that can be if it is clear.

With regard to the collapsible boats and the Englehardt boats, are they a new invention? Is it only very recently that Englehardt boats have been used by you? - Yes, quite recently by us. The "Olympic" was the first.

From the evidence that we have had in this case, does it appear to you that they were not quite well understood by the crews? - I think they were.

You think they were? - Yes.

(*The Commissioner.*) If you think that, how do you account for the fact that one of the Englehardt boats was never launched at all? - That was the last boat, I think, my Lord. It was on top of the officers' house.

Yes, that is it? - The ship was then near foundering when they went to take that boat away. I do not think they had sufficient time.

(*Mr. Scanlan.*) Do not you think it was an improper place for this Englehardt, to have it on the top of the officers' house? - Not at all. 21732. It was a proper place? - It was a proper place.

*The Commissioner:* I think the evidence, Mr. Scanlan, is that that boat was thrown on to the deck. Is not that the evidence? *Mr. Scanlan:* I think so, my Lord.

*The Attorney-General:* Yes.

*Mr. Scanlan:* But there was such a list then that it was impossible to move it.

## **Page 567**

*The Commissioner:* And it was swept away by the water into the sea.

*Mr. Scanlan:* Yes. The reason I ask that question is, I observe in the evidence of Mr. Lightoller in America, that he did not consider that was a proper position for it on the top of the officers' house. It was not put to him here.

*Sir Robert Finlay:* No suggestion has been made before that this was an improper position.

*The Commissioner:* I think so, Sir Robert.

*Sir Robert Finlay:* Not here, I think.

*The Attorney-General:* Questions have been asked about it in the course of the Enquiry as to whether that was a convenient and useful place for it. Nothing more has been said.

*Sir Robert Finlay:* It has been very slight.

*The Attorney-General:* Yes. I do not think there has been a suggestion that it was improper. The only question was whether it was most convenient.

*Sir Robert Finlay:* The Attorney-General says he does not think there was any suggestion that it was an improper place.

*The Commissioner:* No, the suggestion was that it was an inconvenient place. *The*

*Attorney-General:* That is exactly my view. The suggestion was that there might have been a better place found for it.

### **Examined by Mr. HARBINSON.**

You have told us that the Board of Trade had no regulations regarding boat drill? - I do not think they have.

Do you know if they have any inspectors whose duty it is to ascertain if boat drill has been regularly practised? - Yes, they have. Not only that, but it is in the official log of every ship.

Yes, you told us it was entered in the official log, but do those Inspectors make a periodical inspection of the official log - has that been their practice? - Yes, the log is inspected every voyage, not every year. Every voyage the official log goes up to the Board of Trade.

*(The Commissioner.)* That is so, is it not? The official log is sent at the end of the voyage to the Board of Trade? - Yes, with the articles.

Sent up to Whitehall? - The Board of Trade in the shipping port from which the ship sailed.

*(Mr. Harbinson.)* Do I understand they have no officers to come down to the vessels and make inspections there periodically? - Yes, they do. *Mr. Harbinson:* As regards the question of boat drill - *The Commissioner:* I do not know what you mean by that.

*(Mr. Harbinson.)* I mean to test the men as regards their efficiency? - They test that when they inspect the boats on clearance day every voyage.

But do they make any enquiry or investigation as to whether boat drill has been carried out between one clearance and another? - I do not know whether the Inspectors themselves do, but they satisfy themselves that the ships are efficient and that the men understand the working of the boats on clearance day.

That is all you know about it; on clearance day, such inspection as is made then? - Yes.

Do you think it would be advisable to supply men when they are starting out on the voyage, with badges, to indicate on those badges the number of the boat to which they are allotted? - We are doing that now. 21743. You consider that desirable? - I do.

### **Examined by Mr. HOLMES.**

21744. With reference to the boat drill, there is already a Section in the Merchant Shipping Act giving power to punish a seaman who disobeys a lawful command? - Yes.

21745. Have you ever tried in connection with these firemen who have refused boat drill,

putting that section in force? - We did on the occasion of the "Oceanic," but, myself, I have not; I have not had the experience of firemen refusing drill.

21746. Do you think your hand might be strengthened in putting that Section into force, if the order for a fire drill were made compulsory by Statute or by a Board of Trade rule? - Yes.

21747. You have told us of the length of service of the different officers of the "Titanic." During that time did they all give you perfect satisfaction? - Every satisfaction.

21748. And you have relied on them as efficient and careful officers in whom you had every confidence? - They were the pick of the service.

Have you at any time had any complaints from your junior officers as to the existence of the two-watch system? - No, I have not.

Do you not consider that the three-watch system for junior officers would keep the men fitter to perform their duties? - No, I think it is not necessary that junior officers of ships should have more than what we are doing at the present time - that is, the watch and watch system.

You think four hours is sufficient from the time they go off watch till the time they go on watch again? - For a junior officer, yes.

I suppose a junior officer will have calculations to make perhaps while on watch? - Some, yes.

Some complicated calculations? - Yes.

He may be required by the officer of the watch to find out the position? - He may, yes.

Does not that require as clear a head as you can possibly have? - It does. 21756. Do you think a man is best fitted for that kind of work when he has only had four hours' sleep? - Yes, he would be checked by others, remember.

Do you think he would be better fitted for it if he had eight hours off and four on? - I do not think it is at all necessary.

Do you think he would be better fitted for it? - No.

#### **Examined by Mr. LEWIS.**

I think you said that you had 66 in the Sailing Department on the "Titanic"? - Yes.

And of that number 58 are what you term deckhands? - Yes.

How do you make up that number? - There are 66 in the Sailing Department. Out of that you have to take two surgeons, two stewards, two masters-at-arms, and two window cleaners.

Look-out men? - Look-out men are seamen.

How many efficient able seamen would you have then? - I think she had 46 able seamen, counting look-out men and quartermasters.

Have you counted lamp trimmers? - A lamp trimmer, yes.

In the number you have left out? - No, he is a seaman; he is a deckhand. 21766. Now with regard to the difficulty you seem to have experienced with regard to boat drills, I take it that it is desirable, where possible, that the firemen should drill conjointly with the seamen and stewards? - I think it is a good idea, yes.

When you have tried to muster the firemen have you made any attempt to drill them conjointly? - No, we have not.

Why is that? - We have not had time yet.

You consider it desirable, but you have not had time. Are you aware that the men themselves, the firemen, do desire to have boat drill, providing they are drilled with the other men in the ordinary way? - I have never heard of it.

**Page 568**

You have stated in your evidence that your Company made an offer at Southampton to the firemen of half a day's pay. When was that offer made, and by whom? - I think I must refer you to our Marine Superintendent down at Southampton. He would know the exact circumstances.

How could he make that offer? - I do not know.

*The Commissioner:* Do you mean did he make it in writing, or what do you mean? 21772. (*Mr. Lewis - To the Witness.*) Would he make the offer in writing? - I am not certain.

Surely you are acquainted with it.

*The Attorney-General:* I am going to call him.

(*Mr. Lewis.*) When the musters take place I take it the men are on the articles? - Yes. Of course, you could place firemen on the articles, and if they refused they would be liable to be summoned for disobeying the lawful commands of the Master, would they not? - They are liable, yes.

Your Company has not refused on other accounts to take action against the men for refusing to obey the lawful commands of the master, have they? I want to know why, in this particular instance, if they think drills are desirable, and the men refused, they should not avail themselves of that same section of the Act? - I do not understand you. 21776.

The men would be on articles when boat drills were to take place? - Yes, on sailing day.

Would not they be subject to the ordinary law if they refused? - Yes.

And you can summon them for refusing to obey the lawful commands of the Master at boat muster or drill? - We log them; the Government summon them.

*The Commissioner:* You cannot stop the ship to summon a man.

*Mr. Lewis:* I agree, my Lord, it is not always desirable to do that.

*Sir Robert Finlay:* Not always.

*Mr. Lewis:* But very often commanders do desire to give what they term an object lesson.

*The Commissioner:* Do you suggest all the passengers are to be kept waiting while a couple of firemen are summoned?

(*Mr. Lewis.*) My object is to try to ascertain whether they have really considered it desirable in the past to exercise those firemen. My evidence is they have not really bothered to any extent about the firemen in this matter. You are aware that the men themselves did make an application for a muster to take place the day before the sailing?

- I am not aware of it.

Are you acquainted with the methods of other companies? - No, I cannot say I am very much.

Your experience, I suggest, is pretty wide? - Yes.

Do you know anything about the Cunard Company? - I know a little about the Cunard Company.

Can you tell me whether they have any difficulty with regard to their men? - I do not know.

Do you know anything of the Royal Mail Company? - Not much. 21785. Do you know if they experience any difficulty with regard to mustering the men? - I do not know.

Do you know anything of the Union Castle Company? - No.

*Mr. Lewis:* I suppose the local manager will be called, and I will reserve my questions on that point.

### **Examined by Sir ROBERT FINLAY.**

(*Sir Robert Finlay.*) I think Commander Lyon expressed the desire to have a list of the Charts and Sailing Directions and so on supplied to the "Titanic." I have a list here. I think Captain Bartlett can identify it? (*Handing the same to the Witness.*) - Yes. 21788-9. Just hand that to Captain Lyon. (*The same was handed.*) - Messrs. Philips, Son and Nephew supply it.

### **Re-examined by the ATTORNEY-GENERAL.**

Can you tell us what the number of effective deckhands was, counting in officers. There is some little confusion about it?

*The Commissioner:* I make it 50.

*The Attorney-General:* I make it 60, my Lord. It may be we include somebody as effective deckhands that your Lordship has ruled out.

*The Commissioner:* No, I was only listening to his evidence. He began with 66, and then he crossed out, as I understood, 8.

21790. (*The Attorney-General.*) It is just that that I want to get clear from him. Will you tell me again of the 66 who are the eight you cross out? - There are two surgeons, two stewards, two window cleaners, and two masters-at-arms.

21791-2. You rule out the masters-at-arms, do you? - Yes.

Well, that answers it. Then I agree, my Lord; it is clear now that it is 58. *The Commissioner:* With regard to the masters-at-arms. I am advised that they are generally seamen.

*The Attorney-General:* According to our view they are.

*The Commissioner:* And would not be crossed out.

*The Attorney-General:* They are included according to our view. We made it 60 for that reason.

*The Commissioner:* Apparently this gentleman thinks they are not included.

*The Attorney-General:* Yes, we will soon ascertain.

*The Commissioner:* I do not know that it is very important.

*The Attorney-General:* No, as long as we know what is the point of doubt between us.

*(The Witness withdrew.)*

**BERTRAM FOX HAYES, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

*The Attorney-General:* May I say with reference to this witness and the next they are Master Mariners who I am calling at the request of my friend, Sir Robert Finlay. I am going to call them and examine them pursuant to the course we have followed throughout, but I desire to guard myself against its being thought or being argued hereafter that I am in any way bound by what they are going to say, and, moreover, I shall contend at a later stage that, whatever their views may be on that particular point upon which I am calling them, they must be disregarded. With that reservation, I propose to ask them questions which I think will afford your Lordship some information which you may require.

*Sir Robert Finlay:* It is highly necessary that these gentlemen should be called now, if they are going to be called at all, as they are sailing this week. I regard their evidence as extremely material, and, of course, I quite agree that

**Page 569**

the Attorney-General is not to be prejudiced in any argument hereafter by following the ordinary course of his putting the witnesses into the box.

*(The Attorney-General.)* In any event, I agree with my friend to this extent, that your Lordship would desire to have the facts before you, whether it must be taken into account on one material point, which you will have to consider later, is another matter which we can argue then. *(To the Witness.)* You are a master mariner? - I am.

You have held an extra master's certificate since 1897? - Yes.

You are also a Commander in the Royal Naval Reserve, Active List? - Yes.

You went to sea originally, I think, in 1880 in sailing ships? - Yes.

You joined the White Star Line in March, 1889? - Yes.

You were two years in the New Zealand service and were then transferred to the Atlantic service? - Yes.

As Fourth Officer of the "Teutonic" in 1891? - Yes.

You were appointed Commander of the "Britannic" in 1899? - June, 1899. 21801. And, as I understand, you were three years in the transport service? - During the South African War.

With that exception you have been in the Atlantic service ever since you were appointed as Fourth Officer of the "Teutonic" in 1891? - With the exception of one voyage to Australia, which is included in those three years.

And two years, I think, you were in command of the "Laurentic," a Canadian boat? - Yes.

Since you have been sailing to New York do you remember sailing on any other tracks than the tracks referred to in the agreement of 1898? - No.

Are they always followed? - They are always followed by our ships, so far as I remember.

Now, I want to ask you with reference to ice reports. Since the Marconi system has been installed have you received ice reports by wireless telegraphy? - Innumerable ones.

Giving the position in which the ice is when they first telegraph to you? - Yes. 21808.

When you are approaching an ice region, that is to say, the position in which ice has been reported to you, do you take any precautions? - I take precautions according to the weather.

Supposing the weather is clear? - We keep an ordinary look-out, which is always an excellent one.

Do you mean the ordinary look-out in the crow's-nest? - Yes, and on the bridge; and I personally stay round.

You do not put anybody in the bows? - Not in clear weather.

Not in clear weather or fine weather? - Clear weather must be fine.

Do you mean not when you can see clearly, but when you have a smooth sea? - I do not take the sea into consideration at all. It is as long as the weather is clear.

Did you proceed at the same rate of speed? - At the same rate of speed.

You made no alteration? - No alteration.

Is that the practice in your Line, so far as you know? - It is the practice all over the world so far as I know - every ship that crosses the Atlantic.

To make no alteration in speed, notwithstanding that you may have been advised of the presence of ice? - Ice does not make any difference to speed in clear weather. You can always see ice then.

The experience of the "Titanic" shows you cannot always? - There were abnormal circumstances there which nobody has ever experienced before. 21819. But you said you can always see it? - In clear weather I am talking of. 21820. Now I want to ask you, at night - supposing you are steaming at night, and it is reported that along the course you are following you will come into an ice-field, according to your view would you make any reduction in the rate of speed? - None, till I saw the ice.

None till you saw the ice? - No.

If you saw it too close it would be too late? - But you would not see it too close in clear weather.

What? - You would not see it too close in clear weather. That is my experience. 21824.

Of course, I am only asking you according to that. Is this right then? Supposing the weather is clear, and a proper look-out is being kept, you would be able to see ice at sufficient distance to enable you to avoid it? - Certainly.

That is what you mean? - That is what I mean.

Whatever your rate of speed? - Whatever my rate of speed.

And supposing you have an iceberg which is 60 to 80 feet high from the sea level, how far off do you think you would see that on a clear night? - Six or seven miles, I should say. I have seen it 10 miles.

What is it that you see; what is it first calls your attention to the fact that there is an iceberg there? - You see a light there; the ice is light.

You mean light against the horizon? - It is like looking at that piece of paper on the wall; you can see the brightness.

Colour - something which attracts your attention? - The brightness of it attracts your attention.

And is that the way you distinguish it at night? - That is the way you distinguish it any time; you see the colour of it. It is differentiated from land in the daytime. 21832.

Have you ever been very close to an iceberg yourself? - Not in clear weather. I have steamed in between them. They have been scattered all over about the course on either bow, and I have gone on my course steering between them, at nighttime. 21833. I should assume that was in the daytime from what you tell me? - At nighttime approaching Belle Isle.

*(The Commissioner.)* Going full speed? - Going full speed.

*(The Attorney-General.)* What is your full speed? - 18 knots; the "Laurentic" was 18 knots.

That was on the Canadian service? - Yes.

Of the White Star Line? - Of the White Star Line.

*(The Commissioner.)* That is in the track North? - Yes, by Belle Isle. 21839. *(The Attorney-General.)* Where you would meet more ice and expect to meet more ice than on this track? - Yes.

21840. Is that your invariable practice? - Everybody's invariable practice, as far as I know.

*The Commissioner:* No, not everybody's, because we have had evidence about the Canadian Pacific boat, I think it was.

*Sir Robert Finlay:* Not on this point, my Lord.

*Mr. Scanlan:* It is page 194, my Lord.

*The Attorney-General:* Oh, certainly, we have had evidence about it.

*The Commissioner:* I think the Master of the "Mount Temple" stated that he had standing directions never to go -

*Sir Robert Finlay:* I think it was not to enter field ice, and that is why I said, "Not on this point."

*The Commissioner:* Very well.

*Sir Robert Finlay:* It is on page 194.

*The Witness:* May I say, in his evidence at Washington, he said he stopped when he came to the ice? Therefore he saw it before he stopped.

*The Attorney-General:* It is Question 9263. You see I asked this witness these questions particularly about icebergs. The particular question to which your attention is directed is 9263. That does relate to field ice. I am going to ask you a question about that now. I think so far as the evidence goes we have had no evidence that steamers are stopped because they see icebergs. *Sir Robert Finlay:* Or are warned of them.

*The Attorney-General:* Or are warned of them; but they do stop if they are warned of field ice or see field ice.

*The Commissioner:* They stop before they come to the field ice.

*The Attorney-General:* What I am referring to is this answer by Mr. Moore, the Captain of the "Mount Temple": "We are not to enter field ice at any time, no matter how light it may appear." That is what I had in my mind.

*Sir Robert Finlay:* I think it stops there - they are not to enter field ice - because it is given more in detail in our rule, which was issued to vessels using that track, the Northern track, to Canada, and it was pointed out that even if there is a lane it may very likely be a lane which does not go very far. It is no use to enter the ice.

*The Attorney-General:* It does not really stop there, it goes further. The next is: "When you got warning there was ice ahead, what precautions did you adopt? (A.) I simply steered down. I went down further to the southward," and he says his highest speed was about 11 knots.

*Sir Robert Finlay:* He is asked, "Did you decrease your speed? (A.) Not at all; it was daylight."

(*The Attorney-General.*) He steered further to the southward, and his speed was only about 11 knots. Then he is asked if he makes any change in the look-out, and he says, "If we expect to see ice we always double the look-out." That is how it stands, I think. We shall have to consider later the evidence already given. (*To the Witness.*) I only want to get your view. Supposing you had had a report of field ice ahead, not of icebergs, would you still steam full speed ahead? - Till I saw that ice in clear weather, yes.

Even at nighttime? - On a clear night.

What I do not quite understand is this: Where there was an iceberg of from 60 to 80 feet from the sea level, and it was not seen until within half a mile away, how do you account for that if it was a clear night? - I was not there on that night.

*The Commissioner:* That is my difficulty.

*The Attorney-General:* I agree.

*The Witness:* There must have been some abnormal conditions which misled them.

*The Commissioner:* Or there was a bad look-out.

*The Attorney-General:* Either one or the other.

*The Witness:* I do not think there was, my Lord. I have known the two men, and there is no carelessness.

21844-5. (*The Attorney-General.*) I am not going to ask you to say there was a bad look-out on another White Star Line boat; do not think that? - No, not against the men.

### **Examined by Sir ROBERT FINLAY.**

Just one or two questions. What do you say with regard to the use of glasses, or binoculars, by the look-out man? - They are a source of danger, Sir. They spoil the lookout.

How is that? - The look-out man when he sees a light if he has glasses is more liable to look at it and see what kind of a ship it is. That is the officer's business. The look-out man's business is to look out for other lights.

The look-out man ought to be looking about while the officer on the bridge finds out what kind of a light it is? - Yes, it is his business to find out what kind of a light it is, what way it is going, and so on.

Has Mr. Ismay sailed on ships in which you have been? - Several times.

Has he ever in any way interfered with the navigation? - No, Sir. 21851. Did he go simply as an ordinary passenger? - He was treated simply as an ordinary passenger.

*The Commissioner:* As far as I know there is no evidence that he interfered, unless the taking of the telegram from the Captain and keeping it in his pocket, can be regarded as interference. There is no evidence that Mr. Ismay interfered; the evidence goes the other way.

*The Attorney-General:* I do not want to mislead, or for my friend to be under any misapprehension with regard to that. Your Lordship's question to me I agree with - there is no evidence that he interfered in any way with the navigation of the vessel, but I do not agree that he was an ordinary passenger, or treated as an ordinary passenger.

*Sir Robert Finlay:* He was, of course, the Chairman.

*The Attorney-General:* Yes, and he was apprised of the icebergs.

*Sir Robert Finlay:* And although Chairman he simply travelled as any ordinary passenger travelled. He took no part whatever in the directing of the ship, and never interfered in the slightest way.

*The Attorney-General:* I do not want to argue it, but we have to bear in mind that the ice report was given to him for a specific purpose, and to no other passenger on the vessel.

*Sir Robert Finlay:* For a specific purpose?

*The Attorney-General:* Yes, there is evidence as to that.

*Mr. Scanlan:* There is the evidence also as to the discussion between him and the Chief Engineer.

*The Commissioner:* At Southampton.

*Mr. Scanlan:* At Queenstown, before he left.

*Sir Robert Finlay:* I wish really to appreciate the situation. The Attorney-General says that the ice report was given to Mr. Ismay for a specific purpose. I do not quite know what that means. That message related not merely to ice, but also to a tramp vessel said not to be under control, but I cannot trace any evidence as to any specific purpose for which that message was handed to Mr. Ismay.

*The Attorney-General:* I do not think my friend is accurate in his recollection of the facts, but I do not want to discuss the matter now. My impression is that Mr. Ismay admitted definitely to me that he knew it was given to him because it was an ice report, and a serious one. That is my recollection.

*Sir Robert Finlay:* I only wish to be clear as to what my friend means. Is it his suggestion that this telegram was handed to Mr. Ismay by the Captain in order that Mr. Ismay might advise him?

*The Attorney-General:* Oh, no.

*Sir Robert Finlay:* Is that the suggestion?

*The Attorney-General:* No, I never made it.

*Sir Robert Finlay:* Then I do not know what the suggestion is.

*The Attorney-General:* I am sorry my friend did not appreciate the point; I thought I had already made it pretty clear. If he does not know I will tell him; I have no objection to telling him - that the object of giving him the telegram was because he, as Chairman of the Company, was there; that it was looked upon as a very serious report; that it was given to him because it was a very serious report; it was given to him to consider and apprise himself of the facts, and that it was then handed back, as we know from the evidence later on, to the Captain at seven or a quarter-past seven.

*The Commissioner:* With a request.

*The Attorney-General:* With a request; and the object of giving it to him, I certainly shall suggest, was that if he had any directions to give with regard to it that that was the time for him to give them. He was told what was happening.

*The Commissioner:* The real point of the matter is that he did not.

*The Attorney-General:* I quite agree to that.

*The Commissioner:* It is, to my mind, an extraordinary thing that the Captain, instead of pinning that thing up in the chart room, as I should have thought he ought to have done, should hand it to anybody - Mr. Ismay or anybody - to keep in his pocket. That is a very extraordinary thing.

*The Attorney-General:* Of course, it is, and at a later stage we will discuss it.

*The Commissioner:* Yes, it will have to be discussed.

*The Attorney-General:* It is extraordinary there was never a word exchanged about it.

*Sir Robert Finlay:* There must certainly have been if your views are right.

## **Page 571**

*The Attorney-General:* I am not certain that there was not, if you challenge me to say it.

*Sir Robert Finlay:* If my friend is going to say that he will have to deal with the evidence.

*The Attorney-General:* I know. We have the evidence of one person who has been called.

*Sir Robert Finlay:* If Mr. Ismay's word on that point is impeached it is another matter, and I will deal with that at the proper time.

*(The Witness withdrew.)*

**CAPTAIN FREDERICK PASSOW, Sworn.**

**Examined by Mr. BUTLER ASPINALL.**

Do you hold a British Master's certificate? - Yes.

Have you held it since 1880? - Yes.

I believe you have been in command as master for the last 28 years? - Yes. 21855.

Have you been serving during all that time in the Inman Line? - Yes, the Inman Line, and now the American Line.

21856. The Inman Line, as we know, has become an American line, and you passed on from the British company's service into the service of the American company? - Yes.

21857. I think you have crossed the Atlantic some 700 times? - About that. I have never kept an accurate record, but about 700 times.

21858. And at the present moment you are in command of the "St. Paul"? - Yes. 21859. She is one of the American Inman Line boats? - Yes.

What speed boat is she? - About 20 knots.

I think I can shorten your evidence in this way: Have you heard the evidence of the last gentleman who was in the box? - Yes.

Did you hear the statements of fact that he spoke to? - Yes.

And the expressions of opinion that he uttered? - Quite so.

Do you agree or disagree with the statement of facts? - I agree with it.

With regard to the expression of opinions do you agree or disagree? - Yes.

### **Examined by Sir ROBERT FINLAY.**

What routes have you followed on the Atlantic? - In my first experience, before I was in command of a ship, we used to sight Cape Race all the year round. There were no special routes. Then after that we had orders to go not less than thirty miles south of the Virgin Rocks, and then from 1898 we have used the present routes.

In going over the Virgin Rocks would that take you over the Great Bank? - Yes, winter and summer.

You were making for New York? - Yes.

How far south of the Virgin Rocks do you say you went? - Not less than thirty miles.

Since 1898 you have followed the usual tracks? - Yes, of all the other lines.

The tracks agreed upon by them? - Yes.

Do you see a great deal of ice on the tracks you follow? - On the Northern track we see a great deal.

You have had a very large experience of ice? - I have had a very large experience of ice.

I do not know whether your Lordship caught the last answer of the witness. He said that on that track, which he described as going 30 miles south of the Virgins, they saw a great deal of ice, including field ice. You have had a very large experience of ice? - Yes, a large experience of ice.

Did you ever slacken your speed for ice as long as the weather was quite clear? - Not as long as it was quite clear - no, not until we saw it. If it was field ice of course we kept out of it if we could. We get into it sometimes.

Was that the same by night and by day? - The same by night and by day, as long as the weather was absolutely clear.

What do you say with regard to the use of binoculars for the look-out men? - I never heard of it until I read it in the paper the other day. We have never had them - I never have.

Do you think it would be a good thing? - I do not think it would be any advantage, because the men would not use them in cold weather anyway, and we do not rely upon them very much. We always see everything first before the look-out men

do. 21879. Have you in your time ever seen field ice on the present tracks - the tracks that have been followed since 1898? - Never once, only isolated bergs.

**Examined by the ATTORNEY-GENERAL.**

I want to understand one thing. You said you never altered your speed, because you could always depend upon seeing the ice in sufficient time? - As long as the weather is perfectly clear.

Has the disaster to the "Titanic" caused you in any way to modify your view? - I do not think so. Of course, I was not there and I did not see what they looked like. But I have never seen an iceberg of that size that you could not see on a perfectly clear night, and far enough off safely to clear it. I have seen a piece, quite a small piece, that you could see some distance off.

*(The Commissioner.)* If you are right, and if this was - as we have been told by a great many witnesses it was - a perfectly clear night, how do you account for the collision? - I cannot account for it at all. They say it looked like a black iceberg, but I have never seen a black iceberg. I never saw anything but a white one, and that you can see on the darkest night. You can see field ice, too, on the darkest night in time enough for you to get out of the way of it.

We have had an explanation given of it by Mr. Lightoller. He said that the sea was absolutely flat - there was not, as I understood him, even a swell - and that the consequence of that was that there was no surf of any kind round the base of the iceberg. By the base, I mean, the margin on the waterline, and that, therefore, one of the best indications for the seeing of ice was absent. What do you think about that? - I think you would see the surf round it at a shorter distance than you would see the iceberg, if it was a large one. The ice has a phosphorescent appearance.

I should have thought that, as a seaman, you would have had some sort of explanation to suggest? - I cannot think of anything, because they say the ice was dark blue, almost black. I never saw an iceberg like that in my life, and I have seen a good deal of ice too.

Does that lead you to infer that they are mistaken when they say it was black? - I would not like to say that, my Lord. I do not know, of course; I was not there, but I never saw an iceberg of that kind.

Have you ever seen a growler? - These low bergs?

Yes? - Very seldom.

What is the colour of a growler? - White.

The same as an iceberg? - The same as an iceberg, only a smaller one. That is what I understand by a growler - a low-lying berg. We always see those.

**Page 572**

If there was any haze I suppose it would be seen from the bridge? - The berg?

No. If there was any haze the haze would be seen? - Immediately. As soon as

there is the slightest beard on the green light and we are in the ice region we slow down, because you cannot say how far you can see, but when it is absolutely clear we do not slow down for ice.

Of course, if there had been a haze you could have accounted for it? - Yes. 21893.

Would a bad look-out account for it? - Yes, but I do not believe there are bad look-outs on any Atlantic steamers. I do not believe that.

There were two men in this crow's-nest and there were two officers, I think, on the bridge. You do not suppose there could have been a bad look-out? - No, I should not think so. I never knew a bad look-out on these steamers, especially when you are in the ice region - not necessarily because ice was reported, but from longitude 44 to 51 we are always looking out for it.

If a haze comes on, is it the duty of the man in the crow's-nest to report it to the bridge? - No, Sir, it is not; we would know it quicker than he would, or just as quick, because we always see the little blur on the green light.

It is the business of the man on the bridge to notice it? - Yes.

And to give directions accordingly? - Call the Captain of the ship immediately.

**Further examined by Sir ROBERT FINLAY.**

May I suggest one question with regard to what the witness said as to what Mr. Lightoller said? You said that you thought that if there had been a swell the white of the waves breaking at the foot of the iceberg would not be seen further than the iceberg itself? - I do not think it would be seen as far, unless there was a sea on.

Then you would see the breakers just like breakers breaking on the beach.

I am speaking only of an ordinary swell? - No, I should think you would see the berg first.

You are speaking of the icebergs of which you have experience - white icebergs? - Yes.

Suppose you had a black iceberg? - I would not see it, I suppose.

Would the white of the waves, if there was a swell, be seen further under those circumstances? - Oh, yes, of course, according to the amount of sea.

You were speaking of the white icebergs with which you are familiar? - Quite so, yes.

**Further examined by the ATTORNEY-GENERAL.**

I understood you to say that you had never seen a black iceberg. Is that so? - Yes.

Have you ever heard of one? - Never till I read of it in the papers.

*(The Witness withdrew.)*

**CAPTAIN FRANCIS SPURSTOW MILLER, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

Are you Assistant Hydrographer at the Admiralty? - I am.

And you attend here on behalf of the Admiralty to give the views of the Admiralty to my Lord and the Court? - Yes.

I want to ask you particularly with reference to searchlights. First of all, in the Admiralty you have searchlights on board ship, and they are certainly more used there than in the Mercantile Marine? - Very much so.

They have a greater experience of searchlights, or the best experience at any rate. In your view, are these searchlights on board ship of great value in detecting an icefield or an iceberg? - Yes, I should imagine they were.

*Sir Robert Finlay:* I do not gather that this gentleman has any experience, because, in answer to the question, he said: "I should imagine they were."

*The Attorney-General:* I do not understand you. Are you objecting to the evidence? *Sir*

*Robert Finlay:* Yes, I do object. The witness is asked whether searchlights are of value in detecting ice. In reply, the witness does not say that he has any experience with regard to the use of searchlights; he simply says: "I should imagine they were." *The Attorney-*

*General:* I really do not quite understand what the objection is. I will tell my friend what the object of the evidence is. I am calling this gentleman from the Admiralty in order to give the Court some information with regard to the Admiralty's experience of searchlights, and that is the point of the evidence. It is not directed against anybody or anything.

*Sir Robert Finlay:* I will not put it as an objection to the admissibility of the evidence, but I wish to guard against any particular weight being attached to it unless it proceeds on some experience.

*(The Attorney-General.)* I think you will see that it does. *(To the Witness.)* I do not know whether I am right, Captain Miller, but are you speaking from actual experience or are you speaking from information supplied to you by the Admiralty, and which you are attending here to give? - I am speaking, if I may say so, on behalf of the Admiralty as far as I can. I am not speaking my own individual experience. I have had some, but I am here, I believe, to speak on behalf of the Admiralty.

To tell the Court what the result of the Admiralty's experience has been with regard to searchlights; that is so, is it not? - I am speaking, more or less, as to the advantages or disadvantages of searchlights on board ship.

That is quite right - so as to put, at any rate, the information that the Admiralty has, before the Court? - Yes, the Admiralty's view.

Representing, as we understand you do, the views of the Admiralty to the Court, will you tell us whether the use of searchlights is of value in detecting icebergs or icefields? - Yes. As far as our own ships are concerned, we have not had many ships in the ice region, but for other purposes, such as picking up buoys and land searchlights have been frequently used.

Or rocks? - Or rocks. They are also useful in passing through a channel, or through a canal. I submit they are also useful in cases where a ship is stranded. 21915. To assist in life-saving? - And also for salvage work, and for life-saving. Those are the advantages.

Then there are some disadvantages, are there not? - Yes.

I want you to tell the Court the Admiralty's view as to the disadvantages? - The disadvantages of searchlights, with regard to searchlights on board the ship itself, are that they may dazzle the officers and the look-out men on board the ship, and in that case specially so, if they happen to be badly placed with regard to the people who are observing. Secondly, they cause a good deal of interference with general navigation, and they would do so very much indeed in crowded waterways. If on the open sea, of course, the objection would be less. The effect of interference on other vessels would be, as is well known, to blind

**Page 573**

the officers of the watches on board those ships, and, consequently they would make it difficult for them to detect other vessels in their vicinity, and so possibly bring about collision. Thirdly, the lights would have the effect possibly of reducing the brilliancy of the ship's navigation lights from which the searchlight was being exhibited.

*(The Commissioner.)* That is the green and the red lights? - Yes, and possibly the masthead light.

*(The Attorney-General.)* Are there any more disadvantages? - They might also, especially in thick weather and in fog, be mistaken for electric lights of the lighthouses on shore. They also have the effect of screening those shore lights from passing vessels. Another thing with regard to searchlights on board ships might be that a vessel so fitted might depend too much on her searchlights, and get into dangerous proximity to the land and shoal water and buoys, trusting to her searchlights. Further, she might be induced to continue at a high rate of speed, trusting again to her searchlights when, under similar circumstances with regard to weather and so on she would - and rightly so - reduce her speed. I think, too, that the advantages of having searchlights on board ship may not be so great as the disadvantages of causing general interference with the navigation of the ships themselves, and, as I have said, leading vessels to go on at a high rate of speed when they ought to reduce speed. But, in any case, if searchlights are established on board ship very stringent regulations should be laid down as to how they should be worked, especially avoiding doing so in crowded waterways.

I suppose the question of where they are fixed is of importance too? - Yes, that would be very important, and would depend on the number of searchlights established.

21921. Have you found in the experience of the Admiralty that from time to time inconvenience is caused to vessels approaching by the use of searchlights at the defended ports? - Yes, frequent complaints have been received, and early this year a notice to mariners, No. 274, was issued, and a system of signals was introduced to enable vessels to ask the people on shore who were working the searchlights to take the lights off their vessel, by sound, signal, and by flashing.

Has the Admiralty recently called upon officers who have had experience in navigation of ice-fields to report to them upon the use of searchlights? - Yes, they have recently sent a communication out to the officers who have been in command of ships on that station, but so far we have only received the report of one officer. The other reports, no doubt, will come in, and the Admiralty will be prepared to lay them before the Court.

Will you tell us, just shortly, the result of the one report which you have got? - One report was received, and the officer stated that in all cases in clear weather the iceberg was sighted before the searchlights picked it up. The iceberg was sighted at about two miles; the searchlight was then switched on, and lit up the iceberg very clearly, showing a white clear light. Then they detected the ice-floe at a distance of about one and a half miles from the ship, and also low pans and pieces of ice floating between the ship to a distance of about a mile off.

What is not quite clear to me from what you have said is whether it is a fact that the iceberg was first discovered by ordinary sight? - Yes I believe with ordinary sight. I do not know whether it was with binoculars or not.

Was that because the searchlight was not being used, or because the searchlight failed to pick it up? - The report does not say whether the searchlight was actually being used at the time, but it said that they picked up the ice first by sight.

And then turned on the searchlight afterwards? - Yes, and then they saw it beautifully lit up.

*(The Commissioner.)* I do not quite see what the value of that report is. I thought the object was to ascertain whether searchlights could pick up ice before the eyesight could pick it up? - That is the only report that has come in. *The Commissioner:* It does not seem to me to be to the point.

*(Sir Robert Finlay.)* Have you got the report here? - I have it here, but I do not know that I am permitted to produce it.

*(The Attorney-General.)* You will not object to produce it to me? I can see it. If you will show it to me I can see whether it throws any light upon the question or not? - Yes, I can hand it to you.

*The Attorney-General:* Will you get it for me, please? Your Lordship will understand that we have been inquiring about this matter of the searchlights to see what assistance we could render to the Court. In the mercantile marine I think they are practically not used at all.

*The Commissioner:* Yes, that I understand.

*The Attorney-General:* And therefore the only evidence that we can get of value as regards actual experience is from the Admiralty.

*Sir Robert Finlay:* I think, my Lord, in reference to what your Lordship said that the searchlight must have been in use at the time, otherwise the whole report would be meaningless.

*The Attorney-General:* I am not so sure about that.

*The Commissioner:* As the report is described in the witness-box it seems to me to entirely fail in its object.

*Sir Robert Finlay:* I think the searchlight must have been in use, but it was the naked eye that picked up the iceberg first. However, we will see. *(The Report was produced.)*

*The Attorney-General:* I think your Lordship had better see the actual Report. I have seen it, and there are three questions which I think, perhaps, I might read.

*The Commissioner:* Is there any reason why you should not read them?

*The Attorney-General:* Not the slightest.

*The Commissioner:* Then I wish you would read them.

*The Attorney-General:* I was proposing to read three questions and answers. There is some other matter which is not of much importance.

*The Commissioner:* You can omit anything which you think it is not advisable to read. 21930. (*The Attorney-General.*) The Report says: "23rd May, 1912. Sir, With reference to your letter M.12645/12, of 17th May, 1912, I have the honour to submit herewith for the information of the Lord Commissioners of the Admiralty a Report of my experience as to the value of searchlights for detecting floating ice. Dealing seriatim with your questions -

(a.) Have you had any opportunity of lighting up an iceberg with a searchlight? - Yes. Are icebergs, growlers, and others made conspicuous at a distance by searchlights? - Yes, in dark, clear weather.

At what distance do you consider on a clear dark night a 24-inch projector would reveal an iceberg? - It has never been my experience on a dark night to *first* detect a large or moderate-sized iceberg with a searchlight, but after having detected an iceberg with the naked eye I have on several occasions lighted the berg up with a searchlight, and on one occasion the searchlight illuminated the berg at a distance of more than two miles, and clearly showed the edge of ice-field at a distance of at least 1 ½ miles also revealing low ice pans and small ice at a distance of about 2,000 yards, which floated between the ship and icefield, and which had not previously been detected. I have on other occasions, in clear and thick weather, used searchlights with view of detecting ice, and consider that on dark clear nights, provided that the observer does not look into the beam of light, and when a 24-inch projector is situated as in case of foremost projector in H.M.S.

"Brilliant," namely, on top of chart house or fore bridge in centre line of ship, if the beam is thrown from above and behind, but on side of observer, a path of from 800 to 1,000 yards ahead of ship is clearly illuminated, in which path any ice must be revealed at once, and within these distances the instant the beam of a searchlight touches floating ice, the ice appears brilliantly white, and its size and description can be determined at once.

## **Page 574**

"It was my further experience, when using a searchlight from after bridge of "Brilliant" to sweep on beam of ship to bow if the observer stood well forward, and at a lower level than, and was well screened from the searchlight, a path of over 2,000 yards was well lighted up." That is about double what he said before. "In fog, thick mist, drizzling rain, or snow, a 24-inch projector throwing a *white* beam was found to be practically no use." Then there are some questions as to the best position of a light for this purpose, which I will not trouble your Lordship with, because that is a matter for subsequent consideration. The letter is dated the 23rd May, 1912, in reply to a letter of the 17th May, 1912, putting these questions in consequence of this disaster. (*To the Witness.*) Can you tell me how far a searchlight of the character mentioned here, a searchlight, called here a 24-inch projector, would be of any use ordinarily? - About 2,000 yards.

Not more? - No, you cannot depend much beyond that.

*The Attorney-General:* I do not think there is any point in keeping this document. It will get on the notes from my having read it.

*Sir Robert Finlay:* I have nothing to ask the witness.

*(The Commissioner.)* I should like to ask you a question. You gave us what I may call the pros, and cons, with reference to the use of searchlights. You pointed out to us the advantages and the disadvantages. Weighing the one against the other, what is the conclusion, if any, that you have arrived at as to the desirability of using searchlights on this track in ships of the mercantile marine? - I think the Admiralty's view is that it would be advisable not to use them.

That you think is the result of your experience? - Yes. Taking the general navigation throughout - not limited only to the immediate vicinity of ice, but the use of searchlights generally, if they were established in ships in the mercantile marine they might be used in any locality - in the English Channel or in any crowded waterways. 21934. You think it is better that ships of the mercantile marine should be without them? - Yes.

*(The Attorney-General.)* I want to follow up what my Lord said to you. Would it be possible to do this, to have searchlights which could be fixed, supposing it was known that upon a particular night there was a possibility of encountering either icebergs or an ice-field? - Would it be possible to have them fixed?

To have them there ready to be fixed for use, but not otherwise fixed in position for use; that is what I want to know? - Yes, they could be moved up or down, as necessary - yes, certainly.

Supposing that that was the case, and there was a report received that icebergs or ice-fields would be encountered in the night, do you think it would be an advantage to use a searchlight on that night for the purpose of illuminating the space in front so as to detect the icebergs or ice-fields? - Yes, it might possibly be of advantage.

As I understand with regard to the disadvantages which you have pointed out to my Lord, on balance, you are afraid of their being used in places where they will create confusion and danger? - Yes, that was the idea.

Or being used on the particular track even in that respect? - If they are established there ought to be stringent regulations as to their use.

They should only be used in certain conditions such as I have described? - Yes, under certain conditions.

*(The Commissioner.)* Are those observations of yours that you have just made intended to qualify the opinion that you expressed to me just now, that, on the whole, it is desirable that ships should not have them? - Yes, I think the summary of the conclusion would be rather that they should not carry searchlights, but that if they did they should be under stringent conditions.

Then it comes to this: You think, on the whole, it is better that they should have no searchlights at all, but if they should have them then there must be some stringent regulations governing the use of them? - Yes.

*(The Witness withdrew.)*

*The Attorney-General:* That is all the evidence we propose to give, my Lord, with regard to the searchlights.

*The Commissioner:* I think there have been some enquiries made in Germany about the use of searchlights, and as far as I am able to gather it has not been favourable to the use of searchlights in ships of the mercantile marine.

*The Attorney-General:* I gather that the same sort of difficulty has been found by them - I am only speaking on my recollection of a newspaper report - as Captain Miller has pointed out - has resulted from the experience of the Admiralty.

*The Commissioner:* It was some Committee or body which sat in Berlin to consider the question.

*The Attorney-General:* Yes, I think so.

*Sir Robert Finlay:* It has not reported yet. The statement my friend made refers to a very early stage of the proceedings. I do not think the formal report has appeared yet.

*The Commissioner:* I am talking about something that I read about a month ago.

*The Attorney-General:* So am I; that was about the time.

**CAPTAIN BENJAMIN STEEL, Sworn.**

**Examined by Mr. RAYMOND ASQUITH.**

Captain Steel, you are a master mariner, and have held an extra master's certificate for 19 years? - Yes.

You are also a Commander in the Royal Naval Reserve? - Yes.

Are you the Marine Superintendent at Southampton for the White Star Line? - Yes.

Were you present on board the "Titanic" on the 10th of April when there was a boat drill or boat muster? - Yes.

Was Captain Clarke, the Board of Trade Emigration Officer, present also? - He was.

Will you tell the Court what was done with regard to the boats on that occasion? - Two boats were exercised; two boats were put into the water and rowed about the dock manned by about eight men each.

What sort of men? - Sailors.

All sailors? - Yes.

Did any stewards or firemen take part in the drill? - Not on that occasion; not that I recollect.

Each of those boats, you say, were manned by eight deckhands? - Yes; eight sailors and an officer.

And lowered into the water? - Yes.

What happened then; did they row about? - They rowed about the dock. We usually set the sails, but on that occasion it was gusty and windy, and we set no sails on that particular day. They simply rowed about the dock and the boats were taken on board again.

Did you inspect the boats to see whether they were properly equipped? - I did in a general way, yes.

What did you find. Were they properly equipped? - As far as I saw, yes. 21957. Did you look at each boat? - I did, yes.

**Page 575**

As far as you could see they were properly equipped? - Exactly, yes.

Did you notice whether the boats had any indication upon them as to what their carrying capacity was? - No, I cannot say that I noticed that. No, I did not on that occasion.

You do not know whether they had or not? - I do not.

Have you ever experienced this difficulty which has been spoken of with regard to getting firemen to take part in the drills? - Yes, we have recently.

Was any attempt made to get them to take part in the drill on the "Titanic," as far as you know? - No. May I state, my Lord, that we have had a lot of difficulty with these firemen at Southampton.

*(The Commissioner.)* They refused to go to sea the other day, did not they? - Yes, my Lord.

*(Mr. Raymond Asquith.)* Do you mean you have had trouble since the "Titanic" disaster? - We have, yes.

Have you made them offers to try and persuade them to take part in these drills? - We have.

What have you offered them? - Half a day's pay to come down on Tuesday, the day before sailing, and take part in the boat drills.

And have they refused that offer? - Not one appeared. That was equal to a refusal.

*(The Commissioner.)* How much is half a day's pay? - I should say, my Lord, it is about 2s. 4d. I believe that is the exact amount, for work which, I think, will take about two hours.

*(Mr. Raymond Asquith.)* I think you produce the compass deviation card, do you not? - Yes.

*(The compass deviation card was handed in.)*

Have you had experience of the North Atlantic yourself? - About nine years, I think.

Have you formed any views with regard to the use of searchlights for detecting ice? - Yes.

What are your views? - I do not believe in them myself.

Have you used them in fact? - No.

*(The Commissioner.)* You have had no experience? - Not of searchlights, no my Lord, except during the time I served in the navy. I was in the navy for twelve months, and I saw them used there.

*(Mr. Raymond Asquith.)* With regard to the use of glasses, or binoculars, have you any opinion upon that subject? - I never have believed in them.

**Examined by Mr. SCANLAN.**

Do you agree with the evidence of the two previous Captains we have had, Captain Hayes and Captain Passow, that on a clear night an iceberg can be seen at six or seven miles distance? - On a clear night I should think so, yes.

If on this night we have it on the evidence of Mr. Lightoller that an iceberg could only be seen about a mile and a half or two miles, would you say that the night must not have been clear? - I should think a great deal depends upon the size of the berg. 21978. If it was found, as it is stated by Mr. Lightoller, that he had observed from six o'clock to ten o'clock on the night of the 14th of April that it was more difficult than under normal circumstances to see an iceberg, would that suggest to you, from the point of view of seamanship, that a double look-out should have been set that night? - No. 21979. Do not you think it would be desirable to place an extra look-out man on the bows? - No.

### **Examined by Mr. LEWIS.**

21980. Was any offer of half-a-day's pay made prior to the "Titanic" disaster? - The offer of the half-a-day's pay to which I referred was made in the case of the "Oceanic" before she sailed. That was the only time we have made that offer. 21981. When would that have been? - When the men signed on.

21982. Would that be recently - since the "Titanic" disaster? - Oh, yes, since. 21983. You have no recollection of any offer having been made to the men prior to that? - No.

Do you consider it would be desirable to muster the day before? - Yes.

Even to the extent of giving the men a day's pay? - I believe so, yes.

(*The Commissioner.*) That means 4s. 8d.. Would they come on the day before if you gave them 4s. 8d.? - I do not think they would, my Lord, not from our past experience.

If you offered them a £5 note each they might come? - I doubt if some of them would, even if you offered them that.

(*Mr. Lewis.*) How long have you been Marine Superintendent at Southampton? - I have been Marine Superintendent nine years altogether - about four or five years at Southampton.

Are you aware that the men suggested about two years ago that they should muster the day before sailing? - No, I have never heard of it. We can hardly get them to muster on clearance morning, much less before the day of sailing.

Are you aware whether any officials of an organisation have had interviews with your local managers with reference to this point? - No, I cannot recollect any. 21991. The general complaint has been, I think, that men leave on the day of sailing and come back again just as the boat is going off. That is the general complaint, is it not?

- Yes, always.

You have no recollection of definite suggestions being made in order to get over that difficulty by the men's leaders, if I may use that term - that it was bad for the men to turn up late; and did they suggest to the company that it would be far better for

the men to muster earlier in the day? - To muster earlier than eight o'clock, our usual time, our customary time?

Instead of mustering so early to muster and remain on board the ship? - I never heard that.

What time do you muster now on the day of sailing? - We muster at half-past ten. We muster the firemen at half-past ten. The sailors and stewards are mustered at eight o'clock.

How long has that been in vogue? - I really cannot call to mind now, I think perhaps about six weeks or two months. I really could not say.

*(The Commissioner.)* That was because the firemen would not turn up at eight o'clock? - That was the reason. The reason was in order to get them on board ship at halfpast ten and muster them so that they would not have time to go on shore again.

*(Mr. Lewis.)* Was not a suggestion made by the men's officials for putting it at a later time in order that they should be kept on board, instead of having them earlier, allowing them to go away, and running the risk of their not coming back in time? - Well, of course, I have not much to do with the firemen. That is the Superintending Engineer's business and these arrangements may have been made unknown to me. I personally do not know anything about it.

Is it within your knowledge that the men's officials have endeavoured to arrange that this mustering business should be carried out satisfactorily? - No, I cannot say that I know anything about that.

You are not aware as to whether they have interviewed the Superintending Engineer with regard to the matter? - They may have done so, but I really know nothing about it.

Is this difficulty confined to your Company in Southampton? - That I do not know. I do not know much about the other companies there.

Have you ever heard of any difficulty with regard to other companies in Southampton

**Page 576**

so far as the mustering is concerned? - I do not know about the other companies. I do not bother much about the other companies; I have quite enough to do without doing that.

Have you ever heard of any difficulty? - No.

If there had been any difficulty you probably would have heard it? - I do not know that I would.

Do you know whether the other companies muster the firemen with the sailors and stewards? - No, I cannot say I do.

You could obtain the information, I suppose? - If I liked to enquire I suppose I could, but I never see any of the officials belonging to the other companies that you speak of. I very seldom meet them.

Do not you think it would be far more practical for the firemen to muster and drill with the sailors? - Well, as I answered before, we are trying to bring that about, but we have not been successful so far.

Have you ever heard of any complaints on the part of the firemen because they did not muster with the sailors? - No.  
No objection on that score at all? - No.

**Examined by Sir ROBERT FINLAY.**

Do these other companies have as big ships as yours? - In Southampton?

Yes? - No.

I suppose if the ships are not so big they have not so many firemen? - They have nothing like the crews that we have.

Now with regard to the boats. Before the Board of Trade certificate is given does the Inspector satisfy himself as to the equipment of each boat? - Certainly.

Have you been much at sea yourself? - I think I was at sea about 26 or 27 years.

I am not quite sure of the time.

Have you commanded vessels? - Yes.

In the Atlantic and the North Atlantic? - Yes, but not for very long.

How long were you in the Atlantic? - About nine years altogether, but not in command.

You were in the North Atlantic trade for about nine years? - Yes, or more, perhaps ten.

And for how long in command? - About 12 months altogether, I think.

And for the rest of the time as officer? - Yes.

With regard to approaching icebergs, what do you say as to the effect of icebergs on the temperature; is a fall in the temperature a sign of approaching an iceberg?

- I should not judge it so - not in my opinion.

22021. You have heard the evidence which has been given today, and previously, as to not slackening speed on account of ice as long as the weather is clear; is that the practice in your experience? - It is. I have never known any other practice.

*(The Witness withdrew.)*

*Sir Robert Finlay:* My Lord, this is the Certificate of Adjustment of the compasses.

*(The Certificate was handed in.)*

*The Commissioner:* I have had these Tables handed in.

*Sir Robert Finlay:* This is the Certificate showing when the adjustment was made. *The*

*Attorney-General:* My Lord, just before the adjournment I would like to fill up the time, if I may, by calling a short witness whom I am anxious to call, and then I propose to go to the Board of Trade evidence, which is the last that your Lordship will have to deal with.

The witness is Mr. Adams. Your Lordship will remember that Mr. Adams was the wireless operator on the "*Mesaba*," and I undertook at one time to call him whenever he came home. I doubt very much whether the evidence is going to add anything material to our knowledge, but I said I would call him, and I will therefore do so.

**STANLEY HOWARD ADAMS, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

Mr. Adams, you were in April of this year the wireless operator on board the steamship "Mesaba" were you not? - Yes.

On the 14th April of this year do you remember the Captain of the "Mesaba" handing you an ice report which he had written on paper? - I do.

And did he give you directions with regard to the transmission of that report? - Yes. He said that it should be transmitted to all East-bound ships.

Before you had in fact transmitted that report, did he give you another report? - He did.

Did you then place the two reports together? - Yes, on one message form. 22027. Do you remember what the second report was? - No, Sir; it was in relation to ice.

So that you had got these two ice reports which he had given you in writing which you incorporated into one message which you then transmitted? - Yes.

Do you recollect transmitting it to the "Titanic"? - I do. 22030. Have you got your *procès-verbal* before you? - Yes.

I think if you look at that you will see that you transmitted it at 7.50 p.m. If your Lordship happens to have the document that I gave you containing a collection of messages received and sent, your Lordship will find that message on page 3: "Office sent to M.G.Y.," that is the "Titanic"? - Yes.

"Time sent 7.50 p.m." That, I understand, is New York time? - Yes.

"By whom sent, S.H.A." That is you? - Yes, my initials.

"'Mesaba' Office, 14th April, 1912. - Prefix Ice Report. From 'Mesaba' to 'Titanic.' In latitude 42 N. to 41.25, longitude 49 W. to longitude 50.30 W., saw much heavy pack ice and great number large icebergs, also field ice, weather good, clear." I need not ask you in detail about your recollection, but did you get an acknowledgment from the "Titanic"? - Yes.

Have you got it on your *procès-verbal*? - The acknowledgment?

Yes? - No, it is on the original message itself.

You have looked at the original message, and it has it on, has it? - Yes. *Sir Robert*

*Finlay:* Has what?

*The Attorney-General:* The acknowledgment by the "Titanic" of the receipt of this message.

*Sir Robert Finlay:* Have you got it here?

*The Commissioner:* No acknowledgment is copied on this.

*(The Attorney-General.)* No; your Lordship will see why. *(To the Witness.)* Will you just let me look at it for one moment? *(The document was handed to the learned Attorney-General.)* Here is the original message. I do not quite follow what it is; perhaps you will explain it to us. You say that that enables you to say that the "Titanic" had received it? - I sent this message, and the "Titanic" sent: "Received, thanks." If I had not received that acknowledgment I should not have put the office I had sent it to, the time, and my signature. As

soon as I received the official received signal I timed it, dated it, put the office sent to, and initialled it.

I think I understand it now. Is it your practice, first of all, to do this: You send the message first of all, and then this part in the column: "Office sent to, time sent and by whom sent," if I follow you correctly, is not filled up, is it? - No, not until I get the received acknowledgment.

Then when you get an acknowledgment you know that you have transmitted the message to the designated ship? - That is quite right.

And when you have that you fill in that you have sent it and the time and your initials so as to show that you have sent it? - Yes.

And what you get then is "Rd Tks"? - Yes.

*The Commissioner:* Is this system of keeping the *procès-verbal* the same as the system on the "Baltic"?

*The Attorney-General:* I do not know; we will see.

*The Commissioner:* Because the "Baltic" apparently enters on the *procès-verbal* the answer.

*The Attorney-General:* But this is not the *procès-verbal* that we are dealing with. This is the original message.

*The Commissioner:* I know that, but I understand he has no record of the answer.

*The Attorney-General:* No, I understand not.

*The Commissioner:* As I understand it, in the "Baltic" they have a record in their *procès-verbal* of the answers.

*The Attorney-General:* Is not that something more? Your Lordship sees the difference. In the one case it is a mere acknowledgment; in the other it is: "Thanks for your message and good wishes; have had fine weather since leaving." That is the "Baltic" message.

*The Commissioner:* Yes, I know it is, and it appears to me to be substantially the same as this.

*The Attorney-General:* Oh, no.

*The Commissioner:* What is the difference - "Had fine weather since leaving."

22043. (*The Attorney-General.*) Certainly, that is not the same as "Received, thanks." It is something more than merely receiving the acknowledgment. (*To the Witness.*) Is this right? Is "Rd. Tks." anything more than an acknowledgment? - No, that is a contraction for "Received, thanks."

*The Commissioner:* Take the "Empress of Britain." There is an answer there: "Many thanks for your kind message from all here."

*The Attorney-General:* Supposing instead of "Rd. Tks." you had received in answer to that message: "Thanks for your message and good wishes, had fine weather since leaving," what would you have done? - I would have done nothing unless it was an official message from the Captain.

22043a. (*The Commissioner.*) It is signed "Smith." Does that make any difference? - If the Captain authorises the Marconi operator to reply I should have put it on the official message.

22043b. (*The Attorney-General.*) If the Captain of your vessel authorised you to reply to the message from the Captain of the "Titanic" you would then have put it on? - Yes, an official form.

(*The Commissioner.*) But if he did not authorise you, you would take no notice of it? - Because it was not sent as an official message.

Except to fill up the form relating to your original despatch? - That is so. *The*

*Commissioner:* I do not know that it matters at present. Mr. Attorney, I am by no means satisfied that the "Mesaba's" message was ever delivered on the bridge. *The Attorney-*

*General:* Your Lordship remembers we had some little discussion about that, and I stated then the result of the enquiries made and the information we had obtained. We can take it no further. We said then we would call him in order to satisfy the Court, but we can get no further than that. This gentleman says it was sent, and he received an acknowledgment from the operator on the ship.

*The Commissioner:* At present I have very little doubt that the message was sent. *The*

*Attorney-General:* We cannot take it further because we have not got the message from Captain Smith, which would show that he had received it. That is how it stands. Your Lordship is right about that.

### **Examined by Sir ROBERT FINLAY.**

I think you made a statement, did not you, on getting to this country? - I did. 22047. Is that the statement; is that your writing? (*The document was handed to the Witness.*) - Yes, it is.

It was made, I think, to the owners of the ship? - To the shore captain at the Royal Albert Docks.

Of your company? - Yes.

This is the statement, my Lord: "Saturday, 8th June, 1912. I hereby state that on Sunday, 14th April, I had communication with s.s. "Titanic," bound East" - it is written "East" here. Is that right? (*The statement was handed to the Witness.*) - It should have been "West," sir - "bound West."

"And that during the day he" - that is the "Titanic"? - Yes.

The operator - "was very busy with Cape Race. Time of communication, 7.50 p.m. New York time (9.40 ship's) sending ice report, after which he went on working to Cape Race again"? - That is so.

That is subscribed by you? - Yes. 22054. Then is this a copy of your log with regard to these messages on the "Mesaba"? (*The document was handed to the Witness.*) - Yes, that is simplified.

That is what? - It is the log simplified. There are no technical words in that. I have taken out the technical words.

(*The Attorney-General.*) Is that the same as what you call *procès-verbal*, only in ordinary language? - Yes, but that is not the original.

*Sir Robert Finlay:* This is not the original, but a copy.

*The Commissioner:* It is not even a copy.

(*The Attorney-General.*) It is a translation.

*The Witness:* Yes, it is a translation.

*The Commissioner:* A paraphrase of it.

(*Sir Robert Finlay.*) The only other entry I will read is the one opposite the hour 7.50 relating to this message: "Exchanged. T.R.'s with s.s. 'Titanic' bound West, sent ice report, standing by while 'Titanic' calls Cape Race." What does "standing by" mean? - "Standing by" means keeping on the instruments waiting for him to finish calling Cape Race.

That he was in communication with Cape Race, and you were kept waiting while he went on communicating with Cape Race - is that it? - No, not necessarily. I sent that message, and when I said "standing by" - that should read as waiting for a reply. I had had a received signal from the "Titanic," but I was waiting for a probable reply from the Captain.

I see, it is quite right as it stands - "standing by while 'Titanic' calls, Cape Race"? - Yes. That means that you were kept waiting. You got no answer from the Captain and you waited for some time while the "Titanic" was working with Cape Race? - Calling Cape Race.

And the answer never came? - The answer never came.

(*The Commissioner.*) I thought an answer did come then? - Yes, but that was the operator's.

And you waited for the answer to come, possibly expecting - I do not know - that an answer would come from the Captain of the "Titanic"? - Yes, sir. 22065. It did not come from the Captain? - It did not.

It came from the operator? - I should have had that in any case, but I thought that the

## **Page 578**

Captain of the "Titanic" would have some news to communicate to us.

(*Sir Robert Finlay.*) I think the two messages are here. The "Received thanks" came from the operator? - From the operator.

As soon as you sent your message? - As soon as I sent my message.

Then you kept on waiting, thinking that there might be a message from the Captain of the "Titanic"? - Yes, to the Captain of the "Mesaba." 22070. And that never came? - That never came.

*The Commissioner:* That rather bears out the view that I am at present disposed to take about the "Mesaba's" message - that it never left the Marconi room on the "Titanic" at all.

(*Sir Robert Finlay.*) Yes, my Lord. (*To the Witness.*) Just one other question. You said something about combining two messages into your message to the "Titanic"? - That is so.

What were the two messages which you combined? - They were both reports of ice.

Have you got them? I want to see them? - No, I have not. I copied them out on a special form, and got the Captain's authorisation to send them, and then I destroyed the two pieces of paper.

But the two messages that you combined - I suppose you know what they were?

- Yes, this is one, the same as I have - the same as I have just shown you.

We have the combination, of course? - Yes.

Were these messages from other ships? - No, they were received from the Captain, to be transmitted to all east-bound ships.

He gave you two messages? - Yes, he gave me two messages.

Have those messages been destroyed; does the paper no longer exist? - The pieces of paper he brought them on no longer exist. 22079. Is there a copy? - No, Sir, only the combination.

Can you tell us what each message by itself was? - It was with reference to the ice we had seen in the morning, and the one I received later was with reference to the ice we saw in the afternoon.

Can you tell us at all how they ran? - They ran something like this: "Latitude so and so, and longitude so and so, passed so many bergs," and giving the time - the G.M.T. I received another one in the afternoon, or the evening rather, on another piece of paper with a similar report of what we had seen in the afternoon.

*(The Commissioner.)* Why did not you send the one in the morning? - That was my first communication with the "Titanic." 22083. I see, you had not got the time rushes? - No. Until the afternoon? - Until 7.50 p.m.

And then you found there were two messages to be sent, and you made them up into one? - That is right, my Lord.

*The Attorney-General:* And submitted them to the Captain?

*(Sir Robert Finlay.)* When was the first one? What time in the morning was the first message? - It was in the afternoon about four o'clock, according to my recollection. 22087. *(The Commissioner.)* And the next one was somewhere about 7.50? - About seven o'clock.

22088. *(Sir Robert Finlay.)* So that this message combined what had been seen at two different portions of the day; is that it? - That is so.

*The Commissioner:* And that explains, I suppose, the forms in which it is couched - "In latitude 42 North to 41.25, longitude 49 West to longitude 50.30 West"? *The Attorney-General:* Yes.

*Sir Robert Finlay:* It gives the impression, of course, as it stands of that oblong, as it has been called, being much more packed together with ice than it may have been, because this is compressed. It is not: "We saw much pack ice throughout the whole of the area described by the latitude and longitude," but "While we were in that area between the longitude given and the latitude given we saw," and it turns out at different periods of the day "icebergs."

*The Commissioner:* I do not think from my point of view at present it matters at all, because it never reached the bridge.

*Sir Robert Finlay:* That is so.

*(The Witness withdrew.)*

*(After a short adjournment.)*

*Mr. Roche:* I do not know whether it is an opportune time to make a suggestion to your Lordship. My friend the Attorney-General has made an intimation as to the course of the case. It is drawing to an end with regard to witnesses, which I daresay is as welcome to your Lordship as it is to other persons. But there is one point which occurs to myself which has not been elucidated. My clients will not be in a position to do it, and I do not know whether my friend the Attorney-General could not do it or get it done very shortly. Your Lordship has had evidence this morning with regard to speed, and speed in the past is most material as to whether it was negligent or not to go at a certain speed. Another question also occurs to me as to what should be the speed in the future - whether your Lordship should make any recommendations or not in regard to speed in the future under certain circumstances. That depends upon one fact, or is influenced by one fact which is not before your Lordship, and that is that with ships of these dimensions what is the turning circle, or perhaps it would be more correct to say the turning curve of the vessel at any given speed, at full speed, half speed, and so forth. That depends upon information as to the details of the rudder and so forth, and the construction of the vessel, which my friends from the Board of Trade may be able to procure from the persons whom they have available. I do not know how that commends itself to your Lordship as a point which your Lordship will have to consider. Your Lordship quite understands what I mean by the turning circle.

*The Commissioner:* I do.

*Mr. Roche:* It occurs to me it would not be a lengthy matter, and these are factors which your Lordship and those who advise you will probably have to consider.

*The Commissioner:* Are you going to put any evidence before us on this point, Mr. Attorney?

*The Attorney-General:* We did not intend to, but it can be done. If there is any question which suggested itself to my friend, it would have been better if it had been asked of the witnesses.

*The Commissioner:* It is suggested that the point was put to Mr. Lightoller, and that there then came an intimation from you - I do not know if it was from you personally, but it was from someone with you - to the effect that that matter would be dealt with later on.

*The Attorney-General:* It certainly can be done.

*The Commissioner:* It does affect the question of speed.

*The Attorney-General:* Yes.

*The Commissioner:* I mean to say the question of how the ship would answer to her helm and what curve she would make at different speeds may be a matter to be considered.

*The Attorney-General:* Your Lordship shall have it.

*The Commissioner:* You will think about it.

*Mr. Roche:* I am very much obliged to your Lordship. In explanation of not putting the questions, I may say I was desirous of not putting questions of that sort to people who had not made the calculation. It would not have been satisfactory.

*The Attorney-General:* I am not making any complaint, but if my friend had told me he wanted it I would have called evidence about it.

*Mr. W. M. R. Pringle:* May I resume my application for leave to appear on behalf of the Shipwrights' Association. You may remember at the earlier stages I made an application on two occasions on behalf of this Association. At that time you allowed me to remain.

*The Commissioner:* I thought I had enough, and I still think I have got too many; but at the same

**Page 579**

time if you have any questions to ask of any of the witnesses who come into the box, and will suggest them to me, if I think them the least relevant. I shall no doubt allow you to put them. You must remain here and listen to the evidence, and then if any questions occur to your mind, suggest them to me, and if they appear to me to be really relevant I shall, of course, allow you to put them.

*Mr. Pringle:* Of course, I should not think of interfering in any circumstances in which I should not be assisting your Lordship in the Enquiry.

**Sir WALTER J. HOWELL, Sworn.**

**Examined by the ATTORNEY-GENERAL.**

*(The Attorney-General.)* This is the oblong which appears in the "Sphere" of June 8th.

*(Handing same to the Commissioner.)* It strikes me as useful. *(To the Witness.)* Sir Walter Howell, are you one of the Assistant Secretaries to the Board of Trade? - Yes.

And Chief of the Marine Department? - I am.

You entered the Board of Trade nearly 40 years ago? - Yes.

And you became head of the Marine Department in 1899? - That is so. 22093. Is the Marine Department of the Board of Trade charged with the administration of the Merchant Shipping Acts? - Yes.

And also some of the Acts affecting shipping with which we are not concerned at this Enquiry? - Yes.

It is entrusted also with the general superintendence of all matters relating to merchant shipping and seamen? - Yes, as defined in the Merchant Shipping Act, 1894. 22096.

With regard to foreign law applicable to ships, do you strive as far as possible to obtain international agreement? - Yes.

And especially as affecting the safety regulations? - Yes.

Much has been done to secure that object? - I think a considerable deal has been done.

The regulations as to the survey of passenger steamers enforced in France, Germany, Denmark, Japan, the Netherlands, Norway and Belgium have been recognised as of equal effect with your own since 1907? - That is so.

What is the position with regard to the United States? - They were recognised by mutual agreement in 1905.

That is as to survey of passenger steamers? - That is as to survey of passenger steamers.

There are negotiations proceeding on the subject of passenger steamers with other countries, and I need not go into detail with regard to that? - Yes.

Now will you tell me, with reference to foreign requirements as to life-saving appliances, have they also been considered by the Board of Trade with a view to recognition since 1907? - Yes, since the passing of the Act of 1906.

I think there are only two sections in the Act of 1906 with which your Lordship need be troubled - Sections 4 and 9, I think, are the ones. Section 4 of the Merchant Shipping Act of 1906 gave power to apply our rules as to life-saving appliances to foreign ships in certain cases. I will read the section, and your Lordship will see at once how it stands: "Sections four hundred and twenty-seven to four hundred and thirty-one of the principal Act relating to life-saving appliances shall, after the appointed day apply to all foreign ships while they are within any port of the United Kingdom as they apply to British ships; Provided that His Majesty may by Order in Council direct that those provisions shall not apply to any ship of a foreign country in which the provisions in force relating to lifesaving appliances appear to His Majesty to be as effective as the provisions of Part V. of the principal Act, on proof that those provisions are complied with in the case of that ship."

*The Commissioner:* That is Section 4.

22104-5. (*The Attorney-General.*) Yes, of the Merchant Shipping Act of 1906. That is the only section which relates to the life-saving regulations with which we are now dealing. (*To the Witness.*) In the same way, have the life-saving appliance rules of France, Germany, Norway, Sweden, Denmark, and the Netherlands been recognised by Orders in Council under Section 4 of the Act of 1906? - Yes, after considerable negotiation they have.

And negotiations are proceeding with other countries for the same purpose? - Quite so. The life-saving appliance rules of the United States have I think not been recognised by an Order in Council under this Act? - No.

Does the mutual recognition of the British and American passenger certificates include the recognition of the life-saving appliance rules with which the passenger steamers of the two countries have to comply? - It does; the mutual recognition between this country and the United States preceded the passing of the Act of 1906, and it was therefore unnecessary to do anything further.

You have the effect without the Act of 1906? - That is so.

Have you for the purpose of carrying out the duties of your department a large staff assigned to that branch of the department? - I think I may say a very large staff. 22111. So far as is relevant to this Enquiry there is first of all the Head Quarter Staff? - Yes.

That consists of administrative and technical officers with the necessary clerical assistance? - Quite.

The Head Quarter Staff includes a number of principal consultative officers? - It does. First there is the professional member of the Marine Department? - Yes, he is in a sense Surveyor-General and Chief of the staff.

And he is a sailor? - He is a sailor.

Then there is the Engineer Surveyor-in-Chief? - Yes.

Who is that? - Mr. Boyle.

Will you give us the names as we proceed? - Certainly.  
Who is the professional member of the Marine Department? - Captain Young.  
And the Engineer Surveyor-in-Chief is Mr. Boyle? - Yes.  
And the principal Ship Surveyor or Naval Architect? - Mr. Archer.  
Then the principal Surveyor for Tonnage? - Mr. Colvill.  
And the principal Examiner of Masters and Mates? - Captain Harvey. 22124. Then there is a Chief Examiner of Engineers and Chief Inspector of Ships' Provisions? - The Chief Examiner of Engineers is Mr. Seaton -  
They do not affect this case, so you need not trouble. Is the executive work of the Department carried on by a large number of officers stationed at the principal ports of the United Kingdom? - It is.  
And that staff consists, first of all, of a Survey Staff? - Quite so.  
And then the Mercantile Marine Office Staff, Inspectors of Ships' Provisions, and Examiners of Masters and Mates? - Quite so.  
Now the Survey Staff we are principally concerned with in this case. In addition to the principal consultative officers whom you have already mentioned, into how many districts are the ports of the United Kingdom grouped? - The country, including Ireland, is grouped under nine ports.  
And in those nine ports are there engineer, nautical, ship, and sanitary Surveyors? - Yes.  
And in the duties of the Survey Staff is there first of all the survey of ships for passenger

## **Page 580**

certificates? - Yes, including the hull, equipments, and machinery.  
Hull, equipments, and machinery? - Yes.  
I will ask you a little more about that presently. Then is there the survey and clearance of emigrant ships? - Yes.  
That is in pursuance of the provisions of the Statute? - Yes.  
There are a number of other matters with which I need not trouble the Court which also involve duties to be performed by the Survey Staff? - Yes, numerous very important duties.  
But not relevant to the particular matters we are enquiring into now? - Probably not.  
Now will you direct your attention to the case of the "Titanic"? - Yes. 22137. Has your attention been called to the questions which are submitted to the Court? - Yes, it has.  
The second question is, "Before leaving Queenstown on or about 11th April last did the "Titanic" comply with the requirements of the Merchant Shipping Acts, 18941906, and the Rules and Regulations made thereunder with regard to the safety and otherwise of 'passenger steamers' and 'emigrant ships.'"? - Yes, she complied with both sets of requirements.  
That particular Question concerns your department? - Yes, that concerns my department. The particular Questions, I think, my Lord, which are affected by the Board of Trade evidence are 2, 4, 5, and 26, which is the recommendation. Your Lordship will remember it invites the Court to report upon Administration. Those I think are the

Questions that are affected by this evidence. (*To the Witness.*) Now the "Titanic" had to comply with the law which is applicable both to passenger steamers and emigrant ships? - Quite so.

Are those the most stringent provisions under the Merchant Shipping Act? - Those relating to emigrant ships are certainly the most stringent.

Now, just before I go to that, there is one matter I want to call attention to. I want you to direct your attention to some figures which have been compiled with reference to the number of passengers who lost their lives over a period of years on voyages from the United Kingdom to America. The point of it is that the Court may have before it what did happen during the 20 years that preceded this accident, and it has a material bearing of course upon the recommendations that ought to have been made and that were made.

Will you take first of all the 10 years from 1892 to 1901? The total number of passengers carried inward and outward between the United Kingdom and the United States and British North America on all ships - that is, both British and foreign ships, was over 3 ¼ millions? - That is so.

And of those 3 ¼ million passengers was the great proportion carried in ships belonging to the United Kingdom? - By far the greater proportion.

Will you give me the number of passengers who during that period of ten years lost their lives by casualties to vessels belonging to the United Kingdom? - In the years 1892 to 1901 the number of passengers lost by casualties to vessels at sea was - 22145.

Belonging to the United Kingdom? - Belonging to the United Kingdom, was of passengers - west-bound 66, east-bound 7.

Seventy-three in all? - Seventy-three in all.

Have you also considered the figures for the ten years 1902 to 1911? - Yes. 22148. Was the number of passengers carried under the same conditions by both British and foreign ships over six millions? - Over six millions.

22149. And of those six millions was the greater proportion carried by vessels belonging to the United Kingdom? - Certainly; far the greater proportion. 22150.

Now, will you give me the number of passengers who lost their lives by casualties at sea in vessels belonging to the United Kingdom? - West-bound 8, eastbound 1.

Nine in all during that ten years? - Nine in all.

I suppose it is not possible for you to give the figures with regard to the total which you have given, because that includes both the British and foreign ships? - Yes. I want to be very careful to point that out.

You only have the figures available for vessels belonging to the United Kingdom? - Quite so.

*The Attorney-General:* I have a Table, my Lord, which I have summarised, giving you what I think are the material figures, but I have a Table here for every year, showing them exactly. It did not seem to me that that was necessary. The total is what is required.

*The Commissioner:* I suppose it is not possible to say how many of those 6,000,000 and 3,250,000 were carried in British ships?

*The Attorney-General:* I am afraid not.

*The Commissioner:* Very well.

*(The Attorney-General - To the Witness.)* You told me that by far the larger proportion of passengers included in the total of six millions was carried in vessels belonging to the United Kingdom? - Yes.

Can you give us any indication of what that larger proportion consisted of? - I cannot.

*The Commissioner:* The total loss comes to about four persons in a year.

*The Attorney-General:* That is counting the twenty years.

*The Commissioner:* Yes.

*The Attorney-General:* During the last ten years - *The*

*Commissioner:* It is much less.

*The Attorney-General:* It is not quite one.

*The Commissioner:* Yes. Taking the whole 20 years it is about four a year.

*The Attorney-General:* Yes. I think your Lordship will find from the figures, if you go back further, that the loss of life has always been a decreasing quantity in proportion to the increasing number of passengers carried.

*The Commissioner:* These figures show that, but, of course, they only deal with two periods of 10 years.

*(The Attorney-General.)* Yes. I might exhaust the figures as we are upon them. I do not want to go back to them. I am only going to give the summary. Will you just tell me whether this is right: For the 10 years ending the 30th June, 1881, there were 822 lives, crew and passengers, lost? I am going back, as your Lordship sees, to an earlier period, and I am including crew. The figures I gave just now were only dealing with passengers. For the next 10 years ending the 30th June, 1891, were there 247 lives, crew and passengers, lost? - From the 1st July, 1881, to the 30th June, 1891, three vessels and 247 lives.

That includes crew and passengers? - That includes crew and passengers. I thought it was not quite right to confine my observations with regard to statistics simply to passengers, and I compiled these figures to give them both with regard to crew and passengers.

Quite right. And then to the 30th June, 1901, that is carrying the period forward for another 10 years - 183 lives, crew and passengers, were lost? - Yes.

That would compare with the figure of 73 which you gave us first, would it not?

The 183 would include the 73? - It would include the 73, yes.

It is the same period? - It is the same period.

So that you have got seventy-three passengers and that would mean 110 crew? - Quite so.

Then for the next period to the 30th June, 1911, there were fifty-seven? - Fiftyseven lives lost.

Of which as we know there were nine passengers? - Yes. There is one remark I ought to make here. This only includes casualties through which over fifty lives were lost.

I was going to ask you that. Does that apply to both sets of figures which you have given us? You have given us first of all the passengers, and then you have given us the crew and passengers? - In the first there is no reservation, I think, with regard to the fifty lives lost.

That stands altogether apart from the calculation you have made? - Yes.

That is both the seventy-three and the nine? - Quite.

But in this later table of the forty years which you have given, that only deals with casualties in which over fifty lives were lost. Is that right? - That is quite right. 22168. I think we understand how that stands, and I do not think we need burden the Court with further figures upon that. Then "Passenger Steamers" is defined in the Statute under the Merchant Shipping Act, 1894, and to some extent also by the Act of 1906, but substantially it includes every steamship, British or foreign, carrying passengers from, to, or between places in the United Kingdom? - Quite so.

That is the substance of it - I am not using the exact words. Then Section 271 of the Merchant Shipping Act which your Lordship will find in that little abstract at page 7, provides for an annual survey of every passenger steamer which carries more than 12 passengers? - Yes, the survey must be at least once a year.

*The Attorney-General:* Quite right.

*The Commissioner:* Have you a spare copy of that?

*(The Attorney-General.)* Yes, certainly - *(Handing the same to his Lordship.)* There must be a survey at least once a year your Lordship sees if a passenger steamer carries more than 12 passengers. And further that vessel must not ply or proceed to sea without a certificate from the Board of Trade.

*The Witness:* That is so.

Then Section 72 of the Act of 1894 amended to some extent by the Act of 1906 deals with the mode of survey? - Yes.

And requires certain particulars to be stated in the Declaration of the Surveyor. That continues in the Abstract, my Lord, and your Lordship will find the main point set out on page 8. Obviously the object of these provisions in the Statute was to ensure that the survey should be adequate? - Exactly.

That is what Parliament intended? - Yes.

The Board of Trade appoint Surveyors for this purpose? - Yes.

And a person who is appointed as a Surveyor may be both a ship Surveyor as well as an Engineer Surveyor, may he not, if he has the qualifications for both? - Yes. 22176. Generally speaking, as vessels are now built, made of iron and steel, is the work of surveying passenger steamers carried out by Surveyors who hold appointments both as engineer and ship Surveyor? - Speaking generally, that is the case.

Does that mean that before entering the Board's service they have had experience of engineering at sea? - Yes.

In engineering as apprentice and as a seagoing engineer? - Yes.

Do they have to pass a Surveyor's technical examination before entering the Board's service? - Yes.

Do they then have to undergo training and pass a further examination as to their ability to survey a ship before they undertake the work on their own responsibility for the Board of Trade? - That is exactly so.

The survey of the passenger steamers would cover the hull, equipment and machinery of the steamer, I think, you told us in the early part of your evidence? - Yes. 22181. And that is conducted in accordance with the regulations which are made by the Board of Trade? - Yes.

22182. There are instructions which are issued with reference to that, are there not? I will not trouble you for the moment to go into it. I think a later witness will tell us more in detail. You yourself did not survey the "Titanic" at all? - No. 22183. That would not be your business? - Certainly not.

But you would get reports I suppose from your Engineer Surveyor in Chief? - Not in the usual course from the Engineer Surveyor in Chief; usually from the local Surveyor or Surveyors.

And it is they who can speak as to what actually was done with regard to the "Titanic"? - That is exactly so.

Now, just let us understand what happens. Does the Surveyor make a declaration? - Yes. Showing that the vessel has complied with the requirements which he makes for the purpose of the survey? - Yes.

*The Attorney-General:* Your Lordship has already had the particular one relating to the "Titanic" put in evidence.

*The Commissioner:* Yes.

*(The Attorney-General - To the Witness.)* I do not think I need trouble you to go further in detail with regard to that; I only want to get the practice. On receipt of the Surveyor's Declaration is a passenger's certificate issued by the Marine Department under Section 274 of the Act? - Yes, that is exactly the procedure.

22189. Do you give that certificate? - I give that certificate and sign it. I do not want to go into it in detail - it can be given if necessary, but it does not seem to me that it would help - but substantially did the "Titanic" in complying with the requirements of the British Merchant Shipping Acts and the Statutory Regulations and Requirements of the Board of Trade generally, comply with the Requirements of the United States law? - That is so.

That is the substance of it; they are not identical, but they are certainly substantially similar for these purposes. Now I want to take you to emigrant ships.

Besides the passenger certificate to which I have referred the "Titanic" was also required to comply with the requirements as an emigrant ship? - Exactly.

*(The Attorney-General.)* An "emigrant ship," your Lordship will find defined by Section 268, which is on page 5 of the Abstract, and Section 364, which is on page 46 of the Abstract. I do not think really your Lordship need trouble very much about page 46. It extends the voyages to which it is to apply, that is all. Substantially what it amounts to is, that it is a British or foreign ship which carries in any voyage from the British Isles to any port out of Europe, and not within the Mediterranean Sea more than 50 steerage passengers.

*The Witness:* Quite right.

Or, as it is also put, "a greater number of steerage passengers than the proportion of one statute adult for every 20 tons of the registered tonnage of a steamship." Is that right? - Quite right.

And as my friend, Sir Robert, quite rightly says a "statute adult" is a person of 12 years or upwards. I do not think that is very material to go into. The Board of Trade have issued, relating to emigrant ships, a book called Instructions for the guidance of Emigration Officers appointed to carry into effect the provisions of the Merchant Shipping Acts relating to Emigrant Ships? - Yes.

That your Lordship also has. It is a document, a yellow book called "Instructions relating to Emigrant Ships." There is very little in it with which your Lordship need be troubled. (*To the Witness.*) With regard to emigrant ships, the object is not only to secure their seaworthiness and proper equipment, but also to provide a reasonable minimum of accommodation for emigrant passengers? - That is so. 22196. And also that adequate and sufficient food is given, and so forth? - Yes. 22197. There is a provision which is relevant at any rate to some of the questions which have been put, for the meaning of emigrant ships? - Yes.

That your Lordship will find at page 24 of the Abstract of the Act. It is Section 305 of the Merchant Shipping Act 1894. "Every emigrant ship shall be manned with an efficient crew for her intended voyage to the satisfaction of the Emigration Officer from whom a certificate for clearance for such ship is demanded; after the crew have been passed by the Emigration Officer, the strength of the

## Page 582

crew shall not be diminished nor any of the men changed without the consent in writing," and so on. Then Sub-Section (3) gives the right of appeal. "If the Emigration Officer considers the crew inefficient." The only thing that occurs to me as material at present in the book called "Instructions relating to Emigrant Ships" is on page 9 where you will find the instructions relating to the manning.

*The Commissioner:* At page 10 you get the capacity of lifeboats and so on.

*The Attorney-General:* Yes, that is quite right.

*The Commissioner:* And the number of deckhands to be carried.

(*The Attorney-General.*) Yes, and if you look at the number of deckhands to be carried in that Table, you will find 48 is the number which would be applicable to this vessel. Now, we need not trouble about the loadline. There are provisions with regard to that, but I do not think any question arises in this case with reference to the loadline on the certificate of the loadline. If it does become necessary Sir Walter can give some information with regard to it. (*To the Witness.*) But I want you now to go to bulkheads and watertight compartments. First of all, will you tell me, does the Board of Trade, speaking generally, interfere with the design of the vessel? - No, the Board of Trade has always been very reluctant to do that.

Is that left to the shipowner and shipbuilders? - Yes, I think so.

Has it been thought, as a matter of policy, that hard-and-fast regulations would tend to cramp the free development of shipbuilding in this country? - I think that exactly explains the position.

Is that also the case in connection with bulkheads and the subdivision of a vessel into watertight compartments? - Yes.

And has that same policy been pursued? - Yes, I think generally speaking, it has. Subject to certain specific matters to which we will call attention. Let us get the history shortly to what the Board of Trade has done with regard to bulkheads. First of all the Steam Navigation Act of 1846 required steam vessels to be built with a bulkhead on each side of the engine room thus dividing the ship into three watertight compartments? - That was so.

There was a similar requirement in the Merchant Shipping Act, 1854? - Yes. 22206. In 1862 was it thought that the old requirements were unsuitable? - Yes, they were thought to be entirely unsuitable, and the law was repealed in that year.

I want to draw particular attention to this. Since 1862, and apart from Rule 12 of the Life-saving Appliance Rules, have any requirements been made or laid down by Statute as to bulkheads and watertight compartments? - No.

*The Attorney-General:* Your Lordship will see Rule 12, to which attention has been called at some time in the case, but of which I remind your Lordship at the present moment - it is page 16 of the Book containing the rules for life-saving appliances. The only points of it, your Lordship will remember, is that if the ships are divided into efficient watertight compartments to the satisfaction of the Board of Trade then they are required to carry a less number of additional boats.

*The Commissioner:* Yes.

*(The Attorney-General.)* That is the point.

*The Witness:* That is exactly so.

That is to say, that the requirements upon the ship to carry additional boats is lessened by one-half? - Three-quarters in some cases.

But it is lessened by one-half, is it not? - Yes.

And some three-fourths? - Yes.

You understand what I am putting? - Yes.

Whatever it may be, if X is the requirement of additional boats, if the ship is divided into efficient watertight compartments to the satisfaction of the Board of Trade it is only one-half of X which has to be carried by that ship? - Yes.

In point of fact, your Lordship will remember no question arises in this case with regard to it, because no such application was made by the "Titanic" to the Board of Trade. And, apart from that provision in Rule 12, there is no provision, I think, anywhere which makes any regulations or requirements as to bulkheads and watertight compartments? - That is so.

Now I want you to go for a moment to the year 1887.

22215-6. *(The Commissioner.)* Has this Rule 12 ever been put into operation? - Oh, yes, in numberless cases - in a great number of cases.

*The Attorney-General:* I think we have had it in evidence that some few vessels applied. Your Lordship is quite right in thinking it was a very few.

*The Commissioner:* I was wondering in reading it whether any boat ever applied for the approval by the Board of Trade on the matter of watertight compartments for the purpose of getting a reduction made in the lifeboats.

*The Attorney-General:* I will prove the figures later, but I am told that since the passing of this rule there have been 103 applications, and 69 have been granted.

*The Commissioner:* And when did this rule pass?

*The Attorney-General:* In 1894.

(*Mr. Laing.*) 1890, I think.

*The Witness:* I think it was in 1890.

*The Attorney-General:* It was in existence in 1894.

*The Commissioner:* This rule has been in existence 22 years.

*The Attorney-General:* Yes, since 1890.

*The Commissioner:* And how many ships do you say?

*The Attorney-General:* One hundred and three applications have been made.

*The Commissioner:* And 69 have been granted?

*The Attorney-General:* Yes.

*The Commissioner:* That is five a year?

*The Attorney-General:* Yes, it is quite a few.

(*The Commissioner.*) It is quite negligible.

*The Witness:* In recent years it is becoming fewer and fewer every year. Nearly all those applications were made in the earlier days of the passing of the rule.

Then is it the fact that the rule has become practically obsolete? - I think it is the conditions that have been felt to have become obsolete.

*The Attorney-General:* I understand it is about four a year now, so a gentleman tells me who is more familiar with the exact figures.

*The Commissioner:* Is that a matter of any consequence?

*The Attorney-General:* I think not. The only point of it is to call the Court's attention to the fact that there is that rule in existence and except for that rule there is no statutory requirements with regard to bulkheads and watertight compartments.

*The Commissioner:* And the object of the rule is to enable shipowners to be relieved of the obligation of finding a certain number of lifeboats.

*The Attorney-General:* I think the object was to encourage them to have efficient watertight compartments. *Sir Robert Finlay:* Yes.

*The Commissioner:* And so it was said to them, "If you will satisfy us on the question of watertight compartments then we will say to you, 'You need not carry so many boats.'"

*The Attorney-General:* Yes. I can put a few questions which will make it quite clear.

The policy has been almost from the start; anyhow up to a very recent date. I will not say anything about what it is to be in the future - that it was more important to have efficient watertight compartments than to have a full number of boats.

*The Commissioner:* Yes, and that is right, is it not?

*The Attorney-General:* I should have thought so; it is much more important to keep your vessel afloat than to have a large number of boats.

*The Commissioner:* Of course, obviously.

(*The Attorney-General.*) Otherwise your vessel might go down at once; if you had not efficient watertight compartments, you would have no time to launch your boats if the ship was seriously damaged. But I think that has been the policy and it has been considered a good many times. I think that substantially represents what

it is and I will put the dates and the material facts in connection with it to Sir Walter. (*To the Witness.*) In 1887, to which I call your attention, the then Assistant Secretary of the Marine Department of the Board of Trade gave evidence before a Select Committee of the House of Commons on Saving Life at Sea? - He did.

I see there were a good many inquiries about this time. There was first of all, in 1886, a Board of Trade Departmental Committee, which sat to inquire and report into this matter? - Yes; that was quite a small Committee, a domestic Committee.

A Committee of three, and also in 1886 there was a Royal Commission which sat on Loss of Life at Sea? - That was the great Royal Commission on Loss of Life at Sea, and it mentioned this quite incidentally in its report.

And it reported in 1887 I think? - Yes.

Correct me if I am wrong - you are much more familiar with it than I am - it really hardly touched this question, did it? - No, quite incidentally.

In 1887 a Select Committee of the House of Commons sat, and then in giving evidence (I take this as the statement of what was thought to be the policy then) the Assistant Secretary of the Marine Department said this to the Committee, "I would not interfere with the construction of the ship." "As regards bulkheads, there used to be a law that a ship should have one bulkhead before the engine room and one aft." "The law was repealed which compulsorily required two bulkheads, and on the repeal of that law there came to be four, five, and six bulkheads directly. So that," as he argued, "that shows that if you want improvements to go on you must not tie any industry down by hard-and-fast statutory laws, however good they may appear at the moment." The point is, I understand, that then it was made clear that as soon as you had removed the provision which required these two bulkheads the number of bulkheads commenced to increase? - Yes.

*The Commissioner:* Can you explain to me why that was?

*The Attorney-General:* I should assume what it means is this: that if you have a provision which says you must have a minimum or you must have those two, generally speaking, persons were satisfied with having those two. As soon as that regulation was done away with then it was considered that the minimum was dispensed with.

*The Commissioner:* I expect that is the explanation.

*The Attorney-General:* I see Sir Digby Murray, who was the then professional member

-

*The Commissioner:* I am told as a probable explanation that about this time, or somewhere about this time, Lloyd's required more bulkheads.

*The Attorney-General:* Yes.

*The Commissioner:* And then the shipowners would introduce them for the purposes of insurance.

(*The Attorney-General.*) Quite. It is not perhaps a very fruitful subject of speculation or Enquiry, but it is rather interesting to know whether Lloyd's did not do it in the same way, because of course the minimum had been repealed and then they began to consider that something else was necessary. Their minds were directed to the question. Sir Digby

Murray, the then professional member of the Marine Department of the Board of Trade, also gave evidence before that Committee? - Yes.

He was in favour of the efficient subdivision or bulkheading of passenger ships as a better method of ensuring the safety of the passengers than by large provision of boats. That was the policy he advocated? - Yes.

He said, "I think I may further say that it is perfectly useless to supply a ship with a number of boats if in case of collision she is to founder immediately if she is not properly subdivided so that she will float, or, on the other hand, if there are not a sufficient number of seamen on board the vessel to man the boats." *The Commissioner:* What is it you are reading from?

*The Attorney-General:* I am reading from the evidence of Sir Digby Murray, then the professional member of the Marine Department of the Board of Trade before this same Select Committee of the House of Commons in 1887. The Committee reported in 1887. I have got all the documents, but it is so much more convenient to summarise it, and get it on the Note for your Lordship in this way.

*The Commissioner:* That is what I want.

*The Attorney-General:* It saves so much looking through documents.

*The Commissioner:* Yes, and there I can find it.

22228. (*The Attorney-General.*) It is very difficult if you have to follow this from several documents. The Committee reported, "Though the question of construction was clearly not included in the reference to the Committee, still they think it only right to state, after having heard the evidence, that the proper placing of bulkheads, so as to enable a ship to keep afloat for some length of time after an accident has occurred, is most important for saving life at sea, and a thing upon which the full efficiency of Lifesaving Appliances largely depends." Then in 1890 a Committee came into existence which was presided over by Sir Edward Harland? - Yes.

*The Commissioner:* Was that gentleman a member of the firm of Harland and Wolff?

22229. (*The Attorney-General.*) I think so?

*The Witness:* Yes.

22230. (*The Attorney-General - To the Witness.*) He was, I should imagine? - Yes.

22231. I am told he was the founder of the firm. That Committee was formed mainly with reference to the standard to be required by the Board of Trade in granting exemptions under the Life-Saving Appliance Rules? - Yes, it was the fact that that rule was laid down which led to the appointment of the Committee.

That rule came into existence in 1890? - Yes.

Under that rule some standard was to be laid down by which the Board of Trade was to determine whether a ship was divided into efficient watertight compartments? - Yes.

So this Committee was formed? - Yes.

Then, incidentally, the best method of dividing ships into watertight compartments was also discussed? - Yes, that was a necessary part of it.

One further thing with reference to it. Was the method then considered of subdividing ships into watertight compartments so as to float in moderate weather with two compartments in free communication with the sea? - That was what was laid

down. 22237. I mean it was not two adjoining compartments? - "In moderate weather with two compartments in free communication with the sea."

When that Committee reported did the Board of Trade adopt its recommendation with regard to the standard of subdivision into watertight compartments? - They did.

That would be presumably when an application was made under this Rule 12? -

Precisely.

That was the standard then upon which they acted? - That was the standard. There is one clause - I will not trouble you with the book, I will read it so as to get it on the Note - in the regulations and suggestions as to the survey of hull, equipments, and machinery of steamships carrying passengers issued by the Board of Trade under the Merchant Shipping Act which deals with this question of bulkheads and that is the only other, I think, that there is dealing with bulkheads. It is Clause 16 page 8 of the book. It is in another book, to which reference has not been made, at any rate, not today. That is why I was going to read it, so that your Lordship will have it on the note. I wanted to avoid having to refer to the book. Your Lordship will find it on this separate paper, but I will read it.

*Mr. Edwards:* May I ask through your Lordship the learned Attorney-General to allow my friends

#### **Page 584**

and myself to have a look at those instructions. Application has been made to purchase at the Board of Trade these particular instructions, and we have been unable to get them.

*The Attorney-General:* That shows the advantage of applying to this Court, because my friend shall have them without purchasing them.

*The Commissioner:* Certainly you shall see them.

*Mr. Edwards:* Thank you very much.

*The Attorney-General:* If my friend had applied to me he should have had them at once. "An efficient and watertight engine room and stokehold bulkhead, as well as a collision watertight bulkhead, and an after watertight compartment, to enclose the stern tube in each screw-shaft, should be fitted in all sea-going steamers, both new and old, and in the absence of any of these the case must be specially referred to the Board of Trade before a declaration is given. As regards other bulkheads, although a thorough subdivision of the ship is desirable, the Surveyors should not for the present refuse to grant a declaration because these are not fitted. The distance of the collision bulkhead from the after side of the stem measured at the level of the lower deck should not be less than one-twentieth of the vessel's length, measured from the afterpart of the stem to the fore part of the stern post, on the range of the upper deck beams in one, two, and three decked and spar decked vessels, but on the range of the main deck beams in awning decked vessels." In the book the next two paragraphs are struck out because they are altered by another circular. It goes on as it now is: "The collision bulkhead." *The Commissioner:* No, the next paragraph I have is: "In all sea-going steamers coming under survey for passenger certificate for the first time, the following requirements regarding the height of the bulkheads should be complied with"; and then

"the collision bulkhead," etc.

*The Attorney-General:* Then your Lordship has the modern edition, which is right.

*The Commissioner:* What is the date of this?

*The Attorney-General:* February, 1907; the amendment of Clause 16.

*The Commissioner:* Apparently that is the date of the amendment.

*The Attorney-General:* That is right.

*The Commissioner:* But it is not the date of the original rule?

*The Attorney-General:* No, I thought your Lordship wanted the date of the amendment. 22241. (*The Commissioner.*) I did, but I wanted the date of the original rule as well. I think it is 1905.

*The Witness:* That is quite right my Lord.

*The Attorney-General:* I am not sure whether I can give you that information. We have it as far as this, that Clause 16, at any rate, is incorporated in a book which is issued in 1905, but I am not at all satisfied that it was not in existence before, and that is what I am enquiring into. At present we will take it 1905 and we will see whether that is right. 1905 as amended in February, 1907.

*The Commissioner:* That is the way I have taken it. You are quite right in saying it is not certain, that is the right description.

*The Attorney-General:* No, but at any rate it is how we have got it at present. The amendment is "In all sea-going steamers coming under survey for passengers certificate for the first time, the following requirements regarding the height of the bulkheads should be complied with. The collision bulkhead is in all cases to extend to the upper deck. If an iron or steel watertight deck or flat is fitted below the upper deck at the afterend of the vessel, and forms the top of the after watertight compartment, the aftermost bulkhead may terminate at the said watertight deck or flat, but if no such watertight deck or flat is fitted, the aftermost bulkhead should extend to the upper deck. When the loadline disc of the vessel is placed at least as low as is required, by Table C of the Freeboard Tables for awning deck vessels, the remaining bulkheads may terminate at the deck next below the upper deck, but when the disc of vessels other than those of the awning deck type is placed higher than required by Table C, all the bulkheads should extend watertight to the upper deck. In interpreting the above rule, in the case of vessels of the shelter deck type, the deck next below the shelter deck may be regarded as the upper deck, and accordingly the collision bulkhead, as well as the other bulkheads, may terminate at the deck next below the shelter deck provided the Surveyor is satisfied that the deck in question would not, owing to a deficiency of sheer, or for any other reason be brought dangerously near the water surface in the event of the collision compartment being holed. When, however, the Surveyor is in any doubt as to the vessel being able to steam at sea with the collision compartment holed, full particulars should be submitted to the Board of Trade before a declaration is issued. The above regulations regarding the height of the bulkheads and the position of the collision bulkhead are intended to apply only to passenger steamships coming under survey hereafter for the first time." And then you go back to the original clause 16, my Lord, "The collision bulkhead should not have any opening in it, nor should it be fitted with any valves or cocks for draining the compartment in front of it. Pipes should not be carried through it without the special permission of the Board of Trade." I do not think I need read the next two paragraphs; they do not affect this.

*The Commissioner:* The "Titanic" complied with them?

[There is no Question 22242.]

*(The Attorney-General.)* Yes, and we will call the gentleman who went through it. I will go into detail if necessary. I am only anxious with Sir Walter to get all the material before you, before we get to the actual facts of what happened. *(To the Witness.)* Did the question of bulkheads and watertight compartments come before the Board of Trade at all, except in connection with this Clause 16, because we know the "Titanic" made no application under Rule 12? - It only came formally before the Board of Trade in connection with arrangements for closing the watertight doors and in connection with the loadline certificate.

I think I caught the expression "formally." Did you use that? - Yes, I think so.

That would be a matter which would formally come under the cognisance of the Board of Trade, although the Surveyors on board the ship may see what is going on from moment to moment? - Quite right.

What was done in those two matters would have to be dealt with by the Engineer Surveyor-in-chief and the principal Ship Surveyor? - Yes.

I think those are the two who are concerned with it. Has an expert committee been recently appointed by the President of the Board of Trade to consider the whole question of bulkheads and watertight compartments? - Yes, quite recently.

That, I think, is since the "Titanic" disaster? - Quite so.

That is an Advisory Committee which is now either sitting or at any rate which is now considering it? - Yes.

*(The Commissioner.)* Has it sat yet? - I believe it has, but I am not quite sure, but it has certainly held preliminary meetings.

*The Attorney-General:* Yes, it has held those, I know, because the question came before me.

*The Commissioner:* Who are the gentlemen on this Committee?

*(The Attorney-General.)* I wanted the names. *(To the Witness.)* Have you the names? - I have them here.

Will you let us have them? - Mr. Archibald Denny, Chairman, Mr. James Bain, Mr. Henry Robert Champness, Mr. George Burton Hunter, Mr. Summers Hunter, Mr. J. Foster King, Mr. Andrew Laing, Mr. W. J. Luke, Mr. S. P. J. Thearle and Professor John Joseph Welch.

## **Page 585**

*(The Commissioner.)* Are there any terms of reference? - Yes, my Lord, they are quite short. Shall I read them?

Yes, let me hear what they are? - "To be a Committee to advise the Board of Trade, in the interests of safety of life, - (1) As to what, in their opinion, would constitute efficient subdivision with regard to each of the classes of vessels included in the Rules for Life-Saving Appliances made by the Board of Trade under Section 427 of the Merchant Shipping Act, 1894, having due regard to the nature of the service in which they are respectively engaged. (2) Whether independently of the foregoing the Committee desire to make any recommendations with reference to

the subdivisions of vessels already built, or of new vessels, which would in their opinion, contribute to the safety of life at sea.”

There is nothing there that will cover the question of lifeboats? - No, they are not mentioned.

*The Attorney-General:* I do not think it was meant to cover that.

*The Commissioner:* The submission only relates to questions affecting the construction of the ship.

*The Attorney-General:* That is right. I am dealing with bulkheads now. What I wanted to see was who were the members of the Committee which reported in 1891. That was the Committee appointed by the President of the Board of Trade to report upon the spacing and construction of watertight bulkheads in ships of the mercantile marine. The President was Sir Michael Hicks Beach, now Lord St. Aldwyn, and the gentlemen appointed were Sir Edward Harland, Mr. James Anderson, Professor Philip Jenkins, Mr. Alexander Kirk, Mr. James Laing, and Mr. Thomas B. Roydson. There is this passage: -

“We have shown some appreciation of the importance of efficient subdivision of ships in Class 1, Division A. paragraph G of these rules.” That rule there referred to is what is Rule 12. “But we consider it our duty to further express our sense of the importance of the question and to recommend that it should be investigated by a Committee of duly qualified persons, the subject as a whole having been held to be outside the scope of the reference to this Committee.”

22256. (*The Commissioner.*) Was it ever investigated by a Committee? - The investigation was made by Sir Edward Harland’s Committee, the Committee of which the names have been just read to you by the Attorney-General.

*Sir Robert Finlay:* What was the passage you just read, Mr. Attorney?

*The Attorney-General:* I thought I read a passage from the Committee’s Report, but I see what the mistake is, my Lord. That which I just read is not Sir Edward Harland’s Committee’s Report but of a committee which sat earlier. It was in consequence evidently of that that this committee which sat in 1890 and reported in 1891 was appointed.

*The Commissioner:* Now I think I understand.

*The Attorney-General:* That is how it is. I see what happened now. I am coming now to the one over which Sir Edward Harland presided.

*The Commissioner:* What were the terms of submission to that other committee. 22257. (*The Attorney-General.*) I am going to see how far it is material, my Lord. It deals altogether with the subdivision of a ship into watertight departments. I do not know whether you have it.

*The Witness:* I can tell you quite shortly what the position was. First of all came the Life-Saving Appliances Committee of which Mr. Thomas Ismay was Chairman. That was based upon the recommendations of Lord Charles Beresford’s Committee in the House of Commons and made law by the Act of 1888, and in that Report is what the Attorney-General has read: “We have shown some appreciation” and so on. Then in order to determine what should be the standard for the bulkheads, Sir Edward Harland’s Bulkheads Committee was appointed. That is exactly the sequence of events and you read the names of that committee, Mr. Attorney.

*(The Attorney-General.)* Yes I read them. The only thing that occurs to me about it is it does not seem to be confined to the rule, although of course, in order to give effect to it you would have to ascertain what are efficient watertight compartments, and consequently the standard that had to be set up was inquired into by this Committee so as to give effect to Rule 12? - That is it exactly. Sir Edward Harland's Committee reported in 1890.

They were appointed on the 7th March, 1890. Do you say they reported in 1890. I thought it was in 1891? - I think it was 1890, speaking from memory.

I do not think so, but it does not matter. The Report is rather long, my Lord, but I am afraid I must read it.

*The Commissioner:* Are you going to read the whole of it?

*The Attorney-General:* No. I think what would be far better is that I should read it and summarise it.

*The Commissioner:* I think so too.

*The Attorney-General:* It is too long to read. I thought we had a summary of it, but apparently we have not.

*Sir Robert Finlay:* Would it not be better if it were put on the notes without being read here; it would be very convenient for reference afterwards.

*The Attorney-General:* I have no objection, but it is very long. I will read the recommendation, and then we can have the rest on the note, and if there is anything else in it I can refer to it.

*Sir Robert Finlay:* There are only four pages.

*(The recommendation was read by the Attorney-General.)*

The following is the Reference, Report, and Recommendation: -

“To be a Committee to consider and report upon the following matters, viz.: -

“1. As to the manner in which ships shall be subdivided so that they may float in moderate weather with any two compartments in free connection with the sea, and what rule there should be as to the proportion of freeboard of the watertight deck next above to which such bulkheads are attached, as shall be sufficient to enable the ship so to float.

“2. As to the description of ship to which such should apply, in regard to size, or what difference, if any, as between Paddle or Screw Steamers, or Sailing Ships or as to Ocean Voyagers, or Cross-Channel Steamers.

“3. Upon the construction and fitting of watertight bulkheads with a view to their being able to sustain the necessary strain, particularly when the ship is rising and falling in a seaway, without shoring or other adventitious aid, should it so happen that two adjoining compartments are in free communication with the sea, regard being given to the support of any 'tween decks abutting thereto.

“4. In what manner the Surveyors of the Board of Trade can best determine the sufficiency of such Bulkheads.

“5. Under what restrictions may passageways be permitted through such bulkheads as closable by portable plates, or so-called watertight doors, self-acting or otherwise, and what precautions are necessary as to openings in longitudinal bulkheads, to enable the water to pass freely or under control from one side to the other in case of the ship showing signs of instability, as might readily be the case should she be struck on a

transverse bulkhead, and two compartments, both on one side, be in free communication with the sea.

“6. Whether a transverse compartment divided into two by a longitudinal bulkhead should be treated as one or two compartments.

“7. What particulars, drawings, and calculations should be furnished by the owners of ships to the Board of Trade when they desire to take advantage of the following paragraph in the rules made under the Merchant Shipping (Life-saving Appliances) Act, 1888 (51 and 52 Vict., cap. 24): -

“(13) *Watertight Compartments.*

“When ships are divided into efficient watertight compartments, so that, with any two of them in free communication with the sea, the ship will remain afloat in moderate weather, they shall only

## **Page 586**

be required to carry additional boats or life-rafts of one-half of the capacity required by Paragraph (f), Class 1, Division A, of these rules.

“8. Whether, independently of the precise requirements of the foregoing paragraph the Committee have any recommendations to make with reference to bulkheads which would, in their opinion, contribute to the safety of life at sea.

“(Signed) M. E. Hicks-Beach.”

### **“REPORT OF THE BULKHEADS COMMITTEE.**

“To the Right Honourable Sir Michael E. Hicks-Beach, Bart., M.P., President of the Board of Trade.

“Sir, - In your minute of the 7th March, 1890, you requested us to consider and report upon the following matters, viz.: -

“1. As to the manner in which ships shall be subdivided so that they may float in moderate weather with any two compartments in free connection with the sea; and what rule there should be as to the proportion of freeboard of the watertight deck next above, to which such bulkheads are attached, as shall be sufficient to enable the ship so to float.

“2. As to the description of ship to which such should apply in regard to size, or what difference, if any, as between paddle or screw steamers, or sailing ships, or as to ocean voyagers, or cross-channel steamers.

“3. Upon the construction and fitting of watertight bulkheads, with a view to their being able to sustain the necessary strain, particularly when the ship is rising and falling in a seaway without shoring or other adventitious aid, should it so happen that two adjoining compartments are in free communication with the sea, regard being given to the support of any ‘tween decks abutting thereto.

“4. In what manner the Surveyors of the Board of Trade can best determine the sufficiency of such bulkheads?

“5. Under what restrictions may passageways be permitted through such bulkheads, as closeable by portable plates, or so-called watertight doors, self-acting or otherwise; and

what precautions are necessary as to openings in longitudinal bulkheads to enable the water to pass freely or under control from one side to the other, in case of the ship showing signs of instability, as might readily be the case should she be struck on a transverse bulkhead, and two compartments, both on one side, be in free communication with the sea.

“6. Whether a transverse compartment divided into two by a longitudinal bulkhead, should be treated as one or as two compartments.

“7. What particulars, drawings and calculations should be furnished by the owners of ships to the Board of Trade when they desire to take advantage of the following paragraph in the rules made under the Merchant Shipping (Life-Saving Appliances) Act, 1888 (51 and 52 Vict. Cap. 24): -

(13) *Watertight Compartments.*

“When ships are divided into efficient watertight compartments so that with any two of them in free communication with the sea, the ship will remain afloat in moderate weather, they shall only be required to carry additional boats or life-rafts of one-half of the capacity required by paragraph (f) Class 1, Division A, of these rules.

“8. Whether independently of the precise requirements of the foregoing paragraph the Committee have any recommendations to make with reference to bulkheads which would, in their opinion, contribute to the safety of life at sea.

“In approaching these questions we found that but little definite information existed concerning them; and although we have had much valuable and interesting evidence from several well-known experts, we thought it necessary to have recourse to actual experiments, carried out under our own supervision, in order to obtain the information contained in Appendices A and B to our report. These experiments have been proceeding continuously for about a year, and our endeavour has been to arrange the results in a practical form.

“As regards the sizes and classes of vessels assigned to the several grades of subdivision, in our reply to para. 2 we may observe that our conclusions in this respect are the result of much deliberation, and are based on what we deem a fair adjustment as between loss from broken stowage on the one hand, and the greater safety on the other, resulting from improved subdivision. In judging of this matter, we have supplemented our own practical knowledge with reports and evidence from representative shipowners and shipbuilders, as to the minimum length of hold admissible in various trades.

“We now proceed to answer the questions categorically:-

“1. Vessels may be considered able to float in moderate weather with any two adjoining compartments in free communication with the sea, if fitted with efficient transverse watertight bulkheads, so spaced that when two such compartments are laid open to the sea, the uppermost watertight deck to which all the bulkheads extend, and which we will call the bulkhead deck, is not brought nearer to the water surface than would be indicated by a line drawn round the side at a distance amidships of 3/100ths of the depth at side at that place below the bulkhead deck, and gradually approaching it towards the ends where it may be 3/200ths of the same depth below it. This line we may call the margin-of-safety line.

“ With longitudinal bulkheads in combination with transverse bulkheads the vessels should not, under the above conditions, list so as to bring the deck on either side below the water level. Vessels in which the bulkheads do not extend to a continuous deck require a modification of the margin-of-safety line, as to which see Appendix A.

“The arrangement of plane transverse bulkheads necessary to satisfy the above condition, may be determined with the aid of the curves and tables in Appendix A, or by separate calculations in accordance with the assumptions made in that Appendix.

“These curves and tables show the maximum spacing of such bulkheads permissible in vessels of various descriptions and under various conditions at any point in the length measured along the loadline from the foreside of the stem to the afterside of the sternpost, in connection with any given freeboard measured from the *bulkhead deck*. The freeboard to be used is not necessarily that required under the Merchant Shipping Act, 1890, but may be any freeboard which, on the application of the shipowner, may be registered by the Board of Trade. Such freeboard we will call the *bulkhead freeboard*, and the corresponding loadline the *bulkhead loadline*. With the tables so arranged it is, we submit, unnecessary for us to frame rules with regard to the proportion of freeboard in relation to the size of the vessel.

“The tables have been constructed for vessels carrying coal cargoes, but it will be obvious that a vessel whose bulkheads are spaced on the assumption that she carries a cargo of coal, will not be able with equal safety to carry an equal weight of a cargo of greater density - say, pig iron.

“There are thus two methods of proceeding, either of which would enable the condition specified in the Board's question to be fulfilled, viz.: (1) bulkheads must be spaced for cargoes of some specified density, and the vessel will then be able to take full cargoes of such or any less density; or (2) bulkheads must be spaced for some average cargo, and when a cargo of greater density is carried, the vessel must have a greater freeboard, *i.e.*, must carry a less weight.

“With a view to measuring the effect which difference in the density of the cargo has upon the spacing of the bulkheads, a series of experiments were carried out for a sailing vessel with cargoes of salt and iron, as well as of coal. No table has been prepared giving the spacing of the bulkheads suitable for the two former cargoes, but the curves deduced from the experiments are shown in conjunction with that for the coal cargo, and similar curves can be approximately deduced for cargoes of intermediate densities (Diagram 1).

## **Page 587**

“It is obvious from an examination of the curve for the iron cargo, that to require such a spacing of bulkheads in sea-going cargo vessels as would fulfill the conditions of the Board's question under all circumstances of loading, would cause the holds to be too short for general trade. We recommend, therefore, that the arrangement of bulkheads in the vessels specified in the several grades, be fixed on the assumption that the cargo spaces in each, contain cargo such as coal, occupying 47 cubic feet to the ton, sufficient with the full complement of bunker coals on board to immerse the vessel to the bulkhead loadline, and so distributed as a whole that she may float on an even keel. Such cargo we

have assumed to admit water to 40 cubic feet in every 100 cubic feet of the space it occupies.

“In order that the advantage resulting from efficient subdivision of vessels by means of bulkheads may not be nullified by insufficient regard being given to dangers connected with openings in vessels’ sides, we recommend the adoption of the following precautions in regard thereto: -

“(a.) That all coaling and cargo ports in a vessel’s side below the bulkhead deck be efficiently closed and made secure before the vessel puts to sea, and be not opened except when she is coaling or taking in or discharging cargo.

“(b) That there be no sidelights or ports the sills of which are nearer the bulkhead loadline than 12 inches.

“(c) That all sidelights fitted in coal bunkers and bunker holds be fixed. That the glass in such sidelights have a thickness of not less than one-half of their clear diameter, be enclosed in a sufficiently strong frame, and be recessed not less than 1 inch within the outer surface of the shell plating. That sidelights the sills of which are at a distance from the bulkhead loadline less than one-fourth of the bulkhead freeboard be not opened at sea except when, through the consumption of coal or otherwise, the vessel has lightened so much as to make the freeboard to the sills of the sidelights greater than one-fourth of the bulkhead freeboard, and in that case the provisions of sub-section (d) may be held to apply. That ventilators in the vessel’s side capable of closing automatically in case of submersion as well as by hand may be fitted, provided the sill of the opening on the inside be not within 2 feet of the loadline, but that any such automatic arrangement should be examined at least once a week, and if not in order it should be closed.

“(d) That all other sidelights and ports below the bulkhead deck be of sufficient strength. They may be fixed or capable of being opened, but in the latter case the sidelights as well as the ports, if any, should not be adapted to be opened by passengers, they should be closed before the vessel puts to sea, but may be opened during the voyage by the master’s special orders if the sill be not less than one-fourth of the bulkhead freeboard above the loadline. The time of and reason for opening, and also the time of closing such sidelights and ports, should be noted in the official logbook. All sidelights, except those immediately under the bulkhead deck, and bullseye sidelights should be fitted with hinged metal covers.

“(e) That sidelights immediately under the bulkhead deck may be capable of being opened by passengers provided they be arranged to close automatically in case of submersion as well as by hand.

“(f) That notwithstanding the foregoing provisions to the contrary sidelights and ports immediately under the bulkhead deck, may be under the control of the crew or passengers, and need not be arranged to close automatically, provided the freeboard for the purpose of bulkhead spacing is measured not from the bulkhead deck, but from a line 3/100ths of the depth amidships below the line of the sills of any such sidelights and ports

“(g) That all other openings in a vessel’s side below the bulkhead deck, such as scupper and sanitary pipes, etc, be fitted with efficient non-return valves, and that these be carefully examined before sailing on each voyage.

“2 Although all vessels, whatever their length, can be subdivided so as to be able to float in moderate weather with any two adjoining compartments in free communication with the sea, yet if small vessels were subdivided to that extent their holds would be so reduced in length as to impair their value for commercial purposes. Having regard therefore to the exigencies of trade, we recommend that the following six grades be adopted according to which certain vessels should be fitted with bulkheads in the manner indicated in Appendix A, viz.: -

“FIRST GRADE. - Vessels subdivided throughout their lengths so that they may float in moderate weather with any two adjoining compartments in free communication with the sea.

“This grade should apply to: -

“(a.) Sea-going steam vessels whether paddle or screw which have passenger certificates under the Merchant Shipping Act, and which are not less than 425 feet in length.

“(b) Cross-channel steamers, irrespective of their length, whose principal employment is the carriage of passengers, or passengers and mails - as, for instance, those running between Holyhead and Dublin or Kingstown, Dover and Calais, Folkestone and Boulogne, Newhaven and Dieppe, Liverpool and Isle of Man.

“SECOND GRADE. - Vessels subdivided throughout their length so that they may float in moderate weather with any two adjoining forebody compartments, or with any one afterbody compartment, in free communication with the sea. A compartment, the fore end of which does not extend more than a quarter of its length forward of the centre of the vessels length may be treated as an afterbody compartment.

“This grade should apply to sea-going steam vessels which have passenger certificates under the Merchant Shipping Acts, and are less than 425 feet but not less than 350 feet in length.

“THIRD GRADE. - Vessels subdivided throughout their length, so that they may float in moderate weather with any adjoining two of the three foremost compartments or with any one of the other compartments, in free communication with the sea. This grade should apply to sea-going steam vessels which have passenger certificates under the Merchant Shipping Acts, and are less than 350 feet, but not less than 300 feet in length.

“FOURTH GRADE. - Vessels subdivided throughout their length, so that they may float in moderate weather with the two foremost compartments, or with any one of the other compartments in free communication with the sea.

“This grade should apply to: -

“(a.) Sea-going steam vessels which have passenger certificates under the Merchant Shipping Acts, and are less than 300 feet in length.

“(b) Sea-going sailing vessels, irrespective of their length, which carry more than fifty passengers in all, or a greater number of passengers, cabin and other, than in the proportion of one statute adult passenger to every 33 tons of the registered tonnage of such ships.

“FIFTH GRADE. - Vessels subdivided throughout their length, so that they may float in moderate weather with any one compartment in free communication with the sea.

“This grade should apply to: -

“(a.) Sea-going steam vessels not having passenger certificates under the Merchant Shipping Acts and being not less than 300 feet in length.

**Page 588**

“(b) Sea-going sailing vessels not coming under the fourth grade, and being not less than 275 feet in length.

“SIXTH GRADE. - Vessels subdivided in the forebody, so that they may float in moderate weather with any one of the forebody compartments in free communication with the sea.

“This grade should apply to: -

“(a.) Sea-going steam vessels not having passenger certificates under the Merchant Shipping Acts and being less than 300 feet, but not less than, 260 feet in length.

“(b) Sea-going sailing vessels not coming under the fourth grade and being less than 275 feet, but not less than 225 feet in length.

“Every vessel coming under any of the above categories should have her foremost bulkhead at a distance from the stem, measured along the loadline, not less than 5/100ths of the ship’s length.

“By way of illustration of the above we give in Appendix A (Diagram 2) some examples of possible subdivision in vessels of various lengths, according to the grades to which they belong.

“3. Bulkheads forming watertight compartments may be considered of sufficient strength to withstand the strain, particularly when the vessel is rising or falling in a seaway, without shoring or other adventitious aid, if constructed in accordance with the table of scantlings given in Appendix B, regard being had to the support of any ‘tween decks or other permanent structure abutting thereto. Such bulkheads should be efficiently secured to the outside plating by means of frames or angle-irons, and also to the deck to which they extend.

“4. The Surveyors of the Board of Trade may accept the designs and scantlings contemplated in the tables above referred to as a standard of sufficiency, but other modes of construction may be allowed provided that it be shown to the satisfaction of the Board of Trade that the strength will not be less than it would have been if the bulkheads had been constructed as in Appendix B. In all cases regard is to be had to any collateral support given by decks, partial decks, longitudinal bulkheads, bunkers, trunkways, etc.

“5. We recommend that any passage ways through such bulkheads should be subject to the following conditions, viz:-

“(a.) That all openings in watertight bulkheads be fitted with efficient watertight doors. That portable plates be inadmissible except in the engine room space, and that an entry be made in the ship’s logbook wherever such a plate is removed, and also when it has been efficiently replaced, and that such entry be afterwards copied in the official logbook.

“(b) That all doors forming part of watertight bulkheads - except such as are already shut - be closed before the vessel puts to sea, and be closed subsequently at least once in every twenty-four hours while on the voyage, and the fact entered in the

official logbook. In addition we recommend that watertight door drill be a preliminary to the usual fire and boat drill.

“(c) That a watertight door may be self-acting or otherwise, but should be workable from above the bulkhead deck, and have an index showing whether such door is open or closed, except in the case of double doors the mechanical arrangement of which necessitates one being closed before the other can be opened, and in the case of doors which are only used when the vessel is loading or discharging cargo, or at a port or place of call; such doors should be closed under the supervision of the officer in charge of the vessel before she is cleared for sea, and an entry to that effect made in the ship’s logbook at the time, and signed by the said officer, a copy of such entry being afterwards made in the official logbook. “(d) That openings in watertight bulkheads through which coal may be worked during the voyage, be fitted with approved double doors as described above, or any equally safe arrangement. In no case should a watertight door be considered as forming part of a watertight bulkhead when coal, which may be passed through it while the vessel is at sea, is liable to rest against it.

“6. A compartment subdivided by one or more longitudinal bulkheads should be treated as one compartment only, unless the owners satisfy the Board of Trade that the vessel will not have her stability seriously reduced, or list, so that any part of the bulkhead deck at the side is under water, in the event of the space between a longitudinal bulkhead and the vessel’s side, or of two such adjoining spaces on the same side of the vessel being open to the sea. If the Board of Trade be not satisfied in the above respect trimming valves should be fitted to each such longitudinal bulkhead, each valve being workable from above the bulkhead deck, and having an index showing whether it is open or closed.

“7. Owners desiring to take advantage of any exceptions made in favour of efficiently subdivided vessels should furnish the Board of Trade with the following particulars and drawings: -

“(a.) Longitudinal elevation in section showing the sheer, the bulkheads, the bulkhead deck, and any other decks proposed.

“(b) Plan and elevation of each bulkhead, showing recesses and doors, if any, with their positions marked, together with details of the appliances for opening and closing them.

“(c) Proposed bulkhead freeboard and corresponding loadline; also the lines of the sills of the sidelights between the bulkhead deck and the bulkhead loadline.

“Where bulkheads are constructed as specified in Appendix B they may be regarded as of sufficient strength without further calculation.

“8. We recommend that each watertight compartment intended for occupation by crew or passengers should be provided with some independent means of escape, other than by watertight doors, available under all circumstances. Having regard to the great additional safeguard which such subdivision as we recommend would provide against loss not only by collision or stranding, but also by fire, we would suggest that the Board of Trade might well offer a larger concession than that mentioned in Section 7 of the Reference to this Committee, as an inducement to owners to subdivide their vessels to the extent that we have indicated under the several grades. We therefore submit that in such case owners

might be relieved of the obligation to carry any part of the additional boats, rafts, and other life-saving appliances required by the rules issued by the Board of Trade under the Merchant Shipping (Life-Saving Appliances) Act, 1888.”

22261. (*The Attorney-General.*) The effect of that is this. The Committee thought, having regard to the great additional safeguard when the subdivision which they had recommended had taken place, that a greater inducement should be offered than existed under Rule 12 of the Life-Saving Appliance Rules which exempted such a vessel, with efficient watertight compartments to the extent of one-half of the additional boats and rafts which were required. This Committee seemed to have thought that there should be a greater inducement even than that, because they thought it was so much more important to have efficient bulkheads than it was boats, and that you could therefore exempt them from providing further boats if they made the subdivision of the ship into watertight compartments more efficient. That is what it amounts to?

*The Witness:* That is it.

*The Commissioner:* Pursuing the policy of reducing the boats in consideration of the increase of the watertight compartments.

*The Attorney-General:* Quite; and that is the position as the result of the Committee appointed in 1890. From that time no other Committee has sat with regard to this matter until one was appointed, I think, in April, 1911.

*The Commissioner:* And that Committee's Report was not acted on?

## Page 589

*The Attorney-General:* It has not been acted upon.

*The Commissioner:* It has not been acted upon?

*The Attorney-General:* That is so up to now.

*The Commissioner:* It was made in 1901, was it not?

*The Attorney-General:* No, 1911.

*The Commissioner:* I beg your pardon.

*The Attorney-General:* Is your Lordship speaking of the last Committee, or of this one of 1890?

*The Commissioner:* I really do not know, but I am speaking of the recommendations which you have just read to me.

*The Attorney-General:* Those are the recommendations of the Committee appointed in 1890.

*The Commissioner:* Have they ever been acted upon?

*The Attorney-General:* No, there has been no further exemption granted.

*The Commissioner:* They advised a further exemption which would have necessitated an alteration of Rule 12. *The Attorney-General:* Yes.

*The Commissioner:* But although they made these recommendations nothing has been done.

*The Attorney-General:* I think that is right.

(*The Commissioner.*) Is that right, Sir Walter?

*The Witness:* That is quite right; you have put it exactly, my Lord. The Board of Trade did not adopt the recommendation.

*The Attorney-General:* What it amounts to is this, that although they recommended that the additional lifeboats required should be dispensed with if you had efficient watertight compartments the rule as it stands continued, and as it then existed, that is to say that no alteration was made in it.

*The Commissioner:* Then so far as the recommendation of the Committee is concerned it need never have been made. It had no effect.

*The Attorney-General:* I think it had.

*(The Commissioner.)* What effect had it?

*The Witness:* The Board of Trade were not satisfied as to what constituted a watertight compartment or bulkheaded ship, efficiently bulkheaded, and so they referred to this Committee to say what was an efficiently bulkheaded ship, so that they might be exempted from the additional life-saving appliances referred to in Rule 12; and this Committee gave them the advice and they adopted it. But it went further. These recommendations went beyond it. They said, "You shall do away with the whole of the deduction allowed for life-saving appliances instead of one-half."

*The Commissioner:* I did not understand that.

*(The Attorney-General.)* No, not quite; the whole of the additional ones. *The Witness:*

Yes, you are right, "More liberal deduction." I think the expression in that report was -

They dealt with a number of other matters? - Yes.

In connection with bulkheads? - Quite.

But as to this particular recommendation at paragraph 8, my Lord, is right in saying that that was not followed? - That is quite right. *The Attorney-General:* That is what my Lord asked you.

*The Commissioner:* That is all I meant, that so far as that recommendation goes it might as well never have been made because nothing was done upon it. *The*

*Attorney-General:* That is right.

*(The Witness withdrew.)*

*(Adjourned until tomorrow, 10.30 o'clock.)*

## PROCEEDINGS

THE RIGHT HON. LORD MERSEY,  
*Wreck Commissioner of the United Kingdom,*

WITH

REAR ADMIRAL THE HON. S. A. GOUGH-CALTHORPE, C.V.O., R.N.,  
CAPTAIN A. W. CLARKE,  
COMMANDER F. C. A. LYON, R.N.R.,  
PROFESSOR J. H. BILES, LL.D., D.Sc., MR.  
E. C. CHASTON, R.N.R.  
*Acting as Assessors.*

ON A FORMAL INVESTIGATION

ORDERED BY THE BOARD OF TRADE INTO THE

## LOSS OF THE S. S. "TITANIC."

### TWENTY-SECOND DAY.

THE RIGHT HON. SIR RUFUS ISAACS, K. C., M.P. (*Attorney-General*), SIR JOHN SIMON, K. C., M.P. (*Solicitor-General*), MR. BUTLER ASPINALL, K. C., MR. S. A. T. ROWLATT and MR. RAYMOND ASQUITH (instructed by Sir R. Ellis Cunliffe, Solicitor to the Board of Trade) appeared as Counsel on behalf of the Board of Trade.

THE RIGHT HON. SIR ROBERT FINLAY, K. C., M.P., MR. F. LAING, K. C., MR. MAURICE HILL, K. C., and MR. NORMAN RAEBURN (instructed by Messrs. Hill, Dickinson and Co.) appeared as Counsel on behalf of the White Star Line.

MR. THOMAS SCANLAN, M.P. (instructed by Mr. Smith, Solicitor), appeared as Counsel on behalf of the National Sailors' and Firemen's Union of Great Britain and Ireland, and of the personal representatives of several deceased members of the crew and of survivors who were members of the Union. (Admitted on application.)

MR. BOTTERELL (instructed by Messrs. Botterell and Roche) appeared on behalf of the Chamber of Shipping of the United Kingdom. (Admitted on application.)

MR. THOMAS LEWIS appeared on behalf of the British Seafarers' Union. (Admitted on application.)

MR. L. S. HOLMES (of Messrs. Miller, Taylor and Holmes of Liverpool) appeared on behalf of the Imperial Merchant Service Guild. (Admitted on application.)

MR. COTTER appeared on behalf of the National Union of Stewards. (Admitted on application.) MR. HAMAR GREENWOOD, M.P. (instructed by Messrs. Pritchard and Sons), watched proceedings on

behalf of the Allan Line Steamship Company; and (instructed by Messrs. William A. Crump and Son) also on behalf of the Canadian Pacific Railway Company.

MR. ROCHE (instructed by Messrs. Charles G. Bradshaw and Waterson) appeared on behalf of the Marine Engineers' Association. (Admitted on application.)

MR. A. CLEMENT EDWARDS, M.P. (instructed by Messrs. Helder Roberts and Co.), appeared as Counsel on behalf of the Dock, Wharf, Riverside and General Workers' Union of Great Britain and Ireland. (Admitted on application.)

MR. W. D. HARBINSON (instructed by Mr. Farrell) appeared on behalf of the third class passengers. (Admitted on application.)

MR. C. ROBERTSON DUNLOP watched the proceedings on behalf of the owners and officers of the s.s. "Californian" (Leyland Line). (Admitted on application.)

Mr. H. E. DUKE, K. C., M.P., and MR. VAUGHAN WILLIAMS (instructed by Messrs. A. F. and R. W. Tweedie) appeared as Counsel on behalf of Sir Cosmo and Lady Duff Gordon. (Admitted on application.)

MR. F. LAING, K. C., and MR. ALFRED BUCKNILL appeared on behalf of Messrs. Harland and Wolff. (Admitted on application.)

**Page 592**

**Sir WALTER J. HOWELL, Recalled.**

**Further examined by the ATTORNEY-GENERAL.**

I propose now to pass to the consideration of the Board of Trade's activities with regard to boats and other life-saving appliances. I think it would be more convenient to deal with what has happened on the Report in July, 1911, after bringing the history upto-date for both boats and life-saving appliances. In March, 1886, the Board of Trade appointed a small Departmental Committee to consider the subject, that is life-saving appliances? - Yes.

There were certain requirements in the earlier Acts, in the Merchant Shipping Act and the Passengers Act of 1855, but they are not of sufficient importance to call his Lordship's attention to them. I do not think they assist, even historically. But in March, 1886, there was this Committee, and they reported that the existing requirements, such as they were, were obsolete and inadequate? - Quite so.

Some reference was made to this matter - it is not easy to see what, without examining it in detail - by the Royal Commission on Loss of Life at Sea in 1887? - Yes, quite incidental.

Yes, so that we get no assistance from that. By that time I think the subject had already been discussed at the Colonial Conference of that year? - That is so.

And then a Select Committee of the House of Commons had been appointed to deal with it, that is the Select Committee of which Lord Charles Beresford was the chairman, to which you referred in connection with bulkheads yesterday? - Yes. 22273. They reported in 1887, and recommended that the Board of Trade should appoint a committee to frame rules as to life-saving appliances? - Quite so. 22274. That that committee should consist of shipowners, shipbuilders, persons

acquainted with the navigation of vessels and the recognised Association of Seamen, Lloyd's Register and kindred societies? - Exactly.

It was of selections from those persons that the committee was to consist? - Quite so. Then I see, in 1888, there was a Bill passed, which was the Merchant Shipping Life-saving Appliances Act, 1888? - Yes.

That was passed in consequence of and in accordance with the recommendations of the Beresford Committee of 1887? - Yes, it followed the lines of that Committee almost exactly.

And under that Act power was given to the Board of Trade to make Rules as to boats and other life-saving appliances? - Quite so.

Under that Act also provision was made for a Committee to be formed to advise the Board of Trade on the Rules which were to be formulated? - Exactly.

The constitution of the Committee was provided in the Schedule to that Act; it was reproduced in the Merchant Shipping Act, 1894, and forms the 17th Schedule to the Merchant Shipping Act, 1894; and under that it says that the constitution of the Committee shall consist of - "(1) Three shipowners selected by the Council of the Chamber of Shipping of the United Kingdom; (2) One shipowner selected by the

Shipowners' Association of Glasgow, one shipowner selected by the Liverpool Steamship Owners' Association and the Liverpool Shipowners' Association conjointly; (3) Two shipbuilders selected by the Council of the Institution of Naval Architects; (4) Three persons practically acquainted with the navigation of vessels, selected by the Shipmasters' Societies recognised by the Board of Trade for this purpose; (5) Three persons being, or having been able bodied seamen, selected by Seamen's Societies recognised by the Board of Trade for this purpose; (6) Two persons selected conjointly by the Committee of Lloyd's, the Committee of Lloyd's Register Society, and the Committee of the Institute of London Underwriters." When one bears in mind the provisions in the Statute, it is easier to follow the constitution of the Committee which has hitherto existed. That Committee was formed by the then President of the Board of Trade, the present Lord St. Aldwyn? - That is so.

I think in November, 1888? - Yes.

And certain draft Rules were prepared - we may take this quite shortly - and these Rules were adopted by the Board of Trade under date of June, 1889? - Quite so. 22283. Those were the first that were formulated in consequence of this Statute? - Quite so.

Those were the Rules which were eventually recommended and formed the subject of some discussion in 1890 at various dates, and were adopted, I think, in November, 1890? - They were adopted in November, 1890; I think so.

Some reference was made to it yesterday? - Immediately the first Rules had been issued there was a slight revision of them, and I rather think that was what came in November, 1890. That is how it was, I think. The first Rules were early in 1890, and the revision came later.

We need not pause to discuss that. There is some question. I see what you mean, in 1889 and 1890, but the new Rules presented to Parliament with regard to the exemption

from the required additional number of boats, as we know, first came into force in 1890? - Yes.

Now for a moment let us deal with those original Rules, because I want to ask you one or two questions about them. In the first place I notice that the scale for passenger and emigrant ships was based on gross tonnage, and not upon the number of passengers carried, and so far as we have the documents before us, that seems to have been the guiding principle ever since? - Yes.

Up to the present moment? - Yes.

The scale is gross tonnage, and not the number of passengers, as of course your Lordship noticed at a very early stage. We are dealing now with the years 1889 and 1890, when these Rules were drafted and eventually adopted. Had there been any scale in existence before? - There had been a slight scale, I think; I do not remember quite accurately what it was, but the Board's Surveyors had some guidance on the subject. But this was the first statutory scale laid down.

Was it on gross tonnage? - It was based on gross tonnage also, so far as my memory serves me.

*The Attorney-General:* It is only for the purpose of history, my Lord, and nothing else, but I notice in the Statute of 1854, the earliest Merchant Shipping Statute, there the scale was registered tonnage. I only want to see exactly how it was we got registered tonnage.

*The Commissioner:* I do not know what you are trying to do.

*The Attorney-General:* I am trying to trace how it was that the scale was gross tonnage instead of the number of passengers.

*The Commissioner:* It was so.

*The Attorney-General:* Yes, and now I am seeing why it was so. The first thing I was tracing out from that was that originally apparently in 1854 the first scale we have at all (and which it is not necessary to go into further) is registered tonnage on this scale, and not gross. That is the only point.

*The Commissioner:* By registered tonnage you mean net registered tonnage.

*The Attorney-General:* I am going to refer to the authority upon it.

*The Commissioner:* I recognise that book; I have not seen it for 20 years.

(*The Attorney-General.*) The Statutes are all dealt with in that book. It is only for historical purposes, otherwise it is of no avail. (*To the Witness.*) Does that refresh your recollection? - Yes. I remember that the earlier one was on net registered tonnage, and that the first one on gross

## **Page 593**

tonnage was the outcome of these first statutory Rules.

Can you tell us at all why it was that the change was made? - It was felt to be a better indication of the size and power of the ship - gross tonnage rather than net tonnage.

22293. Can you also tell us why it was that the scale that was adopted was a tonnage scale and not a number of passengers scale? - You mean adopted by this Committee?

22294. Yes. I want you to follow the question that I am putting to you, because at first sight, at any rate, it does not seem to be clear why, when you are providing

accommodation for the crew and the passengers in a ship, you should provide the boating accommodation according to tonnage instead of the number of persons to be carried in the ship? - Quite so.

That is what I want you to tell us? - When the Board of Trade later came to the Committee it said they were to have regard to several considerations: First of all, the number of persons carried; secondly, how many boats they could carry consistently with not destroying the stability or seaworthy qualities of the ship, or unduly hampering her decks. Then the Committee proceeded to consider it on those terms, and the point was mentioned whether they should take the basis on this view. I think it was mentioned, but only to be rejected at once, I think. At any rate, they adopted the basis of gross tonnage because they thought they were instructed to divide the ships into divisions and classes, and that that was a clear indication that they were to take size as the basis of their consideration. If it had been intended that they were to take the number of persons on board as their basis they would not have been told to divide the ships into classes. There would have been no necessity to do anything of the sort.

Told by whom? - In the Reference to them by the Board of Trade. The Reference to the Board of Trade was that the ships should be divided into classes and the Board of Trade passed that on to the Committee that ships should be divided into classes. 22297. (*The Commissioner.*) What classes? - That was precisely the question they had to settle. They came to the conclusion that it meant classes having regard to their size as indicated by gross tonnage.

I do not understand that. Can you tell me what the classes were that they did divide it into? - Yes, certainly.

What were they? - First of all, emigrant passenger ships.

Those classes I understand? - And then on to other classes.

Were there other classes? - Yes, the foreign-going passenger ships, and then the foreign-going cargo steamships and steamers; I am speaking from memory. Then, sailing ships engaged in carrying passengers, and so on. It was graded into classes, and those classes were based upon gross tonnage, as being the best indication of the size of the ships.

But you have not answered the question that was put to you by the AttorneyGeneral:

Why was it that tonnage measurements were taken as the standard to go by, rather than the number of persons carried on the ship? - That I think I can indicate quite clearly again; I had endeavoured to already.

But you have not succeeded in informing my mind about it? - If it had been intended -

I do not care about what was intended, but I want to know why it was - what the reason was for taking tonnage as the standard instead of the number of people whose lives were to be saved by the life-saving appliances? - The Committee proceeded at once to consider whether they could do it on that basis.

Oh, well, if they could not do it on that basis, that is an excellent reason? - Then they proceeded to divide it into these divisions by tonnage, as they found the other impracticable.

Either you do not understand my question or I am not sufficiently intelligent to understand your answer; I do not know which it is. I want to know why, when they were applying themselves to the question as to how to provide for the safety

of a number of lives, they excluded the number of lives from consideration and took into consideration only the tonnage of the ship? - I should be sorry to say that was the only thing they took into consideration, but it was the main consideration.

Did they take into consideration the number of lives on the ship? - Yes, undoubtedly.

I did not understand that they did? - Oh, yes; but that was not the main basis they took.

The main basis they took was the tonnage of the ship, because that indicated her size. A consideration running through it all was the number of lives on board, so that they took both.

*(The Attorney-General.)* Still one vessel may carry a very much larger number of persons in proportion to her tonnage than another? - Quite so.

Nevertheless, according to your views, they were to carry the same number of boats. That is the difficulty that we want you to explain? - I was secretary of this original committee. I was not a member of it.

Are you speaking now of the Committee that reported in 1887? - No, of the Life-Saving Appliances Committee.

Formed under the Statute of 1888? - I was secretary, and I am telling you what I remember, what my impression is after this long period of time, that first of all the

Committee said, "We have to consider the number of lives on board; can we form that as a basis?"

*(The Commissioner.)* You are putting the thing all the other way about. You say the very first thing they did was to consider the number of lives on board? - "Can we take this as the basis? No, we think it impracticable."

Can you take which as the basis? - The basis of the Rules to be drawn up.

You say, "Can we take this as the basis?" What is the "this"? - One consideration was:

Can we take the basis of persons on board, or is it better to take the basis of size, as indicated by gross tonnage; and they came to the conclusion that it was better to take the basis of size as indicated by gross tonnage.

But why? - Because they thought so, I suppose.

But why did they think so? - I cannot tell you; I cannot tell you what other persons thought.

But cannot you give me any notion? - I was trying to do so just now.

Well, what is it? - The reason was they were told to divide the ships into classes. If they were told to do that, why should they say the basis is lives, because that would not require the division of the ships into classes. You would simply say ships of all classes are to carry boats sufficient to save all on board. That would not require division into classes and size and so on. It would be simply enunciating one principle.

*(The Attorney-General.)* Suppose you had to divide your vessels into classes, it would mean that you would have one class for emigrants, carrying the largest number of passengers; another class would be passenger ships; another class would be cargo ships, foreign-going cargo ships; and then I suppose you would also have the

home trade passenger ships? - Yes, every sort of ship; every class of ship. 22321.  
You would have excursion steamers, I suppose? - Of course.  
And supposing you said that they would have to carry according to the number of passengers, unless you made an exception with regard to excursion steamers it would mean that they would have to carry on these ships boats for passengers on the same scale as a foreign-going vessel. Is that what you mean? - Not quite. What I mean is this: Supposing you had made up your mind that the principle was to be the safety of all carried - that boats were to be

## Page 594

provided for all carried - then you would take each class, and you would say how many for this, how many for that, but you would have no distinction. You would say every ship going to sea, whether an emigrant ship, or passenger ship, or excursion ship, or whatever she is, is to carry sufficient boats to save all on board. There is no necessity to divide into classes at all. Any class of vessel would have the same.

The only difficulty that strikes me is that that is met by making an exception of certain classes? - Quite. I think it would have meant that at once. If they had taken that basis that would have arisen at once; but they did not; they took the basis of gross tonnage. They preferred it.

*(The Commissioner.)* Do not leave it until you understand it, Mr. Attorney. *The Witness:* I can only go on repeating what I have said. I am most anxious to explain this as far as I can. I am perfectly clear in my own mind, but my explanatory power must be weak.

*(The Attorney-General.)* What is clear in your mind will no doubt get clear in ours in time, but we have to get it? - It is my fault no doubt, I quite understand. 22326. Why I referred to the division of vessels into classes was because I understood you to say that was the reason why the Committee did not take the number of lives as the basis, because they were required to divide the vessels into classes? - Yes.

Then what I was puzzled about was that after all you may divide into classes and still require a number of boats according to the number of passengers? - Yes, but the same principle would run through the whole of the classes.

But you may adjust that principle? - Certainly.

*(The Commissioner.)* You speak at large, and in language that I do not understand. You say the same principle runs through all the classes. What is the principle that you are talking about? - I said that -

No, do tell me so that I may understand your answer. What is the principle to which you have just referred when you said the same principle would run through all the classes. What is the principle? - The principle running through all the classes, as they are at present, is the principle of gross tonnage, of course. *The Commissioner:* That does not get us any forwarder.

*(The Attorney-General.)* I have before me the divisions that were made in the classes, and it is obvious that although they proceed upon gross tonnage instead of the number of passengers, they did make a distinction between the various classes of steamers in the requisition for boats? - Oh, yes.

*The Commissioner:* Then, if that is so, I begin to see some daylight. *The*

*Attorney-General:* They did do it.

*(The Commissioner.)* Probably. What they did I do not know, was to say, "Now, there are emigrant ships; put them in a class"; and then I expect you will find they provided a larger supply of lifeboats in that class than they did in a cargo-carrying ship, say? - Yes, that is quite right.

And that the difference was measured by the tonnage? - That is quite right.

*The Attorney-General:* No.

*The Commissioner:* No, no. What I said was not intelligible. It was not right. *The*

*Attorney-General:* The difficulty I have still remains, and I think your Lordship will see it. Dividing into classes does not help you at all except, of course, that you may make a different requisition according to scale.

*The Commissioner:* Yes.

*The Attorney-General:* And you may either say tonnage or number of passengers, and it is possible you may make exceptions.

*The Commissioner:* What they did, I expect, was this. Just listen to me and see if it is right. Here is an emigrant ship, 3,000 tons; here is a cargo boat, 3,000 tons; the number of boats for the emigrant ship will be calculated on the tonnage, but at a greater proportionate rate.

*The Attorney-General:* That is right.

*(The Commissioner.)* A greater proportionate rate than the cargo ship. That is what it must have meant? *The Witness:* Yes, that is it.

*(The Attorney-General - To the Witness.)* Now, that is what you mean, Sir Walter, is it? - That is exactly what I mean.

*The Attorney-General:* Now, if you take the book your Lordship will see how that is carried out.

*The Commissioner:* In which of these books is it?

*The Attorney-General:* I mean the Rules made by the Board of Trade under Section 427 of the Merchant Shipping Act, 1894.

*The Commissioner:* Very well.

*(The Attorney-General.)* There your Lordship will find, if you look at page 4 of the book. "For the purposes of these Rules British ships shall be arranged in the following classes: Division A, Class 1, Steamships carrying emigrant passengers subject to all the provisions of the Merchant Shipping Act; Class 2, Foreign-going steamers having passenger certificates under the Merchant Shipping Act"? - Quite so.

"Class 3, Steamships having passenger certificates under the Merchant Shipping Act authorising them to carry passengers anywhere within the home trade limits, that is to say, between places in the United Kingdom, or between the United Kingdom and ports in Europe, between the River Elbe and Brest. Class 4, Foreign-going steamships not certified to carry passengers." Those are all Division A. Those are steamers, and they are steamer emigrant ships, passenger ships, home trading passenger ships, and foreign-going steamers not certified to carry passengers. It deals with four. Then Division B is substantially the same thing with regard to sailing ships. Then Division C - *The*

*Commissioner:* I do not think you need go any further.

*The Attorney-General:* That is the basis upon which it is carried out.

*The Commissioner:* Those are the classes the Witness referred to.

22337-8. (*The Attorney-General.*) Yes. Now, if your Lordship will turn to page 6 you will see how it is done; at any rate you will understand the principle upon which it is done, whatever the view may be about it. Page 6: "Division A, Class 1. Rules for steamships carrying emigrant passengers subject to all the provisions of the Merchant Shipping Act." This is the one which applies to the "Titanic" which has already been referred to. This is the one which makes the most demands on steamships to carry boats. Then it is continued right through.

*The Witness:* May I interrupt one moment. The leading principle running through all that is the tonnage Table.

22339. The Table at page 17? - That is it, and the basis of that Table you will see is tonnage.

If you follow it right through you will see Sir Walter is quite right. It is all based on tonnage.

*The Commissioner:* Oh, yes.

22340-1. (*The Attorney-General.*) But, of course, the number decreases -

*The Witness:* May I interrupt. In some of the divisions and classes you will see they go away from the principle of tonnage rather, and adopt the principle of lives on board. This is what I have been trying to explain to you. Let us pass to the first cargo boat. 22342. Which is that: Division A, class 4, "Foreign-going steamships not certified to carry passengers," on page 8? - Let me read that.

(*The Commissioner.*) If you look at that, a boat of that kind which is not designed for passengers at all is to carry sufficient boats to accommodate all passengers on board? - Quite.

*Mr. Edwards:* Apparently, my Lord, according to the reading of it, it has to carry sufficient boats on each side; it is double.

## **Page 595**

(*The Attorney-General.*) Where there is ample opportunity for providing boats on each side sufficient to carry the number on the ship, the Board of Trade does provide by its Rules that on each side there shall be a sufficient number of boats? - Is not that a justification of what I said just now?

(*The Commissioner.*) Pray do not begin to argue? - Oh, no, I do not want to. 22346. (*The Attorney-General.*) That is what you mean now? - Yes. This is a defection from the tonnage basis to the basis of lives on board.

*The Commissioner:* Is this the principle upon which they go - that where you have an emigrant ship it is impossible to provide sufficient boats for all the people on board if you are to have proper regard for the stability of the ship and the working of the ship?

*The Attorney-General:* Yes.

22347. (*The Commissioner.*) But where you have a cargo boat on which there are few people you can easily, and therefore must, provide sufficient boat accommodation for everyone on board? - Double that.

*The Attorney-General:* In that particular case it is double.

*The Commissioner:* That is to say, a sufficient number on each side to accommodate everyone on board?

*The Attorney-General:* Yes, that is the principle.

*The Commissioner:* Therefore, so far as the lifeboats are concerned a man is safer upon a cargo ship than upon an emigrant ship?

*The Attorney-General:* Yes.

*The Commissioner:* And of necessity, as this Committee thought, because they thought you cannot put on an emigrant ship the number of boats that are required to save everybody?

*The Attorney-General:* Quite.

*The Commissioner:* Without interfering with the navigation of the ship.

*The Attorney-General:* Quite. Might I add to that, your Lordship has in mind, no doubt, a very important consideration, that when you are dealing with passenger and emigrant ships that come in the first class you will have the best skill and the best means of guarding against the sinking of the vessel if your watertight compartments are efficient.

*The Commissioner:* You will have the greatest degree of floatability.

*The Attorney-General:* Yes, and the greatest number of precautions taken, so far as they can be, apart from boats.

*The Commissioner:* That is what, at any rate, the gentlemen who framed those Rules thought at that time.

*The Attorney-General:* Yes.

*Sir Robert Finlay:* And I think it is carried out in the first three classes also by providing that they need not carry the number shown on the Table on declaring that the boats they have are sufficient for all on board.

*The Attorney-General:* Which is that?

*Sir Robert Finlay:* Division A, class 1 under B.

*The Attorney-General:* "(F.) Provided nevertheless," do you mean?

*Sir Robert Finlay:* No. "Master or owners of ships claiming to carry fewer boats," etc. The same thing occurs in class 3.

22348. (*The Attorney-General.*) (F.) really embodies it: "Provided nevertheless that no ship of this class shall be required to carry more boats or rafts than will furnish sufficient accommodation for all persons on board." (*To the Witness.*) As I understand it, Sir Walter, that has been the guiding principle ever since that Committee sat and the original Rules were framed, with amendments and improvements. That has been the principle up to the present date? - Yes, that is so.

*The Commissioner:* Are you going to take him to page 17?

*The Attorney-General:* Yes, but I think there is a little to get before we get as far as that. Those are the Rules for 1894. Now, we may get a little further information. The first section of the Merchant Shipping Act, Life-Saving Appliances, of 1888, is to this effect. I think it throws some light certainly upon what Parliament thought at the time, and what the Board of Trade must necessarily have considered in framing these Rules: "It shall be the duty of the owner and master of every British ship to see that his ship is provided, in accordance with Rules under this Act, with such boats, lifejackets and other appliances

for saving life at sea as, having regard to the nature of the service on which the ship is employed, and the avoidance of undue encumbrance of the ship's deck, are best adapted for securing the safety of her crew and passengers." Those are the conditions they were to take into account.

*The Commissioner:* I did not hear anything of those words which would point to leave to take into consideration the commercial values. I see it says, "Best calculated to preserve the lives of those on board," but it occurs to me that you must have regard to the ship as a commercial venture, otherwise a ship would never go to sea at all. If you are to think only of the lives of the people on board and nothing else you might have such a complicated system of life-saving apparatus that the ship could never sail.

*The Attorney-General:* As they were dealing with merchant shipping I presume they did not think it was necessary to put that in.

*The Commissioner:* But there are a great many things to consider.

*The Attorney-General:* Oh, yes, it is not so easy as some people think to determine the question, when you consider it.

*The Commissioner:* Oh, dear no. It appears to one's mind at the first blush of the thing that you ought to have boats to save every life, and if what happened on the "Titanic" is a fair sample of what would take place in similar circumstances on other boats, you ought not only to have sufficient boats to save every life, but you ought to have nearly one-third more than sufficient because these boats on the "Titanic" did not go away anything like full. If that is to be the normal state of things you want a great many more boats than sufficient to carry the number.

*The Attorney-General:* And of course that assumes a very calm night in which you can launch all your boats on each side, which is, of course, rather an abnormal state of things.

*The Commissioner:* Of course, it may be said against that that the boats would have carried their full complement if there had been proper discipline, and so on.

*The Attorney-General:* Yes, but I was assuming that the boats had gone away with their full complement; then they would have saved 1,178 instead of 703 persons, but there was a very large number of persons for whom there was no accommodation.

*The Commissioner:* You still have a large margin.

*The Attorney-General:* And if you want to make the ship quite safe - at least, quite safe you never could, but so safe that there is boat accommodation which can be launched for all the people on board - you would have to provide for full accommodation on both sides of the ship, that is to say, each side of the ship ought to be able, if you could have an ideal state of things, to launch sufficient boats to carry the complement of passengers and crew on board.

*The Commissioner:* Undoubtedly, because we have had evidence which appears to me at present that in certain states of the sea you could not launch any boats on one side of the vessel; you would have to confine yourself to the other side.

*The Attorney-General:* Yes, you would have to get to the lee-side. That would work out at over 80 boats a side if you were to work on that basis. But at any rate it would mean that you would have to have sufficient boats on each side to carry all. And your Lordship notices that that is the view that was taken, where you can do it, by this very special provision.

*The Commissioner:* Yes, I noticed it. Mr. Edwards pointed it out just now.

*Sir Robert Finlay:* It might, further, involve a good many more men on board than were wanted for the navigation of the ship, to deal with those boats?

*The Commissioner:* Yes.

*The Attorney-General:* Of course, you have to man them all.

*The Commissioner:* By degrees you may reach a state of things which makes it impossible to send these boats to sea, commercially. You *may* reach such a point.

*The Attorney-General:* I have already indicated to your Lordship that the argument which I shall use will be that it is much more important to make your ship as near as unsinkable as you can than to provide boats?

*The Commissioner:* Of course it is.

22349. (*The Attorney-General.*) Although no doubt there is value to be attributed to providing boats as well. (*To the Witness.*) I was coming to this to get it before my Lord historically. In 1890 new Rules were made by the Board of Trade. That is the question I was on? - The first Rules were made on the recommendations of this Committee. 22350. In 1890? - Yes. May I say something? I know the Committee had in mind the commercial considerations referred to by Lord Mersey, and I think they took these words in the section as covering this: "Having regard to the nature of the service on which the ship is employed, and the avoidance of undue encumbrance of the ship's deck." They thought that met it sufficiently.

*The Attorney-General:* It is in the Merchant Shipping Act, at any rate.

*Sir Robert Finlay:* Where is that?

22351. (*The Attorney-General.*) Those words occur in the first Section of the Act of 1888. (*To the Witness.*) What actually happened was, the Rules which were made by the Board of Trade in consequence of the Committee's recommendations would in the ordinary course have come into force on the 31st March, 1890? - That is so.

The Committee met again in 1890, and as a result of that they formulated some new Rules which were put before the Board of Trade; they were then presented to Parliament and were to come into force on the 1st November, 1890. That is right, is it not? - Yes, I think that is right.

That brings it to this, that they were to come into force on the 1st November, 1890. And one of those Rules provided that boats, and rafts additional to boats under davits, should provide in the aggregate three-fourths more than the minimum cubic contents of the boats under davits? - Yes.

That is the Rule we have had referred to and which we have discussed. Now, the New Rules that were made subsequent to that after the Life-Saving Appliances Committee had met again in 1893, were Rules which were presented to Parliament and which were to come into effect on the 1st June, 1894? - Yes.

Those are the Rules which are contained, with certain alterations, in this book to which we have just been referring? - Yes.

That is, the Rules made by the Board of Trade under Section 427 of the Merchant Shipping Act, 1894? - Yes.

And the alterations that are made are not material for the purpose of the point we are considering, are they? - Not in the least; they were quite minor alterations.

22358. I only want to get to the point we are considering. It is useless to give his Lordship all the documents leading up to this. On page 17 of this book we get to the Table which is actually in force at the present moment? - Yes.

That is what we are concerned with, and that is the Table which came into force on the 1st June, 1894? - No, that only went up to 9,000 tons. The present one goes up to 10,000 and upwards.

I do not think our minds are quite on the same point. The Rules that came into force on the 1st June, 1894, are the scale which is at present in force? - Yes.

That is the one at page 17? - That is the one at page 17.

That is what I was putting to you? - I thought you said the originals.

No; I purposely did not; I said the 1st June, 1894.

*The Commissioner:* But nevertheless, the answer is a useful one.

22363-4. (*The Attorney-General.*) I agree; but until one understands it, it is useless proceeding with it. (*To the Witness.*) I know what you are referring to, but I want to get, first of all, clearly before my Lord that the scale which is now in force is the scale which has been in force since the 1st June, 1894? - That is exactly right.

That is the scale you find at page 17? - That is exactly so.

But that was not the same scale as had been in force before? - That is quite so.

*The Attorney-General:* That is it.

*The Commissioner:* What was the scale?

(*The Attorney-General - To the Witness.*) Is the alteration in the scale to 10,000 and upwards? - That is the sole alteration.

So that before the 1st June, 1894, Rules you had not the scale applying to vessels of 10,000 tons and upwards; you stopped apparently at 9,000 and upwards? - Yes, 9,000 and upwards.

So that it is really the first line in the scale which is new by this? - That is quite right.

*The Commissioner:* Now, tell me this: When did the previous scale, which finished at 9,000, come into operation?

(*The Attorney-General.*) 1890. (*To the Witness.*) That is right, is it not? - Yes, in 1890.

*The Commissioner:* Very well. In 1890 you had a scale that provided for the lifeboat accommodation on ships up to 9,000 and upwards, as I understand.

*The Attorney-General:* Yes.

(*The Commissioner - To the Witness.*) It was thought worthwhile, on the 1st June, 1894, to alter that scale by including it in ships of 10,000 and upwards? - Quite so.

22372. That is to say, in a period of four years you altered it. This present scale has been in existence 18 years. Now, why has it never been altered? - I can only just indicate to your Lordship. That will be explained by the professional officers, but I will indicate it to your Lordship. At the time when the Rules were made, on the 1st June, 1894, the largest ship complete was the "Lucania," 12,952 tons, certified to carry 1,857 passengers and crew.

*The Attorney-General:* I think I will ask the question first, and then I will direct his mind to the questions your Lordship is putting.

*The Commissioner:* I am jumping a little too soon, I think.  
*(The Attorney-General.)* It will direct his mind more to the answer you want.  
When those Rules came into force on the 1st June, 1894, was the largest ship afloat the “Lucania,” a ship of 12,952 tons, and certified to carry 1,857 passengers and crew? - Yes.  
According to these Rules, which were framed to come into force on the 1st June, 1894, the Table was extended from 9,000 and upwards to 10,000 and upwards; but even that 10,000 tons apparently was put upon 3,000 tons short of the “Lucania’s” gross tonnage? - Yes.  
So that if I follow correctly what was done there, for some reason there was an addition to the scale and an increased number of boats required for vessels of 10,000 tons and upwards, but still not a scale which dealt with a vessel of 13,000 tons, except in so far as it is covered by the requirement as to 10,000 and upwards? - Quite.  
When you once got to 10,000 tons and upwards it did not matter how much the increase was apparently, you still only had to carry according to the Board of Trade Regulations the 16 boats under davits? - Yes, that is quite so. But you have not quite got my point. My point is that it was quite clear that the scale was intended to include the “Lucania,” because she was in existence and already launched, and her tonnage was

**Page 597**

12,952, so that that vessel was in existence when the Rules for 10,000 and upwards were laid down.

That I think you do make clear. Whatever may be thought of it, that is quite clear, that although you had a vessel of 13,000 tons in existence at the time they passed these Rules, they did not mean to make a scale which would extend to that, but would be satisfied if that vessel complied with the scale for one of 10,000 tons and upwards? - Yes, that is exactly what I mean.

But it still does not answer the question which my Lord put to you, which we want to know something about, if you can help us, as to why it was that it was thought worthwhile to alter the scale by adding this line “10,000 and upwards”? - In order to include ships similar to the “Lucania.”

*The Attorney-General:* Well, it made a small demand upon a vessel like the “Lucania.”

*The Commissioner:* It would have been included in the 9,000 and upwards equally.

*The Attorney-General:* Yes, but she would have to find more boats. *The*

*Commissioner:* There may be no significance in it, I do not know, but the “Lucania” was practically a boat of 13,000 tons.

*The Attorney-General:* Yes.

*The Commissioner:* Very well. Its amended scale which included the words “10,000 and upwards,” was, according to the Witness, made in view of the fact that the “Lucania” was a boat of 13,000 tons. *The Attorney-General:* Yes.

*The Commissioner:* Now the provision in the scale before it was altered was that as far as boats of 9,000 and upwards went they were to carry 14 boats. You have a boat then made which is more than one-third bigger - nearly half as big again - and yet the increase

for the number of boats in the "Lucania" would only be two, from 14 to 16. *The Attorney-General*: That is it.

22379. (*The Commissioner*.) It may be that it is right, but it appears to me that it is wrong. I am not poking fun at it at all. It may be that it is not wrong, but it looks wrong.

*The Witness*: At any rate, it shows they made some increase there. 22380. (*The Attorney-General*.) I will tell you what it shows. If I may say so respectfully, what my Lord says is really the crux of the criticism to be directed to this scale? - I am quite aware of that, and that will be dealt with by the professional officers.

*The Attorney-General*: We want to understand it.

(*The Commissioner*.) You have not answered my question, you pushed it off on to somebody else, who is not in the witness-box, and that is: Why, having thought it worthwhile to make one alteration in the course of four years, did it never occur to anybody in the next 18 years to make any alteration? - That is a question I am not competent to answer.

But I am sure, Sir Walter, that you must have talked about it to somebody in the Board of Trade? - Oh, yes.

Now, to whom did you talk? - I talked to the professional officer of the Marine Department.

And what explanation did he give? - He said that he did not think the scale required any further alteration.

Why not? - I have not a very clear recollection of what his reasons were. I would rather he gave them in his own words.

I should have thought it was so important that you would have had? - No, because conversations were taking place frequently on many things.

The gentleman is here, I understand, and you prefer to leave him to get out of the difficulty? - I prefer that the professional officer should answer professional questions.

(*The Attorney-General*.) To whom are you referring? - To Sir Alfred Chalmers, the professional adviser of the Board of Trade then.

Whatever the reason may be, the one thing that is established by this is that at this time, in 1894, when you had not only the "Lucania" but the "Campania" also with a tonnage of just upon 13,000 tons -? - They were nearly the same tonnage.

The Committee thought that the number of boats required apparently should be the 16 mentioned in the scale? - Quite so.

*The Commissioner*: Can you tell me how this Table would be altered? What procedure would have to be adopted for the purpose of altering it?

*The Attorney-General*: I think the Board of Trade would do it.

*The Commissioner*: Who has the power?

*The Attorney-General*: My impression is that the Board of Trade can do it. I think it is an administrative action which they can take at once.

*The Commissioner*: It is an Appendix to Rules made by the Board of Trade. If they alter the Appendix they alter the Rules. How do they alter their Rules?

(*The Attorney-General*.) I think the Rules are framed, and on the authority of the President are laid before Parliament, and lie on the Table for so many days, I think 40 days, and after that they become law. Is not that it?

*The Witness:* That is quite right.

*The Attorney-General:* Dealing with only the last three years preceding this year. In May, 1909, there is an alteration made in these Rules with reference to motor lifeboats. In April, 1910, there is an alteration made - I will give a reference to it later in more detail, with regard to stowage of boats in board or under davits. In June, 1911, there is another one.

*The Commissioner:* I was wondering whether it was some cumbrous procedure.

*The Attorney-General:* Oh, no, it is the ordinary procedure of Parliament. When there is a power given by Statute to a Department to make Rules, the Rules lie on the Table of the House, and, of course, can be dealt with by an Address to the House if objected to, and if the House does not object then they have the force of Statute within the powers of course conferred by the Statute upon the person who has made the Rules.

*Sir Robert Finlay:* My friend, Mr. Laing, has had prepared an analysis and a consecutive statement of all that has been done with regard to this, setting out the material sections, and I think it might be of very considerable service if your Lordship would look at it, and your Lordship will say whether it might be convenient that it should be printed. It will be very useful.

*The Attorney-General:* I should like to see it before it is dealt with, because I have a print of the same thing. We are having it printed, so that your Lordship should have the whole story.

*The Commissioner:* Whether it is from you or Sir Robert is a matter of indifference. It would be of assistance to have it tabulated on one sheet.

*The Attorney-General:* We had better look at it, because I think we have a good deal that Sir Robert has not.

*The Commissioner:* Mr. Maurice Hill will look at the two, and select, impartially you know, the one which he thinks is the better.

*The Attorney-General:* I can say nothing about it, because I have not seen it.

*The Commissioner:* You will let me have one or the other.

*The Attorney-General:* Yes, and it may be the two may be given. We have one which I think, so far as I know -

*The Commissioner:* You naturally think is better than theirs.

*The Attorney-General:* No, I do not think it is better, because I have not seen theirs.

*Sir Robert Finlay:* My friend has not seen Mr. Laing's work. *The*

*Commissioner:* But he nevertheless thinks his is better.

*The Attorney-General:* No, I do not.

*The Commissioner:* You have just said so.

*The Attorney-General:* No, what I said was I thought it was useful; I did not go further. I certainly should not, without seeing Mr. Laing's. But

## **Page 598**

there is some information which the Board of Trade as a Department has which Mr. Laing cannot have. That is what I meant.

*The Commissioner:* The serious point, to my mind, here, and the one which I want to have cleared up, is this. Why did the Board of Trade leave this Table which finishes at 10,000 and upwards in existence for 18 years without any revision. That is the point.

*The Attorney-General:* Yes, I know the answer.

*The Commissioner:* That the shipowners thought the Table was not sufficient is obvious, because they themselves provided a considerable number of boats beyond the number mentioned in the Table and that must have been because they thought the Table was not sufficiently stringent.

*(The Attorney-General.)* It would be better that the Witnesses should give the answer. I know what their answer is, and we shall discuss afterwards whether it is a good one *(To the Witness.)* I will pass somewhat rapidly on, Sir Walter. As far as I understand, between 1894 and 1904 there was no great development in the tonnage of passenger steamers? - No, I think not.

There was a development in the direction of increasing the tonnage, but no great development. I notice the "Baltic" was built in 1904. She was over 20,000 tons? - Yes. 22394. There was also the "Celtic," which I see was built in 1901, she was 20,000 tons or more, was she not? - Yes.

22395. *(The Attorney-General.)* There was some increase. Your Lordship will see it is an increase undoubtedly from the 13,000 that we have got. It is not quite right to say between 1894 and 1904, I think, to make it right, we had better say between 1894 and 1901 here is no great increase, but from 1901 to 1904 there are several steamers built of over 20,000 tons? - Yes, those three. 22396. That is how it stands? - Yes.

*(The Commissioner.)* I suppose that every ship that is built informs the Board of Trade of the number of lifeboats to be carried? - Certainly. They have to be to the satisfaction of the Board of Trade.

So that if the Board of Trade is satisfied that a sufficient number of boats are, in fact, carried there is, in a sense, no occasion to alter the Table? - Yes, my Lord.

*The Commissioner:* Perhaps you will not assent to that, and I am sure Mr. Scanlan will not.

*The Attorney-General:* Your Lordship has in mind the provision with regard to additional boats and rafts that have to be provided. I mean this scale is not exhaustive, as your Lordship knows. If you want to see exactly how it stands you must not only take page 17, but you must take page 6 as well. *The Commissioner:* Yes, I know that.

*The Attorney-General:* Because the requisition for the "Titanic" was not 5,500, as the scale would indicate; it was 9,625 cubic feet capacity, and that is arrived at by taking the scale at page 17, which is for vessels of 10,000 tons and upwards, requiring 16 boats of the capacity of 5,500 cubic feet; then you have to go to page 6, paragraph D, and it is under that that you get the requirement for the three-fourths additional cubic capacity in the number of boats and rafts.

*The Commissioner:* You had better read it.

*The Attorney-General:* "If the boats placed under davits in accordance with the table do not furnish sufficient accommodation for all persons on board, then additional wood, metal, collapsible, or other boats of approved description (whether placed under davits or otherwise) or approved life-rafts shall be carried. One of these boats may be a steam launch, but in that case the space occupied by the engines and boilers is not to be included in the estimated cubic capacity of the boat. Subject to the provisions contained

in paragraph (f) of these Rules, such additional boats or rafts shall be of at least such carrying capacity that they and the boats required to be placed under davits by the Table provide together in the aggregate in vessels of 5,000 tons gross and upwards, three-fourths, and in vessels of less than 5,000 tons gross, one-half, more than the minimum cubic contents required by Column 3 of that Table. For this purpose three cubic feet of air case in the life-raft is to be estimated as ten cubic feet of internal capacity. Provided always that the rafts will accommodate all the persons for which they are to be certified under the Rules, and also have 3 cubic feet of air case for each person. All such additional boats or rafts shall be placed as conveniently for being available as the ships arrangements admit of having regard to the avoidance of undue encumbrance of the ship's deck, and to the safety of the ship for her voyage." Now, that is the scale that is applicable.

*Mr. Scanlan:* Look at the qualification on page 16.

*The Attorney-General:* That, of course, we have had. I will read it again.

*The Commissioner:* We have had it, but you had better read it again.

*(The Attorney-General.)* One must bear in mind it does not apply to this particular case, but, of course, it is a general Rule. On page 16 is the one, Rule 12. That is the one we discussed yesterday: "When ships of any class are divided into efficient watertight compartments to the satisfaction of the Board of Trade, they shall only be required to carry additional boats, rafts, and buoyant apparatus of one-half of the capacity required by these Rules, but the exemption shall not extend to lifejackets or similar approved articles of equal buoyancy suitable to be worn on the person." We have the three provisions and to work that out, as I understand it, is this. First of all, if it is a vessel of more than 10,000 tons, you must, in accordance with the scale at page 17, have a minimum of 16 boats with a cubic capacity of 5,500 feet minimum? - Yes, and those are the boats under davits.

That you must have, but then in addition to that, in accordance with what is provided in the Rules at page 6, there must be a boat accommodation but not necessarily an accommodation under davits, of an addition of three-fourths of the minimum cubic capacity required under the scale at page 17? - Quite right.

So that would mean that you would have to have not only the 5,500, but in addition you must have three-fourths of 5,500 cubic feet capacity measured in boats; in other words, you would have to have boats with a cubic capacity of 9,625 cubic feet provided on that ship? - Quite right.

And of the boats making up that cubic capacity of 9,625 cubic feet, 16 at least must be boats placed under davits? - Quite so.

That is what it comes to? - Yes.

But if the vessel had applied under Rule 12 on page 16, and the Board of Trade had been satisfied that her subdivision into watertight compartments was efficient and satisfactory, then instead of having to carry additional boats to the extent of three-fourths of the 5,500 cubic feet capacity, should would only have had to carry one-half of that cubic capacity? - That is quite right.

So that instead of 9,625 cubic feet in boats of that capacity in sum total, she would have had to provide boats with a total capacity of 7,750 cubic feet? - Quite right.

*The Commissioner:* That is absolutely correct, so far as I follow it.

*The Attorney-General:* If your Lordship pleases. We have had the evidence. I cannot put my finger on it; but my impression is that the evidence as it stands is that the "Titanic," with the boat accommodation she had, including collapsibles, that is taking the 20 boats, had a capacity for 1,178 persons and a cubic capacity, I think, of 11,325 cubic feet.

*Mr. Laing:* That is right.

*The Commissioner:* There is no doubt that she complied with the requirements.

*The Attorney-General:* And more.

*The Commissioner:* And more.

*(The Attorney-General.)* It may be necessary when we are discussing this question to see exactly how you measure the number of persons to be carried in regard to the cubic capacity of the boats, but that varies to some extent. It does

## **Page 599**

not seem to me that it is at all important with reference to this matter. There are the Rules which deal with it. You may say, speaking approximately, that if you divide by 10 you get the number of persons? - Yes.

But, of course, there are some in which you may divide by eight, I notice? - Yes.

I rather think that applies to collapsibles, does it not? - It does.

That is how it stands, with collapsibles you may divide by eight. It is not unimportant to bear it in mind, having regard to the latter development to which your Lordship's attention will be called. I think that is all I need say about it at present. *(To the Witness.)* Now, I had brought your attention to the 1901 to 1904 period when we had got to the construction of vessels of over 20,000 tons. At that time was the matter considered by the Board of Trade; that is to say, was any consideration given to the necessity of altering the scale by requiring more boats for vessels of greater tonnage? - Was this in 1904 you are referring to?

Yes. You see what I am directing attention to? - Yes, the period in 1904. I know the attention of the professional officer was specially directed to that subject at that time, and as far as I remember what he said to me as the result of conversations was that he was strongly of opinion that the increase of tonnage and accompanying increase of persons carried was counterbalanced by the greater safety of the ships themselves. This greater safety I understood was due, first, to improvements of construction; second, the adoption of regular routes across the Atlantic for the purpose of avoiding collisions with other vessels, and avoiding ice; and, third, somewhat later, the introduction of wireless telegraphy.

Let us pause there for a moment. That means, when this question was considered, there were those three factors to be taken into account. When you speak of improved construction, does that take into account and cover also the subdivision into watertight compartments? - That is the main point of it, I think.

Then there was further this, that regular routes had been adopted across the North Atlantic out and home? - Quite.

Which gave greater safety? - As I understand it, they were laid down for that purpose.

So as to avoid collisions? - Yes, avoiding collisions with other vessels and with ice.

Then there is the third element which was taken into consideration, and that was the introduction of wireless telegraphy? - Quite; I understood that those were the main reasons which influenced him.

Which, of course, gave an opportunity of calling for assistance? - Yes.

Then, was any consideration directed to the number of disasters in the transAtlantic passenger trade? - Oh, yes. I remember the splendid record of safety of life at sea was one of the points to which attention was directed then.

*The Commissioner:* I want to correct, and I hope correctly, something that the Witness has just said, that the new track was one of the matters taken into consideration in 1904. It is pointed out to me that the new track was adopted in January, 1899, so that one can scarcely say that the new track was of any importance in 1904.

*The Attorney-General:* With great respect, I should have thought that it was, because they had had the Rules in existence since 1894. Then, when this development came in the direction of increasing the tonnage of the vessels, they had to see how that compared with the state of things when they passed the Rules in 1894, and then they found, amongst other things, that there was this matter of the tracks.

*The Commissioner:* Which had supervened.

*(The Attorney-General.)* Yes, and that therefore when the increased tonnage arose that was a thing to be taken into account. Of course, I agree nobody suggested it until this came into existence, but in contrasting 1894 and 1904 it does become an element. The figures which you gave me yesterday have shown us what, in fact, were the casualties which had occurred during the years 1892 to 1901, and I suppose that could have been ascertained up to 1904, or very nearly to 1904? - Oh, yes.

All those matters were taken into consideration? - Yes, I am quite sure they were.

And as a consequence no alteration was made? - Yes, that is so.

Was it thought that wireless telegraphy was a very important consideration in determining whether or not you required an extended scale? - It was certainly one of the things discussed. I think wireless telegraphy really came into practical use in about 1907.

I know it was commented on very much in the case of the "Republic," which happened in 1909. It was of the greatest service there, I remember.

22422. The Advisory Committee was invited in April, 1911, to advise on this very question of the necessity for increasing the requirements under the scale, was it not? - Quite so.

*The Attorney-General:* We have referred to what happened with reference to that, but I am not sure whether your Lordship had it clearly brought before you. Some reference was made to it when we were examining Mr. Carlisle.

*The Commissioner:* Yes, I remember.

*The Attorney-General:* Of course this is important, because I am now coming to what happened in 1911.

*The Commissioner:* You are coming to the document that Mr. Carlisle, among others, signed?

*The Attorney-General:* Yes.

*The Commissioner:* Apparently, according to his own admission, very foolishly. *The Attorney-General:* In the document that will be printed, your Lordship will have that included, also with the terms of reference. (*The document was handed to the Commissioner.*) (*To the Witness.*) On the 4th of April, 1911, you, as representing the Board of Trade, wrote to the Secretary of the Merchant Shipping Advisory Committee, by direction of the Board of Trade, asking that the Advisory Committee should consider certain questions. The one I particularly want to call attention to is this. Questions had been asked in the House of Commons, and this is stated, this is the letter of the 4th of April which precedes: "The Board are of the opinion that the Table in the Appendix to the Rules should be extended upwards in the form indicated in the accompanying scale, so as to provide for vessels of tonnage up to 50,000 tons gross and upwards. It appears to the Board that the number of boats and the boat capacity need not necessarily increase in a regular proportion according to the increase in tonnage, and that due regard should be paid to what is reasonable and practicable in passenger steamers exceeding 10,000 tons. The attention of the Merchant Shipping Advisory Committee is invited to the Rule of the 19th April, 1910, as to the stowage of boats required to be placed under davits, and to the fact that the capacity of the additional boats and/or rafts required by division A, class 1, Clause (d), of the Rules is governed by the capacity of the boats required to be placed under davits. I am to state that the Board would be obliged if the Merchant Shipping Advisory Committee would be so good as to suggest in what manner the scale (*See accompanying copy.*) should be continued upwards, having due regard to the considerations indicated above." *The Commissioner:* That was 1911.

*The Attorney-General:* The 4th April, 1911: "I am further to state that the Board would be glad to learn whether the Advisory Committee are of opinion that Rule 12 should or should not be revised so as to exempt altogether from the requirements of additional boats and/or rafts those vessels which are divided into efficient watertight compartments to the satisfaction of the Board of Trade. I am to add that, in considering the questions dealt with in this letter, the constitution of the Merchant Shipping Advisory Committee should be identical with that of the

## **Page 600**

Committee as recently constituted for the purpose of considering an amendment of the Life-Saving Appliances Rules in connection with the Englehardt collapsible lifeboat." Now, let us see. The result of that was that the Advisory Committee which as already stated, came into existence in accordance with the Statute of 1888, was asked to consider these questions, and in accordance with the scale which was imposed in that letter.

*The Commissioner:* I have got that Report.

*The Attorney-General:* Yes, but now I want your Lordship to have the letter of the 4th April.

*The Commissioner:* The letter which you have just read?

*The Attorney-General:* Yes, which includes the terms of reference and encloses the scale.

*The Commissioner:* Is it the letter signed by Mr. Norman Hill?

*The Attorney-General:* No. What I have read is a letter from the Board of Trade to the Advisory Committee which precedes all those, and which suggests or proposes to the Advisory Committee a new scale.

*The Commissioner:* That is the 4th April.

*The Attorney-General:* Yes.

*The Commissioner:* The one I have is the 4th July.

*The Attorney-General:* Yes. I wanted your Lordship to have that before you. This is only for present use; you shall have it all bound up in proper form. May I say, of course those copies which we are having printed will be supplied to all the Members of the Court. If you look at that letter you will see that encloses the scale proposed by the Board of Trade: "Minimum number of boats to be placed under davits on vessels of 10,000 tons to 50,000 tons and over." Then it gives the scale. "Gross tonnage" beginning "50,000 and upwards, 45,000 and under 50,000, 40,000 and under 45,000, 35,000 and under 40,000, 30,000 and under 35,000, 25,000 and under 30,000, 20,000 and under 25,000, 15,000 and under 20,000, 12,000 and under 15,000, 10,000 and under 12,000."

*The Commissioner:* It is just the sort of Table that I suggested it would have been right to have made during the 18 years.

*(The Attorney-General.)* Yes. Substantially, we may take it, it decreases in 5,000 tons, 30, 25, 20, 15, until you get to vessels of 15,000 and under 20,000 tons, and then from that the gradation is a little less steep; it is from 12,000 tons to 15,000 and 10,000 to 12,000; and then from that, of course, take out the words "and upwards," and it is in accordance with the present scale. Will your Lordship turn over the page of the document I have just handed to you, because that gives us the names of the Merchant Shipping Advisory Committee, and tells us whom they represented. Sir Norman Hill was nominated by the Shipowners' Parliamentary Committee, as were also Mr. Cuthbert Laws, Mr. Watts, Mr. Raeburn and Mr. Roxburgh, and they all represented shipowners. Sir Raymond Beck was nominated by Lloyd's and represented underwriters. Mr. Samuel Cross was nominated by the Liverpool Underwriters' Association and also represented underwriters? - Yes.

Sir Theodore Doxford was nominated by the Institution of Naval Architects and represented shipbuilders, and Dr. Inglis the same? - Yes.

Captain John Trenery was nominated by the Mercantile Marine Service Association and British Shipmasters' and Officers' Protection Association, and represented Masters and Officers. Captain Hampson was nominated by the Imperial Merchant Service Guild, represented by my friend today? - Yes.

And he represented the Masters and Officers. Your Lordship will remember the Imperial Merchant Service Guild is represented by my friend Mr. Holmes in this Enquiry. Mr. Sheares was nominated by the Institute of Marine Engineers and represented the

Engineer Officers. Mr. Spencer was nominated by the Marine Engineers' Association, and he also represented Engineer Officers. Then Mr. Henson and Mr. Cathery and Mr. Havelock Wilson were nominated by the National Sailors' and Firemen's Union, and represented seamen. Mr. Barrie was a shipowner and Mr. Joyce was a pilot; Mr. Henry Radcliffe, shipowner, and Sir Walter Runciman, shipowner, were additional members,

the last four being appointed by the Board of Trade. That made the Committee. That was the Committee which had been in existence for a number of years. I do not know whether you can tell me how long? - It is reappointed at intervals.

I am not sure what you mean. The Committee was appointed originally under the Act of 1888? - Quite.

And its constitution is provided by the Statute, and again under the Merchant Shipping Act of 1894, under that 17th schedule to which I referred? - Yes.

Then there is the appointment of the Committee. It must have been under the Merchant Shipping Act, 1894? - Quite.

Does that Committee continue in existence up to the present moment? - No, it was appointed for two years.

And then? - And then can be re-appointed with or without alteration.

When was this Committee appointed consisting of the gentlemen whose names I have read? - In 1909. There has been very slight alteration in the Committee's constitution from the beginning. There are one or two things to which I will call attention. If your Lordship has the document before you, the three or four paragraphs that follow I think should be read: "When matters concerning the revision of the Rules for Life-Saving Appliances are to be considered by the Merchant Shipping Advisory Committee the Board of Trade appoint representatives of the Committee of Lloyd's Register and the Committee of the Institute of London Underwriters to assist the Advisory Committee. On this occasion" - that is referring to the 1911 Committee and Enquiry - "Messrs. T. Rome and R. A. Ogilvie represented Lloyd's Register and the Institute of London Underwriters respectively. The following two gentlemen were also co-opted for this occasion - Rt. Hon. A. M. Carlisle, representing shipbuilders, and Mr. T. Royden, representing shipowners."

*The Commissioner:* Is this sheet which you have given me torn out of the historical document that you intend to furnish me with?

*The Attorney-General:* Yes, but I wanted it a little re-arranged, and I also thought it would be better to have it printed a little larger. This was part of the Appendix, but I do not want to hand it in as it is now, because it really includes a little too much and wants a little alteration. I had given directions before we came in this morning that it should be done. It is only because I have some Departmental papers, which my friends could not have, which made me think I had some material which could not be included in Mr. Laing's document. But we will make a comparison, and I have no doubt anything Mr. Laing has done will be most useful so far as it goes, and we will incorporate in it also our own papers. It is this Committee which reports in July of 1911. If your Lordship looks at the names you will see -

*The Commissioner:* They are substantially the same.

*(The Attorney-General - To the Witness.)* It was a Sub-Committee, I think, was it not? - Yes.

It does not include all members? - No.

*The Commissioner:* I thought it was a Sub-Committee.

*The Attorney-General:* It really must have been because of the names.

*The Witness:* On page 17 it is so headed.

*The Commissioner:* Mr. Norman Hill in his letter of the 4th July refers to the Report of a Sub-Committee.

*The Attorney-General:* That Sub-Committee consists of a number of persons who either constituted the Committee, or were nominated in accordance with the powers of the Board of Trade, according to the paragraphs which I read after reading the names of the members of the Committee.

## **Page 601**

*The Commissioner:* For instance, it will include Mr. Carlisle, who was not one of the Committee.

*The Attorney-General:* Yes, and Mr. Royden, who was a shipowner, and also Mr. Rome, who represented Lloyd's Register, and Mr. Ogilvie, who represented the Institute of London Underwriters.

*The Commissioner:* And none of those gentlemen are mentioned on the Committee.

22435. (*The Attorney-General.*) No, none of those four are mentioned. (*To the Witness.*) Why was it that on the 4th April, 1911, the Board of Trade was minded to have this scale reconsidered? What had happened in the interval? - In the interval between when?

22436. The last consideration of which you have told my Lord before April, 1911, was 1904? - Yes.

Had there been an increase in the tonnage of the boats constructed during the few years preceding 1911? - Yes, I think so, considerably.

Does your Lordship remember at one stage my friend, the Solicitor-General, handed in a picture with a Table showing the increase in the tonnage of the boats constructed over a period of years? *The Commissioner:* I do not remember it.

*The Attorney-General:* You did have it; it was this, (*Showing a picture.*) only a little larger.

*The Commissioner:* Oh, yes, we have that.

(*The Attorney-General.*) It only dealt with the White Star Liners, but it showed the increase. (*To the Witness.*) The tendency during those intervening years had been towards increasing the tonnage of the vessels constructed? - Yes.

It had the "Mauretania" and the "Lusitania" in it? - Yes. 22441. Which I think were over 30,000 tons? - Yes.

It was about 1907 that they were built? - Yes.

And subsequently to that, of course, we had the designing of the "Olympic" and the "Titanic," which were the two largest? - Yes.

It was that tendency to increase the size of the vessels that caused the Board of Trade to direct the attention of the Advisory Committee to the scale then in existence? - Quite so.

(*The Attorney-General.*) Now, my Lord, I propose to refer to the Report of the Committee. (*Copies were handed to the Court.*) On the 4th July, 1911, there is a letter from the Merchant Shipping Advisory Committee forwarding Report on proposed amendments of the Life-Saving Appliances Rules. "We have the honour to report that your letter of the 4th April, with reference to the minimum number

of lifeboats to be carried on vessels of 10,000 tons gross tonnage and upwards and your letter of the 17th May, on the subject of the depth of lifeboats, have been very carefully considered by the Merchant Shipping Advisory Committee, and that it was unanimously decided at a meeting held on the 29th ultimo to adopt the report of a Sub-Committee which was specially appointed to enquire into these questions. A copy of the Report is accordingly forwarded herewith, and the Committee desire us to suggest, for the consideration of the Board of Trade, that effect should be given to the recommendations contained in it." That is signed by Sir Norman Hill, Chairman, and Mr. R. W. Matthew, Secretary. Am I right in this, that Mr. Matthew, who was Secretary, was in the Board of Trade? - Yes. 22446. He occupied some position, I am not quite sure what it is? - He is an Upper Division Clerk in the Board of Trade.

Was there any other representative of the Board of Trade upon it? - There are the four members who were appointed by the Board of Trade as additional members, but not as representatives of the Board of Trade.

They are not officials of the Board of Trade? - No.

They are four shipowners and shipbuilders and so on, who were nominated by the Board of Trade to sit on the Committee? - Yes, the President thought there should be a few more, and he put those on.

The reason I make that correction is because somebody, I think it was Mr. Carlisle, did say that there were a number of officials of the Board of Trade upon the Committee. That is wrong. The only one is Mr. Matthew, who is the Secretary. There are four persons appointed by the Board of Trade, but they are not officials.

*The Commissioner:* Mr. Matthew is not on the Committee.

*The Attorney-General:* No.

*The Commissioner:* He is appointed in the ordinary way; Secretary to the Committee.

*The Attorney-General:* Except for that this is an Advisory Committee independent of the Board of Trade. There are only four nominated by the Board of Trade. This is the Report: - "In accordance with the decision of the Merchant Shipping Advisory Committee at their meeting on Friday, the 28th April, we have given careful consideration to the letter of the 4th April from the Board of Trade, in which the Committee were asked to advise: -

"(1) As to the manner in which the Table in the appendix to the Life-Saving Appliances Rules should be extended so as to provide for vessels of tonnage up to 50,000 tons gross and upwards; and

"(2) As to whether Rule 12 should, or should not, be revised so as to exempt altogether from the requirements of additional boats and for rafts those vessels which are divided into efficient watertight compartments to the satisfaction of the Board of Trade. "In considering these questions, we have had specially in mind the fact that the number of passengers carried does not necessarily increase in proportion to the increase in the tonnage of the vessel. This is particularly true in the case of vessels exceeding 10,000 tons, a type of vessel which is practically only built to provide special accommodation for large numbers of first and second class passengers.

“Similarly there is no fixed relation between the tonnage of vessels and the deck space available for the carrying of lifeboats under davits. Increase in the length of a vessel is only one of the factors and often not the most material factor contributing to the increase in its tonnage, and it should also be remembered, in estimating the space available for the launching of lifeboats, that it is impossible to place davits forward of the bridge and very undesirable to have them on the quarters of the vessel.

“We are strongly of opinion that every encouragement should be given to secure the provision of vessels which by their construction have been rendered as unsinkable as possible and which are provided with efficient means for communicating with the shore or with other vessels in case of disaster.

“In view of these considerations, we have agreed upon the following recommendations:-

- “1. That it is questionable whether it is practicable to increase the number of davits;
- “2. That any increase in the number of lifeboats to be carried can probably be best effected by providing for the launching of further boats from the existing davits;
- “3. That the Table should be extended in the manner indicated below, viz.:-

Gross Tonnage	Minimum number of boats to be placed under davits.	Minimum number of additional boats to be readily available for attachment to davits.	Total minimum cubic contents of boats required by columns 2 and 3.
10,000 and under 12,000	16	- 2	5,500
12,000 and under 20,000	16	4	6,200
20,000 and under 35,000	16	6	6,900
35,000 and under 45,000	16	8	7,600
45,000 and upwards	16		8,300

That 8,300, your Lordship will see, is to compare with 5,500 at page 17 of the existing Rules.

**Page 602**

*The Commissioner:* Or it compares with the 10,000 in this Report.

*The Attorney-General:* It does. The reason I am comparing the last is because that is what would apply to the “Titanic.” That is, of course, merely what is required for the attachment to davits.

*The Commissioner:* What strikes one at once looking at this Report is this: in cases where the gross tonnage has increased more than four times, or about four times, the cubic contents of the boats required to be carried is only increased about one-half.

*The Attorney-General:* Yes, not quite 50 percent.

*The Commissioner:* About one-half. That strikes one on the face of it as singular.

*The Attorney-General:* Your Lordship sees how it stands.

*The Commissioner:* You see a corresponding increase in the number of boats, but not those under davits; they remain stationary.

*The Attorney-General:* They are to be readily available for attachment to the davits, as your Lordship points out. Then the Report goes on: -

“It is further recommended that all passenger vessels of 10,000 tons gross tonnage and upwards should be required to be fitted with wireless telegraphy apparatus.

“4. That the Rules should be amended so as to admit of decked lifeboats of an approved type being stowed on top of one another or under an open lifeboat, subject to suitable arrangements being made for launching promptly the boats so stowed;

“5. That the additional boats and rafts required under the provision of division (A.), class 1 (d) of the Life-Saving Appliances Rules shall be of at least such carrying capacity that they, and the boats required by columns 2 and 9 of the above Table, provide together three-fourths more than the minimum cubic contents required by column 4 of that Table;

“6. That vessels divided into efficient watertight compartments to the satisfaction of the Board of Trade should (*provided they are fitted with wireless telegraphy apparatus*) be exempt from the requirement of additional boats and/or rafts. The Committee suggest in this connection that the Board of Trade should review the requirements designed to attain the standards as to watertight compartments at present enforced by them under Rule 12, having regard to the developments of shipbuilding since the report of the Committee on the spacing and construction of watertight bulkheads.

“We have also had before us the Board’s further letter of the 17th May, enquiring whether, in the opinion of the Advisory Committee, it would be advisable to prescribe a maximum depth for lifeboats as compared with their breadth, and, if so, what that proportion should be.

“In connection with this letter, we have been supplied by the Board of Trade with reports from their Principal Officers in Great Britain, giving the dimensions and cubic capacities of the various kinds of boats on five typical ships in each of eight ports.

“We recommend that the Board should be advised to alter the Life-Saving Appliances Rules so as to provide that, in [the] future, the depth of lifeboats supplied to a British merchant vessel shall not exceed 44 percent of their breadth.

(Signed) Norman Hill,

Robert A. Ogilvie,

Royden,

T. Rome,  
Thomas Spencer,  
J. Havelock Wilson.”

*The Commissioner:* Someone has written in pencil opposite to those names, "E. Booth, Cunard."

*The Attorney-General:* I do not know what that is.

*The Commissioner:* Mr. Booth is Chairman of the Cunard Company.

*The Attorney-General:* This means nothing; it was a note.

*The Commissioner:* It perhaps means that Mr. Booth is not amongst them.

*The Attorney-General:* I do not know what it is.

*The Commissioner:* Did Mr. Carlisle say to me that Mr. Booth was on that Committee?

*The Attorney-General:* Oh, no. If he did I did not hear him.

*The Commissioner:* It was in answer to me. I do not know that it matters much. Is there anybody in that list that does represent the Cunard Line?

*The Attorney-General:* I do not think so.

*The Commissioner:* Mr. Carlisle at that time did not represent Harland and Wolff.

*The Attorney-General:* I understand Mr. Royden represented the Cunard Company. There is nothing on the papers to show it. That is to say, he is a director of the Cunard. He was nominated by the Board of Trade. What your Lordship is referring to I see is at page 552, in the evidence of Mr. Carlisle. I will read you all that there is that applies to it.

*The Commissioner:* I do not think it matters. Do not stop to do it. Does it matter? *The*

*Attorney-General:* Not the slightest, except that your Lordship seemed to suggest there was somebody who was not included in it. I see how the mistake arose. He thought it was the Chairman, and then your Lordship said: "Do you mean Mr. Booth?" and he said he did, whereas it was a director, who was Mr. Royden.

*The Commissioner:* He meant Mr. Royden.

*The Attorney-General:* Yes, that is the explanation. I notice in comparing this with the scale, there is a different gradation adopted by the Committee. It is a much steeper one than the one suggested by the Board of Trade in their letter of the 4th April.

*The Commissioner:* May I look at that paper again which has "E. Booth" pencilled on it? *(The same was handed to the Commissioner.)*

*The Attorney-General:* If you compare that scale with the scale in the print at the foot of the letter of the 4th April, 1911, you will see that, although its limits are the same the gradation is much steeper in the Advisory Committee's recommendation.

*The Commissioner:* Now, you have got to the 4th July, 1911.

*The Attorney-General:* Yes.

*The Commissioner:* Now, what was done after that?

*(The Attorney-General - To the Witness.)* After the receipt of this Report was the Report first of all examined and considered by the Board of Trade? - Yes.

Is it the practice to examine and consider it before it is laid before Parliament? - Yes, always.

*(The Commissioner.)* I should like to know, as a matter of curiosity, what you mean by the "Board of Trade" in that connection? Who are the gentlemen? - The Marine Department.

Who are the gentlemen? - The gentleman who would examine it at once would be the chief professional officer.

What is his name? - The chief was at that time Captain Young. He was the professional member of the Marine Department.

Would anyone else examine this Report? - He would call into counsel any other of his officers he thought necessary.

Do you know whether he did call in anybody? - I am not sure; I think he did.

*The Attorney-General:* I am going to call him.

*The Commissioner:* Very well.

*(The Attorney-General.)* Was this question as to the relative proportion of the depth and breadth of the lifeboats considered an important

### **Page 603**

one? - An extremely important one, I know, because he told me so himself.

I do not want to go into it in any detail, but the point was this, that unless you had some restriction or some Rule with regard to the relative proportion, a vessel could say it was complying with your Rules as to cubic capacity although the depth would be so great that the boats would not be able to carry the number of passengers intended? - Not properly carry them.

So that it was thought necessary to have some fixed proportion between the depth and breadth so as to really make your Rule operative, so that the cubic capacity required should in boat accommodation be sufficient to carry a certain number of passengers according to your scale? - Yes, that the boat should be of a good type. 22461. We need not go further into that at the moment. Were some experiments undertaken at your chief ports? - Yes, they were; very exhaustive experiments, I believe.

By local principal officers? - By local officers under Captain Young's directions.

That is one of the matters dealt with in that Report, as we see from reading it.

*The Commissioner:* I thought the experiments were subsequent.

*(The Attorney-General.)* So they were, but the question of the relative preparations were of importance because, in consequence of them, some new Regulations would have had to be made by the Board of Trade to carry the recommendations into effect. *(To the Witness.)* Before the Rules were made and in order that you should once for all make a regulation which was to apply to all future boats, you were making experiments so that you might be quite sure of your ground before you demanded that boats should have a certain proportion of depth to breadth? - That is precisely the position.

When were those experiments concluded? - I think, speaking from memory, towards the end of the year.

Were Rules drafted? - No.

Was there an amendment of the general Rules submitted to the Department? When you had got to the end of your experiments and you had got your reports by November, 1911, in the ordinary course of things then the Board of Trade would have to give effect to those views? - Yes.

If they meant to change anything they would have to amend the general Rules then in existence. That is right, is it not? - Quite.

Did they draft an amendment of those general Rules? - No.

What happened? - They were not satisfied altogether with the position. They thought that the matter should go back to the Advisory Committee for certain other consideration.

Let us follow that I think there is a little confusion, because I am speaking from a statement which I have got. Was not there a draft amendment of the general Rule submitted to the Department by the Principal Ship Surveyor at the end of January, 1912?

- Yes, I rather foolishly misunderstood your question.

There was a draft amendment of the Rules submitted? - Yes, there was.

Was that at the end of January, 1912? - Yes, and it was only by one officer.

That is the Principal Ship Surveyor? - Yes.

Was the matter then further considered? - Yes, it was.

By whom? - By the professional member.

Was that during February and March? - Yes, during the early months of this year.

And then on the 4th April did you direct that a letter should be sent to the Advisory Committee? - Yes.

Is there any note of that direction? - Oh, yes, it is on the official minutes. 22480. Was it a direction that a letter should be sent to the Advisory Committee with regard to the extension of the boat scale and of the draft Rule as to the form of boats? - That is so.

As far as I know that letter was not actually sent till the 16th of April, 1912? - That is quite true.

Had the Easter recess intervened? - It had.

*The Attorney-General:* The important thing is the date.

*The Commissioner:* A critical date.

*(The Attorney-General.)* Yes, a very critical date *(To the Witness.)* It strikes one at once that the letter which is sent is sent really on a date after we received the news of the "Titanic" disaster? - That is true.

We received that on the 15th, and then the letter is sent by you on the 16th, but as I understand you, the direction for that letter had been given on the 4th April, before the Easter recess? - Yes, the most precise directions.

*(The Commissioner.)* Where are those directions recorded? - On the Board of Trade minutes.

Have you got them here? - No.

*(The Attorney-General.)* There is no difficulty in getting them, is there? - It is not usual to produce the minutes.

*(The Commissioner.)* You need not allow a difficulty of that sort to stand in your way? - I do not wish to raise any difficulty at all.

*The Attorney-General:* I quite understand, it is not usual to produce them, and you think you ought to point that out. But all we want is to see the direction that was given on that particular day. That is what my Lord wants to see.

*(The Commissioner.)* And then I want to ask another question. Why was not the letter written? And then I want to ask another question. Was the letter of the 16th April written because of the "Titanic" disaster? - Shall I answer those questions now? 22490. Yes, if you can? - This is the position. I hope I shall make it quite clear. The action of the Board of Trade had been directed on the 4th. The letter was not prepared until some days afterwards, and it was actually sent on the 16th. Before the letter actually went it was brought to me, and it was pointed out: "This disaster has happened, is this letter to go?" And I said "Certainly it is to go at once without the smallest alteration of any kind or sort."

When had the letter been prepared? - Between the 4th and 16th.

Oh, but when? - I cannot give you the date. My directions were given on the 4th.

I know that. Do you mean to say it was prepared before you heard of the loss of the "Titanic"? - Oh, I think not - not the actual draft.

Then there is no significance in that? - I want to explain why I did it, my Lord. *The Commissioner:* All I want to see are the minutes directing that this letter should be prepared.

*The Attorney-General:* The minutes have been sent for, and your Lordship shall have them.

*The Commissioner:* They are close at hand?

*The Attorney-General:* Oh, yes. In point of fact the letter which bears date the 16th April deals, of course, with the questions raised in the report. There is another letter which, at any rate, your Lordship should have in mind whilst your mind is directed to this point. There was the letter written on the 20th April, which has specific reference to the "Titanic."

*The Commissioner:* You might read us that.

22495 (*The Attorney-General.*) This is on the 20th April. This is from Sir Walter Howell to the secretary of the Merchant Shipping Advisory Committee: "Sir, - With reference to previous correspondence between the Department and your Committee respecting the revision of the statutory Rules for life-saving appliances on British ships, and particularly to the letter from this Department of the 16th April, I am directed by the Board of Trade to state that as an entirely new situation has been created by the recent disaster to the s.s. 'Titanic,' they assume that the Committee, in reconsidering the matter in connection with the suggestions already put

## **Page 604**

before them by the Board, will have full regard to this new situation, and the facts of the disaster so far as ascertained. As you are doubtless aware, suggestions have been made in the House of Commons and elsewhere to the effect that, in view of the loss of the 'Titanic,' action should be taken by the Board of Trade in regard to certain questions other than those expressly dealt with in the Life-Saving Appliances Rules, *e.g.*, in regard to (1) steamship routes in the North Atlantic; (2) the speed of steamers where there may be dangers to navigation; and (3) the provision and use of searchlights on large passenger steamers; and the Board would be glad to know the Committee's views in regard to these,
